Having qualified as a practical astronomer by working for some months at the Royal Observatory, Greenwich, Grant was appointed in 1859 to succeed John Pringle Nichol [q.v.] as professor of astronomy and director of the observatory in the university of Glasgow. The only available part of its equipment was a six-inch transit-circle by Frazer, and with it Grant made a long series of meridian observations, the results of which were embodied in '*A Catalogue of 6415 Stars for the Epoch 1870*,' published at Glasgow in 1883. The introduction contains a discussion of proper motions. A supplementary '*Catalogue of 2150 Stars*,' appeared a few weeks after his death. Both are of sterling value, and they were compiled with the minimum of assistance. A nine-inch Cooke equatorial was mounted under Grant's supervision in 1863, and was employed by him for observations of planets, comets, and double stars. He joined the Himalaya expedition to Spain for the total eclipse of 18 July 1860, and from his station near Vittoria watched the disclosure of the chromosphere and prominences, the true nature of which he had been one of the first to infer (*Memoirs Royal Astronomical Soc.* xli. *passim*). He originated in 1861 the electrically controlled time service of Glasgow, and co-operated with Sir George Biddell Airy [q.v. *Suppl.*] in 1865 in determining, by means of galvanic signals, the difference of longitude between Glasgow and Greenwich (*Monthly Notices*, xxvi. 37). The Leonid meteors of 1860 and 1868, the Andromeds of 1872 and 1885, and the ingress of Venus

at the transit of 1882 were observed by him, and formed the subjects of communications to the Royal Astronomical Society. In a letter to the 'Times' of 20 Sept. 1807, he traced the forged Pascal papers to their source in the third edition of Newton's 'Principia.'

Grant died on 24 Oct. 1892 at Granttown-on-Spey. He married on 3 Sept. 1874 Elizabeth Emma Davison of Newcastle, New South Wales, and co. Monaghan, Ireland, by whom he left one son and three daughters. He published translations of Arago's 'Biographies of Distinguished Scientific Men,' 1854, and 'Popular Treatise on Comets,' 1861; and, with Admiral William Henry Smyth [q.v.], of Arago's 'Popular Astronomy,' 2 vols. 1855 and 1858. Many articles by him were inserted in Knight's 'English Cyclopædia,' and he contributed as well to the 'Astronomische Nachrichten,' the 'Comptes Rendus,' and the 'Proceedings of the Philosophical Society of Glasgow,' of which body he acted as president during three years.

[Monthly Notices Royal Astronomical Soc. Hil. 210 (E. Dunkin); Nature, 10 Nov. 1892; Times, 2 Nov. 1892; Royal Soc.'s Cat. of Scientific Papers.] A. M. C.

GRAVES, CHARLES (1812-1899), bishop of Limerick and mathematician, born in Dublin on 6 Nov. 1812, was youngest son of John Crosbie Graves of the Irish bar, chief police magistrate of Dublin, and of Helena, daughter of the Rev. Charles Percival. His early education was received at a private school near Bristol. In 1829 he entered Trinity College, Dublin, and in 1832 was elected to a foundation scholarship, a distinction then given only to classical proficiency. Intended originally for the army, he became an expert swordsman and rider; he played cricket for his university, and later in life did much boating and fly-fishing. In 1834 he graduated as the first senior moderator and gold medallist in mathematics and mathematical physics. In 1836 he obtained the very rare distinction of election to a fellowship on a first candidature. In 1843 he was chosen professor of mathematics in the university of Dublin in succession to James McCullagh [q.v.] He was made dean of the Castle Chapel, Dublin, in 1860, and dean of Clonfert in 1864, and he was appointed bishop of Limerick, Ardfert, and Aghadoe in 1866, being one of the last bishops appointed before the disestablishment of the Irish church. That office he held for thirty-three years until his death.

Having been in 1837 elected a member of the Royal Irish Academy, Graves filled suc-

cessively the offices of secretary of the council and secretary of the academy, and was elected its president in 1861. He was elected a fellow of the Royal Society in 1880, and the honorary degree of D.C.L. was conferred on him in 1881 by the university of Oxford. He died in Dublin on 17 July 1899 at the advanced age of eighty-six. Graves married in 1840 Selina, daughter of Dr. John Cheyne [q.v.], and by her had issue five sons and four daughters.

A monument to his memory in Limerick Cathedral bears a Latin inscription in verse by Professor R. Y. Tyrrell, with renderings in English by the bishop's son, Mr. A. P. Graves, and in Irish by Dr. Douglas Hyde. A portrait, by Miss Purser, was presented by him to the Royal Irish Academy, and an admirable profile medallion, by John Henry Foley [q.v.], belongs to his eldest son.

Graves's manners were characterised by dignified courtesy, and, in his hours of relaxation, by a genial and cordial freedom. His wide culture, keen intelligence, and conversational powers made him a very attractive and agreeable companion. His calm judgment in practical affairs was combined with admirable tact and temper. His liberal feeling towards those who differed from him won for him the esteem of all, especially in his diocese, without distinction of sect or party.

In 1841 Graves published a translation of the two elegant memoirs of Charles 'On the General Properties of Cones of the Second Degree and of Spherical Conics.' In the copious notes appended to this translation he gave a number of new theorems of much interest, which he arrived at principally by Charles's mode of treatment. Probably the most remarkable of these was his extension of the construction of an ellipse, as traced by a pencil which strains a thread passing over two fixed points, by substituting for the points a given ellipse, with which he showed that the locus is confocal. This he deduced from the more general theorem in spherical conics, the latter being arrived at from its reciprocal theorem—viz. if two spherical conics have the same cyclical arcs, then any arc touching the inner curve will cut off from the outer a segment of constant area. Bertrand, in his great treatise on the integral calculus (1864), attributed the foregoing fundamental theorem of Graves to Charles, who had subsequently arrived at it by an independent investigation. In a long appendix to the volume Graves gave a method of treating curves on a sphere corresponding to the Cartesian method on the plane, arcs of great circles taking the place

of right lines. This theory he worked out in detail, supplying formulae for tangents, normals, osculating circles, &c., to spherical curves. This memoir was greatly admired by Sylvester and other distinguished mathematicians, but their high expectations of its fertility have not been fulfilled.

This was the only mathematical work published by Graves. His other investigations were either embodied in his lectures as professor, or in papers read before, and published by, the Royal Irish Academy. During this period Sir William Hamilton, McCullagh, and Humphry Lloyd were also members, and the meetings were often made the occasion of announcing the results of the spirit of scientific investigation which then remarkably prevailed in the university of Dublin.

While Hamilton was explaining in a series of communications his new calculus of quaternions, several contemporary mathematicians were led to conceive more or less analogous systems, likewise involving new imaginaries. Graves proposed a system of algebraic triplets of this kind. It must, however, be said of it, as of the other similar systems, that it could not lay claim to anything like the power of the quaternions, and was not so much a valuable working method as an interesting mathematical curiosity.

Other papers by Graves, published by the Royal Irish Academy, related to the theory of differential equations, to the equation of Laplace's functions, and to curves traced on surfaces of the second degree. For example, he gave an elementary geometrical proof of Joachimsthal's well-known and fundamental theorem—viz. that at all points on a line of curvature of an ellipsoid the rectangle pn is constant, where p is the central perpendicular on the tangent plane, and n is the diameter drawn parallel to the element of the line of curvature. He also gave some very important applications of the calculus of operations to the calculus of variations, and more especially arrived at an elegant and simple demonstration, by the operational method, of Jacobi's celebrated theorem for distinguishing between maxima and minima values in the application of the calculus of variations. Graves had much literary and artistic taste, and to these were largely due the symmetry and elegance, both of method and results, which are marked characteristics of his mathematical work.

On the death of Sir William Hamilton, in 1865, Graves delivered from the presidential chair an eloquent *éloge* upon him containing a valuable account both of his

scientific labours and of his literary attainments. As a member of the academy Graves devoted much time and thought to Irish antiquarian subjects. It is a striking instance of his varied accomplishments that, the death of George Petrie [q. v.] having taken place shortly after that of Hamilton, Graves pronounced an *éloge* on him also, and gave as competent a survey of the archaeological researches of the one as he had given of the scientific investigations of the other. Both these '*Éloges*,' originally printed in the '*Transactions of the Royal Irish Academy*,' were separately published (Dublin, 1866 and 1868).

He studied with special zeal the interpretation of the ogham inscriptions, so numerous in Ireland, and applied to them the accepted methods for the decipherment of writings, known or presumed to be alphabetical, and in this way confirmed the interpretation which is given of these symbols in some of the old Irish books. He thus gave readings and renderings of a number of the inscriptions on cromlechs and other stone monuments. The subject, however, is still surrounded with difficulties, and many archaeologists have been led to the conclusion that the inscriptions are intentionally cryptic, at least in some cases.

Graves, in some '*Suggestions*' published at Dublin in 1851, brought before the government the importance of having the old Irish laws, commonly called the Brehon laws, edited and translated by competent scholars. His suggestion was adopted, and he was appointed a member of the commission charged with carrying it into effect, and held this office until his death.

[Private information; Cotton's *Fasti Ecol. Hiberniæ*, Suppl. p. 33.] B. W.

GRAVES, HENRY (1806-1892), printer, son of Robert Graves (d. 1825), and younger brother of Robert Graves, A.R.A. [q. v.], was born on 10 July 1806. At the age of sixteen he became an assistant of Samuel Woodburn, the art dealer, and later was employed by Messrs. Hurst, Robinson, & Co., the successors of Boydell, as manager of their print department. On the failure of this firm in 1825 Graves, in conjunction with Francis Graham Moon [q. v.] and J. Boys, acquired the business which was carried on with various changes of partnership until 1844, when Graves became sole proprietor; the title of the firm has since been Henry Graves & Co. In the course of an enterprising and successful career, throughout which he was recognised as the leading London printseller, Graves published

an immense number of fine engravings from pictures by Turner, Wilkie, Lawrence, Constable, Landseer, Faed, Frith, Grant, Millais, and other contemporary painters. He specially devoted himself to the reproduction of the works of Sir Edwin Landseer, employing upon the work the best engravers of the day, and paying the artist himself more than 50,000*l.* for copyrights. He also issued valuable library editions of the works of Reynolds, Lawrence, Gainsborough, Liverseege, and Landseer. Graves was one of the founders of the 'Art Journal' and 'Illustrated London News,' an active member of the Printers' Association and the Artists' General Benevolent Fund, and a governor of the Shakespeare memorial at Stratford. He died at his house in Pall Mall, London, on 23 August 1893, and was buried in Highgate cemetery. By his first wife, Mary Squire (*d.* 1871), Graves had two sons, Boydell Graves and Algernon Graves, the latter of whom is chairman of the company to which the business was transferred in 1890.

[Times, 24 Aug. 1892; Athenæum, 3 Sept. 1892; private information.] F. M. O'D.

GRAY, SIR JAMES (*d.* 1773), diplomatist and antiquary, was elder son of Sir James Gray, who was created baronet (of Scotland) by Queen Anne in 1707, and of Hester Dodd, his wife. Horace Walpole said of Gray that 'his father was first a box-keeper and then footman to James II.' In 1744 Gray, who had succeeded his father in the baronetcy, accompanied Robert D'Arcy, fourth earl of Holderness [*q. v.*], to Venice, and remained there as British resident until 1763, when he was transferred to Naples as envoy extraordinary to the king of Naples and the Two Sicilies. In 1761 he was again transferred as minister plenipotentiary to the king of Spain, and was made a knight of the Bath. Owing to the outbreak of war with Spain in that year, he did not take up his residence at Madrid until 1766. He held that post until 1770. He was sworn of the privy council in 1769, and died in London, unmarried, in January 1773.

He was succeeded in the baronetcy by his younger brother, GEORGE GRAY (*d.* 1773), colonel of the 17th foot and major-general in the army, who, however, only survived his brother a few weeks, and died in the following February. Their mother, Hester, lady Gray, survived both her sons, and died in 1783, aged 97. She was buried with her sons at Kensington.

Sir James Gray and General Gray are noteworthy as two of the original founders

of the Society of Dilettanti in 1782, and they were among the leading spirits of the society. General Gray acted as secretary and treasurer to the society from 1788 to 1771, and was well known in society as an amateur of architecture. In 1780, when British resident in Venice, Sir James Gray met, there and made acquaintance with James Stuart (1713-1788) [*q. v.*] and Nicholas Revett [*q. v.*], then just about to start for Athens. Through Gray's influence they were elected members of the Society of Dilettanti, which society thereby became identified with the important works on 'The Antiquities of Athens,' published by Stuart and Revett. At Naples he took a leading part in the discoveries at Herculaneum, and in the whole progress of classical research.

Portraits of Sir James Gray and General Sir George Gray in fancy dress are among the series painted by Knapton, and still in the possession of the Society of Dilettanti. The former was one of the party at the celebrated Calves' Head Club dinner, on 30 Jan. 1784, at the White Eagle tavern in Suffolk Street, which resulted in a street riot, and was converted at the moment into a matter of historical importance.

[Ouse's History of the Society of Dilettanti; Faulkner's History of Kensington; Letters of Lady Mary Wortley Montague.] L. C.

GRAY, JOHN MILLER (1850-1894), art critic and curator of the Scottish National Portrait Gallery, was born in Edinburgh in 1850, his mother dying at his birth. His father, John Gray, who had retired from business, lost nearly all he had saved by the failure of the Western Bank, and Gray had to leave school somewhat early and enter the Commercial Bank. Devoting his leisure to the study of books and pictures and prints, he gradually made a beginning as a critic, writing principally for the 'Edinburgh Courant.' His monograph on George Manson [*q. v.*] in 1880, along with other art criticism, attracted attention, and when the Scottish National Portrait Gallery was founded in 1884 by John Ritchie Findlay [*q. v. Suppl.*], Gray was appointed curator. Throwing himself ardently into the work, for he was devoted to history as well as to art, he did much for the welfare of the gallery. Meanwhile he also extended his literary connection, writing regularly for the 'Academy,' and occasionally for the 'Art Journal' and the 'Magazine of Art,' while after the collapse of the 'Courant' he became art critic on the 'Scottish Leader.' He also contributed much to the 'Encyclopædia Britannica,' 'Chambers's Encyclo-

pedia,' and the 'Dictionary of National Biography.' His interests were very varied; book plates, bookbindings, stained glass, &c., claimed his attention, and he was the originator of the Heraldic Exhibition held in Edinburgh in 1891. He died unmarried in Edinburgh on 22 March 1894. He left practically all he possessed to form a fund for the purchase of portraits for the Scottish National Portrait Gallery. An oil portrait by P. W. Adam and a pencil drawing and a medallion by C. S. Matthew hang in the curator's room in the Scottish Portrait Gallery, and in the 'Memoirs' (published 1895) a caricature by G. R. Halkott and a photograph are reproduced.

In addition to magazine and other articles, and the work already mentioned, he published 'David Scott, R.S.A.' (1882); 'P. W. Nicholson' (with Mr. Baildon) (1887), and 'James and William Tassie' (1894). He also edited 'Clark of Penicuik's Memoirs' (1892) for the Scottish History Society.

[Scotsman, 23 and 28 March 1894; Academy, vol. xlv.; Athenæum (Sir George Scharf), 16 June 1894; J. M. Gray, *Memoirs and Remains*, Edinburgh, 1895.] J. L. O.

GREEN, ALEXANDER HENRY (1832-1896), geologist, born at Maidstone on 10 Oct. 1832, was the eldest son of Thomas Sheldon Green, head-master of the grammar school at Ashby-de-la-Zouche, who had married Miss Derington of Illockley in Leicestershire. After passing through his father's school he went to Gonville and Caius College, Cambridge, where he was admitted pensioner on 25 June 1851, and graduated as sixth wrangler in 1855. Elected a fellow of his college in the same year, he proceeded M.A. in 1858, and resided until he obtained an appointment on the Geological Survey in 1861. Here he worked at first on the jurassic and cretaceous rocks of the midland counties, passing on from them to the carboniferous deposits of Derbyshire, Yorkshire, and the northern counties. In 1874 he left the survey to become professor of geology in the Yorkshire College at Leeds, undertaking also, in 1885, the duties of the chair of mathematics. He was for a time lecturer on geology at the school of military engineering, Chatham. In 1888 he was appointed to the professorship of geology at Oxford in succession to Sir Joseph Prestwich [q. v.], and received from that university the honorary degree of M.A.

Green became F.R.S. in 1862, and received the Murchison medal in 1892. In the last year he was elected honorary fellow of Gonville and Caius College. In 1886 he

was elected F.R.S., and in 1890 was president of the section of geology at the Leeds meeting of the British Association. His strength in this science lay in field work and in certain departments of physical geology where his mathematical knowledge was especially helpful. As a teacher and writer he was remarkably clear. In addition to the duties of his chair he undertook much examining and consulting work; perhaps, indeed, excessive labour shortened his life, for he was most indefatigable and thorough in whatever he took in hand.

In the summer of 1896 he had a paralytic stroke, and died on 19 Aug. at his residence, Boars Hill, near Oxford. He was twice married: in 1860 to Miss Mary Marsden, from the neighbourhood of Sheffield, who died in 1882; and in 1888 to Miss W. M. Armstrong, a native of Clifton, who survived him. One son and two daughters were the issue of the first marriage, and a son and a daughter of the second, all of whom survived their father.

Green's contributions to scientific periodicals were not numerous, but many survey memoirs were written wholly or in part by him, such as those dealing with Banbury (1864), Stockport (1866), Tadcaster (1870), Devensbury (1871), Barnsley (1878), and Wakefield (1879). He also wrote the major part of the memoir on North Derbyshire (1866, with a second edition in 1887), and the geology of the Yorkshire coalfield (1878), which is considered to be the most important memoir from his pen. He contributed to 'Coal, its History,' &c., written by professors of the Yorkshire College (1878), and in 1876 published a 'Manual of Physical Geology,' in which certain branches of the subject were exceptionally well handled (it reached a third edition in 1888), and in 1890 wrote a remarkably lucid little book on 'The Birth and Growth of Worlds.'

[Obituary notice, *Geological Magazine*, 1896, p. 489; *Quart. Journ. Geol. Soc.* 1897, *Proc.* p. li; *Venn's Biogr. Hist. of Gonville and Caius College*, Cambridge; private information.]

T. G. B.

GREEN, SIR WILLIAM KIRBY MACKENZIE (1836-1891), diplomatist, born in 1836 at Nauplia in Greece, was the son of Sir John Green (d. 18 Sept. 1877), consul-general at Bucharest from 1867 to 1874, by his wife Margaret, daughter of George Suter. He was educated abroad and entered the consular service at the age of seventeen. In 1850 he became private secretary to the consul-general for Egypt, and in 1859 became secretary to (Sir) John Drummond Hay [q. v. Suppl.], remaining in the public

service in Morocco for several years. He was vice-consul at Tetuan and acting consul at Tangier, and was engaged upon special missions in the court of Morocco at various times during the next ten years. In 1869 he was transferred to Tunis as acting agent and consul-general, and thence was moved to Damascus in 1871 and to Bahrât in 1873. In 1876 he was promoted to be consul at Sentari, and on 6 Jan. 1879 he became consul-general for Montenegro and the vilayet of Sentari. Here during three eventful years he did work which made his name familiar to the public. He consistently maintained the view that the Turkish government, though in urgent need of reform, was not beyond hope, and that the Christian subjects of the Porte were not faultless. He was frequently consulted by government, his opinions appeared in many blue-books, and he was freely attacked by the anti-Turkish party in England. In 1881 he was created C.M.G. in recognition of his services, and on 1 July 1886 he succeeded Sir John Drummond Hay as envoy to Morocco and consul-general at Tangier.

In Tangier Green's knowledge of oriental languages—in which he was second only to Sir Richard Burton [q. v. Suppl.]—together with his diplomatic ability, gave him great influence with the sultan. He obtained several important concessions from Mulay Hassan, among others the establishment of telegraphic communication between Tangier and Gibraltar, which the sultan had refused for the space of twelve years. On 10 Dec. 1890 he started on a special mission to Morocco to obtain from the sultan compensation for the destruction of the factories of the North-West Africa Company by a party of Bedouin Arabs. He was successful in his mission, but died suddenly at Morocco on 26 Feb. 1891. He was buried at Tangier on 8 March. On 21 June 1887 he was created K.C.M.G. He married in 1863 Mary, daughter of Sir Thomas Reule. By her he had issue.

[Times, 3, 4, 9, 10, and 11 March 1891; Burke's Peerage, 1891.] E. I. C.

GREENHILL, WILLIAM ALEXANDER (1814–1894), physician and author, born at Stationers' Hall, London, on 1 Jan. 1814, was youngest of the three sons of George Greenhill, treasurer of the Stationers' Company. There was a long-standing association of the family with the company, his grandfather having been master in 1783, and his brother Joseph, after serving as treasurer for about sixty years, being elected master in '90. Greenhill received his early education

at a private school at Edmonton, and thence he went to Rugby in 1828, the year when Dr. Arnold became head-master. At Rugby among his chief school friends were A. H. Olough, W. C. Lako, A. P. Stanley, and C. J. Vaughan. He then belonged to the band of Arnold's attached pupils who have spread the traditions and influence of the school over the world. He was the anonymous 'old pupil,' a letter to whom from Arnold is printed in Dean Stanley's *Life* (i. 372, ii. 54, 116). In 1832 he left Rugby with an exhibition, and, after unsuccessfully standing for a scholarship at Trinity College, matriculated there as a commoner on 9 June 1832. At Oxford a renewal of friendship with A. P. Stanley increased his interest in the life and studies of the university, which at first appear to have been distasteful to him (*Stanley's Life and Letters*, i. 125). In 1837 he laid the foundation of his lifelong friendship with Benjamin Jowett [q. v. Suppl.] Having determined to take up medicine as a profession he studied at the Radcliffe Infirmary, Oxford, and visited Paris to acquaint himself with hospital practice there, 1836–7. By this means he gained a full and accurate knowledge of the French language. Although he passed the requisite examinations, Greenhill took no degree in arts, but graduated M.B. in 1839 and M.D. in 1840. He was appointed physician to the Radcliffe Infirmary in 1839, and continued to hold the office until 1861. He then began practice as a physician in Oxford, and lived at 91 High Street. His work in sanitary matters began in 1849, when there was a visitation of cholera at Oxford, and he drew up, for the Ashmolean Society, a series of reports upon the public health and mortality of the city (see *ENGLAND, Memoir upon the Cholera at Oxford in 1854*).

As a parishioner at Oxford of St. Mary's, Greenhill came into association, soon after his settlement in practice, with the vicar, John Henry Newman [q. v.], who appointed him churchwarden, an office which he held at the time when the latter resigned the living in 1843. His personal intercourse with Newman then ceased, although they corresponded on friendly terms (cf. *Letters and Correspondence of Newman*, ii. 477). He was a member of Dr. Pusey's theological society (*Life of Pusey*, i. 387, 410), and was intimate with other leaders in the Oxford movement. He was one of 'the younger liberals' who wished the proctors to exercise their power of veto when the condemnation of Tract No. XC. was proposed in 1845 (*Life and Letters of Dean Church*, p. 61).

While he lived in Oxford his house was a gathering-place for the leaders of thought at the university, and among his close friends were C. P. Edson, W. J. Copeland, C. Marriott, J. B. Morris, and James Bowling Mozley. At this time he turned his attention to the study of Arabic and Greek medical writers. His labours bore fruit in a Greek and Latin edition of the 'Physiology of Theophrastus' (1842), a Latin edition of Sydenham's works for the Sydenham Society (1844); an English translation from this Arabic of Rhazes on the small-pox (1847), in addition to numerous articles in (Sir) William Smith's 'Dictionaries of Greek and Roman Antiquities and Biography' (1842-9).

In 1847 Greenhill worked enthusiastically to promote the election of W. E. Gladstone as member of parliament for the university (BURTON, *Twelve Good Men*, ii. 110). He remained a liberal in politics through life, but he abstained from supporting the party at the election of 1885, through fear of the threatened disestablishment of the church of England, and in 1886, when he disapproved of the home-rule proposals.

In 1851, mainly on account of his health, Greenhill left Oxford and settled at Hastings, taking the practice of James Maclean [q.v.]. Here he became one of the physicians of the local infirmary, and took an active part in the work of various public charities. In 1855 he published 'Observations on the Death-rate of Hastings' in the first volume of the 'Journal of Public Health,' conducted by his friend, (Sir) Benjamin Ward Richardson [q.v. Suppl.] This subject he pursued in a paper on 'Hastings Parish Registers' in the 'Sussex Archaeological Collections,' vol. xiv. (1862). Greenhill's early investigations showed him how unhealthy were many of the dwellings of the labouring classes, and how injurious their condition was to the prosperity of the town, then rising into public favour as a health resort. With a view to remedying some part of the evil, he founded in 1857 the Hastings Cottage Improvement Society, which was worked as a company, and always paid a fair dividend. The society bought up, repaired, and improved, as far as possible, old and insanitary dwellings, besides building new houses upon approved modern principles. He was secretary from 1857 to 1891. So successful was this venture that, with some of the original shareholders, he started a similar organisation, the London Labourers' Dwellings Society, of which also he was secretary from 1862 to 1876. In 1881, on Gladstone's recommendation, he was granted a pension of 60*l.* on the civil list. Greenhill devoted his spare time to the

study of the writings of Sir Thomas Browne [q.v.] After several years of careful preparation he published his edition of 'Religio Medici,' 'Christian Morals,' and 'A Letter to a Friend,' in Macmillan's 'Golden Treasury' series in 1881. This was at once accepted as the standard edition of this book. It was characterised by scholarship and critical acumen, scrupulous accuracy, and loyalty to the author (Professor Saintsbury, in SIR H. CRAIK'S *English Prose Selections*, ii. 313). He contributed an article on the bibliography of the 'Religio Medici' to the 'Bibliographer,' vol. i. No. 6, May 1882. For some time before his death he was engaged upon an edition of Sir Thomas Browne's 'Hydriotaphia' and 'Garden of Cyrus,' at which he was at work on the last evening of his life. It was left unfinished, and being completed by his friend, E. H. Marshall, was issued in the 'Golden Treasury' series in 1896.

Greenhill died at his residence in The Croft, Hastings, after a very short illness, from syncope, on 19 Sept. 1894. He was buried in the borough cemetery on 22 Sept., and a brass tablet has been placed to his memory in St. Clement's, his parish church. In 1810 he married Laura, daughter of John Ward, collector of H.M. customs at West Onver, and niece of Dr. Arnold. By her, who died in 1832, he had three sons and two daughters, of whom a son and a daughter survived him.

Greenhill's principal works are: 1. 'The Physiology of Theophrastus, in Greek and Latin,' London, 1842. 2. 'Prayers for the Medical Profession,' London, 1842. 3. 'Advice to a Medical Student,' London, 1843. 4. 'Advice to a Patient in a Hospital,' pts. i. and ii., London, 1843. 5. 'Sydenham's Works in Latin' (Sydenham Soc.), London, 1844. 6. 'Life of Sir James Stonhouse,' London, 1844. 7. 'Life of Thomas Harrison Burdett, M.D.,' London, 1845. 8. 'Rhazes's Treatise on the Small-pox,' translated from the Arabic into English, London, 1847. 9. 'Ἀπὸ τοῦ οὐρανοῦ: Bread from Heaven: Scripture Texts for every day in the year, in Greek and English, 1872. 10. 'A Form of Prayer to be used on the opening of a new House, or Block of Buildings,' London, 1873. 11. 'A Classified List of the Charitable Institutions of Hastings and St. Leonards,' Hastings, 1873. 12. 'The Contrast: Duty and Pleasure, Right and Wrong,' Hastings, 1874; 6th edit., London, 1893. 13. 'Sir Thomas Browne's Religio Medici, Letter to a Friend, &c., and Christian Morals,' London, 1881. 14. 'Sir Thomas Browne's Hydriotaphia and the Garden of Cyrus,'

London, 1896. To this Dictionary he contributed many articles.

GREENWOOD, JOSEPH GOUGE (1831-1894), principal of the Owens College, Manchester, born in 1821, was the son of the Rev. Joseph Greenwood, a congregationalist minister at Petersfield, Hampshire, and his wife Maria, whose maiden name was Gouge. At the age of fourteen he was sent to University College school, London, of which Thomas Howitt Key [q. v.] and Henry Malden [q. v.] had recently been appointed joint head-masters. Thence he proceeded to University College, London. In 1840 he graduated B.A. in the university of London, with honours in both classics and mathematics, gaining the university scholarship in the former subject of examination.

A year before this his father had died, leaving the young student responsible for a family of six younger children. For several years he supported himself and others by private tuition, and after a time as an assistant master in his old school; during an interval he acted as substitute for Henry Malden in the Greek chair at University College. In his day he had few superiors in London as a private tutor in the classical languages and literature. One of his earliest pupils was Edward A. Leatham, who dedicated to him his striking 'Tale of the great Athenian Revolution—Churimious' (1859). Greenwood had no time himself for the luxuries of authorship; but to this period of his life must have belonged his translation of the 'Pneumatics of Hero of Alexandria', edited by Bennett Woodcroft [q. v.] (1851), and the first plan at least of his 'Elements of Greek Grammar' (1857), an attempt to supplement Howitt Key's application of the 'crude-form system' to Latin grammar by compiling Malden's fragmentary Greek grammar designed on the same principles.

In 1850 Greenwood accepted the offer of the chair of classics and history in the newly founded Owens College at Manchester [see (OWENS, JOHN)]. He thus became associated at the beginning of its career with this important seminary of higher instruction, whose ultimate success was largely owing to his perseverance and devotion.

At first the college failed to establish a hold upon Manchester and its district, and in July 1857, when its fortunes were almost at their lowest ebb, Greenwood was appointed to the principalship on the resigna-

tion of this post by Alexander John Scott [q. v.] Greenwood continued to lecture, but soon after his appointment as professor the subject of history had been detached from his chair and assigned to Richard Copley Christie [q. v. Suppl.]; Latin and classical Greek were later transferred to separate professors; and during the last few years Greenwood retained only the teaching of Greek Testament criticism. His teaching of this subject (afterwards commemorated by the endowment of a Greenwood Greek Testament lectureship in the college) was, in accordance with the system of the college, as well as with his own disposition as a teacher, essentially confined to textual criticism. His private opinions were through life those of an orthodox but liberal churchman.

In the earlier years of the college Greenwood advocated much change in the system of college teaching, in order to recommend it to Manchester business men. In 1853 he had taken an active part in opening classes for the schoolmasters of primary schools; and having in 1858 become honorary secretary of a working-men's college on the same lines as that of the London college, opened a few years earlier under the influence of Frederick Denison Maurice [q. v.], he was instrumental in bringing about its amalgamation, in 1861, with Owens College, of which for a long time to come it formed an important department. Within the next few years a tide in public opinion and sentiment at last set in at Manchester, which justified the foundation, in the midst of a busy industrial community, of a place of learning and research, educationally equal to university requirements. This growth of public interest and confidence in the college was largely due to the scientific teaching of Sir Henry Roscoe and his colleagues; but great credit belongs to Greenwood for consistently maintaining a due balance between the claims of the older and those of the newer branches of academic study. In these endeavours he was entirely at one with Alfred Neill, who during the greater part of his principalship presided over the governing body of the college. In 1867-71 a new era in the history of the college began with the movement for its extension, in which, with Thomas Ashton and others, Greenwood took a prominent part. The results were 'the rebuilding of the college on a new site and scale, the entire reconstituting of its constitutional and administrative system, an extraordinary development of its facilities for instruction and research, and something like a trebling of its financial resources.' On the opening of the new college buildings in 1873 the principal delivered

an address 'On some Relations of Culture to Practical Life' (printed in 'Essays and Addresses by Professors and Lecturers of the Owens College,' 1874). In 1872 the Manchester Medical School was incorporated with the Owens College, after negotiations in which Greenwood displayed much tact; and two years later the new medical buildings of the college were opened.

The most important events in the history of the college during the later years of Greenwood's official life were the admission of women students into the college and the foundation of the Victoria University. He was no friend in principle to conducting the higher education of women on the same lines as that of men, and objected (at all events as a rule) to joint or mixed classes. Thus he exercised a restraining influence upon the settlement of the question at Manchester; but he was fully awake to the fact that when the new Victoria University had opened its degrees to all comers without distinction of sex, women students could not be denied the necessary facilities for gaining them. So far as the departments of arts and sciences were concerned, this was to a very large extent accomplished during his principaship. Into the spirit of the foundation of the Victoria University he from the first loyally entered, taking a chief part in the negotiations which in 1880 ended in the grant of a charter on federal principles, the Owens College, however, remaining for four years the only college of the university. He became its first vice-chancellor, holding the office till 1886 for three successive periods of two years, and warmly interesting himself in the determination of the examinations and courses of study in the university, which largely occupied its earliest years. His caution at times conflicted with the more boldly progressive policy upheld by the majority of his colleagues; but when the Victoria University became federal in fact by the admission of Liverpool University College and Yorkshire College, Leeds, &c, with great circumspection, guarded the interests of Owens College. Towards the close of 1889, owing to failure of health, he resigned the principaship which he had held for thirty-seven years. Shortly afterwards he settled at Eastbourne, where he occupied himself with literary pursuits, including a revision of the text of Wordsworth, his favourite author through life. He died at Eastbourne on 25 Sept. 1894.

In 1873 the university of Cambridge, whose chancellor, the seventh Duke of Devonshire, was also chancellor of the Victoria University and president of the Owens

College, conferred on Greenwood the honorary degree of LL.D., and in 1884 the university of Edinburgh, on the occasion of its tercentenary, bestowed upon him a similar honour. He was twice married: first, to Eliza, the daughter of John Taylor, a unitarian minister in Manchester, by whom he left two daughters; and secondly to Katharine, daughter of William Langton, manager of the Manchester and Salford Bank at Manchester. A portrait of him, by F. A. Partington, is in the Owens College.

GREENWOOD, THOMAS (1790-1871), historian, born in 1790, was the second son of Thomas Greenwood, a London merchant. He was educated at St. John's College, Cambridge, graduating B.A. in 1815 and M.A. in 1831. He entered Gray's Inn on 14 March 1809, and was called to the bar on 24 June 1817. He was appointed fellow and reader in history and polite literature in the university of Durham, and in 1836 he published 'The First Book of the History of the Germans: Barbaric Period' (London, 4to), in which he carried the history of the German races from the earliest times down to 772 A.D. This immense work was the result of prolonged labour. Its great bulk and the obscurity of the subject prevented it from being widely known, but it has frequently proved a storehouse to succeeding historians.

In 1837 Greenwood was chosen bencher of Gray's Inn, and from 1841 to 1842 he filled the office of treasurer. His work on the early history of the Germans led him to make researches into the history of the Roman patriarchate, and eventually led to the publication between 1856 and 1865 of the five volumes of his 'Cathedra Petri: a Political History of the Great Latin Patriarchate' (London, 8vo), in which he carried the history of the papacy to the close of the pontificate of Innocent III. The work was overshadowed by Dean Milman's brilliant history of Latin Christianity (1855), but its thorough system of references must always give it value. While Milman wrote for the general student, Greenwood addressed himself to the medieval scholar (cf. *Saturday Review*, 31 March 1860). Greenwood died at

14 Westbourns Terraces, Hyde Park, London, on 1 Nov. 1871.

Besides the works mentioned he was the author of 'Position and Prospects of the Protestant Churches of Great Britain and Ireland with reference to the proposed establishment of a Roman Hierarchy in this Country,' London, 1851, 8vo.

GREGG, ROBERT SAMUEL (1834-1896), archbishop of Armagh, second son of John Gregg [q.v.], was born at the rectory, Kilsallaghan, co. Dublin, of which parish his father was then rector, on 3 May 1834. He was educated at Trinity College, Dublin, where he graduated B.A. with honours in 1857, and proceeded M.A. in 1860. In the same year Gregg was ordained for the curacy of Rathcooney, co. Cork, and three years later was appointed incumbent of Christ Church, Belfast, an important cure which brought him in touch with the working-class population of the north of Ireland. In 1863 he returned to the diocese of Cork as rector of Frankfield and chaplain to his father, then bishop, and in 1866 became rector of Carrigrohane and precentor of St. Finn Barro's Cathedral, Cork. Here he quickly acquired a high reputation for administrative ability, as well as for the qualities of sound judgment, moderation, and good sense by which he was subsequently distinguished in the episcopal office. In the controversies which followed the disestablishment of the Irish church, particularly in regard to the revision of the prayer-book, Gregg took the conservative side, but his influence was uniformly exerted in a conciliatory spirit. Gregg's principal service to his church at this time lay in devising for his own diocese of Cork the singularly successful financial plan which became the foundation of the financial system of the disendowed church of Ireland, and on this and other occasions he showed a remarkable talent for finance. In 1873 he was presented by the university of Dublin with the degrees of B.D. and D.D., in recognition of his services to the church of Ireland.

In 1874 Gregg was appointed dean of Cork, and in the following year was selected by the Irish bishops to succeed Bishop O'Brien in the diocese of Ossory, Ferns, and Loughlin. Gregg, at forty-one years of age, thus became a member of the episcopal bench while his father was still bishop of Cork. On his father's death on 26 May 1878, the synods of Cork, Cloyne, and Ross at once

selected Gregg to succeed him. As bishop of Cork, Gregg's most noticeable work lay in the completion of the beautiful cathedral of St. Finn Barro, which had been rebuilt during his father's episcopate at a cost of over 100,000*l.*; but he also won a deserved reputation not only for administrative efficiency, but for a statesmanlike grasp of church problems which opened the way to the highest office in the Irish church. On the death in 1893 of Primate Robert Bent Knor [q.v. Suppl.], Gregg was selected to succeed him as archbishop of Armagh and primate of all Ireland. He died at the Palace, Armagh, on 10 Jan. 1896, after scarcely two years' enjoyment of the primacy.

Gregg was not especially remarkable either for theological learning or for pulpit eloquence, and in the latter respect, as also in the staid deliberation of his demeanour, presented a marked contrast to the ardent temperament and impetuous eloquence of his father. But he possessed, in addition to marked administrative capacity and practical sagacity in affairs, that sort of silent and reserved power which enables some men to exercise all the authority of a leader without appearing to load. His influence in the general synod of the church of Ireland was at all times remarkable. Gregg was married in 1863 to Elinor, daughter of John Hugh Bainbridge of Frankfield House, Cork, by whom he had two children, both of whom survived him—John William Gregg, Causestown House, Athlery, co. Monagh, and Amy Elinor, wife of Canon R. Walsh, D.D., rector of Donnybrook. She died in 1893. A portrait of Gregg by Staples is in the Palace, Armagh, and another, posthumously painted, in the Palace, Cork. A memorial window was placed in Armagh Cathedral.

C. L. F.

GREGG, WILLIAM (d. 1708), conspirator, of Scottish origin, was in all probability the son of William Gregg, British envoy to Denmark, who died towards the close of 1701, and was succeeded at Copenhagen by James Vernon (d. 1756), eldest son of Secretary James Vernon [q.v.]. Vernon appears to have taken the young Gregg into his service as secretary, but had to dismiss him, according to Burnet, 'for his ill qualities.' Nevertheless, when Robert Harley became secretary of state in 1706, he not only appointed Gregg to an underclerkship in his office, but extended to him an exceptional amount of confidence. That at any rate was one explanation; another was that Harley's office was always in a state of the most complete disorder, and that papers of

the gravest import were open to the inspection of every clerk, doorkeeper, or laundress in the establishment. When, at the close of 1707, the antagonism between Godolphin and Harley was at its height, and the whigs were intriguing to exclude the latter from the council, intelligence came from the postmaster at Brussels that a packet of letters from the secretary's office, addressed to the French minister, Chamillart, had been opened upon advice received, and had been found to contain copies of important state papers; a covering note indicated that the copies were sent by Gregg. Gregg was arrested on 1 Jan. 1708, was examined by Sunderland on 3 Jan., and forthwith committed to Newgate. He was tried at the Old Bailey on 19 Jan. for correspondence with France, pleaded guilty, and was sentenced to death. The culprit pleaded in extenuation poverty and debt, but swore positively that he had no participator in his crime. The whig leaders, however, eager to obtain matter against Harley, were in great hopes that the unfortunate man would say something to convict his chief of complicity. The House of Lords formed a committee of seven to examine Gregg, and placed upon it Somersot and two other dukes, besides Wharton, Townsend, Halifax, and Somers. The committee went to Newgate on 7 Feb., and informed Gregg that if he would make a full confession he might rely upon the intercession of the house.

In spite of the temptation thus dangled before him the poor fellow adhered manfully to the truth of his first statement. The committee had the cruelty to keep the condemned man in suspense for three months. At length, in bitter disappointment at making no other discovery than that the business of the secretary's office was conducted in a strangely lax manner, they sent the queen a recommendation that the execution should take place. Gregg was hanged at Tyburn on 28 April 1708, and, having been quartered, his head was placed on Westminster Hall. Before he met his fate he delivered a paper to the ordinary, in which he solemnly exculpated Harley from all participation in his offence. He also left a letter, the contrite tenor of which was warmly commended by Hearne. Harley, though he found it necessary during the second week in February 1708 to resign his secretaryship, had the generosity to allow the widow a pension of fifty pounds annually out of his private purse.

T. S.

GREGORY, WILLIAM (1766-1840), Irish under-secretary, was the youngest of three sons of Robert Gregory, a member of a family sprung from an offshoot of the Gregorys of Styvechale Hall, Coventry, who came to Ireland with Cromwell and settled in Tipperary. His father, Robert Gregory (1727-1810), himself a man of some mark, was chairman of the East India Company for three months in 1782, and member of parliament for Maidstone from 1768 to 1774, and for Rochester from 1774 to 1784; there is a portrait of him by Dance at the family seat, Coole Park, co. Galway, and a bust by Nollekens (*Genl. Mag.* 1810, ii. 385).

William Gregory was born in 1766 and educated at Harrow and at Trinity College, Cambridge, where he graduated B.A. in 1783 and M.A. in 1787. On 16 May 1781 he was admitted student of the Inner Temple. In the Irish parliament of 1798-1800 he appears to have sat for Portlington (*Off. Rst.* ii. 690), and he served as high sheriff of co. Galway in 1799. Though it does not appear that he had had any previous official training, Gregory was appointed in October 1812 civil under-secretary to the lord-lieutenant of Ireland (LASCELLES, *Lib. Mun. Hib.* iii. 106). There was at this time a military under-secretary as well, but in 1821 the two offices were united, Gregory holding both for ten years. In this position he enjoyed great authority as the confidential adviser and close friend of successive viceroys and chief secretaries; was described by friendly critics as 'the dry nurse' of young English statesmen; and was credited by O'Connell and other hostile critics with being the real ruler of Ireland. He was on terms of warm intimacy with Sir Robert Peel during that

statesman's long tenure of the chief-secretaryship, and, down to the date of Peel's conversion on the question of Roman catholic emancipation, was his chief adviser on Irish affairs. During the greater part of Lord Liverpool's premiership Gregory's influence at Dublin Castle was supreme, but after the retirement of his friend William Saurin [q.v.] from the attorney-generalship his authority gradually waned. In 1827, when Lord Anglesey became viceroy in Canning's administration, it was thought inexpedient to continue Gregory in office. His resignation was culled for, and was actually placed in the lord-lieutenant's hands, and in anticipation of his retirement Gregory was created a member of the privy council, besides receiving the offer of a baronetcy, which he declined. But Canning dying before his successor could be appointed, and 'the transient and unbarrassed phantom' of Lord Goderich [see ROBINSON, FRANKRICK JOHN] vanishing before any fresh arrangements had been made, Gregory retained his office four years longer. On the return of Lord Anglesey, however, Gregory's career was quickly closed. He was removed from office in December 1831, and retired from public life.

In addition to his office of under-secretary Gregory held from October 1812 the post of ranger of the Phoenix Park, in which his official residence was situated. Gregory died there on 13 April 1840. He married in 1789 Lady Anne Tranch (d. 1833), daughter of William Power Keating, first earl of Clanmarty; by her he left issue two sons, Robert, father of Sir William Henry Gregory [q.v. Suppl.], and William, rector of Kildown.

'Though not at all a brilliant man, Gregory possessed many high qualities—excellent judgment, sound sense, attention to business, and great clearness and accuracy in his transaction of it. . . . Few people have been more popular in Ireland during so long a period of great poverty. Though a tory of the tories, he was not disliked by those who differed from him in politics' (*Autobiography of Sir William Gregory*). His correspondence from 1813 to 1835 is preserved at his seat, Coole Park, co. Galway. A selection from these papers was published by Lady Gregory in 1898, under the title of 'Mr. Gregory's Letter-box.' This volume, besides exhibiting Gregory in the guise of an able, shrewd, and conscientious adviser of the Irish government, throws much light on a period of Irish history hitherto very imperfectly illuminated.

[Mr. Gregory's Letter-box, 1898; *Autobiography of Sir William Gregory*, 1894; *Graduate Cantabr.* 1859-1823; *Cont. Mag.* 1810, i. 668; *Correspondence of Sir Robert Peel*, vol. i, 1891;

Correspondence of Daniel O'Connell, 1868; *Recollections of Lord Cloncurry*, 1840; *Burke's Landed Gentry*; information from G. E. Latton Pickering, esq., of the Inner Temple.]

C. L. F.

GREGORY, SIR WILLIAM HENRY (1817-1892), governor of Ceylon, was the only son of Robert Gregory of Coole Park, co. Galway, by Elizabeth O'Hara of Raheen in the same county. He was born on 12 July 1817 at the under-secretary's lodge, Phoenix Park, Dublin, the residence of his grandfather, William Gregory [q.v. Suppl.] As a very small boy he made the acquaintances of Richard Colley, Marquis Wellesley [q.v.], during his Irish viceroyalty, and enjoyed the affectionate friendship of that statesman, many of whose letters are printed in Gregory's autobiography. Gregory was educated first at Mr. Ward's school at Iver, Buckinghamshire, and afterwards at Harrow, where he entered in 1831 under Charles Thomas Longley [q.v.], who considered him the cleverest boy he ever had under him. He gained the Peel scholarship, and was head of the school before leaving for Oxford. At Christ Church, whence he matriculated on 6 June 1835, he was less fortunate, running second for the Craven scholarship in two successive years. Owing partly to ill-health, he left Oxford without a degree. But he had laid at school the foundation of a brilliant scholarship, and he was conspicuous among his contemporaries in parliament for his intimate knowledge of the classics.

Leaving Oxford in 1840 Gregory travelled abroad with his parents for some time. He had up to this time taken no serious interest in politics; but in the spring of 1842 he was induced to stand as the conservative candidate for Dublin, and was returned by a large majority, defeating Viscount Morpeth (afterwards the popular viceroy and Earl of Carlisle). The election cost 9,000*l.*, of which the chief item was a 'gratification for 1,500 freemen at 3*l.* a head.' Though fortunate in being returned at five-and-twenty for so important a constituency, Gregory was obliged to give pledges to the extreme conservative and Orange party, which were inconsistent with his real convictions, and by which he subsequently felt himself considerably hampered. Notwithstanding that his attention to politics was at first rather spasmodic, Gregory was soon looked on as among the promising young men of his day in the House of Commons. He was popular with all parties and attracted the attention and regard of men so different as Peel, Disraeli, and O'Connell. He supported Peel on the Maynooth grant and in his corn-law

policy; and shortly before Peel's loss of office in 1846 was offered by the premier the Irish lordship of the treasury, with the conduct of Irish business in the House of Commons, in the temporary absence of Henry Pelham Fiennes Clinton, Lord Lincoln (afterwards Duke of Newcastle [q. v.]), then chief secretary, from parliament. Gregory was persuaded by his friends, who feared the charge of unprincipled office-seeking, to refuse this offer, a decision he always deeply regretted, and which had an unfortunate influence on his subsequent career. After Peel's overthrow Gregory remained in nominal opposition to the ministry of Lord John Russell, but his sympathies were becoming more and more liberal. He took an active part in February 1847 in the discussion of the Poor Relief Act, designed by the Russell ministry to mitigate the misery caused in Ireland by the potato famine, and was the author of the 'Gregory clause,' which was intended to prevent the abuse of the act by disentitling the possessor of more than a quarter of an acre of land to eleemosynary assistance. He also procured the insertion of provisions for assisting emigration. At the general election of August 1847 Gregory found that his liberal tendencies had alienated many of his old supporters, and he failed to secure re-election. He was then nominated for his native county of Galway, but, being insufficiently supported, withdrew his candidature, and for ten years made no further attempt to enter parliament. In 1849 he was appointed high sheriff of Galway.

For the next six years Gregory devoted himself almost exclusively to the turf, for which he had early evinced a passion, and where he had won in his twenty-second year as much as 5,000*l.* on Coronation's Derby. By 1853 he was obliged to sell two-thirds of the fine estate of 7,000*l.* a year, to which he had succeeded on the death of his father in 1847. He visited Egypt in the winter of 1856-60 and Tunis two years later. He printed privately in 1859 a narrative of both these journeys, in two volumes. After this financial breakdown Gregory finally quitted the turf; but he retained his interest in racing matters to the close of his life. Not long before his death he contributed to Mr. Lawley's 'Racing Life of Lord George Bentinck' (1892) a number of interesting reminiscences of his career on the turf; and the editor, who appended to his account of Bentinck two valuable chapters on Gregory's racing career, laments that Gregory, 'who knew the turf and all its intricacies as well as Sir Walter Scott's "William of Deloraine" knew the passes and fords of the Scottish

border,' and 'possessed the literary ability and keen insight into character requisite for the task,' could not be prevailed upon to write a history of the turf.

At the general election of 1857, his affairs being by this time put in order, Gregory was returned as a liberal-conservative and supporter of Lord Palmerston for co. Galway. He was re-elected for the same constituency at two successive general elections, and continued to represent it until 1871. During this second period of his active political life Gregory acquired a distinguished position in the House of Commons. Down to 1865 he ranked as a liberal-conservative, but after the death of Lord Palmerston, to whose views his own approximated more closely than to those of any other statesman, he formally joined the liberal party; and on Earl Russell's accession to the premiership in 1866 was offered office as a lord of the admiralty in the liberal government. This he declined for private reasons. He was, however, opposed to the wide extension of the franchise, and joined the celebrated Cave of Adullam [see HORSMAN, EDWARD; LOWN, ROBERT] in opposition to Russell's reform bill of 1866. He subsequently supported Gladstone in his Irish church disestablishment measure and in his Land Act of 1870. Gregory held pronounced views on the subject of Irish agrarian legislation, and in 1866 introduced a measure which anticipated in some of its clauses the provisions of the Land Acts of 1870 and 1881. But it was in reference to matters connected with the relations between the state and art that Gregory was best known in parliament. In 1860 he initiated a House of Commons inquiry, over which he presided as chairman, into the accommodation at the British Museum, and subsequently had much to do with the arrangement and development of the South Kensington collections. He was an ardent supporter of the opening of public museums on Sundays, took a keen interest in popularising the study of the arts, and for several years was regarded as the principal authority in the House of Commons on matters of this sort. In 1867 he was appointed a trustee of the National Gallery, on the recommendation of Disraeli, whose regard, in spite of political disagreement, Gregory always retained. Thenceforward he took the keenest interest in the development and enlargement of the national collection, a task for which his fine and cultivated taste well qualified him. Shortly before his death he presented the gems of his private collection of pictures to the National Gallery.

In 1871 Gregory was appointed, on the

recommendation of Lord Granville, governor of Ceylon, having been sworn a member of the Irish privy council early in the same year, and in January 1872 sailed for that dependency, in which he remained for over five years. In this position Gregory exhibited the highest administrative qualities, and his tenure of the governorship was one of uninterrupted success. He 'spent more money on reproductive works than any other governor, doing much to stimulate the cultivation of coffee and tea, and to improve the harbours of the island.' He was also active in restoring the architectural remains of the ancient Kandyan kings. In 1876 he received the prince of Wales in Colombo on the occasion of his visit to India, and was made K.C.M.G. A statue of Gregory stands before the museum at Colombo. In 1877 he resigned his office and returned to Ireland. Thenceforward Gregory took no active part in public affairs, though his interest in them remained keen. As an Irish landlord he approved Gladstone's Land Act of 1881. But he was stoutly opposed to the home-rule movement; and in 1881 he printed privately a 'Confidential Letter,' in which he combated the separatist aims of Parnell and his followers. He had, however, a deep sympathy with oppressed nationalities, and with most aspirations for local independence. He was in favour of the recognition of the independence of the southern states during the American civil war; and in 1882 he advocated the cause of Arabi Pasha in letters to the 'Times.' Subsequently to his retirement from the Ceylon government he paid three visits to that island. In 1889 he contributed to the 'Nineteenth Century' an article on Daniel O'Connell, whom he had known well in early life. After 1890 Gregory's health gradually failed, and he died at St. George's Place, London, on 6 March 1892, from the effects of a chill contracted when attending a meeting of the trustees of the National Gallery.

Gregory was twice married: first, in January 1872, to Elizabeth, daughter of Sir William Olay and widow of James Temple Bowdoin, a lady possessed of considerable private fortune, who died in 1873; secondly, on 2 March 1880, to Augusta, youngest daughter of Dudley Perse of Roxborough, co. Galway, who survived him with one son, William Robert Gregory.

Gregory was a man of great natural abilities, real political talent, and marked personal charm, who, but for a certain inherent instability, might easily have attained to the most eminent political positions. He was an excellent landlord, and enjoyed through

the worst phases of Irish agrarian agitation the regard of his tenantry and the goodwill of all classes of his countrymen.

The main authority for Gregory's career is his autobiography, written in his retirement between the years 1884 and 1891, and published in 1894 by Lady Gregory. The portrait prefixed to that work conveys a somewhat erroneous impression of his figure, which was slight and delicate, though his head was massive.

[Sir William Gregory, K.C.M.G.: an Autobiography, 1894; Burke's Landed Gentry; Men of the Time for 1891; obituary notices in Times, 8 March 1892; F. B. Lawley's Racing Life of Lord George Bentinck; Ferguson's Ceylon in the Jubilee Year.]

C. L. F.

GREY, SIR GEORGE (1812-1898), governor of South Australia, of New Zealand (twice), and of Cape Colony, and prime minister of New Zealand, was only son of Lieutenant-colonel Gray of the 90th foot regiment, and was born on 12 April 1812 at Lisbon. Eight days previously his father, who commanded a division of the storming party at the fall of Badajoz, was mortally wounded in the third assault there. The Grey family, to which this officer belonged, and which carried on a banking business in London, was a branch of the Greys of Groby, now represented in the peerage by the Earl of Stamford. Young George Grey was educated at Sandhurst. A college friend describes him there as 'a bright, rosy-cheeked subaltern, A 1 at mathematics, fortifications, military survey, languages, and general knowledge.' He was granted a commission in the 83rd foot in 1829, a lieutenantancy in 1833, and a captaincy in 1839. In the last-named year he sold his commission and left the army. While a subaltern he was for four years quartered in Ireland, where the distress and discontent of the peasantry made an impression on his mind deep enough to affect his aims and policy when governor and colonial reformer in after years. In 1836 Grey volunteered to explore the north-western coast of Western Australia. The Royal Geographical Society accepted his offer, and with a friend, Lieutenant Lushington, he landed near Hanover Bay in December 1837. Utterly ignorant of the Australian climate and natives, they began their journey in midsummer, and the party suffered great hardships from heat and thirst, and in struggling over burning rocks and among broken scrub-covered gorges and hillsides. They discovered a river and some fairly useful country; but in a skirmish with a tribe of aggressive blacks, Grey was speared in the hip, and though he shot his assailant and put the other natives to flight, the wound was

severe enough to force him to abandon the expedition. A voyage to the Mauritius restored his strength, though for the rest of his life the spear wound troubled him. Still bent on exploration, he sailed from Perth in 1839 with thirteen men and three whale-boats to explore the west coast north and south of Shark's Bay. The party was well equipped, yet met with even greater disasters than the first expedition. After discovering the Gascoyne River they found that the bulk of their stores, which had been placed on an islet off the shore, had been spoiled by a hurricane. When they endeavoured to return to Perth by sailing along the surf-beaten coast, want of water forced them to try to land through the breakers. Both boats were wrecked. With but a little salt meat, damaged flour, and arrowroot left, the party started on 2 April to march on foot three hundred miles to Perth. Grey walked into the town alone on the 21st, so haggard that friends did not recognise him. The whole of his company had either flagged or lain down by the way utterly exhausted, though all but one were saved by rescue parties promptly sent to search for them.

The courage, endurance, and humane care for followers and natives, which were the best qualities displayed by Grey in these unlucky journeys, recommended him to Lord John Russell as the right man for the difficult post of governor of South Australia. That colony had been founded in 1836; yet, owing to mismanagement and a partial and blundering application of Gibbon Wakefield's land theories, its settlers in 1841 were still crowded in and near Adelaide, where they had been idling, bickering, speculating in town lots, entertaining one another with champagne and tinned meats and preserved vegetables, and producing next to nothing. To provide employment, Grey's predecessor, Colonel Gawler, had erected a costly viceregal residence and public offices, and, to meet this and other outlay, had drawn bills on the imperial treasury, which were dishonoured. By rigid economy Grey, who took the reins in May 1841, reduced the colony's expenditure, which had been 170,000*l.* the year before, to 30,000*l.* in 1843, and drove the townspeople to the work of cultivating the land. His life was threatened and his household boycotted, but gradually his firmness prevailed. The home government lent the colony some necessary moneys, and the settlers began to grow food. The discovery of copper at Burra Burra and elsewhere made an end of depression, and when in October 1846 Grey was shifted to New Zealand, it could be claimed that the clouds had passed away

from South Australia, and that in no small degree his good sense and resolution had brought about the change. He had shown humanity to the aborigines, interest in education, and opposition to religious ascendancy.

An even harder task awaited him. In New Zealand the mistakes and misfortunes which had marked the birth of South Australia had been repeated, and to them had been added an unsuccessful war with a portion of the native race. The troops in the colony were but a handful, and the warlike Maori tribes, if united, could have swept the settlers into the sea. Grey reached Auckland in November 1845 to find confusion and despair. The colonial office, however, supplied him with the men and money which they had withheld from his predecessors, and the capture of the pa (stockade) of the insurgent chiefs, Heké and Kawiti, soon gave peace to the most disturbed districts, though petty hostilities dragged on for some two years in the Wellington province. Grey cleverly seized the well-known chief, Rauparaha, believed to be secretly the instigator of strife, and detained him in honourable captivity. By employing the natives on wages at road making, by ostentatiously honouring friendly chiefs, by discountenancing land-grabbing, and encouraging industry among the Maori, Grey was able to gain remarkable influence over the race. He purchased large areas of their land for settlement, but refused to sanction any infraction of their treaty rights. It was partly for this last reason that he took the responsibility of refusing to put into force the constitution sent out to him from Downing Street in 1848, under which self-government was to be granted to the New Zealand colonists. Though the settlers resented this, they prospered under Grey's autocratic rule, which lasted until December 1853, when he was sent to govern Cape Colony. Before departing from New Zealand he shared in drawing up the free constitution finally granted to that colony, a feature of which was the establishment of six provinces with large local powers. He was made K.C.B. in 1848.

In Cape Colony Grey was successful in averting a Kaffir invasion on a large scale by capturing certain of the chiefs in a fashion somewhat similar to the seizure of Rauparaha. Afterwards, when starvation and disease had broken the strength and spirit of the Kaffir tribes, he dealt kindly with them and gained their confidence. At the same time he strengthened and extended the colony by the introduction of the German legionaries and other German settlers. To aid this work he twice pledged his private credit, a step

he had also once taken to complete an important land purchase in New Zealand. By the Dutch also he was liked and trusted, so that in 1858 he successfully mediated between the Free State Boers and the Basutos, and in the same year was able to inform the Cape parliament that the Volksraad of the Orange River Free State had passed resolutions in favour of federation with Cape Colony. Unhappily the colonial office, of which young Lord Carnarvon was then political under-secretary, feared South African union, and took umbrage at Grey's encouragement of it without official permission. Lord Carnarvon, in his own words, thought Grey a dangerous man. In June 1859 the colonial secretary, Sir Edward Bulwer Lytton, recalled him in a despatch which, however, recognised his abilities, endowments, and lofty aims. Grey always asserted that Queen Victoria protested against his dismissal and approved of his South African policy. Much exasperated he returned to England, after quitting Cape Town amid general expressions of esteem and regret. Before he reached home, however, the Derby ministry had fallen, and the Duke of Newcastle coming to the colonial office reinstated Grey, albeit with instructions to abandon his federation policy.

A creditable episode in Grey's South African service was the vigour and promptitude with which he sent help to India in the crisis of the mutiny. A despatch sent him from Lord Elphinstone at Bombay apprised him of the outbreak. He at once sent off two batteries of artillery, a large quantity of military stores, 80,000*l.* in specie, and as many horses as he could collect. He also induced Colonel Adrian Hope, when with the 93rd regiment he put in at Cape Town on his way to Singapore to join Lord Elgin in the Chinese war, to divert his voyage to Calcutta. Grey afterwards sent a detachment of the German legion to India, and emptied his own stables in his efforts to provide horses for the East. In his anxiety to send help to India he did not hesitate to weaken the defensive strength of Cape Colony; but by personal visits and appeals made to the more powerful Kaffir chiefs he so wrought upon them that they refrained from taking any advantage of the position. Among the journeys he took for this purpose was one into Basutoland, where he conferred with the celebrated Moshesh in his hill fortress, Thaba-Bosigo.

In 1861 the colonial office for the fourth time sent Grey to fill a post of exceptional difficulty. For seven years after his departure from New Zealand peace had been main-

tained there. But the relations of the whites and Maori grew slowly more and more strained. The natives formed a league to oppose further sales of land, elected a king, and were carelessly allowed to buy guns and gunpowder. In 1860 war broke out over the sale of a piece of land at Waitara in Taranaki. After a year of fighting a truce was patched up, but the situation was full of danger, and Grey was sent to save it. He did not succeed; for, though he gave up the disputed land at Waitara, he was unable to regain the confidence of the Maori. Nor had the governor any longer complete personal control of the colony's native policy. He had to act on the advice of ministers, and with his ministers Grey was not always on cordial terms. Moreover, in the decade between 1860 and 1870 the New Zealand ministers and colonists were usually out of harmony with the colonial office. Grey sympathised with the colonists, and his relations with Downing Street grew less and less happy. To this unpleasantness was added that caused by his quarrels with General Cameron and General Chute, the officers who commanded in New Zealand during the warfare which broke out in July 1863 and lasted about four years. General Cameron was not only utterly without local knowledge, but lacking in energy. Grey urged him to take more vigorous action, and, when the general declined in 1865 to attack the strong Weraroa pa, marched against it and took it himself. This achievement hastened Cameron's resignation and also embittered feeling at the war office against the governor. To his difficulties was added the objection taken by the colonial office to the confiscation of three million acres of land belonging to insurgent tribes—an act assented to by the governor—and also to the tone of certain of his despatches. In 1867 the rebels had been repeatedly beaten, and fighting ceased. It was then that the Duke of Buckingham wrote from the colonial office curtly informing Grey, at the end of a letter on other matters, that the name of his successor would be communicated to him.

Technically, Grey was not recalled; for his term had expired by effluxion of time. But the letter could have but one meaning—that his career in the imperial service was ended. In New Zealand this treatment was held to be discourteous and unjust. The colonists and their parliament believed he had been sacrificed for befriending them, and they hastened to show to Grey many public tokens of sympathy and gratitude.

In March 1868 Grey, on the arrival of his successor, Sir George Bowen [*q. v.* Suppl.],

retired to Kawau, a pleasant island in the Hauraki Gulf, which he had purchased and which he had made interesting by planting, gardening, and the acclimatising of foreign trees, flowers, and animals. After a stay of some months he sailed to England, where, after interviews with the Duke of Buckingham and Lord Granville, which did not lead to a reconciliation with the colonial office, he stood at Newark as a liberal candidate for the House of Commons. The official liberals, however, did not want him in English politics, and in order not to split the liberal vote he withdrew. Both on the platform and in writing he was active from 1808 to 1870 in opposing Mr. Goldwin Smith and the 'Little England' school, in protesting against the severance of England from her colonies, and in advocating a system of state-aided emigration from the mother country, by which the poor should be helped to settle on colonial waste lands. In 1871 he returned to New Zealand and lived quietly at Kawau, studying, collecting books, and showing hospitality, until in 1874 he consented to enter New Zealand politics, and was chosen superintendent of the province of Auckland and member of the House of Representatives for Auckland City. With eloquence and dash, but without success, he led the opposition to the centralist party, which abolished in 1876 the colony's provincial institutions. Thereafter a radical party formed round him, and in 1877 he became prime minister. The reforms for which he and his principal lieutenants, (Sir) Robert Stout and John Ballance [q. v. Suppl.], strove were—adult franchise (to describe which Grey invented the term 'One-man-one-vote'), triennial parliaments, the taxation of land values, the leasing instead of the sale of crown lands, compulsory repurchase of private estates, the election of the governor by the colonists. All these except the last have been carried; but none were carried by the Grey ministry. That, after two ineffectual years of uneasy life, was brought down mainly by the unpopularity of its land tax and by a commercial crisis, for which it was in no way responsible, but which occurred in 1879, and the effect of which did not entirely pass away for sixteen years. Grey was not a successful prime minister. He quarrelled with his ablest supporters, put his trust in incompetent men, showed little aptitude for the conduct of parliamentary business, and managed to create the impression that he was a careless and ignorant financier. After the fall of his ministry his followers deposed him from the leadership. This he did not forgive, and all through the

fourteen years which he spent in the House of Representatives afterwards he never heartily co-operated with the radicals or became reconciled to those who led them. Treated with the most marked deference by the house, to which he was always re-elected almost without opposition, his influence both there and in the colony nevertheless dwindled. In 1890, however, he proposed and carried the completed form of manhood suffrage, and in 1891 he enjoyed a triumph in Australia, where, as one of the New Zealand delegates, he was a striking figure in the federal convention. There he made a stand, and a successful stand, for 'One-man-one-vote,' and fought, not successfully, to have the governor-general elected by the people of the federation. After addressing large meetings in Victoria and New South Wales, he was welcomed with enthusiasm in his old colony, South Australia. In the progressive movement of the last decade in New Zealand he took no share, except as an occasional critic, and in 1894, quietly and without any sort of notice, quitted the colony to spend the rest of his days in London. After his arrival in England he was made a privy councillor, but increasing feebleness hindered him from playing any further public part. He died of senile decay on 20 Sept. 1898, and was buried in St. Paul's Cathedral, where a public funeral was given him.

Before and after leaving Cape Colony Grey presented to the Cape Town public library his own collection of books and manuscripts, then said to be the most valuable private library in the southern hemisphere. For this the Cape colonists set up his statue close by the library hall. During the next twenty-five years he again got together a fine collection of books, and these, with some interesting manuscripts, he gave to the city of Auckland, where a hall was built to receive them. Grey's own writings were 'Vocabulary of the Aboriginal Language of Western Australia' (Perth, Western Australia, 1839, 4to); 'Vocabulary of the Dialects of South-western Australia' (2nd edit. London, 1840, 12mo); 'Journals of Two Expeditions of Discovery in North-west and Western Australia in 1837-8-9, by Captain G. Grey, Governor of South Australia,' London, 1841, 2 vols.; 'Polynesian Mythology and Ancient Traditional History of the New Zealand Race (English and Maori),' London, 1855, 8vo; 2nd edit. Auckland, 1886, 8vo. Much the most important of these is the volume of Maori legends, gathered and translated in such leisure as he could find during his first governorship of New Zealand.

Good as some of his writing was, he was

a better speaker than writer, and on the platform reached at moments a very high level indeed, in spite of faults of vagueness, prolixity, and a too deliberate utterance. Ungifted with incisiveness, analysing power, or command of detail, he usually failed in debate; but his ability to sway crowds was at times remarkable, and was gained without recourse to vulgar methods, for his dreamy eloquence was never marred by coarseness, violence, or personal abuse. The mark was often missed, but the aim was always high. His most striking personal characteristics were, perhaps, cool courage and absolute self-confidence, masked by a manner courteous to the verge of deference. His opinions were a curious compound of democratic idealism akin to Jefferson's, and a species of pacific imperialism. Against noble aims and a real love of lofty principle, against a life untainted by corruption or the grosser forms of self-seeking, must be set notable faults—the faults of a bold temperament and of an acute man of action, most of whose life was passed in command or controversy. He was wilful, quarrelsome, jealous, and over-fond of finesse—failings which had their full share in cutting short his official career, in isolating him during many years of his life, and in hindering him from receiving a full measure of reward for the solid services he rendered to the empire and its southern colonies.

Gray married, in 1830, Harriet, daughter of Admiral R. W. Spencer, K.C.B., at that time government resident at Albany, West Australia. The only child of the union, a son, died in infancy at Adelaide. The marriage was not happy; but Sir George and Lady Grey, after a separation lasting for many years, were reconciled some eighteen months before her death. She died only a fortnight before her husband.

A portrait of Grey, painted by Sir Hubert Herkomer, R.A., is in the National Portrait Gallery, London.

W. P. R.

GREY, SIR HENRY GEORGE, Viscount Howick, and afterwards third Earl Grey (1802-1894), statesman, eldest son and heir of Charles Grey, second Earl Grey [q. v.], was born on 28 Dec. 1802 at Howick in Northumberland. He was educated under a private tutor and at Trinity College, Cambridge, where he graduated M.A. in 1823. During his period of residence he took an active part in the debates of the Union Society, and was elected its treasurer in 1822. From 1808 until his succession to his father's earldom he was known as Viscount Howick.

At the general election in 1826 he was returned for Winchester in the whig interest on 9 June, and sat for this borough till 1830. He made his first speech in the House of Commons on the recommitment of the East Retford disfranchisement bill, and proposed a series of resolutions pledging the house to deal with parliamentary corruption. He also showed himself early in his parliamentary career to be a strong supporter of catholic emancipation, and in the reform bill debates proved an active advocate of reform. From the first he took up a somewhat independent position in party politics, and on 4 Feb. 1830 he saved Wellington's administration from defeat by speaking and voting against what he regarded as a purely factious amendment (WALKER, *Hist.* ii. 535). On 3 Aug. 1830 he was returned for Higham Ferrers, and was appointed under-secretary for the colonies in his father's administration. Influenced by Wakefield's schemes for colonisation [see WAKEMAN, EDWARD GRIMON], he introduced an emigration bill in 1831, and was one of the first to oppose the making of large grants of land in the colonies. His policy on this head took the form of alienation in moderate amounts to private persons and the establishment of a fund for promoting emigration out of the profits realised.

On 9 May 1831 he was returned for Northumberland, and on 15 Dec. 1832, after the reform bill, for the north division of the county, which seat he held till 1841. In 1833 he resigned his office in consequence of the cabinet being unwilling to undertake immediate emancipation of the slaves in the West Indies. He spoke on 28 April 1838 against Stanley's proposals for a twelve years' apprenticeship (*Times*, xvii. 1281). He was generally supported by the abolitionists, and his attitude brought about the reduction of the period of apprenticeship from twelve to seven years. His exercise of independence was condoned, and he again held office in Lord Grey's administration as under-

secretary for home affairs from January to July 1834. In the Melbourne ministry he was admitted to the cabinet with the office of secretary at war, 18 April 1835, and was created a privy councillor. He supported Lord John Russell's motion concerning the Irish church, and his disapproval of the alterations to the Irish corporation bill made in the second chamber was so pronounced that he is reported to have talked of the possibility of the 'lords being swept away like chaff' (GREVILLE, *Memoirs*, i. iii. 290), an error in judgment which he lived to rectify. In the difficulties with Canada in December 1837 Howick dissented from the course followed by the cabinet in withdrawing the revenues from colonial control and in suspending the constitution, and only gave way after ineffectually threatening resignation (S. WALFORD, *Life of Lord J. Russell*, i. 294). Lord Glenelg he regarded as incompetent, and he wrote to Lord Melbourne on 27 Dec. 1837 expressing this need for change at the colonial office (*Melbourne Papers*, ed. Lloyd Sanders, p. 381). Again, in January 1839, he announced his intention of resignation, as he was dissatisfied with the colonial secretary's proposals for dealing with the West Indian crisis (*ib.* i. 313). At the crisis created by Grote's motion with regard to the ballot (June 1839) Howick, though opposed to such legislation, was in favour of freedom for both cabinet and party to vote according to individual opinion. In August the suggestion was made by Lord John Russell that he should be given the post office and called to the House of Lords; he, however, preferred to retire from the ministry (TOWNES, *Melbourne*, ii. 310; *Hansard*, li. 768), especially objecting to the appointment of Poulett Thomson as governor of Canada. Though now out of office, his interest in parliamentary politics did not slacken, and his amendment (*Hansard*, lvii. 1078) to the Irish franchise bill in 1841 resulted in the defeat of the government (WALFORD, *Hist.* iii. 523) and the ultimate abandonment of the bill.

At the general election in 1841 Howick lost his seat in Northumberland, but on September 1841 was returned for Sunderland. His views with regard to free trade were at this time far in advance of those of his party. Though on 18 Feb. 1839 he had voted with the whole cabinet excepting Poulett Thomson against Villiers's motion to take evidence on the operation of the corn laws (*Hansard*, xlv. 150), he, in 1843, made his motion for investigating existing causes of distress this occasion for setting out at length the argument in favour of free

trade. Though the motion was lost, his argument, in which he stoutly maintained protection of every kind to be robbery of the community at large, created a considerable impression. Howick's clear and decided views served to dispel Lord John Russell's doubts on the subject in 1845, and he laid down as one of the guiding lines of policy for his party the viciousness of 'the whole principle of what is called protection' (letter from Lord Howick to Lord J. Russell, 16 Dec. 1845, *English Historical Review*, i. 125). Having been raised to the House of Lords by the death of his father (17 July 1845), the new Earl Grey was immediately recognised as the active leader of his party in the second chamber. Hence his objection to serve in a cabinet with Lord Palmerston as foreign secretary in December 1845 proved fatal to Lord John Russell's attempt to form an administration. This action was due entirely to his distrust of Palmerston's management of foreign affairs, especially with regard to France (*ib.* p. 124). On the successful formation of the administration six months later, in June 1846, Grey withdrew his opposition to Palmerston as foreign secretary, owing to the necessities of the situation, and himself took office as secretary for the colonies, 'the two ministers working together as if they had ever entertained the highest opinion of each other's good temper and discretion' (CAMPBELL, *Autobiog.* p. 11). He held the post for nearly six years, from June 1846 to February 1852, and during this period led the debates in the Lords for the government. Grey's conduct with regard to the colonies was chiefly governed by his belief in free trade and representative institutions, and his desire to lessen the responsibilities and expenses of the mother country. Somewhat unsympathetic, and on all occasions didactic and dogmatic, he has been termed 'singularly unhappy in his management of colonies' (FARRER, *British Colonial Policy*, p. 318). He was, however, wise enough not to force his favourite projects against decided expressions of colonial feeling. His elaborate scheme for the government of New Zealand, put forward in 1846, being found not workable, a bill was passed suspending the constitution for five years [see GRAY, SIR GEORGE, Suppl.]. In 1847 he attempted unsuccessfully to impose his favourite idea of making municipalities the constituent bodies for representative assemblies, but withdrew the scheme on opinion in the Australian colonies proving adverse. Failing absolutely to appreciate the growing feeling against transportation, he instituted towards the beginning of 1848 a ticket-of-

leave system and revoked the order in council of 1840, by which New South Wales had ceased to be a place for the reception of convicts (*Colonial Policy*, ii. 43-4); his attempt also to land convicts at Cape Colony in 1849 was much resented, and would doubtless have been actively resisted if enforced. He was possessed with the idea that it was practicable to give representative institutions and then stop without giving responsible government (*Letters of Lord Brougham*, ed. Mariudin, 299). In his despatch to Governor Harvey on the granting of constitutions to Nova Scotia and New Brunswick in 1848 he urged him 'to abstain from going further than can be avoided without giving up the principle of executive responsibility' (*Comm. Pap.* 1847-8, v. 42-77). In 1848 a charge was made against the colonial secretary by Lord George Bentinck in the House of Commons of having misled the committee of inquiry on the subject of West Indian distress by withholding papers. Grey defended himself in the Lords, pledging his honour that the omission was accidental; but, however unjustified the charge, the awkward fact of omission was made much use of by his opponents and critics (WAKEFIELD, *Art of Colonisation*, p. 248).

In the beginning of 1849 the colonial secretary revived the committee of the privy council for trade and foreign plantations as a deliberative and advisory body (see his *Colonial Policy of the Administration of Lord J. Russell*, ii. 91), and the constitutions drafted for the Australian colonies in 1850, and for the Cape Colony in 1851, were framed in the first instance at the recommendation of this body. In South Africa Grey acquiesced unwillingly in Sir Harry Smith's establishment of the Orange River sovereignty 'on condition that the management of their own concerns, with the duty of providing for their own defence and for the payment of the expense of the system of government, should be thrown entirely on the emigrant Boers, and on the native tribes among whom they are settled' (*Corresp. relative to the State of the Kaffir Tribes*, July 1848, p. 68). His view was that 'if the majority of the inhabitants would not support the authority of the resident, he must be withdrawn' (*ib.* February 1852, p. 248), and he held the opinion that it would be far better for this country if the British territory in South Africa was confined to Cape Town and to Simon's Bay (*Colon. Policy*, 2nd. ed. ii. 248). This doctrine of colonial administration resulted in the recall of Sir Harry Smith. Grey, however, deserves the

entire credit of the appointment of Lord Elgin as governor of Canada. In order to secure this best man for the working out of a dangerous situation, the colonial secretary showed himself superior to party politics, and his instructions as to this policy to be pursued (Grey, *Colonial Policy*, i. 206, 234) were statesmanlike and worthy of the occasion. On the riots at Montreal following Lord Elgin's consent to the rebellion losses indemnity bill, Lord Grey defended in the House of Lords the governor-general's action, and declared that this principle of responsible government was the only possible method of administration for Canada.

In 1853 he published *The Colonial Policy of Lord John Russell's Administration* (2 vols.) in the form of a series of letters addressed to the late prime minister; therein he boasted that during his period of office a remarkable development in both the population and the resources of the colonies had taken place, a commercial revolution deeply affecting the colonies had been safely passed through, and a great reduction of the colonial charges imposed on the treasury had been effected (*Colonial Policy*, ii. 303). He was also satisfied that the granting of the management of their own affairs had not interfered with the maintenance of the welfare of the empire as a whole, and exhibited no sympathy with those members of his party who looked forward to the severance of colonial ties with an easy assurance; such an event he regarded 'as a grievous calamity, lowering by many steps the rank of this country among the nations of the world' (*ib.* p. 305). He maintained that parliament by adopting free trade had not abandoned the duty and power of regulating the commercial policy of the British empire, and in later years considered that the surrender of authority by the imperial government and the consequent abandonment by British colonies of the free-trade policy had been injurious to the whole empire (see his *Commercial Policy of the British Colonies and the McKinley Tariff*, p. 17).

In Lord Aberdeen's coalition ministry of March 1852 Grey was not included, and although his interest in politics never flagged, he did not sit in another cabinet. From the spring of 1852, when he withdrew from the colonial office, until his death, forty-two years later, he played the part of critic to both parties, and in consequence received the support of neither. Always opposed to the Crimean war, he resisted Gladstone's proposals for increased income tax and the issue of exchequer bills; but his motion in the House of Lords, 25 May 1855, in praise of the

candour and pacific spirit of the Russian emperor excited such general opposition that the vote was not pressed. In similar fashion in 1857 he condemned the Chinese policy of the government, maintaining that from the first it should have been conciliatory, but his views were not accepted in the House of Lords. He vigorously pronounced against the annexation of Nice and Savoy by France, and urged the government to do their utmost to prevent a course so pregnant with evil for the future.

On the Fenian outbreak in Ireland and consequent suspension of the Habeas Corpus Act, 26 Feb. 1866, Lord Grey propounded a series of resolutions on Irish grievances, and he insisted on the necessity of remedial measures. He urged the injustice of appropriating Irish church revenues for the exclusive benefit of a minority, and demanded security for permanent improvements by occupiers of land. His motion was negatived without a division, but his early sympathy with Irish grievances was not forgotten, and rendered the voice that he subsequently raised against Gladstone's policy of home rule the more influential.

Ever critical and independent in attitude, he opposed the ministerial Ballot Act in 1872, urging the need for facilities of discovering on scrutiny how each elector had voted. Although he fell foul of conservative foreign policy, complaining of the want of candour in Lord Salisbury in the conduct of the Anglo-Russian treaty arranged with Count Schouvaloff in May 1878, and protesting against the 'epoliation' of Roumania and the retrocession of Bessarabia (*Times*, May 1878), yet at the general election of 1880 he supported the conservative candidates for the north division of Northumberland, addressing a letter on the subject to his nephew, Mr. Albert H. G. Grey. Always a supporter of the established church he took the lead in November 1885 in framing a declaration by liberal peers and others against disestablishment (SALISBURY, *Personal and Political Memorials*, ii. 181). The home-rule policy developed by Gladstone in 1885-6 he uncompromisingly opposed, and his letters in the '*Times*' on this subject, as well as on English policy in Africa and Egypt, housing of the poor, bimotallism, and tithes, were always clearly written and decided in tone.

Grey died on 9 Oct. 1804 at Howick in Northumberland, where he was buried. He married, on 9 Aug. 1832, Maria, third daughter of Sir Joseph Copley, bart., of Sproborough; she died on 14 Sept. 1878. He left no issue, and was succeeded by his

nephew, Albert Henry George Grey, fourth Earl Grey. He was made K.G. in 1868 and G.C.M.G. in 1869.

As a statesman Grey's critical faculty, never dormant, interfered alike with his usefulness and his advancement. He was equal to any office he undertook, and an indefatigable worker (*Melbourne Papers*, ed. Lloyd Sanders, p. 381), but in the opinion of Greville, who did not like him, was mainly characterised by 'his contempt for the opinion of others, and the tenacity with which he clung to his own' (*Memoirs*, 2nd part, iii. 308). Sir Charles Wood, however, thought him one of the pleasantest colleagues he had ever had (SIR ALAERNON WILST, *Recollections*, p. 270), and the Prince Consort found him open to argument and, if worsted, ready to own it at once, though very positive in his views and fond of discussion.

A portrait of Grey in oils by Saye is at Howick in the possession of the present Earl Grey.

In addition to the work mentioned in the text, Lord Grey wrote: 1. 'Parliamentary Government considered with reference to Reform of Parliament,' 1858. 2. 'Free Trade with France, comprising Letters from the "*Times*,"' 1881. 3. 'Ireland, the Causes of its Present Position,' 1888. 4. 'The Commercial Policy of British Colonies and the McKinley Tariff,' 1892.

Ten of his speeches between 1831 and 1877 were published in pamphlet form.

[Hansard's Debates; *Times*, 10 Oct. 1894; Sir O. Adderley's Review of the Colonial Policy of Lord J. Russell's Administration; *Edinb. Rev.* cxxxvii. 98; Lord Grey's own writings and works mentioned in the text.] W. C.-R.

GROSART, ALEXANDER BALLOCH (1827-1899), author and editor, was born on 18 June 1827 at Stirling, where his father, William Grosart, was a builder and contractor. His mother was Mary Balloch. He was educated at the parish school of Falkirk and privately. At the age of twenty-one (November 1848) he entered the university of Edinburgh with the view of preparing for the ministry. Already he had acquired a taste for literary and antiquarian studies, and, although he failed to take any degree, his studies lay in the direction of the special work to which in after life his energies were devoted. While still a student he published an edition of the poems of Robert Fergusson (1851). He entered the theological hall of the United Presbyterian Church in 1851, and after the usual curriculum was licensed by the presbytery of Edinburgh in January 1856. Having re-

ceived a call from the first congregation of Kinross, on the shores of Loch Leven, he was ordained there on 29 Oct. following. The church was large and influential. He soon won a reputation as a preacher, and at the same time became well known as an author of religious manuals and a literary antiquary. In January 1862 he declined a call to Woolwich, but early in 1865 accepted one from the newly formed congregation of Princes Park, Liverpool. On 4 March 1868 he was translated to Mount Streat Presbyterial church, Blackburn. Shortly after his induction he removed with the majority of the congregation to a new church in Preston New Road, called St. George's church. The membership of this church was nearly tripled during Grosart's ministry. The building, which had cost £8,000, as an initial outlay, was freed from debt, and a new church was started in the Whalley Range district of Blackburn in 1884. Notwithstanding his literary occupations, Grosart was diligent and sympathetic in the performance of his pastoral duties. Failing health compelled him to resign his charge at Blackburn in November 1892. He retired to Dublin, where he died on 16 March 1899, and was buried in Mount Jerome cemetery. While in Liverpool he married Miss McDowall, daughter of a builder and contractor of Dublin.

Grosart's claim to remembrance rests on his reprints of rare Elizabethan and Jacobean literature, but it was his strong interest in puritan theology that originally led him to devote himself to the study of sixteenth and seventeenth century poets and prose writers. The writers, whose works he first edited, were the puritan divines Richard Sibbes (1862-4) and Thomas Brooks (1866-7), together with Herbert Palmer's 'Memorials of Godliness' (1865), Michael Bruce's 'Poems,' with memoir (1865), and Richard Gilpin's 'Demonologia Sacra' (1867). A bibliography of Richard Baxter's writings followed in 1868. He had then already foreshadowed the special bent of his future labours in two pamphlets, 'Lord Bacon not the Author of the Christian Paradoxes' (1865) and 'Who wrote Britain's Ida?' (1869), a poem previously assigned in error to Edmund Spenser, and ascribed by Grosart to Phineas Fletcher. After 1868 he concentrated his energies on the revision, by private subscription, of secular literature. Between 1868 and 1876 he printed privately for subscribers a series of thirty-nine volumes, which he entitled the Fuller Worthies Library. The series included Thomas Fuller's 'Poems and Translations in Verse,' the works in prose and verse of Sir John Davies (3 vols.), Fulke Greville, Lord

Brooke (4 vols.), Henry Vaughan (4 vols.), Andrew Marvell (4 vols.), and George Herbert (3 vols.), besides the poems of Richard Crashaw, John Donne, Robert Southwell, Sir Philip Sidney, and others. The series was completed by four volumes of miscellanies, containing the poems of many less known authors, whose published work was small in quantity and quite inaccessible.

Before the Fuller Worthies Library was completed Grosart began another series of reprints, in 1875, under the title of 'Occasional Issues of Unique and very Rare Books.' All the volumes of the 'Occasional Issues,' which numbered thirty-eight, the last appearing in 1881, are of the highest bibliographical interest; they include Robert Dover's 'Annalia Dubreusina,' Robert Chester's 'Love's Martyr' (an edition of which he provided for the New Shakspeare Society), 'Willobio his Avisas,' and Clarke's 'Polimanteia.'

A third series of reprints, 'The Chertsey Worthies Library' (1876-81), was in fourteen volumes, and supplied reprints of the complete works of Nicholas Breton, John Davies of Hereford, Joshua Sylvester, Francis Quarles, Dr. Joseph Beaumont, Dr. Henry More, and Abraham Cowley. A fourth series of equal interest was projected in 1881, under the title of the 'Huth Library,' after the name of the great book collector, Henry Huth [q.v.], in whose library original copies of the volumes which it was Grosart's intention to reprint were to be found. The Huth Library came to a close in 1886 after the issue of the works of Robert Greene in fifteen volumes, Thomas Nashe in six volumes, Gabriel Harvey in three volumes, and Thomas Doldker's prose tracts in five volumes. Promised reprints of the prose works of Sir Philip Sidney, with the works of George Whetstone, Henry Chettle, Anthony Munday, and many smaller writers, were abandoned. Meanwhile Grosart embarked in two other ventures of interest, editions of the complete works of Samuel Daniel and of Edmund Spenser. The edition of Spenser reached ten volumes (published between 1880 and 1888), and included a memoir by Grosart and critical essays by Professor Dowden, Professor Palgrave, and other well-known writers. The edition of the works of Daniel reached five volumes, the last two appearing as late as 1896.

In addition to these undertakings, Grosart was responsible for the printing for the first time from the original manuscripts of the Towneley Hall MSS. 1897 (2 vols.), Sir John Eliot's 'Works,' 1879-82 (6 vols.), and the 'Lismore Papers' of Sir Richard Boyle,

first earl of Cork, 1886-8 (5 vols.) For the Chetham Society he edited the *Farmer MSS.* in the 'Chetham Library,' 1873; for the Roxburghe Club the complete poems of Richard Barnfield, 1876; and for the Camden Society 'The Voyage to Cadiz of 1625' in 1883. He also issued a complete collection of the prose works of Wordsworth, 1876, 8 vols. A supplement to his edition of the 'Works of Crashaw,' consisted of hitherto unprinted poems which he discovered in manuscript in the library of Trinity College, Dublin (1888), and he prepared some small volumes of selections from the works of Sidney, Raleigh, and others in a series which he called the 'Elizabethan Library' (1890-1899). A projected life of Shakespeare's patron, the Earl of Southampton, was never written.

All Grosart's editions of old authors were privately issued in very limited editions to subscribers at high price, and the business arrangements were conducted by himself. His handwriting was peculiarly small and often illegible. He spared neither time nor trouble in searching for rare volumes and recollecting information, and in the course of his career travelled widely, ransacking the chief libraries of France, Germany, Italy, and Russia, as well as those of England, Scotland, and Ireland. His literary style was defaced by mannerisms and affectations: he was, as Dr. John Brown (author of 'Rab and his Friends') used to say, 'by nature quaint and archaic'; in the preface and notes to some of his later reprintings his querulousness, dogmatism, and ill-temper were painfully conspicuous. All his literary work was marred by egotism, a want of tact, diffuseness, and clumsy arrangement of his materials. Yet by means of his elaborate series of reprints of Tudor and Jacobean writers, whose works were rare and almost inaccessible, he conspicuously advanced the thorough study of English literature.

Grosart never abandoned the writing of devotional books of religion. His early religious publications include 'Small Sims' and 'Mighty to Save,' 1863; 'Thou Lamb of God,' and 'The Prince of Light,' 1864; and 'Joining the Church,' 1865. 'Representative Non-conformists, with the Message of their Life-work for To-day,' appeared in 1879. In 1868 he printed for private circulation a small volume of fifteen hymns, and he afterwards printed many new year and watch-night hymns. His poems and hymns were collected in 'Songs of the Day and Night, or Three Centuries of Original Hymns' (1890).

Grosart was also a voluminous contributor to literary and theological periodicals,

He wrote many articles for the 'Encyclopædia Britannica' (9th edit.), and was a frequent contributor to 'The Leisure Hour,' 'Sunday at Home,' and 'United Presbyterian Magazine.' In August 1877 the university of Edinburgh conferred upon him the honorary degree of LL.D. The university of St. Andrews gave him the degree of D.D. He was also a fellow of the Scottish Society of Antiquaries. His library had few exemplars in first-rate condition, but it was large and well selected, and valuable from the completeness of its puritan literature. Many of the volumes were acquired after his death by the Princeton University of the United States and by the British Museum.

GROSVENOR, HUGH LUPUS, first DUKE OF WESTMINSTER (1825-1899), second son and eventual heir of Richard Grosvenor, second marquis of Westminster [q. v.], by Lady Elizabeth Mary Leveson Gower, second daughter of George Granville, first duke of Sutherland, was born at Eaton Hall, Chester, on 13 Oct. 1825. He was nephew of Lord Robert Grosvenor, first baron Ebury [q. v. Suppl.] He was educated at Oxford, where he matriculated from Balliol College on 2 June 1843, being then known as Viscount Belgrave. Earl Grosvenor, as he was styled from 1846, was returned to parliament on 28 July 1847 in the liberal interest for Chester, which constituency he continued to represent until his accession to the peerage on the death of his father, 31 Oct. 1869. He voted steadily with his party, but took no prominent part in debate until 1866, when he united with the Adullamites and conservatives in opposition to the government on the franchise question. This coalition was denounced by Bright as a 'dirty conspiracy,' and Grosvenor's motion to postpone the second reading of the franchise bill until the entire scheme for the amendment of the representation was before parliament was treated by the government as tantamount to a resolution of want of confidence. It was, however, only negatived by the narrow majority of five after prolonged debate in an unusually full house (16 April), and a subsequent defeat in committee sealed the fate of the measure and the administration. The scheme of reform subsequently submitted by Disraeli was accepted by Grosvenor as a basis of discussion, and the amendments which he

moved in committee had no influence on the course of the measure.

Notwithstanding his somewhat ambiguous course in this crisis, Grosvenor remained an independent liberal, and both in the House of Commons and in the House of Lords, in which he took his seat as third marquis of Westminster, in succession to his father, on 5 May 1870, gave a steady though silent support to the first Gladstone administration, on the fall of which he was created Duke of Westminster (27 Feb. 1874). He also adhered to Gladstone throughout the prolonged controversy on the Eastern question, and held the office of master of the horse during Gladstone's second administration (1880-5). He visited, however, with profound misgiving the policy adumbrated in the Midlothian address of 17 Sept. 1885, joined with Lords Grey, Selborne, and other liberal peers in the manifesto of dissent published in the 'Times' of 4 Nov. following, and pronounced decisively and with voluntemence against homo rulo in a speech at Chester on 12 Jan. 1880. Sympathy with the Armenians, for whose relief he organised a committee at Grosvenor House, brought him once more into accord with Gladstone in 1895, and his acceptance of the chairmanship of the Gladstone memorial committee, which held its first meeting at Grosvenor House on 21 June 1898, was a weighty testimony to the splendour of the services rendered by the deceased statesman to his country.

Westminster was created K.G. on 6 Dec. 1870, sworn of the privy council on 28 April 1880, and appointed aide-de-camp to the queen in 1881, and lord lieutenant of Cheshire in 1883, and of the county of London in 1888. He was also lord high steward of Westminster, hon. colonel of the Earl of Chester yeomanry cavalry, and hon. colonel of the 13th Middlesex rifle corps. He was a considerable landlord, and greatly improved his London property by rebuilding. He was also a promoter of agricultural and technical education, a judicious dispenser of ecclesiastical patronage, and a munificent donor to the church and charitable institutions. He made Grosvenor House a centre of far-reaching philanthropic effort. He was president of several metropolitan hospitals, of the Gardeners' Royal Benevolent Institution, of the Metropolitan Drinking Fountain and Cattle Trough Association, and of the United Committees for the Prevention of Demoralisation of Native Races by the Liquor Traffic.

Amid those serious preoccupations he, like his father and grandfather, cultivated a taste

for art, by which he greatly enriched the noble gallery which he inherited, and indulged the love of manly sports characteristic of the English gentleman. He was a good shot, a fine horseman, and an excellent judge of horseflesh. He was also the most successful breeder of racehorses of his generation. Succeeding to an indifferent stud, he judiciously laid out fourteen thousand guineas in the purchase from Mr. James Morry of the magnificent thoroughbred Doncaster, who signally exemplified the Horatian adage, 'fortes creantur fortibus et bonis.' Doncaster won the Derby in 1873; Bend Or, a colt by Doncaster, won the Derby in 1880, and was sire of Ormonde, winner not only of the Derby but of the Two Thousand Guineas and St. Leger Stakes in 1883. Orme, a colt by Ormonde, unfortunately poisoned before his mettle could be tried for the Two Thousand Guineas in 1892, was sire of Flying Fox, who won the Derby and the St. Leger, Two Thousand Guineas, Prince of Wales, Jockey Club, and Peliqueo Stakes in 1899. The Duke's filly Shotover also won the Derby and the Two Thousand Guineas Stakes in 1882.

The duke died on 22 Dec. 1899 at Lord Shaftesbury's seat, St. Giles's, Cranborne, Dorset. His cremated remains were interred on 28 Dec. in Beleston churchyard, near Eaton Hall. Two portraits of him are at Grosvenor House, one a full-face crayon drawing done by George Richmond in 1858, and the other a side-face portrait in oils, painted by H. W. in 1872; at Eaton Hall is Millais's portrait of the duke in hunting costume.

Westminster married twice: first, on 28 April 1852, Lady Constance Gertrude Sutherland-Leveson-Gower, fifth daughter of George Granville, second duke of Sutherland; secondly, on 20 July 1882, the Hon. Catherine Caroline Cayondish, youngest daughter of William, second lord Cheham. He had issue by his first wife seven sons and four daughters; by his second wife two sons and two daughters. His eldest son, Victor Alexander, earl Grosvenor, who was born 28 April 1853, died in his father's lifetime on 22 Jan. 1884: leaving by his wife, Sibell Mary, daughter of Richard George Lumley, second earl of Scarborough, two daughters and a son, Hugh Richard Arthur, who succeeded his grandfather as second duke of Westminster; the countess Grosvenor married, secondly, the Right Hon. George Wyndham, M.P.

J. M. R.

GROSVENOR, LORD ROBERT, first **BARON EBURY** (1801-1893), born at Millbank House, Westminster, on 24 April 1801, was third son of Robert Grosvenor, first Marquis of Westminster [q. v.], and his wife Eleanor, daughter, and subsequently sole heiress, of Thomas Egerton, earl of Wilton. His elder brothers were Richard Grosvenor, second Marquis of Westminster [q. v.], and Thomas Grosvenor, second Earl of Wilton. Hugh Lupus Grosvenor, first Duke of Westminster [q. v. Suppl.], was his nephew. The future Baron Ebury, who was styled the Hon. Robert Grosvenor from 1801 to 1831, and Lord Robert Grosvenor from 1831, when his father became marquis, was educated at Westminster School, where he was admitted on 18 June 1810; he left on 18 April 1816, and on 9 Dec. 1818 matriculated from Christ Church, Oxford. He graduated B.A. in 1821, and on 7 July in the same year was admitted student of Lincoln's Inn. In April of the following year he was returned to parliament as member for Shaftesbury, and in 1826 he was elected for Chester, which he continued to represent through seven parliaments until 1847.

In 1830 Grosvenor visited the northern states of Africa, publishing on his return 'Extracts from the Journal of Lord Robert Grosvenor: being an account of his visit to the Barbary Regencies in the Spring of 1830' (Chester, 1831, 8vo). On the accession of the whigs to power in 1830 he was appointed comptroller of the household, and sworn of the privy council on 1 Dec. He held this appointment until 1834, and after Lord John Russell's return to power in 1846 Grosvenor was for a few months treasurer of the household. From 1847 to 1857 he sat in parliament for Middlesex, but took little part in party politics, and on 15 Sept. 1857 was raised to the peerage, on Palmerston's recommendation, as Baron Ebury of Ebury Manor, Middlesex. In 1852 he published anonymously 'Leaves from my Journal during the Summer of 1851; by a Member of the late Parliament' (London, 8vo).

Ebury now devoted himself mainly to the cause of protestantism in the church of Eng-

land. He viewed with alarm the development of high-church views and ritualistic practices, and the remainder of his life was spent in endeavours to enforce old laws and enact new ones for their suppression. To his initiative was due 'the omission from the prayer-book of the state services for King Charles the martyr, for the restoration of Charles II, and for Guy Fawkes's day; the relaxation of the terms of clerical subscription; the adoption of an alternative burial office and a new lectionary' (BLION, *Lord Ebury as a Church Reformer*, p. 2), all of which were effected during Lord Derby's administration in 1858-9. During that year he founded and became president of the society for the 'revision of the prayer-book,' which in 1874 produced and published a revised prayer-book. Ebury frequently advocated in the House of Lords, where his chief opponent was Samuel Wilberforce, the appointment of a royal commission for this purpose. In 1862 he introduced a bill for the amendment of the Act of Uniformity, and in 1879 another for the amendment of the prayer-book. These efforts proved unavailing, and in 1889 Ebury retired from the presidency of the Prayer-book Revision Society.

Ebury also associated himself with Anthony Ashley Cooper, seventh Earl of Shaftesbury [q. v.], in demanding further limitation of the hours of work in factories, and in 1854 he carried a bill for 'the provision, regulation, and maintenance of county industrial schools in Middlesex' (HODGKIN, *Life and Work of the Seventh Earl of Shaftesbury*, ii. 431). In politics Ebury was an advanced whig, and in 1864 he presided at a banquet to Garibaldi during the latter's visit to England. Later on Ebury was a liberal unionist, and he voted against Gladstone's home rule bill in September 1893, being by many years the oldest peer to take part in the division. He died at his town house, 35 Park Street, on 18 Nov. following, and was buried on the 22nd at Northwood, near Rickmansworth, the church of which had been erected almost entirely at his expense. Portraits of Ebury are prefixed to the 'Leaves from my Journal' (1852) and to Bligh's 'Lord Ebury as a Church Reformer' (1891). He married, on 17 May 1831, Charlotte Arbuthnot (1808-1891), eldest daughter of Henry Wellesley, baron Cowley [q. v.], by whom he had issue five sons and two daughters. The eldest son, Robert Wellesley Grosvenor (b. 1834), succeeded as second Baron Ebury; the second son, Thomas George (1842-1886), was secretary of legation at Peking from 1879 to 1883,

chargé d'affaires in 1883, and secretary of legation at St. Petersburg in 1885-6.

Besides the works already mentioned, Ebury published several pamphlets and speeches advocating liturgical reform; his speech on the revision of the liturgy, delivered in the House of Lords on 6 May 1868, was published in that year, and reached a fourth edition in 1860. In 1861 he published 'The only Compromise possible in regard to Church Rates' (2nd edit. same year); in 1880 'Auricular Confession'; and in 1886 'Laity and Church Reform,' reprinted from the 'Times.' Other letters and speeches on similar subjects are collected in the Hon. and Rev. E. V. Bligh's 'Lord Ebury as a Church Reformer' (London, 1891, 8vo).

GROVE, Sir GEORGE (1820-1900), writer on music and first director of the Royal College of Music, born on 13 Aug. 1820 at Clapham, in a house which is now occupied by the site of Wandsworth Road railway station, was the son of Thomas Grove of Charing Cross and Pinner, Buckinghamshire. He went to a school on Clapham Common, kept by a Mr. Elwell, where he had as one of his schoolfellows George Grainger Bradley, afterwards dean of Westminster, whose sister he subsequently married. His next entered Stockwell (afterwards Clapham) grammar school, then under Charles Pritchard [q. v.], the astronomer. After finally leaving school he was articled for three years to Alexander Gordon to learn the profession of a civil engineer. At the end of his articles he went to Glasgow for two years, where, in the factory of Robert Napier (1791-1870) [q. v.], he gained further experience in the practical part of his profession. He was admitted a member of the Institution of Civil Engineers on 26 Feb. 1839. When his old master (Gordon) received an order to erect an iron lighthouse at Morant Point, on the eastern extremity of the island of Jamaica—the first ever put up—Grove was despatched to superintend its erection. An iron plate at the foot of the lighthouse, first permanently

lighted on 1 Nov. 1842, records Grove's name as the engineer. Scarcely had he returned to London before Gordon again sent him off to Bermuda, where the government were about to build a lighthouse on Gibbs' Hill, of which a sketch appeared in the 'Illustrated London News' of 20 April 1844, and which was first lighted on 1 May 1846. Upon his return from Bermuda Grove entered the office of Mr. C. H. Wild, one of Robert Stephenson's chief assistants, who sent him to Chester to look after the erection of the 'general station' there. From Chester he was transferred to Bangor, where he served under Edwin Clark, Stephenson's resident engineer, at the Britannia bridge [see under CLARK, LAMMUR, Suppl.] An account of the first floating of the tubes is recorded in the 'Spectator' of 23 June 1849, which is interesting as being Grove's first appearance in print.

Engineering was, however, soon to be abandoned. In 1819 Grove became secretary to the Society of Arts, and shortly afterwards he accepted a similar post at the Crystal Palace, Sydenham, where the Great Exhibition building of 1851 was re-erected, and opened by Queen Victoria 10 June 1851. For a period of twenty years he rendered invaluable service to the Crystal Palace, especially in regard to the development of the music there, which subsequently attained world-wide fame under the nurturing influence and enthusiastic sway of Grove and August Mannes, the musical director of the palace, conjointly. The daily and weekly orchestral performances at Sydenham prompted those admirable analytical notices of musical compositions with which the name of George Grove was so long and is so favourably associated. He had always shown a great fondness for music, but had never received any technical training in the art. Entirely self-taught, his knowledge was acquired solely by 'picking up' information. 'I wish it to be distinctly understood,' he said, 'that I have always been a mere amateur in music. I wrote about the symphonies and concertos because I wished to try to make them clear to myself and to discover the secret of the things that charmed me so; and from that sprang a wish to make other amateurs see it in the same way.' The first analytical programme compiled by Grove was that of the Crystal Palace concert on 26 Jan. 1866 to celebrate the centenary of the birth of Mozart. Week by week during the concert season for forty years Grove continued to write those analyses, which have been reprinted over and over again, not only at the Crystal Palace but in many concert pro-

grammes in London and elsewhere, including America. The most important of these interesting notices were published in a volume in 1884, and, after being amplified and carefully revised, were reissued as 'Beethoven and his Nine Symphonies' in 1896. At the palace, in co-operation with August Manns, Groves did much to make the music of Schubert—one of his special favourites—known. In the autumn of 1867 he, in company with Sir Arthur Sullivan [q. v. Suppl.], paid a memorable visit to Vienna, where they were successful in unearthing Schubert's 'Rosamunde' music, which had been neglected for more than forty years. A full account of this discovery is related by Grove in the Appendix to the English translation of Kreisler's 'Life of Schubert' (1869). At the end of 1873 he resigned the post of secretary to the Crystal Palace Company (though he still retained connection with the building which owed so much to him by being made a director), upon the acceptance of an offer from Messrs. Macmillan, the publishers, to an important position on their editorial staff. He edited 'Macmillan's Magazine' for some years, and wrote for Macmillan's series of 'History Primers' a primer of geography (1875), which has been translated into French and Italian.

The great work of his life—a work which will carry his name down to posterity—was the 'Dictionary of Music and Musicians.' The prospectus, dated 'March 1874,' stated that the work was not to exceed two volumes of some 600 pages; it ultimately attained to four volumes and an exhaustive index, totalling together 3,313 pages. The first volume appeared in 1878, and the fourth in 1889; an index volume was issued in 1890. Grove was not only the projector and editor of the 'Dictionary,' but, in addition to many other articles, he contributed three important monographs on Beethoven, Mendelssohn, and Schubert—his favourite trio of composers—which are models of biographical literature. He made two special journeys to Germany to obtain materials for his Mendelssohn article, and more than two to Vienna for his monographs on Beethoven and Schubert.

In 1883 he took a very active part in the movement, initiated by King Edward VII when prince of Wales, for the formation of the Royal College of Music at Kensington, and was appointed the first director of that institution. For eleven years he threw all his energies into the work of organising and getting into working order that great music school. He resigned the office of director at Christmas 1894, when he was succeeded by Professor Sir C. Hubert H. Parry.

Grove's interests in life were very varied. In his earliest days he had been instilled with a knowledge of the Bible, much of which he knew by heart. Fired by a remark made by James Fergusson (1808-1886) [q. v.], author of 'The Handbook of Architecture,' that there was no full concordance of the proper names in the Bible, Grove set to work, and with the aid of his wife made a complete index of every occurrence of every proper name in the Old Testament, New Testament, and Apocrypha, with their equivalents in Hebrew, LXX, Greek and Vulgate Latin. This was in 1858-4. His next Bible study was a step in a similar direction. In 1864 he made the acquaintance of Arthur Penrhyn Stanley (afterwards dean of Westminster) [q. v.], who became his lifelong friend and who appointed Grove his literary executor. Stanley (then canon of Canterbury) was at the time engaged on the appendix to his 'Sinai and Palestine,' the first step in the topography of the Bible, with the result that it engendered a strong desire in Grove to visit the Holy Land. He paid two visits to Palestine—in 1859 and 1861—the outcome of these journeys being the formation in 1865 of the Palestine Exploration Fund, of which Grove was virtually the founder and institutor. He became hon. secretary to the fund and laboured incessantly on its behalf. A further contribution to biblical literature was the editorial assistance he rendered to (Sir) William Smith (1813-1893) [q. v.] in the preparation of his 'Dictionary of the Bible.' In addition to writing about a thousand pages of the book, he rewrote some of the articles but retained the initials of the original writers. He also furnished the index to Clark's 'Bible Atlas' (1868), in which the places are recorded in English and Hebrew, followed by the texts in which the names of the places occur.

The mental and physical activity of Sir George Grove was quite remarkable. He translated Guizot's 'Études sur les Beaux-Arts' (1853), and contributed a sketch, 'Nabuloe and the Samaritans,' to Sir Francis Galton's 'South Africa' (1853). He contributed prefaces to Otto Jahn's 'Life of Mozart,' Hensel's 'Mendelssohn Family,' W. S. Rockstro's 'Life of Handel,' 'A Short History of Cheap Music, as exemplified in the Records of the House of Novello, Ewer, & Co.,' 'The Early Letters of Schumann,' and to Mr. F. G. Edwards's 'History of Mendelssohn's Oratorio "Elijah."' He was also a frequent contributor to periodical literature.

Grove was the recipient, on 19 July 1880, of a gratifying testimonial—a thousand

guineas and a gold chronometer—presented to him by the Archbishop of Canterbury on behalf of the subscribers. He was knighted on 22 May 1883, and on 26 May 1894 was made a companion of the Bath. Alfred Ernst, duke of Saxe-Coburg and Gotha [q.v. Suppl.], decorated him with the cross of the Order of Merit, and he received the honorary degrees of D.C.L. Durham and LL.D. Glasgow Universities. Upon his retirement from the directorship of the Royal College of Music in 1894 he still continued to take a warm and active interest in music and musicians. He was an exceedingly kind-hearted man, and took a special delight in giving a helping hand to young men. A great letter writer, his communications were characteristically reflective of his mercurial temperament, wide knowledge, boundless energy, and yet not without a touch of humour in forms of expression. For the last two years of his life he suffered from paralysis, which death relieved at his wooden house at Lower Sydenham, on 28 May 1900. His remains are interred in Ladywell cemetery, Lewisham. Grove's pupils at the Royal College of Music presented him with a bust by Mr. Alfred Gilbert, R.A.; and the teaching staff with his portrait by Mr. C. W. Furse. Other portraits of him were painted by Henry Phillips, Mr. H. A. Olivier, and Mr. Felix Moscheles. A George Grove memorial scholarship has been founded at the Royal College of Music.

Grove married, in 1851, Harriet, daughter of the Rev. Charles Bradley [q.v.], who survived him.

[Life and Letters by C. L. Graves, 1903; Musical Times, October 1897, containing a biographical sketch by the present writer, information for which was verbally supplied by Grove, and Musical Times, July 1900; Musical World, 24 and 31 July 1880.] F. G. B.

GROVE, SIR WILLIAM ROBERT (1811-1896), man of science and judge, only son of John Grove, magistrate and deputy-lieutenant for Glamorganshire, by his wife Anne, born Bovan, was born at Swansea on 11 July 1811. He was educated under private tutors, and at the university of Oxford, where he matriculated from Brasenose College on 6 Feb. 1829, graduated B.A. in 1832, proceeded M.A. in 1835, and was created D.C.L. in 1875. He received the degree of LL.D. from the university of Cambridge in 1879. On 11 Nov. 1831 he was admitted student at Lincoln's Inn, and was there called to the bar on 23 Nov. 1835. His professional career was retarded by ill-health, and the respite thus gained enabled

him to follow his natural bent towards scientific investigation. In 1835 he became a member of the Royal Institution, of which in 1844 he was elected vice-president. The invention in 1839 of a gas voltaic battery, since known as the Grove battery, brought him into notice, and on 26 Nov. 1840 he was elected F.R.S. In the same year he was appointed to the chair of experimental philosophy in the London Institution, which he retained until 1847. He proved an unusually active member of the Royal Society, both by his contributions to its 'Transactions,' and by the leading part which he took in its reconstitution in 1847, in which year he was awarded the royal medal for his paper 'On the Gas Voltaic Battery' (*Phil. Trans.* 19 June 1845), and his Bakerian lecture 'On certain Phenomena of Voltaic Ignition and the Decomposition of Water into its Constituent Gases by Heat' (*ib.* 19 Nov. 1846). This tribute, however, did but crown a reputation already European. A professorial lecture 'On the Progress of Science since the Foundation of the London Institution,' delivered in January 1842, and printed for private circulation, contained the germ of the grand generalisation which, as developed in a subsequent course of lectures published in 1846 under the title 'The Correlation of Physical Forces' (London, 8vo), reduced the apparent plurality of forces to virtual unity by demonstrating their mutual convertibility, thus anticipating by a year the essay of Helmholtz on the same subject. The 'Correlation of Physical Forces' has passed through six editions and been translated into French (1856). The sixth English edition (1874) gathers together the more important of Grove's minor contributions to science, including in particular the Bakerian lecture, a paper 'On the Electro-chemical Polarity of Gases,' read before the Royal Society on 1 April 1852, another 'On the Strife seen in the Electrical Discharge in Vacuo,' reprinted from the 'Philosophical Magazine' for July 1855, and an address on 'Continuity,' delivered by him as president of the British Association in 1866. Other papers by Grove will be found in 'Notices of the Proceedings of the Meetings of the Members of the Royal Institution,' vols. i-xii.

Grove's scientific eminence brought him trials in patent cases, and, as his health improved, he threw his main energies into his practice. He took silk in 1853, and for some years had a lead on the South Wales and Chester circuits. In 1856 he appeared for the defence in the great Rugeley murder case [see PALMER, WILLIAM, 1824-1856]. He

was a member of the royal commission appointed on 1 Sept. 1804 to inquire into the law of patents. On the transference of Sir Robert Collier [q. v.] from the court of common pleas to the judicial committee of the privy council, Grove was appointed to the vacant judgeship, invested with the coif (30 Nov. 1871), and knighted (27 Feb. 1872). The consolidation of the courts effected by the Judicature Acts of 1873 and 1875 gave him the status of justice of the high court, and the order in council of 16 Dec. 1880 transferred him to the queen's bench division. He proved an efficient judge, but, as he was not specially assigned to the hearing of patent cases, it may be doubted whether his services to suitors were such as to compensate for his withdrawal from scientific investigation. He retired from the bench in September 1887, and was sworn of the privy council (28 Nov.) On his release from official duty, Grove returned to his scientific studies with unabated zest (cf. his interesting lecture 'On Antagonism; or, the Conflict of the various Forces by which the Equilibrium of Nature is maintained,' delivered on 20 Feb. 1888 at the Royal Institution; *Proceedings*, vol. xii.) He was, however, no exception to the rule that a philosopher's best work is done comparatively early. He died, after a slow decline, at his residence, 115 Harley Street, London, on 1 Aug. 1890.

Grove married, on 27 May 1837, Emma Maria (d. 1879), daughter of John Diston Fowles of Summit House, Middlesex, by whom he left issue; a daughter married William Edward Hall [q. v. Suppl.]

Grove was an original member of the Chemical Society, a member of the Accademia dei Lincei of Rome, and a knight of the Brazilian order of the Rose.

GROVER, JOHN WILLIAM (1836-1892), civil engineer, born on 20 April 1836, was the only son of the Rev. Henry Montague Grover of Boveney Court, Burnham, Buckinghamshire, and rector of Hitcham,

Buckinghamshire. He was educated at Marlborough College and in Germany, and then became a pupil of Sir Charles Fox [q. v.]; at the close of his pupilage he entered the employ of Sir John Fowler [q. v. Suppl.], and was engaged in carrying out preliminary surveys for railways in Portugal and Spain. He was next appointed a draughtsman in the office of works of the science and art department, and eventually became head of the engineering and constructive branch. Among the works superintended by him while he held this post were the north and south courts of the South Kensington Museum, and the conservatory of the Royal Horticultural Society.

In January 1862 Grover set up in business as a consulting engineer at Westminster, and during the next eleven years he designed and carried out several important engineering works, mainly in connection with railways. One of his works, an iron pier on the coast of Somersetshire, was described in a paper he read before the Institution of Civil Engineers in 1871, 'Description of a wrought-iron Pier at Claverton, Somerset' (*Proc. Inst. Civil Engineers*, xxxii. 130). He also assisted Major-general Walter Scott, R.E., in the design of the Royal Albert Hall.

In 1873 he visited Venezuela to make surveys for the mountain line from La Guaira to Caracas, and he also made a hydrographical survey of the coast near La Guaira for the proposed harbour works.

On his return to England from Venezuela he gave up railway work and turned his attention to waterworks. He designed and was responsible for several systems in the chalk districts round London. Among others may be mentioned the water supply for the districts of Newbury, Wokingham, Leatherhead, and Rickmansworth. His method of dealing with the problem of supplying these towns was described in a communication submitted to the Institution of Civil Engineers in 1887, entitled 'Chalk Water Springs in the London Basin' (*Proc. Inst. Civil Engineers*, xc. 1).

Of the patents taken out by Grover perhaps the most important was that for his so-called 'spring washer,' used to prevent the slacking of permanent-way fish bolts on railway lines; these washers have been very extensively used in all parts of the world.

He was elected a member of the Institution of Civil Engineers in 1867, and was also a fellow of the Society of Antiquaries and a vice-president of the British Archaeological Association. In connection with his antiquarian pursuits he was instrumental in

the recovery and restoration of the Olapham marbles in St. Paul's Church, Clapham.

He died at his residence on Olapham Common on 23 Aug. 1892.

In addition to the papers mentioned above Grover published the following works and pamphlets: 1. 'Estimates and Diagrams of Railway Bridges,' London, 1860; 2nd ed. 1870. 2. 'The Facilities of "flexible" Rolling Stock for economically constructing . . . Railways or Tramways,' London, 1870. 3. 'Iron and Timber Railway Superstructures,' London, 1874. 4. 'Suez Canals from the most ancient Times to the Present,' London, 1877. 5. 'Section of a Well at Hampstead,' London, 1878. 6. 'Ancient Reclamations in the English Fenlands,' London, 1878. 7. 'Proposed Richmond Footbridge,' London, 1890. 8. 'An Explanation of the London Water Question,' London, 1892. 9. 'Old Clapham' (1897).

[Obituary notices in Proc. Inst. Civil Eng. vol. cxli.; Times, 31 Aug. 1892.] T. H. B.

GRUB, GEORGE (1812-1892), Scottish ecclesiastical historian, born at Old Aberdeen on 4 April 1812, was the only child of George Grub, a respectable citizen and convenor of the trades at Old Aberdeen, by his wife, Christian Volumn. He entered King's College, Aberdeen, at the age of thirteen and a half, and afterwards entered the law-office of Alexander Allan, advocate in Aberdeen, under whom he served the apprenticeship required by the Society of Advocates in that city. Passing as advocate in 1836, he was in 1841 appointed librarian to the society. This post he held until his death. In 1843 he became lecturer on Scots law in Marischal College, Aberdeen, and for forty-eight years was practically the sole teacher of law in the university of Aberdeen—first, as holding this lectureship; next, after the union of King's and Marischal Colleges (1860-81), as substitute for Professor Patrick Davidson, who held the chair of law at King's College, never lectured; and finally, on that same year's death in 1881, as professor of the university of Aberdeen. He was, rather a careful than a brilliant but he was deeply loved and revered by all his students. In 1856 he graduated M.A. at Aberdeen, and in 1864 he received the degree of LL.D. from his university on resigning the chair in 1891, noted by his former students and adorned with his portrait painted by J. D. By birth an inheritor of the long-juring tradition, he was a accomplished theologian; he had a discriminating enthu-

siasticism the whole course of the Oxford movement; and in the congregation to which he belonged (St. John's Episcopal Church, Aberdeen) he had supported his clergyman, Patrick Ohsyne, throughout a prosecution in regard to eucharistic doctrine, which had weighty consequences, for it led to the charge and prosecution of the bishop of Brechin, Alexander Penrose Forbes [q. v.], and the intervention of Pusey and Keble in defence of that prelate. It took some time to heal the sores occasioned by that controversy.

There was at Aberdeen in the early 'thirties' a group of young men, all of them Aberdeen lawyers, all of them episcopalians, and all of them earnest students of history and antiquities—John Mill Burton [q. v.], Joseph Robertson (1810-1866) [q. v.], and John Stuart (1813-1877) [q. v.]. With these Grub associated on equal terms. Like them he contributed to the 'Aberdeen Magazine' (1831-2), and took part in a far more important undertaking, the formation of the Spalding Club. For this club he edited (1840-2), in conjunction with Joseph Robertson, Gordon's 'History of Scots Affairs,' 3 vols. (1853); Thomas Innes's 'History of Scotland, Civil and Ecclesiastical' (the 'Life of Thomas Innes' which he contributed to this volume was reprinted in the edition of Innes's 'Critical Essays,' published in the 'Historians of Scotland' series), and (1869) the index volume of the 'Illustrations of the Antiquities of Aberdeen and Banff.' In 1861 his own work, by which he is best known, 'An Ecclesiastical History of Scotland from the Introduction of Christianity to the Present Time' (it closes with the death of Bishop Skinner on 15 April 1857), in four volumes, was published at Edinburgh, and at once stamped him as the foremost authority on the subject in Scotland. Clear and unaffected in style, this work is learned and exact, but it suffers somewhat from the fact that his extreme scrupulousness as to literal truth caused him to hold too severely in check the wit and liveliness which were so conspicuous and charming in his conversation. As an historian he was determined to be fair, albeit he is at no pains to conceal (what he was proud of) his enthusiastic torism and his profound attachment to the Scottish episcopal church. In the preface Grub acknowledges the help he had received from Joseph Robertson and Mr. Norval Olyne; he regrets that for the history of the Roman Catholic church after the Reformation he had not been able to obtain more accurate materials; and he says that this work had occupied him more than nine years. In spite of

the more recent researches on the Celtic period of Scottish history, the book is by no means out of date; but it is unfortunate that no second edition of it was called for until Grub was too old to undertake the labour of preparing one. He had made notes for this which it is understood were lent to the Rev. W. Stephen, D.D., Dumbarton, for his 'History' (2 vols. 1894-6).

Grub contributed to 'Chambers's Encyclopædia' the articles 'Scotland' and 'Church of Scotland'; that on 'Scottish Literature' in the earlier editions was also his, but failing health prevented him from undertaking its revision for the new edition. To the Aberdeen Philosophical Society he contributed the 'Life of Bishop Elphinstone'; 'The Life of Bishop Burnet, and his Character as a Historian and Biographer'; 'Dr. James Beattie and his Friends'; 'The Antiquities of Dunkeld'; 'Froude's History and Mary, Queen of Scots'; 'Elgin Cathedral'; 'Review of the Evidence as to the Complicity of Queen Mary in the Murder of Darnley'; and, in concert with his lifelong friend and companion, Mr. Norval Clyne, 'The Ecclesiastical and Baronial Antiquities of the Cathedral of Brechin and Castle of Edzell.' An unpublished paper on Henry Scougal [q. v.] supplied materials for the 'Life' of that author prefixed to the latest edition of Scougal's

devotional treatise, 'The Life of God in the Soul of Man' (Aberdeen, 1892).

Grub died at Aberdeen on 23 Sept. 1898, and was buried in the cathedral churchyard at Old Aberdeen, not far from the grave of the non-juror George Garden [q. v.]

Grub's legal practice was never extensive, and till the last ten years of his life his emoluments from his offices were inconsiderable; but they sufficed for his modest wants. With all his preoccupation in religion and study, he was of a very social disposition, while his wit and abundant lore made him a delightful companion. Of middle height, he was rendered lame in early life by the ossification of the right knee; he had a fine head with keen blue eyes and early-silvered locks. Of two portraits of him by Sir George Reid, one hangs in the Advocates' Hall, Aberdeen, another at Marischal College; the latter is the happier likeness. His wife, Ann Lyall, died many years before him, leaving him two sons, the Rev. George Grub, the rector of the Episcopal Church, Avr, and the Rev. Charles Grub, rector of St. Mary's, Montross.

[Personal knowledge; communications from the Rev. George Grub; Life (in Three Churchmen, Edinburgh, 1893), by the Rev. William Walker, LL.D., Monymusk; Aurora Borealis, Aberdeen, 1898; Records of Old Aberdeen, New Spalding Club, &c.] J. C.

H

HAKK, THOMAS GORDON (1809-1895), physician and poet, was born at Leeds on 10 March 1809, and was descended from an old Devonshire family who had 'lived on the soil for many years without being distinguished in any branch of science, literature, or art.' His father, whose usual residence was Sidmouth, possessed considerable musical acquirements. His mother, fourteen years older than the father, was of the Huntly branch of the Gordon family, being eldest daughter of Captain William Augustus Gordon, and aunt of General Charles Gordon. The father died when Hake was three years old; his widow, left with a moderate competence, continued to live in Devonshire, and obtained for her son an admission to Christ's Hospital, where, first at the preparatory school at Hertford and afterwards in London, he received most of his education. Having determined upon a medical career, he studied at Lewes under Thomas Hodson, 'the highest authority in his profession within the bounds of Sussex,' afterwards at St.

George's Hospital, and at the universities of Edinburgh and Glasgow, at which latter he graduated. After travelling for some time in Italy he settled at Brighton, where he was for five years physician to the dispensary, then proceeded to Paris for a year's study, and on his return in 1839 published 'Promides,' a tragedy on the mysteries of Isis, and the 'nebulous but impressive romance,' as Mr. W. M. Rossetti calls it, 'Vates, or the Philosophy of Madness,' first issued in four incomplete numbers, with illustrations by Charles Landseer (1840, 4to), and afterwards republished in 'Ainsworth's Magazine' as 'Valdarno, or the Ordeal of Art-Worship.' 'Towards 1844 it seethed in my brother's head,' says Mr. Rossetti, and it ultimately led to a friendship between Dante Rossetti and the author eventful for both. Hake next settled at Bury St. Edmunds, where he became intimate with George Borrow and J. W. Donaldson, of both of whom he has given interesting particulars in his autobiography. Between 1839 and

1853 he contributed numerous papers, chiefly of a scientific complexion, to the medical journals. About the latter date he gave up practice at Bury, travelled in America, and on his return established himself at Rochester, and, while filling the post of physician to the West London Hospital, became physician to the Countess of Ripon, who was related to his mother's family. The beauty of Lady Ripon's woods at Necton revived the spirit of poetry within him. He wrote his 'Lily of the Valley' and his 'Old Souls,' which, with other poems, were threaded together as 'The World's Epitaph,' privately printed in 1866 in an edition of one hundred copies. One of these came into the hands of Rossetti, who admired it as enthusiastically as 'Valdarno,' and the two poets met in October 1869. In Rossetti's darkest days, when in 1872 his life was nearly terminated by laudanum, Hake rendered the greatest service. 'He was the earthly providence of the Rossetti family,' says Mr. W. M. Rossetti. He took Dante Rossetti to his house during the worst of the crisis, afterwards accompanied him to Scotland, and consented to his own son George acting for a long time as Rossetti's companion and secretary, a position which the derangement of the patient's mental and physical health eventually rendered untenable.

After 1872 Hake spent a considerable time in Italy and Germany, and, returning to England, settled near St. John's Wood, principally occupied in the composition and publication of poetry for the few, dissenting rather than obscure in thought and diction, but uninviting to those who cannot appreciate mystical symbolism. In 1871 he published 'Madelaine and other Poems,' reproducing much of 'The World's Epitaph.' In 1872 appeared 'Parables and Tales,' comprising 'Old Souls.' In 1876 he published 'New Symbols,' in 1879 'Legends of the Merrow,' in 1880 'Maiden Ecstasy,' in 1883 'The Serpentine Play,' and in 1890 'The New Day,' a collection of sonnets in the Shakespearean form. His autobiography, 'Memoirs of Eighty Years,' was published in 1892. During the last four years of his life he was confined to his couch by a fracture of the hip, but his faculties and spirits remained unimpaired. He died on 11 Jan. 1896.

Hake is a rare instance of a poet nearly all whose work has been produced after fifty. 'He had,' says William Bell Scott, 'retired from medicine, determined to cultivate poetry, and he was really accomplishing his object by perseverance and determined study.' This character is borne out by Hake's own preface to 'The World's Epitaph,' where stress is laid

upon the difficulties of poetical expression in a style which proves that, unless when writing of ordinary things, he found it no easy matter to convey his thoughts clearly and accurately even in prose. There is no poet to whom Tennyson's phrase, 'he beat him out,' would be more applicable, and the rather inasmuch as the result really is music, Hake's most artificial verses being usually accompanied by a melody which proves that metrical expression was, after all, natural to him, and that poetry was actually his vocation. He is nevertheless essentially a poet of reflection, notwithstanding the objective character of most of his poems, and their endeavour to represent ideas by material symbols. Their descriptiveness and sense of the mysteriousness of Nature are balanced by frequent lapses into bathos; the total impression they produce is nevertheless one of dignity and intellectual distinction, and they have, at all events, the merit of independence of all contemporary poetry. The comparative fluency and flexibility of Hake's sonnets, his last poetical work, seem to indicate that he would have overcome his defects if age had suffered him to go on writing. Not many such volumes have been produced by an octogenarian.

About 1870 Hake wrote another novel, 'Her Winning Ways,' which appeared in 'The New Monthly Magazine,' then, like 'Ainsworth,' a mere refuge for the destitute. His prose as well as his verse wanted every quality of popularity. Nothing could have gained him a hearing during his lifetime except his fortunate naturalisation in the Rossetti circle. Dante Rossetti reviewed him in the 'Academy' and the 'Fortnightly Review,' an honour he did to no one else; and a selection from his poems, with a preface by Mrs. Alice Maynell (and a portrait after Rossetti), appeared in 1894. Hake also published small works 'On Vital Force; its pulmonary origin,' 1867, and 'The Powers of the Alphabet,' 1883. His autobiography depicts him as a shroud but not unkindly observer of other men; cheerful rather than genial, communicative but not garrulous, and with a confidence in his own powers partaking rather of the nature of pride than of vanity. A veteran as a man, a novice as an author, he held an exceptional position in the literary society of his day. Mr. W. M. Rossetti accurately describes him as 'a man of more than common height, lithe and straight, with very self-possessioned gentle manners, and clear deliberate utterance.' One of his sons, Mr. Alfred Egmont Hake, is the biographer of General Gordon and the editor of his Chinese journals.

[Hale's *Memoirs of Eighty Years*; W. M. Rossetti's *Life of Dante Gabriel Rossetti*; W. Bell Scott's *Autobiographical Notes*, vol. ii.; Thomas Bayne in *Miles's Poets and Poetry of the Century*; Mr. Theodore Watts-Dunton in *Athenæum*, 19 Jan. 1895; personal knowledge.]

R. G.

HALE, HORATIO (1817-1896), anthropologist, born on 3 May 1817, at Newport, New Hampshire, in the United States, was the son of David Hale, a prominent lawyer of Newport, and of Sarah Josepha, his wife. After the death of her husband, Mrs. Hale turned her attention to literature. Entering Harvard College in 1833, Hale showed a marked faculty for languages. His first essay in original work appeared the next year, and attracted the attention of the college authorities. It consists of an Algonkin vocabulary, which he gathered from a band of Indians who had camped on the college grounds. Three years later, when the United States exploring expedition to little-known portions of the globe was organised under Captain Wilkes, Hale was recommended, while yet an undergraduate, for the post of ethnologist and philologist, and obtained the appointment. From 1838 to 1842 he was employed in the work of the expedition, visiting South America, Australasia, Polynesia, and North-western America, then known as Oregon. From this point he returned overland. The result of his labours was published at Philadelphia in 1846 in a large quarto volume.

Having taken his degree of M.A., Hale made a short tour of Europe, and, on his return, studied law. He was admitted to the Chicago bar in 1856. The year after he removed to Canada, and settled at Clinton, Ontario, where his wife's family had a substantial property, the management of which they desired him to undertake. He continued to reside in Clinton till his death, devoting much attention to the development of the Ontario school system. He was influential in introducing co-education of the sexes in high schools and collegiate institutes, in increasing the grants to these institutions, in establishing the normal school system, and in improving the methods of examination.

The vicinity of the Canadian reserves on the banks of the Thames and Grand River gave Hale ample opportunity for further investigation into American-Indian questions. He discovered, and in 1883 published, under the title, 'The Iroquois Book of Rites,' two Indian manuscripts, dating between 1714 and 1735, which is the only literary American-Indian work extant. His judicious introductions, careful translation and editing add much to the value of the work.

VOL. XXII.—SUP.

In 1884, at its Montreal meeting, he reorganised the section of anthropology as an independent department of the British Association for the Advancement of Science. He had already done a like service for the American Association. At the request of the British committee, he undertook the supervision of the anthropological section's work in the Canadian North-west and British Columbia. The reports, which are very elaborate, appeared in the published 'Proceedings' from 1885 to 1897. Continuing a member of the committee, he was asked to accept the position of vice-president at the association's meeting in Toronto (1896), but declined on the ground of ill-health.

Hale's writings which deal with the more general questions of anthropology are scattered through the 'Proceedings' of the British and American Associations for the Advancement of Science, the Anthropological Institute of Great Britain, Royal Society of Canada, Canadian Institute, Toronto; and through periodical publications like the 'Andover Review,' 'Popular Science Monthly,' 'Journal of American Folk Lore,' 'Science,' and the 'Critic.'

Among other learned bodies Hale was an honorary fellow of the Anthropological Institute of Great Britain, to which he contributed his latest papers. He died on 29 Dec. 1896 at Clinton, Ontario.

In 1851, at Jersey city in the state of New Jersey, he married Margaret, daughter of William Pugh, formerly justice of the peace for the township of Goderich in the county of Huron, Canada West.

T. B. B.

HALFORD, SIR HENRY ST. JOHN, third baronet (1828-1897), rifleman, born on 9 Aug. 1828, was the son of Sir Henry Halford, second baronet (1797-1868), M.P. for South Leicestershire from 1832 to 1857, by his wife Barbara, daughter of his uncle, Sir John Vaughan (1769-1839) [q.v.], by his wife and first cousin, Augusta St. John. Sir Henry Halford, first baronet [q.v.], the physician, was his grandfather. Henry St. John Halford was at Eton from 1840 to 1845. He matriculated as a commoner of Merton College, Oxford, on 26 Nov. 1816,

3 F

and graduated B.A. in 1849. At his father's death on 22 May 1808 he succeeded to the baronetcy. Thenceforth he chiefly resided at the family residence, Wistow Hall, Leicestershire.

Halford took an active part in the public business of his county, Leicestershire. In 1872 he held the office of high sheriff. In June 1876 he was elected deputy chairman of quarter sessions, and at midsummer 1883 chairman. This office he held till his death. On the formation of the Leicestershire county council in 1889 he was elected chairman, and held the office till 1893, when ill health compelled him to resign.

It was, however, in connection with rifle shooting and the volunteer movement that Sir Henry was best known. At the beginning of the movement in 1860 he took command of a company of the Leicestershire volunteers. In 1862 he became colonel of the battalion. In 1868 he resigned, but resumed the office in 1878, and held it till 1891, in which year he became honorary colonel. In 1886 he received the order of C.B.

In the first rifle match between England and Scotland for the Bheo shield in 1862, Sir Henry shot for England, and made the highest score. He subsequently shot in 1863, 1865, 1871, 1872, 1874, 1877-84, 1880-1890, and 1893. In 1872, when England won, he again made the highest score. His principal individual successes at the National Rifle Association meetings at Wimbledon and Bisley were the Albert prize in 1862 and 1893, the Duke of Cambridge prize and the Association cup in 1871, and the Dudley in 1893, besides a vast number of less important prizes. He also in 1864 won the Cambridge long-range cup, a match of great importance, with the newly invented Metford rifle.

In 1877 Sir Henry acted as captain of a team of eight riflemen chosen from England, Ireland, and Scotland, who went to the United States to shoot a match at long distances against eight representative American marksmen. The latter won. In 1882 Sir Henry, this time with two colleagues, took out a team of British volunteers to shoot a match, twelve on each side, against the National Guard of America with service rifles. The British won, and repeated their success in a similar match shot in 1883 at Wimbledon. On that occasion Lord Brownlow, then chairman of the National Rifle Association, was the titular captain of the British team, with Halford as his working subordinate.

In 1880 Halford was appointed a member

of the government small arms committee. The introduction of the Lee-Metford rifle as the British service arm was due to the report of that committee. Halford had great knowledge, both theoretical and practical, of gunnery and gunmaking; he was intimate with William Ellis Metford [q. v. Suppl.], the inventor of the Lee-Metford rifle, and constantly co-operated with him in his experiments. In 1888 Halford published 'The Art of Shooting with the Rifle.'

Halford died on 4 Jan. 1897. In 1863 he married Elizabeth Ursula, daughter of John Bagshawe, but left no issue. His brother John succeeded him, and the baronetcy became extinct at his brother's death.

[A memoir by W. J. Freer, published in the Leicester Journal at the time of Sir Henry Halford's death, and republished in the Transactions of the Leicestershire Archaeological Soc. vol. viii. pt. v. 1898.] J. A. D.

HALL, SIR CHARLES (1843-1900), recorder of London, second son of vice-chancellor Sir Charles Hall [q. v.] by Sarah, daughter of Francis Duval, and niece of the eminent conveyancer, Lewis Duval [q. v.], was born on 3 Aug. 1843. He was educated at Harrow and Trinity College, Cambridge, where he graduated B.A. in 1866 and proceeded M.A. in 1870. Admitted student at Lincoln's Inn on 15 Nov. 1862, he was there called to the bar on 17 Nov. 1866, and was admitted on 13 May 1872 *ad eundem* at the Middle Temple, of which he was elected benchet on 7 Nov. 1881. He was a pupil of Sir James (afterwards Lord) Hannen [q. v. Suppl.], and had for some years a considerable practice in the court of admiralty and on the south-eastern circuit. In November 1877 he was appointed attorney-general to King Edward VII when prince of Wales, and on 2 June 1881 was gazetted Q.C. In 1890 he was created K.C.M.G. in recognition of his services as British representative at the international maritime conference held at Washington during the last quarter of the preceding year. He resigned his office at court on being elected, on 8 Feb. 1892, recorder of London, but remained till his death on terms of intimacy with King Edward VII, then prince of Wales. The duties of the recordership he discharged with conspicuous efficiency. In 1899 he was sworn of the privy council. He represented the western division of Cambridgeshire in the short parliament of 1885-6 and the parliament of 1886-1892. At a bye-election in Aug. 1892 he was returned for the Holborn division of Finsbury. He died unmarried on 9 March 1900, and was interred in the Kensal Green cemetery. His portrait, by the Hon. John

Collier, was placed as a memorial of him in Holborn town hall.

HALL, WILLIAM EDWARD (1835-1894), writer on international law, born at Leatherhead on 22 Aug. 1835, was the only child of William Hall, a descendant of a junior branch of the Halls of Dunglass, and of Charlotte, daughter of William Cotton. The father having been at one time physician to the king of Hanover, and subsequently to the British legation at Naples, much of Hall's childhood was spent upon the continent, whence perhaps his taste in after life for art and for modern languages. He matriculated from University College, Oxford, on 1 Dec. 1852, and graduated B.A. in 1856, taking a first class in the then recently instituted school of law and modern history. In 1859 he graduated M.A. and gained the chancellor's prize for an English essay, 'The effect produced by the precious metals of America upon the greatness and prosperity of Spain.' He was called to the bar at Lincoln's Inn in 1861, but in law as a profession he took no great interest, nor had he the patience to await its tardy favour. His energies were thrown rather into foreign travel, sport, and the study of history, art, language, botany, and strategy. He was an enthusiastic climber and member of the Alpine Club, making several first ascents, notably that of the Lyelkaum, and contributing both with pen and pencil to the 'Alpine Journal.' In 1864 he was under fire during the defence of Sonderborg by the Danes, as he was also, twenty years later, during some of the operations in the neighbourhood of Suakim. In his early days at the bar he visited South America to collect evidence on behalf of the Tichborne claimant, and in later years travelled in Lapland, Norway, Egypt, Bulgaria, India, Burmah, and Japan. From these expeditions, undertaken not merely for pleasure or sport, but also with a view to acquiring information on social, political, and especially on military questions, Hall never failed to bring home numbers of water-colour sketches of a very high order of merit, as well as additions to

what became a valuable collection of Greek vases, Arab weapons, Etruscan urns, Japanese sculptures, and other typical illustrations of the archæology of art. These he was able to arrange to advantage in the fine old Elizabethan mansion which he occupied in the seventies at Llanfihangel, Monmouthshire, and at another fine old house, Coker Court, Somersetshire, whither he removed in the eighties. Though thus versatile in tastes, Hall was a strenuous and methodical writer. In an early pamphlet he anticipated much that has since been said about the defects of the British army, and advocated a scheme of compulsory military service. He had at one time amassed materials and had formed plans for ambitious treatises upon such topics as the history of civilisation and the history of the British colonies; but was at length led, almost by accident, to concentrate his efforts upon that department of thought upon which he was destined to become an acknowledged master. A thin octavo, published in 1874, upon 'The Rights and Duties of Neutrals' was followed up in 1880 by Hall's *magnum opus*, 'International Law,' the publication of which marks an epoch in the literature of the subject. No work so well proportioned, so tersely expressed, so replete with common-sense, so complete, had ever appeared in this country. It has won its way even among continental jurists, to whom as a rule Hall's adherence to what they call *l'école historique-pratique* is distasteful. It reached a fourth edition in 1895. He was elected in 1875 *associé*, and in 1882 *membre*, of the 'Institut de Droit International.' Nor were his merits overlooked by his own government. He had made inquiries, and drawn up reports, in 1871-7, for the education office and for the board of trade; he delivered several courses of lectures at the Royal Naval College at Greenwich, and he was selected to be one of the British arbitrators under the convention of 1891, unfortunately not yet ratified, for the settlement of the conflicting claims of Great Britain and France with reference to the Newfoundland fisheries. This occurred only a year or two before his death, which took place quite suddenly at Coker Court on 30 Nov. 1894. Hall married, first in 1866, Imogen Emily, daughter of Sir William Robert Grove [q.v. Suppl.] (she died in 1886); and secondly, in 1891, Alice Constance, youngest daughter of Colonel Arthur Charles Hill of Court of Hill, Shropshire, but had no children. Hall's premature death deprived his friends of a charming companion, and legal science of one of its ablest exponents.

Besides the works already mentioned he

wrote: 1. 'A Plan for the Reorganisation of the Army' (pamphlet), London, 1867. 2. 'A Treatise on the Foreign Powers and Jurisdiction of the British Crown,' Oxford, 1864.

T. E. H.

HALLÉ, SIR CHARLES (Carl Hallo), pianist and conductor (1819-1895), was born on 11 April 1819 at Ilagon, Westphalia, where his father, Friedrich Halle, was organist of the principal church and 'music director.' As a child he showed remarkable gifts for pianoforte playing. He performed a sonatina in public at the age of four, and played the drums in the orchestra in his early years. In August 1828 he took part in a concert at Cassel, where he attracted the notice of Spohr. At the age of sixteen (in June 1836) he went to Darmstadt and studied under Rineck and Gottfried Weber. A year later he made his way to Paris, intending to take lessons from Kalkbrenner, but he did more by 'picking up' than by actual instruction in the French capital. In Paris he mixed in the best musical circles, which included Chopin, Liszt, Thalberg, Cherubini, Berlioz, Wagner, and others. With Alard and Franchomme he gave an annual series of classical quartett concerts in Paris, which took the highest rank.

In the spring of 1843 Hallé paid his first visit to England, the country of his adoption. He took part in a concert given by Sivori on 16 June, and gave a concert of his own on 30 June, both of which took place at the Hanover Square Rooms, but he refused to play a concerto by Griffin at a Philharmonic concert. He soon returned to Paris, where for the next five years he continued to reside.

The French Revolution of 1848 drove Hallé to England. After playing with success in London, he settled upon Manchester as a likely field of professional operations by reason of its influential colony of music-loving Germans, and that city became his home for the remainder of his life. Although his first claim to recognition was as a pianist, Hallé possessed sterling gifts as an orchestral conductor. He conducted the Gentlemen's concerts from the end of 1849, founded the St. Cecilia Society in 1850, conducted operas at the Theatre Royal in the winter of 1854-5, and threw himself heartily into the cause of music in Manchester. At the Manchester Exhibition of 1857 he conducted an orchestra with so much success that he continued it as a per-

manent institution, with the result that 'Hallé's orchestra' became greatly celebrated in the north of England. A list of works performed at his orchestral concerts, which began on 30 Jan. 1858, is given at the end of his 'Life and Letters' (pp. 407-26). The first performance in England of his friend Berlioz's 'Faust' (Manchester, 5 Feb. 1850) was due to and conducted by Hallé. Other conducting engagements included a series of operas at Her Majesty's Theatre, London, in the winter of 1860-1, the annual Reid concert in Edinburgh (from 1868), the Liverpool Philharmonic Society (from 1882), the Bristol Musical Festivals of 1873, 1876, 1879, 1882, 1885, 1888, 1890, 1893; from 1882-5 he conducted the Sacred Harmonic Society (London).

In 1860 Hallé began those series of pianoforte recitals with which his name was for many years worthily associated. The first of the series, entirely devoted to the works of Beethoven, for which James William Davison [q.v.] wrote his excellent analytical notices, was given in London in 1861; in fact Hallé found a very good second home in the metropolis, where he frequently appeared at the Musical Union, and more especially at the Popular concerts. He had a large *clientèle* as a teacher of the pianoforte, one of his pupils being Queen Alexandra. His best-known professional pupil was Gottschalk.

In 1890, and also in 1891, in company with his second wife (formerly Madame Norman Neruda), Hallé paid two successful professional visits to Australia, and in 1895 to South Africa. He was largely instrumental in founding the Royal College of Music (Manchester), and in 1893 became its first principal.

Hallé received the degree of LL.D. *honoris causa* from the university of Edinburgh in 1880, and on 10 July 1888 he was knighted by Queen Victoria. He died at his residence, Greenhays Lane, Manchester, on 25 Oct. 1895, and his remains are interred in the Roman catholic portion of Salford cemetery. He was twice married: first, on 11 Nov. 1841, to Désirée Smith de Rilien, who died in 1860; and, secondly, on 26 July 1868, to Madame Norman Neruda, the distinguished violinist, who survived him.

As a performer Hallé was a disciple of the classical school, and, compared with modern pianism, his style was somewhat cold, while studiously correct, and respectful to the composers whose works he interpreted. On the other hand, his achievements as a conductor showed that he could rise superior to his somewhat phlegmatic temperament, and so capable a critic as Hans

von Bülow paid a high tribute to his skill as a *chef d'orchestre*. A man of remarkably methodical businesslike habits for a musician, he had an exceedingly retentive memory, and did much to foster a taste for classical music in England. His compositions were unimportant. He edited a 'Practical Pianoforte School' (begun in January 1873), and its sequel, a 'Musical Library,' both consisting of classical pianoforte pieces, begun in 1876. There is an oil painting of him by Victor Mottez (1850).

[Life and Letters of Sir Charles Hallé, edited by his son, C. E. Hallé, and his daughter, Marie Hallé, 1896; various periodical publications; Brit. Mus. Cat.] F. G. E.

HALSWELLE, KEELEY (1832-1891), artist, son of David Halswelle, born at Richmond, Surrey, on 28 April 1832, came of a Somerset stock. At an early age he contributed drawings to the 'Illustrated London News,' and was long engaged in book illustration. Some work for Robert Chambers's 'Illustrated Shakespeare' took him to Edinburgh, where he found a very good friend in William Nelson, the publisher. Among other books which he illustrated were: 'The Falls of Clyde,' 1859; 'Byron's Poems,' 1861; 'Scott's Poems,' 1861; 'Thomas Morris's Poems,' 1863; 'Wordsworth's Poems,' 1863; and 'The Knight of the Silver Shield,' 1885. In 1857 a painting of his was exhibited at the Royal Scottish Academy, and in 1866 he was elected associate. In 1869 he left England for Italy, and during the next few years found most of his subjects there. The 'Ioba di Roma,' exhibited at Burlington House, gained a 50% prize at Manchester; but the most popular work of this period, possibly because of its subject, was 'Non Angli sed Angeli,' painted in 1877. Halswelle was then known as an artist whose inclination was either to paint from the life or to seek subjects in poems and pages of history. Latterly he made a reputation as an excellent landscapist. An exceptionally beautiful work of this period, a painting in oil of the Thames above Midsunhead, was included in (Sir) Henry Tate's gift to the nation, and is now in the Millbank Gallery. In 1884 some views of the Thames, recalling 'Six Years in a Houseboat,' were shown by themselves in London. A book on the subject, which bears the same title, was from the artist's pen. Halswells was elected a member of the Institute of Painters in Oils in 1882.

Halswelle resided in his later years at Stonor House, Steep, near Petersfield, where he was a ruling councillor of the Primrose League. He died of pneumonia at Paris on

11 April 1891, and was buried at Steep on 20 April. He married in 1873 Helen, daughter of Major-general N. J. Gordon, who survived him with two sons.

[Magazine of Art, iv, 406; Man of the Time, 14th ed.; Dict. of British Artists, 1895; Scribner's Cyclopedia of Painters and Paintings; Tate Collection Official Cat.; Ann. Reg. 1891, Chron. p. 159; Times, 14, 18, and 21 April 1891; private information.] E. R.

HAMERTON, PHILIP GILBERT (1834-1894), artist and essayist, was born on 10 Sept. 1834 at Laneside, Shaw, near Oldham in Lancashires. His grandfather, Gilbert Hamerton, was the second son of an old Lancashires family. His father, John Hamerton, a solicitor, married in 1833 Anne, the orphan daughter of Philip Cocker, a cotton manufacturer. She survived his birth only a few days, and the boy was brought up by his aunts at Burnley, and afterwards educated at Burnley and Doncaster grammar schools. His father, to whom he owed nothing but existence, died in January 1844. After the completion of his school education Hamerton was placed with a clergyman, 'with whom I had not two ideas in common,' to be prepared for Oxford. This scheme came to an end from the youth's distaste for the subjects of academical study, combined with reluctance to sign the thirty-nine articles. Being possessed of independent means, he was able to gratify both his leading tastes by 'deciding to try to be a painter and to try to be an author, and seeing what came of both attempts.' In the meantime he accepted a commission in the militia, and travelled and painted in Scotland. In 1863 he came to London, and studied under a clever but not highly cultured artist named Pettitt, who carried on painting as 'a high-class industry.' 'I made rapid progress; it was not quite in the right direction.' He resorted also to Ruskin for advice, which in his opinion proved misleading. He was gradually led back to the Highlands, and his first publication, 'The Isles of Loch Awe and other Poems' (1855), was a volume of verse chiefly inspired by Highland scenery. Its entire failure confirmed him for a time in the pursuit of art, and after his sudden but most fortunate marriage in 1858 with a young French lady, Mlle. Eugénie Gindrisz, the daughter of a republican ex-prefect, who had refused employment under the empire, he took up his residence with her in the solitary islet of Innistrinich on Loch Awe—a marvellous change for the bride, accepted with complete acquiescence. Financial difficulties, chiefly connected with Hamerton's Lancashire property, led, after a few years, to removal to,

France, where Hamerton settled in the neighbourhood of Autun. The step was most fortunate, as it tended to dissociate him from the exclusive practice of pictorial art, in which he would hardly have risen above mediocrity, and to direct him to æsthetic criticism and general literature. The turning point of his career was the publication (1862) of 'A Painter's Camp in the Highlands,' which not only obtained immediate success both in England and America, but made him a contributor to English periodicals. He wrote for the 'Fortnightly' and other reviews, succeeded F. T. Palgrave as art critic on the 'Saturday Review,' an employment which obliged him to spend much time in London, and procured a commission for an extensive work on etching and etchers, which was not published until 1868. A nervous illness in this year, which incapacitated him from railway travel, necessitated the resignation of his post on the 'Saturday.' Unable to leave home, he turned to novel writing, and produced in succession 'Wonderholme' (1869), and, under the pseudonym of Adolphus Segrave, 'Marmorno' (1878), both of which obtained favour with a select public. A more important enterprise was the establishment, in 1869, (together with Mr. Richmond Sealey, of 'The Portfolio,' which forthwith took rank as one of the most important of English artistic periodicals. The introduction of illustration, first by autotype, afterwards by the Woodburytype and various methods of photogravure, made it an epoch in illustrated art literature, while the objects reproduced and the literary contributions were also of the highest order. Hamerton, who had become devoted to etching, contributed a series of papers entitled 'The Unknown River,' with illustrative etchings by himself; and afterwards a series of 'Chapters on Animals,' illustrated with etchings by Voyrassat, and 'Examples of Modern Etchings,' with notes. He continued to direct the journal for the remainder of his life, and it gave him an assured and important position in the world of art. 'The Graphic Arts,' 1882, 'Landscape in Art,' 1883, 'The Saône,' 1887, and 'Man in Art,' 1891, mainly reproduced from 'The Portfolio,' were further contributions to art literature, as well as a life of Turner (1879). His most important literary work, however, was performed as an essayist, and included five books of the highest merit in their respective departments. He had already (1873) published 'The Intellectual Life,' a charming and thoughtful study. In 'Round my House' (1876) he gave the world such a study of French social life as could only have proceeded from one who had,

like him, resided for many years in the heart of France. 'Modern Frenchmen' (1878) was an equally valuable series of biographies of notable men, displaying modern French thought in its most refined aspects, and sining, like all Hamerton's work of this class, at the establishment of cordial feeling between France and England. 'Human Intercourse' (1882) was a work of the class of 'The Intellectual Life.' 'French and English' appeared in 1890. The principal external events of a life so full of artistic and intellectual effort were an unsuccessful candidature for the Slado professorship of fine art at the university of Edinburgh (1880); the tragic death of a son in 1888; and Hamerton's removal in 1891 to Boulogne-sur-Seine, where he died on 4 Nov. 1894. His death was sudden, but he had long been suffering from hypertrophy of the heart. He left an autobiography brought down to the date of his marriage. It was completed and published in 1897 by his widow, better qualified than himself to render justice to the many admirable traits of a sterling character somewhat deficient in superficial attractiveness, and less likely to bring into relief, as he has done, the foibles hardly to be escaped by one doubly proud to sensitiveness as author and as artist. Much, however, that seems vanity is merely lack of a sense of humour. The writer's undoubting conviction that whatever interests him must interest others burdens his pages with superfluous detail. He is indeed once visited by the reflection that 'the reader may advantageously be spared my boyish impressions of the Great Exhibition.' A consistent application of this excellent principle would have benefited the book. Mrs. Hamerton's part of it is also minute, but never tedious. It is an almost unparalleled example of idiomatic English from the pen of a lady who knew none when she was married, and only lived in Great Britain for a short time.

Hamerton also wrote 'Contemporary French Painters' (1865) and 'The Etcher's Handbook' (1871). Etching became his favourite art, and he was a frequent contributor to the exhibitions of the Painter Etchers' Society. In 1882 he was made an officier d'Académie. On 3 March 1894 he received the degree of LL.D. from the university of Aberdeen. His portrait, from a photograph by A. T. Palmer, son of Samuel Palmer [q. v.], is prefixed to his autobiography, and another, by Elliott & Fry, was reproduced in 'Scribner's Magazine' for February 1895.

[Philip Gilbert Hamerton: an Autobiography and Memoir, 1897.] R. G.

HAMILTON, SIR ROBERT GEORGE CROOKSHANK (1836-1895), civil servant and governor of Tasmania, born in 1836, was the son of Zachary Macaulay Hamilton (*d.* 1876) and his first wife, Anne Crookshank. His father, who was nephew of Zachary Macaulay [q. v.] and first cousin of Lord Macaulay, was, on 30 Aug. 1833, admitted minister of Bressay in the Shetlands, and in 1864 was made honorary D.D. of Edinburgh.

Robert was educated at University and King's College, Aberdeen, where he graduated M.A. in March 1854 (*Anderson, Graduates of Univ. and King's Coll.* 1893, p. 306). In 1855 he migrated to London and entered the civil service as a temporary clerk at the war office. In the same year he was sent to the Crimea as a clerk in the commissariat department. In 1857 he was employed in the office of works, and in 1861 he was selected to take charge of the finance of the education department, the work of which was then rapidly growing in bulk and complexity. In 1860, on Lord Lingen's recommendation, Hamilton was appointed to the yet more difficult post of accountant to the board of trade, and in this capacity he successfully reorganised the board's financial department; from 1872 to 1878 he was assistant-secretary to the board of trade. In 1872 he was appointed assistant-secretary and in 1874 secretary of Playfair's civil service inquiry commission; in this capacity he spent some time at Dublin Castle with a view to its reorganisation. In 1878 he became accountant-general of the navy, and was the first to simplify the naval estimates so as to make them intelligible to the public. In 1879 he was appointed a member of Lord Carnarvon's commission on colonial defences, and in May 1882 he was made permanent secretary to the admiralty.

On the murder of Thomas Henry Burke [q. v.] in that month, Hamilton was lent by the admiralty for two successive periods of six months each to the Irish government as under-secretary of state for Ireland. He was then made permanent under-secretary and C.B.; on 12 Jan. 1884 he was created K.C.B., and in the following year honorary LL.D. of Aberdeen. While in Ireland Hamilton became convinced of the advisability of home rule from an administrative point of view, and he is said to have had some share in influencing both his chief, Earl Spencer, and W. E. Gladstone in the same direction. The persistent rumour that he drafted Gladstone's first home rule bill in 1886 was quite incorrect, but his sympathies with home rule were naturally regarded as a cause of his removal from the under-secretaryship in

November 1886 by the conservative ministry which had succeeded the liberal ministry in the preceding July on the rejection of Gladstone's home rule proposals by the House of Commons. He was at once appointed governor of Tasmania, and was succeeded as under-secretary by Major-general Sir Redvers Buller. In 1887 he presided over the meeting of the Australian federal council held at Hobart.

Hamilton remained governor of Tasmania until 1893; on his return he was appointed royal commissioner to inquire into the working of the constitution of Dominica. In 1894, on Mr. Morley's nomination, he was placed on the commission appointed to inquire into the financial relations between England and Ireland, and in November of the same year he was made chairman of the board of customs. He died at 31 Redcliffe Square, South Kensington, on 23 April 1895, and was buried at Richmond, Surrey, on the 26th. He married, first, in 1863, Caroline (*d.* 1876), daughter of Frederick Augustus Geary (*d.* 1845); and, secondly, in 1877, Teresa Felicia, daughter of Major H. Reynolds of the 58th regiment; he left issue by both wives. He was one of the ablest civil servants of his time, and was described by Lord Lingen as 'the most all-round man he knew.' A work on 'Bookkeeping,' which he published with the Clarendon Press in 1868, has passed through many editions.

HAMLEY, SIR EDWARD BRUCE (1824-1893), general, born at Bodmin on 27 April 1824, was youngest son of Vice-Admiral William Hamley, by Barbara, daughter of Charles Ogilvy of Lerwick, Shetland. His father's family had been settled in Cornwall from the conquest; but their lands, which filled a page of Domesday book, had passed from them. Hamley owed his literary faculty to his mother. He was educated at Bodmin grammar school, obtained a cadetship at the Royal Military Academy, Woolwich, on 19 Nov. 1840, and was commissioned as second lieutenant in the royal artillery on 11 Jan. 1843. It was significant of his future that Christopher North and Marshal Saxe were favourite authors with him at that time. He became lieutenant on 15 Sept.

After serving for a year in Ireland, he

was sent to Canada, where he remained nearly four years, devoting himself to reading and field sports. His fondness for the latter went along with a remarkable love of animals, especially cats. On his return to England he was stationed at Tynemouth and Carlisle. He had to live on his pay, and having incurred debts, he turned to literary work as a means of clearing them off. His earliest papers, 'Snow Pictures' and 'The Peace Campaigns of Ensign Faunce,' found ready acceptance, and appeared in 'Fraser's Magazine,' 1849-50. He was promoted second captain on 12 May 1850, and joined his new battery at Gibraltar. A lady who knew him well there says: 'He came to the Rock with the reputation of being very clever, satirical, and given to drawing caricatures. . . . Most people stood in awe of him, owing to his silent ways and stiff manner, and from his taking but little part in things around him, and never taking the trouble to talk except to a few. . . . He had a most tender heart behind his stiff manner, and many were the kind acts he did to the wives and children of his company' (SHANN, i. 63). His connection with 'Blackwood,' to which his oldest brother, William (an officer of royal engineers), was already a contributor, began in 1851. His excellent novel, 'Lady Leo's Widowhood,' appeared in 1853, and was soon republished with drawings by himself, which show that his artistic talent fell little short of his literary gifts.

In March 1854 Colonel (afterwards Sir) Richard Dacres (q.v.), who commanded the artillery at Gibraltar, was given the command of the batteries of the first division in the army sent to Turkey. Hamley went with him as adjutant, and served throughout the war in the Crimea. At the Alma his horse was struck by a cannon-shot. At Inkermann his horse was killed, and he narrowly escaped being made prisoner. He had brought up three guns, and had planted them on the fore-ridge with a boldness and skill which seem to have attracted Todleben's notice (KINULAKD, v. 196-7). On the death of General Strangways, at Inkermann, the chief command of the artillery passed to Dacres; Hamley became his aide-de-camp, and held that post till April 1856. He was four times mentioned in despatches (*London Gazette*, 12 Nov. and 2 Dec. 1854, 26 Jan. and 2 Nov. 1855), was made brevet-major on 12 Dec. 1854, and brevet-lieutenant-colonel on 2 Nov. 1855, and received the Crimean medal with four clasps, the Sardinian and Turkish medals, the Legion of Honour (5th class), and the 'Vidie' (5th class). He sent 'Blackwood'

a series of letters from the camp, which were afterwards republished as 'The Campaign of Sebastopol,' and present a vivid picture of the course of the siege. A review of the 'poetry of the war,' and a paper on 'North and the Noctes,' were also written by him in the Crimea.

On his return home Hamley was quartered at Leith, and made the personal acquaintance of John Blackwood, with whom he was henceforward on terms of affectionate intimacy. Through Blackwood he formed many literary friendships: with Aytoun, Warren, Bulwer Lytton, Thackeray, and others. 'He hated fools, he had no tolerance for presumption, and he could never endure self-complacent bores' (SHANN, i. 122), but with men he liked he was a most genial companion and a brilliant talker. He edited the first series of 'Tales from Blackwood' (1858, &c.), which included two Gibraltar tales of his own.

Early in 1859 he was appointed professor of military history at the newly formed staff college at Sandhurst. He remained there six years, and his lectures were the foundation of his great work, 'The Operations of War,' published in 1860. By this book he 'has done more than any other Englishman to make known to English officers the value of a methodical treatment of the study of campaigns' (MAURICE, *War*, p. 9). The book was not intended for military men only, and its literary finish and the absence of pedantry made it attractive to non-professional readers. But he is himself open to the charge which he brought against other writers on strategy: that they 'treat their subject in too abstract a form.' He ignored national distinctions: he deliberately omitted all reference to the spirit of war, to moral influences, to the effect of rapidity, of surprise, and secrecy' (Colonel INDEMNSON, *Journal of United Service Institution*, xlii. 775). General Sherman, while expressing his high estimate of the work, remarked that in the criticisms of the Atlanta campaign due allowance had not been made for the local conditions.

The earlier volumes of Kinglake's 'War in the Crimea' were reviewed by Hamley in the 'Edinburgh' (April 1863 and October 1865), as he had more fault to find with them than would have suited Blackwood, their publisher. He became colonel in the army on 2 Nov. 1863, and regimental lieutenant-colonel on 10 March 1864. The latter promotion removed him from Sandhurst to Dover; but on 1 April 1866 he was made a member of the council of military education, and for the next four years he

lived in London, at the Albany and the Athenæum Club. In 1869 he was made a member of the Literary Society. His love of animals found expression in an article on 'Our Poor Relations' (*Blackwood*, May 1870), which was afterwards republished with illustrations by Ernest Griset.

The council of military education was dissolved on 31 March 1870. On 1 July Hamley was appointed commandant of the staff college, and held that post till 31 Dec. 1877. He did much to make the staff college course more thorough and practical, laid stress on riding, and carried out extended reconnaissances. He was more prone to blame than praise, but did not stint praise when it was really well earned. In a fourth edition of his 'Operations of War' (in 1878) he took account of the wars of 1866 and 1870, and developed a new system of outposts.

He became regimental colonel on 29 March 1873, and major-general on 1 Oct. 1877 (antedated to 17 May 1869). A distinguished service pension was granted him on 20 Dec. 1879. In March 1879 he was appointed British commissioner for the delimitation of Bulgaria, on the death of Colonel Robert Home. Hamley met with some hostility from the Eastern Roumelians, who wished to be included in Bulgaria, and much obstruction from his Russian colleague; but his tact and judgment with which he carried out his task were praised by Lord Salisbury. He returned to England in October, and was made K.C.M.G. on 12 Jan. 1880. He was similarly employed on the Armenian frontier in the summer of 1880, and on the new Greek frontier in the summer of 1881, and received the thanks of the foreign office in both cases. The sultan promoted him to the second class of the Medjidie in 1880, but he was obliged to decline the order of the Saviour, offered him by the king of Greece in 1881.

On 10 May 1882 he became lieutenant-general, and in July Sir Garnet (afterwards Viscount) Wolseley offered him the command of a division in the expedition to Egypt. He gladly accepted it, for he was eager to show that he was no mere theorist. He embarked on 4 Aug., and landed at Alexandria on the 15th. But his desire of personal distinction caused him many mortifications. 'If I call myself a strategist, I ought to behave as such,' he had remarked some years before; and in that spirit, as soon as Wolseley arrived at Alexandria, Hamley submitted a plan of operations based on a landing in Aboukir Bay. In spite of objections made to it at the time, he was led to believe that it was going to be acted upon when Wolseley put to sea with

the first division on the 19th. Hamley was left behind with the second division, and was deeply vexed to find next morning that the true plan, an advance from Ismailia, had been concealed from him as from nearly every one else. It was a further grievance to him that when he followed the rest of the force to Ismailia, he had to leave one of his two brigades at Alexandria; and it was only in consequence of his strong remonstrance that two battalions were assigned to him for the battle of Tel-el-Kebir, as a provisional second brigade.

That battle (13 Sept.) afforded little scope for a general of division. Hamley accompanied the highland brigade, to which fell the heaviest fighting, and he was convinced that he and his troops had won the battle. When he found that this was not recognised, that no special praise was given to him, and that the only battalion singled out for notice belonged to the other division, his indignation was unbounded. He wrote a report on the field, and supplemented it by another at Cairo. Neither of these was published, and, to counteract what he regarded as an unwarrantable suppression, he gave his version of 'The Second Division at Tel-el-Kebir' in the 'Nineteenth Century' of December 1882 (for a parallel instance see *Wellington Despatches*, xi. 520). Orders were received on 7 Oct. that the two divisions should be broken up, and Hamley returned to England, aggrieved afresh at his recall. He was made K.C.B. on 18 Nov., having received the O.B. on 13 March 1867 on account of his Crimean service. He was included in the thanks of parliament, and received the medal with clasp, the bronze star, and the Osmanieh (2nd class). He had been twice mentioned in despatches (*London Gazette*, 8 Oct. and 2 Nov.).

He had no further official employment; but he was widely regarded as an ill-used man, and Tennyson took occasion to link his name with the 'Charge of the Heavy Brigade' in 1883. He was elected M.P. for Birkenhead in 1885 and 1886, and sat till 1892. While supporting the conservative government he was a candid critic of official shortcomings, and took an active and weighty part in discussions on the defence of India and home defence. On the former question he had lectured at the United Service Institution in 1878 and 1884 (*Journal*, xxii. 98, and xxviii. 124). He had also lectured there on the 'Volunteers in Time of Need' (*ib.* xxix. 180), strongly advocating an increased capitation grant to provide for their field equipment. He became a colonel-commandant of the royal artillery on 7 Dec.

1886, and accepted the honorary colonelcy of the 2nd Middlesex artillery volunteers on 5 Nov. 1887. At this time he would have been placed on the retired list in consequence of non-employment; but in deference to public opinion (see *Punch*, 21 Sept. 1887) he was specially retained on the active list as a supernumerary till 30 July 1890, when he became general. In 1890 he wrote a lucid and masterly narrative of the 'War in the Crimea' in one small volume.

After suffering much for several years from bronchial disorder, he died at 40 Portchester Terrace, London, on 12 Aug. 1893, and was buried in Brompton cemetery. He was unmarried, but after the death of his brother Charles in 1863, he virtually adopted that brother's only daughter. 'A singularly able man, and highly accomplished, with wide knowledge, wide sympathies, and strong opinions of his own, he would probably have attained higher fame if he had been less versatile. . . . He was an excellent draughtsman; although essentially self-centred, an admirable actor; he was a skilful sportsman, and a man who could defy fatigue, and who seemed to like hardships' (*Athenæum*, 19 Aug. 1893).

His writings, published otherwise than in magazines, were: 1. 'Lady Lee's Widowhood,' 1854, 2 vols. 8vo. 2. 'The Story of the Campaign of Sebastopol,' 1855, 8vo. 3. 'A Legend of Gibraltar, and Lazaroo's Legacy' (in 'Tales from "Blackwood"'), 1858, 8vo. 4. 'Wellington's Career' (from 'Blackwood'), 1860, 8vo. 5. 'The Operations of War explained and illustrated,' 1866, 8vo; fresh editions in 1869, 1873, and 1878. 6. 'Our Poor Relations: a Philanthropic Essay' (from 'Blackwood'), 1872, 8vo. 7. 'A Chapter on Outposts,' 1875, 8vo. 8. 'Staff College Exercises,' 1875, 8vo. 9. 'Voltaire' ('Foreign Classics'), 1877, 8vo. 10. 'The Strategic Conditions of our Indian N.W. Frontier' (a lecture), 1879, 8vo. 11. 'Thomas Carlyle' (from 'Blackwood'), 1881, 8vo. 12. 'Shakespeare's Funeral and other Papers' (from 'Blackwood'), 1889, 8vo. 13. 'National Defence' (articles and speeches), 1890, 8vo. 14. 'The War in the Crimea,' 1891, 8vo.

Butler in *Contemporary Rev.* August, and Colonel Gleig in *Genl. Mag.* November 1895.] E. M. L.

HAMPDEN, VISCOUNT. (See BRAND, SIR HENRY BOUVIER WILLIAM, 1814-1892.)

HANKEY, THOMSON (1806-1893), politician and political economist, born in May 1806, was eldest son of Thomson Hankey (d. 1847), by his wife Martha, daughter of Benjamin Harrison. He was descended from Sir John Barnard [q. v.]; in 1855 he repented for private circulation, with a preface by himself, the 'Memoirs' of Barnard, which had first appeared in 1820.

Hankey was admitted into his father's firm of Thomson Hankey & Co., West India merchants, and ultimately became senior partner. He was elected a director of the Bank of England in 1835, and served as governor in 1851-2. In 1853 he was returned in the liberal interest to parliament for the city of Peterborough, and sat continuously until 1868. He was then beaten by a local candidate, but represented it again from 1874 to 1880, when he was once more defeated. During these years he had fought six contested elections. In the House of Commons he spoke frequently, and with independence of thought, on financial subjects. After the commercial panic of 1866 he criticised the constitution and action of the Bank of England. From April 1855 to July 1877 he was a member of the Political Economy Club. He collected a special library of tracts on financial topics, and at the close of his life gave many to the library of the City Liberal Club (*Catalogue*, 1890, pp. 111-14; *Supplement*, 1894, p. 515), and others to the library of the Bank of England. He studied the works of the leading French writers on political economy, and corresponded with them on his favourite points.

Hankey died at 59 Portland Place, London, on 13 Jan. 1893, and was buried in the churchyard of Shipbourne, near Tonbridge, Kent, a tablet being placed in the church in his memory. He married, on 4 Feb. 1831, Appoline Agatha Alexander, daughter of William Alexander and half-sister of Sir William Alexander, the chief baron. She died at 59 Portland Place, London, on 8 July 1888, and was also buried in Shipbourne churchyard.

In 1858 Hankey delivered at the Mechanics' Institution of Peterborough a lecture on 'Banking, its Utility and Economy.' This was printed, with an addition 'respecting the working and management of the Bank of England,' for private circulation only, in 1860. It was published in 1873, and a fourth edition, expanded and revised as regards the bank by Clifford Wigram, came

out in 1887. His other works were: 1. 'Remarks on the Production of the Precious Metals,' by Léon Faucher. Translated by Thomson Hankey, jun., 1852. 2. 'Maria Theresa, the Empress Queen,' a lecture, 1859. 3. 'Taxes and Expenditure,' a lecture, 1864. 4. 'Suggestions for improving the Management of Public Business in the House of Commons,' 1876: referring mostly to proceedings on government bills in committee. 5. 'On Bi-Metallism,' 1879. 6. 'Irish Grievances,' 1881 and 1888: in favour of the abolition of the office of lord-lieutenant and the cheapening of private bill legislation. 7. 'London Dinners,' 1883: a bright little paper, which had previously appeared in 'Macmillan's Magazine,' March 1872, pp. 370-5.

[Burke's Landed Gentry, 9th edit.; Peterborough Advertiser, 21 Jan. 1893, p. 6; Times, 16 Jan. 1893, pp. 1, 10; Athenaeum, 21 Jan. 1893, p. 89; private information.] W. P. O.

HANNEN, SIR JAMES, BARON HANNEN (1821-1894), a life peer, judge, born at Peckham in 1821, was son of James Hannen of Kingswood Lodge, Dulwich, a London wine merchant, and of Susan, the daughter of William Lee of Nayland, Suffolk. He was educated at St. Paul's School from 1831 to 1839, and at Heidelberg University (*St. Paul's School Reg.* pp. 284, 451). He was admitted student of the Middle Temple on 30 Oct. 1841, was called to the bar on 14 Jan. 1848, and joined the home circuit. He seems to have begun speedily to acquire practice in London, and to have done well as a junior both on circuit and at the Guildhall. He was described by a contemporary as a 'clear but frigid and passionless speaker, accurate, precise, and painstaking, well endowed with practical good sense.' It was 'understood,' with the reserve which in those days was the proper thing in respect of men who hoped for success at the bar, that he reported for the 'Morning Chronicle' and wrote for the press. About 1863 he was appointed junior counsel to the treasury, or 'attorney-general's devil,' and in 1865 he was a parliamentary candidate in the liberal interest for Shoreham and the rape of Bramber, but without success. His chief public appearance while at the bar was when he appeared as junior to the law officers at the trial of the Manchester forgers in 1867. In 1868 Hannen was appointed a judge of the court of queen's bench, made serjeant-at-law (15 April 1868), and knighted (14 May); and in 1872 judge of the court of probate and the divorce court, on which occasion he was sworn of the privy council. In 1875 he became, by

the operation of the judicature acts, president of the probate, divorce, and admiralty division of the high court, and held that office until he was created a lord of appeal in ordinary in 1891; on 27 June 1878 he was elected bencher of the Middle Temple, and in 1888 he was created D.C.L. of Oxford University.

In 1888 Hannen was selected by the government to act as president of the special commission appointed to inquire into the charges brought by the 'Times' against Charles Stewart Parnell [q. v.] and other Irish nationalists. The other commissioners were Sir J. C. Day and Sir A. L. Smith, both judges of the high court; and it is probable that by their selection of commissioners the government entirely frustrated the intention with which the Special Commission Act had been passed. What they seem to have intended was a commission which should itself inquire and investigate. What the commissioners did was to allow the parties interested to offer such evidence as they chose, and try the case as if it had been an action for libel tried before them as judges without a jury. Hannen presided throughout 129 sittings with all his accustomed dignity and impartiality, though in two or three instances he was unusually and almost inexplicably forbearing when attacks were made upon the constitution or the impartiality of the tribunal. The report was short and of a remarkably negative character, although it definitely established the existence of a treasonable conspiracy among a number of specified persons. It contained a very large number of conclusions of 'not proved,' in regard to allegations as to which a special jury, upon a plea of justification in an action for libel, could hardly have failed to find the justification proved if they had taken the view of the evidence held by the court. This was especially so with regard to the allegations made by the 'Times' concerning the use made of the funds of the land league and national league.

On 21 Jan. 1891 Hannen was appointed a lord of appeal in ordinary, and was granted the dignity of a baron for life by the style and title of Baron Hannen of Burdock, co. Sussex. In 1892 he was selected to act as arbitrator on behalf of this country in the arbitration at Paris upon the questions at issue between the United Kingdom and the United States as to the rights of seal-fishing in the Behring Sea [cf. art. RUSSELL, CHARLES, BARON RUSSELL OF KILLOWEN, Suppl.] His discharge of this laborious duty added still further to his reputation, and was eminently satisfactory to all parties con-

corned. Subject to this interruption Hannen sat regularly in the House of Lords and the judicial committee of the privy council until his death, which occurred at his house in Lancaster Gate on 29 March 1894; he was buried in Norwood cemetery. He married, on 4 Feb. 1847, Mary Elizabeth, second daughter of Nicholas Winsland, who died on 1 Dec. 1872, and he left a family surviving him.

A portrait of him by T. Blake Wirgman is in the possession of his son, the Hon. James Hannen, and a replica belongs to the benches of the Middle Temple. Hannen's personal appearance and manner accorded in the most striking manner with the popular conception of a judge, as a grave, tranquil, impartial, and venerable officer. He had a peculiar gift for making his meaning perfectly clear in the fewest words, and could indicate rebuke by a word or an intonation. He was consequently master of his own court, and of every one that appeared before him, to an unusual degree, and the business before him was conducted with the happiest combination of deliberation and despatch.

General contemporary opinion of Hannen as a judge was expressed with but little exaggeration by Lord Coleridge when he said, sitting in the divorce court on the day of Hannen's funeral: 'If there has been a greater English judge during the seventy-three years of my life than Lord Hannen, it has not been my good fortune to see him or to know him,' and in the course of the same observations he described him as 'a man of great ability, of remarkable learning, of an intellect strong, capacious, penetrating, powerful, with a singular grasp of facts, and a great power of dealing with them when they were grasped like a master.' On the same day Sir F. Jeune, who had succeeded Hannen as president of the probate division, said: 'Lord Hannen pronounced many judgments which have become landmarks in the law. They are couched in that accurate and dignified language of which he was so great a master. But speaking in the presence of those who know I venture to say that his fame is even more securely based on his careful, his independent, and his decorous administration of justice day by day.'

[Times, 30 March 1894; Foster's Men at the Bar; G. E. Cokeayne's Complete Peerage, iv. 167-8, vii. 416; private information.]

H. S.-N.

HARBORD, WILLIAM (1685 P-11923), politician, born about 1685, was second son of Sir Charles Harbord by Mary Van Alst. Sir Charles Harbord, who was knighted by

Charles I on 29 May 1680, was surveyor-general of the land revenues of the crown under Charles I and Charles II (METCALFE, *Book of Knights*, p. 194; *Cal. State Papers*, Dom. 1633-4, p. 70). He represented Lauceston in the parliaments of 1661, 1678, and 1679, and many of his speeches are printed in Grey's 'Debates' (cf. iii. 46, 358). Burnet describes him as very rich and very covetous (*Own Time*, ed. Airy, ii. 87), and his reputation is severely handled in 'A List of the principal Labourers in the great Design of Popery and Arbitrary Government,' 1677, 4to, p. 3. He died in June 1679.

William Harbord is described as aged 26 in July 1661 (CHRISTIAN, *London Marriage Licences*, p. 831). During the Protectorate he travelled and was probably engaged in trade in Turkey (GREY, *Debates*, v. 41). His political career begins in 1661, when he was returned to the House of Commons for Clifton, Dartmouth and Hardness borough. In 1672 he became secretary to the Earl of Essex (Cupel, Arthur), lord lieutenant of Ireland, and was charged to keep him informed of political affairs in England, and to act as his representative in parliament and court (GREY, *Debates*, ii. 437; AIRY, *Essex Papers*, i. 184, 195, 205). Essex thought Harbord 'a very quick man for despatch of business,' but did not trust him too far (*ib.* i. 143).

In October 1673 Harbord signalled himself by attacking the speaker, Sir Edward Seymour, as unfit for the post he occupied (*ib.* i. 110; *Letters to Sir Joseph Williamson*, ii. 70; GREY, *Debates*, ii. 188; viii. 79). But though this made him unpopular at court he nevertheless was granted (28 May 1674) a pension of 500*l.* per annum on the Irish military establishment (ROBINSON MS. B. 492, f. 137). In the debates of 1676-8 Harbord spoke often against the alliance with France (GREY, iv. 176, 198, 387; v. 43), and pressed for the removal of all papists from the king's person (*ib.* vi. 87, 205, 258). He was a firm believer in the reality of the popish plot, and in concert with Ralph Montagu, afterwards Duke of Montagu [q. v.], whom he helped to get into parliament, took an important part in the attack on Danby (*ib.* vi. 345, 387). In the parliament of 1679, in which he represented Thetford, he spoke against Danby's pardon, attacked Lauderdale, and was eager for the disbanding of the army (*ib.* vii. 23, 64, 173, 193). Barillon in his letters describes Harbord as very serviceable, and states that he paid him 500 guineas, but it is possible that this money was embezzled by Coleman. Harbord's own remarks on Barillon, and his conduct with respect to Coleman, may be inter-

preted either as a proof of his corruption or the reverse (DALRYMPLE, *Memoirs*, i. 338, 382; GRAY, v. 241, vi. 166, viii. 141; SIRWELL, *The First Whig*, p. 26).

Harbord sat in the parliaments of 1680 and 1681 as member for Launceston, in place of his father, and was more violent than ever against popery, against the succession of the Duke of York, and against Tory petitioners. He attacked Halifax as responsible for the dissolution of the parliament of 1679, and urged his removal from the king's councils (GRAY, vii. 387, 427, 439; viii. 24). He promoted the scheme for a protestant association, rejected all compromises, and persisted in demanding the acceptance of the exclusion bill (*ib.* viii. 166, 297, 324). But with more discretion than many of his friends, Harbord shrank from supporting Monmouth's claims to the throne, and said that the only thing to be done in case of the succession of a Roman catholic prince was to make William of Orange protector. He charged his friend Henry Sidney, afterwards Earl of Romney [q.v.], to tell William that no man in the kingdom wished him better, or was more his friend, and that none loved that 'honest plain-dealing people,' the Dutch, more than he did. As early as 1680 he thought of taking refuge in Holland with his family, and it is possible that he subsequently carried out this intention (*Diary of Henry Sidney*, i. 8, 80; ii. 21), for he seems to have been out of England during the whole of James II's reign. In January 1680 Harbord was summoned to appear before the privy council within fourteen days, but disobeyed the summons (ELLIS, *Correspondence*, i. 27). In the same year he served as a volunteer in the imperialist army at the siege of Buda, fell ill, and, desiring to avail himself of James II's proclamation of general pardon, petitioned for an extension of time in his favour (*Rawlinson MS. A.* 189, f. 249; SAVILL, *Correspondence*, p. 297; *Autobiography of Sir John Bramston*, p. 236). This was evidently refused, and in November 1688 Harbord accompanied William of Orange in his expedition to England. William appointed him to act as commissary-general and to raise money in the west for the support of the army (ELLIS, *Original Letters*, ii. iv. 180). Harbord was extremely bitter against James II, declaring publicly that he and other supporters of the prince had no need of the king's pardon, but that they would bring the king to ask pardon of them 'for the wrongs he had done' (CLARNDON, *Diary*, ed. Singer, ii. 217, 219, 221). Yet in spite of his attachment to William he protested vehemently against the proposal to reduce

Mary to the position of a queen consort, saying that he would never have drawn a sword on the prince's side if he could have imagined him capable of such usage to his wife (*Works of John Sheffield*, Duke of Buckingham, ed. 1789, ii. xxxi, Appendix).

William III appointed Harbord paymaster-general and a member of the privy council (LUTTRELL, *Diary*, i. 492, 510). In parliament he took little part in the constitutional debates, but was very active in representing the pecuniary necessities of the new government (GRAY, *Debates*, ix. 12, 38, 61, 161, 178, 184). But he was eager to exclude delinquents from pardon, and proposed that a couple of judges should be hanged at the gate of Westminster Hall (*ib.* ix. 251-8, 316, 379). The language he used about the government of Charles II threatened to lead to a duel, which the intervention of the house prevented (*ib.* ix. 284). Harbord was prominent in all debates about Irish affairs, and advocated a drastic system of land confiscation (*ib.* x. 40). In September 1689 he followed Schomberg to Ireland, where he wrote a very detailed account of the condition of the English army (*Cal. State Papers*, Dom. 1689 90, pp. 276, 293). Schomberg explained to Harbord his reasons for remaining in the entrenched camp at Dundalk instead of attacking the Irish army (*ib.* p. 299; ATTENBURY, *Memoirs*, i. 252). According to him the sufferings of the English troops were largely due to Harbord's mismanagement or avarice (DALRYMPLE, *Memoirs*, ii. Appendix, pp. 177-80). Nevertheless, though Harbord was removed from his post of paymaster in March 1690, he was appointed vice-treasurer of Ireland in November (LUTTRELL, ii. 24; *Cal. State Papers*, Dom. 1690-1, p. 167).

Harbord was also employed as a diplomatist. In July 1690 he was sent to Holland to apologise for the conduct of Torrington at the battle of Beachy Head (*ib.* pp. 61, 99; LUTTRELL, ii. 79, 91). In November 1691, at his own suggestion, he was appointed ambassador to Turkey in order to mediate between the sultan and the emperor, and to set the imperial forces free for the war with France (LUTTRELL, ii. 307, 303, 380, 499; KLOPP, *Fall des Hauses Stuart*, v. 301, vi. 97; BURNET, iv. 178, ed. 1833). He died on his way at Belgrade on 31 July 1692 (BAKER, ii. 172; LUTTRELL, ii. 555).

Harbord married twice: first, Mary, daughter and co-heiress of Arthur Duke of Chiswick, Middlesex, in 1661. Through her he obtained a part of Grafton Park, Northamptonshire, of which he afterwards purchased the remainder (BAKER, ii. 172; *Cal. State*

Papers, Dom. 1671-2, p. 254). He married, secondly, Catherine, daughter of Edward Russell, and sister of Edward, earl of Orford.

By his first wife he had three daughters, viz., Margaret, married Robert King, second baron Kingston [q. v.]; Mary, married Sir Edward Ayscough of South Kelsey, Lincolnshire; Grace, married Thomas Hatcher of Kirby, Lincolnshire. Letitia, his daughter by his second wife, married Sir Rowland Winn of Nostell Priory, Yorkshire.

Harbord's younger brother Charles, who was knighted by Charles II, was first lieutenant of the Royal James, and fell in the battle of Southwold, 28 May 1672, refusing to desert his commander, Lord Sandwich. A monument to him is in Westminster Abbey (*PENNS. Diary*, ed. Wheatley, v. 124, viii. 164, 312; *DAFT, Westmonasterium*, ii. 112).

[Baker's *History of Northamptonshire*, ii. 172; other authorities given in the article.]

C. II. F.

HARDINGE, SIR ARTHUR EDWARD (1828-1892), general, born 2 March 1828, was second son of Henry Hardinge, first viscount Hardinge [q. v.], by Lady Emily Jane, seventh daughter of Robert Stewart, first marquis of Londonderry [q. v.], and widow of John James. Charles Stewart, second viscount Hardinge [q. v. Suppl.], was his elder brother. Arthur was educated at Eton, and commissioned as ensign in the 41st foot on 7 June 1844. He exchanged to the 63rd foot on 28 June, and in July went to India as aide-de-camp to his father, appointed governor-general. He served in the first Sikh war, and was present at the battles of Moodkee, Ferozeshah (where his horse was shot), and Sobraon. He was twice mentioned in despatches (*London Gazette*, 23 Feb. and 1 April 1846), and received the medal with two clasps. He obtained a lieutenancy in the 80th foot on 22 Dec. 1845, and a company in the 16th foot on 1 June 1849. On 22 June he exchanged to the Coldstream guards as lieutenant and captain. He passed through the senior department at Sandhurst, and obtained a certificate.

He served on the quartermaster-general's staff in the Crimean war from 8 March 1854 to 25 June 1856. He was present at the Alma with the first division, and was mentioned in despatches (*London Gazette*, 10 Oct. 1854). He was also at Balaklava and Inkerman and the fall of Sebastopol. He was given a brevet majority on 12 Dec. 1854, and became captain and lieutenant-colonel in his regiment on 20 Feb. 1855. He received the medal with four clasps, the legion of honour (5th class), Medjidie (5th class), and the Turkish medal, and was made

C.B. on 2 Jan. 1857. On 25 May 1858 he became brevet colonel.

He was assistant quartermaster-general at Shorncliffe and Dublin from 1 Oct. 1856 to 29 July 1858, when he was appointed equerry to Prince Albert, on whose death in 1861 he became equerry to the queen. He was promoted major in the Coldstream guards on 16 March 1867, and lieutenant-colonel on 2 Sept. 1868. He went on half-pay on 4 Jan. 1871, and was promoted major-general on 9 April. He commanded a division in Bengal from 22 Oct. 1873 to 27 Oct. 1878, and on his return to England he gave a lecture at the United Service Institution on the 'Results of Field-firing in India' (*Journal*, xxiii. 402). He became lieutenant-general on 1 Oct. 1877, and general on 1 April 1883. He commanded the Bombay army from 30 March 1881 to 11 Dec. 1885, and was governor of Gibraltar from 1 Nov. 1886 till 25 Sept. 1890. He was made K.C.B. on 9 Jan. 1886, and C.I.E. on the 22nd of the same month. The colonelcy of the royal Inniskilling fusiliers had been given to him on 20 Nov. 1881, and on 13 March 1886 he was transferred to the king's royal rifles as a colonel-commandant. He was made colonel of the Coldstream guards 25 Feb. 1890.

He died on 15 July 1892 from injuries he had received in a carriage accident at Wymouth nine days before. He was buried at Fordcombe church, near Penshurst, Kent. On 30 Dec. 1858 he married Mary Georgiana Frances, eldest daughter of Lieutenant-colonel Augustus Frederick Ellis, second son of the first Lord Seaforth. They had, with three daughters, an only son, Sir Arthur Henry Hardinge, K.C.M.G., who was appointed British minister at Brussels in 1906.

[*Times*, 16 and 21 July 1892; *Army Lists*; *Lodge's Peerage*.]
E. M. L.

HARDINGE, CHARLES STEWART, second viscount HARDINGE (1822-1894) of Lahore and King's Newton, eldest son of Sir Henry Hardinge, first viscount [q. v.], and elder brother of Sir Arthur Edward Hardinge [q. v. Suppl.], was born in London on 12 Sept. 1822. He was educated at Eton and destined for the army, but while a boy met with a severe accident which compelled him to use an artificial leg for the rest of his life. In 1840 he matriculated at Christ Church, Oxford, and graduated B.A. in 1844. Within a month after taking his degree he accompanied his father to India as private secretary, and was with him during all the period of his governor-generalship. From 8 Aug. 1851 to 1856 he

was M.P. for Downpatrick in the conservative interest, and after his succession to the peerage (in 1856) he was under-secretary for war in Lord Derby's second administration (March 1858 to March 1869). He never held office again, but always remained a supporter of the conservative party. In 1868 he was appointed a trustee of the National Portrait Gallery, and in 1876 chairman of the trustees, an office which he actively filled till his death. Owing to his father's friendship with Sir Francis Grant (1803-1878) [q. v.] and Sir Edwin Henry Landseer [q. v.], he was brought up among artistic associations, and was himself no mean painter in water-colours. In 1847 his friends in England published a folio volume entitled 'Recollections of India,' consisting of twenty lithographs from his drawings made in India. The most interesting of these are portraits of Sikh chieftains and views of scenery in Kashmir, then an almost unknown country, which he visited in company with John Nicholson (1821-1857) [q. v.], afterwards the hero of Delhi. The originals hang among the military trophies of his father on the walls of South Park, near Penshurst. In 1891 he contributed a brief memoir of his father to the 'Rulers of India' series (Oxford, Clarendon Press).

Hardinge died at South Park on 28 July 1894, and was buried in the churchyard of Fordcombe, Kent. He married, on 10 April 1858, Lavinia, third daughter of Sir George Charles Bingham, third earl of Lucan [q. v. Suppl.], by whom he had a family of five sons and three daughters; she died on 15 Sept. 1894.

[Personal knowledge.]

J. S. O.

HARDY, MARY ANNE, LADY (1825?-1891), novelist and traveller, was the only child of Charles MacDowell and Eliza, his second wife. She was born in Fitzroy Square, London, about 1825. Her father had died five months before, and she was entirely educated at home under her mother's superintendence. She became the second wife of Sir Thomas Duffus Hardy [q. v.] in recognition of her husband's services—he died in 1878—Lady Hardy received on 19 June 1879 a pension of 100*l.* a year from the civil list; it was augmented by 55*l.* on 5 February 1881.

Although Lady Hardy had always been fond of writing, she did not turn seriously to literature until after her marriage. Her first important novel, 'Paul Wynter's Sacrifice,' was published in 1869. It had a success, and was translated into French. A new edition came out in 1881. Her next novel, 'Daisy Nicholl' (1870), achieved a great success in America. In 1880 and 1881, re-

spectively, Lady Hardy travelled in the United States. The tour brought forth two books, 'Through Cities and Prairie Lands: Sketches of an American Tour,' 1881, and 'Down South,' 1883. Lady Hardy wrote articles on social subjects and short stories for various journals and magazines. She died on 19 May 1891 at 124 Portsdown Road, London, and was buried at Willasden.

A portrait, painted during her early married life, passed into the possession of her daughter, Miss Iza Duffus Hardy.

Other works are: 1. 'War Notes from the Crimea,' 1856. 2. 'The Artist's Family: an Historical Romance,' 1857. 3. 'A Casual Acquaintance: a Novel founded on Fact,' 1860, 2 vols. 4. 'A Hero's Work,' 1866, 3 vols. 5. 'A Woman's Triumph,' 1872, 3 vols. 6. 'Lizzio,' 1876, 3 vols. 7. 'Madge,' 1808, 3 vols. 8. 'Beryl Fortescue,' 1881, 3 vols. 9. 'In Sight of Land,' 1886, 3 vols. 10. 'A Dangerous Experiment,' 1888, 3 vols. 11. 'A Buried Sin,' 1894, 3 vols.

HARE, THOMAS (1800-1891), political reformer, born on 28 March 1806, was the only son of A— Hare of Leigh, Dorset. On 14 Nov. 1828 he was admitted a student of the Inner Temple, and was called to the bar on 22 Nov. 1833. He practised in the chancery courts and from 1841 reported in Vice-chancellor Wigram's court. With Henry Elid Nicholl and John Monson Carrow he edited the first two volumes (1840 and 1843) of 'Cases relating to Railways and Canals in the Courts of Law and Equity, 1835-1840.' His reports of cases adjudged by Wigram were published in eleven volumes (1843-1858), and rank as high authorities. He published in 1836 'A Treatise on Discovery of Evidence by Bill and Answer in Equity.' A second edition, 'adapted to the supreme court of judicature acts and rules 1873 and 1875,' was published by his eldest son, Sherlock Hare, in 1876. In 1872 he was elected a benchor of his inn.

Hare was appointed inspector of charities on 22 Oct. 1863, and on 7 Dec. 1872 was created assistant commissioner with a seat at the board. On 21 Dec. 1887 he retired from official life. During these years he was engaged in reporting on the charities of the kingdom, those on London filling in a collected form the third volume of the reports of the Royal City Charities Commission. He was conspicuous for great industry, wide interest in life, and clearness of intellectual vision. He belonged to the Athenæum and Political

Economy clubs, and to the last was actively interested in them. He died at Carlyle Mansions, Chelsea, on 6 May 1891, and was buried at Hook, near Surbiton, on 9 May. A cross, designed by Seddon, was erected over his grave. He married, first, in Dorsetshire on 7 Aug. 1837, Mary, daughter of Thomas Samson of Kingston Russell. She died on 22 Oct. 1855, and was buried in the churchyard of Brompton church. They had eight children. The eldest daughter, Marian, wife of the Rev. W. R. Andrews of Eastbourne, has written under the pseudonym of 'Christopher Hare'; the second daughter, Alice, married Professor Westlake. Hare married, secondly, on 4 April 1872, Eleanor Bowes Benson (1833-1890), second sister of Edward Whitte Benson, archbishop of Canterbury [q. v. Suppl.], by whom he had issue Mary Eleanor (1874-1883).

Hare's energies were concentrated in an attempt to devise a system which should secure proportional representation of all classes in the United Kingdom, including minorities, in the House of Commons and other electoral assemblies. His views were set out at first in the 'Machinery of Representation' (1867, two editions), and they were afterwards more fully developed in his 'Treatise on the Election of Representatives, Parliamentary and Municipal' (1869, 1861, 1865, and 1873). A copious literature grew up for the promotion of his system, which was generally regarded as too complicated for practical working, and many societies were formed for its propagation. John Stuart Mill commended it in the second edition of 'Thoughts on Parliamentary Reform,' and Henry Fawcett, who held that in it 'lay the only remedy against the great danger of an oppression of minorities,' brought out in 1860 a pamphlet entitled 'Mr. Hare's Reform Bill simplified and explained' (STEELE, *Life of Fawcett*, pp. 170, 185, 451).

Hare's other works included a pamphlet in support of the relaxation of the navigation laws, published in 1826 at the request of Huskisson; 'The Development of the Wealth of India,' a reprint from 'Macmillan's Magazine,' 1861; 'Usque ad Caelum,' 'Thoughts on the Dwellings of the People,' 'Local Government in the Metropolis,' 1862; 'The Distribution of Seats in Parliament,' 1879; and 'London Municipal Reform,' 1882, which contained many papers he had previously published on that question. He contributed to Alfred Hill's volume of 'Essays upon Educational Subjects' a paper on 'Endowments created for the Apprenticeship of Children.'

635-6 (by Leonard Courtney); Academy, 16 May 1891 (by John Westlake); A. C. Benson's family pedigree; Benson's Archbishop Benson, i. 6, 80-87, ii. 284-98, 399; private information.]
W. P. C.

HARGRAVES, EDWARD HAMMOND (1816-1891), pioneer of gold-mining in Australia, the third son of John Edward Hargraves, a lieutenant of the Sussex militia, was born at Stoke Cottage, Gosport, on 7 Oct. 1816. After schooling at Brighton and Lewes, young Hargraves sailed for Australia on a merchant vessel in 1832. Next year he sailed for Torres Straits in the *Clementine* in search of béche-de-mer and tortoise-shell. The crew were stricken with yellow fever, and twenty out of twenty-seven died at Batavia, whence the survivors were conveyed to Europe. In 1834 Hargraves sailed again for Sydney, and was engaged in shoop-farming for nearly fifteen years. In July 1849 he sailed for the California gold-diggings, and was struck by the resemblance of the geological formations there to the quartz rocks on the west side of the Blue Mountains in New South Wales. Sir Paul Edmund de Strzelecki [q. v.] had discovered some gold-bearing quartz in this district as early as 1830, and five years later, in a presidential address to the Royal Geographical Society, Sir Roderick Murchison had deduced from data supplied by Strzelecki and others the fact that large auriferous deposits might be looked for in a formation such as that of the Blue Mountains. The suspicion that New South Wales would prove a rich goldfield had therefore been 'in the air' for some time, but nothing whatever had yet been achieved in the way of practical experiment, still less of realisation. Hargraves sailed from California with this object in view at the close of 1850. On 12 Feb. 1851 two men, Lister and Toma, whom he had instructed in the process of cradle-washing, discovered gold at Lewis Ponds Creek, near Bathurst, where Hargraves had predicted it. He was the first at the beginning of April 1851 to make known to the colonial secretary at Sydney, (Sir) Edward Deas Thomson [q. v.], the existence of the precious metal in large quantity. After receiving his evidence, Thomson is said to have remarked: 'If what you say is correct, Mr. Hargraves, we have got a goldfield. It will stop the emigration to California and settle the convict question.' Hargraves was temporarily appointed a commissioner of crown lands at a pound a day, and on 5 Oct. 1853, as a reward for his communication, he was granted a sum of 10,000*l.* by the legislative council of Sydney. In 1854 he visited England

and was presented to Queen Victoria. In 1855 appeared his mediocre and unpretending work, 'Australia and its Goldfields: a Historical Sketch of the Progress of the Australian Colonies . . . with a particular account of the recent Gold Discoveries . . . to which are added Notices on the Use and Working of Gold in Ancient and Modern Times' (with a map and a portrait of Hargraves), London, 1855, 8vo. Hargraves returned to live in Sydney, and was in 1877 voted a pension of 250*l.* by the New South Wales parliament. He died at Forest Lodge, Sydney, on 29 Oct. 1891, leaving issue two sons and three daughters.

[*Australasian Bibliography*, Sydney, 1893; Sydney Herald, 31 Oct. 1891; Mennell's *Australasian Biography*, p. 216; Henton's *Australian Dictionary of Dates*; Strzelecki's *Discovery of Gold and Silver in Australia*, 1856; *North British Review*, August 1851; *Times*, 25 Oct. 1853, 9 and 12 Jan. 1854; Rusden's *Hist. of Australia*, 1883, ii. 601 seq.] T. S.

HARLEY, GEORGE (1829-1896), physician, only son of George Harolay Harley and Margaret Macbeath, was born at Harley House, Haddington, in East Lothian, on 13 Feb. 1829. His father was sixty-three at the time of his birth, and his mother was forty. His father died soon afterwards, and he was brought up by his mother and grandmother, Mrs. Macbeath. He received his early education at the Haddington burgh schools, and at the Hill Street Institution, Edinburgh, and subsequently proceeded to the university of Edinburgh, where he matriculated at the age of seventeen and graduated M.D. in August 1850.

After acting for fifteen months as house surgeon and resident physician to the Edinburgh Royal Infirmary, Harley spent two years in Paris, working in the physiological and chemical laboratories of Charles Dollfus, Verdeil, and Wurtz. He made many observations, which were recorded in the '*Chimie Anatomique*' of Robin and Verdeil. Among these the most notable were the recognition of iron as a constant constituent of the urine, and the observation that the cherry colour of normal human urine was due to urobilinogen (*Pharmaceutical Journal*, 1852). He next worked in the physiological laboratory of the Collège de France, at first under Magendie and then under Claude Bernard, whose publications on the influence of the liver in the production of diabetes led Harley to undertake research as to the effects of stimulation of nerves on the production of sugar by the liver. During his two years' residence in Paris he was almost entirely occupied with physiological researches, and in

1853 he was elected annual president of the Parisian Medical Society. He subsequently spent two years in Germany at the universities of Würzburg (under Virchow), Giessen (under Liebig), Berlin, Vienna, and Heidelberg. When he was studying in Vienna, during the height of the Crimean excitement, he attempted to join the army of Omar Pasha as a civil surgeon, but, travelling with an irregular passport, he was arrested, and narrowly escaped being shot as a spy.

His foreign study well qualified him for the lectureship on practical physiology and histology at University College, to which he was appointed on his return from Padua in 1855. He was also made curator of the anatomical museum at University College, and in 1856 he started practice in Nottingham Place. In 1858 he was elected a fellow of the Chemical Society, and fellow of the College of Physicians of Edinburgh, and he read at the Leeds meeting of the British Association a paper in which he showed that pure pancreatine was capable of digesting both starch and albuminous substances. In 1859 he became professor of medical jurisprudence at University College in the place of Dr. Alfred Carpenter [q. v. Suppl.], and in 1860 physician to the hospital. These appointments he held till eye troubles obliged him to resign them. In 1862 he received the triennial prize of fifty guineas of the Royal College of Surgeons of England for his researches into the anatomy and physiology of the suprarenal bodies.

While at Heidelberg Harley had spent much time in studying in Bunsen's laboratory the methods of gas analysis. After his return to England he made researches on the chemistry of respiration. Some of the results were published in the '*Philosophical Transactions*,' and had much to do with his election to the fellowship of the Royal Society in 1866 at the age of thirty-six. In 1864 he was elected fellow of the Royal College of Physicians; he afterwards held the post of examiner in anatomy and physiology in the college. He also became corresponding member of numerous foreign scientific societies.

In 1864 Harley took an active share in the labours of the committee of the Royal Medical and Chirurgical Society appointed to study the subject of suspended animation by drowning, hanging, &c. The experiments were carried out in his laboratory at University College, as were those for the committee of the same society on chloroform (1864), of which Harley was also a member. He energetically aided in founding

the British Institute of Preventive Medicine.

Harley made careful researches into the action of strychnine, and on the ordeal bean of Old Calabar (*Royal Medico-Chirurgical Transactions*, 1868), and in 1864 read a paper to the British Association on the 'Poisoned Arrows of Savage Man,' in which he demonstrated the nature of the poisons used—in Borneo the heart-paralysing poison of the upas tree, in Guinea the limb-paralysing poison of Wourali. He was the first to demonstrate that strychnia and wourali (arrow-poison) have the property of reciprocally neutralising the toxic effects of each other. In August 1868 he furnished the British Medical Association with an account of the botanical characters and therapeutical characters of the ordeal bean, which was translated into French, and published by Professor Robin in the 'Journal d'Anatomie et de Physiologie' of Paris.

Harley was a man of many hobbies. He invented a microscope which by a simple adjustment could be transformed from a monocular into a binocular or into a polarising instrument, either of a high or a low power. He tried hard to reform English orthography, and published a book entitled 'The Simplification of English Spelling' (1877), in which he advocated the total omission of redundant and useless duplicated consonants from all words except personal names.

Harley died suddenly from rupture of a coronary artery and hæmorrhage into the pericardium on 27 Oct. 1896 at his house, 77 (now 25) Harley Street. His body was cremated at Woking on 30 Oct., and the remains buried at Kingsbury Old Church on the same day. He married Emma Jessie, daughter of James Muspratt [q.v.] of Seaforth Hall, near Liverpool. She survived him with three children, viz., Vaughan Harley, M.D.; Ethel (Mrs. Alec Tweedie, the authoress); and Olga Harley.

Harley contributed a large number of papers to various scientific periodicals. His most important publications treated of the diseases of the liver. In 1863 he published 'Jaundice, its Pathology and Treatment.' This he eventually replaced in 1883 by his book on 'Diseases of the Liver,' in which he focussed all his experience. This book was reprinted in Canada and in America, and was translated into German by Dr. J. Kraus of Carlsbad. In 1886 he published a pamphlet on 'Sounding for Gall Stones,' and in the following year a work on 'Inflammation of the Liver,' in which he advocated puncture of the capsule in congestive liver induration, and 'hepatic phlebotomy' for

acute hepatitis. In 1868 his old pupil, Mr. George T. Brown, brought out a book on 'Histology,' being the demonstrations which Dr. Harley had given at University College. The second edition of the book Dr. Harley edited himself. Subsequently, during a long period of rest in dark rooms, owing to a breakdown of eyesight, he dictated to an amanuensis a book which he published in 1872 entitled 'The Urius and its Derangements;' this work was reprinted in America and translated into French and Italian. In 1859 he became editor of a new year-book on medicine and surgery, brought out by the New Sydenham Society, with the view of keeping an epitome of science applied to practical medicine; he worked for its success unceasingly for some years.

[George Harley, F.R.S., the Life of a London Physician, edited by his daughter, Mrs. Alec Tweedie (The Scientific Press), 1899, The Lancet, 7 Nov. 1896; The British Medical Journal, 31 Oct. 1896; Records of the Royal Society and Royal College of Physicians; private information.] W. W. W.

HARMAN, Sir GEORGE BYNG (1830–1892), lieutenant-general, born 30 Jan. 1830, was the son of John Harman of Chester Square, London, and Moor Hall, Cookham, Berkshire. He was educated at Marlborough College (1844–6), and was commissioned as ensign in the 34th foot on 18 Sept. 1849. He was promoted lieutenant on 21 June 1850, and captain on 19 June 1855. After serving with his regiment in the Ionian Islands and West Indies, he went with it to the Crimea in December 1854. It was assigned to the light division, and took part in the assault of the Redan on 18 June 1855, where Harman received seven severe wounds. He was mentioned in despatches, and obtained the medal with clasp, the Turkish medal, the Medjidie (5th class), and a brevet majority on 2 Nov. 1855.

He served with the 34th in India during the mutiny, and was present at Windham's action with the Gwalior contingent at Cawnpore, and at the siege and capture of Lucknow. He received the medal with clasp, and was given an unattached majority on 4 June 1858. He was assistant-inspector of volunteers from 18 Feb. 1860 to 8 March 1865, when he was made brevet lieutenant-colonel. He served on the staff in the West Indies from 10 June 1866 to 30 April 1872, first as assistant military secretary, and afterwards as deputy adjutant-general. He became brevet colonel on 2 June 1871. On 1 May 1872 he was given an unattached lieutenant-colonelcy, and on 1 April 1873 he was

appointed to the command of a brigade depot at Pontefract.

He went on half-pay on 16 Dec. 1874, and on the 18th was made assistant adjutant-general at Aldershot. On 1 Jan. 1878 he went to Ireland as deputy adjutant-general. He was promoted major-general on 14 Nov. 1881, and was placed on the staff of the expeditionary force in Egypt on 3 Sept. 1882. He commanded the garrison of Alexandria, and received the medal and bronze star. On 18 April 1883 he was appointed deputy adjutant-general at headquarters, and on 1 Nov. 1885 military secretary. He was made C.B. on 24 May 1881, and K.O.B. on 21 June 1887. A distinguished service pension was given to him on 17 April 1889, and he was promoted lieutenant-general on 1 April 1890. He was still serving on the staff at headquarters when he died in South Kensington on 9 March 1892. He married in 1868 Helen, daughter of John Tenge of Starborough Castle and Edenbridge, Kent; she survived him.

[Times, 10 March 1892; Marlborough Coll. Register, p. 16; Army Lists.] E. M. L.

HARRIS, SIR AUGUSTUS HENRY GLOSSOP (1862-1896), actor, impresario, and dramatist, the son of Augustus Glossop Harris [q.v.], was born in the Rue Taillout, Paris, in 1862. After a short experience of commerce, he played in September 1873 Malcolm in a revival at the Theatre Royal, Manchester, of 'Macbeth.' At the Amphitheatre, Liverpool, in juvenile and light comedy parts, he supported Harry Sullivan [q.v.] He then became, under Mapleson, assistant stage-manager, and afterwards manager, at Covent Garden. He produced in 1876 Blanchard's Crystal Palace pantomime, 'Sindbad the Sailor.' At the Criterion he was, 31 March 1877, the original Harry Greenclothes in 'Pink Dominoes.' In 1879 he became the lessee of Drury Lane, but it was some time before he could carry out his ambitious and well-planned schemes. On 31 July 1880 he produced the 'World,' by himself, Paul Meritt, and Henry Pettitt, a spectacular melodrama, which was succeeded, 6 Aug. 1881, by 'Youth,' by the same authors. 'Plunk,' by Harris and Pettitt, came in 1882; 'A Sailor and his Lass,' in collaboration with Robert Buchanan, and 'Freedom,' with Rowe, in 1883; 'Human Nature,' with Pettitt, 1885; 'A Run of Luck,' with the same, 1886; 'Pleasure,' with Meritt, 1887; the 'Armada,' with Hamilton, 1888; the 'Royal Oak,' with the same, 1889; 'A Million of Money,' with Pettitt, 1890;

'A Sailor and his Lass,' by Pettitt alone, 1891; the 'Prodigal Daughter,' with Pettitt, 1892; 'A Life of Pleasure,' with the same, 1893; the 'Derby Winner,' with C. Raleigh and H. Hamilton, 1894; and 'Cheer, Boye, Cheer,' by the same, 1896. The popularity of most of these and that of the pantomimes, which were on a scale of unexampled splendour, raised Drury Lane to the highest point of prosperity. No less remarkable was Harris's success with opera. Beginning at Drury Lane with 'Lohengrin' in 1887, he produced, at one or other of the great houses, operas such as 'Cavalleria Rusticana,' 'Falstaff,' 'I Paglinacci,' 'I Rantzau,' 'La Navarraise,' with great splendour and with the finest obtainable cast. For tragedy he engaged Ristori and John McCullough, whom, in 'Virginius,' he supported as Iulius, the Saxe-Meiningen company, and the Grand-Ducal company of Saxe-Coburg and Gotha. Indefatigable in labour, he managed three, and sometimes four, of the principal London theatres at the same time. The spring of 1891 thus saw him at the same time manager of Her Majesty's, Covent Garden, Drury Lane, and the Olympic. He was the first member of the London County Council for the Strand division, and a member of the committee on theatres and music halls; was sheriff of London in 1890-1, and was knighted on the occasion of the visit of the German emperor. These manifold occupations overtaxed his strength, and he died at the Pavilion Hotel, Folkestone, on 23 June 1896. Harris had a genius for stage management, in which in his time he had no English equal. He had few gifts as an actor, though he occasionally played in his own pieces. He married, on 8 Nov. 1881, Florence Edgcombe Rendle, who survived him, marrying in 1904 Edward Terry, the well-known actor. His sisters Nelly and Maria and his brother Charles were also connected with the stage.

[Personal recollections; Scott and Howard's Blanchard; Pascoe's Dramatic List; Dramatic Footage; Man of the Time, 14th ed.; Athenaeum, 27 June 1896; The Theatre, July 1896, and various years.] J. K.

HARRIS, GEORGE (1809-1890), author, born at Rugby on 6 May 1809, was the eldest son of George Harris (d. 16 Jan. 1856), a solicitor of that town, by his wife Christabolla, only daughter of Rear-admiral William Chambers (d. 28 Sept. 1829). On 6 May 1820 he entered Rugby School. He was a delicate child and suffered from rough treatment while at the school, which he left to join the Spartiate, the flagship of Admiral

Sir George Eyre, as a midshipman. He was, however, unable to endure the hardships of a life on board ship, and, being attacked by illness before the vessel sailed, gave up the idea of entering the navy. After some unpleasant experiences at a private school at Totnes in Devonshire he was articled to his father in 1825. On the expiry of his articles in 1832 he was admitted attorney, and in January 1834 became a partner in his father's firm. Life at Rugby, however, was distasteful to him; he was possessed by ambition for literary success and a desire for London life; and on 22 June 1838 he gave up his prospects and quitted the firm.

After a sojourn in London of little more than a year, during which he wrote for the 'British and Foreign Review' and other journals, and entered at Trinity Hall, Cambridge, he accepted the post of editor of the 'Hull Times' on 11 Sept. 1839. An attack on the Hull railway line led to his resignation on 21 Sept. 1840, and he determined to devote his attention to preparing for the bar. He entered the Middle Temple in December 1839, and was called to the bar on 13 Jan. 1843. He went the midland circuit, but obtained no great practice. In 1847 he published his 'Life of Lord-chancellor Hardwicke' (London, 3 vols. 8vo), on which he had been at work for nearly three years. It was dedicated to the prince consort, who had taken some interest in the progress of the book, was well received by the critics, but had no sale. Harris had neglected his practice at the bar during the preparation of the work, he was disappointed in hopes of patronage from the Earl of Hardwicke, who had taken a great interest in his labours, and he had lost money in railway speculations. He consequently found himself in great financial straits, from which he was only delivered by his marriage with Miss Elizabeth Innes in 1848, a union which placed him beyond anxiety in money matters, and gave him a wife to whom he became sincerely attached.

In April 1853 Harris filled the office of deputy county-court judge of the Bristol district, and early in 1861 he became acting judge of the county court at Birmingham. In 1862 he was appointed registrar of the court of bankruptcy at Manchester, a post which he retained until 1868, when ill-health compelled him to retire on a pension. In the meantime he had turned his attention to the possibility of rendering accessible manuscripts and historical documents scattered throughout the country in private hands. He had himself had experience of the diffi-

culties attending historical research, while compiling his 'Life of Hardwicke,' and gradually the idea of an official commission to investigate and catalogue manuscripts of historical interest in private collections shaped itself in his mind. In 1867 he first brought forward his idea in a paper read at Birmingham in October before the Law Amendment Society, and entitled 'The Manuscript Treasures of this Country, and the best Means of rendering them available.' The paper was published in the 'Transactions of the National Association for the Promotion of Social Science,' a society founded under the patronage of Lord Brougham in 1867, of which Harris was an original member. In this paper Harris suggested the formation of a committee for the purpose of cataloguing and arranging manuscripts in private hands. The project was taken up by Lord Brougham, and Harris himself laboured to forward it. A memorial was presented to Lord Palmerston on 9 July 1869 by a deputation with Harris as spokesman. Palmerston was interested, but the project met with much opposition, and the commission was not finally issued until 2 April 1869, since which date the work of investigation has steadily proceeded. Harris, however, had little or no connection with the project after its temporary failure in 1869.

In 1808 Harris was deprived of a powerful friend and patron by the death of Lord Brougham. He contributed a 'Mémorial of Lord Brougham,' compiled partly from personal recollections, to the 'Law Magazine and Review.' It was afterwards separately published (London, 1868, 8vo). In 1876 he brought out his 'Philosophical Treatise on the Nature and Constitution of Man' (London, 2 vols. 8vo), a work on which he had been engaged intermittently for forty-three years. While many of his theories were novel, his general treatment of the subject showed a singular tendency to revert to the principles and terminology of the mediæval schoolmen, and he completely ignored the methods and conclusions of modern scientific psychology.

Harris was an active member of the Anthropological Society of London, and in 1871 was chosen a vice-president, a position which he retained on the formation of the Anthropological Institute in that year by the union of the Anthropological Society and the Ethnological Society. In 1876, thinking that the Anthropological Institute 'did not give sufficient attention to psychological subjects,' he joined Edward William Cox [q. v.] in founding the Psychological

Society, of which he became a vice-president.

In 1888 Harris issued his egotistical 'Autobiography' (London, 8vo) for private circulation. It consists chiefly of extracts from his diary, which he kept regularly from 1832, and contains a preface by his friend (Sir) Benjamin Ward Richardson [q. v. Suppl.]. He died at Northolt in Middlesex on 16 Nov. 1890, at his residence, Iselippis, an old manor-house, which he had bought and enlarged. On 12 Dec. 1848 he married at Bathwick Church, Bath, Elizabeth, only surviving child of George Innes (d. 17 July 1842), master of the King's School at Warwick and rector of Ilperton in Wiltshire.

Besides the works already mentioned, Harris was the author of: 1. 'The True Theory of Representation in a State,' London, 1852, 8vo; 2nd edit. 1857. 2. 'Civilization considered as a Science, in relation to its Essence, its Elements, and its End,' London, 1861, 8vo; 2nd ed. 1872. 3. 'Principia Prima Legum; or, an Examination and Analysis of the Elementary Principles of Law,' London, 1865, 8vo (only part i. published). 4. 'The Theory of the Arts; or, Art in relation to Nature, Civilization, and Man,' London, 1869, 2 vols. 8vo. 5. 'Supernatural Phenomena: Tests adapted to determine the Truth of Supernatural Phenomena,' London, 1874, 8vo. He contributed many papers to the 'Journal of the Anthropological Society' and to 'Modern Thought.' He wrote numerous legal biographies for the 'Law Magazine and Law Review,' including those of Lord Westbury, Lord Cranworth, Lord-chief-baron Pollock, and Lord Wensleydale.

[Harris's Autobiography; Journal of the Anthropological Institute, 1890-1, xx. 199-200; The Biograph, 1880, iv. 95-100; Rugby School Reg. 1881, i. 141; Men of the Time, 1887; Chambers's Short Memoir of George Harris (the elder), 1866.] E. I. C.

HARROWBY, EARL OF. [See RYDER, DUDLEY FRANCIS STUART, 1831-1900.]

HART, ERNEST ABRAHAM (1835-1898), medical journalist and reformer, the second son of Septimus Hart, dentist, was born at Knightsbridge, London, on 26 June 1835. He was educated at the City of London school, where he gained, among other prizes, the Chamberlain Scott theology prize, though, as a Jew, he restricted his answers to the two questions dealing with the Old Testament. He became captain of the school and Lambert Jones scholar at the early age of thirteen, and was thus eligible for elocution at Queens' College, Cambridge. Reli-

gious disabilities decided him not to enter the university, and he obtained permission to employ his school scholarship for the study of medicine. He entered as a student at St. George's Hospital, receiving part of his medical education at Mr. Samuel Lane's school of medicine in Grosvenor Place, where he carried off all the prizes, and was appointed a demonstrator in his third year.

He was admitted a member of the Royal College of Surgeons of England in 1856, and held the office of house surgeon at St. Mary's Hospital, afterwards becoming associated for a short time with Mr. William Coulson in the general practice which he carried on in Frederick Place, Old Jewry. For two years he acted as surgical registrar and demonstrator of anatomy at St. George's Hospital, and on 8 Feb. 1859 he was appointed junior surgeon at the West London Hospital, becoming full surgeon on 12 Sept. 1860, and resigning 10 Feb. 1863. He then returned to St. Mary's Hospital as ophthalmic surgeon (1863-8), aural surgeon (1865-1868), and dean of the medical school (1863-1868).

Hart's editorial labours began in 1863, when he was employed to read and correct the proofs, and to assist in the literary department of the 'Lancet,' but his literary work commenced when, as a boy, he wrote articles in 'Good Words,' and notably one in 'Fraser's Magazine' in March 1854 on the British Jews, which attracted notice. In 1863 the council of the British Medical Association invited him to edit the 'British Medical Journal,' a position he accepted and filled with the highest credit until his death. For many years Hart was on intimate terms with George Smith, head of the firm of Smith, Elder, & Co., and he advised Smith in the publication of medical literature, which the firm began in 1872. For many years, too, he edited for Smith, Elder, & Co. two weekly periodicals, the 'Medical Record,' which was started in January 1873, and the 'Sanitary Record,' which began in July 1874. The 'Medical Record' gained repute in medical circles by the copiousness of its reports of foreign medical practice. It was Hart who first brought to Smith's notice the possibilities of developing the Apollinaris spring.

He held the office of president of the Harveian Society of London in 1868, and in 1893 the honorary degree of D.O.L. was conferred upon him by the university of Durham. Hart died at Brighton on 7 Jan. 1898; his body was cremated at Woking. A three-quarter-length portrait by Frank Holl, R.A., was painted in 1883 by subscription, and

was presented to Mrs. Hart. There is a better likeness in the picture by Solomon J. Solomon, R.A., of 'A Welcome Home Dinner at Sir Henry Thompson's,' which was exhibited at the Royal Academy in 1893, and came into the possession of Mrs. Hart. He was twice married: first, in June 1855, to Rosetta, daughter of Nathaniel Levy; and secondly, in 1872, to Ahes, daughter of A. W. Rowlands of Lower Sydenham. He left no children.

Hart was before all things a journalist and an organiser. He was also a sanitary reformer, a political economist, a surgeon, and an art collector of no mean capacity. His first and last efforts were devoted to improving the social position of the medical profession. In 1854 he led the agitation which compelled the admiralty to remove naval assistant surgeons from the 'cockpit' to more fitting quarters; in 1888 he made strenuous efforts to ameliorate the lot of military medical officers; and in 1892 he called attention to the grievances of the Irish dispensary doctors.

He was occupied throughout his life with questions of sanitary reform. His earliest investigations were carried out in connection with the 'Lancet' commission upon the nursing of the sick poor in the metropolitan workhouse infirmaries. His exposure in 1872 of the wickedness attending the system of baby farming was instrumental in leading to the passage of an act for the protection of infant life, made more stringent by the amendments of 1897. Coffee taverns, the National Health Society, the abatement of the smoke nuisance in large towns, and efforts to secure the better training and regulation of plumbers, had his strongest support. He was keenly alive to the advantages of vaccination, and never wavered in advocating it as a duty the state owed to the people. He founded in 1883 the Medical Sickness, Annuity, and Life Assurance Society, which soon became a financial success. In 1894 he was engaged in a campaign against the system of barrack schools, in which hundreds of pauper children were herded together until they became subject to chronic disease, and where they were drilled until they were little better than automata. He was urgent in every matter which could prevent the spread of disease, and in 1894-5, in the course of a visit to India, he presented the unique spectacle of a Jew addressing a large meeting of Mohammedans gathered at Hyderabad upon the sanitation of their holy places.

During the short time that he practised as a surgeon he introduced a new method of

treating aneurysm of the popliteal artery by banding the knee-joint, and he achieved considerable success in ophthalmic practice.

The chief energy of his life, however, was devoted to furthering the interests of the British Medical Association. When he first entered upon his duties as editor of the 'British Medical Journal' the association included about 2,000 members; when he died there were upwards of 19,000. The 'Journal' then consisted of twenty pages a week; he increased the size of each sheet and published sixty-four pages. As chairman of the parliamentary bills committee of the British Medical Association (1872-97), he systematically studied and fearlessly criticised all proposals for legislation affecting the medical profession and the public health of the community, and he was a strong supporter later in his life of the medical education of women.

From 1884 he collected a series of objects belonging to almost every branch of art and art industry in Japan. The collection was exhibited at the rooms of the Society for the Encouragement of Art, Sciences, and Commerce in 1886, and at the jubilee exhibition at Saltairo and elsewhere.

Hart published numerous addresses, lectures, pamphlets, and other works. The more important are: 1. 'On Diphtheria,' 1859, 12mo. 2. 'On some of the Forms of Diseases of the Eye,' 1864, 8vo. 3. 'A Manual of Public Health,' 1874, 8vo. 4. 'Hypnotism and the New Witchcraft,' 1893, 8vo; new and enlarged edition entitled 'Hypnotism, Mesmerism, and the New Witchcraft,' 1896, 8vo. 5. 'Essays on State Medicine,' 2 pts. 1894, 8vo. He also originated in 1897 a series of biographies entitled 'Masters of Medicine.'

[Personal knowledge; British Medical Journal, i. 1898; Jewish Chronicle, 14 Jan. 1898; private information.] D'A. P.

HART, JOHN (1809-1873), pioneer colonist and premier of South Australia, was born in Great Britain on 25 Feb. 1809, and apparently went to sea as a boy; he first sighted South Australia when in 1834 and 1835 he was employed on a sealer along the south coast of the colony. His seaman-ship attracted the notice of a Tasmanian merchant, who early in 1836 sent him to London to buy a vessel for the colonial trade. On 1 Sept. 1836 he left England for Launceston, Tasmania, as captain of the *Isabella*, and on arriving shipped for South Australia the first livestock landed in the new colony; on the return voyage to Tasmania he was wrecked and lost everything.

Finding his way back to South Australia he was commissioned by a merchant to buy a new vessel in Sydney, and as master of the *Hope* returned with cattle. He seems to have made a voyage from England between 26 Feb. and 1 July 1838 with the *Henry Parcher* (STEPHENS, *South Australia*), and it was probably not till December 1838 that he established the headquarters of his whale fishery at Encounter Bay, where he was made harbour master. He now first turned his attention to shore concerns, and became in November 1840 director of the Adelaide Auction Company. The crisis of 1842 and the following year brought all business to a standstill; in 1843 he took to the sea again, and sailed for England on the *Augustus*, of which he owned two thirds; he seems to have had a great reputation as a seaman, and was known as 'Captain' Hart to the end of his life.

After two or three voyages to the old country and back, Hart finally gave up the sea about 1846, and devoted himself to commercial pursuits, eventually settling down to the management of the flour mills which connected his name with one of the best brands of Australian flour. He also started the Mercantile Marine Insurance Company, and was a director of the Union Bank of Australia.

Hart first entered political life when he supported the indignation meetings against Governor Robo's land policy; he was member for the Victoria district in the old legislative council of 1851, and, after a visit to England in 1853, returned to take part in the discussions on reform in 1854 and 1855. He was elected as member for Port Adelaide in the first House of Assembly on 25 March 1857. In August he was treasurer for ten days under John Bakor, and again held the post under (Sir) Reginald Davies Hanson from 30 Sept. 1857 to 12 June 1858; he resigned because of a considerable difference of opinion with his colleagues. In 1859 he was again in England intent upon starting the Northern Mining Company for operations in the northern territories; on his return he found that his conduct in regard to mining leases had been attacked, and he demanded the appointment of a select committee which fully exonerated him. In July 1863 he was colonial secretary under Francis S. Dutton for a few days, and then from 15 July 1864 to 22 March 1865 under (Sir) Henry Ayers and (Sir) Arthur Blyth [q.v. Suppl.] successively.

On 23 Oct. 1865 Hart was called upon to form his first ministry, which lasted till 28 March 1866; he then went to England

for a year. In 1868 he was elected for Light; the crucial question of land-law reform was before the colony; it seemed impossible to get a strong ministry together. Hart was premier from 24 Sept. to 13 Oct. 1868, but failed to meet the crisis. Ayers followed, and had to go very quickly; but the next premier, Henry B. T. Strangways, succeeded in passing the land act known by his name. On 3 May 1870 Hart again became premier. This was his chief administration; his first act was to carry through the already projected overland telegraph line to the northern territory; on the question of the development of this territory he had always been an authority. He also tried to continue the improvement of the land law, but his bill was lost in the assembly by the speaker's casting vote. His financial policy was sound and his tariff act much commended. He resigned on an adverse vote on 10 Nov. 1871. He was not again in office; on 28 Jan. 1873 he died suddenly in the act of addressing a meeting of the Mercantile Marine Insurance Company. He was buried near Adelaide, where he resided.

Hart was a cautious man of sound judgment, a plain straightforward speaker; in public life financial and educational reform was his chief watchword; his first advocated consideration of the South Australian debt. He was made O.M.G. in 1870.

He was married and left a large family.

[*South Australian Register*, 30 Jan. (Suppl.) and 31 Jan. 1873; Mennell's *Dict. of Australasian Biography*; *South Australian Blue-books*; *Hodder's Hist. of South Australia*, ii. 4 and 15.]

O. A. H.

HAUGHTON, SAMUEL (1821-1897), man of science, born in Carlow on 21 Dec. 1821, was son of James Haughton [q.v.], of whom he published a 'Memoir' in 1877. He was educated at first at a school in Carlow and, at the age of seventeen, entered Trinity College, Dublin. Here he obtained first gold medal in mathematics (1843), and, six months afterwards, was a successful candidate at the fellowship examination (1844). He graduated B.A. in 1844 and M.A. in 1852. He was ordained deacon in 1846 and priest in 1847.

After obtaining a fellowship Haughton's attention, probably in consequence of his friendship with James McCullagh [q.v.], professor of mathematics at Trinity, was at first directed to mathematical physics. His principal papers on this subject were: 'On the Laws of Equilibrium and Motion of Solid and Fluid Bodies' (*Camb. and Dubl. Math. Journal*, i. 1846); 'On a Classification of Elastic Media, and the Laws of Plane

Waves propagated through them' (*Trans. Royal Irish Academy*, vol. xxii.); 'On the Original and Actual Fluidity of the Earth and Planets' (*ib.*), and various papers on the reflection and refraction of polarised light, which were published chiefly in the 'Philosophical Magazine' and 'Philosophical Transactions.' For the first-mentioned paper he obtained the award of the Cunningham medal from the Royal Irish Academy.

Concurrently with this work he was engaged in the study of geology, and in 1851 was appointed professor of geology in the university of Dublin. This chair he held until 1881, when he resigned it on being co-opted a senior fellow.

His geological papers cover a very wide range. Most of them are to be found in the 'Journal' of the Dublin Geological Society, the 'Proceedings' of the Royal Irish Academy, and the 'Proceedings' of the Royal Society of London. They deal, among other subjects, with the mineralogy of Ireland and of Wales, they include an exhaustive study of Irish granites, and a laborious investigation, carried on in conjunction with Professor Edward Hull, of the composition of the lava of Vesuvius from 1631 to 1868. But perhaps his most important contributions to this science are his studies of the cleavage and joint planes of the old red sandstone of co. Waterford (*Dubl. Geol. Soc. Journal*, viii. 1857; *Phil. Trans.* 1858).

In physical geology Haughton studied the effect on the position of the earth's axis of elevations and depressions caused by geological changes, with the resulting changes of climate (*Proc. Roy. Soc.* 1877). His final conclusion on the length of geological time, based on the probable rate of formation of stratified rock, was that the whole duration was about two hundred millions of years. He also investigated the question of geological climate in connection with Rossetti's law of cooling, and arrived at the conclusion that the secular cooling of the sun has been the chief factor in the changes of geological climate.

In connection with this and other geological questions Haughton undertook a laborious series of calculations on solar radiation, the object of which was to determine the effects on terrestrial climates of alterations in the temperature of the sun and in the constitution of the atmosphere. He also made a research on the effect of the great ocean currents on climate (*Trans. Roy. Irish Acad.* xxviii. 1881; *Cunningham Memoir*, 1885).

In 1854 Haughton commenced the work

of reducing and discussing the tidal observations which had been carried out in 1850-1 at various stations on the coast of Ireland under the direction of the committee of science of the Royal Irish Academy. The results of this work are to be found in numerous papers published in the 'Transactions' of the Royal Irish Academy, the 'Proceedings' of the Royal Society, and the 'Philosophical Magazine.' In consequence of this work he was entrusted with the reporting of the observations made on the tides of the Arctic seas by the expedition in the yacht Fox under Sir Leopold McClintock, which went in search of the Franklin expedition, as well as those made on board H.M.S. Discovery (*Proc. Roy. Soc.* 1875-8). His final papers on this subject appeared in 1893-5 (*Trans. Roy. Irish Acad.* xxx.)

Haughton's studies on fossils in the course of his geological work led him to desire a closer acquaintance with anatomy, and it was in this way that in 1859, at the age of thirty-eight, he came to enter the medical school of Trinity College as a student. He passed through the full course, and graduated in medicine in 1862. He was appointed medical registrar of the school, and applied himself to the work of reform, which at that time was sadly needed, and the high position attained by the school subsequently was mainly due to his energy and determination. He subsequently became chairman of the medical school committee and university representative on the General Medical Council.

In the cholera epidemic of 1866 Haughton organised from among the students a volunteer nursing staff, the ordinary nursing arrangements being quite insufficient to cope with the epidemic. The fearlessness and energy with which he threw himself into that work was the means of saving many lives. But Haughton's medical course had also a directing influence on his scientific work. He commenced a series of observations on the mechanical principles of muscular action, which were published between 1865 and 1873, chiefly in the 'Proceedings' of the Royal Society and 'Transactions' of the Royal Irish Academy. They were finally condensed and arranged in his book on 'Animal Mechanics,' which appeared in 1873. The object of this volume is to show that the muscular mechanism is so arranged that the work required of it is done with a less expenditure of muscular contraction than would result from any other configuration. This he calls 'the principle of least action.' His opposition to the doctrine of evolution, which was probably largely due

to his religious views, is nowhere more apparent than in this work.

His latest work was in the field of chemistry, and included an endeavour to connect the atomic weights with the valencies of the elements by means of a mathematical curve, and the development of what he called the Newtonian chemistry—i.e. the hypothesis that the atoms of chemical elements in acting upon one another obey the Newtonian law of gravitation, with this difference, that, whereas the specific coefficient of gravitation is the same for all bodies, the atoms have specific coefficients of attraction for one another which vary with their chemical nature.

Haughton's connection with the Royal Zoological Society of Ireland extended over the whole of his later life. He became a member of council in 1800, honorary secretary in 1864, and president in 1883. But for his energy in grappling with the financial difficulties with which the society was beset during his period of office as secretary, it would probably have ceased to exist.

Among the honours conferred on Haughton by learned bodies may be mentioned the following: F.R.S. 1858, D.C.L. Oxon. (*hon. causa*) 1808, L.L.D. Cantab. 1881, L.L.D. Edin. (*hon. causa*) 1881, M.D. Bologna (*hon. causa*), 1888. He was elected president of the Royal Irish Academy in 1887.

Haughton's personal character was no less striking than the variety of his scientific attainments. He had the power of influencing men of the most various dispositions to work together in concert, while the charm of his manner and his bright wit, no less than his honesty and directness of purpose, procured him hosts of friends.

He died at his residence, 12 Northbrook Road, Dublin, on 31 Oct. 1897, having held a senior fellowship for sixteen years. He was buried at Carlow on 3 Nov. He was married and left issue.

Besides his numerous scientific papers Haughton published: 1. 'The Three Kingdoms of Nature,' London, 1809. 2. 'Principles of Animal Mechanics,' London, 1873; 2nd ed. same year. 3. 'Six Lectures on Physical Geography,' Dublin, 1880. He also issued in conjunction with the Rev. Joseph Galbraith a series of scientific text-books; it began in 1861 with a 'Manual of Elementary Mathematics,' and continued for twenty years, most of the manuals reaching third or fourth editions. Haughton also edited (with A. H. Halliday) the 'Natural History Review' from 1864 and the 'Dublin Quarterly Journal of Science' from 1861.

[Cat. Grad. Dublin Univ.; Times, 1 and 4 Nov. 1897; Crockford's Clerical Directory, 1897; Brit. Mus. Cat.; private information.]
A. C. O'S.

HAVELOCK-ALLAN, SIR HENRY MARSHMAN (1830–1897), lieutenant-general, colonel of the royal Irish regiment, eldest son of Major-general Sir Henry Havelock (1795–1857) [q.v.], was born at Chinsurah, India, on 6 Aug. 1830. Educated at the Rev. Dr. Outlibert's school in St. John's Wood, London, he was commissioned as ensign in the 89th foot on 31 March 1840, was promoted to be lieutenant in the 86th foot on 23 June 1848, and transferred to the 10th foot to take the adjutancy on 13 Feb. 1852. His further commissions were dated: captain 18th foot (royal Irish regiment) 9 Oct. 1857, brevet major 19 Jan. 1858, brevet lieutenant-colonel 20 April 1859, unattached major 28 June 1864, brevet colonel 17 June 1868, major-general 18 March 1878, lieutenant-general 9 Dec. 1881, colonel of the royal Irish regiment of foot 27 Nov. 1895.

On his way out to India in the autumn of 1848 Havelock got a severe sunstroke, which obliged him to return to England on sick leave in 1849, and his effects clung to him through life, causing periodical fits of mental excitement and eccentricity. On the expiration of his sick leave he went back to India, but came home again after a few years, hoping to be employed in the war with Russia. In this he was not successful, but in 1856 went to the staff college, and returned to the East in time to take part in the Persian war.

Havelock was appointed, from 22 Jan. 1857, acting deputy-assistant quartermaster-general of the division commanded by his father in the expedition under Sir James Outram [q.v.] against Persia, and took part in the bombardment and capture on 26 March of Mohamra. He was mentioned in despatches for his services (*London Gazette*, 18 Aug. 1857), and received the medal. He accompanied his father to Calcutta, where he arrived after the outbreak of the mutiny on 17 June, and, on his father's appointment to command a column for the relief of Cawnpore and Lucknow, went with him to Allahabad as aide-de-camp from 28 June. He took part in the victorious march to Cawnpore, in the actions of Fatehpur on 12 July, Aong and Pandu-Nadi on the 15th, and Cawnpore on the 16th, where he greatly distinguished himself, advancing steadily on horseback in front of the 64th foot towards a 24-pounder gun, which was pouring forth first round shot and then grape. The gun

was captured by a gallant charge. For this service he received the Victoria Cross on 15 Jan. 1858. Some controversy resulted from the action of the general in thus recommending his son, but there was no question as to the gallantry of young Havelock, whose daring and energy were acknowledged by all.

On 21 July Havelock was appointed deputy-assistant adjutant-general to the force. On the first advance from Cawnpore to Lucknow he was present at the actions of Onao on 29 July, Bashiratanj on 5 Aug., when his horse was shot under him, and again on the 12th, and at Bibhor on 16 Aug. In the second advance from Cawnpore, after Outram had joined the force with reinforcements, he took part in the actions at Mangalwar on 21 Sept., where he distinguished himself in the pursuit of the enemy; and at the Alambagh on 23 Sept., where, it is stated, he twice saved Outram's life. Two days later he displayed great gallantry at the successful attack on the Ohar-bagh bridge of Lucknow, where an entrance to the city was gained. He was recommended by Outram for the Victoria Cross (MALIBSON, *Hist. of the Indian Mutiny*, i. 537 et seq.) He was dangerously wounded on this occasion, and his horse was shot under him.

As soon as he was convalescent he took part in the defence of the residency at Lucknow until the relief of the garrison by Sir Colin Campbell. When Sir Colin had gained the Moti-Mahal on 17 Nov. 1857 young Havelock and some other officers accompanied his father and Outram across the half-mile of open space between it and the residency to confer with Sir Colin. A heavy musketry fire opened on the party, and with three others Havelock was struck down, severely wounded. In spite of his wound he attended his father's deathbed on 24 Nov., and his funeral at the Alambagh on the 26th. The baronetcy and pension of 1,000*l.* a year proposed to be conferred upon his father for his distinguished services was bestowed upon him. The creation was dated 22 Jan. 1858.

In December 1857, though still suffering from his wounds, Havelock was appointed, at his own request, deputy-assistant adjutant-general to the Azimgarh and Jannpur field force under Brigadier-general Franks, with whom he had served for some years as adjutant of the 10th regiment. He now assisted him in the operations against the rebel chief Mahudi Haisan in the successful actions at Nasratpur on 23 Jan. 1858, at Ohanda and Hamirpur on 19 Feb., Sultanpur on 23rd, and the chook at Dhaorara on 4 March, when the

column joined the commander-in-chief at the siege of Lucknow. He distinguished himself on 14 March at the storm of the Imambara, forced his way into a palace which commanded three bastions of the Kaisar-Bagh and cleared them of defenders, taking part the same day in the storm and capture of the Kaisar-Bagh. On 19 March Lucknow was won.

On 29 March Havelock, as deputy-assistant adjutant-general to the field force in the Behar and Ghazipur districts, accompanied Sir E. Lugard's column to the relief of Azimgarh, and was present at the successful actions of Metahi on 11 April and of 15 April. The rebels were pursued into the jungles of Jagdispur, where a desultory warfare ensued. In October Havelock proposed to mount some of the infantry to make up for the deficiency in cavalry, and was given the command of a small flying column of mounted infantry. He pursued the Shahabad rebels for two hundred miles in five days, fighting three actions on 19, 20, and 21 Oct., finally driving them into the Kaimur hills. He was again wounded during the operations.

On 25 Nov. 1858 Havelock was appointed to the command of the 1st regiment of Hodson's horse, which he held until March 1859. He led it through the campaign in Oude under Lord Clyde, including the successful action of Bajadua on 26 Dec., the capture of Masjadua on the following day, the defeat of the rebels near Bandi on the Rapti on 31 Dec., and other operations until the end of the campaign. He was frequently mentioned in despatches for his services during the mutiny (*ib.* 18 Oct. 1857, 17 Feb., 31 March, 25 May, 17 July, 31 Aug., and 16 Nov. 1858; 31 Jan., 22 Feb., and 24 March 1859). He received the medal and two clasps, a year's service for Lucknow, and the brevets of major and lieutenant-colonel.

On Havelock's return home in 1860 he joined his regiment (the royal Irish) at Shorncliffe camp. On 1 Oct. 1861 he was appointed deputy-assistant adjutant-general at Aldershot. In August 1863 he accompanied his regiment to New Zealand, and on 25 Oct. was appointed deputy-assistant quartermaster-general to the forces in that colony, serving throughout the Maori war of 1863-4 under Major-general (afterwards General Sir) Duncan Alexander Cameron. He took part in the Waikato campaign and was present at the storm and capture of Rangiriri on 20 and 21 Nov. 1863. He commanded the troops engaged in the affair of Wairi in January 1864, was present at the action of Paterangi and Rangiawhia

on 20 and 21 Feb. and at the siege and capture by storm on 2 April of Orakau. For his services he was mentioned in despatches (*ib.* 19 Feb. and 14 May 1864), received the war medal, and was made a companion of the order of the Bath, military division, on 10 Aug. 1866.

Havelock returned to England at the beginning of 1865, obtained an unattached majority, and married. From 13 March 1867 he served as assistant quartermaster-general in Canada until 31 March 1869, when he returned home, and on 1 Aug. was appointed in the same capacity to the headquarters staff in Dublin. He obtained leave of absence to see part of the Franco-German war of 1871-2, and in 1877 to visit the theatre of the Russo-Turkish war, acting as 'occasional correspondent' of the newspaper press. In January 1874 he unsuccessfully contested Stroud as a candidate for parliament in the liberal interest, and in February was returned as member for Sunderland, for which borough he sat until 1881, when he resigned his seat to take command, on 1 April, of the second infantry brigade at Aldershot. On 17 March 1880 he had assumed by royal license the additional surname of Allan, in compliance with the terms of the will of his cousin, Henry Allan of Blackwell Grange, Durham. He retired from the active list on 9 Dec. 1881, with the honorary rank of lieutenant-general. In 1882 he visited Sir (later) (afterwards Viscount) Wolseley's headquarters at Ismailia, and was present at the battle of Kassassin on 28 Aug.

In 1885 Havelock-Allan was returned to parliament in the liberal interest by the south-east division of Durham county, and in the following year he was returned as a liberal unionist, and held the seat until 1892, when he was defeated, but was again elected in 1895. He was promoted to be K.O.B. on 21 June 1887, on the occasion of the queen's jubilee. His pluck and indomitable energy were as evident in his political career as in his military. Shrewd and well-meaning, but impetuous and choleric, he held strong opinions on many subjects, and made no concealment of his likes and dislikes. He was chairman of the parliamentary naval and military service committee. In the recess of 1897 he went to India to study the Indian army question, and visited the British troops carrying on the campaign against the hill tribes on the Afghanisthan frontier. He was moving down from Ali Masjid after a visit to Landi Kotal, when a fresh horse, which he had been given at the last halt on 30 Dec., gave him some trouble, and in giving it a good gallop to steady it he got

into broken ground on the flank, where Khaibaris were watching to catch him if they could. One of them fired at the horse and killed it, but the ball passed through Havelock's leg, cutting an artery, and he bled to death. The man who fired the shot afterwards joined the Indian army. The intention was to put Havelock-Allan to ransom, and the Khaibaris were disappointed at his death. When his body was found, it was taken to Rawul Pindi, where his regiment, the royal Irish, was then quartered.

Havelock-Allan had been honorary colonel of the Durham militia artillery since 7 May 1887, and in command of the Tyne and Tees volunteer infantry brigade from 17 Oct. 1888. He was a justice of the peace for the North Riding, Yorkshire, and for the county of Durham, of which he was a deputy lieutenant. He was also an alderman of the Durham county council.

He married, on 10 May 1865, Lady Alice Moreton, who survived him, second daughter of Henry George Francis, second earl of Ducis (*d.* 2 June 1853), by his wife Elizabeth (*d.* 15 March 1865), elder daughter of John, second lord Sherborne. He left two sons and a daughter. The eldest son, Henry Spencer Moreton, born in Dublin on 30 Jan. 1872, succeeded him in the baronetcy. The second son, Allan, was born on 30 March 1874. The daughter Ethel, born at Montreal on 1 Nov. 1867, married, on 19 Oct. 1888, Joseph Albert Pease, M.P., second son of Sir Joseph Whitwell Pease, first baronet.

Havelock-Allan was the author of 'Three Main Military Questions of the Day: (i.) A Home Reserve Army; (ii.) The more economic Tenure of India; (iii.) Cavalry as affected by Breech-loading Arms,' London, 1867, 8vo.

[Despatches; Army Lists; Baronetage; Times, 1 and 7 Jan. 1898; Knye's History of the Sepoy War; Malleson's History of the Indian Mutiny; Shadwell's Life of Lord Clyde; W. Fox's New Zealand War, 1863-4; Marshman's Life of Sir Henry Havelock; private sources; Alexander's Bush Fighting, illustrated by Incidents of the Maori War, New Zealand.] R. H. V.

HAWKSHAW, SIR JOHN (1811-1891), civil engineer, son of Henry Hawkshaw of Leeds, and his wife, born Harrington of Derbyshire, was born in the West Riding of Yorkshire in 1811; his father's family had been for some generations farmers in this district of Yorkshire. He was educated at the Leeds grammar school, and then became a pupil of O. Fowler, who was chiefly engaged on road construction. At the age of twenty he joined the staff of Alexander

Nimmo [q. v.], who was then occupied with pier and harbour work in Ireland.

In July 1832 he went to Venezuela to take charge of the Bolivar Mining Association's mines, about two hundred miles from Caracas. He spent three years there; but bad health, brought about by the unhealthy climate, forced him to return to England in 1834. In 1838 he published a book describing his life in Venezuela, entitled 'Reminiscences of South America' (London, 1838). After his return he was employed for a time by Jesse Hartley [q. v.] on the Liverpool docks, and then on railway surveys in Germany for J. Walker; he also superintended the completion of the Manchester, Bury, and Bolton railway line. About this time, in 1838, at the request of the Great Western Railway Company, he reported as to the advisability of the continuance of the broad gauge on that system. In his report he opposed the continuance of the broad gauge, and all through his life he fought strenuously against a break of gauge on railway systems; he took a very prominent part in the opposition in 1872-3 to the proposals of the Indian government for altering the gauge of the railways in India.

In 1845 Hawkshaw was appointed engineer to the Manchester and Leeds Railway, the nucleus of the present Lancashire and Yorkshire railway system, and he remained consulting engineer to the latter company until 1888. His most noteworthy work in connection with this company was the introduction in the new lines of steeper gradients than any which had been adopted down to that date, and although his action was strongly opposed by Robert Stephenson [q. v.], Hawkshaw's sound judgment on this matter has been attested by the adoption since then of similar gradients on similar railways throughout the world.

In 1850 he came to London, and set up in practice as a consulting engineer, and from 1870 onwards he was in partnership with his son and his old assistant, Harrison Mayler.

It is not possible to deal even in outline with the numerous schemes in all branches of engineering for which Hawkshaw was responsible; only a few of the leading and more important ones can be referred to here. In connection with railways perhaps his most famous works were the Charing Cross and Cannon Street railways, with their large terminal stations and bridges over the Thames; the East London Railway, with its utilisation of the old Thames tunnel, constructed by the elder Brunel; and the great tunnel under the Severn for the Great

Western Railway Company, which at the time of its completion in 1887 was one of the most noteworthy of such pieces of railway work, the tunnel being four and a third miles long, two and a quarter miles of this being under the tidal estuary of the Severn (see WALKER'S *The Severn Tunnel: its Construction and Difficulties*, London, 1891; also *Proc. Inst. Civil Engineers*, cxxi. 303).

Hawkshaw was also, with Sir John Brunlees [q. v. Suppl.], consulting engineer to the original Channel Tunnel Company; before preparing his plans for this work he had very careful geological surveys made on both coasts, and he also made detailed marine surveys. During his later years, however, he refused to have anything to do with the proposed tunnel, having come to the opinion that the construction of a tunnel would be a distinct national disadvantage.

In bridge work, in addition to those already mentioned across the Thames, Hawkshaw designed the Nerbudda bridge in India, nearly one mile long; and was responsible, with W. H. Barlow, for the completion of the famous Clifton suspension bridge, utilising for this work the old chains from the Hungerford suspension bridge, which had been pulled down to make room for his new Charing Cross railway bridge.

In 1863, at the request of the then viceroy of Egypt, Hawkshaw visited Egypt and carefully examined the site of the proposed Suez ship canal. It was the extremely favourable report which he sent in on the scheme, and on the proposed site, which finally led to the adoption of M. de Lesseps's plans. The khedive had made up his mind that if Hawkshaw should report against the scheme he would have nothing more to do with it. Richard Monckton Milnes, lord Houghton [q. v.], who was present at the time, says that when Hawkshaw landed at Port Said to take part in the opening ceremonies of the completed canal, M. de Lesseps presented him to the engineers who were present with the words: 'This is the gentleman to whom I owe the canal' (*Milnes's Life of Richard Monckton Milnes, first Lord Houghton*, 2nd edit. ii. 217).

Hawkshaw was also a member of the international congress which met at Paris in 1879 to consider the proposed inter-oceanic ship canal across Central America. He was opposed to the Panama canal scheme because he did not believe it could be constructed at a reasonable cost, and so retired from the congress.

In 1869 he became engineer to the Amsterdam ship canal, which was eventually opened by the king of Holland on 1 Nov.

1878. Until the construction of the Manchester and Liverpool ship canal, this was (after the Suez canal) the most important work of its kind which had been carried out, the canal being sixteen miles long with a depth of twenty-three feet; it also involved very difficult and complicated work in connection with the locks on the Zuyder Zee and at Ymuiden (see *Proc. Inst. Civil Engineers*, lxii. 1).

In 1880 he was appointed sole royal commissioner to inquire into the question of providing the city of Dublin with a proper water supply, and he recommended that Mr. Hassard's scheme for obtaining water from the Vartry should be adopted; this scheme was afterwards carried out. Again, in 1874, he was sole royal commissioner to inquire into the best means of remedying the evils caused by the pollution of the Clyde and its tributaries. He was also responsible for a very considerable amount of drainage work in the fen country in the eastern part of England, one very noteworthy piece of work being the design, in 1862, of a dam to shut out the tide from the middle level drain in Norfolk, the outfall sluice at St. Germainus having given way. Across the dam which he constructed, sixteen large siphons, each three and a half feet in diameter, were laid, and they were sufficient for the drainage of the district for many years (*ib.* xxii. 497).

Among other government committees upon which Hawkshaw served may be mentioned a departmental committee in 1808 to inquire into the construction, condition, and cost of the fortifications which were in existence, or in course of erection, in the kingdom. In 1880 he served on a committee of the board of trade to investigate the effect of wind pressure on railway structures; and when the electric telegraphs were purchased by the government from the various companies in 1888, he was appointed by the act the arbitrator to distribute the purchase money among the different companies and the various shareholders.

Though he was never a strong politician, Hawkshaw stood as a liberal candidate for Andover in 1803, but was defeated; and again in 1805 he proposed to stand as a candidate for Lyme Regis, but withdrew just before the date of the election.

In 1855 he was elected a fellow of the Royal Society, and in 1873 was knighted. He was president of the Institution of Civil Engineers in 1802 and 1863, having joined that body in 1836; and in 1875 he held the office of president of the British Association.

Hawkshaw was without doubt one of the foremost civil engineers of the nineteenth

century, not only on account of the importance of the works with which he was connected, but also on account of the wide field covered by his professional activity. Technical reports and his presidential addresses form practically the bulk of his literary work.

He died at his town residence, Belgrave Mansions, on 2 June 1891. He married in 1835 Ann, daughter of the Rev. James Jackson of Green Hamerton, Yorkshire. She died on 29 April 1885, aged 72.

There is an oil painting by Collins at the Institution of Civil Engineers, and another by G. F. Watts, R.A., in the possession of Mr. J. C. Hawkshaw at Hollycombe, Sussex, and also two earlier portraits, both at Hollycombe. Mr. Hawkshaw has a marble bust by Wontner; the Institution of Civil Engineers has also a marble bust and a small bronze head by Wynn.

The most important of his professional publications were his presidential addresses at the British Association (London, 1875) and the Institution of Civil Engineers (London, 1863); Reports on Dock and Harbour Works at Bristol (1830), Boston (1864), Holyhead (1873), Belfast (1870); on the Suez Canal (Paris, 1863; London, 1868); on the Great Western Railway Locomotive Department (1838), Lancashire and Yorkshire Railway Rolling Stock, &c. (1850), Narrow Gauge for India (1870); and on the Drainage of the River Witham (London, 1801, West, 1802, London, 1877), Thames Valley (1878), Purification of the Clyde (1870); The Present State of Geological Enquiry as to the Origin of Coal (1843).

[Obituary notice in *Proc. Inst. Civil Engineers*, vol. cvi.; *Burke's Peerage* &c. 1890; *Times*, 3 June 1891.] T. H. B.

HAWKSLEY, THOMAS (1807-1893), civil engineer, son of John Hawksley by his wife Mary Whitte, was born at Arnold, near Nottingham, on 12 July 1807. Educated at the Nottingham grammar school under Dr. Wood, he in 1822 was articled to Mr. Stavely, architect and surveyor of Nottingham. He eventually became a partner in this business, which was carried on in Nottingham until he left for London in 1852.

Hawksley's fame as a civil engineer will in a great measure rest on the many extensive schemes for supplying water to large cities for which he was responsible, and it is noteworthy, therefore, that his first important piece of engineering work was connected with a scheme for additional water supply to the town of Nottingham in 1830. In 1845 he became engineer to the joint companies

supplying Nottingham, and continued in that position until the year 1880, when the companies were bought out by the municipal authorities of Nottingham. About 1847 he invented, in conjunction with William George (afterwards Lord) Armstrong [q. v. Suppl.], a self-acting valve designed to close the pipe automatically when the velocity of the water passing through it exceeds a certain limit; the invention is still largely used by water companies.

There is scarcely a large city in the kingdom which did not make use of Hawksley's services at one time or another, but the three cities with which he had the closest connection were Liverpool, Sheffield, and Leicester. His connection with the water supply of the city of Liverpool began in 1846, when he recommended the Rivington-Pike scheme, which was at length adopted, and completed in 1857. The rapid growth of Liverpool, however, made it necessary to cast about for a further supply of water, and in 1874 a scheme for supplying the city from the head waters of the river Severn was drawn up, and the reports were referred to Hawksley and John Frederic Latrobe Bateman [q. v. Suppl.] for their consideration. Hawksley reported in favour of the Vyrnwy scheme, which was eventually carried out, and Hawksley was appointed engineer-in-chief to the undertaking, an office which he held until his retirement in 1885. This scheme involved the construction of a very large masonry dam across the valley of the Vyrnwy, and the creation of an artificial lake almost as large as any natural lake in the kingdom. It is probably the most important scheme which has been completed in this country up to the present time.

Hawksley's connection with Sheffield was brought about in 1864 by the terrible disaster due to the bursting of the masonry dam of the Dale Dike reservoir on 11 March 1864. He was called in with other engineers to advise and report on this accident and to prepare plans for other works for supplying the city of Sheffield. He remained engineer-in-chief of these works until his death.

At Leicester he was responsible for and planned the Thornton Park reservoir and the Bradgate reservoir.

The skill which Hawksley showed in working out his estimates for the water supply of any district upon which he was consulted mainly depended upon the elaborate preliminary calculations he always made, based on rainfall and evaporation measurements taken throughout the district. To Hawksley also is really due the introduction of the 'constant service' system.

In addition to waterworks Hawksley was also responsible for numerous gas supply and drainage works; he served as president of the Gas Managers' Association from 1864 to 1867; and he was one of the authorities consulted in 1857 in connection with the London main drainage scheme. It is, however, as a waterworks engineer that he will always be known; no other engineer in this country during the nineteenth century has carried out so many works, or has been recognised as such an authority upon this branch of engineering.

He became a member of the Institution of Civil Engineers in 1840, was elected to the council in 1853, and served as president in the years 1872-3. He also served as president of the Institution of Mechanical Engineers in 1876 and 1877, and in recognition of his high scientific and engineering attainments he was elected a F.R.S. in 1878.

He furnished numerous reports to foreign governments on engineering questions, mainly on waterworks and sewage works, and as a result received numerous foreign orders. He was made commander of the order of Francois Joseph of Austria, was a commander of the Rose of Brazil, and was a member of the Swedish order of the Polar Star, and Knight of the Dannebrog.

Hawksley was a good mathematician, and took a keen interest in questions of statistics. In 1876 he gave an address at St. George's Hall, Liverpool, as president of the health section of the Association of Social Science, dealing with the application of statistics to various social problems.

He was twice married: in 1831 to Phillis, daughter of Francis Wright of Nottingham, by whom he had several children. His son, Mr. Charles Hawksley, became an eminent engineer. She died in 1854, and in 1855 he married Eliza, daughter of J. Litt. Hawksley died on 23 Sept. 1893, at his residence, 14 Phillimore Gardens, Kensington, at the age of eighty-six.

In the year 1887 his portrait, painted by Sir Hubert Herkomer, R.A., was presented to him by many friends in the engineering and legal professions, as a mark of esteem and affection (*Times*, 14 July 1887). A replica of this oil painting was executed for the Institution of Civil Engineers.

His literary work was entirely confined to his professional reports and presidential addresses: Reports on Water Supply, Leicester (Nottingham, 1850); Edinburgh (London, 1872); Main Drainage of London (London, 1858).

[Obituary notices in Proc. Inst. Civil Engineers, vol. cxvii.; *Times*, 25 Sept. 1893.]

T. H. B.

HAY, SIR JOHN (1816-1892), Australian statesman, born at Little Ythaio, Aberdeenshire, on 23 June 1816, was the elder son of John Hay of Little Ythaio, by his wife Jean Moir. He was educated at the University and King's College of Aberdeen, graduating M.A. in 1834. In the same year he went to Edinburgh, and studied for several years for the Scottish bar. In 1838 he emigrated to New South Wales as a squatter, settling at Welaregang on the upper Murray.

He first took part in colonial politics in 1836, when he was returned to the legislature on 2 April for the Murrumbidgee district. On 24 Sept. he carried a motion of want of confidence in the ministry of (Sir) Charles Cowper [q.v.], and after declining to form an administration became secretary of lands and public works in the government formed by (Sir) Henry Watson Parker [q.v.]. This office he resigned in September 1857 on the defeat of the Parker government on a question of electoral reform. In 1858 the electoral district of the Murrumbidgee was subdivided, and Hay was returned for the Murray, one of the new divisions. He represented this constituency until 1864, when he was returned for Central Cumberland. In 1860, when (Sir) John Robertson [q.v.] brought forward the famous Crown Lands Alienation Act, Hay moved an amendment which was carried against the government, but, on an appeal to the country, Robertson was supported by a large majority of the electors.

On 14 Oct. 1862 Hay was elected speaker of the legislative assembly, a post which he resigned on 21 Oct. 1865 on the ground of ill-health. After his resignation he continued a member of the assembly until 26 June 1867, when he was summoned to the legislative council, of which, on the recommendation of Sir Henry Parkes [q.v. Suppl.], he became president on 8 July 1873, succeeding Sir Terence Aubrey Murray [q.v.]. This position he filled with remarkable ability until his death. On 25 May 1878 he was nominated K.C.M.G. He was vice-president of the New South Wales Agricultural Society.

Hay died, without issue, at his residence at Rose Bay on 20 Jan. 1892, and was buried in the Waverley cemetery on 22 Jan. A marble bust of Hay, executed in September 1889, is in the hall of the legislative council. He married, on 28 Feb. 1838, Mary (d. 1 Feb. 1892), daughter of James Chalmers.

E. I. C.

HAY, SIR JOHN HAY DRUMMOND- (1810-1898), diplomatist. [See DRUMMOND-HAY.]

HAYTER, HENRY HEYLYN (1821-1895), statistician, the son of Henry Hayter of Eden Vale, Wiltshire, the brother of Sir William Goodenough Hayter [q.v.], and of Eliza Jane, daughter and coheir of John Heylyn of Islington, was born at Eden Vale on 28 Oct. 1821, and educated first at Paris and afterwards at the Charterhouse. On leaving school he became a midshipman in the merchant service, and made several voyages, first on Wigram's ships, later on the West India mail packets. In 1852 he emigrated to Victoria. In 1857 he was appointed to the department of the registrar-general, and soon rose to be the head of the statistical branch, where he began steadily to make a well-deserved reputation. In 1870 he was appointed secretary to the royal commission to inquire into the working of the public service of Victoria. He superintended all the arrangements for the census of 1871. In 1872, when on leave of absence in New Zealand, he was requested by the government of that colony to report upon the working of their registrar-general's department.

In May 1874 Hayter's department was constituted a separate office, and he became government statistician. In this position he did the work for which his name will be remembered: he brought the annual returns of statistics of the colony of Victoria into an elaborate and perfect shape, which formed a model for the whole of the Australian colonies. At a conference held in Tasmania in 1875, at which he represented Victoria, his model was adopted as the basis of a uniform system of official statistics. Consequently there is probably no country in the world that can produce an annual series of statistics of cultivation, production, industry, and exchange so perfect as those of the Australian colonies. In 1879, when Hayter came to England as secretary to Sir Graham Berry's 'embassy' to the imperial government for the reform of the constitution of Victoria, he was invited to give evidence before the House of Commons' committee on statistics. His census of 1881 for Victoria was considered a masterly effort of improvement on previous returns, and when, in 1890, he had decided to retire from his office, he was spe-

cially asked to remain, in order to represent Victoria at the inter-colonial conference on methods of census which was held at Hobart, Tasmania, in that year (of which he was elected president), and also to superintend the arrangements for the census of 1891. He accordingly continued to hold his appointment till his death, which took place at his residence, Armadale, near Melbourne, on 23 March 1895, just before his retirement on pension was completed.

Hayter, who was a corresponding member of various learned societies, was awarded medals at exhibitions at Melbourne, Amsterdam, Calcutta, at the Colonial and Indian Exhibition in 1880, and at Paris in 1889. He was created C.M.G. in 1882, an officer of the French order of public instruction the same year, and a chevalier of the order of the Crown of Italy in 1884.

Hayter married in 1855 Susan, daughter of William Dodd of Porchester Terrace, London, who, the only son left of a large family, survived him.

Hayter, besides being the originator of the 'Victorian Year-book,' was the author of several pamphlets such as 'Notes of a Tour in New Zealand,' 'Notes on the Colony of Victoria' (1875; 2nd edit. 1876), 'Hand-book to the Colony of Victoria' (1884; 2nd edit. 1886). He also published: 1. 'School History of Victoria.' 2. 'School Geography of Victoria.' 3. 'Carboona, a Chapter from the Early History of Victoria' (in verse), reprinted from the 'Victorian Review,' 1885. 4. 'My Christmas Adventure, and other Poems,' 1857.

HAYWOOD, FRANCIS (1790-1858), translator of Kant, was born at Liverpool in 1790. He belonged to the literary circle which surrounded William Roscoe [q.v.] and William Shoberl [q.v.] in the first quarter of the nineteenth century, and formed an especially close friendship with Antonio Panizzi when he came to Liverpool as a protégé of Roscoe's in 1823. Possessed of ample means, he devoted himself to study, and must at an early age have acquired a knowledge of German and of German philosophy and divinity unusual in England at the period, having been in 1828 the anonymous translator of Bretschneider's reply to Hugh James Rose's [q.v.] 'State of Protestantism in Germany,' dealing with the tendencies of German theology. He shortly afterwards undertook a much more difficult task in the trans-

lation of Kant's 'Critick of Pure Reason,' previously only accessible to English students unacquainted with German in a French or a Latin version. Haywood's long remained the standard English translation. Published in 1838, it was reprinted with improvements in 1848, and was commended by the chief authority on Kant in Great Britain, Sir William Hamilton, with whom Haywood corresponded respecting it. Its general accuracy was admitted by Max Müller, interested though the latter was in a rival translation. In 1844 Haywood published an analysis of the 'Critick,' designed 'to elucidate the points which still remain unintelligible.' In 1853 he translated the 'Researches into the History of the Roman Constitution' of Wilhelm Ihne, a personal friend. He resided at Edge Lane Hall, near Liverpool, but died at Silliers, Worcestershire, on 29 May 1858. Haywood was Panizzi's surety on occasion of all the latter's appointments at the British Museum, and the warmth of their mutual regard is evinced in their correspondence.

[Fagan's Life of Sir Anthony Panizzi, 1880, i. 51 (with a sketch of Haywood), 100, 331, ii. passim; Gent. Mag. 1858, ii. 201; Brit. Mus. Cat.] R. G.

HAYWOOD, WILLIAM (1821-1894), architect and civil engineer, eldest son of W. Haywood of Camberwell, was born on 8 Dec. 1821. He was educated at the Camberwell grammar school, and then became a pupil of Mr. George Aitchison, R.A., architect and surveyor to the St. Katherine's Dock Company.

He began his professional career as an architect, and was responsible for several important private mansions, among which may be mentioned the seat of the Marquis of Downshire at Easthampstead, Berkshire. Being offered, however, in 1845 the appointment of assistant engineer to the commissioners of sewers for the city of London, he abandoned architecture for civil engineering; a year later he was appointed chief engineer to the commissioners. He became a member of the Institution of Civil Engineers in 1853. He was responsible for an enormous number of improvements of various kinds carried out in the central quarter of the metropolis during the forty-nine years he held office. Probably the work by which he will be best remembered is the Holborn Viaduct; this was begun in 1863, and opened by Queen Victoria on 6 Nov. 1869, although at that date the high-level approaches had not been completed. He was also instrumental in the introduction of asphalt for the roadways of the city in 1869.

In the early part of his career as engineer to the commissioners, in 1850-1, in conjunction with Mr. Frank Forster, chief engineer to the metropolitan commissioners of sewers, he prepared a scheme for diverting the sewage from the Thames; and again in 1854, in conjunction with Mr. (afterwards Sir) Joseph Bazalgette [q. v. Suppl.], he prepared further schemes for the same purpose, and these were practically the plans eventually carried out.

During the time he held his city post he carried on a considerable practice as a consulting engineer, and obtained numerous foreign honours as a reward for the services he rendered. He was a chevalier of the legion of honour, and a knight of the Portuguese order of Christ, and the Belgian order of Leopold.

He was an ardent volunteer, and served in the London rifle brigade, of which he was lieutenant-colonel from 1876 to 1882.

His literary work consists of numerous reports presented to the commissioners of sewers for the city of London, over one hundred in number, dealing with almost every branch of the work of a municipal engineer.

He died at 66 Hamilton Terrace, Maida Vale, on 13 April 1894.

[*Men of this Time*, ed. 1891; *Proc. Inst. Civil Eng.* vol. cxvii.] T. H. B.

HEALY, JAMES (1824-1894), Roman catholic divine and humourist, one of twenty-three children of John Healy, provision dealer, by his first wife Mary (Meyler), was born in Francis Street, Dublin, on 15 Dec. 1824. From the Vincentian school, Usher's Quay (entered 1834), he proceeded (1839) to St. Vincent's College, Castleknock, co. Dublin, but quitting the Vincentian rule he matriculated (11 Sept. 1843) at Maynooth, where in 1847 he became a Dunboyne student [see BUTLER, JOHN, D.D.] under John O'Hanlon, D.D., a critical theologian and a wit, and Patrick Aloysius Murray [q. v.], from whom he learned his admirable elocution. He was not a hard student. Leaving Maynooth in 1850, his first appointment was as reader at St. Andrew's, Westland Row, Dublin, and chaplain to the sisters of mercy in Baggott Street; his next (1852) was to a curacy at St. Michael and St. John's, Dublin. He lived in an attic in the chapel-house, Smock Alley, Essex Street West, and was a model of punctual devotion to his calling, fearlessly risking his life during a visitation of cholera. His appointments were from Daniel Murray [q. v.], archbishop of Dublin, to whose principles

in religion and politics Healy adhered through life. From Dublin he was transferred (1858) by Paul Cullen [q. v.] to a curacy at Bray, co. Wicklow. His intimacy with William Nicholas Keogh [q. v.] stood in the way of his professional prospects.

Becoming more friendly to him, Cardinal Cullen appointed him (1867) administrator of Little Bray, co. Dublin, on the other side of the Dargle. In this cure he remained, without further preferment, till in 1893 he was appointed parish priest of Ballybrack and Killiney, co. Dublin, by archbishop Walsh. His income never exceeded 200*l.* a year; most of a sum raised for him by his friends was lost in Wicklow copper mines. Beloved by his parishioners, his social charm made him a coveted guest in the highest circles of Dublin society. The spontaneity of his humour, the brightness of his repartee, his manly purity, and the inimitable expressiveness of his voice and gesture made his neat little figure a unique personality. At his Saturday dinners the arrangements were of the simplest (his housekeeper was his only servant); his guests included prominent persons of every rank and section. Latterly he paid almost yearly visits to London; he was much courted, but his keen good sense, equal to his kindness of heart, never failed him. In 1890 he visited America. His health began to break in 1889; he suffered from gall-stones and dyspepsia, and went to Carlsbad. In 1892 he took a prolonged tour in Spain and Italy with his friend Mr. Henry Arthur Blyth. Another visit to Carlsbad in 1894 failed to restore his strength. He died on 28 Oct. 1894, and was buried at Ballybrack.

[*Memories of Father Healy*, 1898, 3rd edit.: a book full of good stories.] A. G.

HEATH, DOUGLAS DENON (1811-1897), classical and mathematical scholar, second son of George Heath, serjeant-at-law, by his wife, Anne Raymond (Dunbar), was born in Chancery Lane, London, on 6 Jan. 1811. His father was a son of James Heath [q. v.], the engraver, and half-brother of Charles Heath (1785-1848) [q. v.]. Admiral Sir Leopold George Heath is the scholar's younger brother. After schooling at Greenwich, he spent the greater part of 1826-7 with friends of his father's in France; among the latter was his godfather, the savant Denon, master of the mint to Napoleon I. He went into residence at Trinity College, Cambridge, in October 1828, and read for a year with the well-known classical tutor, Henry Maldon [q. v.]. Among his Cambridge intimates was James Spedding, in

whose company he visited Wordsworth and Tennyson. Tennyson read him many scraps of his composition, which he recognised in poems published many years later. Heath obtained a scholarship at Trinity on 23 April 1830, and two years later graduated senior wrangler, and took the first Smith's prize. In the classical tripos of the same year (1832) he was placed ninth in the first class, but the competition (among the first seven being Lushington, Shilleto, Thompson, Venablos, and Alford) rendered his classical little inferior to his mathematical degree. He was marked out as the first Trinity man of his year, and was elected first to a fellowship on 2 Oct. 1832. He was strongly attached to Cambridge life, but in deference to his father's wish he entered at the Inner Temple, and was called to the bar in 1835. In 1838 his father succeeded in procuring him the reversion of his own lucrative post as county clerk of Middlesex. In 1846 the courts of the county clerk were abolished, so that he might have retired on full salary, but preferred to take the work of a county court judge in the Bloomsbury district with no further salary, and thus from 1847 to 1865 (when he had to retire through deafness) he saved the country over 1,200% a year. During these years, at Spodding's request, he edited the legal remains of Bacon for the seventh volume of the great edition of the 'Works of Francis Bacon' (1869, ed. Spedding, Ellis, and Heath). The several manuscripts of Bacon's professional writings were carefully collated, and many passages for the first time made intelligible.

Two elaborate papers on 'Secular Local Changes in the Sea Level' and the 'Dynamical Theory of Deep Sea Tides and the Effects of Tidal Friction' (*Philosophical Mag.* March 1866 and March 1867) were the firstfruits of his emancipation from legal duties in 1865, and in 1874 he published 'An Elementary Exposition of the Doctrine of [the Conservation of] Energy,' which was highly praised by Clerk Maxwell as 'an example of sound reasoning such as few authors doign (or are able) to introduce into text-books.' His most characteristic work, however, was not mathematical (physics, he avowed, 'soared into higher and higher regions, and I ceased to follow them'), but in connection with the Greek prose classics. He concentrated some acute, judicious, and closely reasoned work into his defence of Aristotle against misconception by Grote and others (*Journal of Philology*, vols. vii. and viii., concerning Aristotle's and other ancient doctrines of causation); scarcely less valuable were his papers 'On the so-called Arabicus

Mons,' and on Plato's 'Cratylus' (*ib.* vols. v. vi. and xvii.) Even more vigorous were his papers in defence of the honesty of Herodotus. His views were greatly strengthened by a journey up the Nile as far as Dongola in 1874-5 (*ib.* 1886, xv. 215). He could not confine himself to defence, but assailed alleged detractors of his favourite author with the utmost vigour, and projected a detailed study on 'the scepticism of Herodotus.'

On his father's death in 1852 Heath became owner of Kitlands, a small estate near Loith Hill, Surrey. He resided there, and greatly benefited the parish of Coldharbour by his generosity. Tennyson, Spedding, and the master of Trinity (Thompson) were fond of discussing poetry and philosophy in Heath's beautiful garden, in which Marianno North painted for the collection at Kew 'at least one flower she had missed in its native Himalaya.' He was one of the founders and benefactors of the Surrey county school at Cranleigh. Heath was a broad churchman and interested in (non-party) politics. He greatly admired Peel, but 'equally distrusted and disliked the two most famous liberal and conservative leaders of later times.' He died unmarried at Kitlands on 25 Sept. 1897, and was buried in Coldharbour churchyard.

[D. D. Heath, a short private Memoir by H. E. Malden, with contribution by Dr. Jackson of Trinity Coll. Cambridge (privately printed 1898); *Times*, 27 Sept. 1897; *Foster's Men at the Bar*; *Guardian*, 29 Sept. 1895; *Graduat Cantab.*] T. 8.

HENDERSON, Sir EDMUND YEA-MANS WALCOTT (1821-1896), lieutenant-colonel royal engineers, chief commissioner of metropolitan police, son of Vice-admiral George Henderson, royal navy, of Middle Deal, Kent, and of his wife, Frances Elizabeth, daughter of Edward Walcott-Sympson of Winkton, Hampshire, was born on 19 April 1821 at Muddiford, near Christchurch, Hampshire. Educated at a school at Bruton, Somerset, and at the Royal Military Academy at Woolwich, he received a commission as second lieutenant in the royal engineers on 16 June 1838. His further commissions were dated: first lieutenant 1 April 1841, second captain 23 April 1847, first captain 20 June 1854, brevet major 26 Oct. 1858, lieutenant-colonel 20 March 1862.

After the usual course of professional instruction at Chatham, Henderson went to Canada in November 1839 and remained there for six years. On his return home he was quartered at Portsmouth in January

1846, but in the following June again embarked for North America, having been selected with Captain Pilon of the royal engineers as commissioner to make an exploring survey in order to fix a boundary between Canada and New Brunswick in the territory ceded by the United States to the crown under the Ashburton treaty, and to determine the practicability of a line of railway of some seven hundred miles between Halifax and Quebec to connect the three provinces of Canada, New Brunswick, and Nova Scotia.

The eastern half of New Brunswick was allotted to Pilon, who lost his life late in the autumn of 1846 by the upsetting of a canoe in a rapid of the Restigouche river in the endeavour to save one of the crew. The western half fell to Henderson, who, forty years after, wrote an account in 'Murray's Magazine' (March 1887) of an adventure on this service, which proved a very difficult one, as the interior was unknown except to lumbermen. His skill as a draughtsman enabled him to illustrate his official report with a panoramic sketch of the country, which attracted the attention of Earl Grey, then secretary of state for the colonies. Henderson married at Halifax, Nova Scotia, and, having successfully completed the duty entrusted to him, returned to England in November 1848, and was quartered at Gravesend.

Early in 1850 he accepted from Earl Grey the appointment of comptroller of convicts in Western Australia, where it had been decided, with the approval of the colonists, to establish for the first time a penal settlement, on account of the opposition from the flourishing colonies of the eastern and southern parts of Australia to continue to receive convicts from home. Western Australia had not so far been a successful colony, and as the government undertook to send out as many free emigrants as convicts the increased supply of labour was welcomed. At the same time a new development of the convict system was to be tried. The prisoners were to be selected with reference to their fitness for colonial life, and, after passing a certain time in a public works prison, were to be sent out to private employment under police supervision, or else employed in public works in various parts of the colony.

Henderson arrived at Fremantle with the first party of convicts and a guard of sappers in June 1850. No preparations had been made for their reception in the colony, and, after making temporary arrangements, he set to work to build a complete settle-

ment. He obtained from England the services of the 20th company royal engineers, commanded by Captain (afterwards Major-general) Henry Wray, with two subaltern officers, Lieutenant (afterwards Colonel Sir) William Crossman and Lieutenant (afterwards Colonel Sir) Edmond Du Cane, to furnish instructors and artisans to conduct the work, and with its assistance not only the convict prison and quarters but a barrack and officers' quarters also were erected. Hiring depots were formed in different parts of the colony, while the ticket-of-leave men who could not obtain private employment were maintained by government and employed in making roads and building bridges.

At the end of 1855 Henderson lost his wife and went home on leave of absence. He married again two years later, and returned to Western Australia in the beginning of 1858. He spent another five years there, during which he was most active in his duties and in all that contributed to the well-being of the colony, in which, after the governor, he was the principal public officer. He resigned the appointment in 1863, and returned to England.

Henderson arrived in England while a royal commission, presided over by Earl Grey, was inquiring into the systems of penal servitude and transportation. Sir Joshua Jebb [q. v.] had recommended Henderson for a seat on the prison board, and in the meantime he gave evidence before the committee. The sudden death of Jebb left vacant the office of chairman of directors of prisons and surveyor-general, and also the inspector-generalship of military prisons. Lord Grey's commission represented the especial fitness of Henderson for these posts, and he was appointed to them on 29 July 1863. He retired from the army on 1 Oct. 1864. He carried out the changes in the administration of prisons made in consequence of the report of the royal commission, and was ably assisted in the work by his former subaltern in Australia, who afterwards succeeded him, Sir Edmond Du Cane. Henderson was made a companion of the order of the Bath, civil division, in 1868.

In 1869 Henderson reluctantly accepted the post of chief commissioner of metropolitan police on the death of Sir Richard Mayne [q. v.] For the second time he found himself at the head of a public department over the heads of, and new to, all serving in it, some of them at this outset not too well pleased with his appointment. That in both cases he succeeded in winning the confidence

and respect of his subordinates was due to his tact and competence. The metropolitan police force at that time numbered about 9,000 constables, and during Henderson's tenure of office it was increased to over 13,000, an army which had to be kept in good discipline without the aid of any special legislation.

Soon after his appointment he increased the number of detectives from 15 to 260 men, and instituted a criminal investigation department under Colonel (afterwards Sir) Howard Vincent. In 1872 some agitators endeavoured to get up a police strike, but after Henderson had personally seen the malcontents the agitation ceased. In 1878 Henderson was promoted to be a knight commander of the order of the Bath, civil division. On 8 Feb. 1886 a meeting in Trafalgar Square brought together a large number of roughs, and ended in a march through the streets of the west end of London, when some rioting occurred, windows were broken, and shops plundered. Fault was found with the police arrangements, and Henderson was thrown over by the government. A committee of inquiry was appointed; but Henderson, conscious of a successful administration of seventeen years, at once resigned without waiting for it to report. A treasury minute laid before parliament approved the recommendation of the home secretary that Henderson should receive the highest rate of pension allowed, on the ground of the high sense entertained by the home secretary and his predecessors of the zeal, discretion, and ability with which he had discharged the duties of his responsible office. At a meeting held at Grosvenor House, Henderson was presented with his portrait painted by Edwin Long, R.A., and a purse of 1,000*l*. The cab-owners and drivers presented him with a model in silver of a hansom cab, Lord Wolseley acting as their spokesman, in recognition of the great interest he had taken in them, of the institution of cabmen's shelters, and of the support he had given to the metropolitan police orphanage.

Henderson was a fluent speaker with an effective sense of humour, and excelled in anecdote. Quick in assimilating ideas, he expressed himself readily and clearly in official letters and reports, and won the complete confidence of his official chiefs. He was a skilful painter in water-colours.

He died on 8 Dec. 1896 at his residence, 4 Gledhow Gardens, London.

He was twice married: first, in 1848, to Mary (d. 1855), daughter of Mr. Murphy of Halifax, Nova Scotia; secondly, in 1857, to Maria (d. 13 Oct. 1896), daughter of the

Rev. J. Hindle of Higham, Kent. His only son, by his first marriage, died when a lieutenant in the royal navy. He left several daughters.

[War Office Records; Times, 10 Dec. 1896; memoir by Sir E. F. Du Cane in the Royal Engineers Journal, 1897.] R. H. V.

HENRY MAURICE OF BATTENBERG, PRINCE (1858-1896), born at Milan on 5 Oct. 1858, was third son of Prince Alexander of Hesse (1828-1888) and hismorganatic wife, the countess Julio von Hauke, daughter of an ex-minister of war for Poland, to whom was granted, in 1858, the title of Princess of Battenberg. His elder brother Alexander was on 29 April 1879 elected first prince of Bulgaria; he abdicated on 6 Sept. 1886 and died on 17 Nov. 1893. His brother, Prince Louis of Battenberg, married, on 30 April 1884, Victoria, eldest daughter of the Princess Alice of Hesse, third daughter of Queen Victoria, and this connection brought Prince Henry, who had received a military education and become lieutenant in the 10th regiment of Rhinish hussars, into contact with the English court. On 23 July 1885 he was married at Whippingham church by the archbishop of Canterbury to the Princess Beatrice, youngest daughter of Queen Victoria. He was naturalised by an act of parliament which passed the House of Lords on 31 July in the same year, was elected K.G. on 22 July, and was granted the title of royal highness; he was also made colonel in the army and captain-general and governor of the Isle of Wight. He took great interest in the Isle of Wight volunteer corps. In November 1895 he volunteered for service with the Ashanti expeditionary force. He sailed on 8 Dec., at first as merely an auxiliary, but he was afterwards made military secretary to the commander-in-chief, Sir Francis Scott. He marched with the force to within thirty miles of Kumasi, when he was attacked by fever; he returned to Cape Coast Castle and embarked on the Blonde cruiser on 17 Jan. 1896. He died at sea on the 20th; his remains were brought to England and interred at Whippingham on 5 Feb. He left issue three sons, Princes Alexander, Leopold, and Maurice, and one daughter, the Princess Victoria of Battenberg, afterwards Queen of Spain.

[Almanach de Gotha, 1896; Times, 23 Jan. to 6 Feb. 1896, *passim*; Burke's Peerage, 1896; Men of the Time, 14th edit.] A. F. P.

HERBERT, GEORGE ROBERT CHARLES, thirteenth EARL of PEMBROKE and ninth EARL of MONTGOMERY (1850-

1895), eldest son of Sidney Herbert, first baron Herbert of Lea [q. v.], and Elizabeth, daughter of Lieutenant-general Charles Ashe A'Court, was born in Carlton Gardens on 6 July 1860, and succeeded his father as Baron Herbert of Lea on 15 Jan. 1861, and his uncle as Earl of Pembroke and Montgomery on 25 April 1862. He was educated at Eton, but on account of his delicate health was very frequently abroad in Italy, Sicily, Spain, Egypt, and Palestine. He made two voyages to the South Pacific before attaining his majority, accompanied by his constant companion in travel, Dr. George Henry Kingsley [q. v.]. The second voyage ended in shipwreck and the total loss of the yacht on a coral reef in the Ring-gold Islands, all on board making good their escape to an uninhabited island not marked on the chart. After ten days the weather improved, the castaways set sail in three of the yacht's boats, and while endeavouring to make the Nannku channel were picked up by a Swedish schooner. The incidents of these voyages formed the framework of a very charming volume, the joint production of Lord Pembroke and Dr. Kingsley, entitled 'South Sea Bubbles, by the Earl and the Doctor' (1872; 7th edit. 1895).

On the formation in 1874 of his second administration, Disraeli, famous for his ready recognition of promising young men, appointed Lord Pembroke under-secretary for war, thus bringing him into the department which had been administered with so much distinction by his father; but his health proved unequal to the strain of official life, and he resigned his post in the government in 1876. Lord Pembroke never accepted office again, and rarely spoke in the House of Lords, but he continued to take a keen interest in public affairs, both imperial and domestic, and communicated his views, through various periodicals and by speeches in the country, upon Ireland, the land question, imperial defence, and the navy. He took a leading part in the volunteer movement, holding a commission for upwards of twenty years, and commanding the South Wilts battalion until within a few months of his death. He believed firmly in the advantage of technical instruction, and gave practical proof thereof by building and endowing the Pembroke technical school near Dublin, where children of tradesmen and artisans in Dublin receive instruction in various industrial crafts.

Lord Pembroke was a good sportsman, having been first a master of harriers for many years, and later of foxhounds; but a bad fall put an end to his hunting, and lat-

terly he spent much of his time afloat, yachting and boat-sailing.

He married, at Westminster Abbey, on 19 Aug. 1874, Lady Gertrude Frances Talbot, third daughter of Henry John Chetwynd Talbot, eighteenth earl of Shrewsbury, and died without issue at Frankfort on 3 May 1895; he was buried at Wilton, where a bronze statue of him by Mr. Alfred Gilbert, R.A., was unveiled by Mr. A. J. Balfour on 19 May 1900. There is a portrait of Pembroke by Sir W. Richmond, R.A., at Wilton. He was succeeded in his peerage by his brother Sidney Herbert, fourteenth and present earl of Pembroke and Montgomery.

Besides the book of travel mentioned above, Lord Pembroke wrote a book of essays, originally published in the 'Temple Bar Magazine,' entitled 'Roots, a Plea for Tolerance' (1873). His writings were distinguished by a refreshing originality of thought and expression, and by discursive observations and speculation on the nature of things. After his death his 'Letters and Speeches' (2 vols. 8vo) were collected and published in 1896.

[Private information and Lord Pembroke's own writings.] H. E. M.

HERMAN, HENRY (1832-1891), dramatist and novelist, was educated at a military college in Alsace, emigrated to America, and fought in the Confederate ranks during the civil war, in the course of which he lost an eye. On 15 May 1875 he produced at the Charing Cross theatre 'Jeanie Dubarry,' a drama in three acts, and on 31 Jan. 1876 at the same house, rechristened the 'Folly,' 'Slight Mistakes,' a farce. 'Carys-wold,' in four acts, by him and J. Mackay, was played in Liverpool on 21 Sept. 1877. He also gave in 1876 an adaptation called 'My Niece and my Monkey,' presumably 'Ma Nièce et mon Ours,' and at the Olympic on 7 Dec. 1882 an adaptation of 'Adrienne Lecouvreur.' His first conspicuous success was obtained on 16 Nov. 1882, with the 'Silver King,' five acts, written in conjunction with Mr. Henry Arthur Jones. To the same conjunction was due 'Breaking a Butterfly' (Ibsen's 'Doll's House'), Prince's, on 8 March 1884, and 'Chatterton' on 22 May, Prince's. In collaboration with William Gorman Wills [q. v.] he (3 Dec. 1884) furnished the Princess's with 'Claudian,' in three acts. The 'Golden Band,' in four acts, Olympic, 14 Jan. 1887, was by Norman and Mr. Freeman Wille. Herman is responsible for two untraceable dramas, 'For Old Virginia' (1891) and 'Eagle Joe' (1892), and for the 'Fay o' Fire,' a romantic

opera, with music by Mr. Edward Jones, Opera Comique, 14 Nov. 1885. This he printed. In collaboration with Mr. David Christio Murray he wrote, between 1887 and 1891, the following novels: 'A Dangerous Catpaw,' 'One Traveller returns,' 'The Bishop's Bible,' 'He fell among Thieves,' 'Only a Shadow,' 'Paul Jones's Alias,' and 'Wild Darrie.' His name alone appears to 'A Dead Man's Story, &c.,' 'Between the Whiffs,' 'Crime of a Christmas Toy,' 'Eagle Joe,' 'Great Beckleswaith the Mystery,' 'Hearts of Gold and Hearts of Steel,' 'His Angel,' 'A King in Bohemia,' 'Lady Turpin,' 'Leading Lady,' 'Postman's Daughter,' 'Scarlet Fortune,' and 'Woman the Mystery.' He wrote stories up to his death. He married Miss Eugenio Edwards, who played in two of his pieces. Herman's choice theatrical library was sold at Sotheby's on 23 Jan. 1885, when 284 lots fetched over 16,000*l*. The high prices were due in great measure to the large number of 'grangerised books.' He died at Gunnersbury on 24 Sept. 1894, and was buried at Kensal Green. His share in the dramas in which he collaborated seems to have been confined as a rule to the stories. He had considerable invention.

[Personal knowledge; Era, 29 Sept. 1894; Scott and Howard's Blanchard; Brit. Mus. Cat.; The English Catalogue of Books.] J. K.

HERSCHELL, FARRER, first BARON **HERSCHELL** (1837-1899), lord chancellor, eldest son of the Rev. Ridley Haim Herschell [q.v.], by Helen Skirving, daughter of William Mowbray of Edinburgh, was born at Brampton, Hampshire, on 2 Nov. 1837. Though in after life he conformed to the Church of England, he was bred in a form of dissent strict enough to exclude him from the older English universities. He spent some time at the university of Bonn, but his true *alma mater* was University College, London. In 1857 he graduated B.A. (with honours in classics) at the university of London, which he afterwards served as examiner in common law, as member of the senate, and (from 1894) as chancellor. On 12 Jan. 1858 he was admitted student at Lincoln's Inn, where he was called to the bar on 17 Nov. 1860, and elected benchor on 8 May 1872.

Like some other distinguished lawyers, Herschell was a pupil of Thomas Chitty [q.v.], the eminent special pleader. He started without connection, and during part of his period of probation contributed to the 'New Reports,' edited by (Sir) George Osborne Morgan [q.v. Suppl.] (London, 1863-5). He made his *début* on the northern circuit, but afterwards confined himself to the north-

eastern circuit, where he rapidly established the reputation of a sound commercial lawyer, and in the course of a few years gathered sufficient practice to enable him to take silk (8 Feb. 1872). From 1878 to 1880 he held the recordership of Carlisle.

Herschell entered parliament in the liberal interest in 1874, being returned (13 June) for the city of Durham, which he continued to represent until the general election of November 1885, when he unsuccessfully contested the North Lonsdale division of Lancashire. If he did not carry the House of Commons by storm, he at any rate gained its ear unusually early. His liberalism was a matter of profound conviction, which banished the forensic ring from his speeches; one in particular, on the unfortunate circular on fugitive slaves, was marked by a gravity, a temperateness, and a dignity which raised the debate above the level of party politics (24 Feb. 1878). Somewhat later he induced the house to give serious consideration to a bill for the virtual abolition of the action for breach of promise of marriage. On the Eastern question, as afterwards on the Irish question, he followed Gladstone unwaveringly, and on his chief's return to power he was appointed solicitor-general (3 May) and was knighted (13 May 1880). As a law officer he proved an unqualified success, but the fall of the government in June 1885, and his defeat at the subsequent general election, clouded his political prospects, and he might have waited long for further advancement but for the schism in the liberal party occasioned by the new departure on the home rule question, foreshadowed by Gladstone after the victory at the polls. The scruples of Lord Selborne and Sir Henry James, now Lord James of Hierford, precluded their acceptance of the great seal in the new administration. Herschell's confidence in Gladstone remained, however, unshaken; he unhesitatingly accepted the veteran statesman's offer, and on 8 Feb. 1886 was created lord chancellor with the title of Baron Herschell of the city of Durham. After the rejection of Gladstone's home rule bill by the House of Commons, and the formation of a unionist administration (22 July 1886), Herschell patriotically refrained from opposing its measures for the pacification of Ireland, and lent the government loyal support on all neutral questions. In January 1887, he, with Sir William Harcourt and Mr. John Morley, represented the supporters of Gladstone's home-rule policy at the abortive 'round-table' conference, which was attended by Mr. Chamberlain and Sir George Trevelyan on the part of liberal unionists. Under the auspices of this

tory ministry Herschell presided over the royal commissions on the precious metals, the metropolitan board of works, and vaccination (1887-9). He resumed the great seal in Gladstone's last administration (15 Aug. 1892), and retained it when Gladstone's place as prime minister was taken by Lord Rosebery. He retired with the rest of Lord Rosebery's administration on the eve of the general election (22 June 1895). He was nominated by Lord Salisbury's government in 1898 a member of the Anglo-American and Anglo-Venezuelan Arbitration Commissions, but served only on the former commission, which met at Washington. The commission was still sitting there when Herschell sustained, through a fall, injuries which proved fatal. He died at Washington on 1 March 1899. His body was brought to England for burial.

Herschell married, on 20 Dec. 1876, Agnes Adela, third daughter of Edward Leigh Kindersley of Olyffe, Dorset, by whom he left, with female issue, a son, Richard Farror, who succeeded as second Baron Herschell.

In the exercise of his judicial functions Herschell seemed the very incarnation of the *esprit positif*. He had no love of refinements, no ambition to lay down principles of far-reaching consequence, or extend the jurisdiction of the court, but was satisfied if he could ascertain and declare the actual state of the law, leaving its amendment to the legislature (see in particular *Law Reports*, Appeal Cases, 1893, p. 617; 1897, pp. 48, 460). He was justly jealous of the importation of equitable principles into the law of negotiable instruments. He even went so far as to exonerate bankers paying forged acceptances in good faith (*ib.* 1891, p. 143), and relieve them from the obligation of inquiring into brokers' authority to pledge securities laid upon them by the decision in Lord Sheffield's case (*ib.* 1892, p. 214). He also took a somewhat liberal view of the liability of directors for false statements made in prospectuses (*ib.* xiv. 350). The general soundness of his law is unquestioned, but his course had been too rapid to permit of leisurely and systematic study; and though his prodigious powers of acquisition and application went far to compensate for this defect, his judgments do not compare in weight and finish with those of his great contemporaries, Selborne and Cairns. His disposal of patronage was singularly judicious, and entirely uninfluenced by political or personal considerations.

In his programme of legal reform the forefront was occupied by codification and the abolition of the distinctions between real and

personal property, towards which the Land Transfer Act of 1897 (60 & 61 Vict. c. 65) was an important step. Among changes of minor consequence he advocated the abolition of the coroner's jury, the transfer of the functions of the coroner to the police magistrates, and the legalisation of marriage with a deceased wife's sister. He was principally concerned in carrying the measures rendering bets paid by agents irrecoverable against their principals, and protecting infants against incitements to betting (55 & 56 Vict. cc. 4, 9).

Herschell was of middle height and of somewhat slight build. He had regular features and remarkably fine dark eyes. His portrait, from a sketch by Rudolf Lehmann, is in 'Men and Women of the Century' (1890). His principal recreation was music, and he was not without skill as an executant on the violoncello. His interests were unusually various. He was a member of the council and departmental president of the National Association for the Promotion of Social Science; he was president of the governing body of the Imperial Institute, founded in 1892; president of the Society of Comparative Legislation, founded in 1894; an original member and, after the death of Lord Coleridge, president of the Selden Society; member of the council and vice-president of the Society for the Prevention of Cruelty to Children; and a freemason. He was D.C.L. (Durham), LL.D. (Cambridge), captain (from 1890) of Deal Castle, and was created G.C.B. in 1893.

He was author of an 'Address on Jurisprudence and the Amendment of the Law,' printed in the 'Transactions of the National Association for the Promotion of Social Science' (1876), and of 'The Rights and Duties of an Advocate; being an Address delivered to the Glasgow Juridical Society on 17 Dec. 1889,' printed in pamphlet form in 1890.

HERVEY, LORD ALTHUR CHARLES (1808-1894), bishop of Bath and Wells, fourth son of Frederick William, first marquess and fifth earl of Bristol, by Elizabeth Albana Upton, daughter of Clotworthy, lord Templetown, was born at his father's London house, 6 St. James's Square, on 20 Aug. 1808. From 1817 to 1822 he lived abroad with his parents, chiefly in Paris, and was taught by a private tutor; he entered Eton in 1822, and remained there until 1826, entered Trinity College, Cambridge, in 1827, and after a residence of two years and a half obtained a first class in the classical tripos, and graduated B.A. in 1830. Having been ordained both deacon and priest in October 1832, he was instituted in November to the small family living of Ickworth-cum-Chedburgh, Suffolk, and Chodburgh being in 1844 separated from Ickworth and joined to Horningsheath or Horringer, he also became curate of Horringer until in 1856 he was instituted to the rectory which he held with Ickworth. He was active in clerical work, took a leading part in the organisation of educational institutions in the neighbouring town of Bury St. Edmunds, and seems to have been the first to propose a system of university extension in a pamphlet entitled 'A Suggestion for supplying the Literary . . . Institutes . . . with Lecturers from the Universities' (1855). In 1862 he was appointed archdeacon of Sudbury. On the resignation of Robert John Eden, lord Auckland [q. v.], bishop of Bath and Wells, in 1869, he was offered the bishopric on the recommendation of W. M. Gladstone, and was consecrated on 21 Dec. In consequence of his refusal to institute a clerk of intemperate habits, who had presented himself to a benefice, he was in 1877-9 involved in a lawsuit, which was carried before the privy council. Judgment was given in his favour with costs, but being unable to recover them he had to pay 1,558*l.*, of which 978*l.* was raised by subscription in the diocese. He died at Jackwood, near Basingstoke, the house of his son-in-law, Mr. O. Hoare, on 9 June 1894, in his eighty-sixth year, and was buried at Wells. By his wife Patience, daughter of John Singleton (born Fowke) of Hazely, Hampshire, and Mell, co. Louth, whom he married on 30 July 1839, and who (1901) survives him, he had twelve children, of whom five sons and three daughters survived him.

Hervey was a handsome and well-made man, had been a champion tennis-player in his younger days, and retained a remarkable amount of physical activity at an advanced

age. He remained a good classical scholar, studied Hebrew for many years, knew something of Arabic and Sanscrit, and spoke French with unusual facility and correctness. Though not intellectually brilliant he was accurate and painstaking. Archaeology and family history attracted him, and he wrote several papers and addresses on these subjects. He was gracious in manner and sympathetic in temperament. As a bishop he was diligent and judicious. Sincerely devout and of moderate views on church matters, though inclined to evangelicalism, he was trusted by men of all parties, ruled his diocese with tact and firmness, and was universally popular in it. For the last three years of his life he was lamed by some gouty affection, but his mental vigour continued unimpaired to the last. He was one of the committee of revisers of the authorised version of the Old Testament, which sat 1870-84, and in 1885 received the honorary degree of D.D. from the university of Oxford in recognition of his services. He contributed largely to (Sir) William Smith's 'Dictionary of the Bible' and to the 'Speaker's Commentary,' and besides sermons and lectures, some collected in volumes and others published singly, charges and pamphlets, he was author of 'The Genealogies of our Lord,' 1853, a work of importance as regards the chronology of Jewish history.

Bishop Hervey's portrait, painted in 1889 by Sir W. B. Richmond, R.A., is in the town hall at Wells, and a miniature painted by Sir William Charles Ross, R.A. [q. v.] in 1851, is in the possession of his family; there are engraved portraits in the 'Memoir' and the volume of the 'Wedmore Chronicle' as below.

[Memoir of Lord A. C. Hervey by his son, Rev. J. P. A. Hervey, privately printed; Wedmore Chron. (1898), ii. 6; private information; personal knowledge.] W. H.

HESSEY, JAMES AUGUSTUS (1814-1892), divine, eldest son of James Augustus Hessey of St. Bride's, London, was born in London on 17 July 1814. He was educated at Merchant Taylors' School, where he remained from 1823 till 1832, and obtained three times the chief annual prize for composition. On 25 June 1832 he matriculated at St. John's College, Oxford, of which he was for some years a resident fellow and lecturer. He graduated B.A. in 1836, taking a first-class in *literis humanioribus*, M.A. in 1840, B.D. in 1845, and D.O.L. in 1846. In 1839 he was presented to the vicarage of Helidon, Northamptonshire. He was appointed

public examiner at Oxford in 1842, and select preacher in the university in 1849. From 1845 to 1870 he was head-master of Merchant Taylors' School, and from 1850 to 1879 preacher of Gray's Inn. In 1860 he preached the Bampton lectures at Oxford, and in the same year he was appointed by Archibald Campbell Tait [q. v.], bishop of London, to the prebendal stall of Oxgate, in St. Paul's Cathedral, which he resigned in 1875. In 1865 he was elected to the office of Grinfield Lecturer on the Septuagint by the university of Oxford, and, on the expiration of the two years' tenure, was elected in 1867 for two years more. At Christmas 1870 he resigned the head-mastership of Merchant Taylors' School, having a few weeks previously been appointed by John Jackson (1811-1885) [q. v.], bishop of London, one of the bishop's examining chaplains. In November 1870 he was nominated to preach the Boyle lecture for 1871 and the two following years. From 1872 to 1874 he was classical examiner for the Indian civil service. Dr. Hessey was appointed archdeacon of Middlesex in June 1875. He was a governor of St. Paul's, Highgate, and Repton schools, and in 1878 and 1879 was select preacher in the university of Cambridge. He was also one of the three permanent chairmen of the Society for Promoting Christian Knowledge, and an active member of nearly all the church societies. Both by his writings and his personal efforts he took a prominent part in resisting proposals for altering the laws of marriage. In 1881 the University of the South, Tennessee, conferred upon him the degree of D.D. He died on 24 Dec. 1892. Dr. Hessey was a scholarly and urbane clergyman, profuse in charity, and, although a devoted churchman, was tolerant of every reasonable effort for ameliorating the spiritual and material condition of the people.

He married, in 1845, Emma, daughter of R. Cazenove of Clapham.

His works are: 1. 'Schomata Rhetorica; or tables explanatory of the nature of the Enthymeme, and the various modes of classification adopted by Aristotle in his Rhetoric and Prior Analytics. With notes and an introduction. To which is added the Commentary on Analyt. Prior II. xxix., by Pacius,' Oxford, 1845, fol. 2. 'A Scripture Argument against permitting Marriage with a Wife's Sister,' 2nd edit. London, 1850, 8vo; 3rd edit. 1855. 3. 'The Biographies of the Kings of Judah. Six Lectures,' printed for private circulation, London, 1853, 8vo. 4. 'Sunday, its Origin, History, and present Obligation,' being the Bampton lectures at Oxford, London, 1860, 8vo; 2nd edit. 1861;

3rd edit. 1866; 4th edit. 1880; fifth edit. 1889. 5. 'Biographies of the Kings of Judah. Twelve Lectures,' London, 1865, 8vo. This volume includes the six lectures which were privately printed in 1858. 6. 'Moral Difficulties connected with the Bible: being the Boyle Lectures for 1871-3,' three series, London, 1871-3, 8vo. In 1853 he edited the 'Institutio Linguae Sanctae' of Victorinus Bytliner.

[Annual Register, 1892, Chronicle, p. 212; Foster's Alumni Oxon. ii. 651; Mon of the Time, 11th edit.; Merchant Taylors' School—Testimonials in favour of the Rev. J. A. Hessey, 1845; Robinson's Register of Merchant Taylors' School, ii. 219; Times, 26 Dec. 1892, p. 8, col. 4.] T. C.

HEURTLEY, CHARLES ABEL (1806-1895), Lady Margaret professor of divinity in the university of Oxford, born on 4 Jan. 1806 at Bishop Wearmouth, in the county of Durham, was son of Charles Abel Heurtley, a banker at Sunderland, by his wife Isabella Hunter of Newcastle-on-Tyne. The father died on 18 March 1806, and the mother married a second husband, Mr. Metcalfe, shipbuilder of South Shields, and died in 1816. On his father's side he was directly descended from one Charles Abel Herteleu, a Huguenot, who in the early days of the eighteenth century migrated from his home at Rouen in Brittany in order to secure liberty to profess the protestant faith. Heurtley, who was himself a staunch protestant, always rejoiced in his descent from one who had thus suffered for his faith.

In 1813 Heurtley was sent to a school at West Boldon, near Gateshead, and in 1817 he passed on to another at Wilton-le-Woar, near Bishop Auckland, a private school which at that time had a considerable reputation. Here he stayed for four years, and as his guardians were extremely desirous that he should become a man of business, he was sent in 1822 to Liverpool as a clerk in the office of Messrs. Brereton & Newsham, timber merchants. After nine months' trial of a very hard and unpromising kind of work, he was confirmed in his original purpose of going to the university with a view to holy orders. Accordingly he went back to school at Louth in Lincolnshire, Sedburgh being too full to take him, and after ten months' work there was elected in 1823 to a scholarship at Corpus Christi College, Oxford, open to boys born in the diocese of Durham.

Heurtley graduated B.A. with first-class honours in mathematics in June 1827. He was an unsuccessful candidate for a fellowship at Oriel in 1828, but after spending four years as second master at Brompton (1828-

1831), he succeeded to a fellowship at Corpus in 1832. In 1831 he graduated M.A., was ordained and served the curacy of Waddington, near Cropredy, until 1810, when he was appointed to the college living of Fenny Compton. During this period he was also reader in Latin at Corpus (1832-5), select preacher before the university (1834 and 1838), and junior dean of his college (1838). He graduated B.D. in 1838 and D.D. in 1853. He was Bampton lecturer in 1845, and was elected Margaret professor by the graduates in theology, who were also members of convocation, in 1853. This post he held for forty-two years, combining it with the rectory of Fenny Compton till 1872, and with a canonry of Christ Church, Oxford, till his death. He died at Oxford on 1 May 1895, and was buried beside his wife in Osney cemetery on 8 May. He married, on 10 April 1814, Jane, daughter of the Rev. W. B. Harrison, vicar of Goudhurst, Kent; by her, who died at Christ Church on 23 Sept. 1893, he left issue one son, Charles Abel, rector of Ashington in Sussex, and three daughters, of whom the eldest, Isabella, married Sydney Linton (d. 1894), bishop of Rivorina.

Learned, courteous, retiring, reading and thinking much, but writing little, Heurtley represented the older type of Oxford scholar, whose influence depended rather upon his personal relations with members of the university than upon the effect of his written works on the world at large. His appearances in public were mainly in connection with the theological questions of the day. He sat as one of the theological assessors in the court that tried Archdeacon Denison for unsound eucharistic doctrine (1856). In 1873 he entered a strong protest, on theological grounds, against the bestowal of an honorary degree upon Professor Tyndall, and in the same year he protested against the precedence accorded to Cardinal Manning at the jubilee dinner of the Oxford Union. His action in these matters was typical of his theological position. He had a profound devotion to the church of England, and conceived its position mainly on the lines of the evangelical party. But he was not a party man, as was shown in a very striking way when in advanced years (1890) he preached a sermon in the cathedral deploring hasty and unmeasured condemnation of the 'higher criticism.' His practical gifts were displayed in his parish at Fenny Compton, where he organised a small company to provide a proper water supply for the village. The scheme was successful, and the village has in consequence been spared from constant visits of epidemic disease.

Heurtley's written work is small in amount, and consists largely of sermons. Of these the most considerable volume is the Bampton lectures on 'Justification' (1845). But he also published a series of works on 'Creeds and Formularies of Faith,' the main subject of his study and of his lectures, of which 'De Fide et Symbolo' (1864) has reached a second edition, and is very largely used. His latest work was 'A History of the Earlier Formularies of the Western and Eastern Churches, to which is added an Exposition of the Athanasian Creed' (1892). Posthumously was published 'Wholesome Words; Sermons . . . preached before the University of Oxford . . . edited with a . . . Memoir . . . by William Ince, D.D., Canon of Christ Church' (London, 1896, 8vo).

[Memoir by Dr. W. Ince, Reg. Prof. of Divinity at Oxford, prefixed to a volume of sermons entitled 'Wholesome Words,' 1896; private information; Foster's Alumni Oxon. 1715-1886.]
T. B. S.-c.

HEWETT, SIR PRESCOTT GARDNER (1812-1891), surgeon, son of William N. W. Hewett of Bilham House, near Doncaster, was born on 3 July 1812. He received a good education, which was completed in Paris, where he devoted some time to painting, though he afterwards abandoned the idea of following art as a profession and turned his attention to medicine. He learned anatomy in Paris, where he also became thoroughly grounded in the principles and practice of French surgery, and on his return to England he was admitted a member of the Royal College of Surgeons on 15 July 1836. He then attracted the favourable notice of Sir Benjamin O. Brodie [q. v.] by the excellence of his dissections, so that when he was on the point of accepting a commission in the service of the Honourable East India Company he was offered the post of demonstrator of anatomy at St. George's Hospital, where his relative, Dr. Cornwallis Hewett, Downing professor of medicine at Cambridge, had served as physician from 1825 to 1833. Hewett became curator of the museum at St. George's Hospital about the end of 1840; the first record in his handwriting of a post-mortem examination is dated 1 Jan. 1841. He was appointed lecturer on anatomy in 1845, and on 4 Feb. 1848 he was elected assistant surgeon to the hospital, becoming full surgeon on 21 June 1861 and consulting surgeon on 12 Feb. 1875.

At the Royal College of Surgeons of England he was elected a fellow on 11 Dec. 1813. He was Arris and Gals professor of human anatomy and physiology 1864-9, a member of the council 1867-88, chairman

of the board of examiners in midwifery 1876, vice-president in 1874 and 1875, president in 1876.

In 1868 he was elected president of the Pathological Society of London; in 1878 he was elected president of the Clinical Society; and on 4 June 1874 he was chosen a fellow of the Royal Society.

He was appointed surgeon-extraordinary to the queen in 1867, serjeant-surgeon-extraordinary in 1877, and serjeant-surgeon in 1884. He also held the appointment from 1876 of surgeon to the prince of Wales. He was made a baronet on 6 Aug. 1883. He then retired to Horsham, where he gave much of his time to water-colour painting and to country pursuits, though he still paid periodical visits to London for professional purposes. His collection of water-colour drawings was presented to the nation, and was exhibited at the South Kensington Museum at the beginning of 1891.

Hewett died on 19 June 1891. He married, on 18 Sept. 1849, Sarah, eldest daughter of the Rev. Joseph Cowell of Todmorden, Lancashire, by whom he had one son, who survived him only a few weeks, and two daughters. There is a half-length subscription portrait, painted by W. W. Oulless, R.A., in the board-room of St. George's Hospital.

As a teacher Hewett was admirable; for he could make his pencil explain his words. Gradually he became known, first to professional circles as one of the most profound anatomists and best lecturers in London, then as an organiser of rare energy and power, and lastly to the general public as a most accomplished surgeon and admirable operator. He was equally skilful in diagnosis, and his stores of experience could furnish cases in point in all medical discussions.

Hewett published numerous papers upon hernia, aneurysm, injuries of the head, and pyæmia in the 'Transactions' of the various societies to which he belonged. The results of his most valuable work upon the injuries and surgical diseases of the head are embodied in his article upon the subject in Holmes's 'System of Surgery' (4 vols. 1880-4).

[Transactions of the Royal Medical and Chirurgical Society, 1892, vol. lxxv.; St. George's Hospital Gazette, 1896, vol. iii.; additional information kindly given by Dr. Humphry D. Rolleston and T. Pickering Pick, esq., consulting surgeon to St. George's Hospital.] D'A. F.

HEXHAM, HENRY (1685?-1650P), military writer, born in Holland, Lincolnshire, about 1686, was possibly son of the Edward

Hexham who served ten years in the Netherlands and accompanied the Cadiz expedition of 1696 (*Cal. State Papers*, Dom. 1627-8, p. 118). His mother appears to have been a sister of Jerome Haydon, merchant, of London, who was probably related to Sir Christopher Haydon [q. v.]. The cousin, John Haydon, to whom Hexham dedicates his 'Appendix of Lawes,' seems to be Sir John Heydon (d. 1658) [q. v.], Sir Christopher's son, and Sir Christopher's daughter Frances married Philip Vincent [q. v.], who has commendatory verses prefixed to Hexham's translation of Mercator's 'Atlas.'

Hexham was in early youth attached as a page to the service of Sir Francis Vere [q. v.]; he was with Vere throughout the siege of Ostend in 1601, and his narrative of that event, which is printed at the end of Sir Francis Vere's 'Commentaries' (1657), supplies some details about the siege not otherwise accessible. Hexham seems to have served with Sir Francis until his return to England in 1600 and to have remained in Holland, possibly in one of the towns garrisoned by the English; he was personally acquainted with Prince Maurice of Nassau and his brother, Frederick Henry. In 1611 he published a Dutch translation of 'The Highway to Heaven,' by Thomas Tuke [q. v.], under the title 'De Konincklike wech tot den Hemel . . .' (Dordrecht, 4to); and in 1623 appeared 'A Tongue Combat lately happening between two English Soldiers . . . the one going to serve the King of Spain, the other to serve the States General' (London, 1623, 4to). When Sir Horace (afterwards baron) Vere [q. v.] in 1625 went to the relief of Breda, Hexham was quartermaster to Vere's regiment, and he occupied a similar position under Vere during the siege of Bois-le-Duc in 1629, at the capture of Venloo, Roermond, and Strales, and the siege of Maastricht in 1631-2. After Vere's death he became quartermaster to the regiment of George (afterwards baron) Goring (1608-1657) [q. v.], with whom he served at the siege of Breda in 1637. In 1640 he was in England, and on 27 July he received a pass on going to Holland on private business. On 28 July 1641 Edward Viscount Conway wrote to Secretary Nicholas that he had known Hexham as long as he could remember, and was sure that Hexham was a good protestant and would take the oath of allegiance and supremacy, which he did four days later, being then described as 'of St. Clement Dances' (*Cal. State Papers*, Dom. 1641-3, pp. 59, 60). Hexham, however, took no part in the civil war in England; he returned to Holland before 1642, and remained there in

the Dutch service and busy with his literary work. His 'English-Dutch Dictionary' has a preface dated Rotterdam, 21 Sept. 1647, and he probably died about 1650.

Hexham's most solid work is his edition of Mercator's 'Atlas'; this was a translation into English of the edition by Jodocus Hondius [q. v.], but Hexham made additions of his own, and was further assisted by Hondius's son Henry. The preface is dated Amsterdam, 1 Jan. 1636 'stilo veteri,' and the work is dedicated by Hexham to Charles I; it was published at Amsterdam in 1636-7 (2 vols. fol.), contains many maps and coloured plates, and is the standard edition of Mercator. Another important work by Hexham was his 'Copious English and Netherduytsch Dictionarie . . . as also a compendious grammar for the instruction of the learners.' The English-Dutch part was published at Rotterdam (1648, 4to), and dedicated by Hexham to his friend Sir Bartholomew van Vauw, knt.; the Dutch-English part was not published until 1668 (Rotterdam, 4to), and Hexham's preface has no date. He claims that this is the first dictionary of the kind, and a second edition was published by Daniel Manly, the Dutch-English part in 1672, and the English-Dutch part in 1675 (both Rotterdam, 4to).

Hexham's other works relate to military history and are of original value as dealing with events in which he himself took part. They are: 1. 'A Historically Relation of the Famous Siege of the Bussie and the Surprising of Wesoll . . .,' Delft, 1630, 12mo (dedicated to the merchants adventurers living at Delft); a Dutch edition was published in the same year in quarto (VAN DER Aa, *Biographisch Woordenboek*, viii. 764-5). 2. 'A Journal of the taking of Venlo, Rossmont, Strala, the memorable Siege of Mastrocht, the towns and castle of Limbruoh . . . anno 1632,' Delft, 1633, 4to; dedicated to his kinsman Francis Morrice, clerk of the king's ordnances, who had married his uncle Jerome Lloydon's widow; a Dutch edition was published at 's Gravouhage (1633, fol.) 3. 'The Principlos of the Art Militaris practised in the Warrs of the United Netherlands,' London, 1637, fol.; dedicated on 5 Sept. 1637 to Henry Rich, earl of Holland [q. v.]. A second and enlarged edition was published in three parts: the first two at Delft in 1642, folio, and the third at Rotterdam in 1643, folio; Dutch editions appeared at the same time, dedicated to William of Orange and the elector Charles Lewis. 4. 'A True and Briefe Relation of the famous Siege of Brsda,' Delft, 1637, 4to, dedicated to the Earl of Holland; a Dutch

edition was published at 'The Hague (1638, 4to). 5. 'An Appendix of the Quarter for the ransoming of Officers . . . together with the Lawes and Articles of Marshall discipline enacted on the States side,' Delft, 1637, fol.; another edition, *The Ilagus*, 1643, fol. (not in Brit. Mus. Libr.; cf. COCKLE, *Military Bibliogr.* 1900, pp. 108, 109). 6. 'The Art of Fortification . . . by Samvll Marolus . . . augmented by Albart Girard . . . and translated by Henry Hexham,' Amsterdam, 1638, fol.; it is dedicated to Sir Henry Vane the elder [q. v.], and is said to be the first work on fortification printed in English in which the subject is treated scientifically (COCKLE, p. 111). 7. 'A True Relation of the Battall of Nicuipoort,' Delft, 1641, fol. 8. 'An Appendix of Lawes, Articles, and Ordinances established for Marshall Discipline in the service of the . . . States Generall . . . translated out of Dutch into English,' *The Ilagus*, 1643, fol.; dedicated to Hexham's cousins, John Heydon and John Harvey. In the preface, dated Delft, 30 Jan. 1613 'stilo novo,' Hexham says he wishes to prevent the pillage committed on both sides during the civil wars by shewing the means taken by the Dutch to check it; he also remarks that he had served forty-two years in the wars and had never been wounded.

[Hexham's works in Brit. Mus. Libr.; Cal. State Papers, Dom.; Van der Aa's *Biographisch Woordenboek*, viii. 764-5; Markham's *Fighting Vessels*, passim, esp. pp. 447-50; M. G. D. Cockle's *Bibliography of Military Books* up to 1842, 1900; cf. *arts. VERN, SIR FRANCIS, and VERN, HONORABLE.*] A. F. P.

HICKS, HENRY (1837-1899), geologist, was born on 26 May 1837 at St. David's, Pembrokeshire, where his father, Thomas Hicks, was in practice as a surgeon, his mother, Anne, being a daughter of William Griffiths of Carmarthen. After passing through the cathedral chapter school of that town, he studied medicine at Guy's Hospital, becoming a licentiate of the Society of Apothecaries and a member of the Royal College of Surgeons in 1862. He then returned to follow his profession at St. David's. Here he made the acquaintance of John William Salter [q. v.], palaeontologist to the Geological Survey, and became inspired with his enthusiasm for discovery in a field which was then almost virgin. Hicks's eyes proved singularly acute in detecting even obscure traces of organisms, and before long he found a fossil in the hitherto barren red flaggy rocks of the Cambrian system near St. David's. This (a 'lingulilla') was described by the fellow-workers in a communication to the Geological Society in 1867. Stimulated by its reception and a

grant from the British Association, Hicks succeeded during the next year in discovering as many as thirty species in the lower Cambrian beds. Afterwards he extended his researches from these basement beds upwards to the great mass of early palaeozoic strata by which they are overlain. Though his professional work did not suffer from his geological ardour, he decided in 1871 to avail himself of an opportunity of practising at Hendon, Middlesex. About six years later he was able to restrict himself to mental disease, when he became the head of an asylum for ladies thus afflicted. This was ultimately located at Hendon Grove. Being now freed from the interruptions of ordinary practice, he extended the range of his geological work, investigating with characteristic ardour the earliest and the latest chapters in the geological history—the rock masses which underlie the base of the Cambrian system, and the glacial and later deposits, some of which were close to his home. He was active in scientific organisations, especially the British Association, the Geologists' Association, and the Geological Society; of the second he was president from 1883 to 1885; of the third he was secretary from 1890 to 1893, and president from 1896 to 1898, being a vice-president at the time of his death. By that society he was awarded the Bigsby medal in 1883. He was elected F.R.S. on 4 June 1885. He was no less active in local affairs, taking part in sanitary and educational movements, the work of the church of England, and the organisation of the conservative party. He died on 18 Nov. 1899. He married, in February 1804, Mary, only daughter of P. D. Richardson, vicar of St. Dogwelle, Pembrokeshire, who, with three daughters (unmarried), survived him.

As a geologist Hicks was singularly acute, both in eye and mind. The more difficult a problem, the greater its attraction for him. But he was sometimes a little too quick in publishing his conclusions; for while his main idea has commonly proved to be right, important details have had to be corrected. But his work, like himself, was always stimulative. As may be inferred, he was often involved in controversy, but he seemed to enjoy an intellectual battle, the stress of which never ruffled the course of friendship for more than a moment, so that his death, in the full vigour of his powers, was not only a loss to science but also to numerous friends. A portrait in oils, by F. Valance, is in possession of the family.

Hicks wrote, in addition to a few medical papers, not less than sixty-three on geological subjects, published chiefly in the 'Reports

of the British Association,' the 'Geological Magazine,' the 'Proceedings of the Geologists' Association,' and the 'Quarterly Journal of the Geological Society.' These may be grouped under the following heads: (1) The earlier palaeozoic strata of Pembrokeshire, where, as already stated, he proved the lower Cambrian rocks to be fossiliferous, and separated them into two divisions. (2) The beds underlying certain conglomerates at St. David's and in North Wales, which in his opinion mark the base of the Cambrian. (3) The geology of the Scotch highlands. (4) Papers on glacial and post-glacial deposits, especially on the discovery of mammoth remains in London (*Quart. Journ. Geol. Soc.* xlviii. 453), and on the exploration of caves at Ffynnon Beuno and Cae Gwyn, North Wales, the contents of which he maintained to be pre-glacial. (5) The latest in date, on the geology of North Devonshire. Hicks was the first to discover fossils in the Mortals slates, which he identified as Silurian.

[Obituary notices in *Nature*, lxi. 109; Catalogue of Scientific Papers of the Royal Society Geological Magazine, 1899, p. 574; *Quart. Journ. Geol. Soc.* 1900, Proc. lvin.; information from the family, and personal knowledge.]

T. G. B.

HIGINBOTHAM, GEORGE (1826–1892), chief justice of Victoria, was the sixth son of Henry T. Higinbotham of Dublin, and Sarah, daughter of Joseph Wilson, at one time American consul in Dublin. He was born in Dublin on 19 April 1826, and educated at the Royal School, Dungannon, whence he went to Trinity College, Dublin, with a Queen's scholarship in 1844, graduating B.A. in 1848 and M.A. in 1853. Early in 1847 he went to London, and, to fill up time when reading for the bar, he became a reporter on the 'Morning Chronicle'; he entered at Lincoln's Inn on 20 April 1848, was called on 6 June 1853, and within a few months sailed for Victoria, where he arrived early in 1854.

In Victoria Higinbotham again combined the law and journalism; he was admitted to the local bar on 27 March 1854, and after a brief period of anxiety began to get briefs regularly, writing occasionally at the same time for the 'Morning Herald.' In August 1856 he became editor of the 'Argus,' and for a time did little or nothing at the bar. In 1859 he resigned the editorship in order to devote himself more fully to his profession.

In May 1861 Higinbotham entered upon political life, being elected a member for Brighton in the legislative assembly. He described himself as an independent liberal. In 1862 he lost his seat, but in 1863 was

again elected for the same place. In June 1863 he became attorney-general in Sir James McCulloch's ministry, and a leading figure in the struggle between the two houses over the question of finance bills and the Darling grant, which lasted from 1865 till 1868 [see under McCULLOCH, SIR JAMES]. His attitude in this controversy gave him for a time a strong hold on popular sympathy; but ultimately he overdid his opposition to imperial interference, and was even denounced on one occasion in the assembly as a traitor. In the election of 1866 he almost lost his seat. On 4 Sept. 1866 he was appointed chairman of the education commission. When, in July 1868, the McCulloch government was reconstituted, he declined the post of attorney-general because he considered that the governor had shown too openly the intention of not being guided entirely by his ministers. He did, however, remain in the cabinet as vice-president of the board of works without a salary. On 1 Feb. 1869 he left the ministry altogether.

In the election of 1871 Higinbotham, whose views of his duty had alienated his constituents, lost his seat to a local candidate, and for the next three years he devoted himself to his practice, which was large and absorbing. In 1874, however, he was again returned to the assembly as member for the East Bourke borough, and not long afterwards, on 24 Jan. 1876, finding himself unable to support Sir Graham Berry's ministry, which was engaged in a struggle with the legislative council on the questions of land tax and payment of members, he resigned his seat; he sympathised with the spirit which animated Berry, but disapproved his methods as subversive of parliamentary government.

Higinbotham now remained aloof from active politics, and in July 1880 was appointed a puisne judge of the supreme court of Victoria. In September 1886, on the retirement of Sir William Stawell [q.v.], he became chief justice of the colony. His independence and his peculiar view of the position of a colonial government are shown by his refusal to accept knighthood on the score that rewards for local services should emanate from a local source, and by his intimation to the imperial government that if he were appointed to administer the government during the absence of the governor he would cease to refer any matters of local concern to the secretary of state. He had been for several years a vice-president of the Melbourne Benevolent Asylum and president of the Australian Health Society. In 1887 he was appointed president of the executive com-

mittee of the Melbourne centennial exhibition, and as such went to Adelaide for the jubilee exhibition and to Sydney for the centenary celebrations in January 1888. In this same year he began his second consolidation of the laws of Victoria, and a remarkably successful work resulted, for which he was publicly thanked in parliament on 16 Dec. 1890. During this latter year he had created much indignation by subscribing to the funds of the strikers in the great general strike. He died at his residence in South Yarra, Melbourne, on 31 Dec. 1892.

The violence of Higinbotham's political utterances contrasted strangely with the charm and amiability of his private life; those who condemned his political views were strongly attached to him personally. His oratorical power was of a high order, and his intellectual attainments placed him in the forefront of his contemporaries in Victoria. He was independent, and radical in his political views, broad-minded and unconventional in private life. He was small in stature but strong and athletic, fond of rowing, and a good rider.

Higinbotham married, on 30 Sept. 1854, Margaret Foreman, of a Kentish family. Besides sons he left a daughter, Edith, the wife of Professor Edward Ellis Morris, his biographer.

[Morris's Memoir of George Higinbotham, 1895; Munnell's Dict. of Australian Biography; Yearbook of Australia, 1893; Duffy's My Life in two Hemispheres, vol. ii, esp. p. 286; Rusden's Hist. of Australia, vol. iii.] O. A. H.

HILL, JOSEPH SIDNEY (1861-1894), missionary bishop, was born at Barnack, near Stamford, Northamptonshire, on 1 Dec. 1861. His father, Henry Hill, died young, and Hill was sent to the Orphan Working School at Flaxton, London. At fourteen he was apprenticed to a trade; but, resolving to be a missionary, he was received into the Church Missionary Society's preparatory institution at Reading in 1872, and into its college at Islington two years later. In 1876 he was ordained deacon by the bishop of London, married, and sailed for the Church Missionary Society's mission at Lagos, West Africa. In the following year he was invalided home, and in 1878 was appointed to the society's New Zealand mission. In 1879 he was admitted to priest's orders by the bishop of Waiapu, New Zealand. He resigned his connection with the Church Missionary Society in 1882, took up evangelistic work in the colony, and was for some time chaplain of the prison at Auckland, New Zealand.

Hill returned to England in 1890, and again volunteered to go out to West Africa

under the Church Missionary Society. The affairs of the society's mission on the Niger were in a position of some complexity. In the hope of solving the difficulties the archbishop of Canterbury (Benson) sent Hill to the Niger as his commissioner, and as the designated successor of Bishop Samuel Adjai Crowther [q. v.], the society appointing him director of the Niger mission. He discharged a delicate task with skill, and on his return home was consecrated bishop in Western Equatorial Africa on 29 June 1893. He left for West Africa in the November following, fell ill soon after landing at Lagos, and died there on 5 Jan. 1895. His wife, Luella Leachman, survived him but a few hours.

[Faulkner's Joseph Sidney Hill; Stock's History of the Church Missionary Society, vol. iii.; Record, 1894, pp. 33, 34.] A. R. B.

HILL, SIR STEPHEN JOHN (1809-1891), colonial governor, born on 10 June 1809, was the son of Major William Hill by his wife Sarah. He entered the army in 1823, became lieutenant in 1825, and captain in 1842. In 1849 he commanded an expedition which proceeded eighty miles up the Gambia. On 6 May he stormed and destroyed the fortified town of Bambacoo, and on the following day attacked and partially destroyed the fortified town of Keenung, besides defeating the enemy on the plains of Quenella. He also commanded a detachment of the 2nd and 3rd West India regiments in a successful attack by the British and French naval and land forces under Commodore Fanehawe on the pirates of the island of Basis, Jaba River, West Africa. For this service he received the thanks of the Lords of the admiralty and the brevet rank of major. On 1 April 1861 he was appointed governor and commander-in-chief of the Gold Coast. In 1862 a poll-tax was imposed on the natives with the consent of the protected chiefs, to assist in defraying the cost of administration. A local force was raised for the defence of the colony under the designation of the Gold Coast corps. On 6 Nov. 1864 Hill was nominated lieutenant-governor of Sierra Leone. He remained there until 1869, undertaking two successful expeditions up the Great Scarcies River in January 1868 and February 1869. In July 1860 he returned as governor-in-chief, remaining until 21 July 1862, when ill-health compelled him to return to England, leaving his son, Lieutenant-colonel William Hill, as acting governor. His second term of administration was marked by the annexation of British Quinh in April 1861 and British Shorboro in November 1861.

On 9 Feb. 1863 he assumed the office of captain-general and governor-in-chief of the Leeward and Caribbee Islands, where he remained until 1869, when he was removed to Newfoundland. Entering on his duties on 29 Sept. he remained there until 1876, when he retired from active service.

Hill was appointed colonel of the 2nd West India regiment on 21 Nov. 1854. He was nominated C.B. in 1860 and K.C.M.G. in 1874. He died in London at 72 Sutherland Avenue, Maida Vale, on 20 Oct. 1891. He was twice married: first, on 30 Nov. 1829, to Sarah Ann, daughter of William Vesoy Munnings, chief justices of the Bahamas; and, secondly, on 3 Aug. 1871, to Louisa Gordon, daughter of John Sheil (d. 6 March 1847), chief justices of Antigua. He left issue by his first wife.

[Times, 27 Oct. 1891; Haydn's Book of Dates; Ellis's Hist. of the Gold Coast, 1893, pp. 217-20; Sibthorpe's Hist. of Sierra Leone, 1881, pp. 67-8, 70-2; Oliver's Hist. of Antigua, 1894-6, vol. i. p. clvi, ii. 100, iii. 319, 321; Prowse's Hist. of Newfoundland, 1895, pp. 498-500.] E. I. O.

HILLARY, SIR WILLIAM (1771-1847), founder of the Royal National Lifeboat Institution, born in 1771 of an old Weneleydale family, was the second son of Richard Hillary, third but eventually only surviving son and heir of John Hillary of Birkkrigg. His mother was Hannah, daughter of George Wynns. His elder brother Richard was a member of the House of Assembly in Jamaica, where he died unmarried in 1808.

William Hillary was appointed equerry to the Duke of Sussex, with whom he spent two years in Italy, returning to England in 1800; and, having come into large property both by marriage and inheritance, he, upon the renewal of the war with France in 1803, raised at his own expense, and many years commanded, the First Essex Legion of infantry and cavalry, amounting to 1,400 men, the largest force then offered by any private individual for the defence of his country. In this cause he expended over 20,000*l.*, and, in consideration of this and other services, he was created a baronet on 8 Nov. 1806. Three years later, owing to a heavy loss of property in the West Indies, Sir William left Essex and settled at Fort Anne, near Douglas, in the Isle of Man. The large number of wrecks that he witnessed, culminating in 1822, when the government cutter Vigilance, the naval brig Racshorse, and many smaller vessels were destroyed off the Isle of Man, directed his attention to the question of saving life at

sea. In February 1828 he issued 'An Appeal to the British Nation on the Humanity and Policy of forming a National Institution for the Preservation of Lives and Property from Shipwreck,' which he dedicated to George IV. The proposal was taken up by George Hibbert and by Thomas Wilson, an influential city member, and on 4 March 1824 a public meeting was convened at the London Tavern, under the chairmanship of the Archbishop of Canterbury (Manners-Sutton); the king, the royal dukes, the Archbishop of York, William Wilberforce, and other personages signified their approval of the movement, and the Royal National Institution for the Preservation of Life from Shipwreck (since 1853 the Royal National Lifeboat Institution) was founded and established upon a permanent basis, with the Earl of Liverpool as first president.

Returning to the Isle of Man, Hillary established in 1826 a district association, of which he became president, and provided the four chief harbours of the island not only with lifeboats but also with the apparatus of Mauby and Trengrouse.

Hillary frequently went out in the boats himself, and was instrumental in saving many lives. In December 1827, assisted by his son, he aided in saving seventeen men from the Swedish barquo *Fortrolindet*, and in the same year, at the expense of six ribs fractured, he took a prominent part in the saving of the crew of the *St. George*. On 29 Nov. 1830 he set out with a crew of fourteen volunteers and saved sixty-two persons (though he nearly lost his own life by being washed overboard), and gained the Shipwreck Institution's gold medal. In 1832 he planned the picturesque tower of refuge on St. Mary's, or Conistor rock, in Douglas Bay. He established a sailors' home at Douglas, and was a strong advocate of the government building a breakwater and making a harbour of refuge in Douglas Bay. His last public act was to preside at a meeting held at Douglas to memorialise the government on this subject in March 1846, when he had to be carried from his residence at Fort Anne to the court house in a chair. Enfeebled in body, but full of mental vigour and public spirit to the last, he died at Woodville, near Douglas, on 5 Jan. 1847, and was buried in Douglas churchyard, 'followed to the grave by crowds who had witnessed his heroism and self-devotion in saving the life of the shipwrecked mariner.'

married, first, on 21 Feb. 1800, Elizabeth, daughter and coheir of Lewis Disney of Danbury Place, Essex; secondly,

on 30 Aug. 1813, Emma, daughter of Patrick Tobin of Kirkbradden in the Isles of Man. By his first wife he had twin children, born 19 Nov. 1800: Augustus William, who succeeded as second baronet and died in 1854, when the baronetcy became extinct; and Elizabeth Mary, who married in 1818 Christopher Richard of Blackmore Priory, Essex. At the time of his death the institution which he had been instrumental in founding owned some twenty lifeboats and an annual income of 350*l*. Its prosperity languished for some years, but it was revived and thoroughly reorganised in 1849, and possesses now three hundred boats with a revenue of over 60,000*l*.

Hillary published several pamphlets, embodying ideas and schemes for the public benefit: 1. 'Suggestions for the Improvement and Embellishment of the Metropolis,' 1824. 2. 'A Sketch of Ireland in 1821: the Sources of her Evils and their Remedies suggested,' 1825. 3. 'Suggestions for the Occupation of the Holy Land by the Knights of St. John of Jerusalem,' 1841. 4. 'The National Importance of a great Central Harbour of Refuge for the Irish Sea at Douglas,' 1842 (a rifacimento of a tract which originally appeared at Douglas in 1826). All of these, as well as the Lifeboat 'Appeal,' went through several editions.

[Dobson's Baronetage, 1855; Lodge's Genealogy of the Peerage and Baronetage, 1869, p. 715; Cont. Mag. 1847, i. 423; The Lifeboat, or Journal of the National Shipwreck Institution, July 1832; Times, 5 March 1826; Book of the Life-Boat, 1804, i. 160; Mundell's Stories of the Life-Boat, p. 16; Gattie's Memorials of the Goodwin Sands, 1890, p. 220; Harrison's Bibliotheca Monensis, 1876, 182, 137, 147, 149, 168, 164; Hillary's Pamphlets in British Museum Library.] T. S.

HINCHLIFF, THOMAS WOODBINE (1825-1882), president of the Alpine Club, the oldest son of Chamberlain Hinchliff of Lee, Kent, and his wife, Sarah Parish, sister of Sir Woodbine Parish [q. v.], was born on 5 Dec. 1825 at 25 Park Street, Southwark. Hinchliff, after attending the grammar school at West Ham and the Blackheath proprietary school, went to Trinity College, Cambridge, where he graduated as B.A. in 1849, and M.A. in 1852. In this interval the record in the 'Graduali Cantabrigienses' shows that the spelling of the family name had been changed from Hinchliffe to Hinchliff. He was admitted a student at Lincoln's Inn on 24 April 1849; was called to the bar, and had chambers in Lincoln's Inn, but did not practise.

Hinchliff did much to bring mountain

climbing into vogue. After spending the summers of 1854, 1855, and 1856 in the Alps, he published a most attractive book, 'Summer Months among the Alps.' Next year he took an active part in the foundation of the Alpine Club, of which he was the first honorary secretary, and president from 1874 to 1877. After 1862, when he lost part of his right hand through a gun accident, he was prevented from undertaking difficult excursions, but he did not abandon the Alps, for he was a lover of their flowers and scenery, and he occasionally undertook more distant journeys, visiting South America more than once, and making a tour of the world. These were described in 'South American Sketches' (1863) and 'Over the Sea and Far Away' (1876), which showed the same freshness and descriptive power as his earlier work. He was also a contributor to the Alpine Club's 'Peaks, Passes, and Glaciers,' the 'Alpine Journal,' and periodical literature. While on his way to the Italian lakes he died, after a few hours' illness, at Aix-les-Bains, on 8 May 1882, and was buried there. A memorial obelisk bearing a bronze modellino (a copy of which is in the rooms of the Alpine Club) was erected by his friends on the flanks of the Gornier Grät, near the Riffelalp hotel.

[Obituary notice, *Alpine Journal*, xi. 39, 56, 407, 486; information from Mrs. Hinchliff (sister-in-law).] T. G. B.

HINCKS, THOMAS (1818-1899), zoologist, born at Exeter on 15 July 1818, was the son of William Hincks (1794-1871), professor of natural history at University College, Toronto, and the grandson of Thomas Dix Hincks [q. v.]. Edward Hincks [q. v.] and Sir Francis Hincks [q. v.] were his uncles. He was educated at Manchester New College, York, and graduated B.A. at London University in 1840. After holding various ministerial posts from 1839, he became minister of the Mill Hill Unitarian Chapel at Leeds in 1855, resigning this charge in 1869 on account of the failure of his voice. He afterwards lived at Taunton, and subsequently for many years at Clifton.

From an early age Hincks was a student of zoology. He attended the seventh meeting of the British Association at Liverpool in 1837. He at first devoted himself to the study of hydroids, and in 1868 published 'A History of the British Hydroid Zoophytes' (London, 2 vols. 8vo), which at once became a standard treatise. He then directed almost all his attention to the polyzoa. He paid special regard to the selection of characters by which to discriminate genera and families

In 1880 he issued his 'History of the British Marine Polyzoa' (London, 2 vols. 8vo), the best general monograph on marine polyzoa in any language. Hincks's monographs were the ripe results of independent and accurate observation ranging over the whole area of the subject treated. Most of his papers appeared in the 'Annals and Magazine of Natural History' between 1851 and 1893.

Hincks was the friend of George James Allman [q. v. Suppl.], whose work was so closely analogous to his own, of George Busk [q. v. Suppl.], and of Professor Fredrik Adam Smitt, who has published important works on the polyzoa in Swedish. He was elected a fellow of the Royal Society on 8 June 1872. He died at Clifton on 25 Jan. 1899. He married Elizabeth, daughter of John Allan of Warrington. His wife and two daughters survived him.

[*Nature*, 16 Feb. 1890; Yearbook of the Royal Society, 1900, pp. 192-4.] E. I. O.

HIND, JOHN RUSSELL (1823-1896), astronomer, was born on 12 May 1823 at Nottingham, where his father, John Hind, who was one of the first to introduce a Jacquemard loom into Nottingham, owned a lace factory. At the age of twelve he began to observe the heavens, and became at sixteen a regular contributor on astronomical subjects to the 'Nottingham Journal,' publishing besides, in an 'Atmospheric Almanac,' weather predictions for 1830 and 1840. In the latter year he was sent to London as assistant to Carpmel, a civil engineer, but quickly obtained a post in the magnetic and meteorological department of the Royal Observatory, Greenwich. He took part in the first chronometric determination of the longitude of Valencia in 1848, and accepted, in 1844, the charge of the observatory founded by George Bishop [q. v.] in the Regent's Park. There, in the course of nine years, he discovered ten asteroids, two comets, a remarkable variable nebula in Taurus (*Monthly Notices*, xxiv. 65), and several variable stars, including the temporary apparition of May 1848. Accompanying William Rutter Dawes [q. v.] to Sweden for the total eclipse of 28 July 1851, he made some interesting observations on the 'rose-coloured flames' (*Memoirs Royal Astron. Society*, xxi. 82), and in 1853 succeeded William Samuel Stratford [q. v.] as superintendent of the 'Nautical Almanac.' He retained, however, the general direction of Bishop's observatory, and transferred his residence to Twickenham on its removal thither in 1861. In 1891 he withdrew from

the 'Nautical Almanac' office under the provisions of the superannuation scheme, and died at Twickenham on 23 Dec. 1895 of heart disease, the promonitory symptoms of which had early impeded his activities. His grave is in Twickenham churchyard. He married in 1846, and had six children.

Hind joined the Royal Astronomical Society on 13 Dec. 1844, acted as its foreign secretary 1847-57, and as president 1880-1881. In 1847 and 1851 respectively he was chosen a corresponding member of the Société Philomathique and of the Académie des Sciences of Paris; he was a fellow of the Royal Society both of London and of Edinburgh, being elected to the former on 4 June 1863; the university of Glasgow conferred upon him an honorary degree of LL.D. in 1882, and the academies of St. Petersburg and of Lund inscribed him among their associates. He was thrice the recipient of the Lalande prize, and gold medals were conferred upon him by the Royal Astronomical Society in 1853 (besides an equivalent testimonial in 1848), by the Royal Society, and by the King of Denmark for his detection of the first comet of 1847; and his profile figured on the obverse of a medal struck by the French Institute in 1860 to commemorate the discovery of the hundredth asteroid. The bestowal of 100*l.* from the Royal Bounty Fund in 1851, and of a civil list pension of 200*l.* a year in 1852, more substantially rewarded his services to science.

He wrote: 1. 'The Solar System,' London, 1852. 2. 'An Introduction to Astronomy, to which is added an Astronomical Vocabulary,' published in Bohn's 'Standard Library' in 1852, and in several subsequent editions. 3. 'The Comets: a Descriptive Treatise. With a Table of all the Calculated Orbits,' London, 1852; translated into German by J. H. Mädler in 1854. 4. 'The Illustrated London Astronomy,' 1853. The great comet of 1858, of which he predicted the return in two pamphlets, first for the year 1848, then, perturbations being allowed for, about 1858, failed to verify either forecast. He, however, successfully traced the apparitions of Halley's comet back to 11 a.d., was a diligent student of Chinese cometary annals, and computed the orbits of forty-three comets, as well as of many asteroids and binary stars. Numerous communications from him were included in scientific collections, notably in the 'Monthly Notices' and the 'Astronomische Nachrichten,' and his letters to the 'Times' on astronomical occurrences appeared at intervals during forty years. The results of a comparison supervised by him of Birkhardt's and Hansen's Lunar

Tables, 1847-65, formed an appendix to the 'Monthly Notices' for 1890, vol. 1.

M. C.

HINE, HENRY GEORGE (1811-1885), landscape-painter, born at Brighton, Sussex, on 15 Aug. 1811, was the youngest son of William Hine, a native of Hampshire, by his marriage with Mary Roffey. His father was at one time coachman to Mrs. Thralo, and afterwards a coachmaster at Brighton. The boy had no regular training in art, but taught himself to draw and paint from nature, and was encouraged by the vicar of a neighbouring Sussex village, who had a collection of water-colours by Copley Fielding, and taught Hine to appreciate the beauties of the South Downs. He painted for some years in Sussex, acquiring some local reputation by sea-pieces and scenes on the coast near Brighton, till he went to London and was apprenticed as a draughtsman to the engraver Henry Meyer [q. v.] On leaving Meyer he went to Rouen, where he spent about two years. He returned, first to Brighton, then to London, where he became a professional wood engraver, and in 1841 extended his practice to drawing on the wood for illustrated journals. Ebenezer Landells [q. v.], who was then projecting the publication of a landscape periodical called 'The Cosmorama,' sent Hine to make a drawing of the port of London on the block. A little comic sketch of a dustman and his dog, which he drew on the margin of the block, caught Landells's eye, and the latter engaged Hine as a contributor to 'Punch,' the first number of which had been published on 17 July 1841. Hine's first contribution appeared in September, and he continued to work for 'Punch' till 1844. He and William Newman were the chief of the regular artists on the staff before Leech took the lead. Hine contributed little black comic sketches, called 'blackias,' and cartoons (eight in all) to volumes iii-v. He also illustrated the first 'Punch's Almanac.' His most remarkable contribution, however, was the sheet of 'Anti-Graham Wafers,' an attack upon the home secretary, Sir James Graham [q. v.], who caused certain private correspondence to be opened, in 1844. At the end of that year Hine withdrew from

the staff of 'Punch' and contributed to several short-lived rival publications, such as 'Puck,' 'The Great Gun,' 'Joe Miller the Younger,' and 'The Man in the Moon,' as well as to the 'Illustrated London News.' After a time he became heartily weary of comic draughtsmanship and professional pun-making, and devoted himself once more to landscape painting. As early as 1830, while still living at Brighton, he had contributed to London exhibitions, and had sent six pictures to the Royal Academy and twelve to the Suffolk Street Gallery between that year and 1861. In 1856 he had three water-colours at Suffolk Street, and in 1859 an oil-painting, 'Smugglers waiting for a Luggie,' attracted some attention at the Academy. In 1863 Hine was elected an associate of the Institute of Painters in Water-colours, and exhibited 'St. Paul's from Fleet Street.' He was elected a full member in 1864, and exhibited in the following year two Dorsetshire subjects, 'Durlstone Head' and 'Nine Barrow Down.' From that time onwards he was a regular contributor to the exhibitions at the Institute (since 1884 Royal Institute) of Painters in Water-colours, of which he was the vice-president from 1888 to 1895. Some of his more important pictures were: 'Lewes from the Town Mill,' 'On the Downs near Lewes,' 'Swanage Bay,' 'Cliffs at Cuckmere,' 'In Cowdray Park,' 'Haymaking,' 'Orle Castle,' 'Moonlight, Shoreham,' and 'Fittleworth Common.' Some of these were sent in 1878 to the Paris Exhibition.

After his marriage in 1840, Hine spent most of his life in London or the northern suburbs; he resided at Highgate from 1856 to 1868, and at Hampstead from 1868 to the time of his death. He painted pictures of London, but his favourite scenery was always that of Sussex, in which he had been born and bred. He continued to paint the downs and the south coast with fresh charm and unabated force, even after he had passed his eightieth year, and several of his water-colours were exhibited at the institute in the year of his death, which took place at Rosslyn Hill, Hampstead, on 16 March 1895. In 1840 he married Mary Ann, daughter of John Egerton, a coach-master. His style was founded especially on that of Copley Fielding. He rendered with great success the wide spaces and sweeping curves of the downs, generally in summer or early autumn weather, in glowing sunlight or with sunset and twilight effects. He painted most frequently on the downs at the back of Brighton, and near Lewes and Eastbourne, or along the coast from Rottingdean to Cuckmere Haven. His pictures sold well,

and enabled him to support a family of ten daughters and four sons. Two of his sons have inherited his talent for art, Mr. Harry Hine being a well-known member of the Institute, while Mr. William Egerton Hine became art master at Harrow School.

E. King's Round about a Brighton Coach Office*, 1896; *Gravee's Dict. of Artists*; private information.] C. D.

HIRST, THOMAS ARCHER (1830-1892), mathematician, born at Heckmondwike in Yorkshire on 23 April 1830, was the youngest son of Thomas Hirst (d. 1842), a woolstapler, by his wife, a daughter of John Oates, a blanket manufacturer of Heckmondwike. About 1835 his father retired from business and removed to Fieldhead near Wakefield. In 1840 Thomas entered the West Riding proprietary school at Wakefield, and in 1846 was articled to Richard Carter, a land agent and surveyor at Halifax. At Carter's office he met John Tyndall [q. v.], who was then Carter's principal assistant. Tyndall became his lifelong friend, and exercised a deep influence on his scientific studies. In 1849 Hirst followed Tyndall to Marburg to study mathematics, physics, and chemistry. After three years at that university he obtained the degree of Ph.D. Subsequently, after spending a short time at Göttingen, where he made the acquaintance of Carl Friedrich Gauss, and worked at magnetism under Wilhelm Eduard Weber, he went to Berlin, and in the session of 1852-3 attended lectures by Peter Gustav Lejeune Dirichlet, Jakob Steiner, and Ferdinand Joachimstal. His intercourse with Steiner did much to determine the ultimate bent of his mathematical investigations.

In 1853 Hirst succeeded Tyndall at Queenwood College in Hampshire as lecturer in mathematics and natural philosophy. He married in 1854, and resigned his post on account of his wife's ill-health in 1856. He spent the winter of 1857-8 at Paris, attending lectures by Michel Chasles and Gabriel Lamé, and passed the following winter at Rome. While travelling in Italy he made the acquaintance of Luigi Cremona, with whom he became intimate. Returning to England in 1860 he was appointed mathematical master of University College School. The experience in educational methods which he gained there, and his experiments on teaching geometry apart from Euclid, led

him to join the Association for the Improvement of Geometrical Teaching on its formation in 1871, and for the first seven years of its existence he filled the office of president.

On 6 June 1861 Hirst was elected a fellow of the Royal Society, and in 1866 of the Royal Astronomical Society. In 1865 he was appointed professor of physics at University College. On the resignation of Augustus De Morgan [q. v.] in 1866, he succeeded to the professorship of pure mathematics; this chair he resigned in 1870 to become assistant registrar in the university of London, giving up at the same time the general secretaryship of the British Association which he had held for four years. On the establishment of the Royal Naval College at Greenwich in 1873 he was appointed director of naval studies, and he continued to discharge the duties of that office for ten years.

Most of Hirst's earlier papers are devoted to researches in mathematical physics, but from 1861 he turned his chief attention to pure geometry. He took a prominent part in the foundation of the London Mathematical Society in 1865, served as its president from 1872 to 1874, and was a member of its council from 1861 to 1883. His papers on pure geometry were largely contributed to the proceedings of this society. The work with which his name will be most definitely associated is contained in his papers on the correlation of planes and the correlation of space of three dimensions. A few properties of correlative planes were proved by Chasles in his '*Traité de Géométrie Supérieure*' (Paris, 1862), but Hirst first constructed the theory of the correlation of planes and developed it to a great degree of perfection. The extension of the theory of correlation to space of three dimensions was adverted to by Chasles in his '*Aperçu Historique sur l'Origine et le Développement des Méthodes de la Géométrie*' (Brussels, 1837); but the full extension was carried out by Hirst, whose investigations, together with those of Rudolf Sturm, Cremona, and others, have resulted in substantial additions to the theory of pure geometry. In 1882 Hirst was elected a fellow of the university of London, and in 1883 he received a royal medal for his researches from the Royal Society. In the same year ill-health compelled him to resign his post at Greenwich. He received a pension and subsequently lived in retirement, spending most of his winters abroad. He died in London on 16 Feb. 1892 at 7 Oxford and Cambridge Mansions. He married in 1851 Anna (d. 1867), youngest daughter of Samuel

Martin of Loughboro, co. Down, and sister of John Martin (1812-1875) [q. v.], the Irish nationalist. He was an honorary member of the Cambridge Philosophical Society and of several foreign scientific institutions.

Besides contributing papers to the 'Proceedings' of the London Mathematical Society, Hirst also wrote several of importance for the 'Philosophical Transactions' of the Royal Society. He edited '*The Mechanical Theory of Heat*' (London, 1887, 8vo), translated from the German of Rudolf Julius Emmanuel Clausius; wrote a preface to Richard P. Wright's '*Elements of Plane Geometry*' (London, 1868, 12mo); and contributed a paper 'On the Complexes generated by two Correlative Planes' to the collection of mathematical papers edited by Cremona, '*In Memoriam D. Chisini*' (Milan, 1881, 8vo).

E. I. C.

HITCHCOCK, ROBERT (d. 1580-1591), military writer, came of a family which possessed lands at Astwood and Hardmead, Buckinghamshire, in the reign of Henry VII (*Ch. Ing. post Mortem*, Henry VII, i, 355; cf. *Larwood, Buckinghamshire*, iii, 307, 357, 556). He described himself as 'gentleman of Cavorfield' in that county, and in March 1572 he had title to some lands in that parish was tried before the court of Star Chamber (*Acts P. C.*, 1571-5, p. 86). Little is known of his life beyond what can be gathered from his books; he refers to 'the skone of a soldiorne that hath trailled the pike,' and on 29 April 1580 he was commissioned to raise a hundred and fifty volunteers in Buckinghamshire for service in the Low Countries (*ib.* 1580-7, p. 80). He apologises for his lack of literary style, and admits that others write with 'plensauror wordes and sugred stile then I' (*A Politique Platt*, pref.); but he was familiar with the courtiers and politicians of the day. When urging his scheme for developing the fisheries he relates that he entertained at dinner, a few days before parliament was prorogued in 1576, nearly all the burghesses for the seaport towns, and submitted his plan to them. He also gave copies to the queen, to Leicester, and other members of the council. Thomas Digges [q. v.] introduced the subject in parliament, but an early prorogation stopped its further progress.

Hitchcock's earliest work appears to have been '*A Discourse of Martial Affairs touching the Safeguard of the Realm, and repul-*

sing of the Enemy, if any attempt of Invasion be made,' which he wrote in 1571 and submitted to Elizabeth on 1 Sept. 1580. It is extant in Lansd. MS. cxix. art. 3, with 'Another Discourse by the same Person, concerning the Overthrow of the Enemies at their own Doors.' A similar treatise is 'Captain Hitchcock's Petition and Proposal to the Queon for stationing some Ships of War in the Channel to annoy Foreign Enemies and protect Friends,' extant in Lansdowne MS. cxiii. 10. A fourth tract by Hitchcock is among Foxe's MSS. (*Lansd. MS. cccxxxix.*), entitled 'A Discourse for Defence against the threatened Invasion of the Holy League' (cf. STRYER, *Annals*, II. ii. 368-70). None of these appear to have been printed, but on New Year's day 1580-1 Hitchcock published his scheme for developing the Newfoundland herring fisheries, with the title 'A Politique Platt for the Honour of the Prince, the greato profite of the Publique State, reliefe of the Poore, preservation of the Rich, reformation of Roges and Idle Persons, and the wealth of thousands that knowes not howe to live' (London, Iohn Kyngston, 1 Jan. 1580); prefixed are verses by the author's brother Francis. Hitchcock's book was commended by Thomas Mun [q.v.] in his 'England's Treasures by Forraign Trade' (cap. xix.), and Tobias Gentloman [q.v. Suppl.] and John Keymer [q.v. Suppl.] wrote books developing Hitchcock's argument. This was followed in 1590 by 'The Quintessence of Wit, being a corrant comfort of conceites, maxims, and politicke devises, selected and gathored together by Francisco Sansovino . . . translated out of the Italian tung . . .' (London, Edward Allde, 28 Oct. 1590; dedicated to Robert Cecil, afterwards earl of Salisbury). Hitchcock brought 'a second part' of Sansovino's work from the Netherlands in 1586, which he promised to translate and publish, but does not seem to have done so. His last work was 'The Arte of Warre; being the onely rare booke of Myllitarie Profession: drawn out of all our late and forraine services, by William Garrard, gentleman, who served the King of Spain in all his Warres fourteen yeaeres, and died A.D. 1587 . . . corrected and finished by Captain Hitchcock, anno 1601' (London, 1591, 4to; dedicated to Robert Devereux, earl of Essex); to it Hitchcock appended 'A generall Proportion and order of Provision for a Yeere . . . to victuall a Garrison of one thousand Souldiours.'

[Hitchcock's works in Brit. Mus. Library; Cockle's Bibliogr. of Military History, 1900; authorities cited.] A. F. P.

HODDESdon, Sir CHRISTOPHER (1584-1611), master of the Merchants Adventurers' Company, born in 1584 (*Cal. State Papers*, Dom. 1601-3, p. 165), was son of Simon Hoddesdon of Hoddesdon and Edgeworth, Hertfordshire, by his wife Jane, daughter of John Etheridge of Edgeworth. In a letter written to Sir Robert Cecil in 1602, Hoddesdon states that in 1544, when he was only ten years old, he 'came from Dantzic by land through all the marine towne except Stade and Emden, and found no Englishman trading nor cloth to be sold but by the steleyard men' (*ib.* p. 160). It was to developing English trade in the north-east of Europe that Hoddesdon devoted his life. In youth he was a clerk in the office of Sir George Barnes (more correctly Barne), merchant, alderman, and in 1562 lord-mayor of London, whose granddaughter he married; she was Alice, daughter of Alexander and sister of Christopher Carleill [q.v.], while (Sir) Francis Walsingham was her step-father. These relationships explain much of Hoddesdon's subsequent career. In May 1563, when Richard Chancellor [q.v.] was sent to open up the trade with Russia, Hoddesdon, according to his own account, accompanied him. He also went with Chancellor on his second voyage in 1565, and was left in Russia as agent for the company. For two years his headquarters were at Nijni Novgorod; then he became head of the English factory at Moscow, and he is mentioned in Jenkinson's letter from that city dated 18 Sept. 1569 [see JENKINSON, *ANTHONY*]. The Russia trade was exceedingly profitable, and Hoddesdon states that during his residence at Moscow he obtained 13,044*l.* for English goods which cost only 8,608*l.*

Hoddesdon returned to England in 1562 to supervise his own business in London; but early in 1567 the company sent him to Narva to develop English trade in the Baltic, and Queen Elizabeth, by letters dated 16 March 1566-7, recommended him to the protection of the kings of Denmark and Sweden. He took with him seven ships containing 11,000*l.* worth of cloth, kerseys, and salt, which he disposed of at a profit of 40 per cent. In 1569 he was again sent to Narva, where he remained for some years as chief of the English factory he had established there. In the following year he asked the Russia Company to send out thirteen ships well armed under the command of William Borough [q.v.], and on 10 July following this squadron defeated six Polish pirate ships off Tüter in the gulf of Finland. Hoddesdon himself wrote announcing this victory to Ivan IV of Russia.

While at Narva Hoddesdon was accused of trading on his own account instead of looking exclusively after the interests of the company. About 1574 he began to be employed by Queen Elizabeth as a financial agent in Germany; on 23 July 1575 he was commissioned to receive at Heidelberg fifty thousand crowns due to the queen from Condé, and on 11 June 1576 he was again sent to Germany to raise a loan of 200,000*l.*, returning on 18 Oct. (*Cal. State Papers*, For. 1575-7, Nos. 252, 812, 995, 1133-5; WALSHINGHAM'S 'Diary,' and *Camden Soc. Miscellany*, vi. 28). In 1577 he went to Hamburg with 20,000*l.* for Duke John Osnabrück, for the levy of reiters destined first for France, and afterwards for the Low Countries. In 1578 he was master of the Merchants Adventurers at Hamburg. At the same time he continued trading on his own account, and on 21 Aug. 1579 he was licensed 'to bring saltpetre and gunpowder from Hamburg' (*Acts P. C.* 1578-80, pp. 249, 309). In 1580 and 1581 he was engaged in commercial negotiations on behalf of the government at London and Antwerp (*Cotton MSS. Galba*, B. xi. 425, C. vii. 81, 86, 127, 142).

By this time Hoddesdon had acquired a considerable fortune, part of which he invested in purchasing the manor of Leighton Buzzard, Bedfordshire, and, like most merchants of the time who became landed proprietors, he sought to improve his estates by enclosures. This brought him into collision with his tenants, and a dispute between them was pending for many years before the privy council and star chamber (*Acts P. C.* 1587-8 pp. 80, 85-7, 103, and 1590 pp. 218, 310, 318). On 26 June 1585, writing from Bishopsgate Street, Hoddesdon declined an office that had been offered him by the queen, unless he might have an allowance of 40*s.* a day (*Cal. State Papers*, Dom. 1581-90, p. 217). Soon afterwards he became an alderman of Cambridge, which he represented in parliament February-April 1593, receiving 5*l.* 12*s.* wages at the rate of 2*s.* a day (*Off. Ret. M. P.* i. 427; COOPER, *Annals of Cambridge*, ii. 521). From November 1591 to November 1592 he served as sheriff of Bedfordshire (*Lists of Sheriffs*, P. R. O., 1898).

Before 1600 Hoddesdon had become master of the Merchants Adventurers' Company, and he was a staunch defender of their privileges against the infractions of them contained in licences and monopolies granted to courtiers (*Cal. State Papers*, Dom. 1601-3, pp. 160, 161). He was knighted by James I at Whitehall on 23 July 1603, just before the coronation, and died at Leighton Buz-

zard, where he was buried on 14 Feb. 1610-1011 (*Addit. MS.* 14417, f. 42). By his first wife he had a son, Francis, who was committed to Walsingham's care when Hoddesdon went to Hamburg in 1577, and seems to have died young; he is said to have had another son, Christopher, who turned papist. His only daughter, Ursula, married about 1585 Sir John Leigh of Stoneleigh, Warwickshire, and their son, Sir Thomas Leigh, married Mary, granddaughter of Lord-chancellor Ellesmers. Hoddesdon married, secondly, Elizabeth, daughter of William Blount of Olbason, Leicestershire, whom he made his sole executrix, and by whom he had no issue.

Soc.), p. 175; *Lipscomb's Buckinghamshire*, iii. 622; *Motealle's Knights*, p. 149; *Chester's Marriage-Licences*; *Tanner MS.* cclxxxviii. 179-493; *Hakluyt's Principall Navigations*, 1589, pp. 200, 301, 425, 426; *Joseph von Hamel's England und Russen*, 1851, pp. 125-8, *Ehrenberg's Hamburg und England im Zeitalter der Königin Elisabeth* (1896); *Early Voyages and Travels to Russia* (Hakluyt Soc.) pp. liv, 100, 218; information from Mr. A. J. Butler; authorities cited.] A. F. P.

HODGSON, BRIAN HOUGHTON (1800-1894), Indian civilian and orientalist, born at Prostbury in Cheshire on 1 Feb. 1800, was the last of a succession of four Brian Hodgsons, whose united ages averaged more than eighty-three years. His father was a partner in the banking house of Hawkins, Nills & Co. of Macclesfield, which failed, with many others, at the beginning of the century, but ultimately paid twenty shillings in the pound. He was from 1814 to 1820 superintendent of martello towers on the coast of Essex, and from 1820 to 1850 barrack-master in Canterbury. He ultimately died in Holland in 1858, aged ninety-two. His mother was Catherine, daughter of William Houghton of Manchester and Newton Park, Lancashire. His grandfather's sister Margaret was the wife of Beilby Porteus [q. v.], bishop of London.

Brian Houghton Hodgson was the second child and eldest son. His early education was obtained at Macclesfield grammar school under David Davies, and at Richmond under Daniel Charles Delafosse, both schoolmasters of repute in their day. In 1816 he was nominated to a writership in Bengal by James Pattison, and was admitted to the East India Company's college at Haileybury. In after life he used to say that he derived much

benefit from the teaching and personal kindness of Thomas Robert Malthus [q. v.], then professor of history at Hailbury. On his arrival at Calcutta in 1818 he continued his oriental studies, according to the custom of that time, in the college of Fort William, devoting himself specially to Persian. But his health soon broke down, and he was never again able to live in the plains of Bengal. Most fortunately he received one of the two appointments in the hills that were then open to a junior civil servant, that of assistant commissioner of Kumaon. The frontier tract of Kumaon, amid the outer ranges of the Himalayas, had recently come under British rule, on the conclusion of the Gurkha war in 1816. Its first British ruler was George William Traill, who held the post of commissioner of Kumaon continuously for twenty years and stamped his strong personality upon the administration. It was of great advantage to Hodgson to serve his apprenticeship under such a man, and also in a district adjoining the native state of Nepal, which was destined to be the scene of his own lifework. After he had been less than two years in Kumaon, the post of assistant resident in Nepal fell vacant, and Hodgson was chosen to fill it. Henceforth, for twenty-three years (1820-43), he remained at Kathmandu, the capital of Nepal, secluded from the active life of Indian administration, but in a unique position to devote himself to study. In order to complete the catalogue of his services, it should be stated that in 1828 he acted for some months as deputy secretary in the political (i. e. foreign) department at Calcutta; but his health again failed, and he was glad to return to Nepal in the humble capacity of postmaster. In 1826 we find him again assistant resident, acting resident from 1829 to 1831, but not confirmed as resident until 1833.

At this time the warlike Gurkhas of Nepal were still chafing under the treaty imposed upon them after Sir David Ochterlony's victories of 1815, by which they lost large tracts of recently conquered territory, and were compelled to accept a British resident at their court. Even to the present day Nepal ranks as an independent state, outside the Indian feudatory system, and recognising China in some vague sense as its suzerain. Hodgson's position, therefore, at Kathmandu was not the same as that of an ordinary resident at the court of a native state. His functions were essentially diplomatic, and did not include the right of imposing advice with regard to the internal administration. His difficulties were

enhanced by the peculiar composition of the Nepalese court, which consisted (then as now) of a *roi fainéant*, while all power was vested in the hands of a minister, himself only the chief of the strongest faction in the state. Ministerial crises were frequent, sometimes ending in indiscriminate massacre, and at any moment a safety-valve against domestic revolution might be sought in an unprovoked invasion of the plains of India. It is Hodgson's chief title to political distinction that he succeeded in persuading the Nepalese court to keep the peace during the anxious period of the first Afghan war. But even so he was not able to gain the approval of Lord Ellenborough, who distrusted all 'politicals,' especially if they happened to be civilians. On the ground that Hodgson had failed to carry out his instructions to the letter, Lord Ellenborough suddenly dismissed him from the residency of Nepal, and added insult to injury by gazetting him to the petty post of assistant commissioner at Simla (not then the summer residence of the viceroy). Hodgson forthwith resigned the service and sailed for England, thus terminating his official career for ever at the early age of forty-three.

Meanwhile Hodgson had won for himself a more permanent reputation in a very different field. From his first residence in Nepal he resolved to take advantage of his opportunities to study the literature, religion, and language of a country then absolutely unknown. The ruling race of Gurkhas are devout Hindus, still retaining many archaic features of the Hindu social system. But a large proportion of the population are Buddhists, and Nepal is in close contact with Tibet. Hodgson's supreme contribution to science is to have discovered the literature of Northern Buddhism, as preserved in both Sanskrit and Tibetan manuscripts. As early as 1828 he contributed papers on this subject to the Asiatic Society of Bengal, which finally took shape in his 'Illustrations of the Literature and Religion of the Buddhists' (Serampur, 1841). It is, however, upon his work as a collector rather than as an author that Hodgson's fame rests. For years he was indefatigable in acquiring original manuscripts, and in obtaining copies of others, which he proceeded to distribute with lavish hand among public libraries. From Tibet he procured two copies of the vast encyclopædias called the 'Kahgyur,' and the 'Stanggyur,' consisting of about 350 volumes in Tibetan block-printing. One of these copies he presented to the college of Fort William, the other to the

court of directors of the East India Company. Of Sanskrit manuscripts he collected more than four hundred, which are now divided among the libraries of Calcutta, London, and Paris. The portion sent to Paris supplied Eugène Burnouf with the materials for his two epoch-making works, which first placed the knowledge of Northern Buddhism on a scientific foundation. Burnouf's posthumous 'Le Lotus de la Bonne Loi' (Paris, 1852) is dedicated to Hodgson, 'comme au fondateur de la véritable étude du Bouddhisme par les textes et les monuments.'

Hodgson's curiosity was by no means confined to literature and religion. He collected a great mass of documents relating to the history, the administration, the trade, and the people of Nepal, for a work on that country which he was fated never to write. These are now deposited in the library of the India Office. He was one of the pioneers of scientific ethnology, his monograph on 'The Koch, Bodo, and Mhinial People' (1817) being always referred to as the model of what such research should be. As a zoologist his name stands equally high. In the 'Royal Society Catalogue of Scientific Papers' there are no less than 127 entered under his name. From Nepal and the neighbouring regions he added 160 new species to the avifauna of India; and he was the first to describe thirty-nine new species of mammalia, one of which (*Budorcas taxicolor*) ranks as a new genus. By means of native collectors and artists whom he trained, he was enabled to present to the British Museum more than 10,000 specimens of birds, mammals, and reptiles, together with 1,800 sheets of drawings, which are now in the rooms of the Zoological Society. He also wrote on the physical geography of the Himalayas, and on the topography of Tibet, with special reference to trade routes.

Hodgson has further left his mark on some Indian questions of practical utility. One of his earliest official reports from Nepal urged the enlistment of Gurkhas in the Indian army, and at the crisis of the mutiny his influence was exercised with Lord Canning at Calcutta to accept Sir Jang Bahadur's offer of military assistance. He planted a tea garden in the residency grounds at Kathmandu, and was among the first to advocate the settlement of European colonists at hill stations. On the subject of education he took a line of his own. At the time when Macaulay's powerful arguments decided the government to prefer English to the classical languages of the east as the

medium for higher instruction, Hodgson issued a series of letters in favour of the claim of the vernaculars. In particular he proposed the establishment of a normal vernacular college for native schoolmasters.

To return to the chronological order of Hodgson's life. His resignation of the civil service in 1843 was irrevocable; but after less than a year at home he resolved to return to India in a private capacity in order to continue his scientific researches. He fixed his residence at Darjiling, as near as he could get to his favourite Nepal. Here for thirteen years he lived the life of a recluse, suffering a good deal from weak health, which could not abate his collecting ardour and his devotion to learning. It was during this period that he applied himself chiefly to ethnology. One of the few guests that he entertained was Sir Joseph Hooker, then engaged on a botanical exploration of Sikkim. In 1858 he returned to England for a short visit, in the course of which he met and married his first wife, Anna, daughter of General Henry Alexander Scott. It was her inability to stand the climate that finally compelled him to leave India in 1858. He settled in Gloucestershire, first at Dursley, and afterwards (1867) at Alderley, under the Cotswold hills. He now altogether abandoned his oriental studies, and adapted himself to the life of a country gentleman, riding to hounds until sixty-eight years of age. From 1863 onwards he wintered on the Riviera, in a villa that he built for himself at Mentone. His first wife died in 1868, and in the second year of his widowhood he married Susan, daughter of the Rev. Chauncy Townshend of Derry, co. Cork, who survived him. By neither marriage were there any children. He died in London, at 48 Dover Street, on 28 May 1894, and was buried in the churchyard of Alderley.

It is remarkable that Hodgson never received any mark of reward from his own government for either his official or his scientific services. In 1838 he was created a chevalier of the legion of honour, and was awarded a gold medal by the Société Asiatique. In 1814 he was elected a corresponding member of the Institut de France. Many learned societies, on this continent as well as in England, made him an honorary member. In 1877 he was elected a fellow of the Royal Society; and in 1880 the university of Oxford conferred upon him the honorary degree of D.O.L. When he first left India (in 1843) the Asiatic Society of Bengal had a bust made of him by T. E. Thornycroft, a duplicate of which is in the rooms of the Royal Asiatic Society in London. Repre-

ductions of this bust and of other portraits at various ages are to be found in his biography. The most important of his numerous papers were collected in three volumes: 1. 'Essays on the Languages, Literature, and Religion of Nepal and Tibet, together with Papers on the Geography, Ethnology, and Commerce of those Countries' (1874); and 2. 'Miscellaneous Essays relating to Indian Subjects,' 2 vols. (1880).

[Life of Brian Houghton Hodgson, by Sir William Wilson Hunter, London, 1896.]

J. S. C.

HODGSON, JOHN EVAN (1831-1895), painter, the elder son of John Hodgson, a member of an influential Newcastle family and a Russia merchant, was born in London on 1 March 1831. At the age of four he was taken to St. Petersburg, but was sent to England eight years later for his education. He entered Rugby school in February 1846, and on leaving school returned to St. Petersburg and entered his father's counting-house. The study of the old masters in the Hermitage collection and of Ruskin's 'Modern Painters' induced him to abandon commerce for an artist's career. In 1853 he came to London and entered as a student at the Royal Academy. He exhibited his first picture, 'The Notice of Ejectment,' in 1856. This was followed by other scenes of domestic life, such as 'The Arrest' (1857), 'Elector and Candidate' (1858), and 'The German Patriot's Wife' (1859). A little later he took to historical subjects, and exhibited 'Sir Thomas More and his Daughters in Holbein's Studio' (1861), 'The Return of Drake from Cadiz, 1587' (1862), 'The First Sight of the Armada' (1863), 'Queen Elizabeth at Purfleet' (1864), 'Talking Home the Bride, 1612' (1865), 'A Jew's Daughter accused of Witchcraft in the Middle Ages' (1866), 'Evansong' (1867), 'Off the Downs in the Days of the Omars,' and two domestic subjects (1868). Since 1859 Hodgson had been living at 5 Hill Road, Abbey Road, and he became a member of the group known a little later as 'the St. John's Wood set,' of which Philip Calderon [q. v. Suppl.] was the leader. A journey to the north of Africa in 1868 led to a change of subjects, and the first of his oriental pictures, 'An Arab Story-teller,' was exhibited at the Royal Academy in 1869. This was followed by a long series of pictures of life in Morocco, Algeria, and Tunis, such as 'An Arab Patriarch' (1871), 'The Snake Charmer' (1872), 'A Tunisian Bird-seller' (1873), 'The Temple of Diana at Zaghouan' (1876), 'An Eastern Question' and 'The Pasha' (1878), 'Gehazi' and

'The French Naturalist in Algiers' (1879). Hodgson was elected an associate of the Royal Academy on 28 Jan. 1873, and an academicien on 18 Dec. 1879. About this time he painted marine subjects, such as 'Homeward Bound' (1880), 'Bound for the Black Sea' and 'A Shipwrecked Sailor waiting for a Sail,' his diploma work, exhibited in 1881. He was more versatile in his later years, when he exhibited, among other works, 'Painter and Critic,' 'Hobbs's Country,' and 'In the Low Countries' (1882), 'Robert Burns at the Plough' (1887), and landscapes such as 'Rural England' and 'Coleshill Common.' He exhibited, in all, ninety pictures at the Royal Academy and about half that number at other galleries.

Hodgson, who was a good scholar and linguist, was appointed librarian to the Royal Academy in 1882 in succession to Solomon Alexander Hart [q. v.], and professor of painting later in the same year in succession to Edward Armitage [q. v. Suppl.] He discharged the duties of both offices with zeal and efficiency during the remainder of his life, and was also of much service in organising the winter exhibitions of old masters. He contributed, jointly with Mr. Frederick Eaton, a series of articles on the history of the Academy in the eighteenth century to the 'Art Journal' in 1889. He also published 'Academy Lectures' in 1884, and 'Fifty Years of British Art' on the occasion of the Manchester exhibition in 1887. He was a contributor to the 'Architect' and other periodicals and journals.

Hodgson died on 19 June 1895 at The Larches, Coleshill, near Amersham, Buckinghamshire, where he had resided for about ten years.

[Men of the Time; Times, 22 June 1895; Athenaeum, 29 June 1885; Illustrated London News, 29 June 1895; Newcastle Chronicle, 24 June 1895; Black and White, 29 June 1895 (portrait).] C. D.

HOGG, JABEZ (1817-1899), ophthalmic surgeon, the youngest son of James Hogg and Martha, his wife, was born at Chatham, where his father was employed in the royal dockyard, on 4 April 1817. He was educated at Rochester grammar school, and in 1832 was apprenticed for five years to a medical practitioner. In 1849 he published a 'Manual of Photography,' which brought him to the notice of the proprietors of the 'Illustrated London News.' He joined the staff of this periodical, and from 1850 to 1866 he acted as editor of a series of illustrated educational works published by Mr. Herbert Ingram. In 1846 he was sub-editor of the 'Illuminated Magazine,' to which Hablot K. Browne and

John Leech both contributed, and he edited the 'Illustrated London Almanack' for fifty-one years.

Hogg entered as a student at the Hunterian School of Medicine and at Charing Cross Hospital in 1845, though he was not admitted a member of the Royal College of Surgeons of England until 1850. By the advice of George James Guthrie [q. v.] he devoted himself more particularly to the study of diseases of the eye, and he soon became proficient in the use of the ophthalmoscope, then newly introduced. On 1 Feb. 1855 he was appointed at the Royal Westminster Ophthalmic Hospital as personal assistant to Guthrie, the founder of the hospital, and here he was elected to the office of surgeon on 2 Feb. 1871, a position he resigned under an age limit on 7 June 1877. He was also ophthalmic surgeon to the Hospital for Women and Children in the Waterloo Bridge Road and to the masonic charities.

He was a vice-president of the Medical Society of London in 1851-2, and was elected a fellow of the Linnean Society in 1860. He served as honorary secretary of the Royal Microscopical Society from 1867 to 1872, and he was first president of the Medical Microscopical Society. He was a prominent freemason, both in the craft and arch degrees. He died on 23 April 1890, and is buried in Kensal Green cemetery. He married, in 1841, Mary Ann, a daughter of Captain Davis of the Indian navy, and in 1859 the youngest daughter of Captain James Read.

Hogg's works were: 1. 'The Domestic Medical and Surgical Guide, . . . to which is appended Advice on the Preservation of Health at Sea,' London, 1853, 8vo; 5th edit. 1860. 2. 'Elements of Experimental and Natural Philosophy,' London, 1853, 8vo; new edit. 1861; also issued in Bohn's 'Scientific Library.' 3. 'The Microscope, its History, Construction, and Applications,' London, 1851, 8vo; 15th edit. 1898. 4. 'A Practical Manual of Photography,' 5th edit. London, 1856, 12mo. 5. 'The Ophthalmoscope, its Mode of Application explained,' London, 1858; 2nd edit. 1858. 6. 'A Manual of Ophthalmoscopic Surgery,' 3rd edit. London, 1863, 8vo. 7. 'On Acanth and its Treatment, Medical and Surgical,' London, 1869, 8vo. 8. 'Skin Diseases,' London, 1873, 8vo; 2nd edit., under the title 'A Parasitic or Germ Theory of Disease,' London, 1873, 8vo. 9. 'Impairment and Loss of Vision from Spinal Connexion,' London, 1876, 8vo. 10. 'The Cure of Cataract and other Eye Affections,' London, 8vo; 1878, 12mo; 3rd edit. London, 1882, 8vo. He also

edited the 'Journal of British Ophthalmology,' 1864, 8vo.

[Lancet, 1890, i. 1203; Times, 26 April, 1890, Men and Women of the Time, 1891, 12th edit., additional information kindly given by Mr. T. Benthie Campbell, secretary to the Royal Westminster Ophthalmic Hospital.] D.A.P.

HOGHTON, DANIEL (1770-1811), major-general, born 28 Aug. 1770, was second son of Sir Henry Hoghton, sixth baronet, of Hoghton Tower and Waltonhall, Lancashire, M.P. for Preston, by his second wife Fanny, eldest daughter of Daniel Booth, a director of the Bank of England. Without passing through the lower grades he obtained a majority in the 97th (Strathpey highlanders) on its formation, 8 Feb. 1794. After serving as a regiment of marines in the channel fleet, it was disbanded in 1795, and he was transferred to the 67th foot on 12 Aug. 1795. The 67th went to St. Domingo in 1796, and thence to Jamaica in 1798. On 31 Jan. 1799 Hoghton was transferred to the 88th (Connaught rangers), and joined it in India. The regiment formed part of the expedition sent to Egypt under Baird in 1801, but Hoghton seems to have remained in India, and to have been sent home with despatches from Lord Wellesley in the spring of 1801.

He had become lieutenant-colonel in the army on 3 May 1790, and on 22 Nov. 1801 he was appointed lieutenant-colonel of the newly raised second battalion of the 8th foot. On 1 Jan. 1805 he was promoted colonel in the army. He remained at home with his battalion till April 1810, when he was appointed to the staff of the British force at Cadiz as brigadier. He was promoted major-general on 25 July, and in September he left Cadiz to join Wellington's army in Portugal. He was given the command of the third brigade of the second division under Stewart [see STEWART, SIR WILLIAM], with whom he had served at Cadiz, and who had been his lieutenant-colonel in the 67th.

In the battle of Albuera (16 May 1811), when the Spaniards gave way on the right, Stewart's division was hurried up to take their place. Its leading brigade (Colborne's) was nearly destroyed by a flank attack of cavalry, and Hoghton's brigade was deployed and moved up to the crest of the hill, which had become the key of the position. There it maintained itself for some hours against the 5th French corps, eleven thousand strong, its three regiments (29th, 57th, and first battalion 48th) losing three-fourths of their men. Hoghton himself was killed as he led forward the 29th. Wollington wrote to Lord Wel-

lesley: 'I understand that it was impossible for anybody to behave better [than he did] throughout the terrible scene, to him novel, in which he was an actor. He was not only cool and collected, as he ought to have been throughout the action, but animated and anxious to a degree beyond what could have been expected from his former habits, and the indifference with which he always appeared to perform the ordinary duties of his profession; and he actually fell waving his hat and cheering his brigade on to the charge' (*Suppl. Desp.* vii. 134). A public monument was voted to him by parliament, and was placed in the north transept of St. Paul's.

HOHENLOHE - LANGENBURG, PRINCE VICTOR OF, COUNT GLADENB., 1833-1891. [See VICTOR.]

HOLDEN, HUBERT ASHTON (1822-1896), classical scholar, born in 1822, was a member of an old Staffordshire family. He was educated at King Edward's School, Birmingham, under Francis Jeune [q. v.] (afterwards bishop of Peterborough), and subsequently under James Prince Lee [q. v.] (afterwards bishop of Manchester). He proceeded to Trinity College, Cambridge, and in his first year of residence, 1842, gained the first Bell university scholarship. He graduated B.A. in 1845, being senior classic, and junior optime in the mathematical tripos, and was fellow of Trinity College from 1847 to 1854; he was LL.D. in 1863. In 1848 he was ordained deacon, and took priest's orders in 1859. He discharged the duties of assistant tutor and classical lecturer of his college from 1848 until 1853, when he was appointed vice-principal of Cheltenham College, and continued in that post until 1868. From 1858 to 1883 he was head-master of Queen Elizabeth's School, Ipswich. In 1890 he was appointed by the crown to a fellowship of the university of London, in which he had been classical examiner from 1869 till 1874, and examiner in Greek from 1886 till 1890. In 1892 the degree of Litt.D. was conferred on him by Dublin University. He died on 1 Dec. 1896, at 20 Redcliffe Square, London, in his seventy-fifth year, and was buried on 5 Dec. at Highgate cemetery.

Holden, who was a classical scholar of fine taste and full knowledge, edited a number of classical works for students. Those

by which he was best known are '*Foliorum Silvula: Selections for Translation into Latin and Greek Verse*, chiefly from the University and College Examination Papers,' Cambridge, 1852 (four parts: pt. i. 2nd ed. 1888; pt. ii. 4th ed. 1890; pt. iii. 3rd ed. 1864); '*Foliorum Centuriæ*, 1852 (10th ed. 1888), a similar collection of pieces for translation into Latin and Greek prose, and '*Folia Silvulæ, sive Eclogæ Postarum Anglicorum in Latinum et Græcum conversæ*' (Cambridge, vol. i. 1865; vol. ii. 1870), containing select translations, by various hands, of pieces from the preceding volumes. All these were edited for the syndice of the Cambridge University Press. For the same body he edited Cicero's '*De Officiis*' (1869; 6th ed. 1886; revised edition, 1898), and '*Pro Gneo Plancio Oratio ad Judices*' (1881); Xenophon's '*Cyropaedia*' (3 vols. 1887-90); Plutarch's '*Lives of the Gracchi*' (1885), '*Lucius Cornelius Sulla*' (1885), '*Nicias*' (1887), '*Timoleon*' (1889), and '*Demosthenes*' (1893); the '*Octavius*' of Minucius Felix: the text newly revised from the original manuscript (1853); '*Thucydides*, book vii.' (1891); the comedies of Aristophanes' (1848). Holden edited also the following among other works for Macmillan's '*Classical Series*': Plutarch's '*Lives of Pericles* (1894) and Themistocles (1881; 3rd ed. enlarged, 1892); Xenophon's '*Hieron*' (1883; 3rd ed. 1888).

A cousin, Henry Holden, D.D. (b. 1814), hon. canon of Durham, edited, with Richard Dacre Archer Hind, '*Sabrinæ Corolla in Hortulis Regiæ Scholæ Salopiensiæ continuaverunt tres Viri Floribus Legendis*' (1850; 4th ed. 1890), a collection of poetical extracts with translations into Latin or Greek.

[*Men of the Times*, 14th ed. 1895; *Times*, 4 Dec. 1896; *Luard's Cantabr. Grad.*; *Brit. Mus. Cat.*] C. E. H.

HOLDEN, SIR ISAAC, bart. (1807-1897), inventor, born at Harlet, near Paisley, on 7 May 1807, was the son of Isaac Holden, who was sprung from a race of yeomen in Allandale, Cumberland, but who migrated to Glasgow in 1801, and became headman at the Wellington coal pit at Nitehill, between Paisley and Glasgow. His mother, Alice Holden, belonged to a Scots family named Forrest. His parents were very badly off, and Isaac began to earn at ten as 'draw-boy' to two weavers in the district. He next entered a cotton mill, where he laboured fourteen hours a day, and then maintained a regular attendance at the night school. When Isaac was fourteen his

father managed to give him a little more schooling, the family having removed in the meantime to Kilbarchan and Johnstone, and then back to Paisley, where he learnt Latin under a capable teacher. In 1823, after a year's experience at shawl weaving, which proved too much for his strength, Isaac joined the school of James Kennedy at Paisley, where he soon became an assistant teacher. In 1826 his father died, and he found his mother and a younger brother dependent upon him. Leaving Kennedy's school in January 1828 he became mathematical teacher successively at Leeds, Huddersfield, and Reading. There, in October 1829, the idea of applying sulphur to the explosive material that was necessary to produce instantaneous light first occurred to him. The idea was circulated by him without any reserve, and shortly afterwards friction matches or lucifers came into common use. Many years later Holden claimed the invention, but he did so with modesty and reserve, and it cannot be said that his claim has been established. In February 1894 he virtually abandoned his claim to priority in favour of John Walker (1781?–1859) [q. v.] of Stockton-on-Tees, though he still claimed complete independence for his invention (made two years and six months after the first record of the sale of 'friction lights' in Walker's day-book). In June 1830 Holden returned from Reading to Glasgow, and he seems for a time to have cherished the idea of entering the Wesleyan ministry, but an accident determined his career in another direction. In November 1830 he was strongly recommended by some friends for the post of bookkeeper in the old-established firm of Townend Brothers, worsted manufacturers of Ollingworth, near Ilkley, in Yorkshire. Holden promptly sold the goodwill of the school he was about to set up, abandoned the idea of the ministry, and set out for his new post, devoting himself for over sixteen years with the utmost energy to the interests of the Townends, in whose service his inventive faculties had full play. He was rapidly moved from the counting-house to the mill; his application to the work was intense, and he was soon meditating the application of machine power to the various operations of wool-combing. The Townends, however, were averse from acquiring exclusive rights, and they were unwilling to aid him in patenting his square-motion wool-comber, which was his most important invention. When they took up the same attitude with regard to his new process for manufacturing gauze yarns in 1846, Holden left them, and became associated with

another inventor, Samuel Cunliffe Lester, afterwards first baron Masham. In conjunction with him, having obtained a patent for a new method of carding and combing and preparing gauze yarns (Patent 11,350, 7 Oct. 1847), and having brought the new machinery as near perfection as possible, Holden opened a large fabrique at St. Denis, near Paris, in 1848. In 1864 Holden concentrated his business at Bradford, and it rapidly became the largest wool-combing concern in the world, counting over thirty millions of fleeces yearly, branching out at Orléans, near Roubaix, and at Rheims, and employing over four thousand persons. The foreign establishments were managed in the main by his son and son-in-law, Isaac Holden Brothers; but Holden relaxed none of his industry, and amassed an enormous fortune, becoming widely known as a model employer and a munificent patron. He remained a devout Wesleyan, and in 1865 he entered parliament for Knaresborough as a supporter of Gladstone. He lost his seat in 1868, but sat for the Keighley division from 1882 until his retirement from politics in 1891. He was created a baronet by Gladstone on 1 July 1893. As he grew older Holden became a valetudinarian, and studied longevity as an art with all his old assiduity. The essential things he regarded to be fresh air, fruit, and exercise. In order to enable his wife to take walking exercise in bad weather, he erected an enormous winter garden at a cost of 120,000*l.* at Oakworth House, near Keighley, where he also fitted up a Turkish bath. In regard to diet he was extremely punctilious. Like Wesley, whose 'Natural Philosophy' he studied as a boy, he saw in farinaceous food a thing to be avoided by the elderly. 'I take for breakfast,' he said, 'one baked apple, one orange, twenty grapes, and a biscuit made from bananas. My midday meal consists of about three ounces of beef, mutton, or fish, with now and again a half cupful of soup. For supper I repeat my breakfast menu.' The orange was his favourite fruit. Wine he eschewed; but on returning from the House of Commons to Queen Anne Mansions he had a tumbler of hot whisky and water. He took no drink with his food, which obliged him to masticate well. He smoked two or three cigars a day, a practice which he claimed to be beneficial. But for the whisky and cigars he was regarded by enthusiasts of self-help as a model which not even Dr. Smiles could have improved upon. Sir Isaac retained his health and his faculties to the very last, dying in his ninety-first year, at his seat of Oakworth, on 18 Aug. 1897.

He married, first, in 1832, Marion (d. 1847), daughter of Angus Love of Paisley; secondly, in 1850, Sarah (d. 1890), daughter of John Sugden of Keighley. By his first wife he left Sir Angus Hollond, M.P., the second baronet, another son, and two daughters.

[*Times*, Daily Chronicle, and Daily News, 14 Aug. 1897; London Society, xxxv. 231; Debrett's Baronetage, 1897, p. 295, Edwards's Fortunes made in Business, Repertory of Arts, xi. 273; Pratt's People of the Period; information kindly given by Dr. W. A. Bone of Owens College.] T. S.

HOLLOND or HOLLAND, JOHN (fl. 1638-1659), naval writer, entered the king's service about 1624 (*Discourses*, p. 8) as clerk to Captain Joshua Downing, who resided at Chatham as assistant to the commissioners of the navy (cf. *Cal. State Papers*, Dom. 1625-6 p. 480, 1627-8 p. 135, 1628-9 p. 454; *Hist. MSS. Comm.* 12th Rep. i. 370). Hollond succeeded Kenrick Edisbury as paymaster of the navy before 1635 (*Cal. State Papers*, Dom. 1635, p. 2). In October 1636 the Earl of Northumberland, admiral of the shipmoney fleet, accused Hollond in a statement of abuses in the navy (HOLLOND, *Discourses*, appendix) of benefiting by corrupt commissions. Hollond pleaded prescription 'of thirty years past' (*ib.* pp. 394, 398). The special practice was prohibited by an order in council dated 16 March 1638-7 (*ib.* p. 404), but the paymaster was not otherwise censured. He was still occupying his post when the 'First Discourse of the Navy' was written, in 1638 (p. 66), and it is quite possible that he retained it until the outbreak of the civil war, notwithstanding the fact that he was selling timber and plank to the government for the use of the navy in September 1639 (*Cal. State Papers*, Dom. 1639, p. 525).

When the control of the navy passed to the parliament the functions of the principal officers other than the treasurer were transferred to a body of three commissioners appointed by an ordinance of 16 Sept. 1642, to serve at a salary of 200*l.* a year each (*Commons' Journals*, iv. 390). To these Hollond was soon afterwards added. He continued to act in this capacity until 1645 or 1646, when he resigned and reverted temporarily to the timber trade (*Discourses*, p. 312). By an act of 16 Jan. 1648-9 Hollond was made a member of a 'committee of merchants for the regulation of the navy and customs,' by purging the administration of royalists, untrustworthy officials, and 'unusoful places' (*SCOMMER*, ii. 1). Afterwards, by the good offices of the 'committoe of merchants,' he

was promoted to be surveyor of the navy in succession to Sir William Batten [q. v.] (*Discourses*, p. 121). His salary of 300*l.* a year dates from 16 Feb. 1648-9 (*Pipe Office Declared Accounts*, Roll 2287).

Hollond soon fell out with the 'committee of merchants' (cf. *Second Discourse*, pp. 120-4). As a member of the parliament's new commission of the navy he set his face vigorously against corruption in appointments and contracts, and drew on himself much unpopularity (*Cal. State Papers*, Dom. 1649-53, *passim*; cf. *Pepysian Miscellanies*, iii. 382). On 29 Dec. 1652 he was discharged from his place as commissioner (*Commons' Journals*, vii. 237; *Discourses*, p. 296; *Cal. State Papers*, Dom. 1652-3, p. 8).

Holding thenceforth no post in the navy, he gave up his official residences at Tower Hill (*Cal. State Papers*, Dom. 1653-4, p. 216), and settled at Deptford, where he engaged once more in the timber trade (*ib.* 1652-3 p. 618, 1656-7 p. 479). After the Restoration Pepys noticed him as the author of a project for restoring depreciated seamen's tickets to their full value (*Diary*, 30 Nov. 1660). He was at that time secretary to Sir George Carteret, treasurer of the navy (*ib.* Wheatley's note). His connection with Deptford was maintained in his later life. In August 1666 his daughter Mabel died there of the plague, and in December 1670 another daughter, Mary, was buried there. His widow was also buried there on 28 Feb. 1691-2. The registers give no reference to his own death.

Hollond's 'First Discourse of the Navy,' dated 1638, treats of the administration of the navy by the principal officers under the three heads wages, victuals, and stores, and exposes various abuses connected with each. The 'Second Discourse of the Navy,' dated 1650, appears from internal evidence to have been written under the Protectorate, perhaps as early as 1656 or 1657, and to have been revised in 1659. The dedication to James, duke of York, is dated 1661, and it is not unlikely that the 'Discourse' was used as a bid for office under the restored monarchy. The 'Second Discourse' deals with the same subjects as the 'First,' but the treatment is much fuller, and the abuses exposed are for the most part different. There is also a remarkable improvement in the writer's literary style. Samuel Pepys, in the 'Diary' (25 July 1662 and 19 March 1669), speaks of the 'Discourses' in the highest terms. Sir William Penn described the 'First Discourse' as 'writ by an able hand . . . and most fit to be read, and in

the most material parts to be the measure of those that would perfect themselves in naval affairs' (*Sloane MSS.* 3232).

Holland's 'First and Second Discourses,' with Sir Robert Slynghobio's 'Discourse of the Navy' appended, have been printed in vol. vii. of the publications of the Navy Records Society from manuscripts in the Pepysian Library at Magdalene College, Cambridge. An account of the other accessible manuscripts is given in the introduction to that volume. Holland's paper of 9 Aug. 1652, against 'permitting the master shipwright to keep a private yard,' is to be found among the state papers (*Cal. State Papers*, Dom. 1651-2, p. 362), and there is also a copy among the Pepysian MSS. (*Miscellanies*, iii. 382).

[Holland's Discourses of the Navy, ed. J. R. Tanner for the Navy Records Society, 1896, vol. vii.] J. R. T.

HOLLOWAY, SIR CHARLES (1740-1827), major-general royal engineers, was born on 17 April 1740. On attaining the age of fifteen he entered the drawing room of the board of ordnance at the Tower of London (7 Feb. 1764), and in 1772 went to Portsmouth to assist the commanding royal engineer with the plans of the new fortifications. On 16 Jan. 1776 he received a commission as second lieutenant in the royal engineers. His further commissions were dated: lieutenant, 1 Jan. 1783; captain lieutenant, 16 Jan. 1793; captain, 31 Dec. 1795; brevet major, 1 Jan. 1801; lieutenant-colonel, 20 July 1804; colonel, 1 May 1811; major-general, 4 June 1814.

In 1777 Holloway went to Gibraltar, arriving there on 17 Sept. During the first part of the celebrated siege of Gibraltar, which began in the summer of 1779, he was staff officer to the chief engineer, Colonel (afterwards General Sir) William Green [q. v.], as well as adjutant of the engineers and of the artillery company. On 17 April 1781 he was made brigade major, and when Green became a major-general he was appointed his aide-de-camp on 18 Oct. 1782. On 4 Jan. 1783 he was severely wounded by the splinter of a shell from the enemy's mortar boats. During the siege he was indefatigable in his exertions and kept a diary of his doings, which fills three folio volumes, and is in the possession of the family. Before his return to England on 7 June 1783 the governor, Sir George Augustus Eliott, afterwards Lord Heathfield [q. v.], thanked him on parade in the presence of the garrison for his services during the siege. He figured in the picture of the principal officers serving in the siege

which was painted by Copley for the city of London.

On 1 Oct. 1784 he joined Major-general William Roy [q. v.], and for three years assisted him in his survey triangulations from the Hounslow base to the Kentish coast, and in connecting the English with the French system of triangulation in 1787. For the next ten years he was employed in the ordinary duties of his corps in the Eastern, Thames, and Woolwich military districts, and was also particularly engaged in strengthening the Tower of London in 1792.

In October 1798 Holloway was selected to be commanding royal engineer and second in command with the local rank of major of a military mission under Brigadier-general George Frederic Koehler [q. v.] to assist the Turks in the reorganisation of their army. He left London with the mission on 8 Dec. and on the 24th was shipwrecked among the ice at the mouth of the Elbe. The mission was rescued and travelled across the continent to Constantinople, where it arrived on 28 March 1799. In June, in conjunction with Major Robert Hope of the royal artillery, Holloway reported upon the fortifications of the Dardanelles and the defence works necessary for the better security of that passage, and of Tenedos and the gulf of Saros. The report was approved and the works were commenced.

On 2 July 1800 the British mission joined the Ottoman army in Syria under the grand vizier. It was encamped at Jaffa after retiring from Egypt, and, at the grand vizier's request, Holloway entrenched the camp and designed additional defences for Jaffa, which were at once put in hand. A virulent attack of plague towards the end of the year caused great mortality, and carried off Koehler on 29 Dec. The command of the mission then devolved upon Holloway, who received the local rank of lieutenant-colonel from 1 Jan. 1801, when he also obtained his brevet majority. Early in the following month, the plague having ceased, the Turkish army advanced and, after crossing the desert, came in contact with a superior French force under General Bonaparte in May. Although nominally the Turkish army was commanded by the grand vizier, Holloway practically commanded it, both in the advance from Jaffa and at the battle of El Hanka on 16 May. The fight lasted for seven hours, when the French were defeated and fell back. On 12 July Holloway entered Cairo with the mission, which remained there until 18 Feb. 1802. The mission returned home in charge of Major (afterwards Sir) Richard Fletcher [q. v.], royal engineers, and Holloway went

to Alexandria. Later he visited Constantinople and Vienna on his return to England, where he arrived on 12 July. For his services with the Turkish army, of which Lord Elgin, the British ambassador at Constantinople, wrote in the highest terms (see despatch, *Wilson's Hist. of the British Expedition to Egypt*, ii. 244, 1803, 8vo), Holloway, who had been invested by the sultan with a pelisse on five different occasions and presented with a gold medal in November 1801, was knighted on 2 Feb. 1803.

In March 1803 he took up the post of commanding royal engineer of the Cork district, and was active in carrying out works of defence in Cork harbour. On 25 July 1805 he was appointed a member of a committee upon a permanent system of defence for Ireland and also of the engineer committee at the Tower of London. He was nominated commanding royal engineer at Gibraltar on 30 Jan. 1807, where he arrived on 18 Sept. He kept another diary during his stay, which in seven quarto volumes of manuscript is in the possession of the family. Its copious references to the frequently changing officers of the garrison, and the narrative of daily routine are of interest chiefly to the military antiquary.

In 1809 Holloway reported on the defences of Cadiz, Ceuta, Algeciras, &c., and in the following year, with the consent of the Spanish authorities, he demolished by mines the Spanish forts and lines in front of the fortress on the north of the neutral ground of the Gibraltar isthmus to prevent their use by the French.

In 1813 and 1814 a malignant fever raged in the garrison with alarming fatality. Holloway and all his household wore ill. His son Charles, a lieutenant in the royal artillery, died on 19 Oct. 1813, and his daughter, Helen Smith, the wife of an officer of the garrison, on the 22nd, and he lost three servants. He returned to England in September 1817, and retired from the army in 1824. He settled down at Devonport, where he died at Stoke Cottage on 4 Jan. 1827.

He married Helen Mary (d. 11 April 1798), second daughter of General Sir William Green [q. v.], by whom he had several children besides those already mentioned.

His eldest son, WILLIAM CUTHBERT ELPHINSTONE-HOLLOWAY (1787-1850), born on 1 May 1787, after passing through the Royal Military Academy at Woolwich, obtained a commission as second lieutenant in the royal engineers on 1 Jan. 1804. His further commissions were dated: lieutenant 1 March

1805, second captain 24 June 1809, captain 21 July 1813, brevet major 21 June 1817, lieutenant-colonel 20 Feb. 1828, colonel 23 Nov. 1841. After serving under his father at Cork harbour he went in December 1807 to Madeira, then in British occupation, and spent one year there. He was then employed in the eastern military district at home, and went to the peninsular war early in 1810. He served in the lines of Torres Vedras, and in various operations of the campaign, including the final siege of Badajoz, where he was shot through the body after having gained the parapet of Fort Picurina in the successful assault of 25 March 1812. After a visit to his father at Gibraltar he returned to England in August. For his services in this peninsula he received the silver medal and clasp for Badajoz, a brevet majority, and a pension for his wound. After serving in Wales, the Isle of Man, and the eastern military district, he went in October 1818 to the Cape of Good Hope as commanding royal engineer, and rendered good service in the Kaffir troubles of 1819 and later, and executed some useful surveys during the thirteen years he spent there. For his services, on his return to England, he was made a companion of the order of the Bath on 26 Sept. 1831. He was sent on particular service to Ireland in 1833, was commanding royal engineer in Canada from April 1843 to August 1849, and in the western military district until his death at Plymouth citadel on 4 Sept. 1850. He was buried in Plymouth cemetery, where a monument to his memory was erected by his widow. He married Amelia (d. 12 July 1874), second daughter and coheir of Captain Thomas Elphinstone, R.N., brother of Sir Howard Elphinstone, first baronet. He took the surname of Elphinstone in addition to and before that of Holloway (*Lond. Gaz.* 26 Feb. 1825).

Wittman's Travels in Turkey, 1802; Jones's Sieges in Spain; Wilson's British Expedition to Egypt.*] R. II. V.

HOOPPELL, ROBERT ELI (1833-1895), antiquary, born in the parish of St. Mary, Rotherhithe, Surrey, on 30 Jan. 1833, was the son of John Eli and Mary Ann Hooppell. He was educated at Queen Elizabeth's free grammar school, St. Olave's, Southwark, and was admitted sizar at St. John's College, Cambridge, on 30 June 1851. He was also a scholar of the college. In 1855 he graduated B.A., being fortieth wrangler

in the mathematical tripos, and in 1856 he obtained a first-class in moral science. He proceeded M.A. in 1858, LL.D. in 1865, and was admitted ad eundem at Durham.

From 1855 to 1861 Hooppell was second and mathematical master at Beaumarie grammar school. He was ordained deacon in 1857, and priest in 1859, and from 1859 to 1861 he served as English chaplain at Menai Bridge. On the foundation at South Shields in 1861 of Dr. Winterbottom's nautical college he was appointed the first head master, and he remained in that position until 1875, when he was instituted to the rectory of Byers Green, co. Durham. For the last year or two of his life he was in delicate health, and wintered at Bournemouth. He died at the Burlington, Oxford Road, in that town on 28 Aug. 1895, and was buried in Bournemouth cemetery. He married at Broxbourne, Hertfordshire, on 20 June 1855, Margaret, daughter of Samuel and Elizabeth Hooppell of Pishloigh, Devonshire; she survived him with two sons and one daughter.

Hooppell served on the committee which superintended the excavation of the Roman camp at South Shields. His paper on the discoveries there (*Natural History Transactions of Northumberland*, vii. 120-42) was the prelude to a lecture, published in 1870, on 'Vinovium, the buried Roman City at Binchester,' between Bishop Auckland and Byers Green, and in 1891 'Vinovia, a buried Roman City,' with thirty-eight illustrations. The substance of this treatise appeared in the journal of the British Archaeological Association, and he contributed to the same journal for 1895 a paper on 'Roman Manchester and the Roads to and from it.' From 1877 he read papers on the names of Roman stations before the Newcastle Society of Antiquaries, and he contributed to the 'Archæologia Aëliana' and the 'Illustrated Archaeologist.' His address, as president of the Tyneside Naturalists' Field Club, is in the 'Natural History Transactions of Northumberland,' vii. 187-206, and after his death there was published in 1898 a volume entitled 'Rambles of an Antiquary,' being a series of papers sent by him to the 'Newcastle Courant' in 1880 and 1881, chiefly on the antiquities of Northumberland and Durham.

Hooppell also published, in addition to several single sermons, 'Reason and Religion, or the leading Doctrines of Christianity,' 1837; 2nd ed. 1895; and 'Materialism, has it any real Foundation in Science?' 2nd ed. 1874.

W. P. C.

HOPKINSON, JOHN (1819-1889), electrical engineer, eldest son of John Hopkinson, mechanical engineer, was born on 27 July 1819 at Manchester. He was educated under O. Willmore at Queenwood, Hampshire. In 1835 he became a student at Owens College, Manchester, and in 1844 gained a Whitworth scholarship. He studied mathematics under Professor Barker at Owens, and, acting under the professor's advice, entered for and won a minor scholarship at Trinity College, Cambridge, in 1857. At Cambridge he devoted himself to mathematics as his chief study, under Dr. Routh, and in 1871 he became senior wrangler, and subsequently Smith's prizeman. While in residence at Cambridge he proceeded to a degree in science in the university of London (D.Sc. 1871). Shortly after his tripos he was elected a fellow of Trinity College, Cambridge. In 1871 he entered his father's works, and in 1872 he became manager and engineer in the light-house and optical department of Messrs. Chance Brothers of Birmingham. In 1874 he invented the group flash system for enabling mariners to distinguish one light from another, the flashes in his system being of varying length and separated by varying intervals of darkness as characterising the lights more distinctly. His great mathematical abilities proved to be of the utmost value to him in this optical work, and later on in his electrical work. His views as to the relation of mathematics to engineering were fully set forth in his 'James Forrest' lecture delivered at the Institution of Civil Engineers in 1891 (*Proc. Inst. Civil Engineers*, cxviii. 330).

Stimulated by the publication of James Clerk Maxwell's [q.v.] 'Electricity and Magnetism' in 1873, and on the advice of Sir William Thomson (now Lord Kelvin), he carried out in 1876-7 a valuable series of experiments on the residual charge of the Leyden jar, and on the electrostatic capacity of glass. The results of these researches were published in four papers in the 'Philosophical Transactions' of the Royal Society, (1876-1881), and he worked continuously on this subject almost up to the time of his death, the last paper he published on the question being one on 'The Capacity and Residual Charge of Dielectrics as affected by Temperature and Time' (*Phil. Trans.* 1897).

In 1878 he resigned his post with Messrs. Chance Brothers and set up as a consulting

engineer in London, and in the same year he was elected a fellow of the Royal Society, serving on the council 1886-7 and 1891-3. He continued to act as scientific adviser to Messrs. Chance Brothers, and was also frequently engaged as an expert witness in patent cases.

The Paris exhibition of 1881 brought into great prominence electric lighting and electric transmission of power, and in this exhibition Hopkinson showed an alternate current dynamo of a new type, and a hoist with reversible motor. Two important papers from his pen in 1879 and 1880 were read before the Institution of Mechanical Engineers; in these papers he endeavoured to elucidate the theory of the dynamo machine, and he introduced for the first time the action of the characteristic curve (*Proc. Inst. Mech. Engineers*, 1879-80). In 1882 he took out his well-known patent for the three-wire system of distributing electricity. In 1883, in an address delivered before the Institution of Civil Engineers, entitled 'Some Points in Electric Lighting' (*Inst. of Civil Engineers' lectures on 'The Practical Application of Electricity'*), he described his first important improvements in the dynamo; but the general solution of the problem involved was not given to the world until the publication of a joint paper by Hopkinson and his brother, Edward Hopkinson, in 1886 (*Phil. Trans.* 1886). In this paper the first portion was devoted to the construction of the characteristic curve for a machine of given dimensions, and the second half to a description of actual experiments on a dynamo to verify the theories set forth in the first part, and to an investigation into the causes of any discrepancies. This paper was undoubtedly the most important publication by Hopkinson on the practical applications of electricity, and was the foundation of the accurate design of dynamos in accordance with theory.

In 1890 he was appointed professor of electrical engineering and head of the Siemens Laboratory at King's College, London. Though he did no actual teaching in connection with this post, it gave him the necessary facilities for carrying on his researches on the dynamo, and his direction of the laboratory was of great value in stimulating the students, and providing advanced students with suggestions for researches. In this work he was assisted by Mr. E. Wilson, and a number of papers were published in the 'Philosophical Transactions of the Royal Society' on their joint experiments on the effect of armature reaction, on the efficiency of transformers, and on alternating currents (*Phil. Trans.* 1894-6).

VOL. XXII.—SUP.

In 1885 he published the results of a series of experiments on the magnetic properties of iron, and for his researches in this subject he was awarded in 1890 a Royal Society medal.

It was not until 1891 that Hopkinson had an opportunity of carrying out any constructive engineering of importance outside the field of lighthouse work. In that year he was appointed by the corporation of the city of Manchester as their adviser on the electric lighting of the city, and he acted as consulting engineer during the carrying out of the work; from 1896 he was also consulting engineer to the corporations of Leeds, Liverpool, and St. Helens, in respect of their works for electric traction. In connection with the Manchester scheme he introduced an important innovation into the system of charging customers for the current used; he had advocated this method as far back as 1888. In the plan adopted the customer of the electricity supply works had to pay 'a charge, which is calculated partly by the quantity of energy contained in the supply and partly by a yearly or other rental, depending upon the maximum strength of the current to be supplied.'

In the field of electric traction he did a large amount of professional work; he was consulting engineer to the contractors for the electrical work on the City and South London Railway, and in 1896 he was electrical engineer for the Kirkstall and Roundhay Tramway at Leeds.

He joined the Institution of Civil Engineers in 1877, and in 1895 became a member of the council. He was also a member of the Institution of Electrical Engineers, and twice filled the office of president. It was owing to his initiative that the volunteer corps of electrical engineers (which sent a strong detachment for active service in South Africa in 1900) was formed, and he was appointed the first major in command of this corps.

Hopkinson was an ardent mountain climber, and his holidays were usually spent in climbing in Switzerland, especially in the neighbourhood of Arolla. His death, at the early age of forty-nine, was due to a terrible Alpine accident; on 27 Aug. 1898, accompanied by his son John and two of his daughters, he began the ascent without guides of the Petite Dent de Veisivi in the Val d'Hérens, an offshoot from the Rhone valley; how the accident, which led to the death of the whole party, occurred will never be known. A few days later the bodies of all were recovered and were buried in the cemetery at Territet. He is commemorated at Cambridge by a wing of the engineering

laboratory built by his widow and surviving children, and at Owens College by an electro-technical laboratory built by his father and other relatives. Hopkinson was a man of most unusual attainments. His great powers as an experimenter in the most difficult fields of scientific research were combined with a wide practical knowledge, and in many of his papers he was able in a quite unique way to employ his high mathematical ability in the solution of practical problems of great commercial importance.

He contributed, as a result of his researches, a great many papers to various learned societies. In the 'Philosophical Transactions of the Royal Society' appeared 'Residual Charge of the Leyden Jar,' 1876-7; 'Refractive Indices of Glass,' 1877; 'Electrostatic Capacity of Glass,' &c., 1877-80-1; 'Torsional Strains in Glass Fibre,' 1878; 'Dielectric Capacity of Liquids,' 1881; 'Magnetisation of Iron,' 1885; 'Dynamoelectric Machinery,' 1886; 'Specific Inductive Capacity,' 1887; 'Magnetic Properties of Impure Nickel,' 1888; 'Magnetic and other Physical Properties of Iron at a high Temperature,' 1889; 'Recalcrescence of Iron,' 1889; 'Magnetic Properties of Alloys of Nickel and Iron,' 1890; 'Physical Properties of Nickel Steel,' 1890; 'Density of Alloys of Nickel and Iron,' 1891. To the 'Philosophical Magazine of the Royal Society' he contributed 'Action of Magnetism on a Permanent Electric Current,' 1880; 'Refractive Index . . . of Transparent Insulating Media,' 1882; 'Quadrant Electromotor,' 1885; 'An Unnoticed Danger in Apparatus for Distribution of Electricity,' 1885; 'Seat of Electromotive Forces in a Voltaic Cell,' 1885; and to the 'Messenger of Mathematics': 'Math. Theory of Tartini's Beats,' 1872; 'Stresses caused by Inequalities of Temperature,' 1879. Among his other papers are 'Group-flashing Lights,' 1874 (Birmingham, 1890); 'Optical Properties of a Titanio-silicic Glass' (Brit. Assoc. 1875); 'Thermo-elastic Properties of Solids,' London, 1887; 'Electric Lighting' (Proc. Inst. Mech. Eng. 1879-80); 'Pres. Address to Junior Engineering Society on Cost of Electric Supply,' 1892; 'Electric Light-houses of Macquarie and of Tino' (Proc. Inst. Civil Eng. vol. lxxxvii.); 'Relation of Mathematics to Engineering' (Proc. Inst. Civil Eng. vol. cxviii.). A collected edition of his scientific papers was published in two volumes in 1901 by the Cambridge University Press.

[Obituary notice in Proc. Inst. Civil Engineers, vol. cxxxv.; Royal Society's Out. of Scientific Papers; private information.] T. H. B.

HORNBY, SIR GEOFFREY THOMAS PHIPPS (1825-1895), admiral of the fleet, second son of Admiral Sir Phipps Hornby [q. v.], was born at Winwick in Lancashire on 20 Feb. 1825. He entered the navy in March 1837 on board the Princess Charlotte, then fitting out as the flagship of Sir Robert Stopford [q. v.] in the Mediterranean. He remained in her till she was paid off in August 1841, and was thus present at all the operations in the Archipelago and on the coast of Syria in 1839 and 1840. (Sir Phipps Hornby was at this time superintendent of Woolwich dockyard, and the boy remained with him till the spring of 1842, when he was appointed to the Winchester, going out to the Cape of Good Hope as flagship of Rear-admiral Josceline Percy [q. v.]. From her, on 15 June 1844, he was promoted to be lieutenant of the Cleopatra, with Captain Christopher Wyvill (1793-1863) [q. v.], for two years' slaver-hunting on the east coast of Africa. In the summer of 1846 he was sent to the Caps in command of a prize, and in the following spring returned to England in the Wolverine. In August his father was appointed commander-in-chief in the Pacific; Hornby went with him as flag-lieutenant, and on 12 Jan. 1850 was promoted to be commander of the flagship Asia of 84 guns. In the summer of 1851 the Asia returned to England, and the admiral settled down at Littlecress, near Emsworth, a place which he had inherited some fourteen years before, though family arrangements had hitherto prevented his occupying it. Hornby meantime went with his kinsman, Lord Stanley, for a tour in India; but in Ceylon his health broke down, and he was obliged to get home as soon as possible. In the following year his father was a lord of the admiralty in Lord Derby's administration; and on its downfall Hornby was promoted to be captain, 18 Dec. 1852.

Partly, it may be, from political or party reasons, partly because he married in 1853, and in great measure, probably—being, by the death of his elder brother, the eldest son—to manage his father's property in Sussex, Hornby remained on half-pay till August 1858, when, under Lord Derby's ministry, he was appointed to the Tribune, then in Chinese waters. He joined her at Hong-kong in the end of October, and was almost immediately sent off with a detachment of marines to Vancouver's Island, in consequence of the dispute with the United States relative to San Juan, one of a group of islands between Vancouver's and the mainland. The ownership of the island remained an open question till 1872, when it was

settled in favour of the States; but in 1859 feeling on both sides ran high, and at one time war appeared to be imminent. That the difficulty was tided over was considered mainly due to the temper and tact shown by Hornby, whom the governor of Victoria wished to take forcible measures and the responsibility of them. When the dispute was temporarily compromised, the Tribune was ordered to England, arriving at the end of July 1860. In March 1861 Hornby was sent out to the Mediterranean to take command of the Neptune, an old three-decker converted into a screw two-decker, and manned by 'bounty' men, whom Hornby characterised as 'shameful riffraff.' Here he came under the command of Sir William Fanshawe Martin [q. v. Suppl.], and had some experience in that admiral's attempts at the devolution of steam manœuvres. At the time he thought them needlessly complicated and likely to be dangerous; but in later life he seems to have better recognised the difficulties which Martin had to contend with, and to have acknowledged the merit of Martin's work. His comments on this are particularly interesting, as there can be little doubt that it was this practice which first led to his own profound studies of the subject and to his future excellence in the management of fleets.

In November 1862 the Neptune returned to England, and in the following March Hornby was appointed to the Edgar as flag-captain of Rear-admiral Sidney Colpoys Dacres [q. v.], commanding the Channel squadron. This post he held till September 1865, when he was appointed to the Bristol as a first-class commodore for the west coast of Africa. Here Hornby continued till the end of 1867, when the state of his health, as well as his private affairs after the death of his father, forced him to apply to be relieved, and he reached England early in 1868. On 1 Jan. 1869 he was promoted to be rear-admiral, and was almost immediately appointed to the command of the flying squadron, which he held for two years. From 1871 to 1874 he commanded the Channel squadron, and from 1875 to 1877 he was one of the lords of the admiralty, an appointment which, to a man of very active habits, proved excessively irksome, the more so as he found himself out of agreement with the methods of conducting the business of the navy. His time, he complained, was so taken up with a hundred little details, that he was unable to give proper consideration to the really important affairs that came before him. On 18 Jan. 1877 he wrote: 'I left the admiralty with less regret and more pleasure than any work with which I have

hitherto been so long connected.' It was thus that, when offered the choice of being first sea lord or commander-in-chief in the Mediterranean, he unhesitatingly chose the latter, and he was accordingly appointed early in January 1877. He had been promoted to the rank of vice-admiral two years before, 1 Jan. 1875.

With his flag in the Alexandra, Hornby arrived at Malta on 18 March, and took up the command, which he held during two years of great political excitement. It was the time of the Russo-Turkish war, and in February 1878, the Russian army having advanced within what seemed striking distance of Constantinople, Hornby was ordered to take the fleet through the Dardanelles. The Turkish governor and government protested, probably as a matter of form and to avoid irritating the Russians; but they made no attempt to oppose the passage, though Hornby went through quite prepared to use force if necessary. A good deal was said at the time about the 'illegality' of the proceeding, but to Hornby, as to Lord Beaconsfield, the objection was a thing of naught, and the 'Times,' commenting on the movement, said, 'The admiral was directed to proceed to Constantinople, and he has proceeded.' He anchored the fleet, in the first instance, at Prince's Island, about two miles from the city, but afterwards moved to a greater distance, remaining in the Sea of Marmora. In acknowledgment of his services at this time, and of the tact with which he had conducted them, he was nominated a K.C.B. on 12 Aug. 1878. On 15 June 1879 he was promoted to the rank of admiral, and in February 1880 he returned to England. In 1881 he was appointed president of the Royal Naval College, from which he was removed in November 1882, to be commander-in-chief at Portsmouth, which office he held for the customary three years. In the summer of 1885, leaving Portsmouth for a few weeks, he commanded an evolutionary squadron, the direct precursor of the 'manœuvres' which have been pretty regularly carried out ever since. One interesting feature of the exercises was the defence of the fleet at anchor in Berehaven against an attack by torpedo-boats. On 19 Dec 1886 he was nominated a G.C.B., with especial reference to his summer 'work in command of the evolutionary squadron'; and on 18 Jan. 1886 was appointed first and principal naval aide-de-camp to the queen.

He now proposed to settle down on his estate at Lordington, near Emsworth, and to be known thenceforward as 'Yeoman Hornby.' Fate and the service were too

strong for him; and though he did continue to 'farm his own land,' and to take a great deal of interest in the affairs of the county, the welfare of the service had always prior claims. On 1 May 1888 he was promoted to be admiral of the fleet, and in 1889, and again in 1890, was appointed aide-de-camp to the German emperor during his visits to this country. In 1891 he was officially sent, on the direct invitation of the emperor, to witness the German manoeuvres in Schleswig-Holstein, where his long hunting experience enabled him to astonish the young German princes. Hornby was, in fact, a horseman from his childhood, and as a cross-country rider was among the best. Although he completely recovered from a serious illness in 1888, and from a severe accident in the early spring of 1891, he was then sensibly aged. The death of his wife in January 1892 was a further shock. On 19 Feb. 1895 he attended a levee, the last time in his official capacity, for the next day, his seventieth birthday, he was put on the retired list. On 3 March he died of influenza. The body was cremated at Woking, and the ashes buried at Compton on 9 March.

Hornby married in 1853 Emily Frances, daughter of the Rev. John Coles of Ditchman Park, Hampshire, by whom he had issue. One of his sons, Robert Stewart Phipps Hornby, C.M.G., became captain in the navy; an older son, Edmund John Phipps Hornby, while major in the artillery, received in 1900 the Victoria Cross for service in South Africa. While president of the Royal Naval College, Hornby delivered there, in the spring of 1882, a short course of lectures on 'Exercising Squadrons,' the notes of which were printed for the use of naval officers. During his later years he wrote occasionally in the 'Times' and the monthly magazine, always on professional subjects. For many years before his death he was universally recognised in the navy as the highest authority on naval tactics and naval strategy, although, except as a boy at Acre in 1840, he had never seen a shot fired in actual war. But almost the whole of his service was in flagships, and he had thus not only a very exceptional familiarity with fleets, but had also been the recipient of the traditions and the reflections of past generations. A lithographed portrait, after a photograph, was published by Messrs. Griffin of Portsmouth.

[Hornby's life has been fully written by his daughter, Mrs. Frederick Egerton (1890), and enriched with many portraits; to this may be added the notices in the *Times* of 4 March 1896, in the *Army and Navy Gazette* of 9 March, and the present writer's personal knowledge.] J. K. L.

HORT, FENTON JOHN ANTHONY (1828-1892), scholar and divine, was born on 23 April 1828. His father, Fenton Hort, third son of Sir John Hort, and grandson of Josiah Hort (1674?-1751) [q. v.], archbishop of Tuam, was a refined and well educated man of good natural abilities; he had been a scholar of Trinity College, Cambridge, and was one of the original members of the Union Debating Society (1816). He had private means, never followed any profession, but had many interests, and was always full of occupation. He married Anne Collett, the daughter of a Suffolk clergyman, a lady of remarkable intellectual power, and of strong old-fashioned evangelical religious views. Their first home was at Leopardstown, a house near Dublin, at the foot of the Three Rock Mountain; but it was in Dublin, at Lady Hort's house, that their eldest child, Fenton John Anthony, was born on 23 April 1828.

The family moved from Dublin to Cheltenham in 1837, and in 1839 young Fenton was sent to the preparatory school kept by the Rev. J. Buckland at Laleham. In October 1841 he was transferred to Rugby, where Arnold was then head-master, and was entered at the house of the Rev. C. Anstey. The first twelvemonth of his public school life was clouded by the death of his younger brother Arthur, to whom he was devotedly attached, and by the death of Dr. Arnold (12 June), whose influence had already made a deep impression upon him. Hort was five years at Rugby (1841-1846), and his intellectual progress during that time was evidently out of the common. He always himself alleged that he derived a special benefit from this vigorous and stimulating teaching of Bonamy Price [q. v.], and used to speak with great affection and gratitude of his head-master, Tait, afterwards archbishop of Canterbury.

He went to Trinity College, Cambridge, in October 1846 as a pensioner. His tutor was William Hepworth Thompson [q. v.]. Hort's life as an undergraduate was one of vehement intellectual energy. His read for honours in mathematics and classics; but he seems to have read everything else as well—philosophy, natural science, theology being favourite subjects—and to have followed the course of public affairs with intense interest. He obtained a foundation scholarship at Trinity College in 1849. Unluckily he was attacked by scarlatina shortly before his mathematical tripos. By a great effort and with considerable risk he did the work of the first three days of the examination; but had to be content with a place in the third class (a

junior optime). Undaunted by this disappointment, but still weak from the effects of his recent illness, he sat for the classical tripos and was bracketed third in the first class (1850).

He at once devoted himself to the task of studying for the two newly created triposes in moral science and natural science. He read with prodigious energy, and next year (1851) obtained a first class in both subjects, winning also the Whewell prize for proficiency in moral philosophy in the moral science tripos, and securing in the natural science tripos the mark of distinction both in botany and in physiology. Hort was probably too reserved and too much of a student to be what is termed 'a popular man' as an undergraduate. But he had several fast friends, the most intimate of these being J. Ellerton, afterwards the famous hymn writer, Gerald Blunt, the rector of Chelsea, J. B. Mayor, J. E. B. Mayor, Henry Bradshaw, Gorham, Vernon Lushington, Vansittart, and Westlake.

Towards the close of his undergraduate career he read with Westcott, then a recent B.A. residing in Trinity and taking pupils. Thus the friendship sprang up which was destined to be productive of a remarkable alliance in theological studies. About the same time he became acquainted with Lightfoot (afterwards Bishop of Durham), whose attached friend he was for the rest of his life. He graduated B.A. in 1850, M.A. in 1853, B.D. in 1875, and D.D. in 1870.

In 1852 he was elected to a fellowship at Trinity at the same time as his friend Lightfoot; and it is a good illustration of his versatility that in 1852 he was president of the Union Debating Society, where he was a frequent speaker, and was regarded as 'one of the rising hopes of the Cambridge school of botanists' (cf. obituary notice by G. S. Boulger in the *Journal of Botany*, February 1893). At this period of his life also he made full use of the privilege of personal acquaintance with F. D. Maurice. This was an epoch in his life. Maurice's influence and Maurice's teaching were a kind of revelation to him. Through Maurice he was brought into contact with Charles Kingsley, Tom Hughes, Daniel and Alexander Macmillan, Mr. J. M. Ludlow, and others, with whose endeavours on behalf of working men and in interests of a social and educational reform he was in strong sympathy. Maurice supplied that which the old evangelicalism and the Oxford movement had failed to give—a philosophy of religion penetrating beneath traditional views and controversies.

Between 1852 and 1857 Hort resided at

Cambridge, devoting himself to study, turning night into day, and laying up a store of ill-health in after years. It was during this period that he laid the foundation for the minute investigation of the text of the New Testament, and in conjunction with Dr. Westcott first undertook the scheme of a joint editorship of a critical edition of the New Testament in Greek. He found time, however, for other things. Thus, as a labour of love, he edited and saw through the press the Hulsean prize essay, written by his friend and contemporary, Henry Mackenzie, on 'The Beneficial Influence of the Christian Clergy on European Progress in the first Ten Centuries.' Mackenzie died in 1853. The essay was issued under Hort's editorship in 1855. Hort was also associated with his friends, Prof. J. E. B. Mayor and Lightfoot, in editing 'The Journal of Classical and Sacred Philology,' of which the first number was issued in 1854. Hort himself was a frequent contributor.

On 12 March 1854 he was ordained deacon at Cuddesdon, and in 1856 priest at Ely. In 1856 he was appointed to examine for the natural sciences tripos; he was employed in useful work on the library syndicate, and in other new departments of university life. In the same year (1856) he contributed to the 'Cambridge Essays' a striking essay on S. T. Coleridge, which has been regarded by competent judges as one of the most successful endeavours to appreciate and interpret Coleridge.

In 1857 he married Fanny, daughter of Thomas Dyson Holland of Heighington, near Lincoln. As his marriage meant the forfeiture of his fellowship, he accepted immediately afterwards the living of St. Ippolyts cum Great Wymondley, near Hitchin, in Hertfordshire, which was in the patronage of Trinity College. For the next fifteen years (1857-72) he lived in this quiet secluded parish. He discharged his pastoral duties conscientiously. He had two churches to serve, and two volumes of the sermons that he preached there have been posthumously published. But his natural bent was towards his studies, and these he prosecuted with unremitting energy. To bad health was added the anxiety of straitened means. After repeated warnings he was compelled by doctor's orders to give up all work between 1863 and 1865. During this interval he made Cheltenham his headquarters, and took long summer visits to Switzerland. On resuming his pastoral work in 1865, he was drawn more and more into the current of university work at Cambridge. He examined frequently for the moral science tripos, and in 1871 he was ap-

pointed Hulsean lecturer, when he delivered the remarkable lectures published after his death under the title of 'The Way, the Truth, and the Life' (1898). In 1868 he wrote articles for (Sir) William Smith's 'Dictionary of Christian Antiquities.' In 1870 he joined the New Testament revision company, and for ten years the revision was one of the most exacting duties in life. On all matters of textual criticism and scholarship Hort's voice in the revision company carried immense weight.

It was evident that in a country parish, at a distance from libraries and burdened with parochial duties, he was carrying on his scholarly work at a great disadvantage. Accordingly the master and fellows of Emmanuel College generously elected him in 1871 to a fellowship, together with a lectureship in theology. His devotion to Emmanuel College was the return which he rendered to that society for the unusual step of electing a senior married man to a fellowship. His friend Dr. Westcott had recently been appointed regius professor of divinity, and his other great scholar friend, Lightfoot, had since 1862 been Hulsean professor of divinity.

Hort returned to Cambridge in March 1872, taking up his abode at 8 St. Peter's Terrace, which was his home for the remainder of his life. As divinity lecturer he lectured at Emmanuel College for six years (1872-8) on New Testament and patristic subjects, e.g. the Epistles, I Corinthians, Ephesians, St. James, Rev. i-iii, Origen's 'Contra Celsum,' Irenæus's 'Contr. omn. Hæres.' lib. iii., Clement's 'Stromateis,' lib. vii. His many-sided interests, his remarkable accuracy, his keen sense of fairness, caused him to be in much request in university business throughout a period of great development. He occupied himself with the most elaborate care in mastering the intricacies of every syndicate and board on which he served.

Meanwhile he had devoted all available time to the great work on New Testament textual criticism on which he was engaged with Professor Westcott. The work went forward more rapidly now that Hort and Westcott were near neighbours. In 1878 Hort had written for the second time an 'Introduction' to their text.

In 1876 he published two important theses, written for the degrees of bachelor and doctor in divinity, to which he had proceeded in the previous year. They appeared in thin octavo form, with the title 'Two Dissertations: 1. On *Μονογενὴς Θεός* in Scripture and Tradition, and 2. On the Constantinopolitan and other Eastern Creeds of the

Fourth Century.' The importance of these contributions to scholarship was generally recognised, and they are excellent examples of the width of Hort's reading and the thoroughness of his methods. In 1877 the first volume of Smith's 'Dictionary of Christian Biography' appeared, to which Hort contributed seventy articles in 'A' and 'B' on the Gnostics, the most elaborate of them being on 'Bardaisan' and 'Basilides.'

In 1878 Hort was elected to the Hulsean professorship of divinity in the place of Dr. J. J. S. Perowne, afterwards bishop of Worcester, who had accepted the deanery of Peterborough. Thus the three scholar friends were divinity professors together—Westcott as regius; Lightfoot, who until 1876 had been Hulsean as Lady Margaret; and Hort as Hulsean. The combination was short-lived, for in 1879 Lightfoot left Cambridge to be bishop of Durham.

In 1881 most of the New Testament work upon which Hort had been engaged for more than twenty years at length saw the light. The text of the Greek New Testament, as edited by Westcott and himself, appeared on 12 May, and the revised English version of the New Testament on 17 May; while on 4 Sept. appeared 'The Introduction' and 'Appendix' explanatory of the Westcott and Hort text. 'The Introduction' was written entirely by Hort, and it at once secured for the writer a foremost position among the great New Testament critics of the century. He was denounced by the more conservative school, who considered that the *textus receptus* had preserved a purer text than that which had been attained by the scientific principles followed by Westcott and Hort.

The compression that had to be practised in the 'Introduction,' and the guarded language adopted in order to avoid anything like the over-statement of his case, cause Hort's 'Introduction' to be difficult reading. But every word was carefully weighed. The problems of criticism are stated with a wonderful grasp of the whole subject; the more distinctly original portion dealing with the distribution of materials into the four groups—Syrian, Western, Alexandrian, and 'neutral'—was hailed by the best scholars as constituting a great advance in the scientific handling of New Testament criticism.

Between 1882 and 1890 Hort was associated with Dr. Westcott and William Fiddian Moulton [q. v. Suppl.] in preparing the revised version of Wisdom and 2 Macc.; and this work was practically finished at the time of his death.

In 1887 the Lady Margaret's readership in divinity was rendered vacant by the death

of Charles Anthony Swainson [q. v.], and Hort was elected on 26 Oct. In 1890 the appointment of Dr. Westcott to the see of Durham, in the place of Lightfoot, left him the survivor of the three scholar friends at Cambridge. On 1 May 1890 Hort preached the sermon in Westminster Abbey at Dr. Westcott's consecration. On 23 May the honorary degree of D.O.L. was conferred on him at Durham. But his health, which for years had not been robust, now began to fail, although his mental activity was unimpaired. In 1891 he appointed the Rev. Frederic Wallis of Gonville and Caius College (afterwards bishop of Wellington) to act as his deputy.

In the summer of 1892 he went to Switzerland, but he was brought home in September in a very prostrate condition. Even so, however, he was able to write under great pressure the full and interesting biography of his old friend Dr. Lightfoot for the present 'Dictionary.' It was a last effort; it seemed as if it exhausted the remaining threads of strength. He died in sleep in the early morning of 30 Nov. 1892. A portrait of Hort was painted in 1891, by Mr. Jacob Hood, for Emmanuel College combination room; copies are in the hall of Trinity College, in the library of the divinity school, Cambridge, at Rugby, and in the possession of Mrs. Hort.

In appearance, as the writer recalls him between 1875 and 1892, Hort was one of the most striking-looking men among the more distinguished personages of his university. He was of middle height; he had the slight stoop of an indefatigable reader; his hair and close-cut beard, moustache, and whiskers were prematurely white. He had well-cut features, with a strikingly fine and broad forehead. He was, as a young man, an ardent mountaineer, and one of the earliest members of the Alpine Club. His interest in natural science was always maintained, and he was a first-rate practical botanist. He had a good ear for music, and as a young man sang a good deal.

He had a love for poetry, and himself had something of true poetical gift (cf. his poem on 'Tintern Abbey,' written in 1855, in the *Life and Letters*, i. 301). As a lecturer he always maintained a high level. His lectures were prepared beforehand with most laborious care; many of them have been published since his death, almost word for word as he delivered them. Although, owing to his fastidiousness and passion for thoroughness, he produced comparatively little literary work, he was able by his superb stores of knowledge to aid scholars

who from every quarter sought his assistance and counsel.

In his latter years he obtained a remarkable hold over younger teachers and scholars. In theological matters he kept strictly aloof from party movements and controversies. His historical senses dominated his whole mind. He could not be a partisan. His lectures on 'The Christian Ecclesia' and 'Judaistic Christianity' illustrate his capacity for working in 'a dry light.' He aimed only at arriving at truth, not at confirming opinion. His always vehemently contended for Holy Scripture being made the foundation of all English theological teaching, and insisted on doctrine being studied in the light of history. His own attitude of mind was one of intense reverence for the past, and of boldness in the simplicity of a strong faith (cf. FAIRBAIRN, *Catholicism, Roman and Anglican*, p. 406). He was no mere schoolman, engrossed in texts and readings, as the outside world supposed. He combined in a rare measure the scholar and the thinker; and in some of the posthumous writings which have been published, notably in his 'Hulsean Lectures,' it is not hard to discern that, in spite of the long discipline of scientific criticism and textual classification, he kept alive the aspiration to express constructively and philosophically his own interpretation of the Christian position in relation to the problems of modern thought. Dr. Sanday called him (*American Journal of Theology*, pp. 95-117) 'our greatest English theologian of the century.' Distinguished foreign scholars like Dr. Caspar René Gregory (*Revue de Théologie*, *Revue de Philosophie*, *Revue de Théologie*, 3 Aufl.) and Dr. Samuel Berger (*d. 1900*), the French protestant biblical scholar (*Des Études d'Histoire Ecclésiastique: Leçon d'Ouverture*, 3 Nov. 1899, Paris, 1899) were as enthusiastic as his own countrymen in their testimonies to the eminence of Hort's achievements in New Testament criticism.

A complete bibliography of Hort's writings published during his lifetime will be found in Appendix iii. (pp. 492-5) of the second volume of 'The Life and Letters.' The more important of those published during his lifetime have been already mentioned. The following have been published posthumously: 1. 'The Way, the Truth, the Life,' 1893 (*Hulsean Lectures* for 1871). 2. 'Judaistic Christianity,' 1894. 3. 'Prolegomena to St. Paul's Epistles to the Romans and Ephesians,' 1895. 4. 'Six Popular Lectures on the Ante-Nicene Fathers,' 1895. 5. 'The Christian Ecclesia, a Course of Lectures on the Early History and Early Conception of the Ecclesia, and Four Sermons,' 1897. 6. 'Vil-

lage Sermons,' 1897. 7. 'Cambridge and other Sermons,' 1898. 8. 'The First Epistle of St. Peter, 1. i-ii. 17, the Greek Text with Introductory Lecture, Commentary, and Additional Notes,' 1898. 9. 'Village Sermons in Outline,' 1900.

[The Life and Letters of Fenton J. A. Hort, by his son, Arthur Fenton Hort (2 vols. 1896); personal knowledge.] HUBERT EXON.

HOSTE, SIR GEORGE CHARLES (1786-1845), colonel royal engineers, third son of the Rev. Dixon Hoste, rector of Tittleshall, Norfolk, and of Margaret, daughter of Henry Stanforth of Salthouse, Norfolk, and brother of Captain Sir William Hoste, R.N. [q.v.], first baronet, was born on 10 March 1786. After passing through the Royal Military Academy at Woolwich he obtained a commission as second lieutenant in the royal engineers on 20 Dec. 1802. His further commissions were dated: lieutenant 21 Dec. 1802, second captain 18 Nov. 1807, captain 21 May 1812, brevet major 17 March 1814, lieutenant-colonel 29 July 1825, brevet colonel 28 June 1838, colonel 23 Nov. 1841.

After home service at Portsmouth and Dover, Hoste went to the Mediterranean in April 1806, and accompanied the expedition under Lieutenant-general Sir James Craig [q.v.] in November, to co-operate with the Russians in the protection of the kingdom of Naples. He landed at Castellana and took part in the operations and in the withdrawal to Messina in January 1806. At the end of June he served in the campaign in Calabria under Sir John Stuart [q.v.], and was present at the battle of Maida on 4 July and at the siege of Scylla Castle from 12 to 23 July, when it capitulated. He returned with Stuart to Messina.

In March 1807 Hoste accompanied the expedition under Major-general McKenzie Fraser to Egypt, landed at Aboukir on the 10th, and took part on the 18th in storming the outworks of Alexandria, which capitulated, and was occupied on the 22nd. In April he took part in the siege of Rosetta until the disastrous retirement to Alexandria, and, on the evacuation of Egypt by the British, returned to Sicily with the troops in September. He was busily engaged during 1808 and 1809 in improving the defences and communications of the east of Sicily to resist attack. The surrender of Capri to Murat in October 1808 led to an expedition under Sir John Stuart in the following June to the bay of Naples, when Hoste was engaged in the capture of Ischia and Procida on the 25th, and in the siege of the castle of Ischia,

which capitulated on the 30th. He returned with the expedition to Messina.

In May 1810 he was on board the Spartan frigate, commanded by Captain Jabeel Brenton [q.v.], on reconnoitring duty; when off the bay of Naples on the 3rd, the Spartan was attacked by a French squadron. At Brenton's request he took command of the quarter-deck guns. After a smart and successful action, in which the Spartan lost ten killed and twenty-two wounded, she stood in triumphantly with her prize, *La Sparvière*, to the Mole of Naples, where Murat had watched the fight. In his despatch Brenton speaks highly of Hoste's services. King Ferdinand conferred upon him the honour of knighthood of the third class of the royal Sicilian order of St. Ferdinand and of Merit 'for great courage and intrepidity' on this occasion, and he was permitted by the prince regent to accept and wear the insignia (*London Gaz.* 27 Nov. 1811).

In December 1810 Hoste left Sicily for Gibraltar, and in May 1811, having returned to England, was stationed at Landguard Fort. On 4 Jan. 1812 he accidentally killed his younger brother, Charles Fox, when out shooting. In November 1813 he accompanied the brigade of guards in the expedition to Holland, landing on the 24th and marching to Delft.

He was engaged under Sir Thomas Graham, afterwards Lord Lynedoch [q.v.], in the bombardment of Antwerp in February 1814 until it was abandoned, and in the night assault of Bergen-op-Zoom on 8 March, when he led the third column, consisting of about a thousand men of the guards under Colonel Lord Proby, into the place. At daybreak, owing to successive blunders, the assaulting columns were withdrawn when the fortress was almost within their grasp. Hoste was very favourably mentioned by Graham in despatches for his services, and received a brevet majority.

After the conclusion of peace Hoste returned home in May and resumed his duties in the eastern military district, from which he was again called a year later to join Wellington's army in the Netherlands in June 1815.

Hoste was appointed commanding royal engineer of the 1st army corps commanded by the prince of Orange, in which capacity he was present at the battle of Waterloo on the 18th, at the assault of Péronne on the 26th, and the occupation of Paris on 7 July. For his services he was mentioned in despatches and made a companion of the order of the Bath, military division (22 June 1815), on the recommendation of the Duke

of Wellington. In November 1815 he was one of the British commissioners appointed to take over the French fortresses for occupation by the allies.

In February 1816 Hoste returned to England, and for the next nine years was employed in the Medway and Thames military districts, after which he went on particular service to Canada in 1825, and to Ireland in 1828. On the accession of William IV in 1830, he was appointed gentleman usher of the privy chamber to Queen Adelaide. He served as commanding royal engineer of the eastern, western, and Woolwich military districts successively. He died at his residence, Mill Hill, Woolwich, on 21 April 1845, and was buried in Charlton churchyard, Kent, where a tomb marks the grave.

Hoste married, on 9 July 1812, Mary, only daughter of James Burkin Burroughes of Burlingham Hall, Norfolk, by whom he had issue four sons and two daughters.

Mag. 1810 and 1815; Porter's Hist. of the Royal Engineers; Royal Military Calendar, 1820; Burke's Baronetage; Army Lists; Bunbury's Military Transactions in the Mediterranean, 1805-10; Sperling's Letters from the British Army in Holland, Belgium, and France; Carmichael-Smith's Wars in the Low Countries.]

R. II. V.

HOW, WILLIAM WALSHAM (1823-1897), first bishop of Wakefield, born 18 Dec. 1823 at College Hill, St. Chad's parish, Shrewsbury, was eldest son of William Wyberg How, who belonged to an old Cumberland family and practised at Shrewsbury as a solicitor. He was educated at Shrewsbury school, and on 19 Nov. 1840 entered at Wadham College, Oxford. He was Goodridge exhibitioner at his college in 1842, and Warner exhibitioner 1842-3. He graduated B.A. in the university with third-class honours in *lit. hum.* on 10 May 1845, and he proceeded M.A. on 26 May 1847.

How then passed through the theological course at Durham, was ordained deacon December 1846, and became curate at St. George's, Kidderminster, under Thomas Legh Claughton, afterwards bishop of St. Albans [q. v. SUPPL.], from whom he received an excellent training for his ministerial work. He was ordained priest in December 1847, and in 1848, for family reasons, returned to Shrewsbury, where he acted as curate in the parish of Holy Cross. In 1849 he married Frances Anne, daughter of Henry Douglas, rector of Salwarpe and residentiary canon of Durham. In 1851 he became rector of Whittington in Shropshire, and remained

there, an exemplary parish priest, for twenty-eight years. In 1854 he was appointed rural dean of Oswestry, in 1860 honorary canon of St. Asaph, in 1868 proctor for the clergy in convocation, and in the same year select preacher at Oxford.

How soon became known as a devotional writer, an efficient conductor of parochial missions, quiet days, and retreats, and a congress speaker. His 'Daily Family Prayers for Churchmen,' which he published in 1852, soon after becoming rector of Whittington, was his earliest contribution to devotional literature and instantly secured a general circulation which it enjoyed for fully thirty years.

How's growing reputation led to a long series of offers of preferment, both in the colonies and at home, but he was in no haste to abandon his parochial labour in the country. He was offered and declined the bishoprics of Natal (1867), New Zealand (1868), Montreal (1869), Cape Town (1873), and Jamaica (1878), besides a canonry, with superintendence of home mission work, at Winchester (1878), and the livings of Brighton (1870), All Saints', Margaret Street (1873), and Windsor, with a readership to Queen Victoria (1878). The first offer he accepted was that of suffragan to the bishop of London, with episcopal supervision of East London. He had to assume the title of bishop of Bedford, because the only titles which could then be used by suffragan bishops were those specified in the Suffragan-bishop Act of Henry VIII. That Act had fallen into abeyance since the early years of the seventeenth century, and had only been revived in 1870 when the first two suffragan bishops, Henry Mackenzie, bishop suffragan of Nottingham, and Edward Parry, bishop suffragan of Dover, were appointed. How was consecrated on St. James's day, 1879, and on the following day was instituted to the living of St. Andrew Undershaft, which supplied the income for the bishop, and a prebendal stall in St. Paul's Cathedral; in the same year he was created D.D. by the archbishop of Canterbury, and on 15 June 1880 by Oxford University. He resided at Stainforth House, Upper Clapton, which was generously put at his disposal by the owner, and became, as a co-worker said, 'the leader of an East London crusade.' He availed himself of the general feeling that the spiritual destitution of East London was appalling, and enlisted agencies for remedying the situation from all quarters. His first policy was 'to fill up the gaps in the ministry, both clerical and lay,' and for this purpose he founded an 'East London Church Fund,' which met with a ready response. The Princess Christian evinced

the deepest sympathy with his work. He secured pulpits and drawing-room meetings in the rich west end to help the poor east, and awakened an interest in the subject in rich watering-places like Brighton, Tunbridge Wells, and Eastbourne, and also in the public schools and universities. Being recognised as a spiritual force, he attracted all spiritually minded people round him, and especially the clergy and laity in his own diocese. He received his clergy daily at Clapton, visited them at their own homes, and spent every available Sunday with one or other of them. But perhaps the work he loved best was that among children. There was no title that he valued more than that of 'The Children's Bishop,' which was popularly accorded him, and no one of his compositions which he wrote with greater zest than his volume of sermons to children.

The bishop's wife, who had taken a large share in the London work, died on 28 Aug. 1887, and the loss doubtless affected Walsham How's decision when in 1888 he accepted the offer of the new bishopric of Wakefield. He soon became as great a power in the north as he had been in the south. His mot, perhaps, with more troubles in his new sphere than in his old, but his earnestness, tact, and geniality soon enabled him to overcome them, and his death, which took place during his August holiday in the west of Ireland on 10 Aug. 1897, was as much regretted in Yorkshire as in London. He was buried at Whittington, and the enlargement of Wakefield Cathedral was decided upon as a fitting memorial to him. He left a family of five sons and one daughter. An excellent portrait of him was painted by Mr. H. L. Norris for Wadham College in 1897, shortly before his death, and there is also one painted by Edward Tayler and presented to him by the clergy of St. Asaph diocese in 1870.

How was a keen fisherman and an accomplished botanist, and a most popular writer, both in prose and verse. His writings include 'Plain Words,' four series of admirable short sermons, the first of which appeared in 1860, and passed through more than fifty editions; several other volumes of 'Sermons,' published at various times; a 'Commentary on the Four Gospels' for S.P.C.K., begun in 1863 and finished in 1868, which had a sale of near 300,000; 'Pastor in Parochia' (1868, 5th ed. 1872) and 'Pastoral Work' (1883), which have also had a very large sale; 'Manual for the Holy Communion,' S.P.C.K., 1868, of which some 700,000 copies have been sold; 'Daily Family Prayers' (1852, 4th ed. 1872), which are very widely used.

In 1864 he published, in conjunction with the Rev. T. B. Morrell, a compilation of 'Psalms and Hymns'; he was one of the original compilers of 'Church Hymns,' brought out by S.P.C.K. in 1871, and Mrs. Caryl Brock's 'Children's Hymn Book' (1881) was published under his revision. His own original hymns are very popular. His last was the hymn for Queen Victoria's diamond jubilee, written at the request of the Prince of Wales in 1897, not many weeks before his death. He also wrote some good sonnets and poems on miscellaneous subjects.

[Mémorial of Bishop Walsham How, by his son, F. D. How; Bishop How's own writings, Gardiner's Reg. Wadham Coll. ii. 400; Foster's Alumni Oxon. 1715-1886; Crookford's Clerical Directory; private information and personal knowledge.] J. H. O.

HOWARD, EDWARD HENRY (1829-1892), cardinal, born at Nottingham on 13 Feb. 1829, was eldest son of Edward Gylos Howard (grandson of the twelfth Duke of Norfolk), by his marriage with Frances Anne, eldest daughter of George Robert Hounsome of Hainton Hall, Lincolnshire. He was educated at Oscott, and afterwards continued his studies at Edinburgh. In his youth he served the queen as an officer in the 2nd life guards, but he afterwards studied theology, was ordained priest by Cardinal Wiseman in the English College at Rome on 8 Dec. 1854, and attached himself to the service of Pius IX. He learned Arabic, Coptic, Hindustani, and Russian, and became an accomplished linguist. For about a year he was employed in India in connection with a mission to put an end to the Goa schism, and the rest of his ecclesiastical career was spent in Italy. His graceful and dignified bearing was familiar to frequenters of St. Peter's, in which basilica he held the office of archpriest's vicar. He was consecrated archbishop of Neocesarea in *partibus infidelium* in 1872, and made coadjutor bishop of Frascati, an office which he retained for only a few weeks. He was created a cardinal-priest by Pius IX on 12 March 1877, the titular church assigned to him being that of St. John and St. Paul on the Coelian Hill. As protector of the English College in Rome—to which he afterwards bequeathed his magnificent library—he took possession of that institution on 24 March 1878. In December 1881 he was nominated archpriest of the basilica of St. Peter, and in that capacity he also became prefect of the congregation which has the care of the edifice itself. In the spring of 1884 he was raised by Leo XIII to the dignity of cardinal bishop, and trans-

lated to the suburban see of Frascati. Having been seized with a serious illness in 1887, he was brought to England in the spring of the following year. He died on 16 Sept. 1892 at Hatch Beauchamp, a villa on the London Road, in the extreme outskirts of Brighton, and was buried at Arundel on 1 Oct.

[*Oscotian*, 1888, p. 47, with portrait; Illustrated London News, 24 Sept. 1892, p. 380; Times, 17 Nov. 1892; Men of the Time, 11th edit.; Tablet, 24 Sept. 1892, p. 481.] T. C.

HOWE, GEORGE AUGUSTUS, third Viscount Howe (1725?-1758), born in 1724 or 1725, was the grandson of Scrope Howe, first viscount Howe [q. v.], and the second but eldest surviving son of Emanuel Scrope Howe, second viscount Howe (d. 29 March 1735), by his wife, Mary Sophia Charlotte (d. 13 June 1782), said by Horace Walpole to be an illegitimate daughter of George I, by Charlotte Sophia, countess of Darlington (d. 20 April 1725), wife of John Adolph, baron von Kielmansegg (d. 15 Nov. 1717). Kielmansegg was master of the horses to George I as elector of Hanover. Richard Howe, Earl Howe [q. v.], and William Howe, fifth viscount Howe [q. v.], were the third viscount's younger brothers. George succeeded his father as third viscount in the Irish peerage in 1735, and was returned to the English parliament for the town of Nottingham on 30 June 1747. He was re-elected in April 1754, retaining the seat until his death.

In January 1746-7 Howe was nominated one of the officers to take part in the campaign in Flanders as aide-de-camp to the Duke of Cumberland (*Gent. Mag.* 1747, pp. 45, 103). On 1 May 1749 he was nominated lieutenant-colonel and captain in the first foot guards; on 25 Feb. 1757 he attained the rank of colonel, and was placed in command of the 60th foot or Royal Americans. With this regiment he arrived in Halifax in July. On 28 Sept. he was appointed colonel of the 55th foot, recently raised for service in the American war, and received the local rank of brigadier-general in North America on Dec. 29. Pitt nominated Howe second to Brigadier-general James Abercromby in command of the force destined to capture Ticonderoga and Crown Point from the French, and thus open the route by Lake Champlain for the invasion of Canada. He trusted that Howe's vigour of mind would compensate for Abercromby's lethargic temperament, and knew that Abercromby placed implicit confidence in him. Howe introduced several reforms into the English force, among others inducing the officers to dress like the men to

avoid a repetition of Braddock's disaster, when the officers were picked off by the enemy's marksmen. On 5 July 1758 the English force proceeded down Lake George, and disembarked at nightfall at Sabbath Day Point. Thence Howe proceeded next morning by land to find a practicable route to Fort Ticonderoga. On arriving at Trout Brook, two miles from the outlet of the lake, he was killed in a skirmish with a French detachment, possibly shot by his own men in the confusion. His fall paralysed Abercromby, who afterwards failed before Ticonderoga. Howe was buried at Trout Brook in a dense forest, the spot being marked by a simple headstone bearing his name, which together with his remains was discovered in 1890 (*Newcastle Weekly Chronicle*, Suppl. 2 Jan. 1892). A monument was erected to his memory in Westminster Abbey by the colony of Massachusetts, designed by James Stuart and sculptured by Peter Scheemakers. He was unmarried and was succeeded as fourth viscount by his brother Richard. An engraved portrait of Lord Howe is contained in Entick's 'General History of the late War,' 1779, iii. 209.

HOWE, HENRY (1812-1896), actor, whose real name was HENRY HOWN HUTCHINSON, was born of quaker parents in Norwich on 31 March 1812. After some experiments as an amateur under the name Halsingham, he made his début at the Victoria theatre in October 1834 as Rashleigh Osbaldistone. At east-end and suburban theatres he played Antonio in the 'Merchant of Venice,' and Tressel in 'Richard III.'

and at the Strand, under J. W. Hammond in 1837, was Winkle in a piece called 'Pickwick.' Many years later he played Mr. Pickwick in Albery's play at the Lyceum. The same year he acted with Macready at Covent Garden, and he participated in the original performance of the 'Lady of Lyons' (15 Feb. 1838). He also played Mark Antony in 'Julius Cæsar.' Joining the Haymarket under Webster, he remained there without a break in his engagement for the almost unprecedented term of forty years. Among innumerable original parts were: Brandon in Lovell's 'Look before you Leap' on 29 Oct. 1840, Ernest de Fonblanche in the 'Roused Lion' on 15 Nov. 1847, Lord Arden in Lovell's 'Wife's Secret' on 17 Jan. 1848. His characters included Fazio, Sir George Airy in the 'Busy Body,' Lord Townley in the 'Provoked Husband,' Archer in the 'Beaux' Stratagem,' Benodick, Joseph Surface, Sir Anthony Absoluto, Sir Peter Teazle, Malvolio, Jaques, Macduff, Harry Dornton. He used to state that there were pieces (such as the 'Lady of Lyons') in which, during his gradual rise, he had played every male part from the lowest to the highest. On 16 Aug. 1879, at the Vaudeville, he was the first Rev. Otho Doxey in Richard Lee's 'Home for Home,' and played Farron's part of Clench in the 'Girls.' Soon afterwards he took (Sir) Henry Irving's rôle of Digby Grant in a revival of Albery's 'Two Roses.' On 26 Dec. 1881, as Mr. Fumival in same piece, he appeared at the Lyceum, with which his closing years were connected. Here he played characters such as Old Capulet, Antonio in 'Much Ado about Nothing,' and 'Twelfth Night,' Germenil in 'Robert Macaire,' Farmer Flam-borough in 'Olivia,' Burgomaster in 'Faust,' and very many others. He accompanied Sir Henry Irving to America, where he died on 10 March 1896. He was a thoroughly conscientious actor, and an exceptionally worthy and amiable man, whose one delight was to cultivate his garden at Isleworth. His son, Henry A. Hutchinson Lowe, musical and theatrical critic on the 'Morning Advertiser,' predeceased him, dying on 1 June 1894, aged sixty-one.

[Personal recollections; The Player, 12 May 1890; Pascoe's Dramatic List; Scott and Howard's Blanchard; Scott's From the Bells to King Arthur; Era Almanack, various years; Sunday Times, various years; Theatrical Notes, 1893.] J. K.

HUCHOWN (fl. 14th cent.), the author of several romances in the old alliterative verse, is described by Wyntoun as 'Huchown of the Awle Ryale' (in one MS. 'Auld Ryall').

Wyntoun eulogises him as 'cunnand in literature,' and ascribes to him three romances, 'The Gret Gest of Arthure,' 'The Awntyre of Gawane,' and 'The Pystyll of Swete Susan.' Of these 'The Pystyll of Swete Susan' can be identified beyond dispute. It exists in five manuscripts (two in the British Museum, one in the Bodleian library, a fourth at Cheltenham, and a fifth at Ripley), and was published in Laing's 'Select Remains,' 1822, and, besides several times by German editors, by the Scottish Text Society in 'Scottish Alliterative Poems' from the five manuscripts ed. F. J. Amours, 1896-7. Further, by means of an exhaustive comparison with the 'Pystyll,' Dr. Trautmann (*Der Dichter Huchown und seine Werke in Anglia*, 1877) has established the identification of 'The Gest of Arthure' with the non-rhyming alliterative poem 'Morte Arthure' preserved in the Thornton MS. at Lincoln, and published, ed. Halliwell, 1847, and by the Early English Text Society, ed. E. Brock, 1865. The identification of 'The Awntyre of Gawane' is still, however, a matter of dispute. Mr. F. J. Amours (*Scottish Alliterative Poems*) argues with some plausibility for the rhyming alliterative poem, 'The Awntyres of Arthure at the Terne Wathe-lync,' preserved in the Thornton MS., in the Douce MS. in the Bodleian Library, and in the Ireland MS. at Hiale, Lancashire, and published by Pinkerton from the Douce MS. in 'Scottish Poems,' 1792, under the title 'Sir Gawain and Sir Galarou of Galloway,' by David Laing in 'Select Remains,' 1822 (2nd ed. 1885); by the Bannatyns Club, ed. Sir F. Madden, 1839; by the Camden Society, ed. Robson, 1842; and by the Scottish Text Society in 'Scottish Alliterative Poems,' ed. F. J. Amours, 1896-7. This conclusion cannot, however, be regarded as more than probable; and there is even a possibility that it may be the non-rhyming 'Sir Gawain and the Green Knight,' which is poetically of great merit.

As to the identity of the poet himself, since his name was Huchown (French *Huchon*), it has generally been supposed that he was the 'gude Sir Hew of Eglyntoun' mentioned in Dunbar's 'Lament for the Makaris.' A Sir Hugh of Eglington, who flourished between 1348 and 1375, was married to Egidia, half sister of Robert II, and was for some years auditor of accounts. The name of no other Sir Hew of Eglington occurs in public documents in the fourteenth century, and notwithstanding some ingenious arguments to the contrary, there is absolutely no reason for refusing to accept this Sir Hew as the poet referred to by Dunbar, and there-

fore in all probability 'Huchown of the Awle Ryale,' which two last words have, with at least plausibility, been interpreted as 'royal palace.'

[Authorities mentioned in text; *Athenæum*, 1900-1.] T. F. H.

HUDSON, SIR JOHN (1833-1893), lieutenant-general, born in 1833, was the eldest son of Captain John Hudson, R.N., by his first wife, Emily (*d.* 9 Oct. 1844), only child of Patrick Keith, rector of Ruckinge and Stalisfield in Kent. He was educated at the Royal Naval School, New Cross. He obtained a commission in the 84th regiment on 22 April 1853, and received his lieutenantancy on 9 March 1855. He served as adjutant to his regiment throughout the Persian campaign of 1856-7. He was present at the storm and capture of Reshieh, the surrender of Bushire, the night attack and battle of Kooshab, and the bombardment of Mohumrah, and received a medal with a clasp. At the time of the Indian mutiny he served as regimental adjutant in Bengal and the north-west provinces, and was present in 1857 with Havelock's column in the actions of Fatehpur (12 July), Aong (15 July), Pandu Nadi (15 July), Cawnpur (16 July), Unao (29 July), Basheratganj (29 July), and Bithur (16 Aug.) He was deputy-assistant adjutant-general on Havelock's staff during the advance to Lucknow, was mentioned in the despatches, and received the thanks of the governor-general in council. He served as adjutant of the 84th foot during the defence of Cawnpur, and at the defeat of the Gwalior mutineers, and was present in the action of Kali Nadi (2 Jan. 1858) and Kankar (17 April) as well as at the capture of Bareilly (May). He was attached to Brigadier Taylor's brigade as brigade-major in the actions at Burnai, Mohamdi, and Shahâbâd. For his services he was promoted to the rank of captain in the 49th light infantry on 23 July 1858, received a medal with a clasp, and was allowed a year's service for Lucknow. On 22 March 1864 he received the brevet rank of major.

In the Ahyeenian campaign of 1867-8 he was second in command of the 21st Bengal native infantry. He was mentioned in the despatches and received a medal. On 18 June 1870 he received the brevet rank of lieutenant-colonel, and on 11 April 1873 attained the regimental rank of major. On 1 Oct. 1877 he obtained the brevet rank of colonel.

He commanded the 28th Bengal native infantry throughout the Afghan war of 1878-80, was present during the operations

in the Khost, including the affair at Matoon, and was twice mentioned in the despatches. On 22 April 1879 he attained the regimental rank of lieutenant-colonel. He was with Sir Frederick (afterwards Earl) Roberts's division in the advance on Kâbul in 1879, and with Brigadier-general (Sir) Herbert Macpherson's brigade in the rear-guard at the engagement at Charasiah on 6 Oct. 1879. For his services at Charasiah he was mentioned in the despatches. During the operations round Kâbul in December he commanded the out-post at Lataband, and was mentioned in the despatches for sallying out and dispersing a hostile force which threatened to invest the garrison. He received a medal with two clasps, and in 1881 was nominated C.B. He commanded the British troops occupying the Khaibar Pass from January 1881 until that force was withdrawn.

In 1885 Hudson commanded the Indian contingent in the Soudan campaign, was mentioned in the despatches, received a medal with a clasp and the Khedive's star, and was nominated K.C.B. On his return to India he commanded a brigade of the Bengal army from 1886 to 1888. He attained the rank of major-general on 2 Aug. 1887, and from 1888 to 1889 was in command of the Quetta division of the Indian army. From 1889 to 1892 he commanded a first-class division of the Bengal army. On 13 Jan. 1892 he became a lieutenant-general, and early in 1893 was appointed commander-in-chief in Bombay. He was killed at Poona on 9 June 1893 by a fall from his horse, and was buried there on the following day. On 7 April 1859 at Allahâbâd he married Isabel Muir, second daughter of Major-general Charles Frederick Havelock (*d.* 14 May 1868) of the imperial Ottoman army, and niece of Sir Henry Havelock [q. v.]

HUGESSEN, EDWARD HUGESSEN KNATCHBULL-(1829-1893), first Baron BRABOURNE. [See *KNATCHBULL-HUGESSEN*.]

HUGHES, DAVID EDWARD (1880-1900), electrician and inventor, was born in London on 16 May 1880. His father, David Hughes, was the son of Robert Hughes, boot-maker, of London and Bala, Merionethshire. In 1887 the family went out to Virginia, and David received his education at St. Joseph's College, Bardstow, Kentucky. At an early age he displayed a talent for music, inherited probably from his father, and in

1849 became professor of music at the college. His great interest in experimental science led to his undertaking the teaching of natural philosophy, and during the tenure of his double office the idea of his type-printing telegraph occurred to him. Although (Sir) Charles Wheatstone [q. v.] had exhibited a type-printer at the Royal Polytechnic Institution, London, in 1841, the first instrument available for practical use was that invented by Hous, of Vermont, and adopted by the American Telegraph Company in 1847. In the motion of the wheel carrying the type at the receiving station was produced step by step, by the teeth of a wheel at the transmitting end making and breaking the electrical circuit as it was rotated. Hughes proposed to produce these synchronous rotations mechanically, and only to use the electric current once for each letter printed.

He resigned his position at Bardstow, and spent two years working out the details of his instrument, which he completed and patented in 1855. Next year it was adopted by the American Telegraph Company, and many of its features are present in the Phelps instruments now used by them.

In 1857 Hughes brought the instrument to this country, and, on its not meeting with the reception he expected, proceeded to France, where it was purchased by the government in 1860 and installed on their lines. During the next ten years it was adopted by most of the continental governments, and its inventor was the recipient of many decorations and honours. In 1872, while resident in Paris, he was elected a foreign member of the newly founded Society of Telegraph Engineers, now the Institution of Electrical Engineers. In 1877 he settled in London, and devoted much of his time to experimental electrical work, with apparatus constructed by himself.

The telephone, invented by Reiss in 1861, had been rendered a practical instrument by Bell in 1876, but his transmitter was still unsatisfactory, even after the introduction of the carbon button into it in 1877. Further improvement was rendered possible by the invention of the 'microphone' in 1878, almost simultaneously by Liddtge ('universal telephone,' German patent, 12 Jan. 1878), and by Hughes (*Proc. Royal Soc. London*, 8 May 1878). It owes its action, as the latter explained, to the great variation of electrical resistance of a loose contact between two conductors, on the slightest relative motion of the two parts.

In April 1878 D'Arsonval, in a communication to the Académie des Sciences (*Comptes*

Rendus, lxxxvi. 832), called attention to the telephone as a sensitive detector of varying electric currents, and in May 1879 Hughes exhibited to the Royal Society of London (*Proc. Royal Soc.* xxix. 56) a new 'induction balance,' in which a telephone replaced the galvanometer and current rectifier of Feltz (*Ann. de Chim. et de Phys.* xxxiv. 65, 68, 1852), and with it repeated and extended the results obtained by Dove with his original balance (*Ann. der Physik*, xlix. 77, 1840).

In 1880 he was elected a fellow of the Royal Society, and in 1885 received the society's gold medal 'for experimental research in electricity and magnetism, and for the invention of the microphones and induction balance.' He had ceased to be a foreign and become an ordinary member of the Society of Telegraph Engineers in 1879, and after being successively a member of the council (1880) and vice-president (1882), he was in 1886 elected president of the society. In his inaugural address he gave an account of his experiments on 'the self-induction of an electric current,' &c (*Journal Tel. Eng.* xv. 6), and succeeded in arousing general interest in the laws of distribution of alternating electric currents in conductors, which had been investigated mathematically by Heaviside and others.

During the interval 1879-86 Hughes appears from his letters to have convinced himself by experiment of the existence of electric waves in the air surrounding an electric spark, and to have discovered the efficacy of a microphone contact (coherer) in series with a telephone or galvanometer and a voltaic coil, as a detector of them. Unfortunately these early experiments on aerial telegraphy were not made public, and it was left for Hertz to demonstrate the existence of electric waves in 1887, for Branly to re-invent the coherer as a detector in 1891, and for Marconi to combine the two into a system of wireless telegraphy in 1896.

He continued for the rest of his life to take an interest in electrical matters, and occasionally took part in the discussion of papers read before the Institution of Electrical Engineers. In 1889 he was elected a manager, and in 1891 vice-president, of the Royal Institution. In 1898 the Society of Arts conferred the Albert medal on him for 'his numerous inventions, especially the printing telegraph and the microphone.'

About this time he began to be troubled with paralysis, and died at 40 Langham Street, W., on 22 Jan. 1900, after an attack of influenza. He was interred at Highgate cemetery. Leaving no issue, he bequeathed between 300,000*l.* and 400,000*l.* to four

London hospitals, and 12,000% to the Royal Society of London, the Académie des Sciences of Paris, the Institution of Electrical Engineers, and the Société Internationale des Electriciens, for the foundation of scholarships and prizes to be awarded for work in physical science.

He married Anna, daughter of Dr. Thomas Chadbourne.

In person he was fair, and rather below the middle height; he was simple in his tastes, 'a most genial companion,' and possessed 'an inexhaustible fund of information' (Cooke). Portraits appeared in *'Electrician'*, xlv. 457, and the *'Electrical Review'*, xlv. 185, 186.

[Royal Soc. Cat. of Scientific Papers; Hughes's Papers in *Comptes Rendus*, *Proc. Royal Soc. London*, *Telegr. Eng. Journ.* &c.; obituary notices by Cooke, *Journ. Inst. Electr. H. L.

HUGHES, THOMAS (1822-1896), the author of *'Tom Brown's School Days'*, was born at Uffington, a country parish near Faringdon in Berkshire, on 20 Oct. 1822. His father was John Hughes (1790-1857) [q. v.]. His brother George Edward (1821-1872), who is the subject of Tom Hughes's *'Mémorial of a Brother'*, was thirteen months Tom's senior; he was educated at Rugby and Oriel College, Oxford, stroked the Oxford crew of 1843, entered Lincoln's Inn in 1848, and practised in the ecclesiastical courts; he was a member of the Pen and Pencil Club, a skilful player on the violoncello, and died at Hoylake, Cheshire, on 2 May 1872.

Tom spent almost all his years up to early manhood in the closest companionship with this elder brother. They went together in the autumn of 1830 to a private school at Twyford, near Winchester, where they had Charles Blachford Mansfield [q. v.] as their schoolfellow. Tom Hughes describes this school as being before its time in the cultivation of athletic exercises, for success in which prizes were regularly given. In February 1834 the two brothers were sent to Rugby, Tom being then eleven years old. Their father had been at Oriel with Dr. Arnold, and though he had no sympathy

with his politics he admired his character and abilities, and he sent his sons to Rugby to be under Arnold.

The Rugby of that time is described in *'Tom Brown's School Days'*. It has been almost inevitable that readers should see Hughes himself in Tom Brown. But in the preface to *'Tom Brown at Oxford'* he complains of this identification. 'I must take this my first and last chance of saying that he is not I, either as boy or man. . . . When I first resolved to write the book I tried to realise to myself what the commonest type of English boy of the upper middle class was, so far as my experience went; and to that type I have throughout adhered, trying simply to give a good specimen of the genus. I certainly have placed him in the country scenes which I know best myself, for the simple reason that I knew them better than any others, and therefore was less likely to blunder in writing about them.' Readers are bound to respect this protest. But the sentiments and doings ascribed to Tom Brown were by Hughes's account those of the kind of boy that Hughes was. Tom Hughes did not become much of a scholar; in academical attainments he was below his brother George, both at school and at college. But he rose high enough in the school to come into that close contact with Dr. Arnold which never failed to draw boys of any thoughtfulness into reverence for him. Tom stayed a year at Rugby behind his brother George, and in the middle of the year he played for Rugby at Lord's in the annual match against a Marylebone club eleven. Then in the spring of 1842, having matriculated on 2 Dec. 1841, he followed his brother to Oxford and Oriel, carrying with him at least a great cricketing reputation, for he played in the June of his first year in the Oxford and Cambridge match at Lord's. The two brothers had rooms on the same staircase, and the genuine though unobtrusive seriousness of Tom's character was no doubt fostered by his intimacy with George. But neither of them seems to have been at all affected by the religious movement of their Oxford days. They associated with their distinguished schoolfellows, Matthew Arnold, Clough, Walrond, and others. Tom Hughes records that in the year before he took his degree he made a tour with a pupil in the north of England and Scotland (*Mémorial of a Brother*, p. 88). He did this by the special request of the pupil's father, who was a neighbour and friend of the Hughes family. Hughes says that he frequented commercial hotels, and heard the corn-law question vigorously discussed, and

came back from the north 'an ardent free-trader.' In other respects, he adds, 'I was rapidly falling away from the political faith in which we had been brought up. . . . The noble side of democracy was carrying me away.' He was thus early showing himself to be the generous, teachable, and courageous Englishman that he was known to be in after life.

Having graduated B.A. in 1845, he went up to London to read for the bar. He had been admitted at Lincoln's Inn on 21 Jan. 1845, but migrated to the Inner Temple on 18 Jan. 1848, and was called to the bar ten days later. He never became a great lawyer, but he studied diligently, and was able to acquit himself creditably in professional business. He became Q.C. in 1869, and bencher of his inn in 1870. It was through his residence in Lincoln's Inn that he came under the great influence of his life. F. D. Maurice was then chaplain of the Inn, and whilst his personal character won the reverence of the young student, his teaching came home to his needs and aspirations and deepest convictions, and completely mastered him. Maurice had no more devoted disciple than Tom Hughes. It was the work of his life to put in practice what he learnt from Maurice. In the latter part of 1848 he offered himself as a fellow-worker to the little band of Christian socialists who had gathered round Maurice, in which Mr. John M. Ludlow, for many years Hughes's closest friend and ally, and Charles Kingsley, and his old school-fellow Charles Mansfield, were already enrolled. The practical part of Christian socialism was the co-operative movement, especially in its 'productive' form. This branch of it has been overshadowed by the vast store system; but it was co-operative production that had the sympathy and advocacy of Hughes and the more enthusiastic promoters of co-operation. In his later years Hughes was accustomed to denounce with some vehemence what he regarded as a desertion of the true co-operative principle by those who cared only for the stores, and who gave no share in the business to the employees of the store and the factory. The early businesses set up by the Christian socialists did not prosper, but Hughes never despaired of the cause. He was one of the most diligent and ardent of its promoters, attending conferences, giving legal advice, and going on missionary tours. He contributed to the 'Christian Socialist' and the 'Tracts on Christian Socialism,' and acted for some months as editor of the 'Journal of Association.' By giving evidence in 1850 before the House of Commons committee on the savings

of the middle and working classes, and by other persevering efforts, he aided the passing of the Industrial and Provident Societies Act (36-7 Victoria, c. 39) in 1893.

Hughes had married in 1848 Frances, daughter of the Rev. James Ford, and niece of Richard Ford [q.v.], author of the famous 'Handbook of Spain,' and near the end of 1849 his brother George became once more for a short time his companion, having joined the young couple in a small house in Upper Berkeley Street. Tom had chambers in common with Mr. J. M. Ludlow at No. 8 Old Buildings, Lincoln's Inn, and in 1853 the two friends agreed to build and occupy a joint house at Wimbledon. 'Our communistic experiment,' says Mr. Ludlow (*Economic Review*, July 1890, p. 305), 'was entirely successful while it lasted,' which was for four years. It was in this Wimbledon house that 'Tom Brown's School Days' was written. Mr. Ludlow records (*ib.* pp. 306, 307) how Hughes put into his hands one night a portion of his manuscript, and with what surprise he became aware, as he read, of the quality of the book. It was shown without delay to Alexander Macmillan [see under MACMILLAN, DANIEL], who promptly undertook to publish it. Its completion was delayed by a domestic grief, the death of Hughes's eldest daughter; but it appeared anonymously in April 1857. Its success was rapid, five editions being issued in nine months.

This book is Hughes's chief title to distinction. His object in writing it was to do good. He had had no literary ambition, and no friend of his had ever thought of him as an author. 'Tom Brown's School Days' is a piece of life, simply and modestly presented, with a rare humour playing all over it, and penetrated by the best sort of English religious feeling. And the life was that which is peculiarly delightful to the whole English-speaking race—that of rural sport and the public school. The picture was none the less welcome, and is none the less interesting now, because there was a good deal that was beginning to pass away in the life that it depicts. The book was written expressly for boys, and it would be difficult to measure the good influence which it has exerted upon innumerable boys by its power to enter into their ways and prejudices, and to appeal to their better instincts; but it has commended itself to readers of all ages, classes, and characters. The author was naturally induced to go on writing, and his subsequent books, such as 'The Scouring of the Whites Horse' (1859) and 'Tom Brown at Oxford' (1861) are not without the qualities of which the 'School Days' had given evidence; but

it was the conjunction of the subject and the author's gifts that made the first book unique.

In January 1854, at a meeting of the promoters of associations, it was resolved, on a motion made by Hughes, 'That it be referred to the committee of teaching and publications to frame and, so far as they think fit, to carry out a plan for the establishment of a people's college in connection with the metropolitan associations.' This was the beginning of the Working Men's College, then situated in Great Ormond Street, which continued to the end of his life one of Hughes's chief interests. He was not able to do much in it as a teacher, but he took an active part in carrying on its social work, commanded its volunteer corps, and was principal of the college for ten years, from 1872 to 1883. He delighted the students by his geniality, but he never concealed from them his earnest religious faith. One of his books, 'The Manliness of Christ' (1879), grew out of what he taught in a bible-class at the college. In an earlier year, 1861, he had written the first of a series of 'Tracts for Priests and People,' issued by Maurice and his friends. His tract was entitled 'Religio Laici,' or, in a subsequent edition of it, 'A Layman's Faith' (1868). His theology was Maurice's, transfused through his own simple and devout mind. In all that he wrote or spoke or did, he was sincere, straightforward, intolerant of deceit or meanness. He interested himself ardently in church reform, and was a hearty member of a 'church reform union,' when it was originated in 1870, and again when it had a brief resuscitation through Arnold Toynbee's efforts in 1886. His position was that of a liberal churchman, supporting a national church with enthusiasm, but desiring to make it as acceptable and inoffensive as possible to nonconformists. When he became known as a social reformer, it was natural that he should be urged to seek entrance to the House of Commons, and he was elected for Lambeth in 1865. In 1868 he was glad to exchange this unwieldy and unmanageable constituency for the borough of Frome, for which he was returned at the general election; he relinquished his candidature for Frome at the general election in February 1874 (the seat was won for the conservatives by Henry Charles, afterwards Lord Lopes (q.v.)), and was nominated for Marylebone, but retired the day before the poll. In the House of Commons the line he took was definitely that of a reformer, and especially of a friend of the working classes; a trades union bill he introduced was read a second time

on 7 July 1869, but made no further progress. He was not a very successful speaker, and, though greatly liked and respected, he would not have been able to reach the front rank in politics. When Gladstone went over to home rule for Ireland, Hughes's opposition to that policy was touched with indignation, and he became a vehement liberal unionist. In 1869 he was chairman of the first co-operative congress, and spoke against the tendency to shelve 'productive' co-operation, which he never ceased to denounce.

The first of three visits to America was made by Hughes in 1870. One of his strongest ties to the United States was his admiration of Lowell's 'Poems,' which was most fervent. Mr. Ludlow describes (*Economic Review*, July 1890, p. 809) how, being asked by Trubner in 1869 to write an introduction to an edition of the 'Biglow Papers,' Hughes, in his self-distrustful way, begged help from him, and the introduction was a joint composition. Two separate essays on American history by the same authors were combined in a volume published in 1862. One of Hughes's objects in going to America was to make Lowell's personal acquaintance. He had been warmly on the side of the north in the civil war, and this, added to the fame of 'Tom Brown's School Days,' made him very popular in the States. In the course of this visit he gave two lectures—one at Boston entitled 'John to Jonathan,' another at New York on the labour question. His subsequent visits to America were connected with a project, commenced in 1879, which at first awakened all his enthusiasm, and afterwards caused him much anxiety and considerable pecuniary loss. His sanguine, unsuspicious temper was not favourable to success in business. In conjunction with friends he bought a large estate in Tennessee, on which a model community was to be established. The place was named Rugby. The purchase had been misled as to the productive value of the estate, and the early settlers underwent a rather bitter disappointment. Tom Hughes drew out of the enterprise, but his mother went to live at the new Rugby with her youngest son, Hastings Hughes, and after ten years' residence died there at a very advanced age.

In July 1889 Hughes was appointed a county-court judge, and went to live at Chester. There he built himself a house, which he named after his birthplace, Uffington, and he grew old happily in the performance of his judicial duties. His health at last gave way to infirmities, and he died

at Brighton on 22 March 1896. In accordance with his known wishes his funeral was strictly private, and he was buried in the Brighton cemetery. Besides his wife he left six surviving children, three sons and three daughters. Two died in childhood, and a son, who was a soldier, died some years before his father after military experience in South Africa. A fine statue of Tom Hughes by Brock has been erected in the school grounds at Rugby.

There are two original portraits, both by Lowes Dickinson—one painted when he was a little over forty years of age, in the possession of his daughter, Mrs. Cornish; the other when he was seventy, in the possession of Mrs. Hughes. Hughes's name is commemorated in the Working Men's College, removed to Crowndale Road, Camden Town, in 1904-5 (*The Working Men's College, 1854-1904*, ed. Llewelyn Davies, 1901).

In addition to the books which have been mentioned—'Tom Brown's School Days,' 'Tom Brown at Oxford,' 'The Scouring of the White Horse,' 'The Memoir of a Brother,' 'The Manliness of Christ'—Hughes wrote *Lives of Bishop Fraser* (1887), of Daniel Macmillan (1882), of Livingstone (1889), and of Alfred the Great (1899), 'The Old Church' (1878), 'Rugby, Tennessee' (1881), 'Gone to Texas' (1884). Many of his addresses and shorter compositions were printed in pamphlet form. A series of his letters to the 'Spectator' were published in his lifetime by his daughter, Mrs. Cornish, under the title of 'Vacation Rambles' (1895). A short fragment of autobiography, which has been privately printed, contains some memories of his early youth and manhood.

Ludlow, 'Thomas Hughes and Septimus Hansard,' in the *Economic Review*, July 1896; *Life of F. D. Maurice*, Brit. Mus. Cat.; Off. Rot. Members of Parl.; Lincoln's Inn Records; Foster's *Alumni Oxon. 1715-1886*, and *Men at the Bar*; *Men of the Time*, 13th ed.] J. L. D.

HUISE, ROBERT (1777-1850), miscellaneous writer, son of Mark Huish of Nottingham, was born there in 1777. He appears to have begun his literary career by writing a readable little treatise on bee-culture, which was afterwards expanded and issued in various forms. This was the one subject on which he may perhaps be termed an expert. His other works are nearly all poor examples of anecdotal, quasi-historical book-making. They occasionally embellish a blank space in biography with a great quantity of loose and fragmentary gossip,

but the 'Quarterly Review' spoke of him with no great injustice as an obscure and unscrupulous scribbler. His fecundity was remarkable, as witnessed by his voluminous compilations during 1835-6. He executed a few translations from the German, and in his later years some novels of a very low type. He died in Camberwell in April 1850.

His works comprise: 1. 'A Treatise on the Nature, Economy, and Practical Management of Bees,' London, 1815, 8vo. 2. 'Memoirs of her late Royal Highness Princess Charlotte Augusta,' 1818, 8vo, with a separately issued supplement, 1818. 3. 'The Public and Private Life of George III,' 1821, 4to. 4. 'An Authentic History of the Coronation of George IV,' 1821. 5. 'Memoirs of Carolina, Queen of Great Britain,' 1821, 2 vols. 12mo. 6. 'Authentic Memoir of . . . Frederick, Duke of York and Albany,' 1827, 8vo. 7. 'Memoirs of George IV,' London, 1830, 2 vols. 8. 'The Historical Galleries of Celebrated Men' (authentic portraits), 1830; only one volume published. 9. 'The Wonders of the Animal Kingdom,' London, 1830. 10. 'The Last Voyage of Captain Sir John Ross . . . to the Arctic Regions in 1829-33,' London, 1835. 11. 'The Travels of Richard and John Lander . . . into the interior of Africa,' 1835 (with a résumé of previous African travel). 12. 'A Narrative of the Voyages of . . . Captain Beechey to the Pacific and Behring's Straits,' London, 1838. 13. 'The History of the Private and Political Life of Henry Hunt, Esq., his Times and Co-temporaries,' 1838. 14. 'Memoirs of William Cobbett, Esq.,' 1838, 2 vols. 15. 'The Memoirs, Private and Political, of Daniel O'Connell,' 1838. 16. 'The History of the Life and Reign of William IV, the Reform Monarch of England,' 1837. 17. 'The Natural History and General Management of Bees,' 1844. 18. 'The Progress of Crime; or, Authentic Memoirs of Maria Manning,' 1849, 8vo. Nearly all his books exhibit violent anti-Tory prejudices.

[Gent. Mag. 1850, i. 681; Quarterly Review, liv. 5; Athenæum, 1842, p. 553; Brit. Mus. Cat.] T. S.

HULKE, JOHN WHITAKER (1830-1895), surgeon, born on 6 Nov. 1830, was fourth son of William Hulke, surgeon, living at Deal in Kent. He was from 1848 to 1849 educated at the Moravian College, Newried. Here he gained his intimate knowledge of the Gorman language and the groundwork of his acquaintance with natural history; here, too, in the Eifel district, his interest

in geology was first awakened. Returning to England he attended King's College school during 1846-7, and in 1849 he entered the medical department of King's College, London. He served as a dresser to Sir William Bowman [q. v. Suppl.] at King's College Hospital, and he was admitted a member of the Royal College of Surgeons of England on 18 July 1852. He then returned to Deal, where he acted as assistant to his father during his attendance on the fatal illness of the Duke of Wellington in September 1852, and he afterwards served the office of house-surgeon to Sir William Ferguson [q. v.] at King's College Hospital.

In 1855 Hulke was attached to the medical staff of the general hospital in the Crimea, and in March of that year he was doing duty in the English hospital at Smyrna. In September he left Smyrna for the camp before Sebastopol, where he spent the winter of 1855-6. He then returned to England, and after examination was elected a fellow of the Royal College of Surgeons on 23 May 1857. He acted for a short time as tutor at King's College Hospital, where he was elected assistant surgeon in 1857 for a term of five years. In 1863 he was appointed assistant surgeon to the Middlesex Hospital, becoming full surgeon in 1870. In 1858 he was elected assistant surgeon at the Royal London Ophthalmic Hospital, Moorfields, where he became full surgeon in 1868 and consulting surgeon in 1890.

At the Royal College of Surgeons of England Hulke filled in succession every office open to him, and died during his second year as president. Winning the Jacksonian prize in 1859 with an essay upon the morbid changes of the retina, he was appointed Anns and Gale lecturer upon anatomy and physiology (1868-71), an examiner on the board of anatomy and physiology (1876-80), on the court (1880-89), and on the dental board (1883-9). He served as a member of the council from 1881 to 1895, a vice-president in 1888 and 1891, Bradshaw lecturer in 1891, president from 1893 to 1895, and his Hunterian oration was read for him on 14 Feb. 1895, while he lay dying of pneumonia.

He was elected a fellow of the Royal Society in 1867, his claim being based exclusively on researches relating to the anatomy and physiology of the retina in man and the lower animals, particularly the reptiles. He served on the council of the Royal Society in 1879-80 and again in 1888-9. Elected a member of the Geological Society in 1868, he became president from 1882 to 1884, and in 1897 he was presented with the Wollaston medal, the greatest honour it is in the power of

the society to bestow. In 1891 he was appointed foreign secretary, a position he held until he died.

In February 1862 he was elected an honorary fellow of King's College, and in 1878 he became a corresponding member of the Academy of Natural Sciences, Philadelphia, and in 1884 an honorary member of the Cambridge Philosophical Society. He was president of the Pathological Society of London from 1883 to 1885, president of the Ophthalmological Society of the United Kingdom in 1886-7, and president of the Clinical Society in 1893-4.

He died in London on 19 Feb. 1895, and is buried in the cemetery at Deal. He married, 1 Oct. 1868, Julia, daughter of Samuel Ridley, but they had no children.

Hulke's name is not associated with any brilliant departure in surgery, but he was wise and quick to see what surgical movements would stand the test of time; an early supporter of aseptic methods, and, to a certain extent, a pioneer in cerebral surgery. He was highly skilled too in the special branch of ophthalmic surgery; he was an excellent pathologist, and his Hunterian oration showed him to be a first-rate botanist. A natural talent, aided by opportunity, enabled him to make important additions to palaeontology, more especially in connection with the great extinct land reptiles (*Dinosauria*) of the secondary period. His investigations were made in the Kimmeridge clay of the Dorset cliffs and upon the Wealden reptiles of the cliffs of Brook and its neighbourhood in the Isle of Wight.

D'A. P.

HUMPHRY, SIR GEORGE MURRAY (1820-1896), surgeon, born at Sudbury in Suffolk on 18 July 1820, was third son of William Wood Humphry, barrister-at-law and distributor of stamps for Suffolk. He was educated at the grammar schools of Sudbury and Dedham, and in 1836 he was apprenticed to J. G. Crosse, surgeon to the Norfolk and Norwich Hospital. In 1839 he left Norwich and entered as a student at St. Bartholomew's Hospital in London, where he came under the influence of Peter Mere Latham [q. v.], William Lawrence [q. v.], and (Sir) James Paget [q. v. Suppl.]. He passed the first M.B. examination at the London University in 1840, obtaining the gold medal in anatomy and physiology, but he never presented himself for the final examination. He was admitted a member of the Royal College of Surgeons of England on 19 Nov. 1841,

and on 12 May 1842 he became a licentiate of the Society of Apothecaries. In the same year three of the surgeons at Addenbrooke's Hospital, Cambridge, resigned their office, and on 31 Oct. 1842 'Mr. Humphrey' was placed third out of six candidates in a contested election for the vacant posts. This appointment made him the youngest hospital surgeon in England, and he at once began to give clinical lectures and systematic teaching in surgery. In 1847 he was invited to act as deputy to the professor of anatomy, and he gave the lectures and demonstrations upon human anatomy from 1847 to 1880. He entered himself a fellow-commoner at Downing College in 1847, graduating M.B. in 1852 and M.D. in 1859. After the retirement of the Rev. Dr. William Clark, professor of human and comparative anatomy, in 1866, the duties of the chair were recast, and Humphry was elected professor of human anatomy in the university. He held this office until 1888, when he resigned it for the newly founded but unpaid professorship of surgery. In 1849 he succeeded Professor (afterwards Sir) George Edward Paget [q.v.], who was then elected president of the council, as the representative of the university of Cambridge on the General Medical Council. In 1880 he delivered the Rede lecture before the university of Cambridge, taking 'Man, Past, Present, and Future' as the subject of his address. He served on the council of the senate of the university, he was an honorary fellow of Downing, and in 1884 he was elected a professorial fellow of King's College, Cambridge.

At the Royal College of Surgeons of England Humphry filled all the offices which his physical strength and his devotion to the university of Cambridge would permit. Elected a fellow on 20 Aug. 1844, when he was still a year below the statutory age, he served as a member of the council from 1861 to 1881, was Arris and Gale lecturer on anatomy and physiology from 1871 to 1873, a member of the court of examiners from 1877 to 1887, and Hunterian orator in 1879. He declined to be nominated for the offices of vice-president and president.

He was elected a F.R.S. in 1859, and he served on the council of this society 1870-1. He was long a member of the British Medical Association, acting first as secretary and afterwards as president of the Cambridge and Huntingdon branch. He delivered the address in surgery at the general meeting held at Cambridge in 1856, presided in the section of anatomy and physiology at the Worcester meeting in 1882, and was president of the whole association at the Cam-

bridge meeting in 1881. In 1867 he presided over the physiological section of the British Association for the Advancement of Science, and in 1870 he gave six lectures on the architecture of the human body as a part of the Fullorian course at the Royal Institution of London. He took an active part in the formation of the Cambridge Medical Society, and for some time was president. He presided at the annual meetings of the Sanitary Society of Great Britain, held in London in 1882 and in Glasgow in 1883. In 1887 he was the first president of the Anatomical Society of Great Britain and Ireland, and he served as president of the Pathological Society of London during the years 1891-3. He was knighted in 1891.

Humphry died at his residence, Grove Lodge, on 24 Sept. 1896, and is buried at the Mill Road cemetery, Cambridge. A bust by Wilton was presented to Addenbrooke's Hospital by the vice-chancellor of the university. A portrait by Mr. W. W. Ouless, R.A., hangs in the Fitzwilliam Museum, and has been engraved. A portrait by Miss K. M. Humphry, painted on the occasion of the enrolment of Professor Humphry as a freeman of his native town, is in the public hall at Sudbury, Suffolk.

He married, in September 1849, Mary, daughter of Daniel Robert McNab, surgeon, of Leppington, by whom he had a daughter and one son, Mr. Alfred Paget Humphry, senior esquire bedell of the university of Cambridge.

Beginning as a general practitioner without a practice, poor and without influence, Humphry became the most influential man in the university of Cambridge, and converted its insignificant medical school into one which is world-renowned. Before all things he was a scientific man and a collector. The Museum of Anatomy and Surgical Pathology engrossed much of his attention, and many of his holidays were spent in journeys designed expressly to secure specimens to fill its shelves. As an anatomist he was one of the earliest workers who attempted to bring human anatomy into line with the growing science of morphology. He was a good and successful surgeon, though a great operation was a severe trial to him. He was the first in England to remove successfully a tumour from the male bladder, and one of the first to advocate the advantages to be derived from the suprapubic method. He had no amusements and was sparing in all that concerned his own indulgence, but he was most hospitable and in large matters profusely generous. Having begun poor, he ended

rich. He was full of research and resource, and generally succeeded in getting his own way, but his aims were unselfish and were always directed to the improvement of his profession.

Humphry's works were: 1. 'A Treatise on the Human Skeleton, including the Joints,' Cambridge, 1858, 8vo; an important work containing the results of original research in several directions. The excellent plates by which the book is illustrated were drawn by his wife. 2. 'On the Coagulation of the Blood in the Venous System during Life,' Cambridge, 1859, 8vo; of this subject he had had painful experience during his own illnesses. 3. 'The Human Foot and the Human Hand,' Cambridge and London, 1861, 12mo. 4. 'Observations in Myology,' Cambridge and London, 1872, 8vo. 5. 'Cambridge: the Town, University, and Colleges,' Cambridge, 1880, 12mo; a very excellent little guide book. 7. 'Old Age: the Results of Information received respecting nearly Nine Hundred Persons who had attained the Age of Eighty Years, including Seventy-four Centenarians,' Cambridge, 1889. Humphry was also founder and co-editor (with Sir William Turner, M.D.) of the 'Journal of Anatomy and Physiology,' Cambridge and London, 1866.

[Personal knowledge; private information; Trans Royal Med. and Chirurg. Soc. 1897, vol. lxx., St. Bartholomew's Hospital Reports, 1896, vol. xxxii.] D'A. P.

HUNGERFORD, Mrs. MARGARET WOLFE (1855 P-1897), novelist, eldest daughter of Canon Fitzjohn Stannus Hamilton, vicar-choral of Ross Cathedral and rector of Ross, co. Cork, was born about 1855, and educated in Ireland. Her early home was at St. Brende's, co. Cork. She married, first, Edward Arglos, a Dublin solicitor, by whom she had three daughters; and, secondly, Mr. Thomas H. Hungerford, by whom she had two sons and one daughter. She died of typhoid fever at Bandon on 24 Jan. 1897.

Mrs. Hungerford wrote over thirty novels dealing with the more frivolous aspects of modern society. They had a great vogue in their day. The first, 'Phyllis,' appeared in 1877; the most popular of all was perhaps 'Molly Bawn' (1878). Most of the books appeared anonymously, but a few bore the pseudonym 'The Duchess.' Her plots are poor and conventional, but she possessed the faculty of reproducing faithfully the tone of contemporary society.

[Allibone's Dict., Suppl. ii. 872; Times, 25 Jan 1897.] E. L.

HUNT, ALFRED WILLIAM (1880-1896), landscape painter, born at Liverpool on 15 Nov. 1880, was the seventh child, and the only son who survived infancy, of the painter Andrew Hunt [q. v.], by his marriage with Sarah Sanderson. He was educated at the Liverpool collegiate school, and gained a scholarship at Corpus Christi College, Oxford, in 1848. In 1851 he won the Newdigate prize for English verse, the subject being 'Nineveh,' and he graduated B.A. in 1852. In 1858 he was elected to a fellowship at his college, which he resigned on his marriage in 1861. In 1882 the college paid him the compliment of electing him an honorary fellow.

He had painted since the age of eight under his father's instruction, and had spent his vacations during his school and college days in sketching from nature in Scotland, Cumberland, Wales, and Devonshire, and in 1850 on the Rhine. He had exhibited drawings at a very early age at the Liverpool Academy, of which he became a member in 1850, and later at the Portland Gallery in London. At Oxford he was deeply impressed by the writings of John Ruskin and by the art of Turner. James Wyatt, the well-known print-seller in the High Street, purchased his drawings, though not on a liberal scale of remuneration, and encouraged him to adopt painting as a profession. Hunt hesitated for a time between an academic and an artistic career. He was a good scholar, a clear and ready speaker, and took much interest in politics as well as literature; but he was first and foremost an artist, and Wyatt turned the scale in 1854 by giving him a commission to go to Wales and paint as much as he could. In that year he exhibited a picture, 'Wastdale Head from Styhead Pass, Cumberland,' at the Royal Academy, and two years later a small oil-painting by him, 'Llyn Idwal, Carnarvonshire,' was hung on the line. It was much praised by Ruskin, and was followed by other landscapes. These, however, were too much in the pre-Raphaelite manner to find favour with the hanging committee. In 1857 his pictures were badly hung, and in 1858 an elaborate work, 'The Track of an Old-World Glacier,' was refused. Ruskin protested vehemently in his notes on the Academy against the treatment of Hunt, but his combative championship did the painter little good in official circles. Hunt was at this time in close touch with the pre-Raphaelites, though not a member of the brotherhood, and he was one of the original members of the Hogarth Club. He exhibited at the Academy each year from 1859 to 1862, but his pictures were badly hung, and after

that time persistently refused, till he ceased to send them in. This discouragement caused him almost to abandon oil-painting, though he was no less gifted in the use of oils than in that of water-colours. In 1862 he was unanimously elected an associate of the Old Water-colour Society, to which he became a regular contributor. He was elected a full member in 1864. For about seven years he worked in water-colours only, but in 1870 he again exhibited an oil-painting at the Royal Academy, and continued to do so occasionally till within a few years of his death. His contributions amounted in all to thirty-seven. At the gallery in Pall Mall East he exhibited more than three hundred water-colours, and these represent only a small proportion of his life's work, for he was a rapid though a very careful worker. He devoted much time and energy to the service of the Royal Water-colour Society, as it has been called since 1881; this advance and the prosperity which the society has enjoyed in recent years were due in some measure to Hunt's exertions. He was a trustee of the society from 1879 onwards, and acted as deputy-president in 1888. He was largely instrumental in organising the Art Club, for social meetings and temporary loan exhibitions, in connection with the society, which was formed in 1883.

After his marriage in 1861 Hunt lived for a time at Durham, but in 1865 he came to London and took a house, 1 Tor Villas (afterwards called 10 Tor Gardens), Campden Hill, Kensington, which had been occupied previously by Mr. James Clarke Hook and Mr. Holman Hunt. This was his residence during the remainder of his life, and he died there on 3 May 1896. A fine and representative loan collection of his works was exhibited in the following year at the private gallery of the Burlington Fine Arts Club. Exhibitions had been held in his lifetime at the Grosvenor Gallery and in the rooms of the Fine Art Society in New Bond Street (1884).

On 10 Nov. 1861 Hunt married Margaret, second daughter of James Raine [q. v.] Mrs. Hunt, who, with three daughters, survived him, wrote several novels.

Hunt painted much at Durham, on the Tees, and at Whithy and other places on the north-east coast of England, but also on the Thames (Sonning, Pangbourne, Windsor, &c.), in Scotland and Wales, in Switzerland, on the Rhine and Moselle, and in Italy, Sicily, and Greece, during a tour of nine months in 1869-70. He visited America and painted the Falls of Niagara in a season of exceptional drought. He was a devoted disciple, but by

no means a mere imitator, of Turner. Like Turner, he was a painter of the sky, of cloud, sunshine, and mist. He used water-colour with an exquisite purity and delicacy, and was no less diligent in the exact study of nature than in acquiring mastery over the technicalities of his art. He took a very high view of the function of the artist, and had a deep and reverent love for the beauty of the world as a manifestation of the divine. His sincere and modest work, inspired by an aim so spiritual, did not show to advantage in a mixed exhibition, and failed to attract the attention it deserved, especially at the Academy; but his reputation with collectors and good judges of art stands high, and is certain to increase. Most of his pictures are in private hands; 'Windsor Castle' (1889) is in the Tate Gallery, and 'Working Late' (exhibited in 1873) is in the Walker Art Gallery, Liverpool.

[Times, 5 May 1896, Daily Graphic, 7 May 1896; Illustrated London News, 16 May 1896, with portrait; Athenaeum, 9 May 1896, Catalogue of Exhibition at Burlington Fine Arts Club, with introduction by Cosmo Monkhouse, other exhibition catalogues; Graves's Dict. of Artists; private information.] O. D.

HUNTER, ROBERT (1823-1897), lexicographer, theologian, and missionary, born at Nowburgh, Fife-shire, on 3 Sept. 1823, was son of John M. Hunter, a native of Wigton-shire, and Agnes Strickland of Ulverston, Lancashire. His father was a collector in her majesty's exchequer. Hunter studied at Marischal College, Aberdeen, where he graduated M.A. in 1841. He received an appointment in connection with education in Bermuda and resided there for two years. On account of his work as a naturalist while in Bermuda he attracted the attention and elicited the warm commendation of Sir William Jackson Hooker [q. v.] of Kew, and of Sir Richard Owen [q. v.], both of whom advised him to devote himself to branches of natural science. Hunter, however, preferred to continue his studies for the ministry of the free church of Scotland, and, having attended the requisite theological classes in Edinburgh, he was licensed as a preacher of the free church. On 22 Oct. 1840 he was ordained colleague of Stephen Hislop [q. v.] of the free church mission at Nagpore, Central India. He gave nine years of distinguished service to the educational and evangelistic advancement of that populous district, and while doing so made several important discoveries in geological science. But failure of health compelled him in 1855 to return home. He subsequently assisted Alexander Duff [q. v.] in forming missionary

associations in the free church, and from 1864 to 1866 he was resident tutor in the theological college of the presbyterian church of England in London.

The remainder of Hunter's life was devoted mainly to literary work. For seventeen years he was engaged in editing the 'Encyclopædic Dictionary,' published in 1869, and reissued in 1895 by the proprietor of the 'Daily Chronicle' as 'Lloyd's Encyclopædic Dictionary.' Sir Richard Owen called it 'a colossal work.' It is a monument of wide knowledge, clear arrangement, and judicious condensation. He also published the 'Sunday School Teacher's Bible Manual' (1893), now known as Cassell's 'Concise Bible Dictionary' (1894), and was a frequent contributor to the 'British and Foreign Evangelical Review' and other religious journals and periodicals of the day.

While engaged in literary work Hunter also continued to render good service in evangelistic work in London. He founded the Victoria Docks Sunday school and church in connection with the presbyterian church of England, and for over twenty years conducted religious services at Sewardstone, near Tottenham.

The university of Aberdeen conferred the degree of LL.D. upon Hunter in 1883. He was also a fellow of the Geological Society, a member of the British Archaeological Society, and was connected with other learned bodies. He was a man of vast learning, of extensive scientific attainments, and of great application—a man, too, of a humble, gentle, and retiring disposition and of genuine piety. He died on 26 Feb. 1897 at his residence in Epping Forest. An earnest preacher of the gospel and a devoted missionary, he will be specially remembered as an experienced scientist and a skilful lexicographer.

Besides the works already mentioned, Hunter published: 1. 'History of India,' 1863. 2. 'History of the Missions of the Free Church of Scotland in India and Africa,' 1873.

[Information chiefly from the Rev. W. Hume Elliot, Ramsbottom, by whom a memoir of Hunter is to be published shortly; in the Brit. Mus. Cat. Hunter's works are ascribed to two different persons.] T. B. J.

HUNTER, WILLIAM ALEXANDER (1844-1898), lawyer, born in Aberdeen on 8 May 1844, was the eldest son of James Hunter, granite merchant, by his wife, Margaret Boddie of Aberdeen. He was educated at the grammar school and at the university of Aberdeen. He entered the university at the age of sixteen, with a high place in the bursary competition. In 1862-

1863 he was first prizeman in logic, moral philosophy, Christian evidences, botany, and chemistry, and in 1864 graduated as M.A. with 'the highest honours' in mental philosophy and in natural science. Besides several prizes he gained the Ferguson scholarship in mental philosophy, and the Murray scholarship awarded by the university after a competitive examination in all the subjects of the arts curriculum. With this successful record he was encouraged to read for the bar, and entered the Middle Temple in 1865. After taking numerous exhibitions awarded by the council of legal education, and passing his examinations with first-class honours, he was called to the English bar in 1867, and joined the south-eastern circuit.

For some years Hunter's work was almost entirely educational. In 1868 he gained the 'proxime accessit Shaw fellowship' in philosophy, which, like the Ferguson, is open to graduates of all Scottish universities. Shortly afterwards he took the Blackwell prize for the best essay on the philosophy of Leibnitz, and on 7 Aug. 1869 was appointed professor of Roman law at University College, London. His class was never large, but he devoted much time to the preparation of his lectures, and elaborated a logical arrangement of the subject, which afterwards appeared in his textbooks. In 1878 he resigned the chair of Roman law, and on 2 Nov. was appointed professor of jurisprudence in the same college. His lectures on this subject during the four years he held the chair contained much valuable criticism of Austin and other writers, but the matter was not published except in a few magazine articles. Under the influence of John Stuart Mill he took an active part in the agitation for the political enfranchisement of women, and aided in obtaining for them opportunities of higher education. In 1875, following the example of Professor John Elliot Cairnes [q. v.], he admitted women to his class in Roman law, and extended to them the same privilege when he afterwards became professor of jurisprudence. In 1882 he resigned his chair of jurisprudence at University College, and in the same year received the degree of LL.D. from the university of Aberdeen. While professor at University College Hunter acted from time to time as examiner in Roman law and jurisprudence at the university of London, and he wrote on social and political subjects in the 'Examiner' and other newspapers. He was for five years editor of the 'Weekly Dispatch.' In 1876 he wrote a pamphlet on the 'Law of'

Master and Servant,' and gave much attention to the interpretation of the law as it affected labour disputes. On retiring from his chair at University College in 1882 Hunter gave whatever time was not occupied in professional pursuits to political controversy. In conjunction with his friend, James Barclay, M.P. for Forfarshire, he took part in the attempts then being made by English and Scottish tenant farmers to obtain compensation for improvements. He also took up in the same interest the question of railway rates, and succeeded in obtaining important improvements in restrictions on charges and in the classification of goods and rates. He collected some materials for a work on private bill legislation, but this was never completed.

In 1885 Hunter was elected member of parliament for the north division of Aberdeen by a majority of 8,900 over the conservative candidate. His friendship with Charles Bradlaugh [q. v. Suppl.] and his intimate acquaintance with natives from India who had passed through his hands as law students had familiarised him with Indian questions, and on 21 Jan. 1886 he began his career in the House of Commons by moving an amendment to the address expressing regret that the revenues of India had been applied to defray the expenses of the military operations in Aya without the consent of parliament. This was withdrawn at Gladstone's suggestion.

At the general election in the same year Hunter declared himself in favour of home rule, and was returned for North Aberdeen unopposed. In 1888 he was appointed by the council of legal education reader in Roman law, international law, and jurisprudence. Next year the government, when legislating on local government in Scotland, appropriated probate duty to the payment of the fees of children taking the three lowest standards in elementary schools. In 1890 Hunter saw the chance of completely freeing elementary education from the payment of fees, and urged that the increase in the duties, which the government then imposed on spirits, should pay the fees in elementary schools on the standards above the three lowest. This he succeeded in carrying, and thus secured wholly free elementary education for Scotland. For this service he received the freedom of his native city in 1890. On 27 Jan. 1891 Hunter moved that the resolution refusing permission to Bradlaugh to take the oath or make affirmation should be expunged from the records of the House of Commons, and this was carried without a division. He had always been interested

in old age pensions, which he was the first to press upon the attention of parliament, and gave valuable assistance to those attempting to bring forward a feasible scheme. But his health was rapidly failing, and he seldom intervened in debate during his remaining years in parliament. In 1895 he was re-elected as member for North Aberdeen by a majority of 8,548, but retired from parliament in the following year owing to the state of his health. On the recommendation of Mr. A. J. Balfour he was awarded a civil list pension of 200*l*. He died on 21 July 1898 at Cults in Aberdeenshire.

Hunter's most important work was 'A Systematic and Historical Exposition of Roman Law in the order of a Code embodying the Institutes of Gaius and of Justinian, translated into English by J. A. Cross,' London, 1876; 2nd edit. enlarged, 1885. The chief characteristic of this work was its order of arrangement, which was based on that recommended by Bentham for a civil code. Under the head of 'contracts' some important criticisms of Maine's theory of the origin of Stipulatio are given, and under 'ownership' a new theory respecting bona fide Possessio is put forward entirely opposed to that of Savigny. The 'Introduction to Roman Law,' which appeared in 1880 (3rd ed. 1885), was a smaller work containing such parts of the subject as students required for pass examinations.

Besides the above works Hunter published 'The Trial of Mnluk Chand for the Murder of his own Child: a Romance of Criminal Administration in Bengal. With an Introduction by W. A. Hunter, LL.D., M.P.,' 1888.

[Personal knowledge.]

E. O.

HUNTER, SIR WILLIAM WILSON (1840-1900), Indian civilian, historian, and publicist, was born on 15 July 1840. His father was Andrew Galloway Hunter, a Glasgow manufacturer, who came from Denholm in Roxburghshire. His mother, Isabella, was a younger sister of James Wilson (1805-1860) [q. v.], and he was thus connected with Walter Bagshot [q. v.], who married a daughter of James Wilson. He was educated at Glasgow, first at the academy and afterwards at the university, where he graduated B.A. in 1860. He then spent some months in study at Paris and Bonn, acquiring (among other things) a useful knowledge of Sanskrit. At the open competition for the Indian civil service in 1861, he came out at the head of the list.

On arriving in India in November 1862 Hunter was posted to the lower provinces of

Bengal. His first appointment was that of assistant magistrate and collector in the remote district of Birbhum. Here, in addition to his official duties, he ransacked old records and collected local traditions, in order to obtain materials for publication. It is characteristic alike of his industry and his ambition that his first literary venture took the form, not of a slight magazine article, but of a considerable historical work, intended to be the precursor of a series, entitled 'The Annals of Rural Bengal.' On its publication in 1863, this was received with universal eulogy, for it was immediately recognised that India had now found a voice to make the dry details of administration not only intelligible but attractive. The book has since passed through six editions. In 1872 followed a yet more important work, in two volumes, on 'Orissa,' a province which will always be interesting for its far-famed temple of Jagannath, and which at that time had drawn special notice as the scene of a disastrous famine. Another publication of these early days was 'A Comparative Dictionary of the Non-Aryan Languages of India and High Asia' (1868), being a glossary of 189 dialects based mainly upon the collections formed by Brian Houghton Hodgson [q. v. Suppl.], with a political dissertation on the relations of the Indian government with the aboriginal tribes. Of this work it should be observed that the author subsequently withdrew some of the linguistic inductions, and went so far as to describe it as one 'for which my opportunities and my knowledge were then inadequate.'

Meanwhile, Hunter had been selected by Lord Mayo to organise perhaps the most gigantic literary enterprise that has ever been undertaken by any government—a statistical survey of the Indian empire, such as Sir John Sinclair [q. v.] attempted one hundred years ago for Scotland. At this distance of time it is difficult to realise the density of the ignorance that then prevailed with regard to the fundamental facts upon which good administration must be based. No general census had been taken, and the wildest estimates of population found acceptance. Each of the provinces remained isolated in respect of its knowledge of the rest, and the supreme government possessed no information to enable it to exercise the duty of supervision or (if need should arise in case of famine) of assistance. So far back as 1867 the government had resolved that a gazetteer should be prepared for each of the twelve great provinces of India. But there was no guarantee for uniformity in the execution of the work. In July 1869 Lord

Mayo placed Hunter on special duty 'to submit a comprehensive scheme for utilising the information already collected, for prescribing the principles according to which all local gazetteers are in future to be prepared, and for the consolidation into one work of the whole of the materials that may be available.' This task occupied the next twelve years of Hunter's life. His first duty was to travel over the whole of India, so as to put himself into communication with the local officials, and see things with his own eyes. These tours, often repeated, gave him an acquaintance with every corner of the peninsula such as few others could boast. As was to be expected, he encountered some opposition and not a little personal criticism, directed chiefly against the uniform system of spelling place-names which it was necessary to introduce. But his enthusiasm and diplomacy finally triumphed over all obstacles. The Hunterian compromise, based upon a transliteration of vernacular names, without any diacritical marks but with a concession to the old spelling of places that have become historical, has gradually won acceptance even in English newspapers.

In September 1871 the new post of director-general of statistics to the government of India was created for Hunter, who was further privileged to spend long periods in England for the greater convenience of the work. In addition to supervising the local editors and drawing up the scheme of the 'Imperial Gazetteer,' he took upon himself Bengal, the largest and least known province in India, and also Assam, which then formed an integral part of Bengal. 'The Statistical Account of Bengal' was published in twenty volumes between 1875 and 1877. The city of Calcutta is omitted, but the last volume contains a valuable appendix on fishes and plants. 'The Statistical Account of Assam' followed, in two volumes, in 1879. The other local gazetteers compiled in India raise the total number of volumes to 128, aggregating 80,000 pages. Meanwhile the task of condensing this enormous mass of material into 'The Imperial Gazetteer of India' was going on apace. The first edition, in nine volumes, appeared in 1881; and a second edition, which was augmented to fourteen volumes, incorporating the latest statistics and the results of the census of 1881, appeared in 1885-7. It is not too much to say that this will rank among the monumental works of reference which our generation has produced. Hunter, of course, did not accomplish all this single-handed. Among his many gifts was that

of getting their best work out of his assistants, who were content to merge themselves in his identity. But his was the mind that planned the whole, and his the energy that caused it to appear with such promptitude. The stamp of his own special handiwork may be found in the article on 'India,' which was reissued in 1895 in a revised form under the title of 'The Indian Empire: its Peoples, History, and Products,' forming a volume of 852 pages. Here he has given a summary of his opinions about many vexed questions in the ethnical and religious history of early India, which he had at one time hoped to treat at greater length. Specially valuable is the account given from original sources of the growth of Christianity in Southern India. A condensation of this important work for school use, entitled 'A Brief History of the Indian Peoples' (1880), has sold to the number of some hundred thousand copies, and has been translated into five vernacular languages.

In 1881, after the first edition of the 'Imperial Gazetteer' had passed through the press, Hunter returned to India as an additional member of the governor-general's council. This appointment, which is equivalent to a seat in the legislature, was twice renewed, making a term of six years. During this period his most important duty was to preside over the commission on education, appointed in 1882 to regulate the divergent systems that had grown up in the several provinces. The report of this commission, drafted by Hunter's hand and almost wholly accepted by the government, marks a new departure in the increased attention paid to the elementary instruction of the masses, and in the recognition of private enterprise, whether displayed by missionaries or by the people themselves. All subsequent improvement in education has been upon the lines of this report. Hunter was also a member of the commission on finance that sat in 1886, and he was sent to England in 1884 to give evidence before a committee of the House of Commons on Indian railways. Another post that he filled was that of vice-chancellor of the university of Calcutta (1886).

In 1887 Hunter finally retired from the service at the early age of forty-seven, to devote the remainder of his life to working up the materials he had accumulated for a great history of India. During his previous visits to Great Britain he had resided at Edinburgh, where he went so far as to build himself a house, which afterwards passed into the occupation of Professor John Stuart Blackie [q. v. Suppl.] He now resolved to

settle at Oxford. After spending a few years in the city and being initiated into academical life, he bought a plot of ground about three miles out on the Eynsham road, on the slope of the Witham Woods, commanding a view along the Valley of the Upper Thames. Here he built a comfortable house, which he called Oaken Holt, with accommodation for his library and also for his horses and his dogs. The superabundance of his energy found vent in many forms, especially in travel; but he never allowed pleasure to interfere with work. In former times he had written much for the 'Calcutta Englishman.' He now became a regular contributor to the 'Times,' where his weekly articles on Indian affairs exercised great influence. One of the first things that he did after settling at Oxford was to arrange with the delegates of the Clarendon Press for the publication of a series of little volumes called 'The Rulers of India.' These were intended as historical retrospects rather than personal biographies, their object being to awaken popular interest in the spectacle afforded by the gradual growth of our eastern empire. He opened the series, which now consists of twenty-eight volumes, with a model memoir on the administration of Lord Dalhousie (1890), and followed it up with 'Lord Mayo,' condensed from a full-length biography which he had previously written in two volumes (1875). That biography of Lord Mayo is notable for containing an admirable analysis of the machinery of the supreme government in India which controls the local administrations. In a book entitled 'Bombay, 1885 to 1890' (1892), Hunter supplemented this by a detailed examination of the administration of the Western Presidency, under the governorship of Lord Reay. He had at one time hoped to write the life of Sir Bartle Frere [q. v.], the greatest of recent governors of Bombay; but this project fell through. Instead, he took up the biography of Brian Houghton Hodgson, the veteran orientalist, who had first aroused his interest in the races and languages of India. Other publications of this period were 'The Old Missionary' (1896), an idyll which makes one regret that he did not more often indulge his lighter vein; and 'The Thackerays in India' (1897), which is worthy of its subject. He also compiled a bibliography of books about India, which, out of the abundance of his own library, he contributed to James Samuelson's 'India Past and Present' (1890).

All these books, and not a few others, might be called 'Olimps from an Anglo-Indian Workshop.' They represent the overflow of his literary activity, while his

mind was none the less bent on executing the project of a history of India, which he had formed long ago during his first years of service in Birbhum. How thorough were his early researches may be seen from the three volumes of 'Bengal MS. Records,' which he calendared at that time, though he did not publish them till 1894, with a dissertation on the permanent settlement. He also compiled a catalogue of 380 historical manuscripts in the library of the India office. Hunter was not destined to carry his original design to completion. He was reluctantly compelled to realise that no individual, however laborious, could compass the entire field. He therefore abandoned the early period of Hindu and Muhammadan dynasties, and devoted himself to tracing the growth of British dominion. This limited design, on the scale sketched out by the author, would have filled five volumes. Only one appeared in his lifetime (1899), which barely opens the subject, for it stops with the massacre of Amboyna in 1623, before the English company had founded its first settlements on the mainland of India. A second volume, continuing the narrative to the close of the seventeenth century, was published in November 1900. The sample given is sufficient to enable us to realise what the bulk would have been, and how great the loss caused by the author's premature death. By his painstaking investigation of contemporary documents, often hidden in Portuguese and Dutch archives, Hunter satisfied the most austere standard of an historian's duty. By his wide generalisations and his recognition of the influence exercised by national character and sea power, he shows himself a representative of the modern school of historical writing. The vigour and picturesqueness of his literary style are all his own.

In the winter of 1898-9 Hunter was called upon to undertake the tedious railway journey across Europe to Baku on the Caspian, to sit by the sick-bed of a son. On his return influenza seized him, and ultimately affected his heart. He died at Oaken Holt on 6 Feb. 1900. He was buried in the churchyard of Cumnor, his funeral being attended by representatives of the university of Oxford, by many distinguished Anglo-Indian friends, and by a crowd of villagers who mourned their benefactor.

Hunter was appointed C.I.E. in 1878, C.S.I. in 1884, and K.C.S.I. on his retirement from India in 1887. In 1869 his own university of Glasgow gave him the degree of LL.D. When he first settled at Oxford, in 1839, the university conferred upon him the ex-

ceptional distinction of M.A. by decree of convocation, which carried with it full rights of suffrage. Cambridge made him an honorary LL.D. in 1887. He was a vice-president of the Royal Asiatic Society, and member of many learned bodies both in England and on the continent. He was also proud of being elected by his neighbours as county councillor for the Cumnor division of Berkshire.

On 4 Dec. 1863 Hunter married Jessie, daughter of Thomas Murray (1792-1872) [q. v.] She accompanied him in many of his journeys, and shared his literary toils. She survived him, together with two sons, of whom the elder joined the army.

Lady Hunter edited essays by Hunter under the title 'The India of the Queen,' 1903, with introduction by F. H. Skrine.

[Private information.] J. S. C.

HUTTON, RICHARD HOLT (1826-1897), theologian, journalist, and man of letters, born at Leeds on 2 June 1826, was the grandson of Joseph Hutton (1765-1856), unitarian minister of Eustace Street congregation, Dublin, and the third son of Joseph Hutton (1790-1860), unitarian minister at Mill Hill chapel, Leeds. His mother was Susannah Grindal, eldest daughter of John Holt of Nottingham. In 1835 his father removed to London to become the minister of the congregation at Carter Lane. Richard was educated at University College School and at University College, under Augustus De Morgan [q. v.], graduating B.A. in 1845 and M.A. in 1849, and obtaining the gold medal for philosophy besides high distinction in mathematics. At University College he became intimate with Walter Bagehot [q. v.], when neither was more than seventeen. They both delighted in discussing their subjects of study, and Hutton relates how on one occasion they 'wandered up and down Regent Street for something like two hours in the vain attempt to find Oxford Street,' so absorbed were they in debating 'whether this so-called logical principle of identity (A is A) was entitled to rank as a law of thought or only as a postulate of language.'

After spending two semesters at German universities, first at Heidelberg in 1846 and then at Berlin, he entered Manchester New College in 1847 to prepare for the unitarian ministry. There he studied under James Martineau [q. v. Suppl.] and John James Tayler [q. v.] His intention of entering the ministry, however, came to nothing; for though he preached occasionally, he received no call to a permanent charge, his intellectual discourses, adorned by no grace of delivery, failing to secure appreciation. For a short time he filled the office of principal of

University Hall in London, then an important centre of nonconformist education. In 1851 he married, and accepted the editorship of the unitarian weekly journal, 'The Inquirer,' offered him by the proprietor, R. Kinder. John Langton Sanford [q. v.] was associated with him in the editorship in 1852, and among the contributors were his brother-in-law, William Caldwell Roscoe [q. v.], and Bagehot. At a time when the traditions of Priestley and Thomas Belsham were still dominant among the unitarians, Hutton advocated many innovations, and in consequence aroused the disapproval of the more conservative. He attempted to prove that the laity ought to have the protection of a litany against the arbitrary prayers of the minister, and that at least the great majority of the sermons ought to be suppressed, and the habit of delivering them discontinued altogether. These counsels of perfection were urged with so much ardour that Hutton himself playfully acknowledged, long after, that 'only a denunciation of just men made all but "perfect" would have tolerated it at all.' In fact the measure of tolerance he received was not large, his views on doctrine alienating those who might have disregarded his innovations in practice. His theology was coloured by the opinions of John Hamilton Thom [q. v.] and James Martineau, when Martineau's name was a word of fear in quiet households. Kinder was repeatedly requested to get rid of his young editors; a formal vote of censure on them was moved at the annual meeting of the London district society, and it was even proposed to start another paper on more orthodox lines. Under such conditions Hutton's tenure of office could hardly have been long continued, but in 1858 the complete breakdown of his health compelled him to relinquish both his editorship and his appointment at University Hall. Threatened with consumption, he was ordered to the West Indies. He returned from Barbados in better health but a widower, his wife having died there of yellow fever.

Hutton, finding his theological course beset with difficulties, turned to the study of the law, in which, however, he did not long persevere. He settled in chambers in Lincoln's Inn, began to read for the bar, and wrote in the 'Prospective Review.' In 1855 he and Bagehot became joint editors of a new magazine, 'The National Review,' which, it is said, was financed by Lady Byron. Owing to change in his theological position, Hutton retired from the joint editorship of the journal shortly before its cessation at the close of 1864. During its first

four years they were aided by Roscoe, who did some of his best critical work on this paper. On his death in 1859 Hutton undertook to edit his writings, which were published in 1860 with a memoir, under the title of 'Poems and Essays' (London, 2 vols. 8vo). Hutton was professor of mathematics from 1856 to 1865 at Bedford College, London, and from 1858 to 1860 he acted as assistant-editor of the 'Economist' [see WILSON, JAMES, 1805-1860].

During this time Hutton, though writing on many and various subjects, had never ceased to make theology his chief interest. He had definitely abandoned the unitarian creed, and had accepted the main principles and beliefs of the English church. He was early drawn in this direction by his friendship with Frederick William Robertson [q. v.], whose acquaintance he made in 1846 while Robertson was officiating at the English church at Heidelberg. From Robertson he received a new conception of the doctrine of the incarnation, in which he was afterwards confirmed by his intercourse with Frederick Denison Maurice [q. v.] Bagehot took him to hear Maurice preach in Lincoln's Inn chapel, and he was permanently impressed by his voice and manner. In 1853 Maurice was so pleased with a review of his 'Theological Essays' by Hutton in the 'Prospective Review' that he sought an introduction to him through Mr. Henry Solly. The acquaintance rapidly ripened into friendship, and Hutton zealously assisted Maurice in his social work in London. The progress of Hutton's views on the subject of the incarnation is marked by the publication, in 1862, of his 'Incarnation and Principles of Evidence,' which formed No. 14 of 'Tracts for Priests and People.' A doubtful passage in this treatise on the doctrine of the divine birth was omitted on its republication in 1871 in his 'Theological Essays.'

In 1861 Hutton obtained a unique opportunity for placing his theological and literary opinions before the public. Early in the year Mr. Meredith Townsend, who had just returned from India after giving up the 'Friend of India,' purchased the 'Spectator,' the well-known weekly liberal paper which had been founded by Robert Stephen Rintoul [q. v.] in 1828. Hutton was offered a half-share in the concern, and in June he became joint editor and part proprietor. The proposal was made by Mr. Townsend at a first interview, by an afterthought, when Hutton had taken his leave and was on his way downstairs; but the partnership remained unbroken until a few months before Hutton's death. It was arranged that while Towns-

end attended to the politics, Hutton should take charge of the department of literature. The position of the journal was not satisfactory, and at the commencement of the partnership Hutton and Mr. Meredith Townsend further impaired its popularity by espousing the cause of the Northern States in the American civil war. Public feeling in England ran strongly in favour of the confederates, and it was not until the collapse of the south in 1865 that the courage of the editors obtained its reward. The change in public opinion towards the close of the war gained the journal a hearing, and the general worth of its contents insured it success. Its form and character were in many respects novel, the 'Saturday Review' being the only similar journal in existence, for the 'Examiner,' under Albany Fonblaque [q. v.], which has been suggested as the source of Hutton's inspiration, was different in character. The editors consistently supported the liberal party until its division in 1886, when, though reluctant to withdraw their allegiance, to Gladstone, they felt compelled to oppose home rule. To Hutton the breach with Gladstone was especially painful, for the two men had long been united by ties of personal friendship and by a remarkable similarity in their views of life and of the relative importance of things and causes.

In the 'Spectator' Hutton found a pulpit from which he could speak on subjects nearest his heart, as well as on books and events of the day. In theological questions he first made his mark as the champion of Christianity against agnostic and rationalistic teachers. For this task Hutton was qualified by the breadth of his mind, the accuracy of his understanding, and his profound knowledge of current religious thought. Pre-eminently catholic in spirit he was removed from lesser party differences, and was able to comprehend and reconcile many positions which to smaller men seemed hopelessly antagonistic. While it would be idle to regard him as standing in the first rank of theologians, it may be questioned whether any of his contemporaries influenced public opinion more widely. This influence was exercised both through the 'Spectator' and by means of the vast correspondence he kept up with private persons on matters of religious controversy. As time advanced his sympathy with the high Anglican and Roman positions increased, and while never identifying himself with either party, his later friends, including William George Ward, Dean Church, and Canon Liddon, were drawn from both. For Cardinal Newman also he had a great admiration, regarding

the spiritual character of his life as standing in strange contrast 'to the eager and agitated turmoil of confused passions, hesitating ideals, tentative virtues, and grasping philanthropies amid which it has been lived.' He contributed a memoir of 'Cardinal Newman' in 1891 to the series entitled 'English Leaders of Religion.'

Hutton's later literary labours were somewhat overshadowed by his theological writings, but they were not without importance. His literary interests were especially directed to the great writers of the close of the eighteenth and the first half of the nineteenth century. Although in such a field he could reveal little hitherto unknown, his intense sympathy rendered his studies of such writers as Scott, Shelley, and Browning of much value. On this critical side his work is less satisfactory, his keen appreciation of the merits of his favourites frequently rendering him incapable of considering their defects. In writers of the late nineteenth century he took less interest, and perhaps in the 'Spectator' he underestimated the literary value of their work. In 1865, on the foundation of the 'Pall Mall Gazette,' Hutton was recommended to the proprietor, Mr. George Smith, by Mr. Frederick Greenwood for the post of editor. Although Mr. Smith preferred to appoint Greenwood himself, Hutton became a contributor, and in 1866 published 'Studies in Parliament' (London, 8vo), a series of sketches of leading politicians, which had appeared in the 'Pall Mall Gazette,' and which are among his happiest writings. In 1871 he issued his 'Essays, Theological and Literary' (London, 2 vols. 8vo). They appeared again, largely recast, in 1877, and in the third edition of 1888 the essays on Shelley and on Browning were further revised. In 1877 Hutton lost his early friend Bagehot, and undertook to edit his writings. This he accomplished in three series. In 1879 appeared 'Bagehot's Literary Studies,' with a prefatory memoir, in 1880 his 'Economic Studies,' and in 1881 his 'Biographical Studies.' Each of these collections went through several editions, the latest appearing in 1895. To the second volume of this 'Dictionary' Hutton contributed a notice of his friend.

Hutton was an original member of the Metaphysical Society, founded in April 1869, and in August 1865 published an article in which he gave a graphic sketch of the society and its chief members in the 'Nineteenth Century,' whose editor, (Sir) James Knowles, was the founder of the society. Under the form of an imaginary debate on a paper by William George Ward, he reproduced the

opinions and expressions of the leading members of the society with striking fidelity.

Hutton was a strong opponent of vivisection, and frequently attacked the practice in the 'Spectator.' In 1875 he served on a royal commission on the subject. The report was unfavourable to the practice, and in consequence in 1876 an act of parliament was passed which restricted experimenting on living animals.

From 1886 Hutton lived at Twickenham in much retirement, owing chiefly to his second wife's long illness, but he saw his friends at the 'Spectator's' office or at his clubs, and kept up a regular correspondence with them. His wife died early in 1897, and he did not long survive her. He died on 9 Sept. 1897 at his residence, Crossedepo, and was buried in Twickenham parish cemetery on 14 Sept. 'Round his grave were grouped Anglicans, Roman Catholics, and Unitarians, in about equal numbers and in equal grief.' He was twice married: first, in 1861, to Anne Mary (z. 1869), daughter of William Stanley Roscoe (1782-1813); and secondly, in 1868, to Eliza (z. 1897), daughter of Robert Roscoe. Both ladies were granddaughters of William Roscoe [q. v.] the historian, and were thus first cousins to one another. He left no children.

Beside the works already mentioned, Hutton was the author of: 1. 'The relative Value of Studies and Accomplishments in the Education of Women,' London, 1862, 8vo. 2. 'Sir Walter Scott,' London, 1878, 8vo (Morley's 'English Men of Letters'). 3. 'Essays on some of the Modern Guides of English Thought in matters of Faith,' London, 1887, 8vo. 4. 'Criticisms on Contemporary Thought and Thinkers,' London, 1891, 8vo. He contributed 'The Political Character of the Working Class' to 'Essays on Reform' (London, 1867, 8vo), and 'Reciprocity' to a volume of 'Lectures on Economic Science,' published by the National Association for the Promotion of Social Science (London, 1870, 8vo). In 1899 a volume of selections from Hutton's writings in the 'Spectator,' entitled 'Aspects of Religious and Scientific Thought,' was edited by his niece, Miss Elizabeth Mary Roscoe. 'William Watson's "Lachrymæ Mæorum" and other Poems' (London, 1893, 8vo) was dedicated to Hutton and Townsend.

ber 1897 (by Miss Julia Wedgwood); Bookman, October 1897; Primitive Methodist Quarterly, January 1898 (by Robert Hind); Wilfrid Ward's W. G. Ward and the Catholic Revival, 1893; L. Huxley's Life of Huxley, 1900, i. 439; Jackson's James Martineau, 1900, pp. 80, 192-3.]

HUXLEY, THOMAS HENRY (1825-1895), man of science, was born at Ealing on 4 May 1825. His father, George Huxley, was senior assistant master in a school at Ealing, which had at that time a considerable reputation under the head-mastership of Dr. Nicholas. Huxley was the seventh child of his parents, and the youngest of those who survived infancy. His mother's maiden name was Rachel Withers. He says of himself: 'Physically and mentally I am the son of my mother so completely—even down to peculiar movements of the hands, which made their appearance in me as I reached the age she had when I noticed them—that I can hardly find a trace of my father in myself, except an inborn faculty for drawing, which unfortunately, in my case, has never been cultivated, a hot temper, and that amount of tenacity of purpose which unfriendly observers sometimes call obstinacy.'

When Huxley was eight years old he was sent to the school in which his father worked; but the death of the head-master led to a change in the character of the school, and George Huxley left it, taking his family to his native town of Coventry. From this time Huxley received little or no systematic education, and his reading does not seem to have been guided by any definite plan. He did, however, earnestly and thoroughly read books on a great variety of subjects. At fourteen he had read Sir William Hamilton's 'Logic,' and under the influence of Carlyle's writings he had begun to learn German.

In 1830 his two sisters married, and each married a doctor. This circumstance seems to have determined the choice of a profession for Huxley himself, although he tells us that his own wish at the time was to become a mechanical engineer. One brother-in-law, Dr. Cooke of Coventry, strongly excited his interest in human anatomy, and in 1841 he went to London as apprentice to the other, Dr. J. G. Scott. At the first post-mortem examination he attended he was in some way poisoned; a serious illness resulted, and after the immediate effects had passed away a form of chronic dyspepsia remained, which was a source of serious trouble throughout his after life.

In 1842 he matriculated at London University, attended Lindley's lectures on botany at Chelsea, and endeavoured, in spite

of a still imperfect knowledge of German, to read the great work of Schleiden. In the autumn of the same year he and his elder brother James obtained scholarships at the Charing Cross hospital, where Huxley first felt the influence of daily intercourse with a really able teacher. He says: 'No doubt it was very largely my own fault, but the only instruction from which I ever obtained the proper effect of education was that which I received from Mr. Wharton Jones, who was the lecturer on physiology at the Charing Cross school of medicine. . . . I do not know that I have ever felt so much respect for anybody as a teacher before or since.' During the next three years he must have accomplished an enormous amount of work. He distinguished himself in the ordinary subjects of professional study, but in addition to this he acquired in some way or other a remarkably thorough knowledge of comparative anatomy, and a wide acquaintance with the writings of the great biologists. In 1845 he announced his discovery of that layer of cells in the root-sheath of hair which now bears his name. Any one who will try to demonstrate the existence of this layer by the methods at Huxley's command will appreciate the power of observation shown by the discovery.

He graduated M.B. in London University in 1846, winning a gold medal for anatomy and physiology. In 1846, being qualified to practise his profession, he applied for an appointment in the royal navy. An application to the director-general, suggested by a fellow-student, was successful, and he was sent to Haslar hospital on the boats of Nelson's ship Victory. Sir John Richardson [q. v.], who was Huxley's chief at Haslar, quickly recognised his qualities, and resolved to find him an appointment which should enable him to prove his worth. Accordingly, when Captain Owen Stanley asked for an assistant surgeon to be appointed to H.M.S. Rattlesnake, then about to start on a surveying cruise in the seas between Australia and the Great Barrier Reef, Huxley was recommended and accepted.

The Rattlesnake left England on 3 Dec. 1846, and was paid off at Olutham, on her return, on 9 Nov. 1850. During the voyage Huxley devoted himself chiefly to the study of animals which could not be adequately preserved, for examination at home, by any methods then in use. Accordingly the first results of his work are described in a series of memoirs on those delicate hydrozoa, tunicates, and mollusca, which float near the surface of the sea, and can be caught in abundance from the deck of a sailing vessel in calm weather. The value of these me-

moirs is due as much to the method of morphological analysis adopted as to the very large amount of new anatomical information they contain. The conception of a morphological type, which was then supported in England by the great influence of (Sir) Richard Owen [q. v.], may be understood from his definition of homology, which he interprets as signifying that essential character of a part which belongs to it in its relation to a pre-determined pattern, answering to the "idea" of the archetypal world in the Platonic cosmogony, which archetype or primal pattern is the basis supporting all the modifications of such part . . . in all animals possessing it' (OWEN, *On the Nature of Limbs*, 1849). The conception of morphological type as an 'archetypal idea,' which Owen had derived from Laënnec Oken (1779-1851), the German naturalist, and his followers, was clearly incapable of being tested by experiment, and Huxley from the first rejected it. For him, as for Von Baer and Johannes Müller, the only useful 'morphological type' was a general statement of those structural characters common to all members of a group of animals in the embryonic or the adult state. Such conceptions could be tested and corrected by observation; and, until the 'Origin of Species' appeared, Huxley regarded any hypothesis concerning the nature of the bond between animals which exhibit the same structural plan as altogether premature.

When the Rattlesnake left England, the hydrozoa were commonly associated with starfishes, parasitic worms, and infusoria in Cuvier's group 'Radiata.' In 1847 Huxley sent two papers, dealing with the structure of a great division of the hydrozoa, to the Linnean Society; in 1848 he sent to the Royal Society a memoir 'On the Affinities of the Family of the Medusæ' (*Phil. Trans.* 1849), and he wrote a letter to Edward Forbes [q. v.], published in 1850 (*Ann. Mag. Nat. Hist.* vi.) In these memoirs the morphological type common to all the hydrozoa is clearly explained, and in the letter to Edward Forbes it is shown that the same structural plan may be recognised in sea-anemones, corals, and their allies. It is pointed out that the plan common to these animals is not exhibited by the other 'Radiata,' and it is proposed to remove both sets of animals from the Radiata, regarding them as subdivisions of a separate class, 'Nematophora.' The views embodied in this suggestion were speedily accepted, and Huxley's statement of the morphological plan common to the class is now held to embody a firmly established anatomical truth.

In this memoir on the medusae a comparison was made between the two cellular 'foundation layers' out of which the body wall and the various organs of a polyp or a medusa are formed, and the two primary layers recognised by Pander and Von Baer in the early embryos of vertebrates. Similarities between the adult condition of lower, and the embryonic condition of higher members of the same group of animals had been recognised by Meckel, and more fully by Von Baer; but this comparison between the early embryo of the highest vertebrates and the adult condition of the simplest multicellular animals then known went far beyond any previous suggestion of this kind. This comparison paved the way for the attempts inaugurated later by Haeckel and Dr. Ray Lankester, under the influence of Darwin, to interpret the embryonic histories of the higher animals as evidence of their common descent from a two-layered ancestor, essentially like a hydroid polyp.

On his return to England in 1850 Huxley learnt that the value of his work on Medusae had been fully recognised. He was elected F.R.S. in 1851, was granted the society's medal in 1852, and found the leading biologists in London, especially Edward Forbes, were anxious to help him. With their help, and that of Sir John Richardson, he obtained from the admiralty an appointment as assistant surgeon to a ship then stationed at Woolwich, with leave of absence which enabled him to arrange the materials amassed during his voyage, and to prepare his notes for publication. Accordingly in 1851 he published two memoirs on the Ascidians, in which several aberrant genera (especially *appendicularia* and *doliolum*) are shown to be modifications of the same morphological type as that found in other ascidians; the relation between salps and other ascidians is clearly explained, while the phenomenon of budding, alternating with sexual reproduction, which had been shown to occur by Cuvier and Eschscholtz, is fully described. In the paper 'On the Morphology of the Cephalous Mollusca' (*Phil. Trans.* 1853) a great advance is made upon all previous efforts to recognise the structural plan common to the various modifications of the 'foot,' and the structure of the plagic 'heteropods' is described. These expositions of the morphology of three widely different groups of animals established Huxley's reputation as a scientific anatomist of the first rank; and the success which attended his use of simple inductive generalisation as a statement of morphological type had great effect upon the methods of

English biologists. While winning reputation and the warm friendship of many among the ablest men in London, he was not earning money; and without pecuniary help of some sort it was impossible even to publish some of his results. The admiralty felt unable to use funds entrusted to it for other purposes, in assisting to publish anatomical works; and not only so, but in January 1854 Huxley's request for further leave of absence was met by an order to join a ship at once. Rather than obey this order he preferred to leave the service, and with it his only certain income, determined to maintain himself somehow, by writing and lecturing, until he could gain an assured income without giving up all hope of scientific work. Fortunately a chance of doing this soon appeared. In June 1854 his friend, Edward Forbes, who had just commenced his course of lectures at the Royal School of Mines in Jermyn Street, was appointed to the professorship of natural history in Edinburgh. Huxley undertook to finish the course in London; in July he was appointed lecturer on natural history at the Royal School of Mines, and naturalist to the geological survey in the following year. The salary attached to these posts was small, but with such additions as he could make to it in other ways he felt justified in taking an important step. During the visits of the Rattlesnake to Sydney, Huxley had met and won the affection of Miss H. A. Heathorn, and he felt that his position was now so secure that he might ask her to share it. Miss Heathorn and her parents set sail for England early in 1855, reaching London in May. The marriage took place in July of the same year.

Before the end of 1855 Huxley had published more than thirty technical papers, and he had given a number of lectures to unprofessional audiences. One of these, 'On the Educational Value of the Natural History Sciences' (1854, *Collected Essays*, vol. iii.), contains those statements concerning the fundamental unity of method in all sciences, the value of that method in the affairs of daily life, and its importance as a moral and intellectual discipline, which form the essence of his popular teaching in later years.

From 1855 until 1859 Huxley's time was largely occupied by the duties of his new post. In his teaching he quickly adapted a system afterwards developed until it became the model which teachers of biology throughout the country endeavoured to imitate. In his lectures he described a small series of animals, carefully chosen to illustrate im-

portant types of structure; and his aim was that every student should be enabled to test general statements concerning a group of animals by reference to one member of the group which he had been made to know thoroughly. Huxley realised from the first that the thorough knowledge of representative animals, which is the only proper foundation for a knowledge of morphology, ought to be acquired by direct observation in the laboratory; this, however, was impossible in Jermyn Street, and his ideal was not completely realised until later. In spite of a certain distaste for public speaking, which only time and practice enabled him to overcome, he devoted much of his most strenuous effort to the work of popular exposition. In a letter dated 1855 he says, 'I want the working classes to understand that science and her ways are great facts for them—that physical virtue is the base of all other, and that they are to be clean and temperate and all the rest—not because fellows in black with white ties tell them so, but because these are plain and patent laws of nature, which they must obey under penalties.'

His scientific work during this period was influenced by his official duties in a museum of palæontology. The monograph of the oceanic hydrozoa, although published in 1859, had been completed long before. Two papers, which continue work begun on the Rattlesnake, are the memoir on *Pyrosoma* (*Trans. Linn. Soc.* 1859), and that on *Aphis* (1857). Each of these describes an alternation of generation, and so continues the early work on salpa; but with these exceptions the greater part of the work published between 1855 and 1859 deals either with fossil forms or with problems suggested by them. Among the more important of the descriptive memoirs (some twenty in number) published before the end of 1859, we must mention that on ocephalaspis and pteraspis (1858), in which the truth of the suggestion that pteraspis is a fish is finally demonstrated; the accounts of the eurypterina (1856-9); the descriptions of dicynodon, rhamphorhynchos, and other reptiles. These studies of fossils seem to have been carried on simultaneously with that of the living forms related to them; thus the work on fossil fishes (the main results of which were not published until 1862) was accompanied by a study of the development of skull and vertebral column in recent fishes (*Quart. Journ. Micr. Sci.* 1859), and by the histological work upon their exoskeleton published in Todd's 'Encyclopædia of Anatomy and Physiology'

(article 'Tegumentary Organs'). The description of extinct crocodilia led to an investigation of the dermal skeleton in living genera (*Journ. Linn. Soc.* 1860). The most important problem, suggested by continual work upon vertebrates, whether recent or fossil, is that presented by the composition of the skull. The doctrine prevalent in England was that which Owen had learned from Goethe and Oken. According to Owen, the archetype skeleton of a vertebrate 'represents the idea of a series of essentially similar segments succeeding each other in the axis of the body; such segments being composed of parts similar in number and arrangement.' Attempts were made, in accordance with this theory, to divide the skull into a series of rings, each of which was supposed to contain every element present in a post-cranial vertebra. The result was a method of description which obscured the actual anatomical relations of the parts described; and the attempt to demonstrate an archetypal idea by anatomical methods reached its climax of absurdity. Huxley applied to the skull the same method of analysis as that he had so successfully applied to other structures. In his essay 'On the Theory of the Vertebrate Skull,' read as the Croonian lecture before the Royal Society in 1858, he endeavours to formulate a morphological type of cranial structure in an inductive statement of those characters which are common to the skulls of a number of representative vertebrates in the adult and embryonic conditions. The lecture is based partly on the embryological work of Reichert, Rathke, and Remak, supplemented by observations of his own upon fishes and amphibia; partly on a careful study of adult skulls. The result is a statement of cranial structure which has been justified in all essential points by the work of the last forty years. The lecture on the skull is admirable not only in substance but in form. The character of the audience justified the free use of such aid to concise statement as technical terms afford; but when this is remembered the lecture must be regarded as a masterpiece of concise and lucid exposition, worthy to rank with the most brilliantly successful efforts of Huxley's later years.

For Huxley, as for many others, the most important event of 1859 was the publication of the 'Origin of Species.' He had maintained a sceptical attitude towards all previous hypotheses which involved the transmutation of species, and, in the chapter written for Mr. Francis Darwin's 'Life and Letters of Charles Darwin,' he says: 'I took my stand upon two grounds: firstly, that up

to that time the evidence in favour of transmutation was wholly insufficient; and, secondly, that no suggestion respecting the causes of the transmutation assumed, which had been made, was in any way adequate to explain the phenomena.'

Darwin rendered a belief in the occurrence of transmutation far easier than it had been by his collection of facts illustrating the extent of variation; while the theory of natural selection provided a working hypothesis, adequate to explain the alleged phenomena, and capable of being experimentally tested. The attempt to secure a fair trial for the new hypothesis, which Huxley felt it his duty to make, involved a great expenditure of time and strength. The account of the 'Origin of Species' written for the 'Times' in 1859, and a lecture 'On Races, Species, and their Origin,' delivered in 1860, mark the beginning of a long effort, which only ceased as the need for it became gradually less. Many were the discussions of this doctrine in which he took part, and especially important and interesting was his share in the debate on the question during the meeting of the British Association for the Advancement of Science at Oxford in 1860.

The consequence of Darwin's theory, which many persons found the greatest difficulty in accepting, was a belief in the gradual evolution of man from some lower form; and evidence which seemed to establish a broad gap between the structure of man and that of other animals was welcomed. Great interest was therefore excited by a paper which Owen had read in 1857, and repeated with slight modification as the Rede lecture before the university of Cambridge in 1859. Owen declared that the human brain was distinguished from that of all other animals by the backward projection of the cerebral hemispheres, so as to cover the cerebellum, and by the backward prolongation of the cavity of each cerebral hemisphere into a 'posterior horn,' with an associated 'hippocampus minor.' It is difficult to understand how an anatomist of Owen's experience can have made those statements; and his subsequent explanations are equally unintelligible (e.g. Owen, *Comparative Anatomy of Vertebrata*, 1866, vol. i. pp. xix-xx). In 1861 Huxley published two essays, one 'On the Brain of Ateles Paniscus,' and one 'On the Zoological Relations of Man with the Lower Animals,' in which it was clearly shown that Owen's statements were inaccurate and inconsistent with well-known facts. Between 1860 and 1862 he gave a series of lectures

'On the Comparative Anatomy of Man and the Higher Apes,' published in book form under the title 'Zoological Evidences as to Man's Place in Nature' (1863, *Collected Essays*, vol. vii.) There is a sense in which the publication of this book marks the beginning of a new period of his work; because from the time of its appearance his writings attracted greater attention and affected a far greater number of people than before. This book and a series of lectures 'On the Causes of the Phenomena of Organic Nature,' addressed to working men and printed in 1863, were widely read and discussed, and from henceforth Huxley devoted a continually increasing amount of energy to popular teaching and to the controversy arising in connection with it. His sense of the importance of such work, and the enjoyment he derived from it, may be gathered from words which seem, although he uses them of Priestley, to give an admirable picture of himself. He says:

'It seems to have been Priestley's feeling that he was a man and a citizen before he was a philosopher; and that the duties of the two former positions are at least as imperative as those of the latter. However, there are men (and I think Priestley was one of them), to whom the satisfaction of throwing down a triumphant fallacy is at least as great as that which attends the discovery of a new truth, who feel better satisfied with the government of the world when they have been helping Providence by knocking an imposture on the head, and who care even more for freedom of thought than for more advancement of knowledge. These men are the Carnots who organise victory for truth, and they are at least as important as the generals who visibly fight her battles in the field' (1874, *Collected Essays*, vol. iii.)

The freedom of thought for which Huxley contended was freedom to approach any problem whatever in the manner advocated by Descartes; and he wishes his more important essays to be regarded as setting forth 'the results which, in my judgment, are attained by an application of the "method" of Descartes to the investigation of problems of widely different kinds, in the right solution of which we are all deeply interested' (ib. vol. i. preface). In 1870, after describing Descartes's condition of assent to any proposition, he says: 'The enunciation of this great first commandment of science concentrated doubt. It removed doubt from the seat of penance among the grievous sins to which it had long been condemned, and enthroned it in that high place among the primary duties which is assigned to it by the scien-

tific conscience of these latter days.' While his held doubt to be a duty, he had no tolerance for careless indifferentism; and he was fond of quoting Goethe's description of a healthy active doubt: 'Eine thatige Skepsis ist das, welche unablässig bemüht ist, sich selbst zu überwinden.'

This fearless application of Cartesian criticism aroused great indignation between 1860 and 1870, but the essays and addresses published during this period did their work. They were certainly among the principal agents in winning a larger measure of tolerance for the critical examination of fundamental beliefs, and for the free expression of honest reverent doubt. The best evidence of the effect they have produced is the difficulty with which men of a younger generation realise the outcry caused by 'Man's Place in Nature,' or by the lecture 'On the Physical Basis of Life' (*ib.* vol. i. 1868). Two passages from the last-named lecture may be quoted as giving a summary of Huxley's philosophical position in his own words:

'But if it is certain that we can have no knowledge of the nature of either matter or spirit, and that the notion of necessity is something illegitimately thrust into the perfectly legitimate conception of law, the materialistic position that there is nothing in the world but matter, force, and necessity, is as utterly devoid of justification as the most baseless of theological dogmas. The fundamental doctrines of materialism, like those of spiritualism and most other "isms," lie outside "the limits of philosophical enquiry," and David Hume's great service to humanity is his irrefragable demonstration of what those limits are. . . . Why trouble ourselves about matters of which, however important they may be, we do know nothing and can know nothing? We live in a world which is full of misery and ignorance, and the plain duty of each and all of us is to try to make the little corner he can influence somewhat less miserable and somewhat less ignorant than it was before he entered it. To do this effectually it is necessary to be fully possessed of only two beliefs—the first, that the order of nature is ascertainable by our faculties to an extent which is practically unlimited; the second, that our volition counts for something as a condition of the course of events. Each of these beliefs can be verified experimentally as often as we like to try. Each, therefore, stands upon the strongest foundation upon which any belief can rest, and forms one of our highest truths. If we find that the ascertainment of the order of nature is facilitated by using one terminology, or one set of symbols, rather

than another, it is our clear duty to use the former; and no harm can accrue so long as we bear in mind that we are dealing merely with terms and symbols.'

Those who 'care even more for freedom of thought than for mere advancement of knowledge' may well consider the effect produced by his lectures and essays upon the minds of English-speaking peoples to be the most important result of Huxley's work between 1860 and 1870. But they represent only a small part of the work he actually did during this period. He was an active member of four royal commissions (on the subject relating to trawling for herrings on the coast of Scotland, 1862; on the sea-fisheries of the United Kingdom, 1864–5; on the Royal College of Science for Ireland, 1866; on science and art instruction in Ireland, 1868). He was Hunterian professor at the Royal College of Surgeons from 1863 to 1869, and Fullerian professor at the Royal Institution from 1863 to 1867; he undertook an increasing amount of administrative work in connection with various learned societies, especially the Royal, the Zoological, and the Ethnological; and he wrote frequently for the reviews, being himself for a short time an editor of the quarterly 'Natural History Review.' In spite of the increased demands upon his time and strength made by all these new duties, his purely scientific work rather increased than diminished in value and in amount.

The papers on fossil fishes, already referred to, were followed in 1861 by an 'Essay on the Classification of Devonian Fishes.' Apart from its great value as an addition to our knowledge of a difficult group of fishes, this essay is remarkable because in it Huxley drew attention to the type of fin which he called 'crossopterygian,' or fringed, because the fin-rays are borne on the sides of a longer or shorter central axis. The imperfect knowledge attainable from the study of fossils did not permit him at this time to describe the structure of the crossopterygium very fully; but after the discovery of *Ceratodus* the conceptions foreshadowed in this essay acquired great importance in connection with attempts to find a common type of limb from which both the fin of an ordinary fish and the limb of an air-breathing vertebrate might conceivably have been derived.

In 1862 he delivered an address to the Geological Society, in which he attacked a doctrine then widely held. The order in which the various forms of life appear, as we examine the fossiliferous rocks from the oldest to the most recent, is practically the same in all parts of the world. This fact

had led many geologists to infer that any step in the successional series must have occurred simultaneously all over the earth, so that two series of rocks containing the same fossils were held to be of contemporaneous origin, however distant from one another they might be. Huxley gave a forcible summary of the evidence against this view, and declared that 'noither physical geology nor palaeontology possesses any method by which the absolute synchronism of two strata can be demonstrated. All that geology can prove is local order of succession.' The justice of this statement has not been questioned; and the limitation imposed by it is one of the many difficulties encountered when we attempt to learn the ancestral history of animals from the fossil records.

In 1863 he delivered a course of lectures at the College of Surgeons 'On the Classification of Animals,' and another 'On the Vertebrate Skull.' Those lectures were published together in 1864. Other courses 'On the Comparative Anatomy of Vertebrates' followed, and a condensed summary of these was published as a 'Manual of the Comparative Anatomy of Vertebrate Animals' in 1871. The scrupulous care with which he endeavoured to verify by actual observation every statement made in his lectures rendered the labour of preparation very great. Sir William Flower [q. v. Suppl.] describes the way in which he would spend long evenings at the College of Surgeons, dissecting animals available among the stores, or making rapid notes and drawings, after a day's work in Jernyn Street. The consequences were twofold; the vivid impression of his own recent experience was communicated to his hearers, and the work of preparation became at once an incentive to further research and a means of pursuing it.

The lectures in 1867 dealt with birds, and Professor Newton writes of them: 'It is much to be regretted that his many engagements hindered him from publishing in its entirety his elucidation of the anatomy of the class, and the results which he drew from his investigations of it; for never, assuredly, had the subject been attacked with greater skill and power, or, since the days of Buffon, had ornithology been set forth with greater eloquence' (Newton, *A Dictionary of Birds*, p. 38). One great result of the work on birds, together with the study of fossil reptiles, was a recognition of the fundamental similarities between the two, which Huxley expressed by uniting birds and reptiles in one great group, the Sauropsida. Other results obtained were shortly summarised in an essay 'On the

Classification of Birds' (*Zool. Soc. Proc.* 1867), containing an elaborate account of the modifications exhibited by the bones of the palate. This essay exhibits in an entirely new light the problems which have to be solved before we can establish a natural classification of birds. The solution offered has not been accepted as final; but there is no question about the great value of the essay as a contribution to cranial morphology.

The lectures on birds must serve as examples of others given at the College of Surgeons; they were probably the most strikingly novel of any except the first course 'On the Classification of Animals;' but the condensed summary, published in 1871, shows that every course of lectures must have marked important additions to our knowledge of the animals with which it dealt. One other important problem, that of the homologies of the bones which connect the tympanic membrane with the ear-capsule, must be mentioned as treated in those lectures, and more fully in a paper read before the Zoological Society (1869).

Apart from the lectures, and from the books based on them, Huxley published about fifty technical papers between 1860 and 1870. Among these are numerous descriptions of dinosauria, including that of *hypsilophodon*, the results being summarised in the essay on the classification of the group (*Quart. Journ. Geol. Soc.* 1869), and in the statements of the relation between reptiles and birds, already referred to. The account of *hyperodapedon* (1869) is of great importance in connection with another group of reptiles, and there are many valuable memoirs on fossil amphibia. Much of his work on systematic ethnology remains unpublished; but in 1865 he published an essay 'On the Methods and Results of Ethnology,' containing a scheme of classification of the races of mankind, based on the characters of the hair, the colour of the skin, and the cranial index. He evidently contemplated a more complete study of physical anthropology; for among the materials left in his laboratory are some hundreds of photographs of various races of men, which he had collected before 1870.

The 'Elementary Lessons in Physiology,' published in 1866, is probably better known than any elementary text-book of its kind. It has been reprinted no less than thirty times since its first appearance.

The years from 1870 to 1885 comprise a period of constant activity, ending in an almost complete withdrawal from public life, made necessary by increasing illness.

In 1872 the removal of the School of

Mines from Jermyn Street to South Kensington gave the long-desired opportunity of completing his plan of instruction, by enabling every student to examine for himself, in the laboratory, the types described in the lectures. With the help of his four demonstrators, Thiselton Dyer, Michael Foster, Ray Lankester, and W. Rutherford, the course of laboratory work was perfected, and its main features are described in the well-known text-book of 'Elementary Biology' (1875), written in conjunction with Mr. H. N. Martin.

An important characteristic of Huxley's teaching, both in his lectures to students and in his technical memoirs, may here be noticed. Darwin had suggested an interpretation of the facts of embryology which led to the hope that a fuller knowledge of development might reveal the ancestral history of all the great groups of animals, at least in its main outlines. This hope was of service as a stimulus to research, but the attempt to interpret the phenomena observed led to speculations which were often fanciful and always incapable of verification. Huxley was keenly sensible of the danger attending the use of a hypothetical explanation, leading to conclusions which cannot be experimentally tested, and he carefully avoided it. This is well seen in the important essay on *Ceratodus* (1876), where a discussion of the way in which the jaws are suspended from the skull leads him to divide all fishes into three series. In one series the mode of suspension of the jaws is identical with that found in amphibia and the higher vertebrates; and the hypothesis that these 'autostylic' fishes resemble the ancestors of air-breathing forms suggests itself at once. Although this was clearly present in Huxley's mind, he is careful to confine himself to a statement of demonstrable structural resemblance, which must remain true, whatever hypothesis of its origin may ultimately be found most useful. Again, in the preface to the 'Manual of the Comparative Anatomy of Invertebrated Animals' (1877) he says: 'I have abstained from discussing questions of ætiology, not because I underestimate their importance, or am insensible to the interest of the great problem of Evolution, but because, to my mind, the growing tendency to mix up ætiological speculations with morphological generalisations will, if unchecked, throw Biology into confusion.' The only attempts to trace the ancestry of particular forms which Huxley ever made are based on palæontological evidence, in the few cases in which the evidence seemed to him sufficiently com-

plete. Such are the essays on the horses (*Presidential Address to the Geological Society*, 1870; *American Addresses*, 1876; *Collected Essays*, vols. iii. and viii.), and that on the 'Classification of the Mammalia' (*Proc. Zool. Soc.* 1880). The treatise on the crayfish (1879) may be taken as a statement of his mature convictions; and the discussion of the evolution of crayfishes, given in this work, relates solely to the evidence of their modification since liassic times, which is afforded by fossils.

In 1870 the school board for London was instituted, and Huxley's interest in the problem of education led him to become one of its first members. In an essay on the first duties of the board (*Contemporary Review*, 1870; *Collected Essays*, vol. iii.) he lays stress on the primary importance of physical and moral culture. 'The engagement of the affections in favour of that particular line of conduct which we call good,' he says, 'seems to me to be something quite beyond mere science. And I cannot but think that it, together with the awe and reverence which have no kinship with base fear, but arise whenever one tries to pierce below the surface of things, whether they be material or spiritual, constitutes all that has any unchangeable reality in religion.' This feeling can, in his judgment, be best cultivated by a study of the Bible 'with such grammatical, geographical, and historical explanations by a lay teacher as may be needful.' He held that the elements of physical sciences, with drawing, modelling, and singing, afforded the best means of intellectual training in such schools. Huxley's influence upon the scheme of education finally adopted was very great, although he left the board in 1872.

In speaking of the later stages of education, he dwelt upon the great value of literary training as a means of intellectual culture, but he never tired of contending that a perfect culture, which should 'supply a complete theory of life, based upon a clear knowledge alike of its possibilities and of its limitations,' could not be acquired without a training in the methods of physical science. At the same time he was careful to emphasise his horror of the prevalent idea that a mere acquaintance with the 'useful' results of scientific work has any educational value. He well knew that educational discipline can only be obtained by the pursuit of knowledge without regard to its practical applications; and he saw the need for sharply separating such educational discipline from the preparation for a handicraft or profession. Writing in 1893 to

one of those engaged in the attempt to obtain an adequate university for London, he says: 'I would cut away medicine, law, and theology as technical specialities. . . . The university or universities should be learning and teaching bodies devoted to art (literary and other), history, philosophy, and science, where any one who wanted to learn all that is known about these matters should find people who could teach him and put him in the way of learning for himself. That is what the world will want one day or other, as a supplement to all manner of high schools and technical institutions in which young people get decently educated and learn to earn their bread—such as our present universities. It would be a place for men to get knowledge, and not for boys and adolescents to get degroos.'

Between 1870 and 1885 he published a number of essays on philosophical subjects, the most important being his sketch of Hume (1870) in Mr. John Morley's 'English Men of Letters' series. In the chapter on the object and scope of philosophy, Huxley adopts the view that the method of psychology is the same as that of the physical sciences, and he points to Descartes, Spinoza, and Kant as showing the advantage to a philosopher of a training in physical science. The chapter dealing with volition and necessity is an expansion of the passage in the lecture 'On the Physical Basis of Life' already quoted. The chapter on miracles begins by demonstrating the absurdity of *a priori* objections to belief in miracles because they are violations of the 'laws of nature'; but while it is absurd to believe that that which never has happened never can happen without a violation of the laws of nature, he agrees with Hume in thinking that 'the more a statement of fact conflicts with previous experience, the more complete must be the evidence which is to justify us in believing it.' The application of this criterion to the history of the world as given in the Pentateuch and to the story of the gospels forms the subject of numerous controversial essays and addresses, reprinted in the fourth and fifth volumes of the 'Collected Essays.'

In 1871, on the retirement of William Sharpey [q. v.], Huxley was chosen as one of the two secretaries of the Royal Society. The duties of this office were even more severe than usual during the years through which he held it. The Royal Society was requested by the Admiralty to plan the equipment and to nominate the scientific staff of the Challenger, in preparation for her voyage round the world. Later on, the task of distributing her collections, and arranging for the publication of

the monographs in which they are described, was also entrusted to the society; and the chief burden of the organisation fell upon Huxley. Many other matters, especially the organisation of arrangements for administering the annual grant of 4,000*l.* made by the treasury in aid of scientific research, made the duties of the secretary a serious addition to other demands upon him. In 1881 he was elected president of the society; but in 1885 he was forced by ill-health to retire. He received the Copley medal in 1888, and the Darwin medal in 1894. From 1870 to 1884 he served upon the following royal commissions: upon the Administration and Operation of the Contagious Diseases Acts (1870-1); on Scientific Instruction and the Advancement of Science (1870-5); on the Practice of subjecting Live Animals to Experiments for Scientific Purposes (1870); to inquire into the Universities of Scotland (1876-8); on the Medical Acts (1881-2); on Trawl, Net, and Beam Trawl Fishing (1881). He also acted as an inspector of fisheries from 1881 to 1885.

In spite of the immense amount of work he contrived to perform, Huxley never enjoyed robust health after the accidental poisoning already mentioned. Fresh air and some daily exercise were necessary in order to ward off digestive difficulties, accompanied by lassitude and depression of a severe kind; but fresh air and exercise are the most difficult of all things for a busy man in London to obtain. The evil effects of a sedentary life had shown themselves at the very beginning of his work in London, and they increased year by year. At the end of 1871 he was forced to take a long holiday; but this produced only a temporary improvement, and finally symptoms of cardiac mischief became too evident to be neglected. For this reason he gave up his public work in 1885, and in 1890 he finally left London, living thenceforward at Eastbourne.

The years of comparative leisure after 1885 were occupied in writing many of the essays on philosophy and theology reprinted in the fourth and fifth volumes of his 'Collected Essays.' An attack of pleurisy in 1887 caused grave anxiety, and after its occurrence he suffered severely from influenza, so that the work of helping these teachers in London in their efforts to obtain an adequate university, which he undertook in 1892 and 1893, involved physical effort of a very severe kind, as did the delivery of his Romanes lecture on 'Evolution and Ethics' before the university of Oxford in 1893. An attack of influenza in the winter of 1894 was followed by an affection of the kidneys, and

he died at Eastbourne on 29 June 1895. He was buried at Finchley on 4 July. Several portraits of Huxley are given in his 'Life and Letters.' The best is that painted in 1888 by his son-in-law the Hon. John Collier, now in the National Portrait Gallery, London. His widow, with two sons, Leonard and Henry, and four daughters (Mrs. Waller, Mrs. Shawcross, Mrs. Roller, and the Hon. Mrs. John Collier), survived him; a son Noel died in 1860.

Huxley was rector of Aberdeen University from 1872 to 1875, was created hon. D.O.L. of Oxford on 17 June 1886, and also received honorary degrees from Edinburgh, Dublin, Breslau, Würzburg, Bologna, and Erlangen. He was elected member of countless foreign societies, and in 1892 he accepted the office of privy councillor, but he cared little for such honours. The only reward for which he cared is that freely given to him by earnest men of every kind, in every country, who gratefully reverence his labours in furthering the noble objects which he set before himself, 'to promote the increase of natural knowledge and to further the appli-

cation of scientific methods of investigation to all the problems of life to the best of my ability, in the conviction which has grown with my growth and strengthened with my strength, that there is no alleviation for the sufferings of mankind except veracity of thought and action, and the resolute facing of the world as it is when the garment of make-believe, by which pious hands have hidden its uglier features, is stripped off.'

Those of Huxley's essays which he wished to collect in a final edition are published in nine volumes of *Collected Essays* (Macmillan, 1893-4). An edition of his scientific memoirs, edited by Sir Michael Foster and Professor Lankester, was published between 1898 and 1903, in four quarto volumes, with a supplementary volume.

[The *Life and Letters of T. H. Huxley*, by his son, Leonard Huxley, 2 vols. 1900, is the main authority; it contains a full list of his published works. An account of his scientific work is given in *Thomas Henry Huxley, a Sketch of his Life and Work*, by P. Chalmers Mitchell, 1900. Cf. art. by Leslie Stephen in *Nineteenth Century*, December 1900.] W. F. R. W.

I

INGELOW, JEAN (1820-1897), poetess, born on 17 March 1820 at Boston, Lincolnshire, was the eldest child of William Ingelow, a banker, and his wife, Jean Kilgour, a member of an Aberdeenshire family. The early years of her life were spent in Lincolnshire, and the effect of the fen scenery is apparent in her verse. She then lived at Ipswich, and before 1863 came to London, where she spent the rest of her life. She was educated at home.

Her first volume, 'A Rhyming Chronicle of Incidents and Feelings,' published in 1850, attracted little attention, although Tennyson found some charming things in it (cf. *Life of Tennyson*, i. 286-7). It was not until the publication of the first series of 'Poems' in 1863 that the public recognised in Miss Ingelow a poet of high merit. It contained the verses entitled 'High Tide on the Coast of Lincolnshire, 1871,' which for earnestness and technical excellence is one of the finest of modern ballads. The volume reached a fourth edition in the year of publication. In 1867 an illustrated edition, with drawings by various artists, among them Poynter, Pinwell, A. B. Houghton, and J. W. North, was brought out. By 1879 it was in a twenty-third edition. A second series of poems appeared in 1876, and both series were

reprinted in 1879. A third series was added in 1885. She wrote much under the influence of Wordsworth and Tennyson. Her verse is mainly characterised by lyrical charm, graceful fancy, pathos, close and accurate observation of nature, and sympathy with the common interests of life. The language is invariably clear and simple. She is particularly successful in handling anapaestic measures. Her poetry is very popular in America, where some 200,000 copies of her various works have been sold.

As a novelist she does not rank so high. Her best long novel, 'Off the Skelligs,' appeared in 1872 in four volumes. The 'Studies for Stories,' published in 1864, are admirable short stories. She depicted child life with great effect, and her best work in that line will be found in 'Stories told to a Child,' published in 1805. Between that date and 1871 she wrote numerous children's stories. Her books brought her comparatively large sums of money, but her fame rests on two or three poems in the volume of 1863. She was acquainted with Tennyson, Ruskin, Froude, Browning, Christina Rossetti, and with most of the poets, painters, and writers of her time. She died at Kensington on 20 July 1897, and was buried at Brompton cemetery on the 24th.

A portrait of her when a child is in the possession of her brother, Mr. B. Ingelow.

Other works by Miss Ingelow are: 1. 'Al-lerton and Dreux; or the War of Opinion,' 2 vols. 1851. 2. 'Tales of Orris,' 1860. 3. 'Mopsa, the Fairy,' 1869. 4. 'Fated to be Free,' 3 vols. 1875; new edit. 1876. 5. 'Sarah de Berenger,' 3 vols. 1879; new edit. 1886. 6. 'Don John: a Story,' 3 vols. 1881. 7. 'John Jerome,' 1886. 8. 'The little Wonder-box,' 1887. 9. 'Very Young and Quite another Story,' 1890. A volume of selections appeared in 1886, and a complete edition in two volumes in 1898.

[Some recollections of Jean Ingelow, 1901; Allibone's Dict. Suppl. ii. 885; Athenæum, 24 July 1897; Times, 21 and 26 July 1897; Miles's Poets and Poetry of the Century, vol. vii.; private information.] E. L.

INGLEFIELD, SIR EDWARD AUGUSTUS (1820-1894), admiral, eldest son of Rear-admiral Samuel Hood Inglefield (1783-1848), who died when commander-in-chief in the East Indies and China, and grandson of Captain John Nicholson Inglefield [q. v.], was born at Chelsea on 27 March 1820. He entered the Royal Naval College at Portsmouth in October 1832, and, passing out in October 1834, was appointed to the *Etna*, and then to the *Actæon*, from which early in 1835 he was moved to the *Dublin*, flagship of Sir Graham Edon Hamond, on the South American station. In her, and afterwards in the *Imogene* on the same station, he continued till 1839. Having passed his examination he was appointed in March 1840 to the *Thunderer*, in which he took part in the operations on the coast of Syria, the storming of Sidon, and the reduction of Acre. He was afterwards for a short time in the *West Indies* and in the royal yacht, from which he was promoted to be lieutenant on 21 Sept. 1842. From November 1842 to 1845 he was in the *Samarang* with Sir Edward Belcher [q. v.]. In March 1845 he joined the *Eagle* as flag-lieutenant to his father, then commander-in-chief on the South American station, and was shortly afterwards appointed to command the *Comus*, in which he took part in the operations in the *Parana* and in forcing the passage at Obligado on 20 Nov. 1845. In recognition of his services on this day his acting commission as commander was confirmed to 18 Nov. In 1852 he commanded *Lady Franklin's* private steamer, *Isabella*, in a summer expedition to the Arctic, and looked into Smith Sound for the first time since it had been named by William Baffin [q. v.]. On his return he published 'A Summer

Search for Sir John Franklin' (1853, 8vo); was elected a F.R.S. (2 June 1853), was awarded the gold medal of the Royal Geographical Society, and the silver medal of the Paris Geographical Society, and was presented with a diamond snuff-box by the emperor of the French. In 1853 he went again to the Arctic in the *Phoenix* with relief to Sir Edward Belcher, and in October brought home the news of the discovery of the north-west passage by (Sir) Robert John Le Mesurier McClure [q. v.], for which he was promoted to the rank of captain on 7 Oct. 1853. In 1854, still in the *Phoenix*, he went for the third time to the Arctic, and brought back the crews of the *Résolutes* and *Investigator*.

In July 1855 he was appointed to the *Firobrand* in the Black Sea, where he took part in the capture of Kinburn. In the following March he was moved into the *Sidon*, which he brought home and paid off. From 1861 to 1864 he commanded the *Majestic*, coastguard ship at Liverpool, and from 1866 to 1868 the ironclad *Prince Consort* in the Channel and the Mediterranean. On 26 May 1869 he was promoted to be rear-admiral, and on 2 June he was nominated a C.B. From August 1872 to December 1875 he was second in command in the Mediterranean and superintendent of Malta dockyard, vacating the post on promotion to vice-admiral on 11 Dec. In 1877 he was knighted, and from April 1878 till his promotion to the rank of admiral on 27 Nov. 1879 he was commander-in-chief on the North American station. On 27 March 1885 he was put on the retired list; but in 1891, on the occasion of the naval exhibition at Chelsea, he was chairman of the arts section, to the success of which he materially contributed. On 21 June 1887 (the queen's jubilee) he was nominated a K.C.B. He died at his house in Queen's Gate on 5 Sept. 1894. He was twice married; first, in 1857, to Eliza Fanny, daughter of Edward Johnston of Allerton Hall, near Liverpool, by whom he had issue; secondly, in 1893, to Beatrice Marina, daughter of Colonel Hodnett of the Dorsetshire regiment.

Inglefield was a man of cultivated taste and mechanical ingenuity. In the course of his service abroad, and especially while at Malta, he formed a very considerable and interesting collection of old Venetian glass. He was himself a painter of exceptional merit as an amateur; some of his pictures—among others 'The Last Cruise of the Last of the Three-deckers'—have been in the Royal Academy; several were exhibited at Chelsea in the Naval Exhibition of 1891,

among them 'H.M.S. Prince Consort in a Gale' and 'H.M.S. Bellerophon and the West Indian Squadron.' He turned the upper part of his house into a workshop, with lathes, benches, &c., with which he occupied much of his leisure to the last. He was also the inventor of the hydraulic steering gear, which was highly thought of in the navy till superseded by steam, and of the Ingledfield anchor. Besides the 'Summer Search' already mentioned, he was the author of some pamphlets on naval subjects.

[O'Byrne's Naval Biogr. Dict.; Times, 7, 10 Sept. 1894; Navy Lists; Royal Navy Lists; personal knowledge.] J. K. L.

IONIDES, CONSTANTINE ALEXANDER (1833-1900), public benefactor, born in Manchester on 14 May 1833, was the eldest son of Alexander Constantine Ionides by Euterpe, daughter of Lucas Sgonta. He commenced a business career in Manchester in 1850, and, some five years later, went out to Bucharest in the wheat trade. Subsequently he returned to England, and in 1864 entered the London Stock Exchange, realising a considerable fortune, and accumulating many superb pictures and articles of *virtu* at his residence, 8 Holland Villas Road, Kensington. In 1882 he retired from active business, and nine years later he transferred the whole of his collection to his house, 23 Second Avenue, Brighton, which he had bought in 1884. He died at Brighton on 20 June 1900, and was buried on 2 July at the Hove cemetery. He married in 1860 Agathonike, daughter of Constantine Fenarli at Constantinople, and left issue three daughters and five sons. There are two portraits of Ionides as a boy in a group by G. F. Watts, R.A., a miniature by Ross dated 1853, a later portrait (1880) by G. F. Watts, and a bronze portrait medal designed in 1882 by A. Legros.

Ionides bequeathed his pictures, pastels, etchings, drawings, and engravings to the Victoria and Albert (South Kensington) Museum, on condition that they should be kept together and in no way concealed from the public view. The pictures include examples of Botticelli, Poussin, Rembrandt, Ostade, Paul Potter, Ruydael, Terborch, Le Nain, Delacroix, Millot, Corot, Degas, Lhermitte, Rossetti, and a number of portraits by G. F. Watts.

[Times, 23 July 1900; private information.] T. S.

IRELAND, ALEXANDER (1810-1894), journalist and man of letters, was born at Edinburgh on 9 May 1810. His

father was engaged in business, and Ireland for long followed pursuits unconnected with literature; but his literary interests and studies procured him as a young man many intellectual friends, among them the brothers Chambers and Dr. John Gairdner [q. v.] His friendship with Gairdner led to his acquaintance with Emerson, who in 1833 came to Edinburgh with an introduction to the physician, whose extensive medical practice compelled him to request Ireland to act as *cicerone* in his stead. Ireland's zealous discharge of this office was the foundation of a lifelong friendship with the great American. In 1848 he removed to Manchester as representative of a Huddersfield firm, and in the same year received a signal proof of the confidence of Robert Chambers, who not only entrusted him with the secret of the authorship of 'The Vestiges of Creation,' divulged to only three other persons, but employed him to avert suspicion while the book was going through the press. The sheets were sent by the London publisher, who was himself in complete ignorance, to Ireland at Manchester, and thence transmitted to Chambers. The secret was strictly kept until 1884, when, every other depository of it being dead, Ireland very properly revealed it in a preface to the twelfth edition, thus disposing of a host of groundless conjectures. In 1846 Ireland succeeded Mr. (afterwards Sir) Edward Watkin as publisher and business manager of the 'Manchester Examiner,' a paper founded the year before by Watkin, John Bright, and William McKerrow [q. v.] in opposition to the 'Guardian,' too haughtily independent of the anti-slavery league to please the 'Manchester school.' The first editor was Thomas Ballantyne [q. v.] Ere long the 'Examiner' absorbed the other local exponent of advanced liberalism, the 'Manchester Times' [see *PRINTING, ARCHAIC*], and as the 'Manchester Examiner and Times' held the second place in the Manchester press for forty years. In 1847 and 1848 occurred the interesting episode of Emerson's second visit to England at the instigation of Ireland, who was, in Carlylean phrase, 'infinitely well affected towards the man Emerson.' All the arrangements for Emerson's lectures were made by him; in his guest's words he 'approved himself the king of all friends and helpful agents; the most active, unweariable, imperturbable.'

Ireland, after a while, found himself able to spare time from journalism for the literary pursuits in which he delighted. In 1851 he was a member of the committee that organised the Manchester Free Library,

whose many books from his own library afterwards came to be deposited. He cultivated the friendship of Carlyle and Leigh Hunt, for the latter of whom he entertained a warm affection, and upon whom he wrote for this Dictionary. He also prepared a most useful bibliography of Hunt's writings, united in the same volume with a similar list of William Hazlitt's, and printed in a limited impression in 1838. In 1889 he edited a selection from Hazlitt's works, prefaced by an excellent memoir. Upon Emerson's death in 1882 he published a biography of him, necessarily incomplete, but possessing especial value from his own recollections; it was enlarged and reissued within the year as 'Ralph Waldo Emerson: his Life, Genius, and Writings.' In the same year he published at Manchester 'Recollections of George Dawson and his Lectures in Manchester in 1846-7.' Perhaps, however, his best-known publication is 'The Book-Lover's Encyclopaedia,' a collection of passages in praise of books selected from a wide range of authors. It was published in 1882 under the pseudonym of 'Philobiblos,' and went through five editions. He himself possessed a fine library, especially rich in the works of early English authors, in which he was well versed. He especially admired Daniel and Burton, and possessed all the seventeenth-century editions of the latter's 'Anatomy of Melancholy.' Unfortunately, this treasured collection had to be sold owing to the reverse of fortune which overtook him in his latter days from the general transfer of liberal support from the 'Examiner' to the 'Guardian,' upon the latter journal's reconciliation with the more advanced section of the party on occasion of Gladstone's home-rule proposals in 1886. The 'Examiner,' now an unprofitable property, passed into other hands, and soon ceased to exist. Ireland bore his misfortunes with great dignity and fortitude, and, although an octogenarian, remained active to the last as a writer in the press. He died on 7 Dec. 1891 at Mauldeth Road, Withington.

Ireland was an excellent man, generous, hospitable, full of intellectual interests, and persevering in his aid of public causes and private friends. A medallion portrait is engraved in 'Threads from the Life of John Mills,' 1890. A collection of Ireland's books, rich in editions of Lamb, Hazlitt, Leigh Hunt, and Carlyle, was presented in 1895 to the Manchester Free Reference Library by Thomas Read Wilkinson, and a special catalogue was issued in 1898.

Ireland was twice married—first, in 1839, to Eliza Mary, daughter of Frode-

rick Blyth of Birmingham, who died in 1842.

Mrs. ANNIE IRELAND (d. 1893), Ireland's second wife, whom he married in 1849, was the sister of Henry Alleyne Nicholson [q.v. Suppl.], regius professor of natural history at Aberdeen, and was herself known as the biographer of Jane Welsh Carlyle (1891), and the editor of her correspondence with Miss Jewsbury (1892); her recollections of James Anthony Froude [q.v. Suppl.] were published posthumously in the 'Contemporary Review.' She died on 4 Oct. 1893.

[Manchester Guardian, 8 Dec. 1894; Threads from the Life of John Mills; personal knowledge.] R. G.

ISMAY, THOMAS HENRY (1837-1899), shipowner, eldest son of Joseph Ismay, shipbuilder, of Maryport, Cumberland, was born there on 7 Jan. 1837. At the age of sixteen he was apprenticed to a firm of shipbrokers (Imrie & Tomlinson) in Liverpool, and on the expiration of his time made a voyage to South America, visiting the several ports on the west coast. Returning to Liverpool he started in business on his own account, and engaged especially in the Australian trade. In 1867 he acquired the White Star line of Australian clippers, and in the following year, in partnership with an old friend and fellow-apprentice, William Imrie, he formed the Oceanic Steamship Company. In 1870 they added the American trade to their other ventures, and in 1871 began running their steamers regularly between Liverpool and New York. In co-operation with Harland and Wolff of Belfast, the White Star liners earned a good reputation for safety, comfort, and speed; it is stated that between 1870 and 1899 they paid to Harland and Wolff no less a sum than 7,000,000. In 1878 the White Star line placed their steamers at the disposal of the government as transports or armies—an offer which led to the modern system of subsidising certain private companies. At the naval review at Spithead in 1897, the Tsutonic, one of the largest steamers then afloat, was sent by Ismay to take part in the national display. In 1892 Ismay retired from the firm of Ismay, Imrie, & Co., but retained the chairmanship of the White Star Company, whose fleet then consisted of eighteen steamers, of an aggregate of 99,000 tons, which by 1899 was increased to 164,000. Ismay was also chairman of the Liverpool and London Steamship Protection Association, a director of the London and North-

Western Railway Company, and of many other industrial enterprises. In 1884 he served on Lord Ravenworth's admiralty committee on contract *versus* dockyard systems of building ships; in 1888 on Lord Hartington's royal commission on army and navy administration, and on several other important committees. He was a liberal supporter of the Liverpool Seamen's Orphan Institution; and in 1887 he contributed 20,000*l.* towards a pension fund for worn-out Liverpool sailors. He was for some years a J.P. and D.L. of Cheshire, and high sheriff in 1892. He died at Dawpool, near Birken-

head, on 23 Nov. 1899, and was buried on the 27th in the churchyard of Thurston, after a semi-public memorial service in St. Nicholas's, Liverpool. Notwithstanding his liberal charities, his estate, as proved, was considerably over 1,000,000*l.* Ismay married in 1859 Margaret, daughter of Luke Bruce, and left issue three sons and four daughters. His portrait by Millais in 1885 was presented to him by the shareholders of the White Star Company.

J. K. L.

J

JACKSON, BASIL (1795-1869), lieutenant-colonel, born at Glasgow on 27 June 1795, was the son of Major Basil Jackson of the royal wagon train, who died on 10 Sept. 1849 at the age of ninety-two. He entered the Royal Military College in 1808, obtained a commission in the royal staff corps on 11 July 1811, and was promoted lieutenant on 6 May 1818. He was employed in the Netherlands in 1814-15, was present at Waterloo as deputy assistant quartermaster-general, and was afterwards sent to St. Helena, where he remained till 1819. He served in Canada and was employed in the construction of the Rideau canal. He was promoted captain on 17 Sept. 1825, and was given a half-pay majority on 7 Feb. 1834.

In February 1835 he was made assistant professor of fortification at the East India Company's college at Addiscombe. He was transferred in December 1836 to the assistant professorship of military surveying, and held that post till 30 Dec. 1857, when he retired on a pension. He had become lieutenant-colonel on 9 Nov. 1846, and had sold out in 1847. He afterwards lived at Glewston Court, near Rose, Herefordshire, till September 1874, and at Hillsborough, co. Down, till his death on 23 Oct. 1889. He married, on 28 March 1828, the daughter of Colonel George Muttelbury, C.B.

He published: 1. 'A Course of Military Surveying' (1838), which passed through several editions, and was the text-book at Addiscombe. 2. (in conjunction with Captain C. R. Scott, also of the royal staff corps) 'The Military Life of the Duke of Wellington' (2 vols. 1840), furnished with unusually good plans.

[Times, 24 Oct. 1889; Dalton's Waterloo Roll Call, 1890; Vibart's Addiscombe.]

E. M. L.

JACKSON, CATHERINE HANNAH CHARLOTTE, LADY (d. 1891), authoress, was the daughter of Thomas Elliott of Wakefield. She became the second wife of Sir George Jackson [q. v.] in 1856, the marriage taking place at St. Helena. After her husband's death in 1861 she turned her attention to literature, and began by editing the diaries and letters of her husband's early life. In 1872 appeared in two volumes 'The Diaries and Letters of Sir George Jackson, from the Peace of Amiens to the Battle of Talavera,' and in 1873, also in two volumes, 'The Bath Archives: a further Selection from the Diaries and Letters of Sir George Jackson, 1809-16.' On 19 June 1874 she was granted a pension of 100*l.* a year from the civil list, in recognition of her husband's services. She now took to reading widely in French memoirs, and compiled from them several books on French society. One of the best of them, 'Old Paris: its Court and Literary Salons,' appeared in two volumes in 1878. Lady Jackson's works have an interest for the general reader, but their inaccuracies and lack of perspective render them useless to the historical student. Her English style cannot be commended. She died at Bath on 9 Dec. 1891.

Other works are: 1. 'Fair Lueitania,' 1874. 2. 'The Old Régime: Court, Salons, and Theatres,' 2 vols. 1880. 3. 'The French Court and Society: Reign of Louis XVI and First Empire,' 2 vols. 1881. 4. 'The Court of the Tuileries from the Restoration to the Flight of Louis Philippe,' 2 vols. 1883. 5. 'The Court of France in the Sixteenth Century, 1614-69,' 2 vols. 1885. 6. 'The Last of the Valois and Accession of Henry of Navarre, 1569-89,' 2 vols. 1888. 7. 'The First of the Bourbons,' 2 vols. 1890.

[Bosser's Modern English Biogr. ii. 29; Times, 11 Dec. 1891; Colles's Literature and the Pension List; Allibone's Dict. Suppl. ii. 891.] E. L.

JAGO, JAMES (1815-1893), physician, second son of John Jago, was born on 18 Dec. 1815 at the barton of Kigilliaok, Budock, near Falmouth, once a seat of the bishops of Exeter. He was educated at the Falmouth classical and mathematical school until about 1833. After a short period of private tuition he entered St. John's College, Cambridge, in Easter term 1835, and graduated B.A. in the mathematical tripos of 1839 as thirty-second wrangler. He then determined to adopt the medical profession, and studied at various hospitals in London, Paris, and Dublin. On 16 Feb. 1843 he was incorporated at the university of Oxford from Wadham College (GARDINER, *Reg. Wadham*, ii. 414). He graduated M.B. on 22 June 1843, and the degree of doctor of medicine was conferred upon him by this university on 10 June 1859. He then began to practise in Truro, and in 1856 he was appointed physician to the Royal Cornwall Infirmary, and he was also connected professionally with the Truro dispensary. He was elected a fellow of the Royal Society on 2 June 1870, and he served (1873-5) as president of the Royal Institution of Cornwall at Truro, a society of which he had been the honorary secretary for many years.

He died on 18 Jan. 1893. He married, in 1864, Maria Jones, daughter of Richard Pearce of Ponzance, by whom he had two daughters.

Dr. Jago was a voluminous writer on various medical subjects, the most important of which were investigations upon certain physiological and pathological conditions of the eye, which his mathematical and medical knowledge especially fitted him to discuss. He was also interested in the history and progress of Cornish science and antiquities. His works are: 1. 'Ocular Spectros and Structures as Mutual Exponents,' London, 1856, 8vo. This work deals with various optical defects of the human eye. 2. 'Entoptics, with its Uses in Physiology and Medicine,' London, 1864, 8vo. He also contributed various papers to the 'London Medical Gazette,' 'Proceedings of the Royal Society,' the 'British and Foreign Medical and Chirurgical Review,' and the 'Journal of the Royal Institution of Cornwall.'

[Proceedings of the Royal Society, 1893, vol. liv.; Foster's Alumni Oxon. 1715-1886.]

D'A. P.

JAMES, DAVID (1830-1893), actor, whose real name was BULASCO, born in London in 1830, made his first appearance in a

subordinate part at the Princess's theatre under Charles Kean. He is first recognisable at the Royalty, where on 28 Sept. 1868 he was the first Mercury in Mr. Burnand's burlesque of 'Ixion.' The following year he was at the Strand, where he played in burlesque, and on 28 Oct. was the first Archibald Goode, a young lover in Craven's 'Milky White,' Tom Foxer in Craven's 'One Tree Hill,' followed. In Mr. Burnand's 'Windsor Castle' he was Will Somers. Other parts of little importance succeeded, and on 15 June 1867 he was the first Joseph in 'Our Domestic,' ('Nos Domestiques'). His reputation rose with his performance on 5 Feb. 1870 of Zerkel Homespun in a revival of the 'Heir at Law.' Two months later, in partnership with Henry James Montague [q. v.] and Thomas Thorne, he undertook the management of the Vaudeville, but was unable to appear in the opening performances. On 4 June 1870, at the Vaudeville, he played Mr. Jenkins in Albery's 'Two Roses,' was the original John Tweedie in 'Tweedie's Rights' on 27 May 1871, and Bob Prout in 'Apple Blossoms' on 9 Sept. He played Sir Benjamin Backbite in 'School for Scandal' and Goldfinch in the 'Road to Ruin' with brilliant success, Shoridan's masterpiece being given over four hundred times. He was the original Sir Ball Brace in Albery's 'Pride' on 22 April 1874, and 'the retired butlerman,' Parkyn Middlewick, in 'Our Boys' on 16 Jan. 1875. This was his greatest success, and the piece was played for over a thousand times; it was not removed from the playbills until 18 April 1879, and was claimed as 'the largest run on record.' On 19 April 1879 he was the first Plantagenet Potter in 'Our Girls' on 29 Jan. 1880 the first John Peddington in Mr. Burnand's 'Ourselves,' and on 8 March Smallribin Charles Wills's 'Cobwebs.' James was the first Edward Irwin in Albery's 'Jacks and Jills' on 29 May, Macclissfield in E. G. Lankoster's 'The Gyn'or' on 23 June, and Professor Mistlotee in Byron's 'Punch' on 26 May 1881. After the partnership between James and Thorne had come to an end, James played at the Haymarket Lombard in the 'Overland Route' and Eccles in 'Oasto.' In 1885 he undertook the management of the Opera Comique, playing Blueskin in 'Little Jack Sheppard,' and Aristides Cassograin in the 'Excursion Train.' In 1886 he was at the Criterion playing John Dory in 'Wild Oats,' Simon Ingot in 'David Garriok,' Matthew Pincher in 'Oryll's Success,' and his old part in 'Our Boys.' At the Criterion he was also the first Townely Snoll in the 'Circassian' on 19 Nov. 1887,

and Rev. Dr. Jeremie Jackson in 'Miss Decima' on 28 July 1891. He took part in 1898 in revivals at the Vaudeville of 'Our Boys' and 'The Guv'nor.' He was also seen as Moses in 'School for Scandal' and Samuel Coddle in 'Married Life.' He died on 2 Oct. 1898.

James was an admirable comedian in parts in which ripeness and humour were requisite. In John Dory, Perkyn Middlewick, Macclesfield, and other characters in which cheeriness and uncton were requisites, he had no equal, and scarcely a rival or a successor. His Tweedie in 'Tweedie's Rights' was a marvellous piece of acting.

[Personal recollections; Pascoe's Dramatic List; The Theatre, various years; Scott and Howard's Blanchard; The Dramatic Poerage; Era Almanack, various years; Sunday Times, various years.] J. K.

JENNER, SIR WILLIAM, first baronet (1815-1898), physician, born on 30 Jan. 1815 at Chatham, was the fourth son of John Jenner, afterwards of St. Margaret's, Rochester, and of Elizabeth, his wife, the only daughter of George Terry. He received his medical education at University College, London, and was apprenticed to a surgeon living in Upper Baker Street, Regent's Park. He was admitted a licentiate of the Society of Apothecaries on 6 July 1837, and a member of the Royal College of Surgeons of England on 29 Aug. 1837. He then commenced general practice at 12 Albany Street, Regent's Park, and graduated M.D. at the university of London in 1844.

At the beginning of 1847 Jenner began a detailed study of the cases of continued fever admitted to the London Fever Hospital, where he made notes of a thousand cases of acute disease. The result of the investigation of these cases was, in his own words, 'to prove incontestably, so far as induction can prove the point, that the specific causes of typhus and typhoid fevers are absolutely different from each other, and to render in the highest degree probable that the specific causes of relapsing fever is different from that of either of the two former.'

In 1849 he was appointed professor of pathological anatomy at University College, London, and later in the same year he became an assistant physician to University College Hospital, succeeding to the office of full physician in 1864. This post he resigned in 1876, and he was elected a consulting physician in 1879. In 1886 he was nominated physician in charge of the skin department of University College Hospital. At University College he acted as substitute

for Dr. Edmund Alexander Parkes [q. v.], the Holme professor of clinical medicine, during his absence at the Crimean war, 1855-6; and when Parkes was appointed professor of hygiene in the army medical school, established at Fort Pitt, Chatham, in 1860, Jenner was confirmed in the chair of Holme professor at University College. From 1863 to 1872 he was professor of the principles and practice of medicine at University College. From 1863 to 1861 he held the office of physician to the London Fever Hospital, and from 1852 to 1862 he was physician to the Hospital for Sick Children in Great Ormond Street.

Jenner was elected a member of the Royal College of Physicians in 1848, and a fellow in 1852. He delivered the Gulstonian lectures in 1853, on 'Acute Specific Diseases;' he was a councillor in 1855-6-7, censor in 1870-1 and in 1880, Harveian orator (for Dr. Parkes) in 1876, and president from March 1881 to March 1888. He was elected a fellow of the Royal Society in 1864, and was created hon. D.C.L. Oxford on 22 June 1870, hon. LL.D. Cantab. 1880, and hon. LL.D. Edin. 1884. He was president of the Epidemiological Society 1866-8, of the Pathological Society of London 1873-5, and of the Clinical Society in 1875.

He was appointed physician extraordinary to Queen Victoria in 1861 upon the death of Dr. William Baly (1814-1861) [q. v.] In 1862 Jenner became physician in ordinary to the queen, and in 1863 he was appointed physician in ordinary to the prince of Wales. He attended the prince consort during the attack of typhoid which caused his death in December 1861, and the prince of Wales during an attack of the same fever ten years later. He was created a baronet on 25 Feb. 1868, a K.C.B. in 1872, and a G.C.B. (civil) on 24 May 1889. He was also a commander of the order of Leopold of Belgium.

Jenner retired from practice in 1890 owing to ill-health, and died at Greenwood, near Bishop's Waltham, Hants, on 11 Dec. 1898. He is buried at Dursley, a village near his residence. A three-quarter-length oil portrait of Sir William Jenner in his robes as president of the Royal College of Physicians, painted by Frank Holl, R.A., is in the possession of Lady Jenner. A copy by Val Prinsep, R.A., hangs in the common room of the Royal College of Physicians in Pall Mall, London. He married in 1858 Adela Lucy Leman, second daughter of Stephen Adey, esq., by whom he had five sons and a daughter.

Sir William Jenner's claim to recognition lies in the fact that by a rigid examination, clinical as well as post mortem, of thirty-six

patients he was able to substantiate the suspicion of the great French physician Louis that under the name of continued fever the English physicians had long confounded two entirely different diseases, to one of which Louis gave the name of typhus, to the other typhoid. The credit of drawing this distinction belongs, among others, to Dr. Gerhard and Dr. Shatmak in America, to Dr. Valleix in France, and to Dr. Alexander Patrick Stewart [q.v.] in Great Britain, but their work was contested, while, since the publication of Jenner's papers, the identity of the two conditions has never been seriously maintained.

Jenner's robust common sense, his sound knowledge of his profession, his kindness to patients, and his somewhat autocratic manner, made him acceptable to all classes, and enabled him to acquire so lucrative a practice that he left behind him a fortune of \$75,000. The failing health of Sir James Clark threw upon him the chief immediate care of the queen's health soon after his appointment as physician in ordinary, and for more than thirty years he proved himself not only a most able physician, but a true and devoted friend of Queen Victoria, who deeply mourned his loss.

Jenner's papers on typhoid and typhus fevers were published in the 'Monthly Journal of Medical Science' (Edinburgh and London) for 1849, and in the 'Transactions of the Royal Medical and Chirurgical Society,' 1850, vol. xxxiii. The latter paper was received on 20 Nov., and read on 11 Dec. 1849, the author being introduced by Dr. William Sharpey [q. v.]

Jenner also published: 1. 'On the Identity and Non-identity of Typhoid Fever,' London, 1850, 8vo; translated into French, Brussels, in two parts, 1852-3. 2. 'Diphtheria, its Symptoms and Treatment,' London, 1861, 12mo. 3. 'Lectures and Essays on Fevers and Diphtheria, 1849-79,' London, 1893, 8vo. 4. 'Clinical Lectures and Essays on Erysipelas, Tuberculosis, Abdominal Tumours, and other Subjects,' London, 1895, 8vo.

[British Medical Journal, 1898, ii. 1851; Transactions of the Royal Medical and Chirurgical Society, 1899, vol. lxxvii.; Royal Society's Yearbook, 1900, p. 183; private information.]

D.A.P.

JENNINGS, LOUIS JOHN (1830-1898), journalist and politician, son of John Jennings, a member of an old Norfolk family, was born on 12 May 1830. Before he was twenty-five he became connected with the 'Times,' for which journal he was sent to India as special correspondent in 1863. For

soms time he was editor of the 'Times of India.' After the civil war he was the representative of the 'Times' in America, as successor to Dr. Charles Mackay [q. v.]. In 1867 he published 'Eighty Years of Republican Government in the United States,' London, 1868, cr. 8vo, and in the same year he married Madeline, daughter of David Henriques of New York. He settled in New York and became the editor of the 'New York Times.' The municipal government of the city had fallen into the hands of the Tammany Ring and 'Boss' Tweed. Jennings, undeterred by threats of personal violence, and even of murder, during many months exposed the malpractices in his newspaper, and finally had the satisfaction of seeing the corrupt organisation broken up through his public-spirited and courageous efforts, and the ring-leaders, who had defrauded their fellow-citizens of millions of dollars, punished. This remarkable achievement was commemorated by a testimonial to Jennings, signed by representatives of the best classes in New York.

Jennings returned to London in 1876 to devote himself to literature, founded and edited 'The Week,' a newspaper which did not meet with much success, and became a contributor to the 'Quarterly Review,' for the publisher of which, John Murray, he acted as reader. In 1877 he had charge of the city article in the 'World.' He was an active pedestrian, and published 'Field Paths and Green Lanes: being Country Walks, chiefly in Surrey and Sussex' (1877 &c. five editions), followed by 'Rambles among the Hills in the Peak of Derbyshire and the South Downs' (1880), with some charming woodcuts after sketches by Mr. A. H. Hallam Murray. These volumes have nothing of the formal character of guide-books, but are racy descriptions of secluded country paths interspersed with stories of quaint rural wayfarers. In 1882-3 he wrote a novel, 'The Millionaire,' said to depict Jay Gould, the American, which appeared in 'Blackwood's Magazine,' and was afterwards published anonymously (1883, 3 vols.)

His most important literary undertaking was to edit, with much skill and judgment, 'The Croker Papers: the Correspondence and Diaries of the late Rt. Hon. John Wilson Croker, Secretary to the Admiralty from 1809 to 1880' (London, 1884, 8 vols. 8vo; 2nd edit. revised, 1885). In November 1885 he was elected M.P. for Stockport in the conservative interest, and became absorbed in politics. He was re-elected in 1886 and 1892. He was a follower of Lord Randolph Churchill [q. v. Suppl.], but

dissociated himself when Lord Randolph attacked the appointment of the Parnell commission in 1889. His last literary work was to edit Lord Randolph Churchill's 'Speeches, with Notes and Introduction' (1889, 2 vols. 8vo). He acted as London correspondent of the 'New York Herald,' and published 'Mr. Gladstone: a Study' (1887, cr. 8vo, several editions), a severe party attack criticised by Mr. H. J. Leech in 'Mr. Gladstone and his Reviler,' 1888. After two years' illness he died on 9 Feb. 1893, at Elm Park Gardens, London, aged 56, leaving a widow and children.

[*Athenaeum*, 18 Feb. 1893, p. 221; *Men and Women of the Time*, 1891; *Times*, 10 Feb. p. 5, and 11 Feb. 1893, p. 1; W. S. Churchill's *Life of Lord Randolph Churchill*.]

H. R. T.

JENNINGS, SIR PATRICK ALFRED (1831-1897), premier of New South Wales, was son of Francis Jennings of Newry, a merchant, who came of a family long settled in that part of Ireland, and his wife, Mary O'Neill. He was born at Newry on 17 March 1831, and educated in that town till he went to the high school at Exeter. Intended for the bar, he preferred engineering, but ultimately began life in a merchant's office; he emigrated to the goldfields of Victoria in 1852. Here he was fairly successful. In 1855 he settled at St. Arnaud and erected quartz-crushing mills.

Jennings soon made an impression in the young colony. He was asked to stand for the Wimmera in the first Victorian assembly (1856), but resolved to devote himself for the present to his own business. In 1857, however, he was made a magistrate, and then chairman of the road board, and afterwards of the first municipal council, of St. Arnaud.

In 1863 Jennings acquired a large pastoral property on the Murrumbidgee in New South Wales, and, migrating to that colony, settled at Warbreccan in the Riverina district as a squatter. Shortly afterwards the agitation for the separation of the Riverina district and its erection into a separate colony reached its height. In 1865 Jennings was asked to go to England as a delegate to represent the grievances of the separatists, but declined because he expected the local government to tackle the question effectively. In 1866 James Martin [q.v.], then premier of New South Wales, personally visited the district and nominated several leading residents to the legislative council. Jennings accepted his nomination and entered the council on 28 March 1867. He resigned in 1869, and was elected to the

assembly as member for the Murray district, for which he sat till 1872, when he decided to contest Mudgee and was beaten, thus losing his seat in parliament. In 1875 he represented the colony at the Melbourne exhibition, and in 1876 was commissioner for New South Wales, Queensland, and Tasmania at the United States centennial exhibition at Philadelphia. Here he received a special medal from the States and was also thanked by the British authorities. From America he travelled to the United Kingdom and Europe, and at Rome was presented to the pope (Pius IX) and decorated with the order of St. Gregory the Great. In December 1878 Jennings was offered by Sir John Robertson (1816-1891) [q.v.] a seat in his projected cabinet as vice-president of the executive council and leader of the upper chamber, but the formation of this ministry was not completed. In 1879 he was executive commissioner for New South Wales at the international exhibition held at Sydney, and in connection with this service was made a C.M.G. and a year later K.C.M.G. In November 1880 he once more entered the assembly as member for the Bogan. From 5 Jan. to 31 July 1883 Jennings was vice-president of the executive council in Alexander Stuart's [q.v.] ministry. From 10 Oct. to 21 Dec. 1885 he was colonial treasurer under (Sir) George Dibbs. The period was a stormy one in colonial politics. Sir John Robertson came into power only to be defeated on a vote of censure; Sir Henry Parkes [q.v. Suppl.] was condemning severely all parties without having strength to form a government. Jennings was called upon and attempted to form a coalition ministry with Robertson; finally, on 26 Feb. 1886, he became premier, holding office as colonial treasurer. The questions with which he had to deal were those of retrenchment and fresh revenue, certain reforms in the civil service, and the amendment of the Land Act. His financial proposals evoked very determined opposition; Parkes condemns them as a protectionist effort put forth by a professed free-trader. They were only carried by extraordinary expedients and all-night sittings. His land tax bill was lost. His colonial secretary, Dibbs, quarrelled with him and left him. At the end of the session his position was greatly weakened, and as he was not wedded to politics, he resigned office on 19 Jan. 1887, partly perhaps in order that he might visit England, where he represented the colony at the colonial conference in London in June and July 1887. After his return he practically eschewed local politics; he

was, indeed, appointed to the legislative council in 1890, and was delegate for New South Wales in the convention on federation held at Sydney in March 1891, but that was practically the close of his public life. He died at Brisbane at a private hospital on 11 July 1897, and was buried at Sydney.

Jennings is described by a contemporary as 'a clear-headed, cultured Irishman' who 'turned every honest opponent who came into contact with him into an admiring friend' (*Sydney Mail*, 17 July 1897, p. 115). He did much to promote the cultivation of music in New South Wales, and gave large sums for the erection of the organ at Sydney University, of which he was a member of senate. He was also a trustee of the National Art Gallery. He was a fellow of St. John's (Roman catholic) College in Sydney, a knight grand cross of Pius IX in 1887, and was made LL.D. of Dublin in 1887.

Jennings married, in 1804, Mary Anne, daughter of Martin Shanahan of Marnoo, Victoria; she died in 1887. He left two sons and a daughter.

[*Sydney Mail*, 17 July 1897; *Heaton's Australian Dictionary of Dates*; *Mannell's Dict. of Australasian Biogr.*; *Parker's Fifty Years in the making of Australian History*, vol. ii.; *New South Wales Blue-books*; *New South Wales Parliamentary Debates*.] O. A. H.

JENYNS, LEONARD (1800-1893), writer and benefactor of Bath. [See *BROMSFIELD*.]

JERRARD, GEORGE BIRCH (d. 1863), mathematician, was the son of Major-general Joseph Jerrard (d. 23 Nov. 1868). He studied at Trinity College, Dublin, and graduated B.A. in 1827. He is chiefly known for his work in connection with the theory of equations. Between 1832 and 1835 he published his 'Mathematical Researches' (Bristol, 8vo), in which he made important contributions towards the solution of the general quintic equation. In 1858 he published a further treatise on the subject, entitled 'An Essay on the Resolution of Equations' (London, 8vo). The theory of equations has since undergone great development, Arthur Cayley [q. v. Suppl.] and Sir James Cockle [q. v. Suppl.] being among those who have devoted attention to it.

Jerrard died on 23 Nov. 1863 at Long Stratton rectory in Norfolk, the residence of his brother, Frederick William Hill Jerrard (d. 18 Feb. 1884).

[*Boase's Modern English Biogr.*; *Gent. Mag.* 1860 i. 102, 1864 i. 130; *Encyclopædia Britannica*, 9th edit. viii. 600.] E. I. O.

JERVOIS, SIR WILLIAM FRANCIS DRUMMOND (1821-1897), lieutenant-general, colonel-commandant royal engineers, son of General William Jervois, K.H., colonel of the 70th foot, and his wife Elizabeth, daughter of William Maitland, was born at Cowes, Isle of Wight, on 10 Sept. 1821. Educated at Dr. Burney's academy at Gosport and Mr. Barry's school at Woolwich, he entered the Royal Military Academy at Woolwich in February 1837, and obtained a commission as second lieutenant in the royal engineers on 19 March 1839. His further commissions were dated: lieutenant 8 Oct. 1841, captain 13 Dec. 1847, brevet major 29 Sept. 1854, brevet lieutenant-colonel 13 Feb. 1861, lieutenant-colonel 1 April 1862, brevet colonel 1 April 1867, colonel 27 Jan. 1872, major-general 1 Oct. 1877, lieutenant-general 7 April 1882, colonel-commandant of royal engineers 28 June 1893.

After the usual course of professional instruction at Chatham, where his survey sheets were framed as a pattern for the survey school, and after a few months' duty at Woolwich, Jervois embarked on 26 March 1841 for the Cape of Good Hope. He was employed on the eastern frontier in the construction of defensive posts on the Fish river to keep the Kaffirs in check. Towards the end of 1842 he was appointed brigadier-major to a force of all arms, sent to Colesberg on the Orange river, under Colonel Harro, the lieutenant-governor, to control the Boers. He was afterwards employed in building a bridge over the Fish river at Fort Brown, and in making the main road to Fort Beaufort. In 1845 he was appointed adjutant of the royal sappers and miners. He accompanied Colonel Piper, the commanding royal engineer, to Natal, and, on his return overland via Colesberg to Cape Town, made a rough survey of the little-known country through which he passed.

At the beginning of 1847 he accompanied General Sir George Berkeley, commanding the troops, to Kaffrland, where he made a sketch survey of British Kaffraria, extending from the Keiskama river to the Kei river, and from Fort Harro to the sea, some two thousand square miles, of which eleven hundred were surveyed during the war under the protection of military escorts. This survey proved of considerable value in subsequent wars, and thirty years later was the only map with any pretension to accuracy which Lord Chelmsford could find for his guidance in that part of the country. On his way home in the *Devastation*, in 1848, Jervois connected the sketch sheets of the

survey, which was published by Arrowsmith. Sir Harry George Wakelyn Smith [q. v.], the governor at the Cape of Good Hope, recommended Jervois to Lord Raglan, the master-general of the ordnance, 'as one of the most able, energetic, and zealous officers I have ever exacted more than his share of duty from.' For his services in the Kaffir war Jervois received the war medal.

From 1849 to 1852 Jervois commanded a company of royal sappers and miners at Woolwich and Chatham, and in June 1852 took it to Alderney for employment on the fortifications for the defence of the new harbour in course of formation. In August 1854 Alderney was visited by Queen Victoria and Prince Albert, and, in accordance with custom, Jervois received a brevet majority on the occasion. In January 1855 he was appointed commanding royal engineer of the London military district, and in the same year was a member of the committee on barracks. On 7 April 1856 he was appointed assistant inspector-general of fortifications at the war office, and commenced the work by which he is best known.

In 1857, in addition to his other duties, Jervois was appointed secretary to the defence committee presided over by the Duke of Cambridge, commanding-in-chief. In the following year a violent French outburst against England on the occasion of the Orsini attempt on the life of Napoleon III created a war scare, and Jervois was specially employed by General Jonathan Peel [q. v.], the war minister, in preparing plans for the defence of London in case of invasion. In 1859 he was appointed secretary to the royal commission on the defences of the United Kingdom, and displayed great energy and ability in guiding the commission. The report, which was mainly drafted by him and fully accepted by the members of the commission, was presented to parliament in 1860, and resulted in a loan of 7,000,000*l.* to buy land and carry out the works recommended.

The death of the prince consort, who took an intelligent interest in the fortifications, was the loss to Jervois of much kindness and support. The designs of the defences of the dockyards and naval bases at home and abroad were mostly made under the direct supervision of Jervois, who, in the transition state of artillery and small arms, had great difficulties to contend with. Rifling was beginning to be adopted for guns, but the 68-pounder smoothbore and the rifled 110-pounder were the heaviest guns then known, and this vital changes which were taking place in arms fundamentally affected the designs of defensive work. Iron plates were

proposed both for ships and forts, and Jervois was a member of the special committee on the application of iron to defence.

On 5 Sept. 1862 he was appointed director of works for fortification, and as such was nominally in administrative charge of all defences under the inspector-general of fortifications, but in reality he was the confidential adviser of successive secretaries of state for war on all questions of defence. In September 1863 Jervois was sent to North America, and reported upon the defences of Canada, Nova Scotia, New Brunswick, and Bermuda. He also visited the principal forts of the eastern seaboard of the United States during the war between north and south. On 27 Nov. 1863 he was made a companion of the order of the Bath, civil division. Both in 1864 and 1865 he visited Canada and discussed defence questions with the local authorities. His reports were laid before parliament. Canada voted over a million sterling to carry out the proposals, but the money was ultimately expended in making a railway to connect the various provinces.

The works in course of construction at home met with plenty of criticism, to which Jervois replied with his usual energy and success. In 1868 he delivered a lecture at the Royal United Service Institution on the 'Application of Iron to Fortifications in special reference to the Plymouth Breakwater Fort.' In the same year the work of the engineers was attacked in the House of Commons and a committee appointed to examine the fortification works built under the defence loan. This committee approved both the designs and the execution of the works, and testified to the skill shown in adapting original designs to altered circumstances and the great advance in the power of rifled artillery.

In 1869 Jervois visited Halifax, Bermuda, Gibraltar, and Malta, to inspect the works in progress. In 1871 and 1872, at the request of the government of India, he visited Aden, Psirim, Bombay, Calcutta, Rangoon, and Moulmein, reporting his proposals for defending them. While engaged in this work he accompanied Lord Mayo, governor-general of India, to the Andaman Islands, and was close behind him when he was assassinated. On 28 May 1874 he was created a knight commander of the order of St. Michael and St. George in especial recognition of his services to Canada. On the winding up of the defence loans in the following year the accounts showed a saving of 40,000*l.* on the voted sum of 7,480,000*l.*, a result highly creditable to Jervois.

On 7 April 1875 Jervois was appointed

governor of the Straits Settlements. On arrival at Singapore, he visited the treaty states and found Perak in a very unsettled condition—he and his party were nearly massacred. He developed the able policy of his predecessor, Sir Andrew Clarke, and appointed commissioners to administer the government in the name of the sultan. The murder of Mr. Birch in November, followed by the repulse of a small British force at Passir-Sala, led Jervois to take energetic measures. All available troops in the Straits Settlements and at Hongkong were hurried to the spot, and, reinforced by troops from India, a successful campaign ensued and the sultan was apprehended. The home government expressed its approval of Jervois's energetic measures. He received the Indian war medal and clasp for his services in the Perak expedition.

While at Singapore Jervois made a valuable report upon the defences required there, which formed the basis of the scheme carried out some years later. In April 1877 he was appointed advisor to the various Australasian colonies as to the defence of their chief ports, and visited New South Wales, Victoria, Queensland, and South Australia. While engaged in this duty he was appointed on 6 July to the government of South Australia, retaining the duty of defence adviser to the other Australasian colonies, and, after taking over his government, visited Tasmania and New Zealand. On 25 May 1878 he was promoted to be a knight grand cross of the order of St. Michael and St. George. His recommendations as to the defences of the Australasian colonies were accepted and eventually carried out, and his reports were of great assistance to the royal commission, of which Lord Carnarvon was president in 1882, on the defence of British possessions and commerce abroad.

Jervois proved a good governor, and after five years in South Australia he was transferred to the government of New Zealand in 1882, retiring from the military service on 7 April of the same year. He paid great attention to the defence of the principal ports of New Zealand, and roused public feeling in the colony by his lectures and writings. He was much aided in these endeavours by the war scare in 1885, and had the satisfaction of seeing the scheme of defence completed before the termination of his term of office. His prompt action when the king of Samoa made overtures to the colony to place his dominions under British protection, and the New Zealand ministers proposed to send an armed vessel to Samoa, saved a serious complication.

Jervois differed from the general opinion in Australasia on the question of Chinese immigration, believing that, as half the Australian continent lies within the tropics, it can only be fully developed by coloured labour, of which the Chinese is the most valuable. In 1888 Jervois attended the celebration at Sydney of the centenary of New South Wales, and delivered a remarkably able speech. He left Wellington, New Zealand, on the completion of his term of government on 18 March 1889, 'the best and most popular governor that New Zealand has ever had.'

In 1890 Jervois served on Edward Stanhope's consultative committee on coast defence duties. He had strongly advocated, on his return home, both in the press and by lectures, that the defence of naval bases at home and abroad should be in the hands of the navy. The navy, however, consistently adhered to the fundamental principle that its duty is to fight the enemy's ships, and declined to be hampered by any such charge. This somewhat whimsical proposal, which owed any significance it possessed to its advocacy by Jervois, fell through. In 1892 he revisited South Australia, and on his return to England lived at Virginia Water. He died on 16 Aug. 1897, from the effects of a carriage accident at Bitterne, Hampshire, and was buried at Virginia Water on 20 Aug.

He was a fellow of the Royal Society (7 June 1888) and of other learned and scientific societies, and an associate of the Institution of Civil Engineers.

Jervois married, on 19 March 1860, in London, Lucy (*d.* 17 March 1896), daughter of William Norworthy, by whom he had two sons and three daughters. Besides the papers already mentioned Jervois contributed to vol. ix. of the Royal Engineers' Professional Papers, new series, 'Observations relating to Works for the Defence of Naval Ports,' and the following were separately published: 'The Defensive Policy of Great Britain,' 1871; 'Coast Defences of England,' 1869; 'Coast Defences and the application of Iron to Fortification,' 1868; 'Report on the Defence of Canada,' 1865, fol.; 'The Defence of New Zealand,' 1884, fol.; 'Anniversary Address to the New Zealand Institute,' 1883; 'Address to South Australian Institute,' 1870.

Two portraits of Jervois in oil, by Fisher, both in uniform—one as a young lieutenant and the other as a captain—are in the possession of the family. An engraving of Jervois was published about 1860 in the 'Drawing-room Portrait Gallery of Eminent Persons

ages' in connection with the 'Illustrated News of the World.'

R. H. V.

JOHNSON, SIR EDWIN BEAUMONT (1825-1898), general and colonel-commandant royal (late Bengal) artillery, fourth son of Sir Henry Allen Johnson, bart. (d. 27 June 1800), and of his wife Charlotte Elizabeth (d. 21 Feb. 1888), daughter of Frederick Philipse of Philipseburg, New York, was born at Bath on 4 July 1825. His father, a student of Christ Church, Oxford, was tutor there to the prince of Orange, and, having received a commission in the 81st regiment, accompanied him as aide-de-camp to the Peninsula, where he served under Wellington and was awarded the war medal with five clasps for Ciudad Rodrigo, Badajoz, Salamanca, Vittoria, and the Pyrenees.

Edwin Beaumont entered the military college of the East India Company at Addiscombe on 7 Aug. 1840, received a commission as second lieutenant in the Bengal artillery on 10 June 1842, and arrived in India on 12 Dec. of that year. His further commissions were dated: lieutenant 3 July 1845, brevet captain 10 June 1857, captain 25 June 1857, brevet major 5 July 1857, brevet lieutenant-colonel 19 Jan. 1858; brevet colonel 19 Jan. 1863, regimental lieutenant-colonel 24 March 1865, major-general 6 March 1868, lieutenant-general and general 1 Oct. 1877, colonel-commandant royal artillery 20 Dec. 1890.

He served with the 5th troop of the 1st brigade of the Bengal horse artillery in the Satlaj campaign of the first Sikh war, and took part in the battles of Ferozshah on 21 and 22 Dec. 1845, and of Sobraon on 10 Feb. 1846, receiving the war medal and clasp. From 5 Aug. 1848 to 17 Nov. 1850 he was deputy judge-advocate-general of the Bengal army. In the Punjab campaign of the second Sikh war in 1848-9 he served on the divisional staff of Major-general William Sampson Whish [q. v.], and was present at the action of the passage of the Chenab river at Ramnagar on 22 Nov. 1848, at the battle of Chillianwala on 13 Jan. 1849, at the battle of Gujrat on 21 Feb., on Sir Walter Gilbert's staff, in the subsequent pursuit of the Sikhs and Afghans to Peshawar, and at the surrender of the Sikh army on 14 March 1849. For his services he was mentioned in despatches (*London Gazette*,

19 April 1849), received the war medal and two clasps, and was noted for a brevet majority on attaining the rank of captain.

From 12 March 1855 he was aide-de-camp to the commandor-in-chief in India, Sir William Maynard Gomm [q. v.], and on 21 Dec. of that year was appointed assistant adjutant-general of artillery in the Oude division. He was at Mirat when the mutiny broke out in May 1857, and accompanied the column of Brigadier-general Archdale Wilson [q. v.] on its march to join that of the commander-in-chief from Ambala. He took part in the actions on the Hindun river at Ghazi-ud-din-Nagar on 30 and 31 May, when he was slightly wounded, and in the action of Badli-ke-Serai on 8 June and the subsequent occupation of the ridge before Delhi. He served throughout the siege as assistant adjutant-general, and when the siege batteries were thrown up he did regimental duty on the left portion of No. 2 battery, consisting of nine 24-pounder guns, succeeding to the command when Major Campbell was wounded. At the assault of 14 Sept. he resumed his place on Wilson's staff. For his services he was mentioned in despatches (ib. 15 Dec. 1857) and received a brevet lieutenant-colonelcy.

He accompanied Wilson, who commanded the artillery, to the siege of Lucknow as assistant adjutant-general, and on its capture in March 1858 was honourably mentioned for his services (ib. 25 May 1858). He was made a companion of the order of the Bath, military division, on 26 July, and received the Indian mutiny medal with two clasps. After the mutiny was suppressed he resumed his duties as assistant adjutant-general of the Oude division, and held the appointment until January 1862, when, after officiating for a time as adjutant-general of the army, he went to England on furlough. On 10 July 1865 he was appointed assistant military secretary for Indian affairs at the headquarters of the army in London, and on 4 Aug. of the following year was nominated an extra aide-de-camp to the field-marshal commanding-in-chief, the Duke of Cambridge. He held both appointments until 1 Aug. 1872, when he returned to India. On 8 July in the following year he became quartermaster-general in India, but had only filled the office eight months when he was summoned home to take his seat as a member of council of the secretary of state for India in October 1874. He was promoted to be a K.C.B., military division, on 29 May 1875. He again returned to India in 1877, having been appointed military member of the council of

the governor-general of India on 19 March, and held the office until 18 Sept. 1880. He was made a companion of the Indian Empire on 1 Jan. 1878. His last appointment was that of director-general of military education at the war office in London, which he held from 10 Dec. 1881 to 31 Dec. 1886. He was decorated with the grand cross of the order of the Bath on the occasion of the queen's jubilee on 21 June 1887. Johnson retired from the active list on 31 Jan. 1891, and died on 18 June 1893, being buried at Hanwell.

R. H. V.

JOHNSON, SIR GEORGE (1818-1896), physician, born on 29 Nov. 1818 at Goudhurst in Kent, was the eldest son of George Johnson, yeoman, and Morey, second daughter of William Corko, timber merchant, of Edenbridge in the same county. In 1837 he was apprenticed to his uncle, a general practitioner at Craubrook in Kent, and in October 1839 he entered the medical school of King's College. While a student he was awarded many prizes and obtained the senior medical scholarship. At this early age he was commencing original work, and was awarded the prize of the King's College Medical Society for an essay 'On Auscultation and Percussion.' In 1841 he passed the first M.B. London, in the first class, and in 1842, at the M.B. examination, he received the scholarship and gold medal in physiology and comparative anatomy. In 1844 he graduated M.D. He became a member of the Royal College of Physicians in 1846, a fellow in 1850; in 1872-3 he was an examiner in medicine, censor in 1865, 1886, and 1875, councillor in 1865, 1874, 1881, 1882, and 1883, Guelstonian lecturer in 1852, materiam medicam lecturer in 1853, Lumleian lecturer in 1877, Harveian orator in 1882, and vice-president in 1887.

At the end of his college course Johnson held in succession the offices of house physician and house surgeon to King's College Hospital. He was an associate of King's College, and in 1843 became resident medical tutor; four years later he was appointed assistant physician to the hospital. In 1850

he was made an honorary fellow of King's College. In 1856 he became physician to the hospital, and in 1857 he succeeded Dr. Royle as professor of materia medica and therapeutics, an office which he continued to hold until 1863, when, on the resignation of Dr. George Budd, he succeeded to the chair of medicine, and also became senior physician to the hospital. He was professor of medicine at King's College for thirteen years. In 1876 he was appointed professor of clinical medicine—an office he resigned ten years later when he became emeritus professor of clinical medicine and consulting physician to King's College Hospital.

In 1862 Johnson was nominated by convocation and elected a member of the senate of the university of London. In 1872 he was made a fellow of the Royal Society; in 1834 president of the Royal Medical and Chirurgical Society, and in 1889 physician-extraordinary to the queen. In 1892 he was knighted. He was a member of the British Medical Association and a frequent contributor to the pages of the 'British Medical Journal.' In 1871, at the annual meeting of the association at Plymouth, he delivered the address in medicine, taking for its topic 'Nature and Art in the Cures of Disease.'

Johnson died from cerebral hæmorrhage at his residence, 11 Savile Row, on Wednesday, 8 June 1896, and was buried on 8 June at Addington. In 1897 an ophthalmological theatre at King's College Hospital was built and equipped in his memory. His portrait, by Frank Iffell, subscribed for by the staff and students of King's College Hospital, was presented to Johnson in 1888 by Sir Joseph (now lord) Lister.

In 1850 he married Charlotta Elizabeth, the youngest daughter of the late Lieutenant William White of Addington, Surrey, but ten years later was left a widower with five children.

Johnson's contributions to medical literature were extremely numerous, and dealt chiefly with the pathology and treatment of kidney disease. He was an ardent exponent of the views of Richard Bright [q.v.], and extended Bright's observations in many directions. His discovery of the hypertrophy of the small arteries in Bright's disease, and his 'stop-look' explanatory theory, led to what was known as the 'hyaline-fibroid degeneration' controversy with Sir William Gull and Dr. Sutton: the practical outcome was that attention was directed to the high tension pulse of chronic kidney disease, together with its importance in connection with other symptoms, and this has opened up now fields of treatment. In 1852 he pub-

lished 'Diseases of the Kidney, their Pathology, Diagnosis, and Treatment,' and in 1873 'Lectures on Bright's Disease,' 8vo. His last publication was 'The Pathology of the Contracted Granular Kidney,' 1896.

Johnson's other works were: 1. 'Epidemic Diarrhoea and Cholera: their Pathology and Treatment,' London, 1855, post 8vo. 2. 'The Laryngoscope: Directions for its Use and Practical Illustrations of its Value,' 1865, 8vo. 3. 'Medical Lectures and Essays,' London, 1887, 8vo. 4. 'An Essay on Asphyxia,' 1889, in which he attacked the views advocated by many modern physiologists. 5. 'History of the Cholera Controversy,' London, 1896, 8vo. He reintroduced the picric acid test for albumen and the picric acid and potash test for sugar. He at once recognised the great use of the ophthalmoscope in renal pathology, and assisted Sir Thomas Watson [q. v.] in revising the last edition of his famous 'Lectures on the Principles and Practice of Medicine.'

W. W. W.

JONES, HENRY (1831-1899), known as 'Cavendish,' writer on whist, the eldest son of Henry Derville Jones of 12 Norfolk Crescent, was born in London on 2 Nov. 1831. His father was an ardent devotee of whist, and was in 1863 chosen to be chairman of the Portland Club whist committee, which, in connection with James Olay [q. v.] and the Arlington Club committee, framed the 'Laws of Short Whist,' edited by John Lorraine Baldwin in May 1864. Henry was educated at King's College school (1842-8), and proceeded as a student to St. Bartholomew's Hospital, where he was a pupil of Sir William Lawrence. After qualifying in 1852 as M.R.C.S. and L.S.A., he practised for some sixteen years in the neighbourhood of Soho Square. In 1869 he retired from practice, but retained a connection with his old profession as a member of the court of the Apothecaries' Company.

In 1864, at Cambridge, Henry's younger brother, Daniel Jones, joined a knot of young men of considerable ability, who had at first 'taken up whist for amusement, but who found it offer enough a field for intellectual study that they continued its practice more systematically with a view to its more complete investigation, and to the solution of difficult problems connected with it.' In London, a few years later, Henry was introduced to his brother's set, of which he soon became the most advanced member. He

began to make notes upon difficult points and to record interesting hands, and he joined the club known as the 'Cavendish,' situated at the back of the Polytechnic, in Cavendish Square. He subsequently became a member of the Portland Club, where he met James Olay. His first written contribution on the subject of whist appeared in 'Bell's Life' for March 1867. In January 1862, in an article in 'Macmillan's Magazine,' William Pole [q. v. Suppl.] suggested the utility of a handbook embodying a series of model games at whist. After correspondence with, and encouragement received from, Pole, Jones brought out in 1862 a small edition of such a manual entitled 'Principles of Whist etched and explained by Cavendish.' A fifth edition was called for in 1863, when the title was altered to 'The Laws and Principles of Whist.' The eighth edition of 1868 was recast, a ninth edition was dedicated to James Olay, the tenth contains new matter, while the eleventh, of 1886, introduces the subject of American leads, as promulgated by Nicholas Trist of New Orleans. 'Cavendish' very soon came to be regarded as the standard authority upon whist, and was (so the story runs) appealed to as such by, among other prominent players, Jones's own father, though the latter had no idea that the writer was his son Henry, of whose powers as a whist player he had formed a far from commensurate opinion. Its distinctive merit as a manual was not novelty of doctrine, but lucidity, literary skill, and above all theoretical coherence. He was, however, the first to lay down clearly the true principles of the discard, and of the call for trumps.

Two years after 'Cavendish' came the slonder and less exhaustive 'Treatise on Short Whist,' of J[ames] O[lay]. 'Cavendish' was certainly a great advance upon anything that had gone before, on the book of 'Major A,' published in 1835, and on the book from which the latter was plagiarised, Mattlews's 'Advice to the Young Whist Player' of 1804. Before this came Payne's 'Maxims,' 1770, which for the first time laid down the principle of leading from five trumps; and before him was the 'immortal' Edmund Hoyle, who published his famous 'Short Treatise' in 1742.

Immediately upon the appearance of his 'classic' in 1862 'Cavendish' became whist editor of the 'Field,' and he soon afterwards became 'Pastime' editor of 'The Queen,' producing at the same time numerous manuals on games. Upon the subject of which he was an undoubted master he produced 'Card Essays,' 1879 (with a dedication to Edward Taverer Foster and a sup-

plement of 'Card Table Talk'), and 'Whist Developments,' 1885. He assisted Pole in his article on 'Modern Whist' for the 'Quarterly Review,' January 1871, and he also contributed to 'The Whist Table,' edited by 'Portland.' He naturally was a member of the leading whist clubs such as the Westminster, the Portland, the Arlington, and the Baldwin. At one time he played a great deal at the Union Club, Brighton. He visited America (May to October 1893), and a banquet was given to him by the whist players of Philadelphia at the Union League Club in June 1893. He played in several matches of the Chicago Whist Club. As a player he was surpassed by his father, and still more by Clay, whose occasional criticisms upon his own performances he records with candour. Jones's personality is described as decided, not without brusqueness. He died at 22 Albion Street, Hyde Park, on 10 Feb. 1899, and was buried at Kensal Green. His will was proved on 7 April 1899 by Harriet Louisa Jones, his widow, and Daniel Jones, his brother, the value of the estate being 11,914*l*. The testator gave his Indian whist-makers to his sister, Fanny Hale Jones, his books, writings, and manuscripts to his brother Daniel. His whist library was sold by Sothby on 22 May 1900.

'Cavendish,' said the 'Times' in a leading article upon his death, 'was not a law-maker, but he codified and commented on the laws which had been made, no one knows by whom, during many generations of card-playing. He was thus the humble brother of Justinian and Blackstone, taking for his material, not the vast material interests of mankind, but one of their most cherished amusements.' In addition to his works on 'Whist' Cavendish issued guides to croquet (1869), bezique (1870), *Cent*6 (1870), *euchre* (1870), *calabrisella* (1870), *criblage* (1873), *picquet* (1873; 9th edit. 1890), *vingt-et-un* (1874), *go-hung* (1876), *lawn-tennis* and *badminton* (1876), *chess* (1878), *backgammon* (1878), and *patience games* (1890). He was much interested in croquet, and helped to found the All England Croquet Club. He edited Joseph Bennett's 'Billiards' in 1873, issued a limited edition of 'Second Sight for Amateurs,' a very scarce volume, in 1888, wrote articles upon whist and other games for the ninth edition of the 'Encyclopædia Britannica,' and collaborated with 'B. W. D.' in 'Whist, with and without Perception' in 1889.

P. Courtney, esq., and J. W. Allen, esq. The Milwaukee serial, 'Whist,' contains numerous anecdotes of 'Cavendish,' and no many as seven portraits of him at various ages (see especially vols. ii. in. iv and xiii.)] T. S.

JONES, LEWIS TOBIAS (1797-1895), admiral, second son of L. T. Jones, captain in the royal artillery and author of a history of the campaign in Holland in 1793-4-5, was born on 24 Dec. 1797. He entered the navy in January 1808 on board the *Thrasher* brig, attached to the Walcheren expedition in 1809, but whether Jones was actually serving in her at the time is doubtful. In 1812 he was in the *Stirling Castle* off Brest, in 1813 was in the *Granicus* at Algiers, where he was wounded, and served continuously in the Channel, and on the Cape of Good Hope or West Indian stations till he was made lieutenant on 29 Aug. 1822. He was afterwards on the *North American*, the *West Indies*, home, and Mediterranean stations. On 28 June 1838 he was promoted to be commander (second captain) of the *Princess Charlotte*, flagship of Sir Robert Stopford [q. v.], and was in her during the operations on the coast of Syria in the summer and autumn of 1840, for which service he was promoted to be captain by commission dated 4 Nov., the day following the reduction of Acre. In 1847 he was flag-captain to Commodore Sir Charles Mothum [q. v.] in the *Penelope*, on the west coast of Africa, where in February 1849 he commanded the boats of the squadron at the destruction of the slave barracks in the Gallinas river. The *Penelope* was paid off in the summer of 1849, and early in 1850 Jones was appointed to the *Sampson*, again for the west coast, under the orders of Commodore Bruce. On 26-7 Dec. 1851 he commanded the expedition detached against the great slaving stronghold at Lagos, which was destroyed and the place made dependent on the English government. Bruce highly commended Jones's gallantry, firmness, judgment, and energy, and sent him home with despatches. Still in the *Sampson*, he then went to the Mediterranean, and on 22 April 1854 was senior officer at the bombardment of Odessa. On 26 May he was nominated a C.B. He continued actively employed in

the Black Sea, and in November was moved into the 90-gun ship *London*, in which he continued till the end of the war. For his services at this time he received the cross of an officer of the legion of honour and the Medjidie of the third class. On 17 June 1859 he was promoted to be rear-admiral, and in the following year was second in command on the *China* station, under Sir James Hope (1808-1881) [q. v.]. On 28 June 1861 he was made a K.C.B. From 1862 to 1865 he was commander-in-chief at Queenstown, and became a vice-admiral on 2 Dec. 1865. On 1 April 1870, under Childers's scheme of retirement for age, he was put on the retired list, on which he became an admiral on 14 July 1871. On 24 May 1873 he was made a G.C.B.; and on 25 March 1881 visitor and governor of Greenwich Hospital, a nominal and honorary appointment. He died at Southsea, after two days' indisposition without pain, on 11 Oct. 1895, within a few weeks of completing his ninety-eighth year.

[O'Byrne's *Naval Biogr. Dict.*; *Times*, 14, 17 Oct. 1895; *Navy Lists*.] J. K. L.

JONES, WILLIAM BASIL (1822-1897), bishop of St. David's, born at Cheltenham on 2 Jan. 1822, was the only son by his first wife (Jane, daughter of Henry Tickell of Leytonstone, Essex) of William Tilsley Jones of Gwynfryn, Llangynfelyn, near Aberystwyth, high sheriff of Cardiganshire for 1838 (J. R. PHILLIPS, *Sheriffs of Cardiganshire*, pp. 37-8). He was educated at Shrewsbury School under Samuel Butler and Benjamin Hall Kennedy from 1831 to 1841, being head boy in his last year (G. W. FISHER, *Shrewsbury School*, p. 335). He went up to Oxford in 1841, having matriculated on 16 June 1840, was scholar of Trinity College 1840-5, and Ireland scholar in 1842, when Archbishop Temple was second in the competition (STEPHENS, *Life of E. A. Freeman*, i. 50); he was placed in the second class in the final school of *literæ humaniores* in 1844, graduated B.A. the same year, and M.A. in 1847. He was elected in 1845 to a Michel scholarship, and in 1848 to a Michel fellowship at Queen's College, but exchanged the latter in 1851 for a fellowship at University College, which he held till 1857, becoming assistant tutor and bursar in 1854, lecturer in modern history and classical lecturer from 1858 to 1865, when he finally quitted Oxford. He also served the university as master of the schools in 1848, as examiner in classical moderations in 1856 and 1860, in theology in 1870, as senior proctor in 1861-2, and as select preacher in 1860-2,

1866-7, 1876-8, being also select preacher at Cambridge in 1881.

Jones's closest friends during his undergraduate days included (Sir) George F. Bowen, H. J. Coleridge, E. A. Freeman, and W. Gifford Palgrave, all Trinity scholars, and his former schoolfellow, James Riddell, scholar of Balliol. They had a literary and philosophical society of their own called 'Hermes,' in which Jones took a prominent part; he was also a member and for a time secretary of the Oxford Architectural Society. At Queen's College commenced his close intimacy with William Thomson (afterwards archbishop of York), who like himself was an old Shrewsbury boy. Thomson, when appointed bishop of Gloucester in 1861, made Jones his examining chaplain, and, when translated to York in 1863, presented him to the Grindal prebend in York Minster and the perpetual curacy of Haxby, substituting for the latter in 1865 the vicarage of Bishopthorpe, where the episcopal palace is situated. Jones soon came to be regarded as the archbishop's 'right-hand man,' and the series of archiepiscopal favours was continued by his appointment as archdeacon of York in 1867, rural dean of Bishopthorpe in 1869, chancellor of York and prebendary of Laughton (in lieu of Grindal) in 1871, and canon residentiary of York in 1873, all which preferments he held (along with his vicarage and examining chaplaincy) till his own elevation to the episcopal bench.

On the resignation of the see of St. David's by Connop Thirlwall [q. v.] in 1874, Disraeli chose Jones as Thirlwall's successor. Apart from his distinction as a scholar, and his exceptional experience of organisation and administration in church work, he had the special qualification of possessing intimate associations with the diocese, and of being a Welshman who spoke Welsh (though in a stiff, bookish manner), and who had made no mean contributions to Welsh antiquarian research. His interest in ecclesiastical architecture had led him, while still an undergraduate, repeatedly to visit St. David's remote cathedral, on which he also wrote some 'very pretty verses,' among the best of his few poetical effusions; he had encouraged Oxford men to go thither to road during the long vacations, and in 1846 one of these reading parties started the movement for the restoration of the cathedral by raising at Oxford a fund for restoring the rood-screen. His lifelong friend, Edward Augustus Freeman [q. v. Suppl.], fully shared his interest, and collaborated with him for several years in writing an elaborate history of St. David's (STEPHENS, i. 161, 206). Jones

secured Freeman's active support for the Cambrian Archaeological Association, which was started in 1846-7, Jones himself acting as one of its general secretaries in 1848-51, and joint editor in 1854 (*Index to Arch. Camb.*) He also interested himself during this period in Welsh education, advocating the reform of Christ's College, Brecon (in a booklet on *Its Past History and Present Capabilities*, 1853, 8vo), and, at the time of the schools inquiry commission, of Ystradmeurig School. Thirlwall, who had a high opinion of him (cf. *Letters to a Friend*, p. 255), had recognised these services by appointing him in 1859 to one of the six curial prebends of St. David's; but this he vacated in 1866, on settling at Bishopthorpe. He was consecrated bishop of St. David's by Archbishop Tait at Westminster Abbey on 24 Aug. 1874 (being made D.D. by the archbishop's diploma on 27 Oct.), and enthroned at St. David's on 15 Sept. He did not obtain a seat in the House of Lords till after the death of Bishop Solwyn in April 1878, but then as junior bishop he held the chaplaincy of the house for the unusually long period of four and a half years, till December 1882. After his release from the chaplaincy he rarely attended the house.

'The progress of the diocese during Bishop Jones's episcopate was far greater than the progress during any period of equal length since the Reformation' (quoted by his successor, Dr. Owen, in his primary 'Olarco,' 1900, p. 26). This was partly due to the fact that in his time the diocese reaped the benefit of reforms initiated by Burgess and Thirlwall, the latter of whom had devoted himself to church building and restoration, the augmentation of benefices (thereby greatly reducing non-residence), and the reform or establishment of educational institutions. All this work Bishop Jones continued and extended. While always encouraging judicious 'restoration' he also gave his support to the multiplication of new mission churches, and the number of churches annually consecrated by him was more than treble Thirlwall's yearly average. His personal efforts for improving the number and status of the parochial clergy and his scrupulous care in the exercise of patronage and in the selection of candidates for ordination (insisting on good testimonials and preferring well-educated to merely fluent men), resulted within a few years in the almost total disappearance of non-residence from the diocese, in a much-needed improvement in pastoral work, and in the progressive raising of the educational and spiritual standard of the ministry. He also applied his conspicuous

business ability to effecting a very complete organisation of diocesan work. In the diocesan conference which he established in 1881, administrative as distinct from deliberative functions obtained prominence from the outset, so that by 1897 as many as twenty-one diocesan committees, boards, and societies submitted reports to the conference.

The proposed division of the diocese—by far the largest in the kingdom—did not, when first suggested, commend itself to the bishop, but he subsequently accepted the proposal, and was prepared to relinquish a part of the income of St. David's on condition that the endowment left should not be less than that of the other Welsh dioceses. He ultimately contented himself, however, with the appointment in 1890 of a bishop suffragan to relieve him of confirmations, while himself retaining control of diocesan business to the end.

As visitor of St. David's College, Lampeter, he was endowed, under the college charter, with exceptionally wide powers, which he exercised to its very marked improvement, one of his first acts being to supply it with a complete code of statutes (1879, 8vo), instead of the few provisional rules which it previously had, while in his last year he assisted the college board in framing a more democratic charter. When the university of Wales was being established in 1893, he however missed the opportunity of securing the inclusion of Lampeter as a constituent college of the university, towards which he thenceforward advised an attitude of friendly reserve. He took an active part in the government of Christ's College, Brecon, becoming chairman of its board of governors in 1890 (see his evidence before Lord Abchurch's committee on Welsh intermediate education, *Minutes*, pp. 433-43). As to elementary education, he was satisfied with the religious instruction which it was possible to provide at board schools. He also cheerfully accepted the Burials Act of 1880, which in his opinion was 'not unjust' to the church, for he admitted that the nonconformists of Wales had at least a theoretical grievance in this matter. But when the Welsh church establishment was more directly attacked, he denied that Wales was either geographically or ecclesiastically distinct from England, embodying his views in the dictum that Wales is 'merely a geographical expression,' is 'nothing more than the highlands of Scotland,' and that it 'has never had a national unity.' He, however, took only a slight part in the work of church defence, which in its militant and aggressive forms was distasteful to

him, and he was successful beyond most Welsh bishops (Thirlwall not excepted) in avoiding controversies, and in maintaining amicable relations with Welsh nonconformists.

Like most of his friends at Trinity he had been deeply interested in the tractarian movement, the more so in his case perhaps, owing to his personal affection for Isaac Williams [q.v.], who was a native of Llangynfelyn parish, where Jones's Welsh home was situated. But a still earlier attachment to evangelicalism, corrected by his cultured historical sense, led him, after the secession of Newman, to develop his sympathies in the direction of the evangelical wing of the moderate school, but with a whole-hearted loyalty to the prayer-book. Among the benefits which he ascribed to the Oxford movement was the greater dignity and solemnity with which it had invested religious functions, whence perhaps (and owing also to his fondness of music, cf. STEPHENS, *Freeman*, i. 90) his private admission that he liked a few ritualists 'to give colour' to his diocese.

Throughout his life Jones was always methodical and minutely accurate, though his range of knowledge was of the widest. A natural warmth of feeling was concealed under a somewhat precise manner. In presence, his short stature was compensated by a quiet dignity. To the last he took a lively interest in archaeological research, and his presidential addresses to the Cambrian Archaeological Association at Carmarthen and Lampeter in 1875 and 1878, and to the British Archaeological Association at Tenby in 1884, were models of their kind.

He died at Abergwili Palace on 14 Jan. 1897, and was buried on the 20th in the family vault at Llangynfelyn. The bishop was twice married: first, on 10 Sept. 1856 (during his residence at Oxford), to Frances Charlott, second daughter of the Rev. Samuel Holworthy, vicar of Croxall, Derbyshire, who died without issue on 21 Sept. 1881; and secondly, on 2 Dec. 1886, to Anne, fifth daughter of Mr. G. H. Loxdale of Aigburth, Liverpool, by whom he left issue a son and two daughters.

The following were his published works: 1. 'Vestiges of the Gaol in Gwynedd,' London (Tenby printed), 1861, 8vo. 2. 'The History and Antiquities of St. David's,' written jointly with E. A. Freeman; issued in four parts, 1852-7 (Tenby, 4to), with illustrations by Jewitt, engraved by Le Keux. 3. 'Notes on the *Œdipus Tyrannus* of Sophocles, adapted to the Text of Dindorf,' Oxford, 1862, 16mo; 2nd ed. 1869.

4. 'The New Testament illustrated by a Plain Commentary for Private Reading,' 2 vols. London, 1865, 4to; the second volume only was by Basil Jones, the first being by Archdeacon Olurton. 5. 'The *Œdipus Rex* of Sophocles with Notes,' Oxford, 1866, 8vo. 6. 'The Peace of God: Sermons on the Reconciliation of God and Man' (chiefly preached before the University of Oxford), London, 1869, 8vo.

His translation into Greek anapestic verse of Tennyson's 'Dying Swan' in the *Anthologia Oxoniensis* deserves to be mentioned as probably the most beautiful thing in that collection. Single sermons and the episcopal charges were also published separately shortly after their delivery. A selection of his 'Ordination Addresses' was issued after his death (Oxford, 1900, 8vo), with a preface by Canon Gregory Smith, who, in his 'Holy Days,' (1900, p. 87), has delineated the chief traits of the bishop's character.

The restoration of the ruinous eastern chapels at St. David's Cathedral is being carried out as a memorial to Bishop Jones and of his two friends, Deans Allen and Phillips, who both died within a few months after the bishop. A portrait of the bishop in his robes, painted by Eddis in 1882 is preserved at Gwynfryn.

Lx. T.

JOWETT, BENJAMIN (1817-1893), master of Balliol College, and regius professor of Greek in the university of Oxford, was the eldest son and second child of Ben-

jamin Jowett of London and Isabella Langhorne. The family originally came from Manningham, near Bradford in Yorkshire, where at one time they owned land. Benjamin was born in the parish of Camberwell on 15 April 1817. He is said to have been a pale delicate-looking boy of unusual mental precocity, and when he learned Greek with the tutor of his cousins, the Langhornes, 'they had no chance against him in their Greek lessons' (*Life and Letters*, i. 80). His chief companion in these years was his elder sister Emily; 'the two would shut themselves up in a room with their books and study for hours.'

On 16 June 1829 he was admitted to St. Paul's school. The high master at the time was Dr. John Sleath [q. v.] of Wadham College. There he acquired two methods of study which he always impressed on his pupils at a later time; he learned large quantities of Greek and Latin poetry by heart, and he constantly retranslated into Greek or Latin passages which he had previously translated into English. Among his contemporaries at the school were [Baron] C. E. Pollock, [Lord] Hannen, and A. S. Eddis of Trinity College, Cambridge.

In November 1835 he gained an open scholarship at Balliol College. About a year afterwards (October 1836) he came into residence. Among the scholars of the time were [Dean] Stanley, [Vice-chancellor] Wickens, Stafford Northcote [Lord Iddesleigh], J. G. Lonsdale, [Dean] Laker, and [Dean] Cloulburn; and among the fellows [Archbishop] Tait, [Dean] Scott, and W. G. Ward.

In Dr. Sleath's opinion Jowett was 'the best Latin scholar whom he had ever sent to college,' and this opinion was confirmed when in the spring of 1837 he gained the Hertford (University) scholarship for Latin. In the next year he obtained a success even more brilliant, being elected a fellow of the college while still an undergraduate (November 1838). In the following summer he obtained a first class in *literæ humaniores*. Already he had begun to take private pupils, the first of whom were Thomas Hanry (afterwards Lord Farrer [q. v. Suppl.] and his brother Oliver. He graduated B.A. in 1839, and M.A. in 1842. In 1841 he obtained the chancellor's prize for the Latin essay, and in 1842 he was appointed by Dr. Jenkins, the master, to a tutorship in the college, a post which he retained till his election to the mastership in 1870. He took deacon's orders in 1842, and priest's in 1845.

Jowett had been brought up amid evangelical views, which were traditional in his family. He now found himself in the

midst of the Oxford movement, and was greatly attracted by William George Ward [q. v.], with whom he was brought into daily contact. Years afterwards, when the two friends met after a long separation, Jowett said: 'Ward reminded me that I charged him with shallow logic, and that he retorted on me with misty metaphysics. That was perhaps not an unfair account of the state of the controversy between us.' In February 1841 Newman's tract on the articles—the famous 'No. X0.'—appeared. It was at once attacked and condemned, and the controversy had a peculiar interest for the Balliol common room. For Tait was one of the first to move in the attack, and Ward, who supported the tract, was dismissed from his lectureship at the college in the following June (CHURCH, *Oxford Movement*, c. xiv., esp. pp. 262 ff.) It appears that Jowett was somewhat bewildered by the shifting currents around him. 'But for the providence of God,' he said at a later time, 'I might have become a Roman Catholic.' In 1844 the crisis in the movement came. Newman had retired from St. Mary's to Littlemore, and Ward published his 'Ideal of a Christian Church.' Jowett, with A. P. Stanley to lead, fought on the side of toleration, and both were present at the scene of Ward's degradation on 18 Feb. 1845, a day which Dean Church regards as the birthday of Oxford liberalism (l. c. p. 340).

Meanwhile Jowett was working earnestly with pupils in college, travelling on the continent in the long vacations. In 1844 he made the acquaintance of some of the most distinguished German scholars of the time, G. Hermann, Bekker, Loehmann, and Ewald, and consulted Erdmann, the historian of philosophy, on the best method of approaching the philosophy of Hegel, by whose teaching he was now becoming fascinated. For some years he remained an eager student of Hegel's writings, and even translated a good deal of the logic in conjunction with [Archbishop] Temple (*Life*, i. 120, 120, 142). He seems also to have been greatly stimulated by Hegel's 'History of Philosophy' in the lectures which he was now giving as tutor, on the 'Fragments of the Early Greek Philosophers'—lectures in which he first gave proof of his peculiar powers. From 1846 onwards his position as tutor was assured; he was the centre of a number of pupils, who were devoted to him, and proved the value of his teaching by their success in the schools. In 1848 he began the practice, which he continued till near the end of his life, of taking pupils with him

in the vacation to some quiet healthy place. Like William Sewall [q. v.] of Exeter, he became a student of Plato, and it was greatly due to him that Plato was included in the list of books which could be offered in the schools (*Life*, i. 182). This incursion into a new field of philosophy he balanced by lectures on political economy. His tours abroad became more rare as the years passed on, but in April 1848 he visited Paris in the days of the revolution with Stanley, Francis Turner Palgrave [q. v. Suppl.], and [Sir] Robert Burnett Morier [q. v.] (see STANLEY, *Life*, i. 390).

Yet theology was the chief study of these days. For some years past Jowett had been on terms of intimate friendship with Stanley, and finally the two friends planned an edition of St. Paul's epistles. Jowett undertook the Thessalonians, Galatians, and Romans; Stanley the Corinthians. From these labours they were drawn away for a time by the movement for reform which now swept over Oxford. Stanley and Jowett had already begun a joint work on university reform, when in 1850 a commission was appointed to take evidence on the subject. Of this commission Stanley was the secretary. From the evidence which Jowett gave before it we see that he wished to retain the college system, but was in favour of increasing the number of professors. That he had in view at this time any extension of university privileges to non-collegiate students there is no proof. But he was clearly on the side of the poor student, and did not wish to see the university possessed by the 'gentleman heresy' (*Life*, i. 183). He was a public examiner in 1849, 1850, 1851, and 1853.

Jowett was now known beyond Oxford. He was consulted by Sir C. Trevelyan in regard to examinations for the Indian civil service, and eventually became a member of Lord Macaulay's committee, which reported in 1854. To the end of his life he retained a lively interest in this subject, and indeed in everything connected with India (see letters to Lord Lansdowne in *Letters*, 1899).

When Dr. Richard Jenkyns [q. v.] died in 1854, Jowett was put forward as a candidate for the mastership, but the election fell on Robert Scott (1811-1887) [q. v.] This repulse made a deep impression on Jowett's sensitive nature; it was, in fact, the beginning of a somewhat distressful period of his life, during which he felt himself in little sympathy with his college and Oxford. The first effect of it was to send him back with renewed energy to his unfinished work on St. Paul. In the next summer, on the same day with Stanley's edition of the Corinthians, his

edition of the Thessalonians, Galatians, and Romans appeared. The publication of this book formed an epoch in Jowett's life.

To the stricter school of philologists the commentary seemed to be vitiated by the view which Jowett took of St. Paul's use of language. His ablest critic, [Bishop] Lightfoot, strongly protested against the charge of vagueness which Jowett brought against the Greek of the New Testament period; and of St. Paul especially he maintained that his antecedents were such that he could hardly fail to speak or write Greek with accuracy, while Jowett was inclined to look on the apostle as one whose thoughts outran his power of expression, so that his meaning must be gathered from the context rather than by a strictly grammatical treatment of the words (see *Journal of Sacred and Classical Philology*, iii. p. 104, ff. 1856). The essays, which were generally acknowledged to be the most important part of the work, were partly condemned as heretical, especially the essay on the atonement, and were also thought to be wanting in definite conclusions, though no one could deny that deep and suggestive thoughts were contained in them. 'Those who look only for positive results will be greatly disappointed with Mr. Jowett's essays. On the other hand, those who are satisfied with being made to think instead of being thought for, and are willing to follow out for themselves important lines of reflection, when suggested to them, will find no lack of interest or instruction in these volumes. The value of Mr. Jowett's labours is far from consisting solely in the definite results attained, which are poorer than might have been looked for. The reconstructive process bears no proportion to the destructive. But, after every abatement which has to be made on this score, these volumes will still hold their position in the foremost ranks of recent literature for depth and range of thought' (LIGHTFOOT, *l.c.*). The book could not fail to attract attention, even beyond theological readers. Bagehot said that Jowett had shown by 'chance expressions' that he had exhausted impending controversies years before they arrived, and had perceived more or less the conclusion at which this disputant would arrive long before the public issue was joined' (*Physics and Politics*, 8th ed. pp. 116, 117). In 1859 a second edition was published, in which the essay on the atonement was rewritten, not with any view of retracting the views put forward in the first, but to explain them more clearly and meet some of the misconceptions which had arisen.

In the same summer (1855) Jowett was

appointed to the regius professorship of Greek, vacant by the death of Dean Gaisford [q. v.] Those who condemned his views were roused to action by this preferment. Under an almost forgotten statute Jowett was denounced by Dr. John David Macbride [q. v.] and the Rev. Charles Pourtales Gough [q. v.] to the vice-chancellor (Dr. Cotton of Worcester) as having denied the catholic faith. Dr. Cotton summoned him to subscribe the articles anew in his presence, and to this Jowett submitted. It was a mean attack, which might create a prejudice, but could lead to no definite result. Almost meagre still was the agitation, prolonged over ten years, by which the Greek chair was deprived of any addition to the statutory emoluments which had been hitherto paid. Of the four chairs founded by Henry VIII at Oxford, and endowed by him with 40*l.* each, the chair of Greek was the only one which had never received increased emolument, and this continued to be the case in spite of repeated appeals to convocation till 1865, when Christ Church consented to raise the income to 600*l.* a year. It was, in fact, made clear that estates had been granted to that college for the purpose, and that the chair must be endowed from some source was rendered inevitable by the action of Jowett's friends, who subscribed 2,000*l.* towards the deficiency—which Jowett refused to accept—and by his own action as professor.

For from his election Jowett had departed altogether from the traditional lines. To edit dictionaries and scholia was not to his taste at all; he began a series of lectures on the 'Republic of Plato' and the 'Fragments of the Early Greek Philosophers,' and at the same time allowed any undergraduate who wished, whether belonging to his own college or not, to bring him, for correction, translations into Greek prose or verse two or even three times a week. This was a very severe addition to his tutorial work. But his lectures were a success. Greek scholarship received a stimulus throughout the university, and outside Oxford his devoted labour on his pupils could not but tell in his favour, whatever his theological opinions might be.

In the ten years following the election to the professorship Jowett fell deeper still under suspicion of heresy. In the second edition of his 'Epistles of St. Paul' (1859) he had repeated his views, and in this he had intended to include an essay on the 'Interpretation of Scripture.' This essay he finally kept back till the next year, when it appeared in 'Essays and Reviews,' a work

which created a panic in the church. The volume was promoted by Harry Bristow Wilson [q. v.], of St. John's College, Oxford, and among the contributors, besides Jowett and Wilson, were Rowland Williams [q. v.], Frederick Temple, afterwards Archbishop of Canterbury, Mark Pattison [q. v.], and others. The book went through many editions, 'for though we have now got to the stage of affecting astonishment at the sensation produced by the avowal of admitted truths in that work, nobody who remembers the time can doubt that it marked the appearance of a very important development of religious and philosophical thought' (LESLIE STEPHEN, *Studies of a Biographer*, ii. 129). Wilson and Williams were brought before the court of arches and suspended for a year, but this judgment was subsequently reversed by Lord Westbury. After the verdict of the dean of arches an attack was made upon Jowett. The case was opened in the vice-chancellor's court at Oxford (20 Feb. 1863), when Mountague Bernard [q. v.] appeared as the vice-chancellor's assessor. On Jowett's part it was protested that the court had no jurisdiction in the matter. Bernard, while rejecting the protest, refused to order Jowett to appear and to admit articles on the part of the promoters of the case. Counsel advised against an application to the court of queen's bench for a mandamus, and the prosecution was dropped.

For a time Jowett held his tongue about theology, and was glad to have done so, because he began to see things more clearly' (1860). But in 1870 he was planning in connection with Wilson a new volume of 'Essays,' in which he intended to write on the great religions of the world. In September of that year he was elected master of Balliol College, and the projected volume never appeared. Theology occupied a great deal of his thought and time; he preached not only in the college chapel but in the university pulpit, in Westminster Abbey, and elsewhere. But nothing was published. He would not allow any of his sermons to be printed, or his 'St. Paul' to appear in a new edition. He wished to attain to greater clearness and certainty, and hoped that these would come with time; but he took on himself other labours which left no leisure for elaborating his views. Yet his theological work had not been in vain; he had pointed out where changes must be made if theology is to retain a hold on thoughtful minds, and if some of his positive conceptions were regarded as 'misty' and 'vague,' he was clear enough in maintaining what he called 'the central light of all religion,' the divine presence.

tice and truth. What he wrote 'was much read and pondered by the more intellectual sort of undergraduates' (PATER).

From 1800 to 1870 his labours were such as would have overwhelmed any other man. At one time he writes that he is seeing every undergraduate in college once a week! In the vacations his hours were given to Plato. He had begun with the idea of a commentary on the 'Republic,' a work which he never dropped, though he did not live to finish it. But he soon felt that a complete analysis of all Plato's writings was required if any one wished thoroughly to understand the 'Republic,' and the analysis in time became an analysis and translation. To this must be added the work of the professorship. One who attended his lectures at the time spoke of them as being 'informal, unwritten, and seemingly unpremeditated, but with many a long-remembered gem of expression, or delightfully novel idea, which seemed to be lying in wait whenever, at a loss for a moment in his somewhat hesitating discourse, he opened a book of loose notes' (*Life*, i. 330).

About 1865 he became, with the support of fellows who had been his pupils, a preponderating influence in the common room of Balliol College. Much time was devoted to the organisation of education in the college and the university. Arrangements were made for inter-collegiate lectures, and Scottish professors were invited to give lectures in the summer term, when their labours in the north were at an end. But his chief object was to lessen the expense of an Oxford career. For this purpose he persuaded the college to found more scholarships and exhibitions, and to establish a hall where, as he hoped, young men would be able to live for little, while enjoying the benefits of the college system. In the end the movement which he supported was carried on a larger scale by the university; the restriction was removed by which students were compelled to reside within the college walls, and non-collegiate students came into being. In the same years a considerable part of the college was rebuilt. Jowett was convinced that 'not a twentieth part of the ability in the country ever comes to the university.' In order to attract men from new classes he persuaded the college to alter the subjects for examination in some of the exhibitions, adding physical science and mathematics to classics.

By his election to the mastership (7 Sept. 1870) Jowett attained the position which he most coveted. He now enjoyed more leisure than hitherto, and he had as much

power as the head of a house could have. For some years after his election he was much occupied with the enlargement of the college. A new hall was built (1877), and the old one transformed into a library for the use of the undergraduates. Later on a hope, formed many years before, was realised, and a field for cricket and football was secured for the college. To this, as to everything connected with Balliol, Jowett gave liberally from his private purse, and finally he built at his own expense a house for a tutor adjacent to the field.

Jowett's interests in education were not confined to Oxford. The University College at Bristol owed much to him, he strongly supported the claims of secondary education and university extension, and at the time of his death he was busy with a scheme for bringing the university and the secondary schools together. When it was arranged in 1874-5 that the age of the candidates for the Indian civil service should be fixed at seventeen to nineteen, and that successful candidates should pass two years of probation at a university, Jowett made arrangements to receive a number of candidates at Balliol College, and helped in establishing a school of oriental languages. In the university commission of 1877-81 he was of course greatly interested. He had not much sympathy with research, beyond certain limits, and on the other hand he urged strongly the claims of secondary education in the large towns, a movement in which he thought it would be wise for the university to take a part. The better organisation of the teaching of the non-collegiate students was strongly pressed, and, above all, the retention to a large extent of prize fellowships, on which Jowett placed great value.

In 1871 the translation of Plato appeared in four volumes. This was an event which determined to a great extent the literary work of the rest of Jowett's life—not that he had done with theology and intended to lead a new life' (PLATO, *Euthyphro*, end), for he was always hoping to return to theology when he could escape from other labours—but the translation of Plato had a rapid sale, and it was necessary to revise it for a second edition (5 vols. 1875). Many thoughts which might have appeared in an independent work on theology or morals were now embodied in the introductions to the dialogues. From Plato he was led on to a translation of Thucydides, with notes on the Greek text (2 vols. 1881). From 1882 to 1886 he was vice-chancellor, and carried into the administration of the office the restless

energy which was one of the most marked characteristics of his nature. He was able to do something for the non-collegiate students, and, in a different line, for the drainage of the Thames Valley, in conjunction with Dean Liddell—though but a small part of their schemes was realised—and a memorial of his work remains in the name 'Vice-chancellor's Out,' which was given to a new outlet made for the Cherwell into the Isis. He also did much for the recognition and elevation of dramatic representations at Oxford. It was due to his support that the 'Agamemnon' of Aeschylus was acted in Balliol Hall, and he gave his direct sanction and encouragement to the performances of the Oxford University Dramatic Society. The theatre at Oxford was rebuilt at this time, and Jowett was one of the first to enter it on the opening night. He also invited Sir Henry Irving to give a lecture at Oxford, and stay at the master's lodge on the occasion. In the same liberal spirit he encouraged music in his own college, inviting John Farmer from Harrow to superintend, and giving an organ for the hall. This was the beginning of the Sunday concerts at Balliol. Another subject to which he gave much thought and care was the university press. During these years his literary work lagged a little, yet in 1885 he published the translation of Aristotle's 'Politics,' with notes, but without the essays which would have given a special value to the book. These he did not live to finish.

The strain of the vice-chancellorship was more than Jowett's health could bear. In 1887 he fell ill, and though he recovered a considerable degree of health, he was quite unequal to the tasks which he laid upon himself. He was, however, able to carry on the revision of the 'Plato' for a third edition, which appeared in 1892, and work upon the edition of the 'Republic' on which he had now laboured for thirty years. This was published after his death by Professor Lewis Campbell. It is to this last edition of 'Plato' that we naturally turn for Jowett's final views on philosophy. He does not give us any comprehensive account of Plato's philosophy, for he did not quite believe that such a comprehensive account was possible. Plato's view changes in different dialogues, and in some no definite conclusion is reached. It was therefore better to treat each dialogue separately. It was also characteristic of his own mind to be constantly changing his point of view. 'Mr. Jowett's forte is mental philosophy. How has this or that metaphysical question presented itself to different minds, or to the same mind at different

times? Under what contradictory aspect may a particular religious sentiment or moral truth be viewed? What phenomena does an individual mind exhibit at different stages in its growth? What contrasts do we find in the ancient and modern world of thought? This is the class of questions Mr. Jowett delights to ask and to answer.' So said Dr. Lightfoot when speaking of the work on 'St. Paul,' and the remarks apply with equal force to the 'Plato.' If we ask ourselves what were Plato's views on ethics, or politics, or art, we shall indeed find many far-reaching observations in Jowett's introductions, but not a systematic statement, such as is given e.g. in Zeller's 'History of Greek Philosophy.' We shall also find much which, though it arises out of Plato's thoughts, is only indirectly connected with him—criticism of modern forms of old views, of ideal governments other than that of Plato, of recent utilitarianism, of Hegel, of the nature and origin of language. Few books cover so wide a field, or show keener powers of observation, or contain deeper thoughts. If the result often seems inadequate, it is because it was the author's aim to get at the truth, not to support any theory. And what is written is written with a finish and beauty rarely surpassed, just as the translation of the text of Plato—and of Thucydides too—has superseded all previous translations.

In 1891 Jowett had a very serious illness, which returned upon him in 1893. Towards the end of September in this year he left Oxford on a visit to Professor Campbell in London. Thence he went to Headley Park, the home of an old pupil, Sir Robert S. Wright, judge of the high court, where he died on 1 Oct. He was buried in St. Sepulchre's cemetery, Oxford, on 6 Oct.

After making bequests to his relatives, secretaries, servants, and others, Jowett left the remainder of his property of whatever kind, including the copyrights of his works, to Balliol College. The profits of the copyrights were to be invested, and the fund thus formed was to be applied partly to republishing of Jowett's own works, and partly 'to the making of new translations and editions of Greek authors, or in any way promoting and advancing the study of Greek literature or otherwise for the advancement of learning in such way that the college may have the benefit intended by 15 George III, ch. 53, § 1.'

After his death his friends subscribed a large sum of money, of which a small portion was expended on a memorial tablet in Balliol College chapel, and the remainder applied to the foundation of two Jowett

lectureships' in Greek philosophy and history (or literature) at Balliol College.

He received the honorary degree of doctor of theology at Leyden, 1875, of LL.D. at Edinburgh, 1881, and of LL.D. at Cambridge, 1890.

There are several portraits of Jowett: (1) In crayons, by George Richmond, R.A., about 1859, at Balliol College; (2) in crayons, by Laugée, 1871, in the possession of Professor Dicey; (3) in oils, by G. F. Watts, R.A., in the hall of Balliol College; (4) in pastels, by the Cavaliere C. M. Ross, at Balliol College; (5) in water-colours, by the Lady Abercromby, 1892, in the hall of Balliol College; the head was subsequently repainted by the same lady, and is at the master's lodge.

Jowett's energy and industry in literary work were more than equalled by his devotion to his pupils and friends. 'He had the genius of friendship,' and was never so happy as when visiting and entertaining friends, or contributing in any way to their happiness. A long succession of pupils regarded him with the greatest affection, and at the close of his life the friends of his youth were his friends still, for he never lost them. Among the earliest were Lord Farrer, Professor W. Y. Sellar, Sir A. Grant, T. O. Sanders, F. T. Palgrave, Theodor Walrond, Professor H. J. S. Smith. These were followed by Lord Bowen, W. L. Newman, Justice Wright, Professor T. H. Green, Lyulph Stanley, Sir O. P.ibert, and later still by Sir W. R. Anson, Sir F. H. Jeune, Lord Lansdowne, Sir Arthur Godley, Andrew Lang, Professor W. Wallace, Professor Caird, Lord Milner, Sir G. Baden-Powell, and many others. It was his delight to have some of these pupil friends at the master's lodge for Sunday, where he also brought together, whenever he could, some of the most distinguished men of his time. Such were Lowell, W. W. Goodwin, O. Wendell Holmes, Huxley, M. Arnold, Turgenieff, Browning, Froude, H. M. Stanley, Dr. Martineau, G. Eliot, Renan, Ruskin. As a host he was most careful and solicitous of the comfort of his guests, but in his conversation he was often reserved. A competent judge wrote of him: 'A disciple of Socrates he valued speech more highly than any other gift, yet he was always hampered by a conscious imperfection and by a difficulty in sustaining and developing his thoughts in society. . . . He was seldom more than the third party intervening' (J. D. Rogers, see *Life*, ii. 157). In a *tête-à-tête* conversation he was often perversely silent, and gaps were almost painful. But with one or

two congenial friends he would talk unreluctantly till midnight, and even in his serious illness he insisted on coming down to breakfast that he 'might have a little cheerful conversation.' He loved to tell stories and to have them told to him, or to discuss subjects in which he had an interest, in the hope of gaining clearer insight. He had a wonderful power of fixing a discussion in a phrase: 'Respectability is a great foe to religion,' he said at the close of a discussion on chapel and church; 'The practice of divines has permanently lowered the standard of truth' was his severe sentence on theological criticism. In his letters to friends he felt able to pour himself out with less restraint than in conversation, and here we often find him at his best, light-hearted, cheerful, amusing, and devoted to his friends, endeavouring to comfort them in distress or bereavement, and to help them in difficulty.

Jowett formed no school, and was not the leader of a party in religion or philosophy. A leader in the church he could not be after the publication of his 'St. Paul,' and he never wished to leave the church for any form of nonconformity. His critical instincts led him in one direction, his religious feeling drew him in another. Thus his speculations led him to 'irreconcilable contrasts' (LESLIE STEPHEN, op. cit. ii. 141), but he did not 'pretend that such contrasts did not exist;' it was because he pointed them out with unusual force and freedom that he was regarded as heretical. In philosophy he was content to be critical (see above); he saw that one philosophy had always been succeeded by another, and the leader of to-day was forgotten to-morrow; each therefore, he concluded, had grasped part of the truth, but not the whole truth. His speculations ended in compromise, and thus, here also, he was unfitted to be a leader. For himself he had almost a horror of falling under one set of ideas to the exclusion of others. 'He stood at the parting of many ways,' and wrote 'No thoroughfare' upon them all, says Mr. Stephen, severely but not unjustly (loc. cit. p. 143); and after all, in doing so, Jowett only went a step beyond the philosopher who condemns all systems but his own. Yet indirectly he left his mark even on philosophy. By him his pupil T. H. Green was stimulated to the study of Hegel, and no influence has been greater in Oxford for the last thirty years than Green's. But the chief traces of Jowett's influence will be found in other spheres. His essays and translations must secure him a high place

among the writers of his time, and in every history of English education in the second half of the nineteenth century he will occupy a prominent place.

The following is a list of Jowett's works: 1. 'St. Paul's Epistles to the Thessalonians, Galatians, and Romans,' 2 vols. 1855; 2nd edit. 1859. 2. 'Essay on the Interpretation of Scripture,' in 'Essays and Reviews,' 1860. 3. 'The Dialogues of Plato,' translated into English, with Analyses and Introductions, 4 vols. 1871; 2nd edit. 5 vols. 1875; 3rd edit. 5 vols. 1892. (The 'Republic,' published separately, 1888.) 4. 'Thucydides,' translated into English, with Introduction, Notes, &c. 2 vols. 1881; 2nd edit. 1900. 5. Aristotle's 'Politics,' translated into English,

with Introduction, Notes, &c. 2 vols. 1885. 6. Plato's 'Republic,' Text and Notes (Jowett and Campbell), 3 vols. 1894. 7. 'College Sermons,' 1896. 8. 'Sermons: Biographical, &c.,' 1899. 9. 'Sermons on Faith and Doctrine,' 1901.

Montefiore, January 1900; personal knowledge] E. A.

K

KAY, SIR EDWARD TEBENTZKE (1822-1897), judge, fourth son of Robert Kay of Brookshaw, Bury, Lancashire, by Hannah, daughter of James Phillips of Birmingham (cf. KAR-SHUTTERWORTH, SIR JAMES; and KAY, JOSHUA), was born on 2 July 1822. He was educated at Trinity College, Cambridge, where he graduated B.A. in 1844, and proceeded M.A. in 1847. He was admitted on 22 April 1844 student at Lincoln's Inn, where he was called to the bar on 8 June 1847, and elected boucher on 11 Jan. 1867, and treasurer in 1888. Like Lord Blackburn and some other eminent judges, it was in the capacity of a reporter that Kay learned his law (see *infra*), and it was but slowly that by dint rather of industry and perseverance than brilliance he acquired one of the largest practices ever possessed by a stuff-gownsmen. He took silk in 1860, and after enjoying a prolonged lull in Vice-chancellor Bacon's court, continued his practice to the House of Lords and privy council (1878). On the retirement of Vice-chancellor Malins in 1881, Kay was appointed (30 March) justice of the high court (chancery division) and knighted (2 May). He proved a strong judge, a sworn foe to lucrative abuses and dilatory proceedings, and as competent on circuit as in chambers. On 10 Nov. 1890 he succeeded Sir Henry Cotton [q.v. Suppl.] as lord-justice of appeal. His tenure of this office was abridged by a painful disorder which, after frequently laying him aside, compelled his retirement at the commencement of Hilary term 1897—not, however, before he had given proof of unusual independence of mind.

He died at his town house, 37 Hyde Park Gardens, on 10 March 1897. His remains were interred (23 March) in the churchyard at Brockdish, near Scole, Norfolk, in which parish his seat, Thorpo Abbots, was situated. He married, on 2 April 1850, Mary Valence (z. 1889), youngest daughter of Dr. William French, master (1820-49) of Jesus College, Cambridge, by whom he left issue two daughters. In her memory Kay founded several divinity scholarships at Jesus College.

Kay was author of 'Reports of Cases adjudged in the High Court of Chancery before Sir William Page Wood, Knight, Vice-chancellor, 1853-4,' London, 1854, 8vo, continued in conjunction with Henry P. Vaughan Johnson to the close of the year 1858; in all 5 volumes, 8vo.

J. M. R.

KEELEY, MRS. MARY ANN (1805?-1890), actress, whose maiden name was Goward, was born in Orwell Street, Ipswich, on 22 Nov. 1805 or 1806. After acting in Norwich, York, and other country towns, she made her first appearance in London as Miss Goward, playing at the Lyceum, 2 July 1825, Rosina in the opera of that name, and Little Pickle in the 'Spoiled Child.' Here and at Covent Garden she met Robert Keeley [q.v.], whom she married in the summer of 1826. On 28 Oct. 1825 Miss Goward made, as Marga-

retta in 'No Song, No Supper,' her first appearance at Covent Garden. Her name appears to Sophia in the 'Road to Ruin,' Norah in 'Norah, or the Girl of Erin,' Matilda in 'Three Deep,' Lucette in 'Shepherd's Boy,' and very many parts, original and other. In 1834 she was a comic support of the Adelphi, where in November 1838 she made a great success as Smike; and in 1839 one still greater as Jack Sheppard. With Macready at Drury Lane in 1842 she played Nerissa, Audrey, Mrs. Placid in Mrs. Inchbald's 'Every one has his Fault,' and Polly Pallmall in Jerrold's 'Prisoner of War.' (For her share in the management of various theatres, for many of her characters, and for her family, see art. ROBERT KEELEY.) Mrs. Peerybingle, Clemency Newcome, Maud in the 'Wife's Secret,' Jane in 'Wild Oats,' Rosemary in the 'Catpaw,' Maria in 'Twelfth Night,' in which she was seen at different theatres, were so many triumphs. Betty Martin in an adaptation so named of 'Le Chapeau de l'Horloger' of Madame Emile de Girardin, in which she was seen at the Adelphi (8 March 1855), was a comic masterpiece. As much may be said for her Mary Jane (February 1856) in Moore's 'That Blessed Baby,' and Frank Oatlands in 'A Cure for the Heartache.' Betsy Baker, Dame Quickly, Mrs. Page, and Miss Prue in 'Love for Love,' must also be mentioned. When, indeed, Mrs. Keeley in 1859 followed her husband into retirement, it was with the reputation of the finest comedian in her line of modern days. Her last professional appearance was at the Lyceum in 1859 as Hector in Brough's burlesque, 'The Siege of Troy.' She came frequently for benefits before the public in her old parts, and often delivered addresses by her friend, Mr. Joseph Ashby Sterry, and others. On 22 Nov. 1895 her ninetieth birthday was celebrated at the Lyceum by a miscellaneous entertainment, in which many leading actors took part. She preserved to the last an unconquerable vivacity. Mrs. Keeley died on 12 March 1899 at 10 Pelham Crescent, Brompton, the house in which thirty years previously her husband breathed his last. In her latest years she was *têted* and caressed beyond the wont of womanhood by almost all people from Queen Victoria downwards, and her funeral at Brompton cemetery on 16 March was almost a public ceremonial. Her daughter, Louisa Mary, married Montagu Stephen Williams [q. v.]

Williams's Leaves of a Life, 1890; Planché's Recollections; Men and Women of the Time, 14th ed.; Era, 18 March 1899; Athenæum, 18 March 1899.] J. K.

KEMBLE, FRANCES ANNE, afterwards Mrs. BUTLER, generally known as FANNY KEMBLE (1809-1893), actress and writer, the daughter of Charles Kemble [q. v.] and Marie Thérèse Kemble [q. v.], was born in Newman Street, London, on 27 Nov. 1809, and educated principally in France. When her father's management of Covent Garden was in *extremis* she made her first appearance on the stage on 5 Oct. 1829 as Juliet to her father's Mercutio and the Lady Capulet of her mother, who returned to the stage after a long absence. Fanny Kemble's success was overwhelming. She appeared on 9 Dec. as Belvidera in 'Venice Preserved,' on 18 Jan. 1830 as Euphasia in the 'Grecian Daughter,' on 25 Feb. as Mrs. Beverley in the 'Gamester,' on 28 April as Isabella in the piece so named; and on 28 May as Lady Townley in the 'Provoked Husband.' So profitable were her appearances that 18,000*l.* of debt were wiped off the theatre. In the following season she was seen as Mrs. Haller in the 'Stranger,' Calista in the 'Fair Penitent,' Juliana in the 'Honeymoon,' Lady Macbeth, Portia, Beatrice, and Constances. In 1833 she was the first Louise de Savoie in her own 'Francis the First,' which was not a success; the first Duchess of Guise in an adaptation of the 'Henri III' of Dumas, which was a failure; and the first Julia in Knowles's 'Hunchback.' In the autumn she accompanied her father to America, appearing on 18 Sept. at the Park theatre, New York, as Bianca in 'Fazio,' a part she repeated in Philadelphia and Boston. On 7 Jan. 1834 she married Pierce Butler, a southern planter, whom in 1848 she divorced (he died in 1867). On 10 Feb. 1847, at Manchester, she reappeared on the stage as Julia, which with Lady Teazle, Mariana, and Queen Katharine, she repeated at Liverpool. In May she reappeared in London, playing at the Princess's with William Creeswick [q. v. Suppl.] After a short visit to America she began in April 1848 a series of Shakespearean readings at Willie's rooms. In October 1849 at Sansom Street hall, Philadelphia, she gave a reading from 'King John.' Resuming her maiden name she retired for twenty years to Lennox, Massachussette, reappearing in 1868 as a reader at Stainway hall, New York. In 1873 she resided near Philadelphia, and in 1877-8 returned to England, dying at 86 Gloucester Place, London, the residence of her son-in-law, the Rev. Canon Leigh, on 15 Jan.

1893; she was buried on the 20th at Kensal Green.

Fanny Kemble had a sparkling, canny, and rather boisterous individuality, and seems to have had a string of elderly admirers of distinction. Rogers, Macaulay, Sidney Smith, and other literary men of the epoch gave her incessant homage, and memoirs of the early part of the century are full of her. Eighty-five letters addressed to her by Edward FitzGerald between 1871 and 1883 were printed in 'Temple Bar,' and with the addition of nineteen letters were issued separately in 1895. Wilson, in the 'Notes,' credited her with genius, and assigned her, as did others, a place near her aunt, Mrs. Siddons. Scott and Moore placed her on a lower plane. Longfellow was completely under her spell. Judge Haliburton spoke of her 'cleverness and audacity, refinement and coarseness, modesty and bounce, pretty humility and prettier arrogance.' Leigh Hunt could not be won to faith in her. Macready said, with some justice, that she was ignorant of the very rudiments of her art, but made amends, declaring that 'she is one of the most remarkable women of the present day.' Lewes called her readings 'an intellectual delight.'

Her chief literary productions were: 'Francis the First,' 1832; 'The Star of Seville,' a drama, 1837; 'Poems,' Philadelphia, 1844; 'A Year of Consolation' (travels in Italy), 1847; 'Plays,' 1863, including 'An English Tragedy,' 'Mary Stuart,' translated from Schiller, and 'Madeira de Belle-Isle,' translated from Dumas; 'Christmas Tree and other Tales,' from the German, 1866; 'Notes on some of Shakespeare's Plays,' 1882; 'Far Away and Long Ago,' 1889.

Her autobiographical works consist of: 1. 'Journal of F. A. Butler,' 1836, reprinted apparently as 'Journal of a Residence in America.' 2. 'Journal of a Residence on a Georgian Plantation,' 1863. 3. 'Record of a Girlhood,' 1878. 4. 'Records of Later Life,' 1882. 5. 'Further Records,' 1891. These works are bright and animated, but caused some offence in certain circles by the views they expressed as to the theatrical profession, which she joined with reluctance. One or two works bearing on slavery were extracted from her early journal, and published separately.

A charming portrait by Sir Thomas Lawrence, showing her, as she said, 'like what those who love me have sometimes seen me,' has been often reproduced. Another beautiful portrait by Sully, formerly in the possession of the Hon. Mrs. Leigh, has been engraved by J. G. Stodart.

J. K.

KENNEDY, VANS (1784-1846), major-general, Sanskrit and Persian scholar, was born at Pinmore in the parish of Ayr, Scotland. He belonged to an old Ayrshire family, and was connected with the houses of Cassilis and Eglintoun. His father was Robert Kennedy of Pinmore, and his mother Robina, daughter of John Vans of Barnbaroch, Wigtownshire, who on marrying his cousin assumed the name of Agnew. Robert Kennedy was ruined by the failure of the Ayr bank, and had to sell Pinmore and retire to Edinburgh, where he died in 1790. The care of his numerous children then devolved on the widow, who was a woman of great worth and ability. Major-general Kennedy was her youngest son, and one of his sisters was Grace Kennedy (q. v.)

Kennedy was educated at Edinburgh, at Berkhamsted, and finally at Monmouth, and was noted in youth for his studious habits. On the completion of his fourteenth year he returned to Edinburgh, and, having obtained a cadetship, he sailed for Bombay in 1800. Shortly after his arrival he was employed with his corps, the 1st battalion of the 2nd grenadiers, against the people of the Malabar district, and received a wound in his neck, from the effects of which he suffered all his life. In 1807 he became Persian interpreter to the Peshwa's subsidiary force at Sirur, then commanded by the Colonel W. Wallace (d. 1809) who, according to the 'Imperial Gazetteer of India,' is still worshipped as a saint by the Hindus. While at Sirur Kennedy had frequent opportunities of meeting Sir Barry Close and Sir James Mackintosh, both of whom greatly admired him. In 1817 he was appointed judge-advocate-general to the Bombay army, and on 30 Sept. of the same year he contributed a paper on Persian literature to the Literary Society of Bombay. Mountstuart Elphinstone, who described Kennedy as the most learned man of his acquaintance, gave him the appointment of Maratha and Gujrati translator of the regulations of government, but the post was abolished a few months after Elphinstone's retirement. He held the office of judge-

advocate-general till 1835, when he was removed by Sir John Keane. After that he was appointed oriental translator to the government, and he held this office till his death.

Kennedy was throughout life a student, and he seems to have belonged to the type of the recluse and self-denying scholar. He is described as working sixteen hours a day, and as expending all his money on manuscripts and munshies, and in relieving the wants of others. He contributed several papers to the Bombay branch of the Royal Asiatic Society, and in 1824 he published at Bombay a Maratha dictionary. In 1828 he published in London a quarto volume entitled 'Researches into the Origin and Affinity of the Principal Languages of Asia and Europe,' and in 1831 he followed this up by another quarto entitled 'Researches into the Nature and Affinity of Ancient and Hindu Mythology.' Both these works exhibit much learning and vigorous and independent thinking, but are now nearly obsolete. The first seems to be the more valuable of the two, and contains some interesting notes, e.g. that at p. 182 on the number of Arabic words in the *Shāhnāma*. Kennedy also wrote five letters on the Puranas, and had a controversy with Horace Hayman Wilson [q. v.] and Sir Graves Champney Haughton [q. v.] He published at Bombay in 1832 a work on military law, of which a second edition appeared in 1847. He died at Bombay on 29 Dec. 1846, and was buried at the old European cemetery at Back-Bay.

[Biographical Memoir by James Bird, Secretary Bombay branch R.A.S.; Journal of B.B.R.A.S. ii. 430, Bombay, 1848, and N. V. Mandlik's edition of the Transactions of the Literary Society of Bombay, Bombay, 1877, vol. i. p. xv; Preface to Grace Kennedy's Collected Works, Edinburgh, 1827.] H. B.-x.

KENNISH or KINNISH, WILLIAM (1789-1862), Manx poet, son of Thomas Kennish by his wife, Margaret (Radcliffe), was baptised at Kirk Maughold, Isle of Man, on 24 Feb. 1799. Of humble parentage, he was reared as a ploughboy, but in 1821 entered the navy as a common seaman, learned English of his messmates, having previously known only his native dialect, and rose to be a warrant officer. He was ship's carpenter on the Hussar, bearing the flag of Sir Charles Ogle upon the North American station, 1829-30, and while stationed at Halifax devised a plan for concentrating a ship's broadside with greater effect than hitherto attempted upon a given mark. His plan, which met with encouragement

from Captain Edward Boxer of the Hussar, was tried by Sir Charles Napier on board the *Galatea* in 1831, and was recommended to the admiralty, to which body Kennish also submitted a theodolite of his invention. In June 1832 he received the gold Isis medal from the Society of Arts. He published his essay, on concentrating a ship's broadside, in 1837 in a handsome quarto, with nineteen plates, and subsequently he served upon the man-of-war Tribune and Donegal in the Mediterranean and in the Channel. But he felt that he had received no encouragement from the admiralty at all commensurate with the labour and money that he had expended upon his essay, and he left the navy in or about 1841. Three years later he published in London 'Mona's Isle and other Poems' (1844, 8vo, a scarce volume), with a long subscription list of naval men. Some of the local pieces, such as 'The Currachs of Lezayre,' more especially those in ballad metre, have merit, and the book is a mine of Manx folk-lore. Disappointed at the limited circulation of his fame, Kennish went over to America, became attached to the United States admiralty, for which body he made a survey of the Isthmus of Panama, and died at New York on 19 March 1862, at the age of sixty-three.

[Harrison's Bibliotheca Monensis (Manx Soc.), 2nd edit. 1876, p. 165; Kennish's Works in Brit. Museum Library; note kindly furnished by Mr. R. Cortell Cowell.] T. S.

KEPPEL, WILLIAM COUTTS, seventh EARL OF ALBEMARLE and VISCOUNT BURY (1832-1894), born in London on 15 April 1832, was eldest son of George Thomas Keppel, sixth earl of Albemarle [q. v.], by his wife Susan, third daughter of Sir Coutts Trotter, bart. Throughout the greater part of his life he was known as Viscount Bury, his father's second title. He was educated at Eton, and in 1843, when eleven years old, was gazetted ensign and lieutenant in the forty-third regiment. In 1849 he became lieutenant in the Scots guards, and during 1850-1 he was private secretary to Lord John Russell. In 1852 he went out to India as aide-de-camp to Lord Frederick Fitzclarence, commander-in-chief at Bombay. In the following year he came home on sick leave, retired from the army, and in December 1854 went out to Canada as superintendent of Indian affairs for Canada. He utilised the knowledge gained in Canada in his 'Exodus of the Western Nations' (London, 1865, 2 vols. 8vo). This is really a history of North America, with particular reference to Canada. Bury believed that

the ultimate separation of England and Canada was inevitable, and was anxious that the separation, when it came, should be effected peaceably.

After his return to England he was, on 30 March 1857, elected to parliament for Norwich in the liberal interest. He was re-elected on 29 April 1859, and again on 28 June following on his appointment by Lord Palmerston to the post of treasurer of the household. His election was, however, declared void, and on 1 Dec. 1860 he was returned for Wick burghs. He stood for Dover at the general election of 1865, but was defeated, and he ceased to be treasurer of the household in 1866, when the conservatives came into power. On 17 Nov. 1868 he was returned for Berwick. In 1871 he was defeated for Berwick, and in 1875 for Stroud. He now became a conservative, and on 6 Sept. 1876 was raised to the peerage during his father's lifetime as Baron Ashford. From March 1878 to April 1880 he was under-secretary at war under Beaconsfield, and in 1885-6 he held the same office under Lord Salisbury. On Easter Sunday 1879 he was received into the Roman catholic church. He succeeded his father as seventh earl of Albemarle on 21 Feb. 1891, and died on 28 Aug. 1894, being buried on the 31st at the family seat, Quiddensham, Norfolk. He married on 15 Nov. 1855, at Dundrum, Canada, Sophia Mary, second daughter of Sir Allan Napier MacNab [q.v.], premier of Canada. By her he had issue three sons and seven daughters. The eldest son, Arnold Allan Cecil, became eighth earl of Albemarle.

Albemarle, who was created K.O.M.G. in 1870, was an enthusiastic volunteer. He was made lieutenant-colonel of the civil service rifle volunteers in 1860, volunteer aide-de-camp to the queen in 1881, and published 'Suggestions for an Uniform Code of Standing Orders on the Organisation and Interior Economy of Volunteer Corps' (London, 1860, 12mo). He was also author of 'The Rinderpest treated by Homœopathy in South Holland,' 1865, 8vo, and with Mr. G. Lacy Hillier of 'Cycling,' in the 'Badminton Library' (London, 1887, 8vo), which reached a fifth edition in 1895.

KER, JOHN (d. 1741), Latin poet, was born at Dunblane, Perthshire. He was for a time schoolmaster at Crieff, and about

1710, after examination by ministers and professors, became a master in the Royal High School, Edinburgh. In 1717 he was appointed professor of Greek in King's College, Aberdeen, being the first special teacher of the subject there (*Stat. Account of Scotland*, xxi. 82). It is significant that he should have secured this post when his political proclivities are remembered, as well as his admiration for the uncompromising Jacobite, Archibald Pitcairne [q.v.]. On 2 Oct. 1734 Ker succeeded Adam Watt in the Latin chair at Edinburgh University. Here he studied law, associating again with friends of high school days, and became exceedingly popular (CHALMERS, *Life of Ruddiman*, p. 98). He had a distinct influence in reviving exact Latin scholarship in Scotland. As a professor he commanded the respect of his students, although somewhat weakly deferential towards his lords when they happened to be members of his class. But, says Dr. Alexander Carlyle of Inveresk, who notes this foible, he 'was very much master of his business' (*Autobiography of the Rev. Dr. Alexander Carlyle*, p. 31). He died at Edinburgh in November 1741.

About 1726 Ker published his Latin poem, 'Donades' (those of the Don), celebrating illustrious alumni of Aberdeen. In 1727 appeared his paraphrase of the Song of Solomon, 'Cantici Solomonis Paraphrasis Gemina.' He is also the author of memorial verses on Archibald Pitcairne, Sir William Scott (1674-1725) [q.v.], and others. He is represented, along with Arthur Johnston and other Latinists, in Lander's 'Poetorum Scotorum Musæ Sacra', 1739. The Latin ballad on the battle of Killiecrankie versified in English by Sir Walter Scott in 'Chambers's Journal,' 1st ser. No. 48, is most probably Ker's (CHAMBERS, *Scottish Songs before Burns*, p. 48).

[Bower's History of the University of Edinburgh, ii. 206-314; Grant's Story of the University of Edinburgh during its first Three Hundred Years, ii. 318; appendix to Erskine's Sermon on the Death of Robertson the Historian, in Discourses on several Occasions, i. 271.] T. B.

KERR, NORMAN (1834-1899), physician, the eldest son of Alexander Kerr, a merchant, was born at Glasgow on 17 May 1834, and was educated at the high school of that city. He supported himself as a journalist on the staff of the 'Glasgow Mail' until he entered the university of Glasgow, where he graduated M.D. and O.M. in 1861. He then sailed for a time as surgeon in the Allan Canadian mail steamers, and in 1874 he settled at St. John's Wood in London, and

was appointed a parochial medical officer of St. Marylebone, a post he retained for twenty-four years. He died at Hastings on 30 May 1899, and is buried at Paddington cemetery, Willesden Lane. He was twice married: first, in 1871, to Eleanor Georgina, daughter of Mr. Edward Gibson of Ballinderry, Ireland, who died in 1892, leaving issue four daughters and a son; and, secondly, in 1894, to Edith Jane, daughter of Mr. James Henderson of Belvidere Lodge, Newry.

The advancement of temperance was the work of Kerr's life. He originated the Total Abstinence Society in connection with the university of Glasgow, was an early member of the United Kingdom Alliance, and was the founder and first president of the Society for the Study and Cure of Intemperance. For many years he was chairman of the Inebriates Legislation Committee of the British Medical Association, and he was vice-president of the Homes for Inebriates Association. He was senior consulting physician to the Dalrymple Home for Inebriates at Rickmansworth, Hertfordshire. The Inebriates Act of 1898 was largely the outcome of his labours.

He wrote: 1. 'On the Action of Alcoholic Liquors in Health,' London, 1876. 2. 'Mortality from Intemperance,' London, 1879. 3. 'Stimulants in Workhouses,' London, 1882. 4. 'The Truth about Alcohol,' London, 1885. 5. 'Intemperance, its Etiology, Pathology, Treatment, and Jurisprudence,' 3rd edit. London, 1894. Among many ephemeral articles was his 'Alcoholism and Drug Habits' in the 'Twentieth Century Practice of Medicine,' 1895.

[British Medical Journal, 1899, i. 1442; additional information kindly given by Mrs. Norman Kerr.] D'A. P.

KERR, SCHOMBERG HENRY, ninth MARQUIS OF LOTHIAN (1833-1900), diplomatist and secretary of state for Scotland, second son of John William Robert, seventh marquis of Lothian, by Lady Cecil Chetwynd Talbot, only daughter of Charles, second earl Talbot, was born at Newbottle Abbey, near Dalkeith, on 2 Dec. 1833. His older brother, William Schomberg Robert Kerr, born on 12 Aug. 1832, succeeded as eighth marquis of Lothian on his father's death, 14 Nov. 1841, but himself died without issue on 4 July 1870. He bequeathed to Oxford University a sum of money for the foundation of the Marquis of Lothian's prize, which is of the annual value of 40*l.*, and is awarded for an essay on some point in foreign history between the death of

Romulus Augustulus and that of Frederick the Great.

Schomberg Henry was educated at Glenalmond and Oxford, where he matriculated from New College on 20 Oct. 1851. He left the university without a degree, entered the diplomatic service, and was appointed attaché at Lisbon. He was transferred in 1854 to Teheran, and thence in 1865 to Bagdad. During the Persian war of 1857 he served as a volunteer on the staff of Sir J. Outram, by whom he was publicly thanked at the close of the campaign. He was afterwards attaché at Athens, and in 1862 was appointed second secretary at Frankfort. In the same capacity he was removed in 1865 to Madrid, and thence in the same year to Vienna. He succeeded his elder brother, William Schomberg Robert, as ninth marquis of Lothian, and fourth baron Kerr of Kershengh, Roxburghshire, on 4 July 1870, and in right of the latter peerage took his seat in the House of Lords on 30 March 1871. He moved, on 19 March 1874, the address in answer to the queen's speech, and on 5 Aug. following took the oaths for the subordinate office of lord privy seal of Scotland, which he retained until death. He was sworn of the privy council on 6 Feb. 1886, and in Lord Salisbury's second administration succeeded Mr. Arthur Balfour as secretary for Scotland, and, as such, ex-officio keeper of the great seal of Scotland and vice-president of the committee of council for education in Scotland (11 March 1887). The sphere of his administrative duties was further enlarged by a statute of the same year (60 & 61 Vict. c. 62). He held office until the fall of the administration in August 1892, during which period he had charge of the measures of 1889 for the reform and re-endowment of the Scottish universities and the reform of Scottish local government, and several other measures nearly affecting Scottish interests. He was a member of the historical manuscripts commission, was elected in 1877 president of the Royal Society of Antiquaries of Scotland, and received in 1882 the degree of LL.D. from the university of Edinburgh, of which he was lord rector in 1887-90. He was also vice-president of the Royal Scottish Geographical Society, and a member of the governing body of the Imperial Institute. He was elected K.T. in 1878, and a knight of grace of the order of St. John of Jerusalem in 1899; was colonel from 1878 to 1889, and afterwards honorary colonel, of the 3rd battalion of the royal Scots regiment, and captain-general of the royal company

of archers from 1884 until his death on 17 Jan. 1900.

He married, in 1865, Lady Victoria Alexandrina Montagu Douglas Scott, second daughter of Walter Francis, fifth duke of Buccleugh, by whom he had three sons and five daughters. His third son, Robert Schomberg, lord Jedburgh, succeeded him as tenth marquis of Lothian.

J. M. R.

KETTLE, SIR RUPERT ALFRED (1817-1894), advocate of arbitration in trade disputes, born at Birmingham on 9 Jan. 1817, was the fifth son of Thomas F. Kettle of Suffolk Street, Birmingham, a glass-stainer, fancy button and military ornament maker, and gilder. The family was descended from Henri Quitel, a Huguenot of Milhaud or Millan in Languedoc, who emigrated to Birmingham on the revocation of the edict of Nantes, and practised there the trade of glass-stainer. Rupert left Birmingham early in life and was articled to Richard Fryor, a Wolverhampton attorney. Resolving to qualify as a barrister, he entered the Middle Temple on 2 June 1842, was called to the bar on 6 June 1845, and soon obtained a large practice on the Oxford circuit. In 1859 he was appointed judge of the Worcestershire county courts, and subsequently he acted as chairman of the standing committee for framing the rules for county courts. Kettle took the deepest interest in industrial matters, and was frequently called upon to arbitrate in disputes in the iron and coal trades. He was the first president of the Midland iron trade wages board, and used the influence which this office gave him to persuade masters and men to accept arbitration in their disputes. In 1864, after a strike in the building trade at Wolverhampton had lasted seventeen weeks, Kettle, on invitation from both sides, succeeded in arranging a settlement and ultimately in establishing at Wolverhampton a legally organised system of arbitration. The essential principle of the new system was that if the delegates of the contending parties could not agree, an independent umpire should have power to make a final and legally binding award between them. The scheme proved so satisfactory that it was rapidly extended to other towns, eventually in-

cluding a large part of the English building trade. Kettle formed similar boards in the coal trade, the potteries, the Nottingham lace trade, the handmade paper trade, the ironstone trade, and other staple trades of the country. He was commonly styled the 'Prince of Arbitrators,' and on 1 Dec. 1830 he was knighted 'for his public services in establishing a system of arbitration between employers and employed.' In 1890 the post-master-general, Henry Cecil Raikes [q. v.], consulted Kettle during the strike of the post-office employés.

On 24 Nov. 1882 Kettle was elected a benchet of the Middle Temple. He was one of the senior magistrates and a deputy-lieutenant of Staffordshire, and he was assistant chairman of quarter sessions from 1868 to 1891. He was an artist of some ability, and several of his pictures were publicly exhibited. In 1892 he resigned his office of county court judge, finding that his labours in connection with arbitration occupied the greater part of his time. He died at his residence, Merridale, Wolverhampton, on 6 Oct. 1894, and was buried on 9 Oct. in the Wolverhampton cemetery. On 18 Dec. 1861 he married Mary (d. 18 July 1884), only child and heiress of William Cooke of Merridale. By her he left issue.

Kettle was the author of: 1. 'A Note on Rating to the Poor . . . for Unproductive Land,' London, 1856, 8vo. 2. 'Strikes and Arbitrations,' London, 1860, 8vo. 3. 'School Board Powers and School Board Duties,' 1871. 4. 'Masters and Men,' London, 1871, 8vo. 5. 'Boards of Conciliation and Arbitration between Employers and Employed,' 1871. 6. 'Suggestions for diminishing the Number of Imprisonments,' 1875. 7. 'The Church in relation to Trades Unions,' 1877.

[Wolverhampton Chronicle, 10 Oct. 1894; Burke's Landed Gentry, 1804; Simms's Bibliotheca Stafford. 1894; Foster's Men at the Bar, 1886; Biograph, 1880, iv. 487-8; Men and Women of the Time, 1898; Jeans's Conciliation and Arbitration in Labour Disputes, 1894, p. 93.]

E. I. C.

KETTLEWELL, SAMUEL (1822-1893), theological writer, born on 31 March 1822, was son of the Rev. William Kettlewell, rector of Kirkheaton, near Ilkley, and his wife, Mary Midgeley. He was educated at Durham University, where he graduated as a licentiate of theology in 1848. He was ordained deacon in the same year, and priest in 1849 by the bishop of Ripon. He then became a curate at Leeds under Walter Farquhar Hook [q. v.], and in 1851 he was appointed vicar of St. Mark's, Leeds. This,

his only incumbency, he resigned in 1870 to devote himself to literary work. He had already published a 'Catechism on Gospel History' (London, 1861, 8vo; 3rd edit. 1878), and two works suggested by the Irish disestablishment agitation, namely: 'A Short Account of the Reformation in Ireland,' and 'Rights and Liberties of the Church' (both London, 1860, 8vo). His energies were now mainly devoted to his work on Thomas à Kempis, and in 1877 he published 'The Authorship of the "De Imitatione Christi"' (London, 8vo); this was followed in 1882 by 'Thomas à Kempis and the Brothers of Common Life' (London, 2 vols. 8vo; 2nd edit. 1884). These two books were the fruit of much research in England, Holland, and Belgium. Kettlewell maintains the usually accepted authorship of the 'De Imitations,' and collects all that is known about the life of Thomas à Kempis. In 1898 he published 'The Basis of True Christian Unity' (London, 2 vols. 8vo), and in 1899 a translation of the 'De Imitatione.' He had received the Lambeth M.A. in 1860, and in 1892, in recognition of his work, he was granted the Lambeth D.D., the queen countersigning his diploma. He died at his residence, Kesselville, Eastbourne, whither he retired in 1870, on 2 Nov. 1893; he was twice married, and his widow survived him.

[Works in Brit. Mus. Lib.; Crookford's Clerical Directory, 1891; Eastbourne Chronicle, 6 Nov. 1893; Times, 21 Nov. 1893; Guardian, 8 Nov. 1893; private information.]

A. F. P.

KEUX, JOHN HENRY *Ln* (1812-1890), engraver. [See *Ln* *KEUX*.]

KEYMER or **KEYMOR, JOHN** (*N.* 1810-1890), economic writer, is said to have written as early as 1801 his 'Observations upon the Dutch Fishing,' which was first published by Sir Edward Ford in 1861 (London, 4to). Keymor had no practical knowledge of the fisheries, being 'altogether unexperienced in such business' (*Gentleman's Way to Win Wealth*, 1614, p. 3); he collected his notes from conversation with fishermen like Tobias Gentleman [*q.v.* Suppl.] and others, with a view to stimulating English fishery, then almost a monopoly of the Dutch. His tract was translated into German, and published in part xii. of the 'Diarium Europæum,' Frankfurt, 1660, 4to; it was reissued in English in the 'Phoenix' [*sic*] 1707, vol. i., in 'A Collection of choice Tracts,' 1721, and in 'A small Collection of valuable Tracts relating to the Herring Fishery,' 1761.

Another work by Keymor, addressed to

James I, on the importance of encouraging manufactures in England and increasing commerce by reducing customs, is extant in the Record Office (*State Papers*, Dom. James I, cxviii, 114). The latter suggestion was much in advance of the age, but on 20 Dec. 1622 Prince Charles, John Williams, bishop of Lincoln and Buckingham, were joined with others in a commission 'to hear the propositions of John Keymer, and consider whether they will tend to the good of the King and the Commonwealth, as is pretended' (*Cal. State Papers*, Dom. 1619-22, p. 409). Nothing further seems to have been done in the matter.

[Editions of Keymer's book in Brit. Mus. Lib.; *Cal. State Papers*, Dom. 1619-22; *Gentleman's Way to Win Wealth*, 1614; Palgrave's Dict. of Political Economy, s.v. 'Gentleman, Tobias.']

A. F. P.

KING, THOMAS (1835-1888), prize-fighter, was born in Silver Street, Stepney, on 14 Aug. 1835, and as a youth served before the mast both in the navy and in a trading vessel. About 1858 he obtained a position as foreman of labourers at the Victoria Docks. His courage in disposing of a dock bully known as 'Brighton Bill' commanded him to the notice of the champion, Jem Ward, who coached him with the gloves at the George in Ratcliffe Highway. On 27 Nov. 1860, on the Kentish marshes, he met Tommy Truckle of Portsmouth for 50l. a side, and defeated him in forty-nine rounds (sixty-two minutes). He was now taken in hand and trained by Nat Langham at the Feathers, Wandsworth, for a contest with William Evans ('Young Broome'), to be followed, if successful, by a fight for the championship with Jem Mace, the finest boxer in England since the retirement of Sayers. The betting of two to one on King was justified by the event on 21 Oct. 1861, after a long fight interrupted by the police at the seventeenth round, but resumed until the forty-third. The fight between the 'Young Sailor,' as King was called, and the 'scientist' Jem Mace of Norwich had another issue, King being outclassed after displaying the utmost pluck in a contest of sixty-eight minutes (28 Jan. 1862). A return match, which excited much greater interest, took place at Aldershot (26 Nov. 1862). The betting was seven to four on Mace, who had the best of the fighting, but was knocked out by a single blow, a 'terrific cross-counter on the left cheek,' in the nineteenth round. In this battle of thirty-eight minutes King had shown himself a glutton for punishment, of a 'bottom' and endurance worthy of the

beet traditions of the ring. King now married and announced his intention of leaving the ring, thus acquiescing in the resumption of the belt by Mace. But he was yet to champion England against America in the great fight with the 'Benicia Boy,' John Camel Heenan, the adversary of Sayers. The ring was pitched at Wadhurst, below Tunbridge Wells, at an early hour on 10 Dec. 1863. King weighed a little below thirteen, Heenan just over fourteen stone; both were over six feet in height. The former seemed mistrustful, Heenan full of confidence. Bets of 20 to 7 were freely offered on the American, but there were few takers. Heenan's game throughout the early rounds was to close in and 'put the hug on' so as to crush his antagonist by dashing him violently to the ground. King's consisted of dealing his adversary a series of eledge-hammer blows on his nose. Both were extremely successful in their respective tactics, and in the absence of the orthodox feinting, sparring, and 'science,' the result came to be mainly a question of sheer endurance. At the eighteenth round the tide of victory turned in King's favour. At the close of the twenty-fourth round, after nearly forty minutes' fighting, Heenan lay insensible, and his seconds threw up the sponge. Public anxiety as to his condition was allayed by a medical report in the 'Times' (12 Dec.) Both combatants appeared in person at Wadhurst, in answer to a summons, on 22 Dec., when they were bound over to keep the peace, both King and Heenan engaging to fight no more in this country. King, having won about 4,000*l.* in stakes and presents, fulfilled his promise to the letter. After starring the country at 100*l.* a week, he set up as a book-maker and realised a handsome competence. He also invested in large property.

In 1867 he won a couple of sculling races on the Thames, but in later years was best known for his success in metropolitan flower shows. He died of bronchitis at Clarence House, Clarence Road, Clapham, on 4 Oct. 1898. After 1863 the vigilance of the police confined pugilism in England more and more to the disreputable and dangerous classes, and Tom King is thus not incorrectly termed by the historian of the English prize-ring as 'Ultimus Romanorum.'

[Miles's Pugilistica, vol. iii. ad fin. (portrait); Pendragon's Modern Boxing, 1879, pp. 43-50, 57-78; Bell's Life, October 1861; W. E. Harding's Champions of the American Prize Ring, 1888, pp. 54-9 (portrait); Times, 11-12 Dec. 1863; Bird of Freedom, 10 Oct. 1888; Sporting Times, 13 March 1875; Bense's Modern Biography, ii. 229.]

T. S.

KING, THOMAS CHISWELL (1818-1893), actor, was born at Twynning, near Tewkesbury, on 24 April 1818. He adopted his wife's maiden name of Chiswell in addition to his own name of Thomas King on his marriage, which took place shortly after he joined the theatrical profession. Apprenticed in his youth to the painting and paper-hanging business at Cheltenham, he acquired a taste for the stage through acting with amateurs, and about 1840 joined the company of Alexander Lee, the ballad composer, to support Mrs. Harriett Waylett [q. v.] in one-act dramas and operettas in Cheltenham, Worcester, Warwick, and Leamington. In 1843 he became attached in a subordinate capacity to the Simpson-Munro company at Birmingham, playing on 24 Oct. Conrad in 'Much Ado about Nothing,' and Sir Thomas Fairfax in the 'Field of the Forty Footsteps.' On 16 May 1844 he was seen as Young Scrooge in the 'Christmas Carol' to the Fezziwig of his wife.

King made rapid progress in his profession, and by August 1847 was playing leading business on the York circuit under J. L. Pritchard. Proceeding to Goulray's Victoria Theatre, Edinburgh, in June 1848, he remained there four months, and in November joined W. H. Murray's company at the Theatre Royal in the same city as 'heavy man,' appearing on the 18th as Sir Richard Wroughton in the 'Jacobites.' In April 1850 he supported Charles Kean during his visit to Edinburgh, and was engaged by him to play secondary tragic parts during the opening season of his management in London. Making his debut at the Princess's in October 1850 as Bassanio in the 'Merchant of Venice,' King subsequently played the king in 'Henry IV, Part I.,' and on 31 Jan. 1851 was seen as the exiled duke when 'As you like it' was performed before the queen at Windsor. Late in this year he was engaged by John Harris of Dublin as leading actor at the Theatre Royal there. He opened under the new management on 26 Dec. as Colonel Buckthorne in 'Love in a Maze,' and soon became an abiding favourite with Dublin playgoers. Remaining there five seasons, he appeared in no fewer than fifteen notable Shakespearean revivals, and as Macbeth, Master Ford, Hotspur, and Leontes, met with much approbation. During 1856 he was in leading support to Helen Faucit, Samuel Phelps, and Miss Glyn during their visits to Dublin. In March 1856 he seceded abruptly from the Theatre Royal, and on 14 April began a three weeks' engagement at the Queen's in the same city in 'Hamlet,' Opening at Birmingham on 20 Oct., in con-

junction with Miss Glyn, King remained there after her departure, and on 18 Nov. played Colonna in 'Evadne.' On 3 Dec. he was seen as John Mildmay in 'Still Waters run deep,' and as Quasimodo in 'Emeralda.' On 6 July 1857 he made his first appearance in Manchester, in association with Miss Marriott and Robert Roxby [q.v.] Returning to Birmingham on 20 Sept. as Hamlet, he appeared there on the 27th as Mephistopheles in Boucicault's version of 'Faust and Marguerite,' which was played for forty-eight nights at a profit of 2,000l.

During 1859 King fulfilled several engagements at the Queen's Theatre, Dublin. On 16 April he played there Serjoant Austerlitz in 'Theresa's Vow,' to the Theresa of his daughter Beesia. On 26 July he was seen as Martin Heywood in the 'Rent Day,' and on 14 Dec. as Estevan in the 'Broken Sword.' On 30 April 1860 he began an important engagement at the City of London Theatre as Hamlet, returning thither in December. On 24 Sept. intervening he returned to the Queen's at Dublin as Ruthven in the 'Vampire.'

From 1861 to 1868 King's record was one of splendid strolling. On 15 March 1869 he was given a trial engagement at Drury Lane by F. C. Chatterton, opening there as Richeau to the Julie de Mortemar of his daughter Beesia, who then made her London debut. He was favourably received, and subsequently played Hamlet, Julian St. Pierre, and William in 'Black-eyed Susan,' besides alternating Othello and Iago with Charles Dillon. At the same house on 24 Sept. 1870 King was the original Varney in the 'Amy Robsart' of Andrew Halliday. In the Easter of 1871 his services were transferred to the Adelphi at a salary of 30l. per week. Thoro he originated the rôle of Quasimodo in Andrew Halliday's version of 'Notre Dame,' which ran uninterruptedly to November, and was revived at Christmas.

In June 1873 King fulfilled an engagement at the Marylebone, and on 11 Sept. made his American debut at the Lyceum Theatre, New York, as Quasimodo. The play did not repeat its Adelphi success, although it was performed for six weeks. On 27 Oct. King played Othello, after which the Lyceum closed abruptly. It reopened in November with Italian opera, and on the 27th 'Notre Dame' was revived for four nights. Afterwards King made a successful tour of Canada, exclusively in Shakespearean plays, and returned to the Lyceum Theatre, New York, on 3 March 1874.

From 1878 to 1880 King was lessee of

the Worcester theatre, an unprofitable speculation. In 1883 he made a short provincial tour under Mr. J. Pitt Rivers's management, but he had outlived his popularity and the vogue of his school. Later appearances were infrequent, but in July 1890 he performed for six nights to good house at the Queen's Theatre, Manchester, and was much admired as Ingomar, one of his most characteristic impersonations. Retiring finally to King's Heath, he died there on 21 Oct. 1893, and was buried at Olaines, near Worcester. He had a son and two daughters, all of whom took to the stage. His elder daughter, Miss Bessie King, survived him.

A sound tragedian of the second order, T. C. King was the last exponent of a school which subordinated intelligence to precept and tradition. Physically he was well equipped, having a tall and shapely figure, with dark expressive features and well-set eyes; and his rich bass voice was flexible and resonant. A temperate graceful actor, he had more individuality and fewer vices of style than most conventional tragedians. In London he never established his hold, but in one or two large provincial centres, notably Dublin and Birmingham, his following was large and affectionate.

[Many errors of detail common to all the biographical accounts of T. C. King are here corrected, thanks to authentic information kindly placed at the writer's disposal by the actor's nephew, Mr. Henry King of St. Leonards-on-Sea. Data have also been derived from Dibdin's *Annals of the Edinburgh Stage*; Pascoe's *Dramatic List*; Levey and O'Rourke's *Annals of the Theatre Royal, Dublin*; Cole's *Life of Charles Kean*; Michael Williams's *London Theatres, Past and Present*; Birmingham *Faces and Places*, vol. v. No. 12; local playbills in the Birmingham Free Library; *Freeman's Journal*.]
W. J. L.

KINGSFORD, WILLIAM (1819-1898), historian of Canada, born on 28 Dec. 1819 in the parish of St. Lawrence Jewry, London, was the son of William and Elizabeth Kingsford of Lad Lane. Educated at Wanoostrecht's well-known school in Camberwell [see WANOOSTROCHT, NICHOLAS], he was articled at an early age to an architect, but, finding the office uncongenial, enlisted in the 1st dragoon guards in his seventeenth year. He went with his regiment to Canada in 1837, became sergeant, and in 1840, through the influence of his friends at home, obtained his discharge, much to the regret of the colonel, Sir George Catcott [q.v.], who offered to procure a commission for him. On the death of that officer in the Crimea,

Kingsford wrote a touching tribute to his memory, which appears in *Lady Cathcart's* life of her husband.

Entering the office of the city surveyor of Montreal in 1841, he qualified in due course as civil engineer, and obtained the position of deputy city surveyor, a post which he held for three years. He resigned this situation to begin the publication of the Montreal 'Times,' in company with Murdo McIver. Two years later he returned to his profession, entered the public works department, and among other undertakings made a new survey of the Lachine canal. In 1849 he was engaged in the construction of the Hudson River railroad in the state of New York, and in 1851 proceeded to Panama as assistant engineer to J. J. Campbell, who was then building the isthmus railway. Returning to Canada in 1853, he surveyed for the Grand Trunk the tracks from Montreal to Vaudreuil, from Montreal to Cornwall, from Brockville to Rideau, and, under A. M. Ross, who had the construction of the work in charge, laid down the lines of the present Victoria Bridge. He was chief engineer of the city of Toronto for a few months during 1855, but resigned to re-enter the service of the Grand Trunk, in whose employment he remained till 1864. He acted at first as superintendent of the line east from Toronto, and afterwards as contractor to maintain the scotian that runs from that city westward to Stratford. He came to England in 1865, made one or two general surveys on the continent for English firms, and reported to Thomas Brassey [q.v.] on the railway possibilities of the island of Sardinia.

In 1867, at the instance of English capitalists who looked forward to the building of the Canadian intercolonial railway—one of the conditions of the new federation—Kingsford went once more to Canada, where he remained during the rest of his life. As the dominion resolved to build the line as a government work, he was disappointed in his immediate expectations, but soon obtained employment, which included the enlargement of the Grenville canal and the draining of the township of Russell in Ontario. The last-mentioned work caused him to fix his permanent residence in Ottawa. When the Mackenzie government came into power in 1872 Kingsford was appointed dominion engineer in charge of the harbours of the great lakes and the St. Lawrence. He continued in this post till 31 Dec. 1879, when he was cashiered by Sir Hector Langevin, who had become minister of public works in the second Macdonald administration.

The dismissal of so important a civil servant in so summary a fashion gave rise to hostile comment at the time as an act of extreme partisanship, and was brought to the notice of the Canadian House of Commons. The minister defended himself by saying that, having made certain changes in the working of his department, the services of a special engineer in charge of harbours was no longer necessary. Kingsford published the correspondence and proceedings in a pamphlet entitled 'Mr. Kingsford and Sir Hector Langevin' (1882). There seems no doubt that Kingsford was unfairly treated.

Thus rudely cast on the world at the age of sixty, Kingsford began the great work of his life, the history of his adopted country. He was well prepared for the task. Besides his own language he was master of French, German, Italian, and Spanish. He had already contributed largely to the press, and put forth a number of substantial pamphlets: 'The History, Structure, and Statistics of Plank-roads,' 1852; 'Impressions of the West and South,' 1858; 'The Canadian Canals: their History and Cost,' 1865, a work supplemented later by articles in the 'Monetary Times,' Toronto; and a monograph on Canadian history entitled 'A Political Coin.' His professional engagements gave him a full knowledge of Canadian topography, while his early experience in the army, supplemented by assiduous reading, enabled him to comprehend a military situation. Kingsford set himself in 1880 to the serious study of the archives of Canada, which were collected at Ottawa, and he continued the work almost without intermission for the next seventeen years.

The firstfruits of his labour, 'Canadian Archaeology,' appeared in 1880, and was soon followed by the 'Early Bibliography of Ontario.' He published the first volume of the 'History of Canada' in 1887. The tenth volume, which concludes his task and brings the narrative of events to the union of Upper and Lower Canada (1841), was printed in 1898, the preface being dated 24 May. Taken as a whole, the work justifies Kingsford's anticipations and the warm reception it received in England and Canada. It is the fullest and fairest presentation of Canadian experience that has been given to the world. Queen's University at Kingston and Dalhousie in Nova Scotia signified their appreciation of his labours by conferring on him the degree of LL.D. McGill University gave his name to a recently endowed chair of history.

Kingsford was a fellow of the Royal Society of Canada, to which he contributed

several papers, and a member of the Canadian Society of Civil Engineers. He survived the completion of his history only a few months, and died on 28 Sept. 1898.

In 1848 he married Maria Margaret, daughter of William Burne Lindsay, clerk of the legislative assembly of the province of Canada. Queen Victoria bestowed on his widow a civil list pension of 100*l.* in recognition of his services.

Studies*, i. 10, ii. 18; *Bourinot's Bibliography*, Roy. Soc. Canada, p. 47; *Toronto Globe*, 29 Sept. 1898; *Parish Register*, St. Lawrence Jewry, E.C.; private information.]

T. B. B.

KINGSLEY, MARY HENRIETTA (1862-1900), traveller and writer, born in Islington on 13 Oct. 1862, was the only daughter and oldest child of Dr. George Henry Kingsley [q. v.] by his wife, Mary Bailey. Charles Kingsley [q. v.] and Henry Kingsley [q. v.] were her father's brothers. Her parents removed to Ilighgate in 1863, soon after her birth, and there she passed her first sixteen years. She had a somewhat irregular home-training, among books, quiet domestic duties, the care of numerous pet animals and a rambling garden, duties and interests which stayed by her through life. She was not sent to school or college, but read omnivorously, and in truth had a world of her own amid the old books of travel, natural history, or alchemy, works on science, country sport, and literature, which she found on her father's shelves. The family led a retired life, and Mary grew up a shy, rather silent girl, disliking social gatherings but eagerly benefiting by intercourse with a sympathetic friend or a scientific neighbour. Her father was an enthusiastic traveller with keen scientific interests. Those his daughter fully shared. She was fond of natural history, especially of her father's favourite study of fishes and their ways. She learned German, but not French, which later she regretted.

In 1879 the household removed to Bexley in Kent; here she experimented in mechanics, studied chemistry, and, through friendship with Cromwell Fleetwood Varley [q. v.], dived into electricity. With an increasing zest for scientific studies she took up ethnography and anthropology. In the spring of 1888 another move was made to Cambridge, where her brother was just entered at Christ's College. This change had a great effect upon

her, besides improving her health, which had been somewhat delicate. In the society of cultivated men and women, congenial to her father and herself, she gained confidence in her own powers, winning friends and appreciation for her own sake. About the spring of 1888 a friend took her to Paris for a week—her first taste of foreign travel. During the four years that followed she devoted herself with tender capability to nursing her mother, who had been attacked by serious illness, and during the latter part of the period she also had the care of her father, who had returned home broken in health after rheumatic fever. Dr. Kingsley died in February 1892, and his wife in April. The heavy sense of responsibility which had naturally weighed upon Mary Kingsley was lightened, and after a trip to the Canaries in the late spring she came back restored in health and tone, with a mind full of new possibilities awakened by the incidents of her voyage. Removing with her brother to Addison Road, London, filled by the hereditary passion for travel, she renounced an intention of studying medicine in order to pursue the study, which she had already begun with her father, of early religion and law. She was resolved personally to investigate the subject in uncivilised countries; she had formerly thought of going to India for the purpose, but instead she now prepared for a voyage to tropical West Africa. Her friends, Dr. Guillemaud of Cambridge and Dr. Günther of the British Museum, encouraged her to collect beetles and freshwater fishes; she read Monteiro and other books on the West Coast; and, with a few introductions to Portuguese colonists and others, she, happy in the sense of freedom, started alone in August 1893. She sailed down the coast to St. Paul de Loanda, made her way thence by land to Ambriz, across many parts hitherto untravelling by Europeans, through great difficulties of swamp, bush, and river while gathering her collections. She also visited during this journey Kabinda and Matadi on the Congo river; and, returning by way of Old Calabar, reached England in January 1894. On this first journey she gained some acquaintance with the customs and fetish (i.e. religion) of the Fjort tribes in the old kingdom of Congo, which she afterwards utilised in an introduction to Mr. R. Dennet's 'Folk Lore of the Fjort' (1898).

The collections which she brought home were of value to naturalists; and the voyage had been a foretaste of what she might do with more definite aims and a better knowledge of how to attain them. During 1894

she made good use of her opportunities among her old friends and new, in preparing to start afresh. Having received a collector's equipment from the British Museum, she sailed from Liverpool on 23 Dec. 1894 for Old Calabar, touching on the way thither at Sierra Leone, Cape Coast Castle, and Accra. Mary Kingsley stayed nearly two months at Old Calabar, where she was most hospitably entertained by Sir Claude and Lady Macdonald, and made many excursions in the neighbourhood. She then went south to Congo Français and ascended the Ogowé river, passing, at the risk of her life, through the dangerous rapids above N'Ojele; and subsequently made a very adventurous and dangerous journey through a part of the Fan country which had never been explored before, from Lambarene on the Ogowé river to Agonjo on the upper waters of the Rembwe river, passing on her way the beautiful and almost unknown Lake Neovi. Afterwards she visited the island of Coriseo, where she obtained some valuable zoological specimens; and the last, but not the least, feat of this memorable journey was the ascent of Mungo Mah Lobe, the great Cameroon, a mountain 13,760 feet high. During this expedition she won the affection and respect of natives all down the coast by the interest she took in their welfare and their affairs; and German and French officials, and missionaries, traders, and sea-captains everywhere became her friends and admiring helpers. In order to pay her way (for which her slender resources did not suffice) she had learnt to trade with rubber and oil, and the knowledge thus acquired became of great importance to the West African merchants in this country. She brought home a collection, reported on by Dr. Günther, consisting of insects, shells, and plants, eighteen species of reptiles, and sixty-five species of fishes, of which three were entirely new and were named after her. Careful notes and observations made on the spot were afterwards used as the foundation of her writings and lectures.

She landed again in England on 30 Nov. 1895, and work soon began to pour in upon her. She set herself resolutely to acquire a power of exposition, both as a writer and speaker, and in this endeavour met with great success. During 1896 she was writing 'Travels in West Africa' (1897), which combined a narrative of both her journeys. Her fresh style bubbled over with humour. In February and March she read papers before the Scottish and Liverpool Geographical Societies, magazine articles followed, and on 19 Nov. she gave her first lecture at the London

School of Medicine for Women on 'African Therapeutics from a Witch Doctor's point of view.' During the next two years she lectured on West Africa all over the country, speaking to various audiences, associations of nurses, pupil-teachers, and working men, as well as to scientific societies, academic gatherings, and to both the Liverpool and the Manchester chambers of commerce. She freely gave her services for charitable purposes. Her great desire was that Englishmen should know the conditions of life and government in their West African colonies, insisting that justice should be done to native and whites man alike. One of her last public utterances was at the Imperial Institute on 12 Feb. 1900. Meanwhile she was still writing assiduously: in February 1899 appeared 'West African Studies,' containing some matter already published and essays showing her matured views on several important subjects. A second edition of this book appeared in 1901, with an introduction by Mr. George Macmillan. A small volume, 'The Story of West Africa' (II. Marshall's Empire Series), begun in 1897, came out in 1899; and her last book was a sympathetic memoir of her father prefixed to his 'Notes on Sport and Travel' (January 1900).

Her health suffered under the strain of work and London life, and she longed to get away. The war of 1899 with the Boer republics turned her thoughts to South Africa, whence she hoped she might return to her own west coast. She sailed on 11 March 1900, reaching Cape Town on the 28th. Offering her services to the authorities, she was sent to the Simon's Town Palace Hospital to nurse sick Boer prisoners; but overwork, heroically and ably performed, brought on enteric fever, from which she died on 3 June 1900. By her long-cherished desire she was buried at sea. The coffin was conveyed from Simon's Town harbour on a torpedo boat; the honours of a combined naval and military funeral were accorded her. The feeling expressed at this sudden, and as it appeared to many unnecessary, loss of a valuable life was universal wherever she had been known, at Cape Town, on the West Coast, and in England. Memorials to her memory were immediately set on foot at Cape Town, at Liverpool, where a hospital bearing her name was projected; while other friends in England and West Africa hoped to carry on her work, which has had an important influence for good on West African affairs, by the establishment of a Mary Kingsley West Africa Society, for inquiry into native custom and law, and for

the mutual enlightenment of the black and white man.

Although of daring and masculine courage, loving the sea and outdoor life, Miss Kingsley was full of womanly tenderness, sympathy, and modesty, entirely without false shame. Her genius was able, wise, and intellectually far-seeing; and, though sometimes wrong, she dealt with great issues from the insight of a sincere and generous mind. Her fine square brow was her chief beauty, and she exercised remarkable personal attraction, heightened by her brilliant conversation and her keen sense of (ever kindly) humour. Portraits exist of her in photograph only; one, a profile, taken at Cambridge in 1898, the other, nearly full face, taken in London about the middle of 1896.

Mary Kingsley was elected a member of the Anthropological Society in June 1898. Among her principal lectures and writings besides those named above are 'The Fetish View of the Human Soul,' 'Folk Lore,' vol. viii, June 1897; 'African Religion and Law' (Nisbett lecture at Oxford), 'National Review,' September 1897; 'The Law and Nature of Property among the Peoples of the true Negro Stock,' delivered at the British Association (Bristol), September 1898; 'The Forms of Apparitions in West Africa,' 'Journal of the Psychical Research Society,' July 1899 (vol. xiv.); 'Administration of our West African Colonies,' an important address to the Manchester chamber of commerce, printed in their 'Monthly Record,' 30 March 1899; 'West Africa from an Ethnological Point of View,' 'Imperial Institute Journal,' April 1900. 'The Development of Dodoes,' 'National Review,' March 1898, and 'Liquor Traffic with West Africa,' 'Fortnightly,' April 1898, dealt with a controversy on liquor and missionaries. Four articles on 'West African Property' appeared in the 'Morning Post' in July 1898, and three or four letters were published in the 'Spectator' in 1897, 1898, and 1900. 'Gardening' and 'Nursing' in West Africa are articles in 'Climate,' April, and 'Chambers's Journal,' June 1900.

[Personal knowledge and private letters; Memoir of Dr. Geo. Kingsley by his daughter, 1900; chapter of autobiography by Mary II. Kingsley in T. P. O'Connor's M.A.P., 20 May 1899.]

L. T. S.

KIRKES, WILLIAM SENHOUSE (1828-1864), physician, was born in 1828 at Holker in North Lancashire. After education at the grammar school of Carlisle he was, at the age of thirteen, apprenticed to a partnership of surgeons in Lancaster, and

went thence to St. Bartholomew's Hospital, London, in 1841. He was distinguished in the school examinations, and in 1846 graduated M.D. at Berlin. In 1855 he was elected a fellow of the Royal College of Physicians of London, and delivered the Gulstonian lectures there in 1856. Sir James Paget [q. v. Suppl.] was then warden of the college of St. Bartholomew's Hospital, and in 1848 he and Kirkes published a 'Handbook of Physiology,' which soon became popular among students of medicine. A second edition appeared in 1851, and further editions by Kirkes alone in 1856, 1860, and 1863. In 1867, 1869, 1872, and 1876 further editions by William Marrant Baker appeared. Vincent Dormer Harris was next joined with Baker in several editions, and then edited the book himself, with the assistance of Mr. D'Arny Power. John Murray, the publisher, to whom it was a valuable property, next employed William Dobbinson Halliburton, under whose care no part of the original work of Kirkes, except his name on the outside cover, remained, and in this form the book goes through almost annual editions, and is still the most popular textbook of physiology for medical students. Kirkes was appointed demonstrator of morbid anatomy to St. Bartholomew's Hospital in 1848, and in 1854 defeated Dr. John William Hume in a contest for the office of assistant physician. He became lecturer on botany, and then on medicine, and in 1864, when Sir George Burrows [q. v. Suppl.] resigned, he was elected physician to the hospital. He died at his house in Lower Seymour Street of double pneumonia with pericarditis after five days' illness on 8 Dec. 1864 (*Gent. Mag.* 1865, i, 124). His most original work is a paper in the 'Transactions of the Royal Medical and Chirurgical Society of London' (xxxv, 281) on 'Embolism, or the carrying of blood-clots from the heart to remote parts of the body,' a pathological process then just beginning to be recognised.

[Memoir in British Medical Journal, 24 Dec. 1864; MS. Records at St. Bartholomew's Hospital; Works; Bouse's Modern English Biogr.]
N. M.

KNATCHBULL-HUGESSEN, EDWARD HUGESSEN, first BARON BRABOURNE (1829-1893), was eldest son, by the second wife, of Sir Edward Knatchbull, ninth baronet [q. v.], of Mersham Hatch, Kent, where he was born on 29 April 1829. His mother, a niece of Jane Austen, was a daughter of Edward Knight of Godmersham Park, Kent, and of Olawton House, Hampshire. Knatchbull went to Eton in 1841, and matriculated at Magdalen College, Ox-

ford, on 9 July 1847. He graduated B.A. in 1851, and proceeded M.A. in 1851. His father died on 24 May 1849, and stated in his will his desire that his son should add to his surname the name Hugessen, after the testator's mother, Mary, daughter and co-heiress of William Western Hugessen of Provender, Kent. This was done by royal license.

At the general election of 1857 Knatchbull-Hugessen was elected a member for Sandwich, in the liberal interest, leaving Lord Clarence Paget for a colleague. His maiden speech in the House of Commons was made on 21 April 1858 in support of the abolition of church rates. When Palmerston, on 30 June 1859, formed his second administration he included Knatchbull-Hugessen in it as a lord of the treasury. This office he filled till 1860, when he became under-secretary for the home office. In Gladstone's first administration, formed on 9 Dec. 1868, Knatchbull-Hugessen returned to the under-secretaryship for the home office. In 1871 he became under-secretary for the colonies. On 24 March 1873 he was appointed a privy councillor. He left office when Gladstone resigned on 18 Feb. 1874. He was not included in Gladstone's second administration, which was formed on 28 April 1880, but on 24 March in that year he was gazetted a peer, with the title of Baron Brabourne of Brabourne in the county of Kent. After he entered the House of Lords his political views entirely changed, and he became a member of the Carlton Club.

He filled the offices of chairman of the East Kent quarter sessions and deputy-chairman of the South-Eastern Railway. He died on 6 Feb. 1893 at Smeeth Paddocks, and was buried at Smeeth, Kent, three days later.

Brabourne was twice married: first, on 19 Oct. 1852, at St. Stephen's, Hertfordshire, to Anna Maria Elizabeth, younger daughter of the Rev. Marcus Richard Southwell, vicar of that church, by whom he had two sons and two daughters; and, secondly, on 8 June 1890, at Maxwellton chapel, Glencairn, to Ethel Mary, third daughter of Colonel Walker of Crawfordton, Dumfriesshire, by whom he had two daughters.

Before and after his elevation to the peerage Brabourne was an industrious man of letters, being chiefly known as author of numerous stories for children, but in these capacities failed to distinguish himself. He was also a book collector. His library, which was sold by auction in May 1892, 'abounded in topographical works, scarcely any English county being unrepresented,'

and the sum realised was over 2,000*l.* (*Athenaeum*, Nos. 3317 and 3353). After the death of his mother on 24 Dec. 1882, in her ninetieth year, Brabourne became possessor of ninety-four letters written by his great-aunt, Jane Austen, to her elder sister, Cassandra. At the close of 1884 he published these letters in two volumes, with introductory and critical remarks, which were mainly notable for their diffuse irrelevance.

Brabourne's story books, which pleased the uncritical readers for whom they were produced, were entitled: 1. 'Stories for my Children,' 1869. 2. 'Crackers for Christmas: more Stories,' 1870. 3. 'Moonshine Fairy Stories,' 1871. 4. 'Tales at Teatime Fairy Stories,' 1872. 5. 'Quiser Folk: Seven Stories,' 1878. 6. 'River Legends; or, Father Thames and Father Rhine,' 1874. 7. 'Whispers from Fairy-Land,' 1874. 8. 'Figgledy-Piggledy; or, Stories for Everybody and Everybody's Children,' 1875. 9. 'Uncle Joe's Stories,' 1878. 10. 'Other Stories,' 1879. 11. 'The Mountain Sprite's Kingdom, and other Stories,' 1880. 12. 'Perdmand's Adventure, and other Stories,' 1885. He also published, in 1877, 'The Life, Times, and Character of Oliver Cromwell: a Lecture,' and, in 1886, 'Facts and Fictions in Irish History: a Reply to Mr. Gladstone.'

[Times and Annual Register for 1893; preface to Letters of Jane Austen.] F.H.

KNIBB, WILLIAM (1808-1845), missionary and abolitionist, third son of Thomas and Mary (born Daxter) Knibb, was born at Kettering on 7 Sept. 1808, one of twins. His father was a tradesman, his mother a member of the independent chapel whose Sunday school he joined at seven years old. After three years at the grammar school he entered some printing works in 1814, and in 1816 removed with his elder brother Thomas (b. 11 Oct. 1799) to Bristol on the transfer of the business. He was baptised by Dr. John Ryland [q. v.] and admitted member of the Broadmead Chapel on 7 March 1822.

Both brothers early conceived a desire for missionary enterprise. William's first impulse was felt while 'composing' missionary accounts and letters. Thomas was accepted in 1822 by the Baptist Missionary Society as master of the free school in Kingston, Jamaica, while William commenced preaching in a village near Bristol, and in a low part of the town called the 'Beggars' Opera,' colloquially the 'Beggars' Uproar.' The death of his brother after three days' illness, on 25 April 1823, led to William sailing on

5 Nov. 1824 for Jamaica to fill the post. He was just over twenty-one, and took with him his young wife, Mary Watkins of Bristol, to whom he was married a month earlier. After four years Knibb resigned his school to undertake the small mission of Savannah la Mar, and in 1830 he settled at Falmouth, near Montego Bay. Local feeling against the missionaries was strong, and their evangelical labours greatly restricted by the island laws. Knibb protested against the unjust action of the magistrates, and became the subject of much misrepresentation. The introduction of Powell Buxton's motion relating to colonial slavery in April 1831 was the signal for violent agitation among the planters and excitement among the slaves, which culminated in insurrection. Knibb was arrested on a charge of aiding, and his chapel, like many others in the island, was destroyed. But the case against him fell through, and on his release he was despatched by the missionaries to plead their cause in England.

He arrived to find the reform bill passed, when his first exclamation was 'Now I'll have slavery down.' He threw himself vehemently into the struggle. At the Assembly Rooms at Bath, on 15 Dec. 1832, he defended the missionaries in a public discussion, and published with P. Borthwick a defence of the missionaries under the title of 'Colonial Slavery' (London, 2nd edit. 1833). He was examined before select committees of both houses of parliament, and in his spare moments addressed some meetings of the Anti-Slavery Society. A handsome sum of money was raised to recoup the heavily taxed missionaries and rebuild their schools and chapels. In October 1834 Knibb returned to Jamaica, where he became the object of malicious attacks in the pro-slavery Jamaican press. These were copied by 'John Bull,' an English paper, then edited by Thomas Hood. A Bristol solicitor and friend of Knibb (Mr. H. W. Hall) brought a libel action against the proprietor of the paper before Lord Denman in 1839 and obtained damages, amounting to 70*l.*, for the missionary. The Baptist Missionary Society presented him with a testimonial to mark the vindication of his character.

In 1840 Knibb, with his two daughters, proceeded to England to exhibit in public addresses the results of emancipation, and to appeal for the enlargement of the mission. At the same time he pressed home the subject of African slavery. He was everywhere received with enthusiasm, as he was subsequently upon his third and fourth visits in 1842 and 1845.

To Knibb's efforts in England and at home the increase of missionary activity in Jamaica was largely due. Addressing a meeting in Norwich in June 1845 he related that thirty-five chapels, sixteen schoolrooms, and twenty-four mission-houses had been built at a cost of 157,000*l.* The conditions of life had already improved so much that, as he pointed out, the average limit of a missionary's life in the West Indies had increased from three to seven years. Knibb himself, a man of splendid constitution and immense energy, spent twenty-one years in Jamaica. He was stricken down with malignant fever in the thick of his work, and died after four days' illness on 15 Nov. 1845 at Kettering, one of his seven stations, where a house had been built and presented by his affectionate people to his wife and daughters. Mrs. Knibb survived until 1 April 1866. Five of their children predeceased him. Of the elder son, William, a remarkable boy of twelve, Dr. James Hoby wrote a 'Memoir.'

Knibb founded, in September 1839, the 'Baptist Herald and Friend of Africa,' a weekly paper for the instruction of the emancipated population of Jamaica. Some of his speeches in England are printed in pamphlet form. His correspondence with Joseph Sturge [q. v.], Joseph John Gurney [q. v.], Dr. Hoby, and many other abolitionists and missionaries, is included in Hinton's 'Life,' where also is a portrait. A medallion was placed at the base of a figure of justice, erected in his chapel at Falmouth to commemorate the birth of freedom on 1 Aug. 1838. Figures of Sturge, Granville Sharp, and Wilberforce appear in bas-relief.

Howard Hinton, Samuel Oughton, T. F. Newmann, J. Aldis, and other baptist ministers, 1840; Devan Braithwaite's Memoir of J. J. Gurney; Gurney's Winter in the West Indies, p. 134; Sturge and Harvey's West Indies in 1837, pp. 190, 201, 204, 281; The Tourist, 1833, p. 1.] O. F. S.

KNIGHT-BRUCE, GEORGE WYNTHAM HAMILTON (1852-1896), first bishop of Mashonaland. [See BRUCE.]

KNOX, ROBERT BENT (1808-1898), archbishop of Armagh, was second son of Hon. Charles Knox (d. 1825), archdeacon of Armagh, by his wife Hannah (d. 1852), daughter of Robert Bent, M.P., and widow of James Fletcher. He was born at Dunganon Park Mansion, the residence of his grandfather Thomas Knox, first viscount North-

land (*d.* 1818), on 25 Sept. 1808. Though baptised Robert Bent, he early dropped the use of his middle name. He was educated at Trinity College, Dublin, graduating B.A. in 1820, M.A. in 1834, B.D. and D.D. in 1858; he was also LL.D. Cambridge in 1888. In 1832 he was ordained deacon and priest by Beresford, bishop of Kilmore. On 7 May 1834 he was collated chancellor of Ardferd, and on 16 Oct. 1841 he was collated to the prebend of St. Munchia, Limerick, by his uncle Edmund Knox (*d.* 7 May 1840), bishop of Limerick, who made him his domestic chaplain. In March 1849 he was nominated by Lord Clarendon to the see of Down, Connor, and Dromore, vacated by the death (2 Nov. 1848) of Richard Mant [q. v.] He was consecrated on 1 May, and enthroned on 3 May at Lisburn, on 5 May at Dromore. Samuel Wilberforce [q. v.], who was in Ireland in 1801, details in his diary (26 Aug.) some ill-natured gossip about the appointment. James Menthorn Todd [q. v.] described Knox as 'very foolish, without learning, piety, judgment, conduct, sense, appointed by a job, that his uncle should resign Limerick.' The dean of Limerick, Anthony La Touche Kirwan (*d.* 1868), said of him, 'He used, when made to preach by his uncle, to get me to write his sermon, and could not deliver it. The bishop used to say, "Why do you always blow your nose in the pathetic part?"' (*Life of Wilberforce*, 1882, iii. 25).

Knox, as a whig, was not at the outset popular in his diocese. Like his predecessor, he resided at Holywood, co. Down. He made no secret of his opinion that, in the absence of extensive reforms, disestablishment was inevitable, and did his best to prepare for it. At an early period of his episcopate he had entertained the project of a cathedral at Belfast (in addition to the three existing cathedrals of the diocese); this luxury he abandoned in favour of a plan for multiplication of churches. The 'Belfast Church Extension Society' was founded by him in 1802; as the result of his efforts, forty-eight new or enlarged churches were

consecrated in his diocese. Prior to disestablishment, he organised (1862) diocesan conferences, and founded a diocesan board of missions. In the House of Lords in 1867, and before the church commission in 1867, he proposed a reduction of the Irish hierarchy to one archbishop and five bishops. He was not a man of commanding power or of genial warmth, but his simplicity and modesty of manner, the plain good sense of his clear and frank utterances, his ready exertions in all works of charity, and his complete freedom from sectarian bias, won for him the respect and good feeling of every section in the community.

On the death, 26 Dec. 1885, of Primate Marcus Gervais Beresford [q. v. Suppl.] he was chosen by the house of bishops as his successor, and, exchanging his diocese for that of Armagh, was enthroned at Armagh as archbishop on 1 June 1886. As president of the general synod of the Irish church, his characteristic qualities of fairness and moderation came effectively into play. He retained to the last his activity of body, presiding at the Armagh diocesan synod a fortnight before his death. He died at Armagh of heart disease on 23 Oct. 1893, and was buried on 27 Oct. in the old church (a disused ruin) at Holywood. Portraits of him are at Armagh Palace and at the sea house of Down. He married, on 5 Oct. 1812, Catherine Delia, daughter of Thomas Gibbon Fitzgibbon of Ballyseeda, co. Limerick, and by her (who predeceased him) had three sons and three daughters, of whom a son, Lieutenant-general Charles Edmond Knox, and two daughters survived him. Besides a sermon (1847), charges (1850 and 1858), and a brief address, 'Fruits of the Revival,' in Stoane's 'Ulster Revival' (1859, 8vo), he published 'Ecclesiastical Index (of Ireland)' (Dublin, 1830, 8vo), a valuable book of reference, with appendix of forms and precedents.

A. G.

L

LACAITA, **SIR JAMES PHILIP** (1818-1895), Italian scholar and politician, only son of Diego Lacaita of Manduria in the Terra d'Otranto, and of Agata Conti of Agnons in the Molise, was born at Manduria, in the province of Lecce, Italy, on 4 Oct. 1818. He took a law degree at the university of Naples, was admitted an advocate in 1836, and practised his profession. An acquaintance with Enos Throop, United States chargé d'affaires at Naples, begun in December 1838, helped him in the study of English, and this knowledge gained him the post of legal adviser to the British legation at Naples, and the friendship of the minister, Sir William Temple, at whose table he met many English travellers of distinction. Lacaita's political opinions were liberal but moderate, and he never belonged to any secret society. He was an unsuccessful candidate for the representation of the city of Naples in 1848, and on 7 April was appointed secretary to the Neapolitan legation in London, but did not start for his post, which he resigned after the fall of the liberal Troja ministry in May. In November 1850 he met Gladstone, who was in Naples in order to collect information about Bourbon misrule. This led to the arrest of Lacaita on 8 Jan. 1851, and he remained in custody for nine days. In a letter from Gladstone to Panizzi, in September, he is referred to as 'a most excellent man, hunted by the government' (FAGAN, *Life of Panizzi*, ii. 37, 203-4).

The publication of Gladstone's letters to Lord Aberdeen, for which Lacaita supplied many striking facts, aroused the hostility of the court and clerical partisans in Italy, and Lacaita found it advisable to leave Naples for London, where he arrived on 8 Jan. 1852. He was at Edinburgh on 14 Feb., in May he was an unsuccessful candidate for the office of librarian of the London Library, and on 15 June married Maria Clavering (d. 1853), daughter of Sir Thomas Gibson Carmichael, seventh baronet. His means were small, but he made many powerful friends in the best political and literary circles in London and Edinburgh. From November 1853 until April 1856 he was professor of Italian at Queen's College, London, was naturalised in July 1855, and published 'Selections from the best Italian Writers' (1855, 2nd ed. 1868, sm. 8vo). In the winter of 1856-7 he accompanied Lord

Minto to Florence and Turin. From 1857 to 1868 he acted as private secretary to Lord Lansdowne, and towards the close of 1858 went with Gladstone to the Ionian Islands as secretary to the mission, being made K.C.M.G. for his services in March 1859.

Lacaita was entrusted by Cavour with a delicate diplomatic negotiation in 1860 connected with schemes to prevent Garibaldi from crossing from Sicily to Calabria, and subsequently the Neapolitan government offered him the post of minister in London with the title of marquis, both of which he declined (ib. ii. 203). In December 1860, after the expulsion of the Bourbons, he revisited Naples, caused his name to be reinstated on the municipal registry, and in July 1861, while back in England, was returned as deputy to the first Italian legislature. He generally supported the new Italian government. After the dissolution of 1865 he did not seek reelection, and was made a senator in 1876. Though speaking but seldom in the chamber, he exercised a considerable influence upon public affairs between 1861 and 1876 through his intimacy with Ricasoli, La Marmora, Minghetti, Visconti-Venosta, and other leading men. Florence became his headquarters in Italy after the removal of the government thence from Turin, and so it remained even after the transfer of the capital to Rome. He spent a portion of each year in England, and during the last fifteen years of his life wintered at Leucaspidi, near Taranto, where he had made large purchases of monastic lands in 1868. He was a director of the Italian company for the Southern Railways from its formation, and took a share in the management of several Anglo-Italian public companies. Besides his English title, he was a knight of the Brazilian order of the Roso, and knight commander of S. Maurizio e Lazzaro and of the Corona d'Italia.

During his earlier years in England he frequently lectured on Italian subjects at the Royal Institution, the London Institution, and elsewhere. He wrote nearly all the Italian articles for the eighth edition of the 'Encyclopædia Britannica,' and revised several editions of Murray's 'Handbook for South Italy.' In 1865 he edited the third or album volume of the great edition of the 'Inferno di Dante,' after the death of Lord Vernon, having helped in the production of the former volumes (London, 1858-65, 3 vols. folio). He compiled the 'Catalogna

of the Library at Chateworth' (London, 1879, 4 vols. large 8vo) for the seventh Duke of Devonshire, and edited the first complete publication of the famous Latin lectures on Dante of Benvenuto da Imola, delivered in 1875, 'Comentum super Dantis Aldigherij Comoediam nunc primum integre in lucem editum, sumptibus Guil. Warren Vernon,' Florence, 1887, 5 vols. large 8vo.

He died at Posilipo, near Naples, on 4 Jan. 1895, in his eighty-second year, leaving an only son, Charles Carmichael Lacaita (b. 1858), M.P. for Dundee, 1885-7.

During forty-five years his life and interests were divided between this country and Italy; in the one a polished Englishman, in the other a vivacious Neapolitan and a conscientious landowner. He was a notable Dante scholar, an excellent bibliographer, a man of wide reading and intellectual sympathy, of great social tact and goodness of heart.

[Information kindly furnished by Mr. C. O. Lacaita; see also the Times, 8 Jan. p. 10, 10 Jan. p. 1, 4, 1895; Lettere ad Antonio Panizzi, pubbl. da L. Fagan, 1880, p. 468, &c.; Minghetti, Mioi Ricordi, 1890, iii. 228; Burke's Peerage, 1894, p. 1607.] II. R. T.

LACY, EDMUND (1370?-1455), bishop of Exeter, born probably about 1370, was son of Stephen Lacy and his wife Sibilla, who were buried in the conventual church of the Carmelites at Gloucester. Edmund was probably a native of that city, and was educated at Oxford, where he graduated D.D. In 1398 he was master of University College, and is said to have presided over that society for five years (Woon, *Hist. and Ant.* ii. 59). On 4 Jan. 1400-1 he appears as canon of Windsor. He was installed prebendary of Hereford Cathedral on 25 Sept. 1412, and in 1414 also held the prebend of Nassington in Lincoln Cathedral. On 12 May 1409 he was sent as envoy to France, and on 22 May 1418 he was appointed agent to the papal court. In Henry V's reign he was dean of the chapel royal, and accompanied the king to Agincourt in 1415 (NICOLAS, *Agincourt*, p. 389). On 8 Feb. 1416-17 he was granted custody of the temporalities of the bishopric of Hereford; the pope assented to his election on 3 March, and Henry V was present at his consecration on 18 April. In 1420 he was translated to Exeter, the temporalities were restored on 31 Oct., and he was installed on 29 March 1421. In that year he preached before Henry V at Westminster (WALSINGHAM, *Hist. Angl.* ii. 387). He was one of Henry V's executors, but seems to have taken little part in politics in the following reign,

though he is mentioned in a political satire about 1450 (BONINGTON, *Excerpta Historica*, p. 162). He was bishop of Exeter for thirty-five years. In 1431 he was excused attendance at parliament on account of his bodily infirmities, but twenty years later he was fined eighty marks for not being present. He died at Chudleigh on 18 Sept. 1455, and was buried on the north side of the choir in Exeter Cathedral. His tomb, which still remains, was long the resort of pilgrims. His will, proved on 8 Oct. 1455, is lost, but his register, covering more than seventeen hundred pages, remains. His gave various books to his chapter, and made other benefactions to the diocese. His 'Liber Pontificalis' was edited from an original fifteenth-century manuscript (the title-page says fourteenth century) by Ralph Barnes and published in 1847 (Exeter, 8vo).

[Preface to Lacy's *Liber Pontificalis*; Oliver's *Bishops of Exeter*; Rymor's *Fœdera*, ix. 404, 422, 450; Beckington *Corresp.* (Rolls Scr.); Nicolas's *Ordinances of the Privy Council*; *Rolls of Parliament*; Ramsay's *Lancaster and York*, ii. 193; Le Neve's *Fæsti Ecol.*, ed. Hardy, passim; Godwin's *De Præmuliibus Angliæ*; Stubbs's *Reg. Sacrum*.] A. F. P.

LACY, WALTER (1809-1898), actor, whose real name was Williams, the son of a coach-builder in Bristol, born in 1809, was educated for the medical profession, went to Australia, and was first seen on the stage in Edinburgh, in 1829, as Montalban in the 'Honeymoon,' was playing there again in 1832, and acted also in Glasgow, Liverpool, and Manchester. His debut in London was at the Haymarket on 21 Aug. 1838 as Charles Surface. At Covent Garden he appeared, about 1841, as Captain Absolute, and at Drury Lane as Wildrake in the 'Love Chase.' With Charles Kean [q.v.] at the Princess's he was, on 18 Sept. 1852, the original Roubine in Boucicault's 'Prima Donna,' and made a great success as Châteaufort Renaud in the 'Coreican Brothers.' With Kean he played John of Gaunt in 'Richard II,' Edmund in 'Lear,' Gratiano, and Lord Trinket in the 'Jealous Wife.' On 30 June 1860 he was, at the Lyceum, the Marquis of Saint Evrémont in 'A Tale of Two Cities,' and at Drury Lane on 17 Oct. 1864 was Gloten to Miss Faucit's Imogen. He was Flutter in the 'Belle's Stratagem' on 8 Oct. 1866 at the St. James's, where he was on 5 Nov. the first John Leigh in 'Hunted Down, or Two Lives of John Leigh.' In two Lyceum revivals of 'Romeo and Juliet' he was Mercutio. On 12 Aug. 1868 he was, at the Princess's, the original Bellingham in Boucicault's 'After Dark.' Other

parts in which he was seen were Benedick, Camus, Faulconbridge, Malvolio, Touchstone, Prospero, Roderigo, Henry VIII, Young Marlow, Sir Brilliant Fashion, Goldfinch, Tony Lumpkin, Bob Acres, Dazzle, Pluttsar, Dudley Smooth, Megrim in 'Blue Devils,' Ghost in 'Hamlet,' My Lord Duke in 'High Life below Stairs,' Jeremy Diddler, and Puff. After a long absence from the stage, occupied with teaching elocution at the Royal Academy of Music, he reappeared at the Lyceum in April 1879 as Colonel Damas in Sir Henry Irving's revival of the 'Lady of Lyons.' He died on 13 Dec. 1898 at 18 Marine Squares, Brighton, and was buried at Brompton cemetery on the 17th. Lacy was a respectable light comedian, but failed as an exponent of old men and was a wretched Sir Anthony Absolute. He was a familiar figure at the Garrick Club, which owns a portrait of him in oils, and was almost to the last a man of much vivacity, and of quaint, clever, unbridled, and characteristic speech. He married Miss Taylor, an actress [see LACY, HARRIETTE DEBORAH].

J. K.

LAFONTAINE, SIR LOUIS HYPO-
LITE, first baronet (1807-1864), Canadian statesman, born at Boucherville, in the county of Chambly, Lower Canada, in October 1807, was the third son of Antoine Médard Lafontaine, a farmer of that neighbourhood, by his wife Marie J. Fontaine Bienvenu, and the grandson of Antoine Médard Lafontaine, member of the legislative assembly of Lower Canada. He was educated at Montreal, and after a course of five years proceeded to study law, entering the office of Denis Benjamin Viger [q. v.]. His political reputation was considerable while he was yet a clerk, and after his call to the bar he quickly acquired a large practice among the French Canadians. He joined Viger in organising the national movement in the district of Montreal, and was returned to the legislative assembly of Lower Canada at the general election of 1830 for the county of Terrebonne, for which he continued to sit until 1837. He was at first a follower of Louis Joseph Papineau [q. v.], whom he rigorously urged on in his resistance to the home government. In a year or two, however, he developed from the follower to the rival of Papineau, from whom eventually he

became completely estranged. While Papineau was associated with the *parti prêtre*, Lafontaine led that of *la jeune France*, and was regarded by the orthodox as little better than an infidel. Although he indulged in unmeasured opposition to government, he saw the outbreak of the rebellion of 1837 with feelings of consternation, being convinced that the resources of the insurgents were quite inadequate. The government, however, mindful of his incendiary language on former occasions, issued a warrant against him for high treason. Lafontaine escaped to England and thence to France. He was able to establish his innocence, and returned to Canada in May 1838. He was imprisoned on 7 Nov. 1838, during the hostile expeditions of Robert Nelson [see NELSON, WILLIAM] from the United States, but was released from lack of evidences.

After the suppression of the rebellion Lafontaine found the leadership of the *parti prêtre* vacant owing to Papineau's exile. He conciliated the priests and assumed the position. On Papineau's return in 1847 he found his place filled and was compelled to become the head of the more extreme party which Lafontaine had formerly directed. Lafontaine opposed the union of Upper and Lower Canada in 1840. On 21 Sept. 1811, after contesting Terrebonne unsuccessfully, he was returned to the parliament of the united provinces for the fourth riding of York, a county in Upper Canada, chiefly through the instrumentality of Robert Baldwin [q. v. Suppl.]. He was at once recognised as the leader of the French Canadians in the new assembly, and early in 1842 declined an offer of the solicitor-generalship of Lower Canada from the governor-general, Charles Edward Poulett Thomson, Baron Sydenham [q. v.], made to him on the condition that he should support the governor's policy. In September 1842, at the instance of Sydenham's successor, Sir Charles Bagot [q. v. Suppl.], he joined Baldwin in forming the first Baldwin-Lafontaine administration, in which he held the portfolio of attorney-general for the lower province. During his term of office he obtained a cessation of proceedings against the political offenders of 1837, including Papineau. The ministry resigned on 28 Nov. 1843 in consequence of a difference with Bagot's successor, Sir Charles Theophilus Metcalfe (afterwards Baron Metcalfe) [q. v.], with regard to the control of the nomination of government officials. In November 1844 Lafontaine was returned for Terrebonne, which he represented during the whole period of his oppo-

sition. In March 1848, after a stormy election in which several persons were killed, he was returned for the city of Montreal, which he represented during the remainder of his public life.

In March 1848 the reform party triumphed at the general election, and Baldwin and Lafontaine again took office, Lafontaine as premier and attorney-general for Lower Canada. In January 1849 he passed an amnesty bill, and in February he introduced the famous rebellion losses bill, which was intended to compensate innocent sufferers in 1837. This bill was bitterly resented both in Canada and England, because it was feared that it would benefit disloyal French Canadians, and it gave rise to the most extraordinary scenes of riot in Montreal [see BRUN, JAMES, eighth EARL OF ELGIN]. Lafontaine's house was partly burnt down and he himself on more than one occasion exposed to imminent peril. In consequence of the disorder the seat of government was permanently removed from Montreal. In the meantime Lafontaine felt that he was growing out of sympathy with the younger reformers. The temper of his mind was naturally aristocratic and conservative. The movement which he had led had been national, and when questions of class interest became of importance he found himself out of accord with his former supporters. He was opposed to the secularisation of the clergy reserves in Upper Canada and the abolition of the seignioral tenure in the lower province, both of them measures steadily demanded by a large section of the reform party. In consequence he retired from political life towards the close of 1851. On 13 Aug. 1853 he was nominated chief justice of Lower Canada in succession to Sir James Stuart [q. v.], and on 28 Aug. 1854 he was created a baronet. He continued to hold the office of chief-justice until his death at Montreal on 20 Feb. 1861. He was twice married: first, on 9 July 1831, to Adèle, daughter of Amable Berthelot, an advocate at Quebec. She died without issue on 27 May 1859, and he married secondly, on 30 Jan. 1861, Jane Morrison, a widow of Montreal. By her he had an only surviving son, Louis Hyppolite, on whose death, in 1867, the baronetcy became extinct.

I. O.

LAING, SAMUEL (1812-1897), politician, author, and chairman of the London, Brighton, and South Coast Railway, was born in Edinburgh on 12 Dec. 1812. He was son of Samuel Laing [q. v.], author of 'Tours' in Norway, Sweden, and Denmark, who was younger brother of Malcolm Laing [q. v.], the historian of Scotland. Laing was educated at Houghton-le-Spring grammar school, and privately by Richard Wilson, a fellow of St. John's, Cambridge. He entered that college as a pensioner on 5 July 1827, graduated B.A. as second wrangler in 1831, and was also second Smith's prizeman. He was elected a fellow of St. John's on 17 March 1831, and remained for a time in Cambridge as a mathematical coach. He was admitted a student of Lincoln's Inn on 10 Nov. 1832, and was called to the bar on 9 June 1837. Shortly after his call he was appointed private secretary to Henry Labouchere, afterwards Lord Taunton [q. v.], then president of the board of trade. Upon the formation of the railway department of that office in 1842 he was appointed secretary, and thenceforth distinguished himself as an authority upon railways under successive presidents of the board of trade. In 1844 he published the results of his experience in 'A Report on British and Foreign Railways,' and gave much valuable evidence before a committee of the House of Commons on railways. To his suggestion the public are mainly indebted for the convenience of 'parliamentary' trains at the rate of one penny per mile. In 1845 Laing was appointed a member of the railway commission, presided over by Lord Dalhousie, and drew up the chief reports on the railway schemes of that period. Had his recommendations been followed, much of the commercial crisis of 1846 would, as he afterwards proved, have been averted. The report of the commission having been rejected by parliament, the commission was dissolved, and Laing, resigning his post at the board of trade, returned to his practice at the bar. In 1848 he accepted the post of chairman and managing director of the London, Brighton, and South Coast Railway, and under his administration the passenger traffic of the line was in five years nearly doubled. In

1852 he became chairman of the Crystal Palace Company, from which he retired in 1855, as well as from the chairmanship of the Brighton line. In July 1852 he was returned to parliament in the liberal interest for the Wick district, which he represented until 1857 (when he lost his seat for opposing British intervention in China). He was re-elected in April 1859, and was financial secretary to the treasury from the following June until October 1860. In that month he was appointed to the important post of financial minister in India, on the council of the governor-general, to replace James Wilson (1805-1860) [q. v.], who had died within a year of taking up this newly created and lucrative office [see FRUEN, SIR BARTLE]. When first asked to go to India, Laing said to Palmerston, 'You want me to go to India to doctor a sick budget with a deficit of six millions; that is a question of military reduction, and the possibility of military reduction depends on peace. Tell me candidly what you think of the prospects of peace, that I may regulate my financial policy accordingly.' Palmerston replied, 'I do not trust the man at the Tuilleries an inch farther than I can see him; but for the next two or three years, which is enough for your purpose, I think we are fairly safe of peace; therefore go in for reduction.'

Having effected the objects of his mission upon the lines laid down with such conspicuous ability by Wilson, Laing was again elected M.P. for Wick in July 1865. He was rejected for that constituency in 1868, but was returned for Orkney and Shetland in 1873, and sat without interruption until he retired from parliament in 1886. Though a staunch liberal, he was opposed to what he considered the anti-imperialist leanings of Gladstone; he published in 1884 a careful and moderate indictment of what would now be called Little Englandism in 'England's Foreign Policy.'

In 1867 Laing was reappointed chairman of the London, Brighton, and South Coast Railway (a post which he held down to 1894), and his position as a railway magnate introduced him to the city. Laing's connections with the financial world were not unimportant. During his tenure of the chair at the board of the London, Brighton, and South Coast Railway, that company gradually became highly prosperous, and he contributed to the result not only by his business capacity, but by his skill in choosing and supporting good subordinates. Noting the constant growth of Brighton and other south-coast towns, he was one of the earliest to discern that the line had a great future before

it. His confidence was more than shared by a number of London stockbrokers who lived down the line, and knew, or thought they knew, a great deal about it. Hence the enormous amount of speculation that took place for a long period in Brighton Deferred Stock ('Brighton A's'). When speculative operations for the rise turned out well, their authors naturally regarded the management of the line with approval; but when they did not, Laing came in for more than a fair share of abuse. He was connected with two other important companies in which his knowledge of railways was useful. These were the Railway Share Trust and the Railway Debenture Trust, which, as chairman, he conducted with a much greater degree of prudence than became common as enterprises of this kind multiplied.

It was not until he had turned seventy and retired from parliament that Laing came before the public prominently as an author. His 'Modern Science and Modern Thought' appeared in 1885 and was very widely read, being in fact an admirably popular exposition of the speculations of Darwin, Huxley, and Spencer, and the incompatibility of this data of modern science and 'revealed religion.' A supplemental chapter to the third edition (1886) contained a fairly crushing reply to Gladstone's defence of the book of Genesis. It was followed by 'A Modern Zoroastrian,' 1887, 'Problems of the Future, and other Essays,' 1889, 'The Antiquity of Man,' 1891, and 'Human Origins,' 1892, all written in a similar easy and interesting style. Without possessing in themselves any great scientific value, these works showed Laing's reading, especially in anthropology, to have been extremely wide, and furnished people with general ideas on subjects of importance which, if discussed in a less attractive form, would probably have passed unheeded.

Laing died, aged 86, at Rockhills, Sydenham Hill, on 6 Aug. 1897, and was buried on 10 Aug. in the extramural cemetery, Brighton. He married in 1841 Mary, daughter of Captain Cowan, R.N., and left two sons and three daughters. His personality was sworn at 94,643. (*Railway Times*, 18 Sept. 1897).

Laing's writings are remarkable as the relaxations of a man who had spent over half a century almost exclusively immersed in affairs. He never attained to quite the same thoroughness and grip of his subject as his father, but he had much the same gift of lucid exposition, and the same freedom from self-consciousness or affectation. Besides the works already mentioned and some pamphlets 'Samuel Laing the younger' published:

1. 'India and China;' England's Mission in the East, 1863. A luminous forecast of probabilities in the Far East. 2. 'Prehistoric Remains of Caithness.' With notes on the human remains by T. H. Huxley, 1866. 3. 'A Sporting Quixote,' 1886, an agreeable if somewhat amateurish fantasia in the form of a novel (cf. *Athenæum*, 1886, i. 550).

T. S.

LAKE, WILLIAM CHARLES (1817-1897), dean of Durham, born in London on 9 Jan. 1817, was the eldest son of Captain Charles Lake of the Scots fusilier guards. Educated at Rugby under Dr. Arnold, he became the lifelong friend of his school-fellow, Arthur Penrhyn Stanley [q. v.]. From Rugby he went to Oxford as scholar of Balliol in November 1834, and was a fellow-pupil under Archibald Campbell (afterwards archbishop) Tait of Sir Benjamin Brodie, Edward Meyrick Goulburn, and Benjamin Jowett. In 1838 Lake was elected fellow of his college at the same time as Jowett, and became tutor four years later. In 1862-3 he was senior proctor in the university. He acted with the moderate party who opposed the action taken against William George Ward [q. v.], and against the proposal that the vice-chancellor should have power to impose a certain form which a member of the university should be required to use in subscribing the articles. He became very intimate with Tait, with whom he generally spent his long vacation travelling on the continent, and was one of the first who urged him to stand for the head-mastership of Rugby. Lake himself had been an unsuccessful candidate in 1849 when Goulburn was elected. He had taken orders in 1842, and in 1858 he left Oxford to become rector of Huntspill in Somerset. Two years later he was named prebendary of Wells. Meanwhile Lake's linguistic abilities had led to his appointment by Lord Panmure as a member of the commission of 1866 to report on military education on the continent. He had won the prize at Oxford in 1840 for his Latin essay on the Roman army as an obstacle to civil liberty. He also served on the Newcastle commission of 1858 to inquire into popular education, and on the royal commission upon military education of 1868. On 9 Aug. 1869 Lake was nominated by Gladstone for the deanery of Durham. In 1881 he was a member of the ecclesiastical court's commission. His theological position was

that of a moderate high churchman, and in 1880 he joined Dean Church and others in endeavouring to induce Gladstone and Archbishop Tait to bring forward legislation modifying the Public Worship Regulation Act.

During Lake's decanate Durham Cathedral was restored. He exercised an important influence over Durham University of which he was warden, and education in the north of England generally owed much to his efforts. The foundation of the College of Science at Newcastle in 1871 was very largely his work. He resigned the deanery, owing to failing health, in 1891, and went to live at Torquay. There he died suddenly on 8 Dec. 1897. He married, in June 1881, Miss Katherine Gladstone, a niece of the premier, who survived him.

Lake published nothing separately but a few sermons and a pamphlet, 'The Inspiration of Scripture and Eternal Punishment, with a preface on the Oxford Declaration and on F. D. Maurice's Letter to the Bishop of London,' 1861. But he contributed to the 'Life' of his friend Tait some highly interesting recollections, and especially a valuable picture of the independent position he held at Oxford, and an account from intimate knowledge of his life as head of Rugby, bishop of London, and primate. Lake also supplied to Mr. Wilfrid Ward's 'W. G. Ward and the Oxford Movement' (1889) some reminiscences of Ward, who was for some time his mathematical tutor at Balliol and exercised some influence over his tone of thought.

G. L. G. N.

LAMBERT, SIR JOHN (1772-1847), general, was the son of Captain Robert Alexander Lambert, R.N. (second son of Sir John Lambert, second baronet), by Catherine, daughter of Thomas Byndloss of Jamaica. He was commissioned as ensign in the 1st foot guards on 27 Jan. 1791, and promoted lieutenant and captain on 9 Oct. 1793. He served at the sieges of Valenciennes and Dunkirk, and was in the action of Lincelles in 1793. He was adjutant of

the third battalion in the campaign of 1794, served with it in Ireland during the rebellion of 1798, and in the expedition to Holland in 1799. He was promoted captain and lieutenant-colonel on 14 May 1801. He served in Portugal and Spain in 1808, and was present at Corunna, and he commanded the light companies of the guards in the Walcheren expedition of 1809. He became colonel in the army on 25 July 1810, and embarked for Cadiz in command of the third battalion on 30 May 1811. In January 1812 he was sent to Carthage with two battalions. He remained there three months, and in October he joined Wellington's army at Salamanca.

On 4 June 1813 he was promoted major-general, and was appointed to a brigade of the sixth division. He commanded it at the battles of the Nivelle, Nive, Orthes, and Toulouse, and was specially mentioned in despatches for the Nivelle and Toulouse (13 Nov. 1813, 12 April 1814). He received the thanks of parliament and the gold cross, and was made K.C.B. on 2 Jan. 1815. Having been sent to America, he joined the army under Sir Edward Pakenham [q. v.] below New Orleans on 6 Jan. 1815, with the 7th and 43rd regiments. In the unsuccessful attack on the American intrenchments, made two days afterwards, he commanded the reserve. Pakenham being killed, and General Gibbs mortally wounded, the chief command devolved on Lambert. He decided not to renew the attack, withdrew the troops which had been sent across the Mississippi, and retreating on the 18th, re-embarked his force on the 27th (JAMES, ii. 543-7; PORTER, i. 303). It proceeded to the bay of Mobile, where Fort Bowyer was taken on 12 Feb., and next day news arrived that peace had been signed.

Lambert returned to Europe in time to command the tenth brigade of British infantry at Waterloo. The brigade joined the army from Ghent only on the morning of 18 June, and was at first posted in reserve at Mont St. Jean. After 3 p.m. it was moved up to the front line to support the fifth (Picton's) division, and one of its regiments, the 27th, which had to be kept in square near La Haye Sainte, lost two-thirds of its men, a heavier loss than that of any other regiment (*Wellington Despatches*, Supplementary, x. 537; *Waterloo Letters*, pp. 391-402). Lambert was mentioned in Wellington's despatch, and received the thanks of parliament, the order of St. Vladimir of Russia (8th class), and that of Maximilian Joseph of Bavaria (commander). He commanded the eighth in-

fantry brigade in the army of occupation in France.

He was promoted lieutenant-general on 27 May 1825, and general on 23 Nov. 1841. He was given the colonelcy of the 10th regiment on 18 Jan. 1824, and the G.C.B. on 19 July 1838. He died at Weston House, Thames Ditton, on 14 Sept. 1847, aged 75. In 1816 he married a daughter of John Morant of Brocklehurst Park, New Forest.

LAMINGTON, BARON. [See COCHRANE-BAILLIE, ALEXANDER DUNDAS ROSS WISHART, 1816-1890.]

LAWES, SIR JOHN BENNET, first baronet (1814-1900), agriculturist, was the only son of John Bennet Lawes (d. 1822), lord of the manor of Rothamsted, near St. Albans, Hertfordshire, and his wife Marianne, daughter of John Sherman of Drayton, co. Oxford. He was born at Rothamsted on 28 Dec. 1814. He was educated at Eton and Brasenose College, Oxford, where he matriculated on 14 March 1833; but, as he said in an autobiographical note contributed to the 'Agricultural Gazette' for 3 Jan. 1888 (p. 13), 'in his days Eton and Oxford were not of much assistance to those whose tastes were scientific rather than classical, and consequently his early pursuits were of a most desultory character.' He left Oxford without a degree. From his earliest years, however, he 'had a taste for chemistry,' and he described how at the age of twenty he had 'one of the best bedrooms in the house fitted up with stoves, retorts, and all the apparatus necessary for chemical research.' At this period his attention was chiefly directed to 'the composition of drugs, and he almost knew the Pharmacopoeia by heart;' he also spent some time in the laboratory of Anthony Todd Thomson [q. v.] at University College, London.

Lawes entered into possession of the family estate in 1834 on coming of age, and made experiments with growing plants (such as poppy, hemlock, colchicum, belladonna) which contained the active principles of drugs. He says, however, that 'for three or four years he does not remember any connection between agriculture and chemistry crossing his mind; but the remark of a gentleman, Lord Daore, who farmed near him, who pointed out that in one farm bones were

invaluable for the turnip crop, and on another farm they were useless, attracted his attention a good deal.' The investigations which Lawes made to discover the reason for this may fairly be regarded as the germ of the Rothamsted experiments, which subsequently became world-famous.

Observing the beneficial results upon his own turnip crops at Rothamsted by dressing them with bones dissolved in sulphuric acid, Lawes took out in 1842 a patent, in which he showed how apatite and coprolite and other mineral or fossil phosphates might be converted into a potent manure by treatment with sulphuric acid. He thus laid the foundation for what speedily became and still remains a very important industry, and he was indeed the pioneer of the now very large agricultural manure trade. The first factory for the manufacture of mineral superphosphate was started by Lawes at Deptford in 1843; he built a second and much larger factory at Barking Creek in 1857 (see historical description by J. O. Morton in *Agric. Gazette*, 2 Jan. 1888, p. 8). He sold the manure business to a company in 1872; but he had at that time embarked in other branches of chemical manufacture (citric and tartaric acid), and remained actively engaged in business in London up to the time of his death.

But 'all the time he was accumulating a fortune by business in London, he was at home spending a fortune in laborious scientific agricultural investigations' (R. Warrington, F.R.S., in *Agric. Gazette*, 17 Sept. 1900, p. 180). In 1848 he started on a regular basis the Rothamsted agricultural experiment station; and in June of that year called to his aid, as coadjutor and technical adviser, Dr. (afterwards Sir) Joseph Henry Gilbert. Together Lawes and Dr. Gilbert instituted and carried out a vast number of experiments of enormous benefit to the agricultural community at large, the details of which were recorded in the 'Philosophical Transactions of the Royal Society,' the *Journals of the Chemical Society* and of the *Royal Agricultural Society*, and other publications. Two main lines of inquiry were followed—the one relating to plants, the other to animals. In the former case the method of procedure is described in the official 'Memoranda' in which it was shown how endeavours had been made 'to grow some of the most important crops of rotation, each separately, year after year, for many years in succession on the same land, without manure, with farmyard manure, and with a great variety of chemical manures, the same description of manure being as a

rules applied year after year on the same plot. Experiments on an actual course of rotation without manure and with different manures were also made: wheat, barley, oats, beans, clover and other leguminous plants, turnips, sugar beet, mangels, potatoes, and grass crops having been thus experimented on. The main object of the experiments on animals (commenced in 1847) was to ascertain how they could be most economically fed for human consumption; but incidentally information of great value was obtained towards the solution of such problems as the sources in the food consumed of the fat produced in the animal body, the characteristic demands of the animal body (for nitrogenous or non-nitrogenous constituents of food), in the exercise of muscular power, and the comparative characters of animal and vegetable food in human dietaries.

In all 132 separate papers or reports on the Rothamsted experiments were published during Lawes's life, most of them in the joint names of himself and Dr. Gilbert. A full list of these is contained in the 'Memoranda of the Origin, Plan, and Results of the Field and other Experiments . . . at Rothamsted,' now issued annually by the Lawes Agricultural Trust Committee. The 'Journal of the Highland and Agricultural Society of Scotland' for 1895 contains a summary (354 pages), by Sir John Lawes and Sir Henry Gilbert themselves, of several series of the experiments, with photographic portraits of both authors, and a view of the manor house.

This did not, however, exhaust Lawes's literary activity, for he was occasionally prevailed on to lecture in public to farmers' clubs, and a lengthy letter by him, estimating the produce of the wheat crop in the United Kingdom, was an annual feature of the 'Times' newspaper in every autumn from 1863 to 1899. He would often moreover write short pithy practical papers for the agricultural press on various phases of the Rothamsted experiments, or expressing in terse and forcible language his own views on some agricultural question of the day.

The unique feature of Rothamsted—which is now the oldest experiment station in the world—is the long unbroken continuity of the investigations. To provide for their permanent continuance, Lawes constituted by deed, dated 14 Feb. 1889, three trustees, to whom he leased the laboratory and certain lands at Rothamsted for ninety-nine years at a peppercorn rent, and conveyed to such trustees the sum of 100,000*l.* as an endowment fund. Under that deed a 'Lawes

Agricultural Trust' was created, which is to be administered by a committee of nine persons, four nominated by the Royal Society, two by the Royal Agricultural Society, and one each by the Chemical and Linnean Societies, the ninth trustee being the owner of Rothamsted at the time (*Journal Royal Agric. Soc.* 1896, pp. 324-32).

The experiments which he was conducting at Rothamsted early brought Lawes into prominence. He joined the Royal Agricultural Society in 1846, and became one of its governing body on 22 May 1848, retaining his seat on the council for the unprecedented period of over fifty-two years. He became a vice-president in 1878, and a trustee in 1891, and was offered the presidency in 1893 (the year of the jubilee of the Rothamsted experiments), though he then felt unequal, through advancing years and increasing deafness, to accept the post. In 1854 he was elected a fellow of the Royal Society, and received the society's royal medal (with Dr. Gilbert) in 1807. In 1894 he also received (again with Dr. Gilbert) the Albert gold medal of the Society of Arts. In 1877 he became LL.D. of Edinburgh, in 1892 D.C.L. of Oxford, and in 1894 Sc.D. of Cambridge, and on 19 May 1882 he was created a baronet.

Lawes acted on a great variety of commissions and committees, including the royal commission on the sewage of towns, and his advice was in constant demand on every variety of agricultural subjects. Rothamsted was for many years before his death a place of pilgrimage for men of science from all countries, students, farmers, and all interested in agricultural research. The earliest laboratory (an old barn) was replaced in 1855 by a new structure—still in use—which was erected by subscribers as a testimonial to Lawes's services in behalf of British agriculture; it was presented to him with a silver candelabrum at a public meeting at Rothamsted on 19 July 1855 (*Agric. Gazette*, 21 July 1855, p. 491; for Lawes's speech on that occasion see *Journal R.A.S.E.* 1900, p. 519).

In 1893, when the Rothamsted experiments had been conducted for a period of fifty years, Lawes was presented by public subscription with his portrait, by Mr. Hubert Herkomer, R.A., a huge monolithic boulder being at the same time set up in front of the laboratory, with an inscription that it was 'to commemorate the completion of fifty years of continuous experiments (the first of their kind) in agriculture conducted at Rothamsted by Sir John Bennet Lawes and Joseph Henry Gilbert, A.D. MCCCXCIII.' Edward VII, then prince of Wales, placed

himself at the head of the movement for commemorating the Rothamsted jubilee, and signed the address presented by the subscribers, which spoke of Lawes as 'one of the most disinterested as well as the most scientific of our public benefactors.' The portrait, granite memorial, and addresses from learned societies, both British and foreign, with which Lawes was connected, were presented at a public ceremonial at Rothamsted on 29 July 1893, over which Mr. Herbert Gardner, M.P. (afterwards Lord Burghels), then minister for agriculture, presided.

Lawes was below the middle stature, and was careless in matters of dress; but his rugged and striking face at once commanded attention, and his exposition of his experiments to an appreciative listener was most telling and instructive. He was fond of deer-stalking and salmon-fishing, and until 1895 went regularly to Scotland for purposes of sport, though his greatest enjoyment was in his farming experiments. He found time, however, to interest himself in a very practical manner in the welfare of the villagers and labourers at Harpenden, near Rothamsted, starting in 1852 allotment gardens for them, and increasing the number from time to time, so that they now number 334 (see 'Allotments and Small Holdings' in *Journal R.A.S.E.* 1892, pp. 451-2). From the beginning he gave prizes for the best gardens, and in 1857 he built for the allotment holders a clubhouse, managed entirely by themselves (*ibid.* 1877, pp. 387-393). Attempts at supplying the various wants of the labourers at wholesale prices, on a co-operative system, commenced in 1859, and Charles Dickens wrote for the first number of 'All the Year Round' (30 April 1859) an article entitled 'A Poor Man and his Beer,' in which the relations of Lawes (who is called in the article 'Friar Bacon') and his labourers are described. The Pig Club and the Flour Club, started by Lawes, and the Harpenden Labourers' Store Society (subsequently formed), failed after a time for want of support from the members, but the clubhouse still exists and is a permanent success. In 1856 Lawes started a savings bank, giving five per cent. interest on deposits; and as he found after a time that if the bank were to prosper he must receive the money himself, it became his custom to spend an hour every Saturday evening in this work, which continued until the general introduction of post-office savings banks.

Lawes died on 31 Aug. 1900, and was buried at Harpenden in the presence of a large and representative assemblage of agri-

culturists on 4 Sept. 1900. The portrait by Mr. Herkomer, painted by subscription in 1893, hangs at Rothamsted. A reproduction of it appears in the 'Journal of the Royal Agricultural Society' for 30 Sept. 1900, with a memoir. Lawes married, on 28 Dec. 1842, Caroline, daughter of Andrew Fountaine of Warford Hall, Norfolk, and by her, who died in 1895, left issue one daughter and one son, Charles Bennett (b. 1843), who succeeded to the baronetcy.

[Journal Royal Agric. Soc. 1900, pp. 511-24 (memoir, with portrait), and earlier vol. quoted above; Agricultural Gazette, 2 Jan. 1888, p. 13 (autobiographical note of his earlier years); Transactions Highland and Agricultural Society, 1895 (portrait, and summary of experiments); Reminiscences of Sir John Lawes (three articles in Agricultural Gazette for 17 and 24 Sept. and 8 Oct. 1900, by R. Warington, F.R.S., a former assistant in the Rothamsted laboratory). Lawes and his experiments are constantly referred to in the agricultural literature of the second half of the nineteenth century.]

E. C.-E.

LAYARD, SIR AUSTEN HENRY (1817-1894), excavator of Nineveh and politician, born in Paris on 5 March 1817, of Huguenot descent, was son of Henry Peter John Layard, of the Ceylon Civil Service, and of Marianne, daughter of Nathaniel Austen of Ramsgate. Daniel Peter Layard [q.v.] was his great-grandfather. His youth was mainly spent in Italy. When sixteen years old he entered the office of his uncle, Henry Austen, who was a solicitor in London. There he remained for six years, but law did not attract him, and in 1839 he decided to leave England for Ceylon, as a relative living in the island held out to him a prospect of more congenial employment. He had made the acquaintance of Edward Mitford, a young man about ten years older than himself, who was setting out for the same destination, and, as Mitford disliked the sea, they hit upon the plan of making the journey overland through Asia. Leaving England on 8 July 1839, Layard joined Mitford at Brussels, and they travelled together through Roumelia to Constantinople. In August 1840 they reached Hamadan, where they parted company. Layard abandoned the journey to Ceylon, and remained for a time in Persia. In the following year it became necessary for him to obtain fresh funds from home. Having written to his friends in London from Baghdad, he descended the Tigris to Basra, and paid a second visit to Khuzistan. His expenses were not heavy, as he adopted the Bakhtiyari dress and travelled alone or with one servant. On

returning to Baghdad he found letters from his friends which necessitated his return to England, and in the summer of 1842 he set out for Constantinople on the return journey. On his way he spent several days at Mosul with Émil Botta, who had recently been appointed French consul there, and who had already begun his excavations in the great mounds opposite the city which mark the site of the ruins of Nineveh. Botta had opened trenches in the largest of the mounds, known as Kuyunjik, and Layard visited and examined with him the spot where he himself was subsequently to undertake excavations for the trustees of the British Museum.

On his arrival at Constantinople, Layard called at the British embassy to deliver a letter entrusted to him by Colonel Taylor, the British resident at Baghdad. At this time the relations between Turkey and Persia were strained owing to disputes concerning the frontier, and Layard hoped that his recent travels in Khuzistan and his knowledge of the region in dispute would procure him employment in some form or other at the embassy. His first reception there was not encouraging; but when his funds were exhausted, and he was about to leave for England, he received an offer from Stratford Canning (afterwards Viscount Stratford de Redcliffe) [q.v.], the British ambassador to Turkey, that he should travel unofficially through Western Turkey and report to him on the state of affairs. This offer, which he readily accepted, was the turning-point in Layard's fortunes. His financial difficulties ceased, and in Canning he obtained an influential patron who put him in the way of his future discoveries. Continuing to employ Layard privately, Canning, in the spring of 1844, sent him on a mission to Northern Albania. Meanwhile he had recommended him for an appointment at the embassy, but, as the suggestion met with opposition at the foreign office, he found other employment for his *protégé*. Canning took a keen interest in archaeology. He had read the memoir of Claudius James Rich [q.v.] on the site of Nineveh, and when Layard described to him the mounds which he had examined with Botta he decided to undertake the exploration of that site. He used his influence with the Porte to obtain the necessary firman; he paid Layard a salary of 200*l.* a year; and he placed at his disposal an additional sum for defraying the cost of excavation (see *LAND-POOLS, The Life of Stratford Canning*, ii. 137*f.*). In the early part of October 1845 Layard received his final instructions, and left Constantinople for Mosul.

Tradition had always pointed to the mounds opposite the modern town of Mosul as marking the site of the ancient city of Nineveh (see YÄQTÛ, ed. Wüstenfeld, iv. 683), and Layard was not the first to examine or explore them. In 1820 and 1821 Olandius James Rich had begun the investigation, and had identified the mounds of Kuyunjik and Nebi-Yunus with Nineveh. Botta, however, was the first to undertake systematic excavations at Kuyunjik. During three months in 1843 he opened trenches in this mound, but as he did not meet with encouraging results he transferred his operations to Khorsabad, the site of Dâr Sharrukîn, the city of Sargon II. The fine sculptures which he there dug up led him to form the erroneous belief that Khorsabad, and not Kuyunjik, was the site of Nineveh, and Layard fell into a similar error when he opened the mound at Nimrûd and wrongly identified it with Nineveh. It was not until the inscriptions found later on at Kuyunjik had been deciphered by Sir Henry Creswicke Rawlinson [q. v.] and others that Rich's view was once again acknowledged to be correct. Nimrûd was afterwards identified as the site of the Assyrian city of Calah. The large mound of Nimrûd, to which Layard, influenced by Botta's want of success at Kuyunjik, turned his attention, lies near the village of that name on the left bank of the Tigris, about twenty miles south-east of Mosul. He continued to dig there until the summer of 1846, uncovering what were subsequently identified as parts of the palaces of Ashurnasir-pal, Esarhaddon, and Shalmaneser II, which were situated respectively in the north-west and south-west corners and in the centre of the mound. Layard made periodical reports of his progress to Canning, who in May procured from the Turkish government a letter authorising the continuation of the excavations and the removal of such objects as might be discovered. Layard therefore had the bas-reliefs sawn in half to lighten their weight, and the sculptured portions were floated down the Tigris to Basra for transport to England. Meanwhile Canning perceived that his own means would not suffice to carry out the excavations with success, and it was in consequence of his representations to Sir Robert Peel, the prime minister (see *Life of Canning*, ii. 149 f.), that operations were continued by the trustees of the British Museum. The sultan had made a personal gift to Canning of the antiquities which had hitherto been found; these Canning generously presented to the nation, and the trustees of the museum availed themselves

of his advice with regard to the future conduct of the excavations.

At the beginning of November 1846 work was resumed at Nimrûd on a more extensive scale for the British Museum, and Layard also superintended excavations at Kalât Sherkat (the site of the city of Ashur), and for a few weeks in the following spring at Kuyunjik. In June 1847 Layard left Mosul for England, where he prepared an account of the excavations with the assistance of Samuel Birch [q. v. Suppl.] of the British Museum. The work was entitled 'Nineveh and its Remains' (1848-9), for Layard incorrectly believed that Nimrûd was within the precincts of Nineveh. The book made a great sensation, and in recognition of his discoveries Layard received the honorary degree of D.O.L. from the university of Oxford on 5 July 1848. It is a curious fact, however, that, like Botta's 'Monuments de Ninive,' the book had in reality little to do with Nineveh or its remains.

On 5 April 1849 Layard was appointed an attaché to the embassy at Constantinople, whither he returned; and in October of that year he again superintended excavations for the trustees of the British Museum, a grant of 8,000*l.* having been placed at their disposal by the treasury for this purpose. For more than a year work was carried on, and palaces of Sennacherib and Ashur-bani-pal at Kuyunjik and a palace of Sennacherib and Esarhaddon at Nebi-Yunus were partly uncovered. In the spring of 1851 Layard returned to England, and the excavations were continued by Rawlinson, then consul general, and the political agent of the East India Company at Baghdad. Layard published an account of his second series of excavations in his work 'Nineveh and Babylon,' which appeared in 1853. Layard's discoveries brought him very wide reputation. He was presented with the freedom of the city of London in 1853, and in 1855 he was elected lord rector of Marischal College, Aberdeen.

He did not return to Mesopotamia after 1851. Thenceforth he devoted himself to politics, in which his main interests were confined to the affairs of Eastern Europe. From 12 Feb. to 18 May 1853 he held the post of under-secretary for foreign affairs under Lord Malmesbury. On 7 July 1852 he was returned as a liberal for Aylesbury. He represented Aylesbury until 1857, but while he held the seat he was absent from England for some time. In 1853 he visited at Constantinople Lord Stratford de Redcliffe (Sir Stratford Canning), his former patron, and, proceeding to the Black Sea in the follow-

ing year on the outbreak of the Crimean war, witnessed the battle of the Alma from the maintop of H.M.S. *Agamemnon*. On his return to England he gave evidence before the committee of inquiry with regard to the condition of the British army at Sebastopol. After losing his seat for Aylesbury at the general election in March 1857, he made a tour in India during the latter part of that year and 1858, in order to study the causes and effects of the Indian mutiny. In April 1859 he unsuccessfully contested York, but in December 1860 was returned as one of the members for Southwark. In July 1861 he again became under-secretary for foreign affairs in Lord Palmerston's administration, in which Lord John (first earl) Russell was foreign secretary. On Palmerston's death in October 1865, Layard continued to hold the same office in Lord Russell's administration, in which Lord Clarendon was foreign secretary, and he resigned with the ministry in July next year. In December 1868, when Gladstone had become prime minister for the first time, Layard was appointed to the post of chief commissioner of works, and was admitted to the privy council. In November of the following year he resigned that office, and his career as a politician was brought to an end by his acceptance of the post of British minister at Madrid.

Layard was in agreement with Lord Beaconsfield's political opinions in regard to Eastern Europe. On 31 March 1877 he was accordingly transferred by Lord Beaconsfield from Madrid to Constantinople, in succession to Sir Henry George Elliot. Within a month of his arrival the Russo-Turkish war broke out, and his action soon became the theme of excited controversy among politicians at home. His sympathies were undoubtedly with Turkey, but in a despatch to the foreign minister, Lord Derby, of February 1878, he solemnly denied reports that he had encouraged Turkey to commence or continue the war, or had led her to believe that England would give her material support. He declared he had always 'striven for peace,' and for 'the cause of religious and political liberty.' In June 1878 he negotiated the Anglo-Turkish convention for the British occupation of Cyprus. In June 1878 he received the order of the grand cross of the Bath as a mark of recognition of his advocacy of Lord Beaconsfield's imperial views. In April 1880 a general election took place in England, and it resulted in the resignation of Lord Beaconsfield and his ministry, and in the formation of Gladstone's second administration. Thereupon Layard

received leave of absence from his post at Constantinople, and his official career came to an end. In May Mr. G. J. (now Viscount) Goschen was sent to Constantinople in his place as special ambassador and minister-plenipotentiary of Great Britain. In his later years Layard lived much in Italy, chiefly at Venice, where he was well known as a social figure and an authority on art, which had always been a subject of his close study. His interest in Italian art was very deep. In February 1866 he was appointed a trustee of the National Gallery, and he became honorary foreign secretary of the Royal Academy of Arts. He died in London on 5 July 1894. His remains were cremated and buried at Woking on 9 July. In 1869 he married Mary Evelyn, daughter of Sir John Guest; she survived him.

Two portraits of Layard in crayon were made by Mr. G. F. Watts, R.A., the one for Mr. John Murray in 1848, the other a few years later for Layard's own collection of pictures; the former portrait is reproduced in 'Early Adventures' (2nd edit.) A coloured picture of Layard, taken in 1843, forms the frontispiece to 'Early Adventures' (1st edit.)

Layard made a greater reputation as an excavator than as a politician or a diplomatist, but he was without the true archaeologist's feeling—a fact which is sufficiently proved by 'his presenting to his friends neatly cut tablets containing fragments of cuneiform inscriptions, which, of course, left serious lacunae in priceless historical documents' (*Athenaeum*, 14 July 1891). His best-known works are those that deal with his excavations. The excavations at Nimrod were described in 'Nineveh and its Remains' (1849, 2 vols.); and 'Discoveries in the Ruins of Nineveh and Babylon' (1853) recounts his second series of excavations; these were his principal works. Drawings of the excavated bas-reliefs were published in two series of plates entitled 'The Monuments of Nineveh' (1849) and 'A Second Series of Monuments of Nineveh' (1853). In 'Inscriptions in the Cuneiform Character from Assyrian Monuments' (1851) he printed, with Sir H. O. Rawlinson's assistance, copies of a few of the monumental texts from his diggings, but he took no part in the decipherment of the inscriptions—a work which was carried out by Rawlinson, Dr. Hinckley, M. Jules Oppert, and others. In 1861 an abridgement of 'Nineveh and its Remains' was published for the railway bookstalls, under the title 'A Popular Account of Discoveries at Nineveh,' a second edition of which was produced in 1867 under the old title, 'Nineveh and its Remains,' together

with a companion volume, 'Nineveh and Babylon,' containing a similar abridgment of his other work. In 1854 he wrote a small guide to the Nineveh Court in the Crystal Palace. In 1887 he published an account of his life between the years 1839 and 1845 under the title 'Early Adventures in Persia, Susiana, and Babylonia' (abridged edition, 1894).

Layard also wrote much on art. In 1887 he revised Kugler's 'Handbook of Painting,' in 1892 he wrote an introduction to a translation of Morelli's 'Italian Painters,' and he edited a 'Handbook of Rome' (1894). He also contributed some papers to the 'Proceedings' of the Ilugonot Society, of which he was president, and some of his speeches in the House of Commons were issued in pamphlet form. In 1890 he was elected a foreign member of the Institut de France. Layard's 'Autobiography' was edited by the Hon. W. N. Bruce, with a chapter by Sir Arthur Otway, in 1903.

[Layard's Autobiography, 1903; Fragments of autobiography in Layard's Early Adventures (1st ed.), Nineveh and its Remains (1st ed.), and Nineveh and Babylon (1st ed.); Lane-Poole's Stratford Canning, vol. ii.; Lord Aberdare's Prefatory Notice to the abridged edition of Layard's Early Adventures; Times, 6 July 1894, and Athenæum, 14 July 1894.] L. W. K.

LAYER, JOHN (1685?-1641), Cambridge antiquary, born in 1685 or 1686, probably at Lillinge Ambo in the North Riding of Yorkshire, was the son of William Layer, a London merchant, by his wife Martha, daughter and heiress of Thomas Wanton. He was educated as a lawyer, but possessed sufficient wealth to enable him to devote most of his time to antiquarian pursuits. He resided at Shepreth in Cambridgeshire. His parochial history of Cambridgeshire is one of the earliest of the kind written. It was never published, but parts of it are still preserved in the British Museum among the Harleian MSS. (No. 6768), which contains a transcript of the portion relating to the hundreds of Armingford, Long Stowe, Papworth, North Stowe, Ohesterton, Wetherley, Thripowe, and among the Additions MSS. (Nos. 5810, 5823, 5849, 5954). Other portions of it are extant in the Bishop's Library at Ely, and at the library at Wimpole Hall, Cambridge. His extracts from the registers of the Bishop of Ely are in the British Museum (*Addit. MSS.* 5824-5828), and his Cambridge pedigrees are in the same library (*Addit. MS.* 5812). An autograph manuscript volume by Layer, licensed for printing and entitled 'The Reformed Justices, or an Alphabetical Abstract of all

such Articles and Matters as are incident and enquirable at the generall quarter Sessions of the Peace or otherwise belonging to the knowledge and practice of a Justices of the Peace,' is in the library of Caius College, Cambridge. It is a handbook for justices of the peace, and is dedicated to Sir John Cutts, 'Custos rotulorum for the county of Cambridge' in 1683. In an epistle to the reader notice is taken of a book recently published, entitled 'The Compleat Justice,' of which Layer was the reputed author. This work is not extant, but a copy of a legal treatise by Layer entitled 'The Office and Duty of Churchwardens, Constables, and Overseers of the Poor' (Cambridge, 1641, 8vo), is preserved in the Bodleian Library. One of Layer's notebooks is among the Rawlinson MSS. in the Bodleian Library (B. 278), and another entitled 'Notes of the Foundation of several Religious Houses from the Collections of John Layer' is in Dodsworth MS. 90 (pp. 158-60).

Layer died in 1641. He married in 1611 Frances, daughter of Robert Sterne of Malton in Cambridgeshire. By her he had three sons and two daughters. He may be truly called the father of Cambridge archaeology, and William Cole (1714-1782) [q.v.] owed much to his industry. After his death his manuscripts eventually fell into the hands of his descendant, John Eyre, who sold his estate at Shepreth and came to London. Eyre was afterwards convicted of felony and transported, when the manuscripts were dispersed. Several, however, fell into Cole's hands and were incorporated by him in his collections. An undated letter from W. Fairfax of Yorkshire to J. Layer is among the Bodleian MSS. (*Rawlinson*, B. 450, f. 390).

[Cole's Manuscript Collections for Cambridgeshire in the British Museum Library; notes kindly furnished by Mr. W. M. Palmer of Royston; Smith's Catalogue of Manuscripts in Caius College Library, 1849, p. 211; Catalogues of Manuscripts in the Bodleian Library.]

E. I. C.

LEATHES, STANLEY (1830-1900), hebraist, son of Chaloner Stanley Leathes, rector of Ellesborough, Buckinghamshire, was born at Ellesborough on 21 March 1830. He was educated privately and at Jesus College, Cambridge, in which university he graduated B.A. in 1852, was elected first Tyrwhitt's Hebrew scholar in 1853, and proceeded M.A. in 1855. In 1856 he was elected honorary fellow of Jesus College. He was ordained deacon in 1856 and priest in 1857, and was curate successively of St. Martin's, Salisbury (1856-8), St. Luke's,

Berwick Street, Westminster (1858), and St. James's, Westminster (1858-60), in which last parish he was appointed in 1860 to the freehold office of 'clerk in orders,' to that of priest and assistant in 1865, and to the perpetual curacy of St. Philip's, Regent Street, in 1869. He was elected in 1863 professor of Hebrew at King's College, London, and in 1870 member of the Old Testament revision committee, in the labours of which he took an assiduous part until their conclusion in 1885. He was Boyle lecturer 1868-70, Hulsean lecturer 1873, Bampton lecturer 1874, and Warburton lecturer 1876-1880. He was installed prebendary of Caddington Major in St. Paul's Cathedral in 1876, and instituted in 1880 to the rectory of Cliffe-at-Elloo, Kent, which he exchanged in 1889 for the more valuable benefice of Much Hadham, Hertfordshire, where he died on 30 April 1900.

Leathes's churchmanship was of the moderate type, equally removed from ritualism and rationalism (see his *Unity of the Church*, a sermon, London, 1868, 8vo; *Future Probation*, London, 1876, 8vo; and 'Life and Times of Irenæus' in *Lectures on Ecclesiastical History*, ed. Dean Lefroy, London, 1896, 8vo). He was a sound Hebrew scholar, a singularly cautious critic, and a sober but uncompromising apologist. The following are his principal works: 1. 'The Birthday of Christ: its Preparation, Message, and Witness. Three Sermons preached before the University of Cambridge,' Cambridge, 1866, 8vo. 2. 'A Short Practical Hebrew Grammar; with an Appendix containing the Hebrew Text of Gen. i-vi. and Psalms i-vi.,' London, 1868, 8vo. 3. Boyle Lectures' (three series): 'The Witness of the Old Testament to Christ,' London, 1868, 8vo; 'The Witness of St. Paul to Christ,' London, 1869, 8vo; 'The Witness of St. John to Christ,' London, 1870, 8vo. 4. 'The Evidential Value of St. Paul's Epistles,' a lecture printed in 'Modern Scepticism,' London (C.E.S.), 1871, 8vo. 5. 'Truth and Life; or, Short Sermons for the Day,' London, 1872, 8vo. 6. 'The Cities visited by St. Paul,' London (S.P.O.K.), 1873, 8vo. 7. 'The Structure of the Old Testament: a series of Popular Essays,' London, 1883, 8vo. 8. Hulsean Lectures: 'The Gospel its own Witness,' London, 1874, 8vo. 9. Bampton Lectures: 'The Religion of the Christ: its Historic and Literary Development considered as an Evidence of its Origin,' London, 1874, 8vo. 10. 'The Christian Creed: its Theory and Practice,' London, 1877, 8vo. 11. 'Grounds of Christian Hope: a Sketch of the Evidences of

Christianity,' London (R.T.S.), 1877, 8vo. 12. 'The Relation of the Jews to their own Scriptures,' in 'The Jews in relation to the Church and the World,' ed. Cloughton, London, 1877, 8vo. 13. 'Studies in Genesis,' London, 1880, 8vo. 14. Warburton Lectures: 'Old Testament Prophecy: its Witness as a Record of Divine Foreknowledge,' London, 1880, 8vo. 15. 'The Foundations of Morality: being Discourses on the Ten Commandments, with special reference to their Origin and Authority,' London, 1882, 8vo. 16. 'Characteristics of Christianity,' London, 1884, 8vo. 17. 'Christ and the Bible. Four Lectures,' London, 1885, 8vo. 18. 'The Law in the Prophets,' London, 1891, 8vo. 19. 'The Testimony of the Earlier Prophetic Writers to the Primal Religion of Israel,' in 'Present Day Tracts,' vol. xiv., London, 1898, 8vo.

J. M. R.

LE CARON, MAJOR HENRI. [See BEACH, THOMAS, 1841-1894.]

LECLERCQ, CARLOTTA (1840?-1893) actress, elder daughter of Charles Leclercq, actor and pantomimist, was born in London about 1840. A brother Charles (d. 20 Sept. 1804) was a member of Daly's company, and well known both in London and New York. Other members of the family were connected with the stage. Her sister Rose is noticed below.

Carlotta acted at the Princess's as a child. She was in 1853 Maddalena in 'Marco Spada,' and in the following years played Marguerite in 'Faust and Marguerite,' Elvira in the 'Muleteer of Toledo,' with other parts; was Ariel in the 'Tempest,' Nerissa in the 'Merchant of Venice,' Mrs. Ford and Mrs. Page in the 'Merry Wives of Windsor,' Rosalind, &c. Her original parts included Diana in 'Don't Judge by Appearances,' and Mrs. Savage in Brougham's 'Playing with Fire.' With Charles Albert Fechter [q. v.] at the Lyceum she played Zillah in the 'Duke's Motto,' Madame de Pompadour in the 'King's Butterfly,' Lucy Ashton in the 'Master of Ravenswood,' Ophelia and Pauline Deschappelles. With him at the Adelphi she was Mercedes in 'Monte Cristo' and Emily Milburn in 'Black and White.' She accompanied Fechter to America, returned in 1877, and married John Nelson, an actor. She played with her husband principally in the country until his death on 25 July 1879. Thenceforward she was rarely seen in London. She died in August 1893.

Her younger sister, **ROSE LECLERCQ** (1845?-1899), was born in Liverpool about 1845, and was on 28 Sept. 1861 at the Princess's the first Mrs. Waverley in 'Playing with Fire.' She was at Drury Lane the original Mary Vance in Mr. Burnand's 'Deal Batman,' and played Astarte in 'Manfred' (10 Oct. 1868). At the Princess's (August 1838) she was Eliza in 'After Dark,' and at the Adelphi Kate Jessop in 'Lost at Sea.' She was Desdemona to the Othello of Phelps, was an admirable Mrs. Page, and was at Drury Lane the first Clara Ffolliott in the 'Shaughran.' At the Vaudeville she was Sophia in an adaptation of 'Tom Jones,' at the Haymarket was Marie Lezinski in the 'Pompadour,' Lady Staunton in 'Captain Swift,' and Madame Fourcannard in 'Esther Sandray,' at the Garrick the Queen in 'La Tosca,' and at the Strand La Faneuse in the 'Illusion' of her brother Pierre. She was the original Evelina Foster in 'Bean Austin,' Lady Dawtry in the 'Dancing Girl,' Marchioness in the 'Amazons,' Lady Ringstead in 'The Princess and the Butterfly,' Mrs. Fretwell in 'Sowing the Wind,' and Lady Wargrave in the 'New Woman.' Her last original part was Mrs. Beedlinor in Mr. R. A. Jones's 'Manceuvres of Jane,' produced at the Haymarket on 29 Oct. 1898. She played this character on 25 March 1899, and died on 2 April. Both the Leclercqs developed into good actresses. Rose Leclercq in her later days had a matchless delivery, and was the best, and almost the only, representative of the grand style in comedy. By her husband, Mr. Fuller, she was the mother of the actor, Mr. Fuller Mellich.

[Personal recollections; Pascoe's *Dramatic List*; *Dramatic Peerage*; Scott and Howard's *Blanchard*; Hollingshead's *Gaiety Chronicles*; Cook's *Nights at the Play*; *Athenæum*, *Era*, *Sunday Times*, and *Era Almanack*, various years.]

LE DESPENCER, BARON. [See DASHWOOD, SIR FRANCIS, 1708-1781.]

LEE, HOLME, pseudonym. [See PARR, HARRIET, 1828-1900.]

LEGGE, JAMES (1815-1897), professor of Chinese at the university of Oxford, son of Ebenezer Legge, was born at Huntly in Aberdeenshire in 1815. He was educated at the Aberdeen grammar school, and graduated M.A. at King's College, Aberdeen, in 1836. From his earliest years he had desired to enter the missionary field, and for the furtherance of this object he, at the completion of his course at Aberdeen, came to London and studied at the theological col-

lege at Highbury. In 1839 he was appointed by the London Missionary Society to the Chinese mission at Malacca, where he remained until the treaty of 1842 enabled him and others to begin missionary work in China. In 1840 he was appointed principal of the Anglo-Chinese College at Malacca, which Robert Morrison [q.v.] had founded in 1825, and in the following year the council of the university of New York conferred on him the degree of D.D. In 1843 he landed in the newly established colony of Hongkong, and took part in the negotiations which ended in the conversion of the Anglo-Chinese college into a theological seminary and its removal to Hongkong. There he resumed his position as principal. His health having broken down, he paid a visit to England in 1845, and three years later returned to Hongkong, where, in addition to his missionary work, he undertook the pastoral charge of an English congregation. In 1868 he paid another visit to England, and in 1873 he returned permanently to this country, resigning the principalship and other posts. In 1870 the degree of LL.D. was conferred on him by the university of Aberdeen, and in 1884 the same honour was granted him by the university of Edinburgh. In 1875 a number of merchants interested in China, and others, collected a fund for the endowment of a Chinese professorship at Oxford, on the understanding that Legge should be the first occupant of the chair. The university accepted the arrangement, appointed him professor, and the authorities of Corpus Christi College elected him a fellow of their college. His inaugural lecture was published in 1876. At Oxford he remained until his death. He died at his residence in Keble Road on 29 Nov. 1897. Legge was twice married: first, on 30 April 1839, to Mary Isabella, daughter of the Rev. John Morison; and secondly, in 1859, to Hannah Mary, daughter of John Johnstone, esq., of Hull, and widow of the Rev. G. Willetts of Salisbury. By both wives he left children.

Legge was a voluminous writer both in Chinese and English, and did much to instruct his fellow-countrymen and continental scholars in the literature and religious beliefs of China. He bore a leading part in the controversy as to the best translation into Chinese of the term 'God,' and published a volume called 'The Notions of the Chinese concerning God and Spirits' (Hongkong and London, 1862, 8vo). But the great work of his life was the edition of the Chinese classics—the Chinese text, with translation, notes, and proface. This task he began in 1841, and finished shortly before his death.

The publications of his labours commenced in 1861, when there appeared 'Confucian Analecta: Doctrine of the Mean and Great Learning,' and 'Works of Mencius.' There quickly followed 'The Shoo-king, or Book of Historical Documents,' 1866, 4th edit, 1875; 'The Shi-king, or Book of Poetry,' London, 1871, 8vo; and 'The Ch'un Ch'iu: with the Tso Chwan,' 1872. He received the Julien prize from the French Institut in 1875 for these works. In 1876 there appeared 'The Book of Ancient Chinese Poetry in English Verse.' The last volumes of Legge's edition of the Chinese classics appeared in the series called 'The Sacred Books of the East,' which Friedrich Max Muller [q. v. Suppl.] edited for the Clarendon Press. To this series Legge contributed vols. iii. xvi. xxvii. xxviii. xxxix. xl., Oxford, 1879-1884, 8vo. Of these the first four volumes dealt with the 'Texts of Confucianism,' and the last two with the 'Texts of Taoism.' Legge's other writings on Chinese literature and religion were: 1. 'The Life and Teaching of Confucius,' London, 1867; 4th edit. 1875. 2. 'The Life and Teaching of Mencius,' London, 1875. 3. 'The Religions of China: Confucianism and Taoism,' described and compared with Christianity,' London, 1880, 8vo. 4. 'Record of Buddhist Kingdoms: Travels of the Buddhist Pilgrim, Fa-hsien, in India,' London, 1886, 4to. 5. 'The Nestorian Monument of Ilsi-an-fu in Shen-Ilsi, China, relating to the Diffusion of Christianity in China in the Seventh and Eighth Centuries, with a Sketch of subsequent Missions in China,' London, 1888, 8vo.

R. K. D.

LEIGHTON, FREDERIC, BARON LEIGHTON OF STURTON (1830-1896), president of the Royal Academy of Arts, was born at Scarborough on 3 Dec. 1830. His family came originally from Shropshire. His grandfather and father were both physicians. His grandfather James (afterwards Sir James) Boniface Leighton was invited to the Russian court, and was court physician under both Alexander I and Nicholas I. His son Frederic Septimus (1800-1892) was educated for the medical profession at Edinburgh, and practised successfully until about 1848, when increasing deafness compelled him to retire. He settled for a time at Bath, but afterwards returned to Scarborough, and finally to London, where he died on 24 Jan. 1892. In spite of the physical disability just mentioned, he was a man of great social talent and of most agreeable manners. His wife, Lord

Leighton's mother, was Augusta Susan, daughter of George Augustus Nash of Edmonton.

The young Frederic Leighton showed an early love for drawing and filled many books with his sketches, but these do not seem to have been of a kind to impress his family very profoundly, and his father, it must be said, disliked the idea of art as a profession. While the boy was still very young, his mother's delicate health gave him his first chance of seeing foreign countries. The family travelled abroad, and in the year 1839, before Frederic was ten years old, he found himself one day in the studio of George Lance in Paris. From this visit his father's acceptance of the idea that possibly nature had made the boy an artist appears to date. Dr. Leighton determined, however, that his choice should not be limited by any one-sided education. In London, Rome, Dresden, Berlin, Frankfurt, and Florence, his education was pursued, with the result that, in one particular at least, it was vastly more thorough than usual with an English boy of his condition. He became an accomplished linguist, speaking the four chief modern languages with almost equal facility. It was in Florence in 1844 that his profession was finally settled. Dr. Leighton consulted Hiram Power, the sculptor of 'The Greek Slave,' as to whether he should make his son an artist. 'Sir,' said Power, 'Nature has done it for you,' adding that the boy could become 'as eminent as he pleased.'

Work was begun in earnest in the Accademia delle Belle Arti, under Bezzuoli and Servolini, whose influence did little but harm. Leighton soon left Florence for Frankfurt, where he resumed his general education. At the age of seventeen he finally left school, and worked at art for a year in the Stædal Institute. In 1848 he moved with his family to Brussels, where he painted one or two pictures, including a 'Cimabue finding Giotto.' In 1849 he was in Paris, copying pictures in the Louvre, and attending a so-called school of art in the Rue Richer. Leighton's individuality was not robust enough for such constant change, and it is probable that he would have been a greater artist than he was, had his early training been more favourable to concentration. His real and serious studentship began only after he left Paris, when he was already in his twentieth year. He returned to Frankfurt, and there worked strenuously for three years under Johann Eduard Steinle (1810-1886), of whom he ever afterwards spoke as his only real master. While under Steinle he painted several pictures, the most notable perhaps 'The Plague

of Florence,' a cartoon founded on Boccaccio's description.

Late in 1852 he went to Rome, where his pleasant manners and varied accomplishments won him hosts of friends, among whom Thackeray, George Sand, Lord Lyons, Gibson, George Mason, Hébert, Mrs. Kemble, Stérome, Bouguereau, and others. It was after meeting him here that Thackeray wrote to Millais, who was Leighton's senior by rather more than a year, 'I have met in Rome a versatile young dog who will run you hard for the presidentship one day.' Soon after he arrived in Rome, Leighton began work on the picture with which he was to draw public attention to himself for the first time. This was 'Cimabue's "Madonna" carried in Procession through the Streets of Florence,' now in Buckingham Palace. It was at the academy in 1855, and was bought by Queen Victoria for 600*l*. After a happy and triumphant season in London, Leighton went to Paris, where he came under the spell of yet another quasi genius in Robert Fleury. On his return to London in 1858, he became intimate with the members, then shaking apart, of the Pre-Raphaelite brotherhood, an intimacy to which perhaps we owe the famous drawings of 'A Lemon Tree' and 'A Byzantine Well-head,' which drew such inevitable praise from John Ruskin [q. v. Suppl.] The 'Lemon Tree' drawing was made in Capri in 1859. In 1860 Leighton established himself at 2 Orme Square, Bayswater, which remained his home until he moved into his famous house in Holland Park Road. Between 1860 and 1866 he was a steady exhibitor at the Royal Academy, his chief contributions being 'Paolo and Francesca,' 'The Odalisque,' 'Dante at Verona,' 'Orpheus and Eurydice,' 'Golden Hours,' and 'A Syracusan Bride loading Wild Beasts in Procession to the Temple of Diana.' In 1864 he was elected an A.R.A., and immediately justified his election by exhibiting his 'Venus disrobing for the Bath,' an essay in the nude which perhaps he never excelled. This year, 1866, was an eventful one in his career, for it saw his migration to the fine house in Holland Park Road, Kensington, which was built for him by Mr. George Aitchison, R.A., and also the completion of his fine wall-painting in Lyndhurst church, 'The Parable of the Wise and Foolish Virgins.'

In 1868 Leighton made the Nile tour in company with Lessops, who was then nearing the conclusion of his own great work. This journey led to a little dabbling in oriental subjects, which, however, took no great hold on his imagination. In 1869

he was elected a royal academician, exhibiting 'Electra at the Tomb of Agamemnon' and 'Dædalus and Icarus,' and painting a St. Jerome as his diploma picture. In 1870 the winter exhibitions, which owed much to his advocacy, were started at Burlington House. The two succeeding summer exhibitions contained three of Leighton's best pictures, the 'Hercules wrestling with Death for the Body of Alceste,' 'The Condottiere,' and 'The Summer Moon.' In 1873 he paid a second visit to the East, the outcome of which was a series of oriental pictures, 'The Egyptian Slinger' and 'The Moorish Garden' being perhaps the best. The creation by which, in some quarters, Leighton is best known had its origin in this eastern tour. He collected a number of fine Persian tiles, and was smitten with the desire to make appropriate use of them. Hence the famous Arab hall in his house at Kensington. To the next few years belong some of his best pictures, e.g. the 'Daphnephoria' and the 'Portrait of Sir Richard Burton' (1876), 'The Music Lesson' (1877), 'Winding the Skies,' and 'Nausicaa' (1878). In 1877 he burst on the world as a sculptor, exhibiting the 'Athlete struggling with a Python,' which is now in the gallery at Millbank.

In 1878 Sir Francis Grant [q. v.] died, and Leighton succeeded him as president of the Royal Academy, the usual knighthood following his election (25 Nov. 1878). As president he completely realised the hopes of his friends. Punctual almost to a fault, tactful, energetic, and equal to every social demand that could be made upon him, he filled the office with extraordinary distinction in the eyes both of his fellow-countrymen and of strangers. And yet the years which followed his election were among the most prolific of his artistic career. Between 1878 and 1896, when his activity was abruptly closed by disease, he painted the two fine wall-pictures in the Victoria and Albert Museum; he completed his second statue, 'The Sluggard,' which now stands at Millbank as a pendant to the 'Athlete with a Python,' as well as a charming statuette, 'Needless Alarms,' which he presented to Sir John Millais; and sent the following pictures, among others, to the exhibition of the Royal Academy: 'Biondina' (1879), 'Portrait of Signor Coeta' and 'Sister's Kiss' (1880), his own portrait for the Uffizi (1881); 'Wedded,' 'Daydreams,' and 'Phryne at Elusis' (1882), 'Cymon and Iphigenia' (1884), 'Portrait of Lady Sybil Primrose' (1885), 'The Last Watch of Hero' (1887), 'Captivo Andromache' (1888), 'Greek Girls playing Ball' (1889),

'The Bath of Psyche' (1890; Millbank Gallery), 'Perseus and Andromeda' (1891), 'The Garden of the Hesperides' (1892), and 'Rizpah' (1893). His last important works were the wall decoration on canvas for the Royal Exchange, 'Phœnicians trading with the Britons,' finished in 1895, and an unfinished 'Clytie,' which was at the 1896 academy. On 11 Feb. 1886 Leighton had been created a baronet.

Early in 1895 his health had given disquieting signs of collapse. He was ordered to cease all work, and to take rest in a warm climate. Prompt obedience to his doctor gave him temporary relief from his most distressing symptoms. Sir John Millais, who was himself beginning to suffer from the disease which was afterwards to prove fatal, took his place at the academy dinner, and did what he could to lighten his colleague's anxieties. It was hoped that these prompt measures had proved more or less effectual, and when Leighton returned to England late in 1895, the immediate danger was thought to have passed away. On 1 Jan. 1896 it was announced that he was to be raised to the peerage as Baron Leighton of Stretton. His patent bore date 24 Jan., and on the following day Leighton died at his house in Holland Park Road; his peerage, which 'existed but a day, is unique' (G. E. C[oxayne], *Complete Peerage*, viii. 245). He was buried on 8 Feb. in St. Paul's, the coffin being inscribed with his style as a peer.

Lord Leighton was an honorary D.C.L. of Oxford, a LL.D. of Cambridge, and a LL.D. of Edinburgh, all of which degrees were conferred in 1879. He was a member of many foreign artistic societies. He was president of the international jury of painting for the Paris Exhibition of 1878. He was a member of the Society of Painters in Watercolours from 1888 onwards. He was for many years colonel of the artists' regiment of volunteers, but resigned the post in 1883. He was unmarried. His heirs were his two sisters, Mrs. Sutherland Orr and Mrs. Matthews. After his death a movement was set afoot to establish a memorial museum in his own house in Kensington, a project which, in spite of controversy, was realised. A large number of those drawings and studies on which his fame will rest perhaps most securely in the future have found a home in what was once his studio.

It is recorded that Leighton used to assert of himself that he was not a great painter. 'Thank goodness,' he also declared, 'I was never clever at anything!' The first of these assertions was truer than the second. He

was not a great painter. He lacked both temperament and creative power, and had nothing particular to say with paint. On the other hand he saw beauty and could let us see that he saw it. He was clever in the best sense, and by dint of taking thought could clothe his intentions in a pleasant envelope. Occasionally he failed disastrously through pure lack of humour, as, for instance, in his 'Andromeda'; on the other hand, the frankness of his objective admirations led him occasionally to success of a very unusual kind in such pictures as 'Summer Moon,' 'The Music Lesson,' and 'Wedded.' In spite of his training under various good draughtsmen, Leighton was not a great draughtsman himself. His forms were soft, the *attaches* especially—wrists, ankles, &c.—being nerveless and inefficient, a fault which was accentuated by the unreality of his textures. But in design, as distinguished from draughtsmanship, he is often as nearly great as a man without creative genius can be. His studies of drapery are exquisite, and nothing could well be more rhythmical than the organisation of line in such pictures as the three just mentioned. Leighton contributed designs to George Eliot's novel of 'Romola' and to 'Dalziel's Bible,' which take a very high place among illustrations in black and white; also one design each for Mrs. Browning's poem, 'The Great God Pan,' and Mrs. Sarteris's 'Week in a French Country House,' both published in the 'Cornhill Magazine.'

Lord Leighton delivered biennially eight discourses at the Royal Academy between 1879 and 1893. They formed a series tracing the development of art in Europe, and dealing philosophically with the chief phases through which it passed; they were published as 'Addresses delivered to Students of the Royal Academy,' London, 1896, 8vo; 2nd ed. 1897.

The contents of Lord Leighton's studio were sold at Christie's in July 1896, when the studies, especially those of landscapes in oil, were eagerly competed for. A catalogue of his principal works is appended to this short biography by Mr. Ernest Rhys, published in 1900.

His portrait by himself is in the famous collection of artists' portraits in the Uffizi at Florence; another, by G. F. Watts, R.A., is in the National Portrait Gallery, London.

[Times, 26 Jan. 1896; Athenæum, January 1896; Life and Work of Sir Frederic Leighton, P.R.A., by Helen Zimmern; Frederic, Lord Leighton, by Ernest Rhys, 1896; private information.] W. A.

LE KEUX, JOHN HENRY (1812-1898), architectural engraver and draughtsman, son of John Lo Keux [q. v.], was born in Argyll Street, Euston Road, London, on 23 March, 1812. After studying under James Basire [see under BASIRE, ISAAC, 1704-1768], he worked for a time as assistant to his father. He engraved the plates for many works of an architectural character, including Ruskin's 'Modern Painters' and 'Stones of Venice,' Weale's 'Studies and Examples of English Architecture' (Travellers' Club), 1839; C. H. Hartshorn's 'Illustrations of Alnwick, Prudhoe, and Warkworth,' 1857; and Parker's 'Medieval Architecture of Chester,' 1858. The Norwegian government employed him to execute thirty-one large plates of Trondhjem cathedral. Between 1853 and 1866 Le Keux exhibited architectural drawings at the Royal Academy. He contributed papers on mediæval arms and armour to the 'Journal of the Archaeological Institute' and similar publications. About 1864 he retired to Durham, where for many years he acted as manager to Messrs. Andrews, a firm of publishers with which his wife was connected. His latest work was the 'Oxford Almanack' for 1870. He died at Durham on 4 Feb. 1898, and was buried in St. Nicholas's Church in that city.

[Athenæum, 15 Feb. 1898.] F. M. O'D.

LENIHAN, MAURICE (1811-1895), historian of Limerick, was born on 8 Feb. 1811 at Waterford, where his father was a woollen merchant. He was one of a family of fifteen. His mother was a native of Carrick-on-Suir. His education began at Waterford, but from twelve to twenty he was at Carlow College, where he was a pupil of Dr. Daniel William Cahill [q. v.], and was known as a skilful player on the violin. On the completion of his education he began his career as a journalist by a connection with the 'Tipperary Free Press,' of which his cousin was proprietor. He was next attached to the 'Waterford Chronicle,' for which he wrote some stirring articles in favour of the agitation against tithes. In 1841, when the 'Limerick Reporter' was established, he was appointed editor, but early in 1843 left it to join the staff of the 'Cork Examiner,' the proprietor of which was John Francis Maguire [q. v.]. During his short residence in Cork Lenihan made the acquaintance of Father Mathew, who induced him to take the temperance pledge, and became his lifelong friend. At the end of a year he was asked by O'Connell and Bishop Power of Killaloe to conduct a paper

in the interests of the repeal movement at Nenagh; and O'Connell in a monster meeting at Limerick announced the establishment of the 'Tipperary Vindicator' under Lenihan's editorship. In this paper Lenihan exposed a police plot known as 'The Shinnon Conspiracy,' and obtained the dismissal of the detective Parker, who was its leader, and of eleven policemen who had assisted him. In 1849 he bought up the 'Limerick Reporter' and incorporated it with the 'Tipperary Vindicator.' This paper, published at Nenagh and Limerick, he continued to conduct with great ability on moderate nationalist lines till the closing years of his life.

Lenihan became much interested in the history of Limerick, and from time to time wrote for his paper articles dealing with the sieges. He gradually accumulated much material, and, encouraged by several well-known Irish antiquaries, among whom he was particularly intimate with Eugene O'Curry [q. v.], he in 1866 published at the suggestion of Patrick Leahy [q. v.], archbishop of Cashel, 'Limerick; its History and Antiquities.' This scholarly and well-written volume superseded the earlier works by Ferrar and Fitzgerald and John James Macgregor [q. v.]. Two of his primary authorities, the papers of the Rev. James White, and the Limerick manuscripts of John D'Alton [q. v.] he had in his own possession; and he was one of the first who had access to the manuscript works of Dr. Thomas Arthur [q. v.], the friend of Ware. He also consulted the chartulary of Edmund Sexton, and obtained valuable matter from the Carew MSS. through Lord Gort, and the papers in the possession of the Hon. John Verker. In addition to these a list of nearly 150 authorities utilised for the work is given in the preface. Good maps, copious appendices, and the index, so rare in Irish books, add much to its value.

Lenihan, besides contributing to periodicals, wrote an introduction to T. F. Arthur's 'Some Leaves from the Fee-book of a Physician,' 1874, 8vo. He had collected materials for histories of Tipperary and Clare, but they were never utilised. He took an active part in municipal affairs, was mayor of Limerick in 1884, and was named a justice of the peace by Lord O'Hagan, whose friendship he enjoyed. He was a member of the Royal Irish Academy and intimate with many of its leading members. He died on 25 Dec. 1895 at 17 Catherine Street, Limerick. His son, James Lenihan, succeeded him as editor and proprietor of his paper.

[Limerick Reporter, 31 Dec. 1895, with obituary notice from Limerick Chronicle; Times, 26 Dec. 1895; Brit. Mus. Cat.] G. L. G. N.

LENNOX, SIR WILBRAHAM OATES (1830-1897), goneral royal engineers, fourth son of Lord John George Lennox (1793-1873), second son of the fourth Duke of Richmond, was born on 4 May 1830 at Molacomb House, Goodwood, Sussex. His mother was Louisa Frederica (*d.* 12 Jan. 1863), daughter of Captain the Hon. John Rodney, M.P., third son of Admiral Lord Rodney. He was privately educated and, after passing through the Royal Military Academy at Woolwich, received a commission as second lieutenant in the royal engineers on 27 June 1848. His further commissions were dated: lieutenant 7 Feb. 1854, second captain 25 Nov. 1857, brevet major 24 March 1858, brevet lieutenant-colonel 26 April 1859, first captain 1 April 1863, brevet colonel 26 April 1867, regimental major 5 July 1872, lieutenant-colonel 10 Dec. 1873, major-general 13 Aug. 1881, lieutenant-general 12 Feb. 1883, general 28 June 1893.

Lennox went through the usual course of professional instruction at Chatham, served for a few months at Portsmouth, and embarked for Ceylon on 20 Nov. 1850. In August 1854 he went direct from Ceylon to the Crimea, where he arrived on 30 Sept., and was employed under Major (afterwards General Sir) Frederick Chapman [q. v. Suppl.] in the trenches of the left attack on Sebastopol, and had also charge of the engineer park of the left attack. He was present at the battle of Inkerman on 5 Nov., having come off the sick list for the purpose. On 20 Nov. he won the Victoria Cross 'for cool and gallant conduct in establishing a lodgment in Tryon's rifle pits, and assisting to repel the assaults of the enemy. This brilliant operation drew forth a special order from General Canrobert.' On 9 Dec. he was appointed adjutant to the royal engineers of the left attack. He acted as aide-de-camp to Chapman with Eyre's brigade at the attack of the Redan on 18 June, and was present in September at the fall of Sebastopol, after which he was adjutant of all the royal engineer force in the Crimea until the army was broken up. He arrived home on 5 Aug. 1856. For his services he was mentioned in despatches (*London Gazette*, 21 Dec. 1855), received the war medal with two clasps, the Sardinian and Turkish medall, the 5th class of the Turkish order of the Medjidie, and on 24 Feb. 1857 the Victoria Cross.

Lennox was adjutant of the royal en-

gineers at Aldershot until he again left England on 25 April 1857 as senior subaltern of the 23rd company of royal engineers to take part in the China war. On arrival at Singapore the force for China was diverted to India for the suppression of the mutiny, and Lennox reached Calcutta on 10 Aug. On the march to Cawnpore he took part on 2 Nov. in the action at Khajwa under Colonel Powell. The captain of his company was severely wounded on this occasion, and, Colonel Goodwyn of the Bengal engineers having fallen sick on 14 Nov., Lennox became temporarily chief engineer on the staff of Sir Colin Campbell. In this position he served at the second relief of Lucknow. He submitted a plan of attack which was adopted by Sir Colin. He took a conspicuous part in the operations, and the relief was accomplished on 17 Nov. He continued to act as chief engineer in the operations against the Gwalior contingent, and in the battle of Cawnpore on 6 Dec. He commanded a detachment of engineers at the action of Kali Naddi under Sir Colin Campbell on 2 Jan. 1858, and at the occupation of Pathghar. He was assistant to the commanding royal engineer, Colonel (afterwards Sir) Henry Drury Harness [q. v.], in the final siege of Lucknow from 2 to 21 March.

After the fall of Lucknow Lennox commanded the engineers of the column under Brigadier-general (afterwards Sir) Robert Walpole [q. v.] for the subjugation of Rohilkhand, was present at the unsuccessful attack on Fort Ruiya on 15 April, its occupation on the following day, and the action of Alaganj on 22 April. Having rejoined Lord Clyde he commanded the engineers at the battle of Barali on 5 May and the occupation of the town. In June Lennox took his company to Rurki, and in September to Allahabad, where he was appointed commanding engineer to the column under Lord Clyde for the subjugation of Oude. He was present at the capture of Amethi on 10 Nov., and of Shankarpur on the 16th, and at the action of Dundia Khara or Buxar on 24 Nov. On 30 Nov. he left Lucknow as commanding royal engineer of the column under Brigadier-general Eveleigh to settle the country to the north-east, and was present at the capture of Umria on 2 Dec. He commanded the 23rd company royal engineers at the action on 26 Dec. under Lord Clyde at Barjadua or Chandu in the Trans-Gogra campaign, at the capture of Fort Majadua on the 27th, and at the action at Banki on the Rapti on 31 Dec. Lennox was included in the list of officers honourably mentioned

for the siege of Lucknow by the commander-in-chief in general orders of 16 April 1858, and was repeatedly mentioned in despatches during the several campaigns (*London Gazette*, 5, 16, and 29 Jan., 25 May, and 17 and 28 July 1858). He was rewarded with a brevet majority and a brevet lieutenant-colonelcy, and received the Indian mutiny medal with two clasps.

Lennox left India in March 1859, and on his arrival home was appointed to the Brighton subdivision of the south-eastern military district. From 14 June 1862 until 31 Oct. 1865 he was deputy-assistant quartermaster-general at Aldershot. On 30 March 1867 he was made a companion of the Bath, military division, for his war services. From November 1866 he held for five years the post of instructor in field fortification at the school of military engineering at Chatham, where his energy and experience were of great value. He originated a series of confidential professional papers to keep his brother officers *au courant* with matters which could not be published, and also a series of translations of important foreign works on military engineering subjects. He also started the Royal Engineers' Charitable Fund, which has been of much benefit to the widows and children of soldiers of his corps. In 1868 he visited Coblenz and reported on the experimental siege operations carried on there. In the following year he was on a committee on spade-drill for infantry, and accompanied Lieutenant-general Sir William Coddington to the Prussian army manoeuvres. In the summer of 1870 he visited Belgium to study the fortifications of Antwerp.

From November 1870 to March 1871 he was attached officially to the German armies in France during the Franco-German war; was present at the siege of Paris under the crown prince of Prussia from 11 to 15 Dec. 1870; at the siege of Mézières from 24 Dec. 1870 to its surrender on 2 Jan. 1871; at the sieges of Paris under the German emperor from 10 Jan. to 4 Feb.; and at the siege of Belfort from 7 Feb. to the entry of the German troops under von Treskow on 18 Feb.

On 13 Nov. 1871 Lennox was appointed assistant superintendent of military disciplines at Chatham, and was on a committee on pontoon drill in December. In 1872 he again attended the military manoeuvres in Prussia. In December 1873 he went to Portsmouth as second in command of the royal engineers, and remained there until his appointment on 24 Oct. 1876 as military attaché at Constantinople. He visited

Montenegro in connection with the armistice on the frontier, and arrived in Constantinople in December.

In April 1877 he joined the Turkish armies in Bulgaria during the Russo-Turkish war, and was present during the bombardment of Nikopolis in June, at Sistova when the Russians crossed the Danube on 27 June, at the bombardment of Ruschuk, at the battles of Karahassankeui on 30 Aug., Katzelevo on 5 Sept., Bejin Verboka on 21 Sept., and Pyrgos Metha on 12 Dec. 1877. On 18 Dec. he accompanied Suleiman Pasha's force from Varna to Constantinople. He received the Turkish war medal.

On his return home in March 1878 he went to the Curragh in Ireland as commanding royal engineer until his promotion to major-general in August 1881. From 2 Aug. 1884 he commanded the garrison of Alexandria, and during the Nile campaign of 1884-5 organised the landing and despatch to the front of the troops, the Nile boats, and all the military and other stores of the expedition. From Egypt he was transferred on 1 April 1887 to the command of the troops in Ceylon, but his promotion to lieutenant-general vacated the appointment in the following year, and he returned home via Australia and America. He was promoted to be K.C.B. on 30 May 1891. He was director-general of military education at the war office from 22 Jan. 1893 until his retirement from the active list on 3 May 1895. Great energy, unbending resolution, and masterful decision fitted him for high command, while his kindness of heart and Christian character endeared him to many. He was engaged in writing a memoir of Sir Henry Harness's Indian career when he died in London on 7 Feb. 1897, and was buried in the family vault at Brighton cemetery on 16 Feb.

Lennox married, first, at Donbigh, on 16 July 1861, Mary Harriett (d. 22 July 1868), daughter of Robert Harrison of Plas Clough, Denbighshire, by whom he left a son, Gerald Wilbraham Stuart, formerly a lieutenant in the Black Watch. He married secondly, in London, on 12 June 1867, Susan Hay, who survived him, youngest daughter of Admiral Sir John Gordon Sinclair, eighth baronet of Stevenson, by whom he had three sons.

He contributed to the 'Professional Papers of the Royal Engineers' papers on the 'Demolition of the Fort of Tutteah,' 'The Engineering Operations at the Siege of Lucknow, 1858,' 'Description of the Passage of the Wet Ditch at the Siege of Strasburg, 1870,' and others. He compiled 'The Engi-

neers' Organisation in the Prussian Army for Operations in the Field, 1870-1,' published in London, 1878, 8vo.

R. H. V.

LESLIE, FREDERICK, whose real name was **FREDERICK HANSON** (1855-1892), actor, son of a military outfitter at Woolwich, was born on 1 April 1855, was educated at Woolwich, at Notting Hill, and in France, and under the name of **Owton Hobbs** acted as an amateur at Woolwich and elsewhere. His first appearance in London took place in 1878 at the Royalty as Colonel Hardy in 'Paul Pry.' He then played at the Folly, the Alhambra, the Standard, and the Avenue as Faust in 'Mefistofele II,' Don José de Mantilla in 'Les Manteaux Noirs,' Le Marquis de Pontsablé in 'Madame Favart,' the Duke in 'Olivette,' and other characters in light opera, and more than once visited the United States, playing at the Casino, New York. His *Rip van Winkle* in Planquette's opera at the Comedy on 14 Oct. 1882 raised his reputation to the highest point it reached, and sustained comparison with that of Joseph Jefferson, whose greatest part it was. At the Alhambra he was seen in the 'Beggars' Student,' at the Opera Comique in the 'Ray o' Fire,' and at the Comedy in the 'Great Mogul.' His first appearance at the Gaiety took place on 26 Dec. 1885 as Jonathan Wild in 'Little Jack Sheppard,' and resulted in his fine comic gifts being thenceforward confined to burlesque. In company with his eminently popular associate, Miss Ellen Farron, he became during many years a chief support of the house, appearing as Noirtier in 'Monte Cristo, Junr.,' Don César de Bazan in 'Ruy Blas, or the Blasé Roué,' the Monster in 'Frankenstein,' and many similar characters. In the composition of not a few of these burlesques he took part under the pseudonym of 'A. C. Torr.' With Miss Farron and the Gaiety company he visited, in 1888-9, America and Australia, reappearing at the Gaiety on 21 Sept. 1890. On 26 July 1890 he took part in 'Guy

Fawkes, Esq.,' and on 24 Dec. 1891 in 'Cinder-Ellen up too Late,' having a share in the authorship of both pieces. He was playing in the burlesque last named when he was taken ill, and on 7 Dec. 1892 he died; he was buried on the 10th at the Charlton cemetery. Leslie was seen on occasions as Sir Peter Teazle, Sir Anthony Absolute, Dr. Ollapod, the Governor of Tilbury Fort in the 'Critic,' Barlow in '100,000L,' and Sir John Vesey in 'Money.' He had high gifts in light comedy, and his burlesque performances often had more than a touch of comedy. His voice, his figure, and his method alike qualified him for burlesque, in which in his line he has had no equal. A good portrait is in Hollingshead's 'Gaiety Chronicles.'

[Personal recollections, Hollingshead's *Gaiety Chronicles*; Era, 10 Dec. 1892; Scott and Howard's *Blanchard*; *Dramatic Peerage*; Theatre and Era Almanack, various years.]

J. K.

LIDDELL, HENRY GEORGE (1811-1898), dean of Christ Church, Oxford, and Greek lexicographer, born at Binchester, near Bishop Auckland, 6 Feb. 1811, was the eldest child of the Rev. Henry George Liddell (1787-1872), brother of Sir Thomas Liddell, bart., who was created Baron Ravensworth at the coronation of George IV. His mother, Charlotte Lyon, was niece of the eighth Earl of Strathmore. His younger brother, Charles Liddell (1818-1894), engineer, was assistant to George and then to Robert Stephenson. During the Crimean war he laid a cable between Varna and Balaklava, but most of his work was done on railway construction; among the lines he built were the Taff Vale and Abercromby line and the Metropolitan extension to Aylesbury. He died at 24 Abingdon Street, Westminster, on 10 Aug. 1894 (*Times*, 18 Aug.).

Liddell was educated at Charterhouse School under Dr. John Russell (1787-1863) [q. v.], and entered Christ Church as a commoner at Easter 1830, being appointed by Dean Smith to a studentship in December of the same year. In June 1833 he gained a double first-class, among his companions in the class list being Charles John Canning (governor-general of India), R. Lowe (Viscount Sherbrooke), W. E. Jelf, Robert Scott, and Jackson (bishop of London). He graduated B.A. in 1833, M.A. in 1835, and B.D. and D.D. in 1855. He became in due course tutor (1836) and censor (1845) of Christ Church, and in the latter year was elected to White's professorship of moral philosophy, and appointed Whitehall preacher by Bishop

Blomfield. In January 1846 he was made domestic chaplain to H.R.H. Prince Albert, and in the summer of the same year was nominated by Dean Gaisford to the head-mastership of Westminster School, vacant by the retirement of Dr. Williamson.

It was during his residence as tutor at Oxford that Liddell published the 'Greek-English Lexicon' which will always be associated with his name. This important work was undertaken in conjunction with his brother-student and contemporary, Robert Scott (1811-1887) [q. v.], and the first edition was published, after labours extending over nine years, in the summer of 1843. It was based upon the 'Greek-German Lexicon' of F. Passow, professor at Breslau and pupil of Jacobe and Hermann. Passow's name appeared on the title-pages of the first three editions, but was afterwards omitted, as the book increased in volume, and a vast amount of new matter was continually added. Passow himself had spent his first efforts on the Greek of Homer and Hesiod; to this he had added the Ionic prose of Herodotus; but his early death in 1833, at the age of forty-six, had left his work quite incomplete. Much remained to be done, not only in the arrangement and method of treatment and illustration of the different meanings of words, but also in adding complete references to the principal Greek authors of various ages. The 'Lexicon' was the constant companion of Liddell in spare moments throughout his life, long after Scott had ceased to be his coadjutor. The dates of the several editions are: 1st 1843, 2nd 1845, 3rd 1849, 4th 1855, 5th 1861, 6th 1869, 7th (revised by Liddell alone) 1883, 8th 1897. The last two editions were electrotyped, and the last, embodying much new matter, was published when Liddell was in his eighty-seventh year. An abridgment of the 'Lexicon' for the use of schools, published immediately after the first edition, and an 'Intermediate Lexicon,' published in 1889, have rendered the labours of Liddell and Scott accessible to the beginners of Greek, as well as to the most advanced scholars.

Westminster School had much fallen in numbers when Liddell undertook the duties of head-master. Many changes were needed to restore its ancient reputation. New assistant-masters had to be appointed, new school-books introduced, the range of subjects of study enlarged, and many old abuses swept away. Under Liddell's wise guidance, and through his own unsparing efforts, much good was effected, and the number of boys soon rose from between eighty and ninety to

about 140. He was in many respects a very remarkable ruler, and his appointment in 1852 as a member of the first Oxford University Commission showed the confidence reposed in him by the government of the day. But the labours of that commission formed a serious addition to his school work, and an outbreak of typhoid fever, an unfortunate result of Dean Buckland's sanitary reforms, led to grave anxieties, and to a serious diminution in the numbers of the boys. Unable to carry out his wish to move the school to a new home in the country, and despairing of its growth and expansion in London, Liddell was glad to accept Lord Palmerston's offer of the deanery of Christ Church in June 1855, on the death of his old chief, Dean Gaisford.

He held the deanery from the summer of 1855 till his retirement in December 1891—a period of more than thirty-six years, a longer tenure of the office than any former dean had enjoyed. It covered also an eventful epoch in the history of Christ Church. The recommendations of the commission of which he had been an influential member were embodied in an ordinance which became law in 1858, under which two of the eight canonries were suppressed, and the powers of the dean and chapter were largely curtailed, their ancient right of nominating to studentships being taken away, and a board of electors established, consisting of the dean, six canons, and the six senior members of the educational staff, who were to examine and select, after open competition, all students except those who were drawn from Westminster School. Instead of the old number of 101 students, there were for the future to be twenty-eight senior students (answering in some respects to fellows of other colleges) and fifty-two junior studentships, twenty-one annexed to Westminster School, and the rest open to competition.

This ordinance remained in force till 1867. But it satisfied nobody; the senior students especially demanding a place in the administration of the property of their house, of which the dean and chapter had always enjoyed the sole management. After much controversy a private commission of five distinguished men was appointed, who drew up a new scheme of government, which all parties agreed to abide by, and which was embodied in the Christ Church Oxford Act, 1867. Under this act a new governing body was created, consisting of the dean, canons, and senior students, who were to be the owners and managers of the property. The rights of the chapter—as a cathedral

body--were at the same time carefully guarded. Liddell had taken a prominent part in both these reforms, and lived to see and to guide a third change, which came after the parliamentary commission of 1877, by which the studentships were divided into two classes, with different conditions of tenure and emoluments.

Dean Liddell's time will always be associated with great alterations and additions to the buildings of Christ Church. The new block of buildings fronting the meadow was erected in 1802-5, the great quadrangle was brought to its present state, and the cathedral, chapter-house, and cloisters were carefully restored.

In all matters relating to the university Dean Liddell exercised considerable authority during many years. The Clarendon Press owes very much to his enlightened and prudent guidance; his refined artistic tastes, and lifelong friendship with Ruskin, led him to take a deep interest in the university galleries. He was vice-chancellor 1870-4, and discharged with singular dignity and efficiency the duties of that important office, which had not been held by a dean of Christ Church since the days of Dean Aldrich (1692-4). As a ruler of his college he was somewhat stern and unsympathetic in demeanour, but he became more kindly as he advanced in years, and his rare and noble presence, high dignity, and unswerving justice gained the respect and gradually the affection of all members of his house. He was created hon. LL.D. of Edinburgh University in 1884, and hon. D.C.L. of Oxford in 1893. On Stanley's death he was offered but refused the deanery of Westminster.

After his resignation of the deanery in December 1891 he lived in retirement at Ascot till his death there on 18 Jan. 1898. His body lies at Christ Church, outside the southern wall of the sanctuary of the cathedral, close by the grave of his daughter Edith, who died in 1876.

Dean Liddell married, on 2 July 1846, Lorina, daughter of James Reeve, a member of a Norfolk family. Three sons and four daughters survived him.

In addition to the 'Greek Lexicon,' Dean Liddell published in 1855 'A History of Ancient Rome,' 2 vols. This work was subsequently (1871) abridged, and as 'The Student's History of Rome to the Establishment of the Empire' has a permanent circulation. He rarely published sermons; the best known of them, preached before the university of Oxford on 3 Nov. 1807, dealt with the philosophical basis of the real presence.

There are two portraits in oil of Dean Liddell; one, by G. F. Watts, R.A., is in the hall of Christ Church. This was presented to the dean, at the gaudy of 1876, in commemoration of the completion of his twentieth year of office. The other, by Sir Hubert Herkomer, R.A., was painted in 1891, and presented by the painter to the university galleries. There is also an exquisite crayon drawing by George Richmond, R.A. (1858), which has been engraved. These, together with a portrait of Liddell at the age of twenty-eight by George Cruikshank, are reproduced in the present writer's 'Memoir' (1899).

LILFORD, BARON. [See POWYS, THOMAS LITTLTON, 1838-1896.]

LINDLEY, WILLIAM (1808-1900), civil engineer, son of Joseph Lindley of Hoath, Yorkshire, was born in London on 7 Sept. 1808. He was educated at Croydon and in Germany, in which country he was afterwards to make his name as an engineer. In 1827 he became a pupil of Francis Giles, and was chiefly engaged in railway work. He was in 1838 appointed engineer-in-chief to the Hamburg and Bergedorf railway, and it was in the city of Hamburg that the engineering work by which he will be remembered was carried out for the next twenty-two years. He designed and supervised the construction of the Hamburg sewerage and water works, of the drainage and reclamation of the low-lying 'Hammerbrook' district, much of which is now a valuable part of the city, and he drew out the plans for rebuilding the city after the disastrous fire of May 1842. He was in fact responsible for most of the engineering and other works which have changed the ancient Hanseatic city into one of the greatest modern seaports of Europe. His water supply for Hamburg was the first complete system of the kind, now usually adopted on the continent, and his sewerage arrangements contained many principles novel at that time, though since commonly adopted. He left Hamburg in 1860, and in 1865 he was appointed consulting engineer to the city of Frankfurt-on-Main. He designed and carried out complete sewerage works for that city. Here again many improvements were for the first time adopted, and this system has become more or less typical for similar works on the continent. He retired from active work in 1879. He joined the Institution of Civil Engineers in 1842, and was for many years a member of

the Smeatonian Society of Engineers, becoming president of it in 1864. He died at his residence, 74 Shooter's Hill Road, Blackheath, on 22 May 1900.

[Obituary notices; Proc. Inst. Civil Engineers, T. H. B. xxxvii.]

LINDSAY, COLIN (1819-1892), founder of the English Church Union, born at Muncaster Castle on 6 Dec. 1819, was fourth son of James Lindsay, twenty-fourth earl of Crawford and seventh earl of Balcarree, by his wife Maria Margaret Frances, daughter of John Pennington, first baron Muncaster. After some private tuition he was sent to Trinity College, Cambridge, where he came under the influence of the high-church movement. He did not graduate, and on 29 July 1845 married Lady Frances, daughter and coheiress of William Howard, fourth earl of Wicklow. His early married life was passed on his father's estate near Wigan, and he took an active part in local affairs. As churchwarden of All Saints', Wigan, he was largely responsible for the careful restoration of that church. He was founder and president of the Manchester Church Society, which through his exertions amalgamated with other similar associations and became in 1860 the English Church Union. Of this body Lindsay was president from 1860 to 1867, and he devoted himself enthusiastically to the work of the society. During these years he lived at Brighton, but in 1870 he removed to London.

Meanwhile his researches in ecclesiastical history convinced him of the untenability of the Anglican position. His wife had already joined the Roman Catholic Church on 13 Sept. 1866, and on 28 Nov. 1868 Lindsay was himself received into that church by Cardinal Newman at the Birmingham Oratory. He gave an account of the reasons for his secession in the introductory epistle to his 'Evidence for the Papacy' (London, 1870, 8vo). In that work Lindsay appeared as a staunch champion of extreme papal claims, and he further expounded these views in his 'De Ecclesia et Cathedra, or the Empire Church of Jesus Christ' (London, 1877, 2 vols. 8vo). He also defended Mary Queen of Scots in 'Mary Queen of Scots and her Marriage with Bothwell' (London, 1883, 8vo; reprinted from the 'Tablet'), in which he declared that there remained 'not a single point in her moral character open to attack.' In 1877 Lindsay retired to Dear Park, Hampton, which his wife had inherited in 1866. The pope granted him the rare privilege of having mass celebrated there or in

whatever house he might be living. He died in London at 22 Elvaston Place, Queen's Gate, on 28 Jan. 1892. He and his wife, who died on 20 Aug. 1897, were buried at St. Thomas's Roman Catholic Church, Fulham. He left five sons and three daughters, of whom the eldest son, Mr. William Alexander Lindsay, K.C., became Windsor herald.

Besides the writings mentioned above, Lindsay was author of various minor works, of which a full bibliography is given in Mr. Joseph Gillow's 'Dictionary of English Catholics.' The most important is 'The Royal Supremacy and Church Emancipation' (London, 1865, 8vo), in which Lindsay defined the view taken of the establishment by the English Church Union.

LINDSAY, JAMES BOWMAN (1799-1802), electrician and philologist, was born at Carmyllie, Forfarshire, on 8 Sept. 1799. But for the delicacy of his constitution he would have been a farmer, like his father, who apprenticed him to a local hand-loom weaver. From an early age he displayed a taste for study, and matriculated at St. Andrews University in October 1822, working at his trade during the recess, and earning some money by private tuition. Having finished his arts course he entered on the study of theology and completed his curriculum, but was never licensed as a preacher. He had gained special honours in mathematics and physical science, and in 1829 he was appointed lecturer on these subjects at the Watt Institution, Dundee, and organised classes in electricity and magnetism. In a fragment of autobiography, preserved in the Dundee Museum, he states that on Oersted's discovery of the deflection of the magnetic needle by an electric current in 1820 he 'had a clear view of the application of electricity to telegraphic communication.' The electric light, which had been produced and described by Sir Humphry Davy [q.v.] in 1812, attracted his attention, and he devised 'many contrivances for augmenting it and rendering it constant.' In the local newspapers it is recorded, on 25 July 1835, that Lindsay delivered a lecture, at which he exhibited the electric light, and foretold that 'the present generation may yet have it burning in their houses and enlightening their streets.' Unfortunately a philological craze diverted him from his experiments.

While at the university he had become interested in comparative philology, and in 1828 he had begun to compile a Pontecntaglossal dictionary, from which he expected to obtain a high reputation. For more than a quarter of a century he devoted all his spare time to it, but it was not completed at his death, and the manuscript is now in the Dundee Museum, a gigantic monument of misapplied labour. To direct attention to his plan, Lindsay published in 1846 his 'Pontecntaglossal Paternoster,' being versions of the Lord's Prayer in fifty different languages. In 1858 he published the 'Chrono-Astrolabo, a full set of Astronomical Tables,' intended to assist in calculating chronological periods, and in 1861 'A Treatise on Baptism.'

So early as 1832 he had demonstrated the possibility of an electric telegraph by experiments in his class-room. About the same time Schilling, and in 1833 Gauso and Weber, set up practical electric telegraphs. In the 'Dundee Advertiser' for 6 May 1845 Lindsay described a new method of telegraphing messages, which he called the autograph electric telegraph. Instead of the twenty-four wires then used for telegraphing he suggested that two would be sufficient; and he proposed that the return current, say from Arbroath to Dundee, could be carried by water if one plate was inserted in the sea at Arbroath and another in the Tay at Dundee. In a letter to the 'Northern Warder,' a Dundee newspaper, on 26 June 1845, Lindsay proposed a transatlantic telegraph, by means of uninsulated copper wire, and suggested that the wire joints might be welded by electricity. In 1853 he announced, in a lecture on telegraphy delivered in Dundee on 15 March, that by establishing a battery on one side of the Atlantic and a receiver on the other, a current could be passed through the ocean to America without wires. He patented this method of wireless telegraphy on 5 June 1854, and during that year made experiments on this plan at Earl Grey dock, Dundee; across the Tay, near Dundee; and at Portsmouth. The latter experiments are described in 'Chambers's Journal' for 1854. In September 1850 Lindsay read a paper 'On Telegraphing without Wires' before the British Association at Aberdeen, and conducted practical experiments at Aberdeen docks, which were highly commended by Lord Rosse, Professor Faraday, and Sir G. B. Airy.

While Lindsay was thus experimenting he was living in extreme penury. In March 1841 he was appointed teacher in Dundee prison at a salary of 50*l.* per annum, and

this post he retained till October 1853, when the Earl of Derby, then prime minister, conferred upon him a pension of 100*l.* 'in recognition of his great learning and extraordinary attainments.' He thenceforward devoted himself to scientific pursuits. For years before he had starved himself that he might purchase books and scientific instruments, and when disease came upon him his emaciated frame could not throw it off. In 1862 he became seriously ill, and, after five days' extreme suffering, he died on 29 June, and was interred in the Western cemetery, Dundee. By a strange error his tombstone gives 1863 as the year of his death. Despite his straitened circumstances, the library which he left was valued at 1,800*l.* An enlarged photograph of Lindsay is in the Dundee Museum, and a marble bust of him, by George Webster, was presented to Dundee by ex-Lord Provost McGrady in 1899, on the centenary of Lindsay's birth, and is in the Dundee Picture Gallery.

H. M.

LINTON, ELIZA LYNN (1822-1898), novelist and miscellaneous writer, was the youngest daughter of the Rev. James Lynn, vicar of Crosthwaite, Cumberland, and Charlotte, daughter of Samuel Goodenough (q.v.), bishop of Carlisle, and was born at Keswick on 10 Feb. 1822. Her mother died when she was an infant, and Mrs. Lynn Linton's youth was spent uneasily from her inability to accommodate herself to the ideas of her family. In 1845 she departed for London, provided with a year's allowance from her father, and resolved to establish herself as a woman of letters. With little knowledge of the world, she had a large stock of antique learning derived from her father's library; and her first attempts in fiction not unnaturally dealt with the past. Neither her scholarship nor her imagination was equal to recreating Egypt or Greece, but 'Azeth the Egyptian' (1846) and 'Amymone, a Romance of the Days of Pericles' (8 vols. 1848), manifested vehement eloquence and brilliant colouring. These gifts were no adequate equipment for the delineation of modern life; and Miss Lynn's next novel, though entitled 'Realities' (1851), was universally censured for its glaring unreality.

Discouraged, as would appear, she accepted an engagement as newspaper correspondent at Paris, where she remained till about 1834, and almost abandoned fiction for several years; her chief work of this period, 'Witch Stories,' being founded, if not precisely upon fact, yet upon superstitions accepted as facts in their day, and of the most dismal and repulsive nature. They originally appeared in 'All the Year Round,' and were reprinted in 1861 (new edit. 1888). In the interim she had gained the friendship of Landor, who treated her with paternal affection. She was bitterly dissatisfied with Forster's biography of him, and criticised it with extreme severity in the 'North British Review.' She was also brought into relation with Dickens by his purchase of the house at Gad's Hill which she had inherited. In 1858 she married William James Linton [q. v. Suppl.], the engraver. Linton was a widower, and it has been said that her motive was a wish to test her theories of education upon his orphan children; but it was more probably compliance with the wish of the deceased wife, whom she had nursed in her last illness. However this may be, the mutual incompatibility was soon apparent, and the parties amicably separated, although Mrs. Linton visited her husband from time to time until his departure for America in 1867, and one of the orphans continued to reside with her stepmother for some time, and she never ceased to correspond with her husband. She also wrote a description of the Lake country (1864, 4to), where she resided during her domestication with her husband, by whom it was illustrated. Mrs. Linton, on her separation from her husband, returned to fiction, adopting a manner widely dissimilar to that of her early works. Having previously been romantic and imaginative, she now demonstrated that experience of the world had made her a very clear-headed and practical writer, excellent in construction, vigorous in style, entirely competent to meet the demands of the average novel-reader, but bereft of the glow of enthusiasm which had suffused her earlier works. There were nevertheless two notable exceptions to the generally mechanical manifestations of her talent. 'Joshua Davidson,' which was published in 1872, and went through six editions in two years, is a daring but in no respect irreverent adaptation of the gospel story to the circumstances of modern life, placing the antithesis between humane sentiment and 'the survival of the fittest' in a light which commanded attention, and with a force which irresistibly stimulated thought. Her other

remarkable book, 'The Autobiography of Christopher Kirkland' (1885), is remarkable indeed as achieving what it is said that even an act of parliament cannot do—turning a woman into a man. It is in a large measure her own autobiography, curiously inverted by her assumption of a masculine character, and, apart from the interest of the narrative itself, this strange metamorphosis, once perceived, is a source of continual entertainment. It gives her own version of her conjugal incompatibilities, and has striking portraits of Panizzi, Douglas Cook, and other remarkable persons with whom she had been brought into contact. Of her more ordinary novels, all popular in their day, the most remarkable were 'Grasp your Nettle' (1865), 'Patricia Kemball' (1874), 'The Atonement of Leam Dundae' (1877), and 'Under which Lord?' (1879).

Mrs. Linton had a special talent for journalism; she had contributed to the 'Morning Chronicle' as early as 1848, and continued a member of its staff until 1861. Writing for the press became more and more her vocation during her latter years. She became connected with the 'Saturday Review' in 1866, and for many years was a much-valued contributor of essays to the middle part of this paper. One of these, 'The Girl of the Period' (14 March 1868), an onslaught on some modern developments of feminine manners and character, created a great sensation, and the number in which it had appeared continued to be inquired for for many years. It was certainly incisive, and was probably thought opportune; but, like her hundred disquisitions unfriendly to the cause of 'women's rights,' it estranged and offended many of her own sex. These papers were reprinted as 'The Girl of the Period, and other Essays' (1888, 2 vols.). A similar series of essays was entitled 'Ourselves' (1870; new edit. 1884). She contributed to many other journals and reviews, and always with effect. In 1891 she published 'An Octave of Friends,' and in 1897 wrote a volume on George Eliot for a series entitled 'Women Novelists of Queen Victoria's Reign.' This displayed a regrettable acerbity, which might easily be attributed to motives that probably did not influence her. She was kind-hearted and generous, and especially amiable to young people of intellectual promise; but her speech and pen were sharp, and she was prone to act upon impulse. She hated injustice, and was not always sufficiently careful to commit none herself. Her independent spirit and her appetite for work were highly to her honour. Her last book, 'My Literary Life,' was published posthu-

mously, with a prefatory note by Miss Beatrice Hamraden, in 1899. She usually lived in London, but about three years before her death retired to Brougham House, Malvern. She died at Queen Anne's Mansions, London, on 14 July 1898. A posthumous portrait was painted by the Hon. John Collier for presentation to the public library at Keswick, and a drawing by Samuel Laurence, taken when she was twenty, passed to the Rev. Augustus Gedge, her brother-in-law.

[The principal authority for Mrs. Linton's life is Eliza Lynn Linton, her *Life, Letters, and Opinions*, by George Somes Layard, 1901. See also *My Literary Life, 1809*; *Men and Women of the Time*; *Athenæum*, 23 July 1898.]

R. G.

LINTON, WILLIAM JAMES (1812-1898), engraver, poet, and political reformer, was born in Ireland's Row, Mile End Road, on 7 Dec. 1812. His father, whose calling is not recorded, was of Scottish extraction, the son of 'an Aberdeen ship carpenter with some pretensions to be called an architect.' His younger brother, Henry Duff Linton (1812-1899), who was also a wood-engraver, and was associated with W. J. Linton in many of his earlier productions, died at Norbiton, Surrey, in June 1899 (*Times*, 23 June 1899).

Linton received his education at a school in Stratford, and in 1828 was apprenticed to the wood-engraver George Wilmot Bonner, with whom he continued for six years. He subsequently worked with Powie and with Thompson, and in 1836 became associated with John Orrin Smith [q. v.], then introducing great improvements into English wood-engraving. About the same time he married the sister of Thomas Wade [q. v.] the poet, after whose death he wedded another sister. He now began to mingle in literary circles, and to make himself conspicuous as a political agitator. Under the influence of his enthusiasm for Shelley and Lamennais, whose 'Words of a Believer' were among the gospel of the time, he had adopted advanced views in religion and extreme views in politics, and, while throwing himself with ardour into the chartist movement, went beyond it in professing himself a republican. He was especially connected with Henry Hetherington [q. v.] and James Wateon (1799-1874) [q. v.], the publishers of unstamped newspapers, and in 1839 himself established 'The National,' designed as a vehicle for the reprint of extracts from political and philosophical publications inaccessible to working men. It had no long existence.

In 1842 Linton became partner with his

employer, Orrin Smith, but the partnership was dissolved by the latter's death in the following year. During their connection Linton had done much important work, especially on 'The Illustrated News,' established in 1842. He was also active in literature. Through his brother-in-law Wade he had become intimate with the circle that gathered around W. J. Fox and R. H. Horne in the latter days of 'The Monthly Repository,' and with their aid, after an unsuccessful experiment in 'The Illustrated Family Journal,' he succeeded (1845) Douglas Jerrold as editor of 'The Illuminated Magazine,' where he published many interesting contributions from writers of more merit than popularity. Among these were 'A Royal Progress,' a poem of considerable length by Sarah Flower Adams [q. v.], not hitherto printed elsewhere, and specimens of the 'Stories after Nature' of Charles Jeremiah Wells [q. v.], almost the only known copy of which Linton himself had picked off a bookstall. Their publication elicited a new story from Wells, which Linton subsequently dramatised under its own title of 'Claribel.'

As a politician Linton was at this time chiefly interested in the patriotic designs of Mazzini, with whom he formed an intimate friendship, and the violation of whose correspondence at the post office in 1844 he was instrumental in exposing. The chartist movement had passed under the direction of Feargus O'Connor [q. v.], whom Linton distrusted and despised, and he had little connection with it; of the free-trade leaders, W. J. Fox excepted, he had a still worse opinion, and continued to denounce them with virulence throughout his life. An acquaintance with Charles (now Sir Charles) Gavan Duffy led him to contribute political verse to the Dublin 'Nation' under the signature of 'Spartacus.' In 1847 he took a prominent part in founding the 'International League' of patriots of all nations, for which the events of the following year seemed to provide ample scope, but which came to nothing. The more limited and practical movement of 'The Friends of Italy' was supported by him. In 1850 he was concerned with Thornton Hunt and G. H. Lewes in the establishment of 'The Leader,' which he expected to make the organ of republicanism, but he soon discovered his associates' lukewarmness in political matters, and quitted 'The Leader' to found 'The English Republic,' a monthly journal published and originally printed at Leeds. After a while Linton carried on the printing under his own superintendence at Brantwood, a house which he had

acquired in the Lake country, since celebrated as the residence of Ruskin. He had previously lived at Miteside in Northumberland, which, as well as his intimate friendship with William Bell Scott [q. v.], had made him acquainted with a circle of zealous political reformers at Newcastle; there he published anonymously in 1852 'The Plant of Freedom,' a series of poems in the metre of 'In Memoriam,' which gained him the friendship and the encomiums, for once not undeserved, of Walter Savage Landor. In 1855 'The English Republic' was discontinued, and Linton commenced an artistic periodical, 'Pen and Pencil,' which did not enjoy a long existence. In this year he lost his wife and returned to London, where, devoting himself anew to his profession, he firmly established his reputation as the best wood-engraver of his day, and was in special request for book illustration. His engravings of the pre-Raphaelite artists' designs for Moxon's illustrated Tennyson were among his most successful productions; if justice was not always done to the original drawing, the fault was not in the engraver, but in the imperfections of engraving processes upon wood before the introduction of photography. In 1858 Linton married Miss Eliza Lynn, the celebrated novelist, best known under her married name of Linton [q. v. Suppl.]. The union did not prove fortunate; the causes are probably not unfairly intimated in Mrs. Linton's autobiographical novel of 'Christopher Kirkland' (1885). It terminated in an amicable separation, involving the disposal of the house at Brantwood to Ruskin, 'pleasantly arranged,' says Linton, 'in a couple of letters.' He remained for some time in London, following his profession. The covers of the 'Cornhill' and 'Macmillan's' magazines were engraved by him; he brought out 'The Works of Deceased British Artists,' and illustrated his wife's work on the Lake country. In 1865 he published his drama of 'Claribel,' with other poems, including two early ones of remarkable merit, a powerful narrative in blank verse of Grenville's son-fight celebrated in Tennyson's 'Revenge,' and an impressive meditation symbolising his own political aspirations, put into the mouth of Henry Marten [q. v.] imprisoned in Chopstow Castle. In November 1866 Linton went to the United States. He had intended only a short visit in connection with a project for aiding democracy in Italy, but he found a wider field for the exercise of his art opened to him than at home, and he mainly devoted the rest of his life to the regeneration of American wood-engraving. He established

himself at Appledore, a farmhouse near New Haven in Connecticut, gathered disciples around him, and by precept and example was accomplishing great things, when his career was checked by the introduction of cheap 'process' methods, inevitable when the art has become so largely popularised, but always regarded by him with the strongest objection. At first he sent his blocks to New York, but ultimately bought a press, and conducted both printing and engraving under his own roof. For the literary furtherance of his views on art he produced 'Practical Hints on Wood Engraving,' 1879; 'A History of Wood Engraving in America,' 1882, and 'Wood Engraving, a Manual of Instruction,' 1884. During a visit to England in 1883 and 1884 he began his great work called 'The Masters of Wood Engraving.' This book was based upon two hundred photographs from the works of the great masters, which he began in 1884 in the print-room of the British Museum. Returning to New Haven he wrote his book, printed it in three copies, and mounted the photographs himself, and in 1887 returned to England, bringing one of the copies to be reproduced under his superintendence in London. The work appeared in folio in 1890.

Meanwhile his private press at Appledore had been active in another department, producing charming little volumes of original verse, much prized by collectors, such as 'Windfalls,' 'Love Lore,' and 'The Golden Apples of Hesperus,' the latter an anthology of little-known pieces, partly reproduced in another collection edited by him, 'Rare Poems of the Sixteenth and Seventeenth Centuries' (New Haven, 1882, 8vo). In 1883 he published an extensive anthology of English poetry in conjunction with R. H. Stoddard. In 1879 he wrote the life of his old friend, James Watson, the intrepid publisher, and contributed his recollections to the republished poems of another old friend, Ebenezer Jones [q. v.]. In 1889 'Love Lore,' with selections from 'Claribel' and other pieces, was published in London under the title of 'Poems and Translations.' A collection of pamphlets and contributions by himself to periodical literature, comprising twenty volumes (1830-86), and entitled 'Prose and Verse,' is in the British Museum Library. After his final return to America in 1892, though upwards of eighty, he produced a life of Whittier in the 'Great Writers' series (1893), and his own 'Memories,' an autobiography full of spirit and buoyancy, which might with advantage have been more full, in 1895. He died at

New Haven, Connecticut, U.S.A., on 1 Jan. 1898.

Linton's fame as an engraver is widely spread, but he has never received justice as a poet. His more ambitious attempts, though often true poetry, are of less account than the little snatches of song which came to him in his later years, bewitching in their artless grace, and perhaps nearer than the work of any other modern poet to the words written for music in the days of Elizabeth and James. Produced at so late a period of life, these lyrics evince an indomitable vitality. They were dedicated to a coeval, William Bell Scott [q.v.], who wrote: 'All his later poems are on love, a fact that baffles me to understand.' His translations of French lyrics are masterly, and his anthologies prove his acquaintance with early and little-known English poetry. As a man he was amiable and helpful, full of kind actions and generous enthusiasms. His indifference to order and impatience of restraint, though trying to those most nearly connected with him, were not incompatible with exemplary industry in undertakings that interested him. His most serious defect, the 'carelessness of pecuniary obligation,' which he himself imputes to Leigh Hunt, mainly sprang from the sanguine temperament which so long preserved the freshness of the author and the vigour of the man.

Photographic portraits of Linton at advanced periods of life are prefixed to his 'Poems and Translations' (1889), and to his 'Memories,' 1896.

[Linton's Memories, 1896; G. S. Layard's Life of Mrs. Lynn Linton, 1901; Mr. A. H. Bullen in Miles's Poets of the Century, article on W. J. Linton by Mr. J. F. Kitto in English Illustrated Magazine, 1891; Times, 3 Jan. 1898; Athenæum, 8 and 16 Jan. 1898; personal knowledge.] R. G.

LLOYD, WILLIAM WATKISS (1813–1893), classical and Shakespearian scholar, the second son of David Lloyd of Newnecle-under-Lyme, was born at Homerton, Middlesex, 11 March 1813. He was educated at the grammar school of Newcastle-under-Lyme, Staffordshire, and made so much progress that the master, the Rev. John Anderton, offered to contribute towards the fees of a university course. At the age of fifteen, however, he was placed in the counting-house of his cousins, Messrs. John and Francis Lloyd, the tobacco manufacturers of 77 Snow Hill, London, of which firm he afterwards became a partner; he retired from business in 1864. For a period of thirty-six years his days were devoted

to uncongenial duties and his nights to books. At one time he lived at Snow Hill, and for many years never left London. With an inborn love for learning he added to a solid basis of Greek and Latin a wide knowledge of modern languages and literatures, as well as of ancient art, history, and archaeology. To these pursuits every leisure hour, even to the close of his life, was applied. The firstfruit of his studies was an historical and mythological essay on the 'Xanthian Marbles: the Nereid Monument' (1845), followed by other contributions on subjects of Greek antiquities, some printed in the 'Classical Museum.' In 1854 he supplied certain 'Arguments' to Owen Jones, 'Apology for the Colouring of the Greek Court in the Crystal Palace.' In the same year he was elected a member of the Society of Dilettanti, chiefly through the friendly offices of Monckton Milnes (afterwards Lord Houghton). Until his death he 'was one of the principal guides and advisers of the Dilettanti in their archaeological undertakings,' and acted temporarily as secretary and treasurer in 1888 and 1889 (Cuss, *History of the Soc. of Dilettanti*, 1898, pp. 187, 206).

As a labour of love he supplied essays on the life and plays of Shakespeare to S. W. Singer's edition of the poet published in 1856 (2nd ed. 1875). The essays show acute criticism and thorough knowledge of Elizabethan literature, and were collected by the author in a private reprint (1858, and reissued without the life in 1875 and 1888). A memoir on the system of proportion employed in the design of ancient Greek temples was added by him to C. R. Cockerell's 'Temples of Jupiter Panhellenius at Ægina and of Apollo Epicurius,' published in 1860. The subject was also treated in 'A General Theory of Proportion in Architectural Design and its Exemplification in Detail in the Parthenon, with illustrative engravings' (London, 1868, 4to; lecture delivered before the Royal Institute of British Architects, 13 June 1869), his most original work, of which the conclusions have since met with wide approval. His literary interests were now turned in a different direction, and he published 'The Moses of Michael Angelo: a Study of Art, History, and Legend' (1868, 8vo), followed by 'Christianity in the Caricatures, referred to Artistic Treatment and Historic Fact' (1865, 8vo), in which artistic criticism is coupled with a free treatment of religious matters, and 'Philosophy, Theology, and Poetry in the Age and Art of Rafael' (1868, large 8vo). In 1868 he married Ellen Brookor, second daughter of Lionel John Beale, and sister of Dr. Lionel S. Beale.

Ancient Greek history and art were the subjects of his next two publications, perhaps the most generally interesting of his writings: 'The History of Sicily to the Athenian War, with Elucidations of the Sicilian Odes of Pindar' (1872, 8vo), and 'The Age of Pericles: a History of the Politics and Arts of Greece from the Persian to the Peloponnesian War' (1875, 2 vols. 8vo), the last a complete conception of the social life and art of Greece at its highest point. In 1882 he delivered four lectures on the 'Iliad' and 'Odyssey' at the Royal Institution, of which body he acted as one of the managers from 1879 to 1881. He was elected a member of the Athenæum Club in 1875, and for many years was an active member of the committee of the London Library. He was a correspondent of the archæological societies of Rome and Palermo.

Lloyd died at 43 Upper Gloucester Place, Regent's Park, on 22 Dec. 1893 in his eighty-first year, leaving a widow (*d.* 1900), a son, and a daughter. His portrait by Miss Bush was bequeathed to the Society of Dilettanti (*Cust, History*, p. 236). Another portrait by Sir William Richmond, R.A., is in the possession of the family.

Watkiss Lloyd was a remarkable instance of a lifelong devotion to learning, stamped by disinterested self-denial. Without a university training, and never recognised by any academic body, he had the strong qualities and some of the weaknesses of the self-taught. His books manifest conscientious industry, originality, and sound scholarship; but while his judgment was solid and his thought clear, he was not endowed with the faculty of expressing his ideas in attractive literary form. Power of condensation and artistic arrangement of materials were wanting. One half of his life was passed in solitude, but during the last half he mixed in the world, and the angularities of the student became softened. He was a charming talker, modest, unpedantic, and a staunch friend. In personal appearance he was tall and impressive; even to the end he was strikingly upright in carriage, and showed few outward signs of his advanced age.

Besides the books above mentioned, he published: 1. 'Explanation of the Groups in the Western Pediment of the Parthenon,' London, 1847, 8vo (from 'Classical Museum', pt. 18); 'The Central Group of the Panthenaio Frieze' (from 'Trans. Roy. Soc. Lit.' n.s. vol. v. 1854); 'The Eastern Pediment of the Parthenon' (from *ib.* n.s. vol. vii. 1862). 2. 'Artemis Elaphebolos: an Archæological Essay,' London, 1847, 8vo

(privately printed). 3. 'The Portland Vase,' London, 1848, 8vo. 4. 'Homer, his Art and Age,' London, 1848, 8vo (Nos. 3 and 4 reprinted from the 'Classical Museum'). 5. 'The Eleventh of Pindar's Pythian Odes,' London, 1849, 8vo. 6. 'On the Homeric Design of the Shield of Achilles,' London, 1854, large 8vo. 7. 'Pindar and Themistocles,' London, 1862, 8vo (a prose translation of Pindar's eighth Nemean ode). 8. 'Panics and their Panaceas; the Theory of Money, Metallic or Paper, in relation to Healthy or Disturbed Interchange,' London, 1869, 8vo. 9. 'Shakespeare's "Much Ado about Nothing," now first published in fully recovered Metrical Form with a Prefatory Essay,' London, 1884, 8vo (he contended that all the plays were written in blank verse). 10. 'Elijah Fenton: his Poetry and Friends,' Lond. 1894, sm. 8vo (posthumous).

Lloyd contributed many articles to the 'Classical Museum,' the 'Transactions of the Royal Society of Literature,' the 'Architect,' the 'Athenæum,' and the 'Journal of Hellenic Studies,' and, although he published much, left behind a great quantity of unprinted manuscripts, among them being 'The Battles of the Ancients'—military history always attracted him—others, bequeathed to the British Museum, include 'A Further History of Greece,' treating of the later Athenian wars; 'The Century of Michael Angelo,' a treatise on 'The Nature of Man,' 'Shakespeare's Plays metrically arranged,' 'Essays on the Plays of Æschylus and Sophocles,' and upon the Neoplatonists, a translation of the Homeric poems in free hexameters, translations of Theocritus, Bion, and the odes of Pindar, besides materials for the history of architecture, painting, and sculpture.

Lloyd; see also Memoir by Sophia Beale, with list of works and photogravure portrait included in Lloyd's *Elijah Fenton*, 1894; *Times*, 27 Dec. 1893 and 17 Jan. 1894; *Athenæum*, 30 Dec. 1893, p. 916; *Architect*, 23 Dec. 1893, p. 399; *Publishers' Circular*, 30 Dec., p. 752; *Allibone's Dict. of English Literature*, 1870, ii. 1111; *Kirk's Suppl. to Allibone*, 1891, ii. 1010.] H. R. T.

LOCH, HENRY BROUGHAM, first BARON LOCH OF DRYLAW (1827-1900), born on 23 May 1827, was the son of James Loch, M.P., of Drylaw in the county of Midlothian, by his wife Ann, the daughter of Patrick Orr. He entered the royal navy in 1840, but left it as a midshipman in 1842 and was gazetted to the 3rd Bengal cavalry in 1844. Though only seventeen years of age, he was chosen by Lord Gough as his aide-de-camp, and in that capacity served

through the Sutlej campaign of 1845. In 1850 he was appointed adjutant of the famous irregular corps, Skinner's Horse. On the outbreak of the Crimean war his gift of managing Asiatic soldiery led to his being selected in 1854 to proceed to Bulgaria and assist in organising the Turkish horse. He served throughout the war, and at its close he was signalled out for the employment which was destined to close his military career. In 1857 James Bruce, eighth earl of Elgin [q.v.] was despatched on a special embassy to China to arrange, as was supposed, the final terms of settlement of the war that was then raging, and Captain Loch was attached to his staff. He was present at the taking of Canton on 28 Dec. and the seizure of Commissioner Yeh, and he subsequently proceeded with Lord Elgin on his mission to Japan, and in 1858 he was sent back to England with the treaty of Yoddo, concluded by Great Britain with that country. In 1860 the failure to obtain the ratification of the treaty of Tientsin and the repulse of the English gunboats before the Taku forts had involved the Anglo-French expedition under Sir James Hope Grant [q.v.] and General Montauban, afterwards Count Palikao. Lord Elgin was again sent out as minister plenipotentiary, and mindful of Captain Loch's services he took him with him as private secretary. In conjunction with Mr. (afterwards Sir) Harry Smith Parkes [q.v.], Loch conducted the negotiations which led to the surrender of the Taku forts, and he shared in the advance on Peking.

On 18 Sept. he formed one of the small party which was treacherously seized by the Chinese officials on returning from Tungchau, whither they had been to arrange the preliminaries of peace. Loch had actually made his way through the enemy's lines to the English camp and had given warning of the intended treachery, but he chivalrously returned in order to try and save his comrades. For three weeks he endured the most terrible imprisonment, loaded with chains, tortured by the gaolers, and herded with the worst felons in the common prison. So frightful was the state of his surroundings that a single abrasion of the skin must have led to a terrible death from the poisonous insects that swarmed in his cell. His situation was rendered more deplorable by his inability to speak the Chinese language with any fluency. Fortunately the loyalty and determination of his fellow-prisoner, Parkes, led first to the amelioration of his condition, and eventually to their joint release. They anticipated by only ten minutes the arrival of an order from the emperor imperatively

commanding their execution. On 8 Oct. they rejoined the British camp, but, with the exception of a few Indian troopers, the rest of the party—French, English, and native—died in prison from horrible maltreatment, and Loch himself never fully recovered his health.

In 1860 he was sent home in charge of the treaty of Tientsin, and in the following year he finally quitted the army, and was appointed private secretary to Sir George Grey [q.v.], who was then secretary of state at the home office. In 1863 he was made governor of the Isle of Man, a post which he occupied to the great satisfaction of the islanders until 1882. In 1880 he had received the distinction of a K.C.B. In 1882 he was transferred to a commissionership of woods and forests and land revenue, and his career outside the somewhat narrow bounds of the English civil service seemed at an end. In 1884, however, he was sent to Australia by Gladstone as governor of Victoria. He was made a G.C.M.G. on 24 May 1887. During his five years' tenure of that office his kindness and tact endeared him to all classes of the population, and he left affectionate remembrances behind him when in 1889 the Marquis of Salisbury, the conservative prime minister, chose him to succeed Sir Hercules Robinson (afterwards Lord Rosmead) [q.v. Suppl.], who had just completed his first term of office as governor of the Cape and high commissioner in South Africa.

It was during Loch's residence at the Cape that the South African question first began to assume the threatening proportions which led to the war of 1899. In the Cape Colony itself matters were peaceful enough, owing to the temporary combination of Mr. Cecil Rhodes with the Afrikaner party. There were few constitutional difficulties, and Sir Henry found himself generally in accord with his constitutional advisers, and able to work with them with but little friction. Outside the borders, however, the elements of unrest were beginning to ferment, and Loch had scarcely the requisite knowledge of South African problems to enable him to adequately master the situation. He was alive, however, to the greatness of Mr. Rhodes's conceptions, and to the danger that would inevitably attend any expansion of the Transvaal Republic. He assisted the expeditions which led to the annexation of Mashonaland and Matabeleland, and he allowed the Bechuanaland police force to be sent up to threaten the Matabele from the west on the outbreak of the war of 1893.

The most striking episode in his South

African career was his mission to Pretoria, in 1894, to interfere on behalf of the British subjects who had been commandeered by the Boers in their operations against Matabele, the Matabele chieftain. He was successful in obtaining the abandonment of the claim of the Boer government; but it was thought he had hardly pressed the English case with sufficient vigour. It was from the rough treatment accorded to President Kruger at Johannesburg on this occasion, in contrast with the enthusiastic reception accorded to the high commissioner, that much of the former's hostility to Great Britain and to the Johannesburgers is said to have arisen.

Earlier in his term of office Sir Henry had succeeded in putting strong pressure on President Kruger to prevent the incursions to the north and west of roving Boer filibusters. He had, however, made to the Transvaal government an offer of a way of access to the sea-coast on condition that the president should moderate his attitude of hostility and join the Cape customs union, which it was fortunate for the empire that Kruger refused.

Loch's Transvaal policy failed locally to create the impression of any great strength or decision. Fortunately for his peace of mind his term of office expired at the beginning of 1895, and he left Africa before the disasters of the Jameson raid.

On his return to England he was raised to the peerage, but he took small part in politics, voting with the liberal unionists. When, in December 1899, the reverses to the British arms in Natal and Cape Colony at the hands of the Boers gave rise to the call for volunteers from England, Loch threw himself heartily into the movement, and took a leading share in raising and equipping a body of mounted men who were called, after him, 'Loch's Horse.' He lived to see the decisive vindication of British supremacy by the occupation of Pretoria, but his health had been failing, and he died after a short illness in London, of heart disease, on 20 June 1900.

Loch married, in 1862, Elizabeth Villiers, niece of the fourth earl of Clarendon, and had by her two daughters and a son. The latter, Edward Douglas, second baron, entered the grenadier guards and served with distinction in the Nile expedition of 1898 and in the Boer war of 1899-1900, receiving a severe wound in the latter campaign.

There is a painting of Loch by Henry W. Phillips, an engraving of which is appended to the third edition of his 'Personal Narrative of Occurrences during Lord Elgin's Second Embassy to China.' Originally pub-

lished in 1809, this little book is a most admirable account of the expedition, and, written in a simple and unaffected style, gives a highly pleasing impression of the courage, loyalty, and ability of the writer under circumstances of great danger and hardship. It is much to be regretted that by Lord Elgin's desire Loch abandoned his intention of publishing a detailed account of the proceedings of the embassy of 1860.

[There is no memoir yet published of Loch. See the Personal Narrative above referred to; Times, 21 June 1900; Froude's Oceana; Fitzpatrick's Transvaal from Within; Speeches of Cecil J. Rhodes, ed. Vindex.] J. B. A.

LOCKER, ARTHUR (1828-1898), novelist and journalist, second son of Edward Hawke Locker [q. v.], and brother of Frederick Locker-Lampson [q. v. Suppl.], was born at Greenwich on 2 July 1828. He was educated at Charterhouse School and Pembroke College, Oxford, where he matriculated on 6 May 1847, but, after graduating B.A. in 1851, he entered upon a mercantile life in an office at Liverpool. The next year, however, smitten by the prevalent gold fever, he emigrated to Victoria. Not succeeding at the gold-fields, he took to journalism, and also produced some tales and plays which have not been reprinted in England. He returned in 1861, with the determination of devoting himself to literature. He wrote extensively for newspapers and magazines, and in 1863 obtained a connection with the 'Times,' which he kept until 1870, when he was appointed editor of the 'Graphic' illustrated newspaper, which had been established about six months previously [see THOMAS, WILLIAM LUSON, Suppl.] He proved a most efficient editor, and was greatly beloved for his general urbanity, and his disposition to encourage young writers of promise. In December 1891 the state of his health compelled him to retire, and after visiting Madeira and the Isle of Wight in the vain hope of recovery, he died at 79 West Hill, Highgate, on 23 June 1898. He was twice married. After his return to England he published some works of fiction, chiefly based on his Australian experiences; 'Sweet Seventeen,' 1866; 'On a Coral Reef,' a tale for boys, 1869; 'Stephen Scudamore the Younger,' 1871, and 'The Village Surgeon,' 1874.

[Foster's Alumni Oxon. 1715-1886; Brit. Mus. Cat.; Times, 26 June 1893; Graphic, 1 July 1893.] R. G.

LOCKER-LAMPSON, FREDERICK (1821-1895), poet, more commonly known as FREDERICK LOCKER, was born on 29 May

1821 at Greenwich Hospital, where his father, Edward Hawko Locker [q. v.], held the office of civil commissioner. His mother, Eleanor Mary Elizabeth Boucher, was the daughter of the Rev. Jonathan Boucher [q. v.], vicar of Epsom, a book collector and a former friend of George Washington. Frederick Locker was the second son of his parents, a younger brother being Arthur Locker [q. v. Suppl.] After an education at various schools—at Olapham, at Yateley in Hampshire, at Olapham again, and elsewhere—he became, in September 1837, a junior clerk in a colonial broker's office in Minoing Lano. This uncongenial calling he followed for little more than a year. Then, in March 1841, he obtained from Lord Minto, first lord of the admiralty and son of the governor-general of India, a temporary clerkship in Somerset House, and in November 1842 he was transferred to the admiralty, where he was placed as a junior in Lord Haddington's private office, and subsequently became deputy reader and *précis* writer. In his posthumous recollections ('My Confidences,' 1896, pp. 135-50) he gives an account of his official life, the tedium of which he had already begun to enliven, apparently with the approval of his chief, by the practice of poetry. A rhyming version of a petition from an importunate lieutenant seems to have sent Lord Haddington into ecstasies (*ib.* p. 136). Locker's experiences as an admiralty clerk were prolonged under Sir James Graham and Sir Charles Wood. In 1849 his health, never good, broke down, and he obtained a long leave of absence. In July 1850 he married Lady Charlotte Bruce, a daughter of Thomas Bruce, seventh earl of Elgin [q. v.], who brought the famous Elgin marbles to England. Not long afterwards he quitted the government service. In 1857 he published, with Chapman & Hall, his first collection of verse, 'London Lyrics,' a small volume of ninety pages, and the germ of all his subsequent work. Extended or rearranged in successive editions, the last of which is dated 1893, this constitutes his poetical legacy. In 1867 he published the well-known anthology entitled 'Lyra Elegantiarum,' being 'some of the best specimens of *vers de société* and *vers d'occasion* in the English language,' and in 1879 'Patchwork,' justly described by Mr. Augustine Birrell as 'a little book of extracts of unrivalled merit.' During all this time he was assiduously cultivating his tastes as a virtuoso and book lover, of which latter pursuit the 'Rowfant Library,' 1880, is the record. Chronic ill-health and dyspepsia made it impossible for him to follow any active calling. But he went much into society, was a member of

several clubs, and enjoyed the friendship of many distinguished persons of all classes. He knew Lord Tennyson, Thackeray, Lord Houghton, Lord Lytton, George Eliot, Dickens, Trollope, Dean Stanley (his brother-in-law), Hayward, Kinglake, Cruikshank, du Maurier, and others, and he had seen or spoken to almost every contemporary of any note in his own day. In April 1872 Lady Charlotte Locker died, and was buried at Kensal Green. Two years later (6 July 1874) he married Hannah Jane Lampson, only daughter of Sir Curtis Miranda Lampson, bart. [q. v.], of Rowfant, Sussex, and in 1883 took the name of Lampson. At Rowfant, subsequent to his second marriage, he mainly resided, and he died there on 30 May 1895.

Locker's general characteristics are well summed up by his son-in-law, Mr. Augustine Birrell, in the Appendix to the Rowfant Library, 1900. He was 'essentially a man of the world; he devoted his leisure hours to studying the various sides of human nature, and drawing the good that he could out of all sorts and conditions of men. His delicate health prevented him from taking any very active share in stirring events; but he was content, unembittered, to look on, and his energies were continually directed towards gathering about him those friends and acquaintances who, with their intellectual acquirements, combined the charms of good manners, culture, and refinement.' As a poet he belonged to the school of Prior, Præd, and Hood, and he greatly admired the metrical dexterity of Barham. His chief endeavour, he said, was to avoid flatness and tedium, to cultivate directness and simplicity both in language and idea, and to preserve individuality without oddity or affectation. In this he achieved success. His work is always neat and clear; restrained in its art, and refined in its tone; while to a wit which rivals Præd's, and a lightness worthy of Prior, he not unfrequently joins a touch of pathos which recalls the voice of Hood. His work mellowed as he grew older, and departed further from his first models—those rhymes *galamment composés* which had been his youthful ambition; but the majority of his pieces, at all times, by their distinctive character and personal note, rise far above the level of the mere *vers d'occasion* or *vers de société* with which it was once the practice to class them.

Locker left children by both his wives. Eleanor, his daughter by Lady Charlotte, married, first, in 1878, Lord Tennyson's younger son, Lionel, and secondly, in 1888, Mr. Augustine Birrell, K.C. By his second wife Locker had four children, the eldest of

whom, Mr. Godfrey Locker-Lampson, is an attaché in the foreign office.

'London Lyrics,' Locker's solitary volume of original verse, has appeared in many forms since its first issue in 1837. A second edition followed in 1862, and in 1865 Messrs. Moxon included a selection from its pages in their 'Miniature Poets.' This was illustrated by Richard Doyle [q.v.] A second impression followed in 1868, and the Doyle illustrations were subsequently employed in an issue of 1874 prepared for presentation to the members of the Osmopolitan Club. In 1868 an edition of 'London Lyrics' was privately printed for John Wilson of Great Russell Street, with a frontispiece by George Cruikshank, illustrating the poem called 'My Mistress's Boots.' To this succeeded editions in 1870, 1872, 1874, 1876, 1878, 1885 ('Elzevir Series'), 1891 and 1893. Besides these Locker prepared a privately printed selection in 1881, entitled 'London Lyrics,' and in 1882 a supplemental volume, also privately printed, entitled 'London Rhymes.' Of the former of these volumes a few large-paper copies were struck off, which contained a frontispiece ('Bumble-Rise') by Randolph Caldecott (sometimes found in two 'states'), and a tail-piece ('Little Dinky') by Kate Greenaway. In America 'London Lyrics' was printed in 1883 for the Book Fellows' Club of New York, with *inter alia* some fresh illustrations by Caldecott; and in 1895 the Rowfant Club of Cleveland, Ohio, a body which had borrowed its name, by permission, from Mr. Locker's Sussex home, put forth a rare little volume of his verse, chosen by himself shortly before his death, and entitled 'Rowfant Rhymes.' It includes a preface by the present writer and a poem by Robert Louis Stevenson. Most of these books contain the author's portrait, either from an etching by Sir John Millais, which first saw the light in the Moxon selection of 1865, or a pen-and-ink full-length by George du Maurier. There are other American editions, some of which are pirated.

'Lyra Elegantiarum,' as above stated, appeared in 1867. The first issue was almost immediately suppressed because it included certain poems by Landor which were found to be copyright, and a revised impression, which did not contain these pieces, speedily took its place. An American edition followed in 1884, and in 1891 an enlarged edition was added to Ward, Lock, & Co.'s 'Minerva Library.' In preparing this last, of which there was a large-paper issue, Locker had the assistance of Mr. Coulson Kernahan. 'Patchwork' was first printed

privately in quarto for the Philobiblon Society, and afterwards published in octavo in 1879. No later edition has been published. In 1886 Locker compiled the catalogue of his books known to collectors as the 'Rowfant Library.' It comprises, besides its record of rare Elizabethan and other volumes, many interesting memoranda, personal and bibliographical. Since Locker's death an appendix to the 'Rowfant Library' has been issued, under the title of 'A Catalogue of the Printed Books &c. collected since the printing of the first Catalogue in 1886 by the late Frederick Locker-Lampson,' 1900. It is inscribed to the members of the Rowfant Club, has a preface by Mr. Birrell, and memorial verses by various hands. The Rowfant Library was sold to an American bookseller in 1905, and was dispersed. Locker's autobiographical reminiscences were published posthumously in 1896 under the title of 'My Confidences,' the volume was edited by Mr. Birrell.

[Century Mag. 1883 (by Brander Matthews); Miles's Poets and Poetry of the Century; Slater's Early Editions, 1894; Rowfant Rhymes, 1895; Nineteenth Century, Oct. 1895 (by Coulson Kernahan); Scribner's Mag. Jan. 1896 (by Augustine Birrell); My Confidences, 1896.] A. D.

LOCKHART, WILLIAM EWART (1846-1900), subject and portrait painter, was born on 18 Feb. 1846 at Eggleston, Annan, Dumfriesshire. His father, a small farmer, managed to send him, at the age of fifteen, to study art in Edinburgh, where he worked with Mr. J. B. Macdonald, R.S.A., and for a short time in the life school; but in 1863 his health gave way, and he was sent to Australia. Returning greatly benefited by the voyage, he settled in Edinburgh, and, in 1867, paid the first of several visits to Spain, where he found material for some of his finest works. In 1871 he was elected an associate of the Royal Scottish Academy, and in 1878 became an academician, while he was also an associate (1878) of the Royal Society of Painters in Water-colours, and for some years a member of the Royal Scottish Water-colour Society. He had occupied a prominent position as a painter of subject pictures and portraits in Scotland for many years; but when in 1887 he was commissioned by Queen Victoria to paint 'The Jubilee Celebration in Westminster' he went to London, where he afterwards devoted himself principally to portraiture.

His pictures in both oil and water-colour are marked by considerable bravura of execution and much brilliance of colour, but are rather wanting in refinement and subtlety. They are always effective and telling, how-

ever, and the 'Jubilee' picture, to which he devoted three years, is one of the ablest works of its kind. On the whole, Spanish and Majorca pictures, such as 'The Old and the Five Moorish Kings,' 'A Church Lottery in Spain,' 'The Orango Harvest, Majorca,' and 'The Swine-herd' are his best and most characteristic works; of his portraits, those of Lord Peel (bronze medal at the Salon), Mr. A. J. Balfour, and Mr. John Polson may be mentioned. He also painted landscape in water-colour with much success. His portrait of Mr. Balfour is in the Glasgow Corporation Galleries; his 'Swineherd' in the Dundee Gallery; and his diploma—a study for 'The Old'—in Edinburgh, while the French government bought the sketch for 'The Jubilee.' The Keppelstone Collection, Aberdeen Art Gallery, includes an autograph portrait of Lockhart.

He married Mary Will, niece of his master, Mr. J. B. Macdonald, on 7 Feb. 1868, and, dying in London on 9 Feb. 1900, after several years of rather indifferent health, was survived by her and five children—one son and four daughters.

[Private information from Mrs. Lockhart and Mr. J. B. Macdonald, R.S.A.; *The Scotsman*, 12 Feb. 1900; *Athenaeum*, 17 Feb. 1900; *Scots Pictorial* (by John MacWhirter, R.A.), March 1900; R.S.A. Report, 1900; catalogues of galleries and exhibitions.] J. L. C.

LOCKHART, SIR WILLIAM STEPHEN ALEXANDER (1841–1900), general, commander-in-chief in India, fourth son of the Rev. Lawrence Lockhart of Wicketshaw and Milton Lockhart, Lanarkshire, by his first wife, Louisa, daughter of David Blair, an East India merchant, and nephew of John Gibson Lockhart [q. v.], was born on 2 Sept. 1841. His older brothers were John Somerville Lockhart, Major-general David Blair Lockhart of Milton Lockhart, and Laurence William Maxwell Lockhart [q. v.], the novelist.

Entering the Indian army as an ensign on 4 Oct. 1858, he joined the 44th Bengal native infantry, and was promoted lieutenant on 19 June 1859. His further commissions were dated: captain 16 Dec. 1868, major 9 June 1877, lieutenant-colonel 6 April 1879, brevet colonel 6 April 1883, major-general 1 Sept. 1891, lieutenant-general 1 April 1894, and general 9 Nov. 1896.

He served for a few months in the Indian mutiny with the 5th fusiliers in Oude in 1858–9, and as adjutant of the 14th Bengal lancers in the Bhutan campaigns from 1864 to 1866, when he especially distinguished

himself in the reconnaissance to Chirung. In scouting and outpost duty he was very efficient, and had a keen eye for ground and was particularly useful in hill warfare. His services were acknowledged by the government of India, and he received the medal and clasp.

In the Abyssinian expedition of 1867–8 Lockhart was aide-de-camp to Brigadier-general Merewether, commanding the cavalry brigade, and took part in the action of Arogee and the capture of Magdala. He was mentioned in despatches (*London Gazette*, 30 June 1868) and received the medal.

On his return to India he was appointed deputy-assistant quartermaster-general with the field force, under Brigadier-general (afterwards Sir) Alfred Thomas Wilde [q. v.], in the expedition to the Hazara Black Mountains in 1868, was mentioned in despatches (*ib.* 15 June 1869), and received a clasp to his frontier medal.

He received the bronze medal of the Royal Humane Society for rescuing two women from drowning in the Morar Lake, Gwalior, on 26 Dec. 1869.

For ten years, from October 1869, Lockhart held the appointments successively of deputy-assistant and assistant quartermaster-general in Bengal, but was twice away in Achin between 1875 and 1877, the second time as military attaché to the Dutch army, when he took part in the assault and capture of Lambadde, was mentioned in despatches, offered the Netherlands order of William, which he was not allowed to accept, and received the Dutch war medal and clasp. He was, however, struck down with malarial fever and put on board the steamer for Singapore in an almost moribund condition.

In the Afghan campaigns of 1878 to 1880 Lockhart was first appointed road commandant in the Khaibar to hold the Afridi tribes in check, and, in November 1879, assistant quartermaster-general at Kabul. He was present at the actions of Mir Karoz and Takht-i-Shah and other operations under Sir Frederick (now Earl) Roberts round Kabul in December 1879, and was subsequently deputy adjutant and quartermaster-general to Sir Donald Martin Stewart [q. v. Suppl.], commanding in Northern Afghanistan, returning with him to India by the Khaibar pass in August 1880. He was mentioned in despatches (*ib.* May 1880), received the medal and clasp, and was made a companion of the order of the Bath, military division.

On his return to India Lockhart held the

post of deputy quartermaster-general in the intelligence branch at headquarters from 1880 to 1885. In 1884 he was sent to Achin to rescue the crew of the *Nisero* from the Malays, for which he received the thanks of government. In June 1885 he went on a mission to Chitral, where his firmness and tact had the best effect. He commanded a brigade as brigadier-general in the Burmese war from September 1886 to March 1887, was mentioned in despatches (*ib.* 2 Sept. 1887), received the thanks of the government, a clasp to his medal, and was made a K.C.B. and a C.S.I.

On his return to India he commanded a second-class district in Bengal, but a severe attack of malarial fever compelled him to return home. For six months he was employed at the India office in the preparation of an account of his explorations in Central Asia, and in April 1889 he took up the appointment of assistant military secretary for Indian affairs at the horse guards. But he did not remain long in England, for he returned to India in November 1890 to command the Punjab frontier force, first as a brigadier-general and then as a major-general, until March 1895. The greater part of this time was occupied by wars with the hill tribes in a succession of punitive expeditions. Lockhart commanded the Miranzai field force in January and February 1891, then the 3rd brigade of the Hazara field force in March and April, and the Miranzai field force again from April to June. He was mentioned in the governor-general's despatch (*ib.* 15 Sept. 1891), received two clasps, and was promoted to be major-general for distinguished services. He commanded the Isazai field force in 1892, and the Waziristan expedition in 1894-5, was again mentioned in despatches by the government of India (*ib.* 2 July 1895), received another clasp, and was made a K.C.S.I. On his return he was given the Punjab command.

In 1897, after Sir Bindon Blood had made a settlement with the fanatics of Swat, the Afghans rose and closed the Khaibar pass; the revolt spread to the Mohmands and the other mountain tribes of the Tirah, and Lockhart was sent in command of 40,000 men to quell the rising. He showed exceptional skill in handling his forces of regulars in an almost impracticable country, in a guerilla warfare, against native levies of sharpshooters, who were always trying to elude him, but he outmanœuvred them and beat them at their own tactics. The campaign consisted of hard marching among the mountains and hard fighting, including the memorable action of Dargai, when the

Gordon highlanders and the Ghurkhas greatly distinguished themselves. For his services he received the thanks of the government of India, was made a G.C.B., and succeeded Sir George White as commander-in-chief in India in 1898. He died in harness on 18 March 1900.

A good portrait in oils of Lockhart, painted by a Scotsman, Mr. Hardie, in 1894, was the property of Major-general D. B. Lockhart of Milton Lockhart.

He married first, in 1864, Caroline Amelia, daughter of Major-general E. Lascelles Denny; and secondly, in 1888, Mary Katharine, daughter of Captain William Eccloe, Coldstream guards, who survived him.

H. V.

LOCKWOOD, SIR FRANK (1846-1897), solicitor-general, second son of Charles Day Lockwood, stone-quarrier at Levitt Hagg, near Doncaster, was born at Doncaster in July 1846. In 1860 the family moved to Manchester, and in 1863 he entered the grammar school (having been previously at a private school at Edenbridge) under Mr. Walker, afterwards head-master of St. Paul's School. In October 1865 he proceeded to Caius College, Cambridge, where he took a 'pass' degree in 1869. In 1869, having abandoned the idea of holy orders, he entered Lincoln's Inn and was called to the bar in January 1872. He at once joined the old midland circuit, and attended sessions at Bradford, Leeds, and other places. A fair measure of success was speedily awarded him, and in 1875 he held fifteen briefs in one assize at Leeds. During his early days at the bar the habit of drawing he had learnt from his father grew upon him, and his rapid sketching in court of judges, witnesses, and litigants gave him occupation and secured him notice. For some of these early sketches he appears to have found a market; but in later life, though he still continued to sketch, he tossed them from him with careless indifference. In September 1874 he married Julia, daughter of Salis Schwabe of Glyn-y-garble, Anglesea. His practice steadily increased, and from 1879, when, at the request of the presiding judge, he defended the burglar and murderer, Charles Peace, his name was always much before that large section

of the public who follow 'celebrated trials' with an interest that never flags. He took silk in 1882. In politics he was a liberal. His first attempt to get into parliament was at King's Lynn, and was unsuccessful, as also was his first contest at York in November 1883, when, however, he was beaten by twenty-one votes only. At that time he, like the majority of liberal candidates, refused to vote even for an inquiry into home rule for Ireland, but he pledged himself to support household suffrage and elective local government in that country, and for making those pledges he incurred the public censure of Lord Salisbury, who, however, lived to make them both good. In October 1884 he became recorder of Sheffield, and in November 1885 he and his great friend, Mr. Alfred Pease, were returned to the House of Commons for York, which city he continued to represent till his death. From 1885 to 1895 Lockwood led a very busy life both professionally and socially. 'His tall powerful frame, his fine head crowned with picturesque premature white hair, his handsome healthy face, with its sunshine of genial, not vapid good nature, made him notable everywhere. So powerful was this personality that his entrance into a room seemed to change the whole complexion of the company, and I often fancied that he could dispel a London fog by his presence' (see Lord Rosebery's letter in Mr. Birrell's sketch, *Sir Frank Lockwood*, 1898).

In the House of Commons Lockwood, though he took no active part in debate, was a great figure, and his sketches depicting the occasional humours of that assembly were in much demand. During the vacation of 1894 Lord Rosebery, the premier (to whom Lockwood was warmly attached), offered him the post of solicitor-general, which he accepted, in succession to Sir Robert Reid, who became attorney-general. The election of 1895 restored Lord Salisbury to power, but owing to a difficulty about the scale of his successor's remuneration, Lockwood nominally remained solicitor-general until August 1895, when Mr. (now Sir Robert) Finlay succeeded him. In the vacation of 1896 he accompanied Charles Lord Russell of Killowen [q. v. Suppl.], the lord-chief-justice of England, to the United States of America. About May 1897 his health showed signs of failing, and it gradually declined until his death at his house in Louisa Gardens on Sunday, 19 Dec. 1897, in the fifty-second year of his age. His wife and two children, both daughters, survived him.

Lockwood made no pretensions to be con-

sidered a learned lawyer, nor was he accounted a consummate advocate; but his sound sense, ready wit, good feeling, and sympathetic nature, set off as these qualities were by a commanding presence and good voice, placed him in the front ranks of the bar, and easily secured him a large business. Both outside and inside his profession he enjoyed a large and deserved popularity with all sorts and conditions of men. He had all the domestic virtues, and was nowhere more appreciated than in his own home. His death was unexpected and chilled many hearts. A collection from his sketches was publicly exhibited in London after his death for the benefit of the Barristers' Benevolent Association, and some of the sketches have been reproduced in an album, '*The Frank Lockwood Sketch Book*,' London, 1898, obl. 4to. His lecture on '*The Law and Lawyers of Pickwick*,' published by the Roxburghe Press in 1894, went into a second edition in 1896. There is a memorial window and tablet in York Cathedral.

[Sir Frank Lockwood, a Sketch, 1898, by the present writer.] A. B.-L.

LOPES, HENRY CHARLES, first BARON LUDLOW (1828-1899), judge, third son of Sir Ralph Lopes, bart. [see LORDS, SIR MAXWELL MASSIE], of Maristow, Devon, by Susan Gibbs, eldest daughter of A. Ludlow of Heywood House, Wiltshire, was born at Devonport on 3 Oct. 1828. He was educated at Winchester School and the university of Oxford, where he matriculated from Balliol College on 12 Dec. 1845, and graduated B.A. in 1849. He was admitted on 5 June 1849 student at Lincoln's Inn, but on 26 May 1852 migrated to the Inner Temple, where he was called to the bar on 7 June 1852, and elected benchet on 31 May 1870, and treasurer in 1890. He practised first as a conveyancer and equity draftsman, afterwards as a pleader on the western circuit and at Westminster. He was appointed recorder of Exeter in 1867, and was gazetted Q.C. on 22 June 1869. Returned to parliament for Launceston in the conservative interest on 9 April 1868, he retained the seat until the general election of February 1874, when he rendered signal service to his party by wresting Frome from the liberals. In 1876 he was appointed justice of the high court and knighted (28 Nov.). He sat successively in the common pleas and queen's bench divisions until his advancement in 1885 to the court of appeal (1 Dec.), when he was sworn of the privy council (12 Dec.). He was raised to the peerage, on occasion of the queen's jubilee in 1897 (26 July), as

Baron Ludlow of Heywood, Wiltshire, and shortly afterwards retired from the bench. He died at his town house, 8 Cromwell Place, on Christmas day 1899, leaving by his wife Cordelia Lucy (m. 20 Sept. 1854), daughter of Eiving Clark of Efford Manor, Devon, an heir, Henry Ludlow, who succeeded as second Baron Ludlow. Place among the great lawyers of the nineteenth century cannot be claimed for Ludlow. He showed, however exceptional ability in nisi prius and divorce cases, and was an admirable chairman of quarter sessions.

LOTHIAN, NINTH MARQUESS OF. [See KERR, SCHOMBURG HENRY, 1838-1900.]

LOVELL, ROBERT (1770?-1796), poet and participator in the 'pantisocratic' project of Southey and Coleridge, was born apparently at Bristol about 1770. He was the son of a wealthy quaker, and probably followed some business; but the vehemence of his 'Bristoliad,' a satire on Churchill's style and not deficient in vigour, shows that he was ill at ease in the commercial atmosphere of Bristol. He still further estranged himself from his original circle by marrying, in 1794, Mary Fricker, a girl of much beauty and some talent, who had endeavoured to repair the fortunes of a bankrupt father by going on the stage. It does not precisely appear when he first made Southey's acquaintance, but early enough for Southey to have become engaged to his sister-in-law, Edith, before Coleridge's visit to Bristol in August 1794. Lovell introduced the two poets to their Meccenas, Joseph Cottle [q. v.], and ere long Coleridge was betrothed to a third Miss Fricker, Sam, whom he married on 14 Nov. 1795. In the same month of August 1794 the three friends co-operated in the production of a wellnigh improvised three-act tragedy on the fall of Robespierre. Each wrote an act, but Lovell's was rejected as out of keeping with the others, and Southey filled the void. The tragedy was published as Coleridge's at Cambridge in September 1794. Southey and Lovell nevertheless combined to publish a joint volume of poetry (Bristol, 1794; Bath, 1795) under the title of 'Poems by Bion and Moschus,' which has occasioned it to be mistaken for a translation. The Bath edition bears the authors'

names. Southey's mature opinion of his own pieces may be inferred from the fact that he reprinted none of them; and Lovell's team with such felicities as 'Our village curate graved the elegiac stone,' 'Have we no duties of a social kind?' They were, notwithstanding, reprinted in Park's 'British Poets' (1808 sq. vol. xli.), with the addition of the 'Bristoliad,' which does not seem to have been published before. Next to their poetry, the young men were chiefly occupied with the project for their pantisocratic colony on the banks of the Susquehanna, to which Lovell was to have brought not only his wife but his brother and two sisters. The design had practically collapsed before Lovell's death in April 1796 from a fever contracted at Salisbury, and aggravated by his imprudence in travelling home without taking medical advice. Edith Southey, in Southey's absence, nursed him for three nights at the risk of her life. Lovell's father refused all aid to his daughter-in-law on the ground of her having been an actress, and she and her infant son were thrown upon the never-failing beneficence of Southey. She lived in his family during his life, and afterwards with his daughter Kate until her death at the age of ninety. The son, Robert Lovell the younger, settled in London as a printer in 1824. Some years afterwards he went to Italy and mysteriously disappeared. Henry Nelson Coleridge journeyed in quest of him, but no trace was ever discovered.

[Cottle's Early Recollections, 1837; Southey's and Coleridge's letters; private information.] R. G.

LUCAN, EARL OF. [See BINGHAM, GEORGE CHARLES, 1800-1883.]

LUDLOW, BARON. [See LOPES, HENRY CHARLES, 1828-1899.]

LUMBY, JOSEPH RAWSON (1831-1895), author and divine, was the son of John Lumby of Stanningloy, near Leeds, where he was born on 18 July 1831. He was admitted on 2 Aug. 1841 into the Leeds grammar school. In March 1848 he left to become master of a school at Meanwood, a village now absorbed in Leeds. Here his ability attracted the notice of friends, by whom he was encouraged to proceed to the university. In October 1854 he entered Magdalene College, Cambridge, where in the following year he was elected to a Milner class scholarship. In 1858 he graduated B.A., being bracketed ninth in the first class of the classical tripos. His subsequent degrees were M.A. 1861, B.D. 1873, D.D. 1879.

Within a few months of graduation Lumby was made Dennis fellow of his college, and began to take pupils. In 1860 he gained the Crosse scholarship, and in the same year was ordained deacon and priest in the diocese of Ely. For clerical work he had the chaplaincy of Magdalene and the curacy of Gorton. In 1861 he won the Tyrwhitt Hebrew scholarship, and was appointed classical lecturer at Queens' College. In 1873 his name was added to the list of the Old Testament Revision Company, and into this work and its sequel, the revision of the Apocrypha, he flung himself with much ardour. He just lived to see the appearance of the revised version of the Apocrypha. In 1874, being now a widower through the death of his first wife, he was chosen fellow and dean of St. Catharine's, and, having resigned his curacy at Gorton, was made curate of St. Mark's, Newnham. The following year he was appointed, on the nomination of Trinity Hall, to the vicarage (non-stipendiary) of St. Edward's, Cambridge. His sermons here were much appreciated by undergraduates. In 1879 he was elected to the Norrisian professorship of divinity, and was also Lady Margaret preacher for that year. Having vacated his fellowship at St. Catharine's by a second marriage, he was appointed to a professorial fellowship in that college in 1886. In 1887 he was made prebendary of Wetwang in the cathedral church of York, and acted as examining chaplain to the archbishop of York and the bishop of Carlisle. On the death of Foulton John Anthony Hort [q. v. Suppl.] in 1892 he was unanimously chosen to succeed him as Lady Margaret professor of divinity. But he did not long enjoy the honour, dying at Merton House, Grantchester, near Cambridge, on 21 Nov. 1895.

Lumby's literary career showed remarkable activity. He was one of the founders of the Early English Text Society, and edited for it 'King Horn' (1866), 'Ralis Raving' (1867), and other pieces. For the Rolls series, being requested by the master of the rolls to continue the work of Professor Bawington, he edited vols. iii.-ix. of Higdon's 'Polychronicon' (1871-86), and vol. i. of the 'Chronicon' of Henry Knighton (1889). To the Pitt Press series he contributed editions of Bacon's 'Henry VII' (1876), 'Venerabilis Bedæ Historiæ. . . Libri iii. iv.' (in conjunction with Professor John E. B. Mayor, 1878), More's 'Utopia,' in Robynson's English translation (1879), More's 'History of Richard III' (1883), and Cowley's 'Essays' (1887). As co-editor of the 'Cambridge Bible for Schools,' he

edited, with commentary, 'The Acts' (chaps. i-xiv., 1879; completed 1884), '1 Kings' (1886), '2 Kings' (1887), 'The Acts' in the 'Cambridge Greek Testament for Schools' (1885), also in 'The Smaller Cambridge Bible for Schools' (1889), and for this last series '1 Kings' (1891). To the 'Sunday School Centenary Bibles' he contributed a 'Glossary of Bible Words' (1880), republished in the same year in an altered form by the Society for the Promotion of Christian Knowledge. For the 'Speaker's Commentary' he edited '2 Peter' and 'Jude' (1881); for 'A Popular Commentary' the 'Epistles to the Philippians' and 'Philemon' (1882); and for 'The Expositor's Bible' the two 'Epistles of St. Peter' (1893).

Besides these works for various series Lumby wrote the chapter on 'The Ordinary Degree' in Seeley's 'Guide' (1866), 'Three Sermons on Early Dissent,' &c. (1870), 'A History of the Croeds' (1873), 'A Sketch of a Course of English Reading' (1873), 'Hear the Church' (1877), 'Greek Learning in the Western Church' (a pamphlet, 1878), preface to a 'Compendium of Church History' (1883), 'A Popular Introduction to the New Testament' (1883), and articles in the 'Cambridge Companion to the Bible' (1893). He was also a contributor to the ninth edition of the 'Encyclopædia Britannica.'

[Private information; Armitage and Wortley News, 29 Nov. 1895; article signed W. T. Southward in the Cambridge Review, 28 Nov. 1895; personal knowledge.] J. H. L.

LUMSDEN, SIR HARRY BURNETT (1821-1890), lieutenant-general, born 12 Nov. on the East India Company's ship *Rose*, in the bay of Bengal, was eldest son of Colonel Thomas Lumsden, O.B., of the Bengal artillery, and of Belhelvie Lodge, Aberdeenshire, by Hay, daughter of John Burnett of Elrick in the same county. He was sent home from India in 1827, was educated at the Bellovie academy, Aberdeen, and Mr. Davies's School, Bromley, Kent, and returned to India as a cadet at the age of sixteen. He was commissioned as ensign in the 50th Bengal native infantry on 1 March 1838. He had marked aptitude for languages, and in the spring of 1842 he was attached as interpreter and quartermaster to the 33rd Bengal native infantry, which formed part of the army that forced the Khyber under Sir George Pollock [q.v.] At Cabul Lumsden began a close friendship with John Nicholson [q.v.] He was promoted lieutenant in the 59th on 16 July 1842, and rejoined it at Loodiana early in 1843. He served with it in the Sutlej campaign of

1845, and was severely wounded at Sohraon.

When (Sir) Henry Montgomery Lawrence [q. v.] became resident at Lahore, Lumsden was chosen by him as one of his assistants, and was appointed on 15 April 1846. He accompanied Lawrence to Kashmir in October, and in December he was sent with three thousand Sikhs and six guns through the Hazara country. His march was opposed by some seven thousand hillmen, but by skilful stratagems he forced the passage of two tributaries of the Jhilam, near Muzaffarabad, and brought the hillmen to submit after two sharp actions. He received the thanks of the government, and was charged with the formation of the corps of guides for frontier service. He was given a free hand in the recruiting, training, and equipment of this force, which was to consist of about a hundred horse and two hundred foot. He chose men from the most warlike tribes of the border, men notorious for desperate deeds, or, as he put it, 'accustomed to look after themselves, and not easily taken aback by any sudden emergency.' The equipment of the guides included the adoption of the khaki uniform, which Lumsden was the first to introduce into the Indian army.

The guide cavalry distinguished itself under him during the siege of Multan in 1848, and again on 8 Jan. 1849, when it surprised and destroyed a raiding force of Sikhs on the Kashmir border. Lumsden again received the thanks of government. He was present at the battle of Gujrat on 21 Jan., was mentioned in despatches, and received the Punjab medal with two clasps. His corps had proved so useful that its strength was raised on 19 June to four hundred horse and six hundred foot. As assistant commissioner in Yusufzai, and for a time in charge of the Peshawar district, Lumsden was concerned in many affairs with the border tribes. Lord Dalhousie wrote: 'A braver or a better soldier never drew a sword. The governor-general places unbounded confidence in him and in the gallant body of men he commands,' and warmly praised his conduct as an administrator (20 Dec. 1851).

In November 1852 he went home on leave, after fifteen years of continuous service in India. On 1 March 1853 he was promoted captain, and on 6 Feb. 1854 he was given a brevet majority for his services in the Sikh war. He returned to India at the end of 1855, and was restored to the command of the guides. In January 1857 he was sent on a mission to Candahar, accompanied by

his brother, Lieutenant (later General Sir Peter Stark) Lumsden, and Dr. Henry Walter Bellew. Persia had seized Herat, and the object of the mission was to make sure that the British subsidy to the amir was duly applied to the payment of troops for the defence of Afghanistan against Persia. It was also to advise and assist the amir so far as it could without exciting Afghan jealousy. It reached Candahar on 25 April. Its position, delicate from the first, became hazardous a month afterwards, when news arrived of the outbreak and spread of the sepoy mutiny in India. But it was important, both in the interest of the amir and for British prestige, that the mission should not be recalled during the crisis; and while his guides were fighting brilliantly before Delhi and elsewhere, Lumsden had to remain at Candahar. It is related that at this time Lumsden and his brother one night overheard some Afghans discussing the expediency of putting them to death. He left that city on 15 May 1858, and was promoted lieutenant-colonel. 'The clear sound judgment and admirable temper' which he had shown was acknowledged (20 Dec. 1858), and he was made a civil C.B. on 5 Dec. 1859, but this was small compensation for the opportunities he had missed.

He resumed command of the guides, and served under Brigadier (Sir) Neville Chamberlain in the operations against the Waziris in April and May 1860, for which he received the medal with clasps. An attempt on his life was made on 2 Aug. by a fanatical camp-follower, but he escaped with a severe wound in his left arm. In March 1862 he was appointed to the command of the Hyderabad contingent, with the rank of brigadier-general, and this severed his connection with the guides. He became colonel in the army on 15 June. A good service pension was given to him in 1866. He went home for six months in that year, and on 5 Sept. married Fanny, daughter of Charles John Myers of Dunningwell, Cumberland, vicar of Flintham, Nottinghamshire. Early in 1869 he gave up the command of the nizam's troops, which he had done much to improve; and, after attending the Umballa durbar to meet the amir, Sher Ali, he left India in April.

He had been promoted major-general on 6 March 1868, and was made K.C.S.I. on 24 May 1873. He became lieutenant-general 1 Dec. in the same year, and general 1 Jan. 1880. The offer of further employment in India, long looked for, came too late; and on 15 Sept. 1875 he retired from the army. On his father's death in 1874 he

had inherited Belhelvie Lodge, and there he spent the remainder of his life, occupying himself with sport (especially hawking), photography, and wood-carving. He died there on 12 Aug. 1896. Tall and powerful, a good rider, an excellent shot, and skilful with all weapons, he was an ideal frontier soldier, unequalled in his knowledge of Pathans and his influence over them. He was, wrote Sir Richard Pollock, 'a singular mixture of shrewdness and simplicity, absolutely free from selfishness and self-seeking, with great originality, a perfect temper, and a keen sense of humour.' His military career suffered by his absence from India during the mutiny, and his intense dislike of official routine made him decline civil employment, for which he was well qualified.

Three portraits are given in 'Lumsden of the Guides,' 1899, a biographical sketch, by General Sir Peter Lumsden and George R. Elsmie.

E. M. L.

LUSHINGTON, EDMUND LAW (1811-1893), Greek professor at Glasgow, born on 10 Jan. 1811, was the son of Edmund Henry Lushington, chief commissioner of the colonial board of audit, and master of the crown office, and of his second wife, Sophia, daughter of Thomas Phillips of Sedgely, near Manchester. He passed his childhood at Hanwell, Middlesex, and was educated at Charterhouse school, one of his contemporaries being Thackeray, who was also with him for a time at Cambridge. Lushington, becoming head of the school while still young and not very robust, found the exacting duties of captain somewhat irksome. Entering Trinity College, Cambridge, he was two years the junior of Tennyson, with whom, and with Arthur Hallam, Trench, and others, he was associated in the select club of twelve, called 'The Apostles' (commemorated in 'In Memoriam,' lxxxvii.)

In 1832 Lushington was senior classic and senior chancellor's medallist, and became fellow and tutor of Trinity College. The year was a specially brilliant one, Henry Alford [q. v.], Richard Shilleto [q. v.]—'a second Porson'—and William Hepworth Thompson [q. v.], afterwards master of Trinity, also being in the list. In 'The Virginians' (i. xli.) Thackeray makes a covert though sufficiently obvious allusion to the brilliant scholarship of Thompson and Lushington.

In 1838 Lushington succeeded Sir Daniel Keyte Sandford [q. v.] as professor of Greek at Glasgow, gaining the appointment over Robert Lowe (Lord Sherbrooke), after Archibald Campbell Tait [q. v.], subsequently archbishop of Canterbury, had withdrawn his candidature. As a professor he won the admiration and the affection of his student, and while, as described in the epilogue to 'In Memoriam,' 'wearing all that weight of learning lightly like a flower,' he invested his subject with a singular charm. In 'Principal Shairp and his Friends' (p. 11) Professor Sellar, alluding to Lushington's inaugural lecture of 1838-9, says: 'Shairp left the lecture, as he told me, repeating to himself the line

That strain I heard was of a higher mood;

and the impression thus produced was confirmed by his attendance on the private Greek class.' This accords with the universal testimony of Lushington's students. In 1875 he resigned his chair, the university conferring on him the honorary degree of LL.D. He settled at Park House, Maidstone, the residence described in the prologue to 'The Princess,' which is dedicated to his brother Henry. In 1884 he was elected lord rector of Glasgow University, and the principal, John Caird [q. v. Suppl.], welcomed him with a fitting eulogy when he delivered the customary rectorial address. He died at Park House, Maidstone, on 13 July 1893.

On 10 Oct. 1842 Lushington married Cecilia Tennyson, sister of Lord Tennyson, the marriage ceremony being performed by Charles Tennyson Turner [q. v.] (Lord Tennyson, *A Memoir*, i. 203). The epilogue to Tennyson's 'In Memoriam' is an epithalamium on Lushington's marriage with the poet's sister. He was survived by his wife and his daughter Cecilia.

Although believed to have written anonymously for some of the reviews, Lushington made few acknowledged contributions to literature. He translated into Greek Tennyson's 'Enone' (*ib.* i. 180) and 'Crossing the Bar,' the version of the latter giving the poet especial satisfaction (*ib.* ii. 367). To volume i. (pp. 201-3) of the 'Memoir of Lord Tennyson' by his son he contributed interesting reminiscences. He collaborated with Sir Alexander Grant [q. v.] in editing in 1866 (2nd edit. 1875) the 'Philosophical Works' of James Frederick Ferrier [q. v.], prefixing to the volume of 'Philosophical Remains' an exquisitely delicate and thoughtful memoir and appreciation. He published the Glasgow rectorial address in 1886.

[Times and Glasgow Herald of 14 July; Athenæum of 22 July 1893; Tennyson's Memoir of Lord Tennyson; Burke's Landed Gentry.] T. B.

LYSONS, SIR DANIEL (1816-1898), general, born on 1 Aug. at Rodmorton, Gloucestershire, was son of the Rev. Daniel Lyons [q. v.], the topographer, by his second wife, Josepha Catherine Susanus, daughter of John Gilbert Cooper of Thurgarton Priory, Nottinghamshire. He was educated at the Rev. Harvey Marryat's school at Bath, and at Shrewsbury school, where he twice saved boys from drowning. He spent two years (1832-3) with M. Frossard at Nîmes to learn French. On 26 Dec. 1831 he obtained a commission as ensign in the 1st regals, joined the regiment at Athlone in February 1836, and went with it to Canada in the following year.

He became lieutenant on 23 Aug. 1837, and, owing to his skill as a draughtsman, he was employed on the staff of the deputy quartermaster-general, Colonel Charles Gore [q. v.], during the Canadian insurrection. He was present at the action of St. Denis, and was mentioned in despatches (*London Gazette*, 26 Dec. 1837). He was also at the capture of St. Eustache. He was deputy assistant quartermaster-general from 1 Dec. 1837 to 12 July 1841, and with the assistance of officers of the line he surveyed a good deal of the frontier. He was an indefatigable sportsman, and has left a vivid picture of his Canadian life, and especially of moose hunting, in his 'Early Reminiscences.'

On 29 Oct. 1843 the right wing of the royals left Quebec for the West Indies in the transport *Premier*, which was wrecked six days afterwards in Obatte Bay, on the right bank of the St. Lawrence. Lysons was very active in saving those on board, and being sent back to Quebec for help, he made in four and a half days what was reckoned an eight days' journey of three hundred miles. His exertions were praised in general orders, and he was rewarded by a company in the 3rd West India regiment on 29 Dec., the Duke of Wellington directing that his promotion should be notified to him by return of post. He went to the West Indies from England in the spring of 1844, and was given command of the troops in Tobago; but on 21 May he was transferred to the 23rd Welsh fusiliers, then stationed in Barbados. He was brigade-major there from 3 Nov. 1845 to 15 March 1847, when he accompanied his regiment to Halifax, Nova Scotia.

He returned with it to England in the

autumn of 1848. He was town-major at Portsmouth from 18 June to 21 Aug. in 1849, and drew up a system of encamping and cooking there. Having obtained his majority on 3 Aug., herejoined his regiment at Winchester, and served with it during the next five years at Plymouth, Liverpool, Chester, and Parkhurst. In April 1854 he embarked with it for Turkey, and was the first man to land in the Crimea in September. The 23rd formed part of the first brigade of the light division. At the Alma it lost over two hundred officers and men, including its commanding officer. Just before the battle Lysons joined the second division as assistant adjutant-general, but succeeding to the lieutenant-colonelcy of his regiment on 21 Sept., he returned to take command of it. He was present at Inkerman, though laid up with fever at the time. The excitement did him good, and the hurricane of 18 Nov. seems to have completed his cure.

Throughout the winter Lysons was indefatigable in his care of his men, reduced from eight hundred to about two hundred fit for duty. He put up, mainly with his own hands, a hospital hut for them. His officers were nearly all 'young boys, very nice lads, but as yet quite useless;' and in the summer, when the strength of the regiment had been raised by drafts to over five hundred, he described it as 'like a newly raised militia regiment officered from the higher classes in a public school.' In the assault of 18 June 1855 Lysons commanded the supports of the column furnished by his brigade. He was wounded in the knee, but brought the brigade out of action, and had command of it for a time. In the second assault, on 8 Sept., he led an attack on the right flank of the Redan, and was severely wounded in the thigh. On 25 Oct. he was given command of the second brigade of the light division, and retained it till the end of the war. He had been three times mentioned in despatches (*London Gazette*, 10 Oct. 1854, 4 July and 5 Oct. 1855), was made brevet-colonel on 17 July 1855, and C.B. (5 July), and received the medal with three clasps, the Sardinian and Turkish medals, the legion of honour (4th class), and Medjidie (3rd class).

He returned to England in July 1856, and resumed command of the 23rd. On 16 Jan. 1857 he exchanged to the 25th foot, and on 24 Nov. went on half-pay, having been appointed on 5 Nov. assistant adjutant-general at headquarters. In this office he was employed on the revision of the infantry drill-book and its adaptation to the needs of the volunteers. He also prepared 'Instructions

for Mounted Rifle Volunteers' (1860). On 6 Dec. 1861 he was sent to Canada in connection with the 'Trent' affair, and he was deputy quartermaster-general from 27 Aug. 1862 till 30 Sept. 1867. This gave him an opportunity of extending the frontier surveys which he had been engaged upon as a subaltern.

He was promoted major-general on 27 Dec. 1868. He commanded brigades at Malta and Aldershot from 1 July 1868 to 30 June 1872, and then commanded in the northern district for two years. He drew up a system of 'Infantry Piquets,' which was issued by authority in 1875. On 1 April 1876 he was appointed quartermaster-general at headquarters. He became lieutenant-general and was made K.C.B. on 2 June 1877, and on 14 July 1879 he became general. The colonelcy of the Derbyshire regiment was given to him on 25 Aug. 1878, and he accepted the honorary colonelcy of the first volunteer battalion of the royal fusiliers. From 1 July 1880 to 1 Aug. 1888 he commanded the Aldershot division, and

he was then placed on the retired list, having reached the age of sixty-seven. On 29 May 1886 he received the G.C.B., and on 4 March 1890 he was made constable of the Tower.

Lysons died on 29 Jan. 1898, and was buried at Rodmarton. Vigorous to the last, he had been writing on army reform a month before (*Times*, 17 Dec. 1897). In 1856 he married Harriet Sophia, daughter of Charles Bridges of Court House, Overton. She died in 1864, and in 1865 he married Anna Sophia Biscoe, daughter of the Rev. Robert Tritton of Morden, Surrey. By his first wife he had four sons, of whom the second, Henry, obtained the Victoria cross in the Zulu war of 1879 as a lieutenant in the Scottish rifles.

[Lysons's *Early Reminiscences* (1896) and the *Crimean War from First to Last* (1895), the latter consisting of letters written by him in the Crimea; *Times*, 31 Jan. 1898; *Broughton-Mainwaring's Historical Record of the Royal Welsh Fusiliers*, pp. 159-216.]

E. M. L.

M

MACALLUM, HAMILTON (1841-1890), painter, born at Kames, Argyllshire, on 22 May 1841, was the second son of John Macallum, J.P., of the Kames gunpowder works. While still a boy at school he showed a strong inclination towards art. This, however, was opposed by his father, who insisted on his entering a merchant's office in Glasgow, in preparation for an Indian commercial career. In 1864, when he was twenty-three years of age, he finally rebelled, and, winning a reluctant assent from his father, went to London to become a painter. He entered the Royal Academy schools the same year. From that time onwards his time was divided between London and various painting grounds (the western highlands, among which he provided in a small yacht of his own, Heligoland, Holland, Southern Italy, the south coast of Devonshire), where his favourite subject, sunlight, could be fully studied. His original and thoroughly personal way of treating this subject soon attracted attention, and won him both detractors and admirers. He had studios successively at Hampstead (Haverstock Hill), in Piccadilly, and at Beer, South Devon. His contributions to the chief London exhibitions extended over twenty years, from 1876, when 'Hoisting the Storm Jib' was at the Royal Academy, until 1896, when

his last picture, the 'Crofter's Team,' hung on the same walls. Macallum died very suddenly of heart disease at Beer on 28 June 1896. He left a widow, Euphemia, daughter of Mr. John Stewart of Glasgow, and one son. Mrs. Macallum subsequently (13 March 1900) received a civil list pension of 100*l.* per annum in consideration of her husband's merits as an artist.

Macallum was one of the most original landscape painters of his time. He was single-minded, concentrating his attention on those aspects of nature by which his own sympathies were most closely touched. His pictures have great individuality. He saw colour in a way of his own, but his best works are likely to be prized long after things conceived on more conventional lines are forgotten. Three of them are in the Millbank Gallery, the 'Crofter's Team,' already mentioned, and two drawings in water-colour.

[Private information.]

W. A.

MACARTNEY, JAMES (1770-1848), anatomist, son of Andrew Macartney, gentleman farmer, of Ballyrea, co. Armagh, and Mary, his wife, was born at Armagh on 8 March 1770. He began life as an Irish volunteer in 1780, and was afterwards educated at the endowed classical school at

Armagh, and then at a private school. He was associated for a time with Henry and John Sheares [q. v.] and Lord Edward Fitzgerald [q. v.], but, being dissatisfied with their programme, he cut himself adrift and began to study medicine. He apprenticed himself to William Hartigan (1756 P-1812) on 10 Feb. 1793, his master being president of the Royal College of Surgeons of Ireland in 1797. Macartney also entered as a pupil in the college school, Mercer Street, Dublin, where he made some dissections for the museum, and he attended the Lock hospital and the Dublin dispensary. In 1798 he came to London to attend the Hunterian or Great Windmill Street school of medicine, and he became an occasional pupil at St. Thomas's and Guy's hospitals. He also attended the lectures of John Abernethy [q. v.] at St. Bartholomew's Hospital, and through his influence was appointed a demonstrator of anatomy in the medical school in 1798. He was admitted a member of the Royal College of Surgeons of England on 6 Feb. 1800, began to practise in London as a surgeon, and was appointed lecturer on comparative anatomy and physiology at St. Bartholomew's Hospital, a post he held from March 1800 to 1811. On 21 Feb. 1811 he was elected F.R.S., and from 1803 to 1812 he served as surgeon to the royal Radnor militia. In May 1813 he was admitted M.D. of St. Andrews University, and on 21 June 1813 he was elected professor of anatomy and surgery in the university of Dublin, and physician to Sir Patrick Dun's hospital. These offices he resigned in 1837, after he had raised the medical school to a much better position than it had ever before occupied. During almost the whole of his residence in Dublin Macartney was subjected to a very singular exhibition of petty persecution and open insult at the hands of some members of the board of Trinity College. He was denied the privilege of election to the fellowship of the Royal College of Surgeons, though he was made an honorary fellow of the Royal College of Physicians of Ireland in 1818. He also received an honorary M.D. from the university of Cambridge (31 Aug. 1833), to which he sold his museum in 1836, the university of Dublin having refused to purchase it. He died at 31 Upper Merrion Street, Dublin, on 6 March 1848 (*Gent. Mag.* 1848, i. 554). He married on 10 Aug. 1795 a Miss Elkenhead.

An ill-used and greatly misunderstood man, 'he was,' says Professor Alexander Macalister, 'an expert anatomist and a philosophical biologist far in advance of his period. His description of the vascular system of

birds has in many respects not been surpassed, and his account of the anatomy of mammals may be read with more profit than many modern works. In his account of the brain of the chimpanzee compared with that of an idiot, as well as in many others of his papers, there are glimpses of a morphology far beyond Cuvier, whose works he edited. His book on inflammation may be placed side by side with any pathological work of the period, while his researches on animal luminosity form the basis of many subsequent researches on the subject.' Macartney discovered the fibrous texture of the white substance in the brain, and the connection between the subcortical nerve fibres and the grey matter of the cerebral hemisphere. He gave, too, the first satisfactory account of rumination in the herbivora, and he discovered numerous glandular appendages in the digestive organs of mammals, especially of rodents. As one of Warburton's advisers and as a practical anatomist of great experience in teaching, he had much to do in shaping the Anatomy Act of 1832.

Macartney's works were: 1. 'Lectures on Comparative Anatomy' (Cuvier's lectures translated by W. Ross under the inspection of J. Macartney), London, 1802, 2 vols. 8vo. 2. 'Observations on Curvature of the Spine,' Dublin, 1817, 4to. 3. 'A Treatise on Inflammation,' London, 1838, 4to: reissued in America, Philadelphia, 1840. He also wrote numerous papers in the 'Philosophical Transactions,' and his articles on comparative anatomy are published in Abraham Rees's 'Cyclopaedia,' London, 1819, 45 vols. 4to.

[James Macartney, a memoir by Professor Alexander Macalister, F.R.S., of Cambridge, London, 1900; Sir Charles A. Cameron's History of the Royal College of Surgeons of Ireland, pp. 371, 372; 'Erinensis's' account of the appearance and methods of Macartney in the *Lancet*, 1825, viii. 248-52.] D'A. P.

MCCOSH, JAMES (1811-1894), philosopher, only son of Andrew McCosh, farmer, of Carskoech, Ayrshire, by Jean, daughter of James Carson, farmer, of the same county, was born on 1 April 1811. Of covenanting ancestry, he was brought up religiously and was early devoted to the kirk. He was educated at the universities of Glasgow and Edinburgh, and in 1834 gained the M.A. degree at Edinburgh by an essay on the Stoic philosophy, which was highly commended by Sir William Hamilton. He studied theology under Dr. Chalmers, and, having been licensed by the presbytery of Ayrshire, officiated successively at Arbroath, 1835-8, and Brechin, 1838-50. While at

the latter place he became a convert to 'free kirk' principles, and took an active part in organising the secession. Meantime, however, he was busy with natural theology, and the publication in 1850 of his first important work, 'The Method of the Divine Government, Physical and Moral' (Edinburgh, 8vo; last edition, New York, 1874), proved the turning-point in his career. It was read and greatly admired by the Earl of Clarendon, then lord-lieutenant of Ireland, and led to McCosh's appointment to the chair of logic and metaphysics in Queen's College, Belfast (1851). In 1860 appeared his 'Intuitions of the Mind inductively investigated,' London, 8vo (last edition, New York, 1872), in which he attempted to meet the prevalent empiricism by a careful survey of the entire domain of what he conceived to be axiomatic truth. It was followed by 'An Examination of Mr. J. S. Mill's Philosophy: being a Defence of Fundamental Truth,' London, 1860, 8vo (last edition, New York, 1880)—a work called forth by Mill's 'Examination of Sir William Hamilton's Philosophy' (1865). Mill honoured his critic with a few strictures in his third edition, to which McCosh rejoined in a volume entitled 'Philosophical Papers,' London, 1868 (New York, 1869), which also included an 'Examination of Sir William Hamilton's Logic' and an essay on the 'Present State of Moral Philosophy in Britain.'

McCosh resigned his post at Belfast on being elected in 1868 to the presidency of Princeton College, New Jersey, with which office was associated the chair of philosophy in that seminary. He administered the affairs of the college with eminent success for twenty years, during which period he published many philosophical works.

McCosh resigned the presidency of Princeton College in 1888, but retained the chair of philosophy until his death on 16 Nov. 1894. He was LL.D. of the universities of Aberdeen (1850) and Harvard (1868), also D.Litt. of Queen's College, Belfast, and D.D. He married in 1845 a daughter of Alexander Guthrie, M.D., brother of Dr. Thomas Guthrie [q.v.] Princeton College contains his statue, set there by his admirers in 1888. (For portraits see his 'Life' by Sloane, cited *infra*.)

McCosh is said to have been an effective lecturer and preacher, and his simplicity and perspicuity of style render this extremely probable. His philosophy, however, had never an appreciable influence on English thought. To the defects of the Scottish school he was by no means blind, but his early training had included no systematic study of transcendentalism, and a visit to

Germany in 1858 led to no result. It may even be doubted whether he had apprehended the earlier forms of idealism. At any rate his polemical works evince no adequate appreciation of the positions which he attacked, and his own 'intuitional' theory is a mere *ignoratio elenchi*.

McCosh was joint author with Dr. Dickie of 'Typical Forms and Special Ends in Creation,' Edinburgh, 1855; London, 1862 (last edition, New York, 1880). He was also author of the following works: 1. 'The Supernatural in relation to the Natural,' Cambridge, Belfast, and New York, 1862, 8vo. 2. 'Supplement' to Dugald Stewart's 'Outlines of Moral Philosophy,' 1865. 3. 'The Laws of Discursive Thought,' London and New York, 1870, 12mo (last edition, New York, 1890). 4. 'Christianity and Positivism,' London and New York, 1871, 8vo (last edition, New York, 1875). 5. 'The Scottish Philosophy: Biographical, Expository, Critical; from Hutcheson to Hamilton,' London, 1874, 8vo (last edition, New York, 1880). 6. 'Ideas in Nature overlooked by Dr. Tyndall,' New York, 1875, 12mo. 7. 'The Development Hypothesis: is it Sufficient?' New York, 1876, 12mo. 8. 'The Emotions,' London and New York, 1880, 12mo. 9. 'The Conflicts of the Age' (from the 'North American Review'), New York, 1881, 8vo. 10. 'Psychology. The Cognitive Powers,' London and New York, 1886, 8vo (last edition, New York, 1891). 11. 'Psychology. The Motive Powers: Emotions, Conscience, Will,' London and New York, 1887, 8vo. 12. 'Realistic Philosophy defended in a Philosophic Series,' London and New York, 1887, 2 vols. 8vo (a collective issue of several dissertations published between the years 1882 and 1885). 13. 'The Religious Aspect of Evolution. The Bedell Lectures for 1887,' New York, 1888, 12mo (enlarged edition, 1890). 14. 'First and Fundamental Truths,' London and New York, 1889, 12mo. 15. 'The Tests of various Kinds of Truths' (Merrick Lectures), New York and Cincinnati, 1889, 1891, 12mo. 16. 'The Prevailing Types of Philosophy: Can they reach Reality logically?' New York, 1890, 12mo. 17. 'Our Moral Nature,' New York, 1892, 12mo (see also DILLIS, *McCosh Bibliography*, which gives a complete catalogue of his multifarious contributions to periodical literature, articles in the 'Schaff-Herzog Encyclopædia of Religious Knowledge,' pamphlets, and other fugitive pieces).

[Sloane's Life of James McCosh, 1896; Irving's Book of Scotsmen; Eclectic Magazine, July 1871; Appleton's Journ. 8 March 1873;

J. M. R.

MCCOY, SIR FREDERICK (1823-1899), naturalist and geologist, son of Simon McCoy, a Dublin physician, was born in that city in 1823. After passing through a course of medical study there and at Cambridge, and before reaching the age when he could begin to practise, he was diverted to natural science by undertaking the arrangement of the collections of the Geological Society of Ireland and of the Royal Irish Academy. Sir Richard John Griffith [q. v.] then engaged him to make the palaeontological investigations required for the 'Geological Map of Ireland.' The results of these studies were published in two volumes, one entitled 'Synopsis of the Carboniferous Limestone Fossils in Ireland,' 1844, the other 'Synopsis of the Silurian Fossils of Ireland,' 1846, and during the later part of the time thus employed he was a member of the regular staff of the Survey. In 1846, on the invitation of Adam Sedgwick [q. v.], he went to Cambridge to arrange the collection in the Woodwardian Museum. McCoy was continuously engaged in that university till 1850, when he was appointed professor of mineralogy and geology at Queen's College, Belfast. But, as his Cambridge work was still unfinished, he returned thither for a few months in the spring and autumn of each year. During these intervals he aided Sedgwick in Cornwall in 1851, at May Hill in 1852 and 1853, and in South Wales in 1854. In that year he completed the description of the fossils in the Woodwardian Museum, and was appointed to the chair of natural science in the new university of Melbourne, leaving England for this post in the autumn. The results of his studies at Cambridge were finally published in a volume entitled 'British Palaeozoic Rocks and Fossils,' 1854. This was restricted to the fossils; for Sedgwick, who contributed an introduction, had intended to write another volume describing the rocks. McCoy's new office was no sinecure, for he had to cover the whole field of natural history; nevertheless he acted as palaeontologist to the Geological Survey in its earlier stages, and was founder of the National Museum of Natural History and Geology at Melbourne, of which he was director until his death, besides taking an active interest in municipal affairs and serving as a justice of the peace. He was also chairman of the first royal commission for international and intercolonial exhibitions for the colony of Victoria. The later part of his life was spent at his house 'Maritima,'

Brighton Beach, about nine miles from Melbourne, where he died on 18 May 1899. He married Anna Maria, daughter of Thomas Harrison, a solicitor, of Dublin. His wife died in 1886, and in the following year he lost his son Henry, a barrister practising in New Zealand, who had married in 1870 and left a family of seven children. His only daughter, Emily Mary McCoy, also died before him.

McCoy throughout his long life was the most indefatigable of men. He lived very plainly, and did much of his work between ten at night and three in the morning, not requiring more than five hours' sleep. So, notwithstanding the official duties and the books already enumerated, he published two works for his government of Victoria, one entitled 'Prodromus of the Zoology of Victoria' (1878 sqq.), the other 'Prodromus of the Palaeontology of Victoria,' each appearing in 'decades' at intervals during thirty of the fifty-eight years covered by his publications; and he also wrote no less than sixty-nine papers, dealing, in addition to some zoological topics, with almost every branch of palaeontology. In fact, according to report, he was more engrossed in research than in the duties of his chair. He was conspicuous for his antagonism to the views of Charles Robert Darwin [q. v.]

McCoy was elected F.G.S. in 1852, and received from that society its Murchison medal in 1879. In 1880 he was made a F.R.S. The honorary degree of doctor of sciences was conferred on him by Cambridge in 1886, where he was also an honorary member of the Philosophical Society, as well as of the Royal Society of Australia, the Imperial Society of Naturalists of Moscow, and of many other British and foreign societies. He was awarded the Emperor of Austria's gold medal for arts and sciences, was a knight chevalier of the royal order of the crown of Italy, was created C.M.G. in 1886, and K.C.M.G. in 1891.

[Obituary notices in the Geological Magazine, 1899, p. 283; The Quarterly Journal of the Geological Society, 55, lix; the Year-book of the Royal Society, 1900, p. 196, by H[enry] W[oodward], and Nature, ix. 83, by H[enry] B[olingbroke] W[oodward]; frequent references in Sedgwick's Life and Letters, vol. ii., with information from Frederick H. McCoy, esq. (grandson), and others.] T. G. B.

MACDONELL, ALASTAIR RUADH, known as **PICKLE THE SPEY** (1725?-1761), thirteenth chief of Glengarry, born about 1725, was eldest son of John, twelfth chief, by the only daughter of Colin Maclenzie of Hilton. While yet a mere youth he was

sent in 1788 to France, where in 1748 he joined Lord Drummond's regiment of royal Scots guards. In March 1744 he was with the Earl Marischal, and intended starting with the futile expedition of that year. Having in the following year been sent to Scotland to give information in connection with certain Jacobite disputes, he was in May despatched by the highland chiefs to France to testify to Charles their allegiance to his cause, but at the same time to warn him against an attempt to land in Scotland unless strongly backed by foreign assistance. His mission, however, was of no avail; for Charles, before Macdonell's arrival in France, had already set sail on his rash adventure. Macdonell resolved to take part in it, but while returning to Scotland with a detachment of Drummond's guards he was captured on 25 Nov. 1745 by H.M.S. Sheerness (*London Gazette*, 26-9 Nov., quoted in *Blackie's Itinerary of Prince Charles Edward*, Scottish Historical Society, 1897, p. 111), and sent to the Tower of London, where he was detained until July 1747. In December 1749 he helped himself to the Jacobite treasure concealed at Loch Arkaig. Already or shortly afterwards he had further resolved on the betrayal of the Jacobite cause, and having introduced himself to Henry Pelham, he, as Mr. Lang has elaborately and beyond civil demonstration, become a hired spy on Prince Charles and the Jacobites, corresponding with the government under the pseudonym of 'Pickle.'

Perhaps it has been insufficiently borne in mind that Macdonell may have all along cherished resentment against the prince on account of the clan's removal to the left wing at Culloden, where it practically deserted the prince's cause by refusing to strike a blow on his behalf. True the clan gave the prince shelter during his wanderings, but Macdonell himself may on account of the treatment of the clan, or for some other reason, have cherished a personal grudge against the prince. In any case he was probably clever enough to recognise that the prince himself had become impossible; and his interest corresponding with his convictions, he may have persuaded himself that he was really saving his clan and the highlands generally from much needless suffering by frustrating the prince's madcap schemes. If, however, as is likely, his purpose was mainly selfish, it was unsuccessful, for the death of Polham in 1764 blighted his main hopes of reward. On the death of his father in September of the same year, he became chief of the clan and succeeded to his father's impoverished fortunes. He died in 1761 in a hut adjoining

his ruined castle, and having no issue was succeeded in the chieftaincy by his nephew Duncan, son of his brother Aeneas, who was slain at Falkirk.

During the '45 the command of the Glengarry clan was, on account of the imprisonment of the chief, and of Alastair the chief's eldest son, entrusted to the second son, Aeneas; but in the absence of Aeneas in the highlands to procure reinforcements, the clan was, while on the march southwards to Derby, under the charge of Colonel Donald Macdonald of Lochgarry; and after the death of Aeneas at Falkirk, Lochgarry accompanied the prince in his later wanderings and escaped with him to France, whence he wrote to his chief a 'memorial' detailing the clan's achievements during the rebellion and its loyal conduct to the prince while a fugitive in its fastnesses (printed in *Blackie's Itinerary of Prince Charles Edward*, pp. 111-126).

[Macdonald's History of the Macdonalds; Andrew Lang's Pickle the Spy, 1897, and Compensations of Pickle, 1898, with the authorities therein mentioned; Blackie's Itinerary of Prince Charles Edward.]
T. F. R.

MACDOUGALL, Sir DUNCAN (1787-1862), lieutenant-colonel of the 79th Cameron highlanders, son of Patrick MacDougall of Soroba, Argyllshire, by his wife Mary, daughter of Duncan M'Vicar, was born at Soroba in 1787. Educated at Edinburgh, he entered the army as ensign in 1804, served in the 53rd and 85th foot on the frontier, at the Cape of Good Hope, and in the peninsular war. He took part in the third siege and in the capture by storm of Badajoz on 6 April 1812, in the siege and in the capture on 27 June of the forts of Salamanca. In the battle of Salamanca on 22 July, he gallantly saved the colours of his regiment and was severely wounded. He was present at the siege of Burgos in September and October and the retreat from it, at the siege and capture on 31 Aug. 1813 of St. Sebastian, at the passage of the Bidassoa in October, at the battles of Nivello (10 Nov.), the Nive (9 to 13 Dec.), and the investment of Bayonne. He received three medals for his peninsular services. He took part in the American war of 1814, was present at the battle of Bladensburg on 24 Aug., the capture of Washington, and the attack on Baltimore on 12 Sept., when he was aide-de-camp to Major-general Robert Ross [q.v.], who was killed. He also served in the operations against New Orleans in December 1814 and January 1815, was aide-de-camp to Lieutenant-general Sir Edward Pakenham [q.v.],

when that officer was killed at the assault of 7 Jan., and took part in the siege of Fort Rowyer in Florida. In 1825, when in command of the 79th foot at Halifax, Nova Scotia, he was entrusted with the organisation of the colonial militia. In 1836 he relinquished the command of his regiment and retired from the active list in order to join the British auxiliary legion of Spain as quartermaster-general and second in command under his friend Sir De Lacy Evans (q. v.). For his services in Spain he received from Queen Isabella II the order of knighthood of St. Ferdinand. In later years he raised the Lancashire artillery militia. A prominent figure in the volunteer movement of 1859, he presided at the great meeting at St. Martin's Hall, London, at which it was inaugurated. He published a very useful pamphlet in 1860 entitled 'Hints to Volunteers on various Subjects.' He died on 10 Dec. 1862, and was buried in St. Paul's Cathedral, London, where there is a monument with a bust by Adams to his memory. He was twice married: first, in 1817, to Anne, daughter of Colonel Smelt, governor of the Isle of Man, by whom he left an only son, Patrick Leonard (q. v. Suppl.); and, secondly, in 1844, to Hannah, widow of Colonel Nicholson of Springfield House, Liverpool.

[War Office Records; Despatch; Army Lists; private information.] R. H. V.

MACDOUGALL, SIR PATRICK LEONARD (1819-1894), general, colonel of the Linnet regiment, and military author, born at Boulogne-sur-Mer, France, on 10 Aug. 1819, was son, by his first wife, of Sir Duncan MacDougall (q. v. Suppl.). Educated at the Military Academy at Edinburgh and at the Royal Military College at Sandhurst, he received a commission as second lieutenant in the Ceylon rifle regiment on 18 Feb. 1836, in July exchanged into the 79th Cameron highlanders, and on 26 July 1839 into the 36th foot. His further commissions were dated: lieutenant 11 May 1839, captain 7 June 1844, major 9 Feb. 1849, brevet lieutenant-colonel 17 July 1855, brevet colonel 17 July 1858, major-general 6 March 1868, lieutenant-general 1 Oct. 1877, colonel of the 2nd battalion of the West India regiment 21 Dec. 1881, general 1 Oct. 1883, colonel of the Leinster regiment 26 Aug. 1891.

In 1840 MacDougall entered the senior department of the Royal Military College at Sandhurst; he left in 1842 with the highest class certificate and especial commendation. Transferred on 25 June 1844 to the Royal

Canadian rifle regiment, he joined it at Toronto, Canada, and for the next ten years served as a regimental officer there and at Kingston. On 3 March 1854 he was appointed superintendent of studies at Sandhurst, but the following year was sent on particular service to the Crimea, where he acted as assistant quartermaster-general on the staff of Brigadier-general D. A. Cameron in the expedition to Kertch in May 1855, and attended Lord Raglan in the trenches at the unsuccessful assaults on the Redan on 18 June. For his Crimean services he received the war medal and clasp, the Turkish medal, and a brevet lieutenant-colonelcy. On his return home he resumed his appointment at Sandhurst, which he held until 1858.

In 1856 his principal work, 'The Theory of War: illustrated by numerous Examples from Military History,' was published, and a second edition appeared in 1858. It soon became a text-book of military instruction, was translated into French and German, and gave its author a first place among English military writers. In 1857, in a pamphlet entitled 'The Senior Department of the Royal Military College,' MacDougall drew attention to the want of proper instruction for staff officers, and on the formation of the staff college on 5 Feb. following, he became its first commandant. He published in 1858 a treatise written expressly for students of military history, entitled 'The Campaigns of Hannibal arranged and critically considered.'

During his tenure of office at the staff college he was an industrious writer and lecturer, taking as some of his subjects 'Napoleon's Campaign in Italy in 1796,' 'The Military Character of the great Duke of Marlborough,' 'General Sir Charles James Napier as Conqueror and Governor of Sind.' He wrote the obituary notice of Napier which appeared in the 'Times' of 13 Feb. 1860, and in 1862 published 'Forts versus Ships,' and 'Defence of the Canadian Lakes and its influence on the general Defence of Canada,' both written in crossing the Atlantic on a short visit to America. In 1864 his life of his father-in-law, the historian of the peninsular war, Sir William Francis Patrick Napier (q. v.), edited by Lord Abinger, was published in two octavo volumes, and in the same year 'Modern Warfare as influenced by Modern Artillery.' Early in 1865 he contributed articles on Sir William Napier both to the 'Edinburgh' and the 'Quarterly' Reviews.

MacDougall was appointed adjutant-general of Canadian militia in May 1865. His services in the Fenian raid of 1866 were

brought to the especial notice of the authorities at home by Lord Monck, the governor-general (*Despatch* No. 53, 14 June 1866), who was so impressed with the value of MacDougall's work in the organisation of the militia and volunteers that, on leaving Canada, he wrote officially to thank him for having 'laid the foundation of a military system inexpensive, unoppressive, and efficient,' and sent a copy to the home authorities. During MacDougall's service on the staff in Canada he lectured on military subjects from time to time, and published a pamphlet on the 'Defence of Canada.'

Returning to England in April 1860 he wrote 'The Army and its Reserves,' and was much occupied with the then burning question of army reform. In October 1871 he was appointed deputy inspector-general of the auxiliary forces at headquarters. He presided over Cardwell's 'Localisation Committee' in that year, one of the most important which have ever sat at the war office, whose report, generally adopted, proposed by the fusion of the regular, reserve, and auxiliary forces under the generals commanding districts, to form one army for defence under the commander-in-chief and by the institution of linked battalions, to have always one at home and one abroad, with depot centres for enlisting and training recruits.

For five years from April 1873 MacDougall was head of the intelligence branch of the war office, at first as deputy adjutant-general, and afterwards as deputy quartermaster-general. Created a K.O.M.G. on 30 May 1877, he was a year later appointed to the command in North America, just at a time when relations with Russia were strained after the Russo-Turkish war. He undertook to have ten thousand trained and disciplined Canadian volunteers available for service wherever required, in a few weeks after the offer of their service was accepted, thus instituting a valuable precedent which has since been followed, not only by Canada, but by most of the self-governing colonies—notably in the recent South African troubles—to the great advantage of the empire.

MacDougall returned to England in May 1883, and retired from the active list in July 1885. He died at his residence, Melbury Lodge, Kingston Hill, Surrey, on 28 Nov. 1894, and was buried at East Putney cemetery, the sergeants of the Kingston depot carrying his body to the grave. He was twice married: first, in 1844, to Louisa Augusta (d. 1850), third daughter of Sir William Francis Patrick Napier; and, secondly, in 1860, to Marianno Adelaide,

who survived him, daughter of Philip John Miles of Leigh Court, Somerset. There was no issue of either marriage. A miniature of Sir Patrick MacDougall by Notman of Montreal, Canada, became Lady MacDougall's property.

In addition to the works already mentioned, and many articles in the reviews and magazines, MacDougall was the author of the following: 'Emigration: its Advantages to Great Britain and her Colonies, together with a detailed Plan for the Promotion of the proposed Railway between Halifax and Quebec, by means of Colonization,' London, 1848, 8vo; 'Modern Infantry Tactics,' London, 1873, 8vo; 'Short Service Enlistment and the Organisation of our Infantry as illustrated by Recent Events,' Edinburgh, 1883, 8vo.

[War Office Records; obituary notice in Times of 30 Nov. 1894; Despatches; Army Lists; private information.] R. H. V.

MACFIE, ROBERT ANDREW (1811-1898), free-trade advocate, son of John Macfie, sugar refiner, of Leith, by Alison, second daughter of William Thorburn, was born at Leith on 4 Oct. 1811. Educated at the high schools of Leith and Edinburgh, and at the university of Edinburgh, he entered, in 1827, his father's business, of which about ten years later he established a branch at Liverpool. There he co-operated with Leona Levi in founding the chamber of commerce, and was elected trustee of the Exchange. He retired from business about 1863 and devoted the rest of his life to public objects. As member for Leith Burghs in the parliament of 1868-74, he made himself conspicuous by his uncompromising advocacy of free trade in inventions, proposing a system of 'national recompenses' in lieu of patents. He also agitated for the abridgment of authors' copyrights. These extreme views he combined with an earnest solicitude for the consolidation and defence of the empire, which rendered him a determined opponent of all tampering with the Union, and a pioneer of imperial federation. He died at his country seat, Dreghorn, near Edinburgh, on 16 Feb. 1898. He was F.R.C.I. and F.R.S.E., and a Knight Commander of the Hawaiian Order of Kalakaua.

Macfie married in 1840 Caroline Eliza, daughter of John Eastin of Conrance Hill, Dumfriesshire.

Macfie published: 1. 'The Patent Question: a solution of difficulties by abolishing or shortening the Inventor's monopoly and instituting National Recompenses,' London, 1863, 8vo. 2. 'Recent Discussions on the

Abolition of Patents for Inventions in the United Kingdom, France, Germany, and the Netherlands,' London, 1869, 8vo. 3. 'Colonial Questions pressing for immediate solution in the interest of the Nation and the Empire,' London, 1871, 8vo. 4. 'Copyright and Patents for Inventions. Pleas and plans for cheaper books and greater industrial freedom,' Edinburgh, 1871, 8vo. 5. 'A Glance at the Position and Prospects of the Empire,' London, 1872, 8vo. 6. 'The Patent Question in 1875; with a suggestion as to Copyright,' London, 1875, 8vo. 7. 'Cries in a Crisis for Statesmanship popular and patriotic to test and contest Free Trade in our Manufactures,' London, 1881, 8vo. 8. 'The Patent Bills of 1883: private aims and public claims,' Edinburgh, 1883, 8vo. 9. 'The Questions put by the Royal Commissioners on the Depressed State of Trade dealt with in an independent but sympathetic spirit,' Edinburgh, 1885, 8vo. 10. 'The Scotch Church Question. Letter of an Heritor in a country parish, and Notes on the Question how to adapt and improve the Ecclesiastical System of Scotland without destroying it,' Edinburgh, 1886, 8vo. 11. 'Offhand Notes on "Prayers for Social and Family Worship for the use of Soldiers, Sailors, Colonists, Sojourners in India, prepared by a Committee of the General Assembly of the Church of Scotland: a revised edition, 1889,"' Edinburgh, 1892.

McILWRAITH, SIR THOMAS (1835-1900), premier of Queensland, son of John McIlwraith of Ayr, Scotland, and his wife Janet Hamilton, daughter of John Howat, was born at Ayr on 17 May 1835, and educated at the academy in that town and at Glasgow University for the profession of an engineer. In 1854 he followed an elder brother to Victoria and obtained employment on the Victorian railways, and afterwards with the well-known contractors, Cornish & Bruce. In 1861, having gradually bought up a good deal of land in Queensland, he began to reside there in part and give much attention to pastoral pursuits; in 1869 he was elected to the legislative assembly of that colony as member for Maranoa, and in 1870 settled entirely in Queensland.

In January 1874 McIlwraith took office as minister for works and mines under Arthur Macalister [q. v.], but resigned in October, and for some time took no special part in

politics. In 1878 he was returned for Mulgrave, and on 21 Jan. 1879, after the defeat of this ministry of the Hon. John Douglas, became premier and colonial treasurer. The programme of his first session embraced a large scheme of local government and a reform of the immigration system. On 24 Dec. 1881 he took the post of colonial secretary instead of treasurer. Probably the most important event of his administration was his annexation of New Guinea to Queensland on 4 April 1883; it was a daring act for a colonial statesman, and, after rousing much criticism at home, was disallowed by Gladstone's government. As an almost immediate result of the disallowance, and to the great indignation of the Australian colonies, Germany seized New Guinea and several places in the Western Pacific; and the imperial government was shortly compelled to follow McIlwraith's lead and take over a large part of New Guinea. On the question of a railway concession to an English company on the land grant system he was left in a minority at the general election of this year, and resigned office in November 1883, after being twice beaten in the House of Assembly. Very soon after this defeat he left for Great Britain, where he spent some months, receiving the freedom of Ayr and an honorary LL.D. from Glasgow University.

On his return to Queensland McIlwraith professed to have retired from politics, but in 1888 he again stood for parliament, was elected for North Brisbane, and on a programme of a 'national party' came into power at once on 13 June as premier, holding office both as colonial secretary and treasurer. He began by a difference with the governor, Sir Anthony Musgrave [q. v.], on the contention that the latter was bound to follow the advice of his ministers in exercising the crown's prerogative of mercy; the point was decided in McIlwraith's favour. In October he came into collision with the imperial government on the subject of the appointment of a governor; but in this case his contention was not made good. On 30 Nov. McIlwraith relinquished the position of premier to Mr. Boyd Dunlop Morehead, though he remained in the cabinet without portfolio and proceeded on a voyage to China and Japan for his health. In September 1889, soon after his return, he split with his colleagues on questions of finance, and in the new session joined with his former opponent, Sir Samuel Griffith, to defeat them. In August 1890 he became colonial treasurer in Griffith's ministry. At this time he received an invitation from Scotland to return

thither and contest Ayr, his native city, but he declined. In March 1891 he represented Queensland at the federation convention held at Sydney. In November 1892 he took another voyage for his health, this time to Northern India, returning in March 1893 to find that the premier had resigned and the ministry was in a manner in commission. On 27 March he was called upon to form a ministry. A general election soon followed, and he came in again with a larger working majority than any administration Queensland had ever had before. The difficulty which faced him at that time was the attitude of the so-called labour party. On 27 Oct. he resigned the position of premier owing to the failure of his health, but nominally remained in the ministry; on 15 Jan. 1893 he came to England for medical advice; and in a short time his illness became so pronounced that he could not return to Queensland. For six years following he was in the hands of specialists and confined to the house. In 1895 he was offered but declined the position of agent-general. He died on 17 July 1900 at 208 Cromwell Road, London, and was buried at Ayr.

McIlwraith's reputation was not confined to his own colony, where his influence was commanding. But his connection with the Queensland Investment and Land Mortgage Company involved him in a series of legal actions which came to an end in 1892. Subsequently he was severely criticised over the conduct of business by the Queensland National bank, of which he was a director. He was an associate of the Institute of Civil Engineers and was made K.O.M.G. in 1882.

McIlwraith married, on 14 June 1879, Harriette Ann, daughter of Hugh Mosman of Armidale, New South Wales, who with four daughters survived him.

[Innes Addison's Graduates of Glasgow, p. 876; Monnell's Dict. of Australasian Biogr.; British Australasian, 19 July 1900; The Queenslandor, 21 July 1900; Queensland Blue Books and Parliamentary Debates.] O. A. H.

MAKAY, ALEXANDER (1815-1895), educational writer, born in Thurso on 15 Nov. 1815, was the youngest of the eight children of Murdoch Mackay, farmer, of Latheron, Caithness. On his father's second marriage young Mackay went to Aberdeen, where he studied at King's College, and graduated M.A. in 1840. In 1844 he became the first Free church minister of Rhynie in Aberdeenshire, the established minister of which had been one of the seven clergymen of Strathgogie deposed by the evangelical majority of the church of Scotland. Here his geological

studies, chiefly in connection with rare fossils found in the old red sandstone in a quarry near Rhynie, brought him into communication with Hugh Miller, Sir A. Ramsay, of the Geological Survey, Sir Roderick I. Murchison, and Dr. A. Keith Johnston, who recommended him as a fellow of the Royal Geographical Society in 1859.

In 1861 Mackay published a 'Manual of Modern Geography, Mathematical, Physical, and Political,' which attracted much attention, and has since proved a mine of wealth to other writers on geography. In 1866 the degree of LL.D. was conferred on him by King's College, Aberdeen.

In 1867, finding the charge of a congregation less congenial than literary work, he resigned his pastorate at Rhynie and went to Edinburgh, from which he removed to Ventnor in 1878. During this period he devoted himself entirely to works on geography and kindred subjects. He had just completed the rewriting and revision of proofs of his work on physiography and physical geography, when he died suddenly at Ventnor on 31 Jan. 1895. Mackay married in November 1846 Margaret Lillie, daughter of Alexander Lillie of Banff. By her he had five sons, all of whom he survived. One of them was the well-known missionary of Uganda, Alexander Murdoch Mackay [q. v.]

Mackay's works have had a very large circulation, and are characterised by the best qualities of the old school of geographical text-books, being full of facts systematically arranged, scrupulously verified, and illustrated by brief notes of general interest. In one instance he made an attempt to fix the elementary facts on the minds of young scholars by producing a 'Rhyming Geography' (1873; now edit. 1876), some of the stanzas of which, once read, are difficult to forget. His most arduous piece of work was an ingenious mnemonic system for remembering numbers, which he developed in a book entitled 'Facts and Dates' (1869; 3rd edit. 1879).

Mackay was also the author of the following works: 1. 'Elements of Modern Geography,' 1864; 12th edit. 1872. 2. 'Outlines of Modern Geography,' 1865. 3. 'First Steps in Geography,' 1869. 4. 'Geography of the British Empire,' 1869. 5. 'The Intermediate Geography,' 1874; 10th edit. 1885. 6. 'Life and Times of the late Rev. George Davidson, Latheron,' 1875. 7. 'Handbook to the Seat of War in Turkey,' 1877. 8. 'Physiography and Physical Geography,' 1877. He also edited and revised Reid's 'Elements of Astronomy,' 1874.

[The Geographical Journal, v. 276-7; private information; Mrs. J. W. Harrison's Story of Mackay of Uganda; Brit. Museum Cat.]

G. S.-H.

MACKENZIE, COLIN (1806-1881), lieutenant-general in the Indian army, born in London on 25 March 1806, and baptised at St. James's Church, Piccadilly, was youngest son but one of Kenneth Francis Mackenzie (d. 1831) and his wife, Anne Townsend. His father, who belonged to the Redcastle branch of Mackenzies, was attorney-general of Grenada, and lost much during the war with France, 1793-1815. Colin was educated successively at a school in Cumberland, at Dollar, and at Oswestry, and in 1825 he was appointed a cadet of infantry on the Madras establishment. He served as adjutant of the 48th Madras native infantry in the Coorg campaign in 1831, and was present in all the sections of that campaign, during a portion of which he held the appointment of deputy-assistant quartermaster-general. At the close of the campaign his services were favourably noticed by the brigadier-general commanding the force. In 1836 he accompanied Captain (afterwards Admiral Sir Henry Ducie) Chads in an expedition to the Straits of Malacca, which had been organised for the purpose of extirpating piracy in those seas. Although Mackenzie was on board Captain Chads's ship only as a passenger, his services and his gallantry were such that they elicited warm acknowledgments from Captain Chads and afterwards from Lord Auckland, then governor-general of India, who selected him in 1840 for employment with the force then serving in Afghanistan. In this unfortunate expedition, which, owing mainly to the incompetence of the general in command, ended in the complete destruction of a large British force, Mackenzie greatly distinguished himself. He was employed at first as assistant political agent under Mr. (afterwards Sir George) Clerk at Pesháwar. Thence he proceeded to Kábul, where he joined a corps of sappers which had been raised in Afghanistan by George Broadfoot, a shipmate of his on his voyage to India. Mackenzie led the advanced guard of Sir Robert Sale's force as far as Gundamak on its march to Jellálabad, and then, returning to Kábul, he commanded a so-called, but absolutely indefensible, fort, called the fort of Nishán Khán, in which the commissariat of Shah Soojah's troops was kept. He was in command of this fort when the insurrection of the Afghans at Kábul broke out. Kaye, in his history of the first war in Afghanistan, thus describes Mackenzie's de-

fence: 'On 8 Nov. it became certain that Mackenzie, with all his gallantry and all his laborious zeal, working day and night without food and without rest, conducting the defence with as much judgment as spirit, could not much longer hold his post. His men were wearied out, his ammunition was exhausted, his wounded were dying for want of medical aid. He had defended his position throughout two days of toil, suffering, and danger; and no aid had come from cantonments, none was likely to come. So, yielding at last to the impotency of others, he moved out of the fort and fought his way by night to cantonments. It was a difficult and hazardous march; and almost by a miracle Mackenzie escaped to encounter new dangers, to sustain new trials, and to live in habitual gratitude to God for his wonderful preservation.'

In the following month Mackenzie was present at the conference between the envoy, Sir William Kay Macnaghten [q.v.], and the Afghan chief, Akbár Khán. He and Eldred Pottinger [q.v.] had in vain endeavoured to dissuade Macnaghten from attending the conference, assuring him that there were strong grounds for suspecting treachery. But the conference took place and the envoy was treacherously seized and shot by Akbár Khán. At the same time Mackenzie and George Lawrence [q.v.] were made prisoners. Later on, during the unfortunate retreat from Kábul, Mackenzie, who had been set free, displayed the greatest courage and excellent judgment, and did all in his power to stimulate the efforts of the officers in superior military command. Indeed it is not too much to say that, if Mackenzie had been the general in command, instead of being only a captain, the disasters which attended the first Afghan war might have been averted. In the course of the retreat, it having been arranged that hostages should be given up to Akbár Khán, Mackenzie was selected as one of them. His selection was approved by Akbár Khán as a man who was certain to keep his word. In consequence of his deeply religious life the Afghans called him the 'English Moollah,' and had the greatest confidence in him. While in this position he was deputed by Eldred Pottinger, with the approval of Akbár Khán, to convey letters to the political agent at Jellálabad and to General Sir George Pollock [q.v.], who had reached that place. On both these missions he had more than one very narrow escape, and after the second he was attacked by a dangerous illness which nearly cost him his life. Mackenzie was subsequently carried off by Akbár Khán with the rest of the hostages

and prisoners, and with them was being removed over the Hindu Kúsh, whence they were to be sent to Bokhara to be sold as slaves, when, owing to the arrival of Pollock's force in the vicinity of Kábul and the flight of Akbár Khán, the Afghán in charge of the prisoners was induced by a guarantee of a large sum of money to release them. Before returning to India Mackenzie took part with Henry Havelock [see HAVELOCK, SIR HENRY] on the assault upon the fort of Istalíf. He, like Eldred Pottinger and the others who had distinguished themselves during the insurrection and the retreat, was one of the victims of the unreasoning prejudice which led Lord Ellenborough [see LAW, EDWARD, EARL OF ELLENBOROUGH] to treat with studied neglect all who had been in any way connected with the recent disasters, except the garrison of Jollálabad. Mackenzie was refused the Kábul medal and the six months' pay which accompanied it, and it was not until 1858 that, owing to the interposition of Lord Dalhousie, it was granted to him.

Mackenzie was subsequently employed on the north-west frontier to raise a Sikh regiment (the 4th), with which he kept the peace of the border during the last Sikh campaign. It was while thus employed that he made the acquaintance of Lord Dalhousie, who formed a high opinion of his character and of his talents. It is said to have been by his advice that Lord Dalhousie was induced to abandon an idea he had formed of making over to Afghanistan the country between the Indus and the Sulaiman range. Mackenzie urged that Peshávar was the gate of India, and therefore should not be given up. He was still a regimental captain when, in 1850, he was appointed by Lord Dalhousie brigadier-general in command of the Ellichpur division of the Hyderabad contingent. In nominating Mackenzie for this post the governor-general remarked that 'the gallantry, ability, and endurance displayed by him at the time of the rising at Kábul are amply recorded, and in connection with the subsequent events of that period entitle him to a higher reward at the hands of the government of India than the command of a local corps in the Sutlej provinces.' Mackenzie had held his new command for some years when a mutiny occurred in one of the cavalry regiments of the contingent which nearly cost him his life. In September 1855, on the occasion of the Muharram procession at Bolárum, the great day of which happened that year to be a Sunday, Mackenzie issued orders which in the first instance prohibited any procession

being held on the Sunday, but were subsequently so far modified as to permit of the processions taking place within the lines of the regiments, but not in the barracks or along the roads. This order was openly violated by the 3rd cavalry regiment of the contingent, which marched past the brigadier's house and grounds, making a hideous din when the procession reached that spot. Mackenzie sent out orderlies to stop them, and, this interference proving ineffectual, went out himself unarmed and seized two small standards which the sepoys were carrying. The result was a tumult, in the course of which Mackenzie was dangerously wounded. The government, while paying a high tribute to Mackenzie 'as a good and distinguished soldier, and as honourable, conscientious, and gallant a gentleman as the ranks of the army can show,' condemned the course taken by him on this occasion as rash and ill-judged.

Although this judgment was questioned by some very distinguished officers, there can be no doubt that it had an unfortunate influence upon Mackenzie's subsequent career. He was compelled by his wounds to return to England for a time. Afterwards he held the political appointment of agent to the governor-general with the Nawáb Názim of Bengal; but there he appears not to have received the support which ought to have been afforded to him at headquarters, and he was transferred to one of the civil departments of the army as superintendent of army clothing, a post ludicrously inappropriate to his previous services. Some years later, on his claiming a divisional command in his own presidency, it was withheld from him by the commander-in-chief on the ground of the censure which had been passed upon him in the Bolárum case. On that occasion the governor of Madras (Francis, Lord Napier [q.v. Suppl.]) and one of the members of council expressed strong disapproval of the commander-in-chief's decision, and referred the question to the secretary of state, who, however, declined to interfere. Mackenzie, who was made C.B. in 1867, finally left India in 1873, and died at Edinburgh on 22 Oct. 1881. A photographic portrait of Mackenzie, aged 74, is prefixed to Mrs. Mackenzie's 'Storms and Sunshine' (Edinburgh, 1884, 2 vols.) Mackenzie married first, in May 1832, Adeline, eldest daughter of James Pattie of the Bengal civil service, who died four years afterwards. He married secondly, in 1843, Helen, eldest daughter of Admiral John Erskine Douglas, who survived him, and published several works relating to India, besides the life of her husband.

[History of the War in Afghanistan, by J. W. Kaye, F.R.S.; Storms and Sunshine of a Soldier's Life, by Mrs. Colin Mackenzie; Twelve Indian Statesmen, by George Smith, C.I.E., LL.D.; India Office Records; Boase's Modern English Biogr.; Illustrated London News, lxxix. 464 (with portrait).] A. J. A.

MACKINNON, SIR WILLIAM, first baronet (1823-1895), founder of the British East Africa Company, born at Campbeltown in Argyllshire on 31 March 1823, was the son of Duncan Mackinnon of Campbeltown, by his wife Isabella (d. 21 April 1861), daughter of John Currie of the same town. He was educated at Campbeltown, and was trained to the grocery trade there. Early in life, however, he came to Glasgow, and was employed in a silk warehouse and afterwards in the office of a merchant engaged in the Eastern trade. In 1847 he went out to India and joined his old schoolfellow, Robert Mackenzie, who was engaged in the coasting trade in the Bay of Bengal. Together they founded the firm of Mackinnon, Mackenzie, & Co. On 29 Sept. 1850 the Calcutta and Burmah Steam Navigation Company was founded mainly through Mackinnon's exertions. It was renamed the British India Steam Navigation Company on 8 Dec. 1862. The company began with a single steamer plying between Calcutta and Rangoon, but under Mackinnon's direction it became one of the greatest shipping companies in the world. Under his guidance it developed, and in many instances created, a vast trade around the coast of India and Burmah, the Persian Gulf, and the east coast of Africa, besides establishing subsidiary lines of connection with Great Britain, the Dutch East Indies, and Australia. He was careful to have his ships constructed in such a manner that they could be used for the transport of troops, thus relieving the Indian government from the necessity of maintaining a large transport fleet. His great business capacity did not impair the humanity of his disposition. On learning that his agents during a famine in Orissa had made a contract with government for the conveyance of rice from Burmah at enhanced rates, he at once cancelled the agreement, and ordered that the rice should be carried at less than the ordinary price.

About 1873 the company established a mail service between Aden and Zanzibar. Mackinnon gained the confidence of the sultan, Seyyid Barghash, and in 1878 he opened negotiations with him for the lease of a territory extending 1,160 miles along the coast line from Tungi to Warsheik, and extending inland as far as the eastern pro-

vince of the Congo Free State. The district comprised at least 590,000 square miles, and included Lakes Nyasa, Tanganyika, and Victoria Nyanza. The British government, however, declined to sanction the concession, which, if ratified, would have secured for England the whole of what is now German East Africa. In 1886 the foreign minister availed himself of Mackinnon's influence to secure the coast line from Wanga to Kipini. A charter was granted, and the Imperial British East Africa Company was formally incorporated on 18 April 1888, with Mackinnon as chairman. The company acquired a coast line of 150 miles, including the excellent harbour of Mombasa, and extending from the river Tana to the frontier of the German protectorate. The company, which included among its principles the abolition of the slave trade, the prohibition of trade monopoly, and the equal treatment of all nationalities, found itself seriously handicapped in its relations with foreign associations, such as the German East African Company, by the strenuous support which they received from their respective governments. The British government, on the other hand, was deterred by the principles of English colonial administration from affording similar assistance. The territory of the company was finally taken over by the British government on 1 July 1895 in return for a cash payment.

Mackinnon had a great part in promoting Sir H. M. Stanley's expedition for the relief of Emin Pasha. In November 1886 he addressed a letter, urging immediate action, to Sir James Fergusson, under-secretary of state for foreign affairs, and followed this by submitting to Lord Iddesleigh, the foreign secretary, a memorandum suggesting the formation of a small committee to send out an expedition. He and his friends subscribed more than half the sum of 20,000*l.* provided for the venture, the rest being furnished by the Egyptian government (cf. *In Darkest Africa*, 1890, prefatory epistle).

Mackinnon was for some time a director of the City of Glasgow Bank, and assisted to extricate the concern from its earlier difficulties. In 1870, finding that he could not approve the policy of the other directors, he resigned his seat on the board. On the failure of the bank in 1878 the liquidators brought a claim against him in the court of session for about 400,000*l.* After a protracted litigation Mackinnon, who had peremptorily declined to listen to any suggestion of compromise, was completely exonerated by the court from the charges brought against him, and it was demonstrated that

the course taken by the directors was contrary to his express advice.

Mackinnon was one of the chief supporters of the Free Church of Scotland. Towards the end of his life, however, the passage of the Declaratory Act, of which he disapproved, led to some difference of opinion between him and the leaders of the church, and he materially assisted the seceding members in the Scottish highlands. In 1891 he founded the East African Scottish Mission.

In 1882 Mackinnon was nominated C.I.E., and on 15 July 1889 he was created a baronet. He died in London, in the Burlington Hotel, on 22 June 1893, and was buried at Olachan in Argyshire on 28 June. He was a highlander of the best type, a hospitable host, and a generous benefactor. He possessed great administrative ability. When Sir Bartle Frere sent Sir Lewis Pelly to the Persian Gulf in 1862 he said, 'Look out for a little Scotsman called Mackinnon; you will find him the mainspring of all the British enterprise there.'

On 12 May 1856 Mackinnon married Janet Colquhoun (d. 1894), elder daughter of John Jamieson of Woodside Crescent, Glasgow. He had no issue.

[Scotsman, 23, 29 June 1893; Glasgow Herald, 23 June 1893; D. D. Mackinnon's Memoirs of Olan Fugson, 1899, pp. 194-9; Times, 23 June 1893.] E. I. O.

MACKNIGHT, THOMAS (1829-1899), political writer, born at Gainsford, co. Durham, on 15 Feb. 1829, was son of Thomas Macknight and his wife Elizabeth. After being educated at a school at Gainsford kept by Dr. Bowman, Macknight removed to London, and on 28 Sept. 1849 entered the medical faculty at King's College. In 1850 he won the Stephen prize for an essay on 'The Historical Plays of Shakspeare' (London, 1850, 8vo), and in 1851 the Leathes prize for divinity; he also obtained three special certificates for physiology, chemistry, and botany. He was president of the King's College Literary and Scientific Union, and published an 'Address on the Literature of the Age,' which he delivered on 12 March 1851. He left King's College in 1851, and took to writing for the press; he was a whig of the Palmerstonian school, and his first book, published anonymously, was 'The Right Hon. Benjamin Disraeli: a Literary and Political Biography' (London, 1854, 8vo), in which Disraeli's career and policy were vigorously attacked. The book was at the time attributed to (Sir) William Harcourt, and Lord Lyndhurst denounced

it as 'a very blackguard publication and written in a very blackguard style' (*Croker Papers*, 1885, iii. 310). Macknight's next book was 'Thirty Years of Foreign Policy: a History of the Secretaryships of the Earl of Aberdeen and Viscount Palmerston' (London, 1855, 8vo), this is a defence of the policy leading up to the Crimean war, which Macknight declared to be 'inevitable.' From these party pamphlets Macknight turned to his most substantial work, his 'History of the Life and Times of Edmund Burke' (London, 1858-60, 3 vols. 8vo), which remains the best detailed life of Burke; it had occupied much of Macknight's time since he left King's College, and he had published two papers on Burke in 'Fraser's Magazine' for November and December 1851. In 1863 he published his 'Life of Henry St. John, Viscount Bolingbroke' (London, 8vo).

Early in 1866 Macknight was appointed to succeed Mr. Frank H. Hill as editor of the Belfast 'Northern Whig.' He crossed to Ireland on 31 Jan. 1866, and remained editor of the 'Whig' for thirty-two years. He made his paper the mainstay of the liberal party in Ireland, and vigorously defended the Irish church disestablishment and the land acts of Gladstone's government from 1868 to 1874. The influence of the 'Northern Whig' under his editorship was mainly responsible for the return of Mr. (afterwards Sir Thomas) McClure, a liberal, and Mr. William Johnston of Ballykilbeg, an independent, as members for Belfast in 1868. For his services on this occasion he was presented with a testimonial by his friends on 26 May 1869. Macknight also supported Gladstone's government from 1880 to 1885, but, like most liberals in Ulster, he differed from Gladstone on home rule, and remained a staunch unionist till his death; he continued, however, to advocate drastic measures of land reform in Ireland.

In 1891 Macknight was presented with another testimonial in recognition of his twenty-five years' service as editor of the 'Northern Whig,' and in 1896 he published 'Ulster as it was and as it is; or, Twenty-eight Years' Experience as an Irish Editor' (London, 2 vols. 8vo). Macknight died at his residence, 28 Wellington Park, Belfast, on 19 Nov. 1899.

[Macknight's works in Brit. Mus. Libr.; Belfast Northern Whig, 20 Nov. 1899; Who's Who, 1899; private information.] A. F. P.

McLACHLAN, THOMAS HOPE (1845-1897), landscape painter, the second son of Thomas McLachlan and his wife Jane Hope, was born on 16 March 1845 at Dar-

ington, where his father was manager of the branch of National Provincial Bank. Educated at Merchiston Castle school, Edinburgh, and Trinity College, Cambridge, where he graduated B.A. in 1868, and was bracketed first in the moral science tripos, he entered Lincoln's Inn on 27 Oct. 1865, and was called to the bar on 17 Nov. 1868. For some years he practised in the court of chancery, but he did not care for the work and had few briefs. His desire was to be a painter, and, encouraged by John Pettie [q. v.] and others who believed in his gifts, he, in 1873, gave up law and took to art. He had no academic training to begin with, and the short time he spent in the studio of Carolus Duran at a later date was of little account; but he studied the early English landscape painters, and later was considerably influenced by the work of the French romanticists and Cecil Gordon Lawson [q. v.] His work was always individual and interesting, for he had a poetic apprehension of nature, and was peculiarly sensitive to grave and impressive emotions which belong to twilight, night, and solitude. And while his technique was somewhat faulty, he designed with dignity and was a refined and powerful colourist.

He exhibited at the Academy and the Grosvenor, and later at the New Gallery and the Institute of Painters in Oil-colours, of which he was a member; but it was not until 1890, when he became associated with five other painters in the 'Landscape Exhibition' at the Dudley Gallery, that the beauty of his work, there seen more in a mass and in more congenial surroundings, drew the attention it deserved. But he lived to share in only another exhibition, for on 1 April 1897 he died at Weybridge. Next June a collection of his pictures was brought together in the studios of his friends, Mr. Leslie Thomeon and Mr. R. W. Allan, and afterwards some admirers presented a characteristic work, 'Ships that pass in the Night,' to the National Gallery.

In 1870 he married Jean, youngest daughter of William Stow Stowell of Faverdale, who with the son and daughter of the marriage survived him. A portrait drawn in red chalk by E. R. Hughes has been reproduced, a small portrait is worked into a headpiece in the 'Magazine of Art' (1895), and in the 'Art Journal' (1897) a photograph is reproduced.

[Private information; Foster's Men at the Bar, 1885; Preface to Catalogue of Memorial Exhibition by Selwyn Image; Magazine of Art, 1895; Saturday Review, 12 June 1897; Art Journal, May 1897; Exhibition Catalogues; Oct. National Gallery of British Art.] J. L. O.

MACLEAN, SIR JOHN (1811-1895), archaeologist, son of Robert Lean of Trehudrethbarton, in Blisland, Cornwall, and his wife Elizabeth, daughter of Thomas Every of Bodmin, was born at Trehudreth on 17 Sept. 1811. In 1845, as a descendant of the Dochgarroch branch of the clan Lean, he resumed the prefix of Mac.

Maclean entered the ordnance department of the war office in 1837, was keeper of the ordnance records in the Tower of London from 1855 to 1861, and deputy chief auditor of army accounts from 1865 to 1871. In that year he retired on a pension, and on 14 Jan. 1871 was knighted at Osborne. While engaged in official life he dwelt at Pallingswick Lodge, Hammeremith, and as an active churchman took much interest in the ecclesiastical administration of the parish of St. John, Hammeremith. After his retirement he lived at Bicknor Court, near Coleford, Gloucestershire, and from about 1887 at Glasbury House, Clifton, where he died on 6 March 1895. He married at Helland church, Cornwall, on 5 Dec. 1835, Mary (b. 1818), elder daughter and coheirress of Thomas Billing, of Blisland and St. Breward. She survived her husband.

Maclean's great undertaking was: 1. 'Parochial and Family History of the Deanery of Trigg Minor,' 3 vols., a rural deanery of East Cornwall, comprising the topographical particulars of several important parishes, the principal of which was Bodmin, and containing elaborate pedigrees of many of the leading families in the county. It came out in parts between 1868 and 1879, and in it was embodied the labour of twenty years. His other works and editions included: 2. 'The Life and Times of Peter Carew,' 1857. 3. 'Letters from George, lord Carew, to Sir Thomas Roe, 1615-17,' Camden Society, 1880. 4. 'Letters from Sir Robert Cecil to Sir George Carew,' Camden Society, 1884. 5. 'The Life of Sir Thomas Seymour, knight, Baron Seymour of Sudeley,' 1869 (one hundred copies only). After his withdrawal into Gloucestershire he edited 6. 'The Berkeley Manuscripts: John Smyth's Lives of the Berkeleys,' 1889-5, 3 vols. 7. 'Annals of Chepstow Castle. By John Fitzhugh Marsh,' 1883; and 8. 'Historical and Genealogical Memoir of the Family of Poyntz,' 1886. With W. C. Hearn he edited 9. 'The Visitation of Gloucester in 1823,' Harleian Society, 1885. While living in London Maclean shared with enthusiasm in the work of its chief antiquarian societies. He was elected F.S.A. on 15 Dec. 1855, and was long a member of the council. At the meetings of the Royal Archaeological In-

stitute he was a frequent attendant, supplied articles to the journal, and completed the general index to its first twenty-five volumes. He was one of the founders of the Harleian Society, and co-operated with Dr. Drake and Colonel Vivian in editing and annotating 'The Visitation of Cornwall in 1620.'

Macleau joined in the foundation of the Bristol and Gloucester Archaeological Society, contributed many papers to its 'Transactions,' and edited vols. iii-xvi, a silver inkstand being presented to him for his services. Many articles by him appeared in the publications of the Royal Institution of Cornwall, the Clifton Antiquarian Club, and the Somerset Archaeological and Natural History Society.

[Boase and Courtney's Bibl. Cornub. i. 333-4, ii. 973, 1273; Boase's Collectanea Cornub. pp. 523-4; Maclean's Trigg Minor, i. 390; Academy, 16 March 1895, p. 237; Trans. Bristol and Gloucester Archaeol. Soc. xix. 3, 168-9; Dod's Poemona, 1891.] W. F. O.

MACLEOD, SIR JOHN MACPHERSON (1792-1881), Indian civilian, born at Ardarden in Dumbartonshire in 1792, was the eldest son of Donald Macleod of St. Kilda, colonel in the Madras army, by his wife, Diana, daughter of Donald Macdonald of Tomoro in Inverness-shire. He was educated at Haileybury and at the university of Edinburgh, and obtained a writership in the Madras civil service on 27 July 1811. On 7 Jan. 1814 he was appointed second assistant to the secretary to government in the several civil departments, and on 8 July was promoted to be first assistant. In 1816 he was nominated secretary and member of the committee for revising the customs laws. After a three years' visit to England he was appointed acting secretary to government in the financial and general departments on 27 June 1823, and on 6 July 1824 he was permanently confirmed as secretary. In 1825 he became Tamil translator to government, and member of the college board, of the board of public instruction, and of the mint committee. On 14 April 1826 he was nominated Persian translator to government, and on 20 Feb. 1827 he became secretary in the revenue and judicial departments. On 16 Jan. 1829 he was appointed a temporary member of the board of revenue, and he afterwards was permanently confirmed third member. On 22 June 1832 he received the post of commissioner for the government of Mysore, and in 1834 he was deputed to Hyderabad on special duty by the governor-general. Macleod's work in Mysore was of especial importance. The province had in the previous year been transferred from

native rule to English superintendence. The task of organising the financial and political administration fell largely upon him and was carried out with ability and success. On 19 Feb. 1835 he became a member of the Indian law commission, and in 1836 member of the committee for revising the system of prison discipline throughout India. He returned to England in July 1838 and retired from the service in 1841. In 1843 he was nominated K.C.S.I., and in 1871 a privy councillor. He died on 1 March 1881 at his London residence, 1 Stanhope Street, Hyde Park. In 1822 he married Catharine, daughter of William Greig of Thornhill in the county of Stirling.

[Times, 31 March 1881; Dodwell and Miles's Madras Civil Servants, 1839; Friese's Record of Services of Civil Servants in the Madras Presidency, 1885.] E. I. C.

MACMAHON, JOHN HENRY (1820-1900), scholar and divine, born at Dublin in 1829, was son of John MacMahon, a barrister. He was educated at Enniskillen, and on 1 July 1840 entered Trinity College, Dublin, as a pensioner; he graduated B.A. in 1852, being scolar moderator and gold medallist in ethics and logic, and proceeded M.A. in 1856. He took holy orders in 1853, and held for some years a cure of souls under Dr. Alexander, the present primate of Ireland, but retired from parochial work after the disestablishment of the Irish church in 1869. He was subsequently chaplain to the lord-lieutenant, and from 1890 to the Mountjoy prison. He died at Dublin on 23 May 1900.

MacMahon was deeply read in Aristotle, the Christian fathers, and the schoolmen, but was not an original thinker. He contributed to Bohn's 'Classical Library' the 'Metaphysics of Aristotle, literally translated from the Greek, with Notes, Analysis, Questions, and Index,' London, 1857, 8vo; and to Clark's 'Ante-Nicene Library' 'The Refutation of all Heresies by Hippolytus, translated,' Edinburgh, 1888, 8vo. He was also author of 'A Treatise on Metaphysics, chiefly in reference to Revealed Religion,' London, 1800, 8vo (an essay similar in scope to Mansel's celebrated 'Bampton Lectures'), and of 'Church and State in England: its [sic] Origin and Use,' London, 1873, 8vo (an historico-juridical argument for the maintenance of the established church).

[Cat. Dubl. Grad.; Times, 24 May 1900; Brit. Mus. Cat.; information from the registrar of Trinity College, Dublin.] J. M. R.

McMURDO, SIR WILLIAM MONTAGU SCOTT (1819-1894), general, born on 30 May 1819, was son of Lieutenant-

colonel Archibald McMurdo of Lotus, Kirkcudbrightshire. After passing through Sandhurst, he was commissioned as ensign in the 8th foot on 1 July 1837, and obtained a lieutenantancy in the 22nd foot on 5 Jan. 1841. The regiment went to India in that year, and was stationed at Karachi. It formed part of the force with which Sir Charles James Napier [q. v.] took the field against the amir of Sind in December 1842, and McMurdo was placed in charge of the quartermaster-general's department. At the battle of Meeanee on 17 Feb. 1843 he killed three men, fighting hand to hand, and three more in the battle of Hyderabad on 24 March, where he was himself severely wounded. Two days before, he had been sent with 250 Poonah horse to reinforce Major Stack's column on its march to join Napier, and he saved the baggage of the column from capture. He was three times mentioned in despatches (*London Gazette*, 11 April, 9 May, and 6 June 1843), and received the medal with two clasps.

He obtained a company in the 28th foot on 8 July 1843, and was transferred to the 78th highlanders on 20 Oct.; but he remained at the head of the quartermaster-general's department in Sind till December 1847, performing the duties 'with great ability and vast labour' (*Napier's Life*, iv. 394). He took part in the operations against the hillmen on the right bank of the Indus in 1844-5, where he again distinguished himself by his intrepidity (*ib.* iii. 238). Napier spoke of him as 'an ornament to Scotland' (*ib.* p. 81), and on 4 Sept. 1844 he married Napier's daughter, Susan Sarah. He received a brevet majority on 18 Feb. 1848. When Napier returned to India as commander-in-chief in 1849, McMurdo went with him as aide-de-camp. He acted as assistant adjutant-general from November 1849 till November 1851, and took part in the operations against the Afridie, including the forcing of the Kohat pass, for which he received the medal and clasp. In 1850 he published a pamphlet, 'Sir Charles Napier's Indian Baggage Corps,' in reply to Colonel Burlton's comment on Napier's letter to Sir John Hobhouse.

He became lieutenant-colonel in the army on 21 Oct. 1853, and was assistant adjutant-general at Dublin from May 1854 to January 1855. On 2 Feb. he was appointed director-general of the new land transport corps, and was sent to the Crimea, with the local rank of colonel, to reorganise the transport service. This he did with great energy and success. On one of his demands the secretary to the treasury, Sir Charles Trevelyan,

had written, 'Col. McMurdo must limit his expenditure.' McMurdo replied: 'When Sir Charles Trevelyan limits the war, I will limit my expenditure' (*ILLUMINATED*, p. 208). Before the war ended, his corps numbered seventeen thousand men, with twenty-eight thousand horses, mules, &c. He also took over the working of the railway. He was made aide-de-camp to the queen and brevet-colonel on 11 Dec. 1855, and C.B. on 2 Jan. 1857. He received the medal with one clasp, the Turkish medal, the legion of honour (4th class), and Medjidie (4th class).

After the war the land transport corps was converted into the military train, and McMurdo was made colonel-commandant of it on 1 April 1857. In 1859 the volunteer movement began; in February 1860 McMurdo was appointed inspector, and in June inspector-general, of volunteers. He held this office till January 1865, to the great advantage of the force. It was 'a post to which he came to have had a peculiar call, and in which his zeal, faithfulness, and ability have been as conspicuous as his gallantry heretofore in the field' (*Naval and Military Gazette*, 28 Jan. 1865). On his retirement from it he received a testimonial from volunteer officers. He became colonel of the Inns of Court volunteers on 23 Jan., and of the Engineer and Railway volunteer staff corps on 9 Feb. 1865. In 1869 he published 'Rifle Volunteers for Field Service: their Arms, Equipment, and Administration,' a pamphlet of twenty-seven pages, giving his advice to the commanding officers of corps.

He commanded a brigade in the Dublin district from October 1866 to February 1870, and a district in Bengal from May 1870 to March 1873. He was promoted major-general on 6 March 1868, lieutenant-general on 10 Feb. 1876, and general on 20 May 1878. He was given the colonelcy of the 60th foot in July 1876, was transferred to the 15th foot in August 1877, and to the 22nd (Cheshire regiment) in June 1888. On 24 May 1881 he was made K.C.B., and on 1 July was placed on the retired list, being subsequently made G.C.B. He died at Nice on 2 March 1894. His wife survived him, with several children.

[*Times*, 3 March 1894; Broad Arrow, 10 March 1894; *Napier's Life of Sir C. J. Napier*; *Napier's Conquest of Scinde*; *Kinglake's War in the Crimea*; *Hamley's War in the Crimea*.] E. M. L.

MAITLAND, EDWARD (1824-1897), mystical writer, born at Ipswich on 27 Oct. 1824, was the son of Charles David Maitland, perpetual curate of St. James's Chapel, Brighton; he was the nephew of General

Sir Peregrine Maitland [q. v.], and brother of Brownlow Maitland and of Charles Maitland (1815-1866) [q. v.] His father was a noted preacher, and Edward Maitland was brought up among strict evangelical ideas, and rigorous theories about original sin and atonement. After education at a large private school in Brighton, he was admitted as a pensioner at Caius College, Cambridge, on 19 April 1843, and graduated B.A. in 1847. He was destined by his family for the pulpit, but was diverted from taking orders by doubts as to faith and vocation, and by the feeling that the church was rather 'a tomb for the preservation of embalmed doctrines' than a living organism. In his perplexity he got leave of absence from his home for a year, and left England. He went in 1849 to California, became one of the band of 'forty-niners,' and remained abroad, on the shores of the Pacific, mainly in America and Australia, where he became a commissioner of crown lands, until the one year of absence had grown into nine. He married in Australia, but was left a widower with one son after a year of wedlock.

Returning to England at the end of 1857 he devoted himself to literature, with the dominant aim of 'so developing the intuitional faculty as to find the solution of all problems having their basis in man's spiritual nature, with a view to the formulation of a perfect system of thought and rule of life.' Many of the vicissitudes of his life, both physical and mental, were recorded with but little distortion in his romance called *The Pilgrim and the Shrine*. From the *Life and Correspondence of Herbert Austin*, B.A. Cantab., which was published in 1867, and warmly acclaimed by thoughtful critics. It was followed by a romance called *The Higher Law* (1869), which represents the escape of a youth from the trammels, no longer of orthodox religion, but of traditional morals. Maitland became a figure in society, and was appreciated highly by Lord Houghton and Sir Francis Hastings Doyle. He began to write in the 'Spectator' and 'Examiner,' and did some reviewing for the 'Athenaeum' from 1870 onwards. His book 'By and By: an Historical Romance of the Future' (1878) led to his making the acquaintance of Anna Kingsford [q. v.], whom he visited at her husband's vicarage of Atcham, in Shropshire, in February 1874. In conjunction with her he produced anonymously, in 1875, 'The Keys of the Croods.' At the close of 1874 his mother died at Brighton, and Maitland accompanied Mrs. Kingsford to Paris. He joined her crusade against materialism, ani-

mal food, and vivisection, upon which subject he wrote a forcible letter in the 'Lancet' (June 1876), which attracted the most widespread attention to this subject. In this same year he first saw the apparition of his father, who had then been ten years dead, and he soon afterwards recognised that he 'belonged to the order of the mystics.'

In 1876 Maitland informs us that he acquired a new sense, that of 'a spiritual sensitiveness,' by means of which he opened relations with the church invisible of the spiritual world. He was able to see the spiritual condition of people. In a state of mind which must have approximated to that of William Blake, he tells us that he saw upon one occasion the soul of a tree. He could also, he asseverated, recall the memory of some of his past lives. He was told through a sensitive that there had been many, that he had lived in trees and animals, and that he had been a prince. He 'remembered' a life lived in ancient Thebes; he believed that he had been Marcus Aurelius and St. John the Evangelist (hence the mention of boiling oil was inexpressibly painful to him). St. John, he believed, was a reincarnation of the prophet Daniel.

In 1881, before a highly fashionable audience, he gave a series of lectures upon his new or, as he affirmed, revived esoteric creed; these lectures formed the groundwork of his 'revelation,' in which Anna Kingsford collaborated, *The Perfect Way*; or, *The Finding of Christ*, 1882 (revised 1887 and 1890). By publishing this in his own name he admits that he cut himself off from his old friendships and all his literary and social ambitions. A striking parallel is afforded by the later life of Laurence Oliphant [q. v.], with whom Maitland had a good deal in common, though he was constrained to express dissent from the spiritualistic theories embodied in 'Sympneumata.'

Maitland joined the Theosophical Society about 1883, but the vagaries of Madame Blavatsky soon compelled him to secede from the 'London Lodge,' and in May 1884, in collaboration with Mrs. Kingsford, he founded the Hermetic Society, of mystic rather than occult character, claiming no abnormal powers, and 'depending for guidance upon no Mahatmas.' In 1885, with some help from 'Anna,' he rendered into English the 'Minerva Mundi' and other hermetic writings of Hermes Trismegistus. In 1886 he and Mrs. Kingsford visited Madame Blavatsky at Ostend, but refused to be inveigled back into the theosophical fold. After the death of Anna Kingsford, in February 1888, Maitland lived alone at 1 Thurloe Square Studios, Lon-

der, where he professed to receive continual 'illumination' from his former collaborator. Henceforth he devoted his main energies to an elaborate record of their singular partnership and co-operation, though he still found time to do a certain amount of journalistic work, and in November 1891, in response to astral intimations, he founded the Esoteric Christian Union. His later works were 'Clothed with the Sun, being the Book of the Illuminations of Anna (Bonus) Kingsford,' 1889; 'The New Gospel of Interpretation,' 1892; and 'Anna Kingsford. Her Life, Letters, Diary, and Work. By her Collaborator . . . with a Supplement of Post-mortem Communications,' 2 vols. 1890. After the conclusion of this last, which he regarded as his *magnum opus*, Maitland's physical and mental decline was remarkably rapid. In 1896 he went to reside with Colonel Currie at The Warders, Tonbridge, and he lost the power of speech some months before his death, on 2 Oct. 1897. He was buried in Tonbridge cemetery on 5 Oct. By his wife Esther, who died in Australia, he left a son, a surgeon-major in the Bombay medical service.

Physically, Maitland was a giant, and his moral and intellectual gifts were of a very high order. A pure and flexible prose style lends a charm to all his writings, of which it is sad to reflect that so little will survive. The motto of his later life was 'An honest god's the noblest work of man,' and in his strenuous endeavours to construct an honest deity (with some aid from the Bible, the sacred books of the East and Hermes Trismegistus, and also from Emerson, Carlyle, Tucker's 'Light of Nature,' Elephas Levi, and Anna Kingsford, but mainly out of his own inner consciousness), he gradually became to all appearance completely distraught.

Good portraits of Maitland are reproduced in 'Light,' 'Borderland,' and the 'Life of Anna Kingsford.' He had a large domed head, with a somewhat massive cast of features, his face suggesting at the same time intellectuality and will-power.

Most of Maitland's works are replete with autobiographical detail, more particularly 'The Pilgrim and the Shrine' and 'Anna Kingsford,' which is an autobiography as much as it is a 'Life.' See also Venn's Biogr. History of Caius College, ii. 281; Graduatii Cantabr.; Academy, 16 Oct. 1897; Athenæum, 16 Oct. 1897; Light, 16 Oct. 1897 (portrait); Borderland, ii. 383 (portrait).] T. S.

MALAN, CÉSAR JEAN SALOMON, calling himself later **SOLOMON CÉSAR MALAN** (1812-1894), oriental linguist and biblical

scholar, was descended from an old Waldensian family originally settled at Mérindol in Provence, but dispersed by religious persecution in 1714. One branch fled to Geneva; here Malan was born on 22 April 1812, his parents being Dr. César Henri Abraham Malan, a noted protestant divine, and Salome Georgette Jeanne Schönberger, a Swiss. His early education was given by his father, under whom he gained a conversational knowledge, not only of German, Spanish, and Italian, but also, at an early age, of Latin. He had also begun English, Hebrew, Arabic, and Sanskrit. In 1830 he went to Scotland as tutor to the family of the Marquis of Tweeddale. In 1833 he matriculated at St. Edmund Hall, Oxford, where he resided till 1837, having meantime (1834) married Mary, daughter of John Mortlock, whose acquaintance he had made in Geneva. In 1834 he gained the Boden (Sanskrit) scholarship, and in 1837 he won the Pusey and Ellerton (Hebrew) scholarship, and graduated (Class II) in *litera humaniores*.

In the same year (1837) Malan accepted the post of classical lecturer at Bishop's College, Calcutta, which he reached in 1838. He took Anglican deacon's orders in the same year; and in the following year, becoming secretary to the Asiatic Society of Bengal, gained the intimate friendship of the remarkable scholar Csoma Körösi, from whom he learned Tibetan. Besides gaining a knowledge of several Indian vernaculars, he also advanced in Chinese. Leaving India on account of failing health in January 1840, he arrived in England in the following September. In 1842, after further travels in Egypt and in Palestine, he accepted a curacy at Alverstoke, Hampshire, taking M.A. (and joining Balliol College) and also priest's orders in 1843. His first wife having died in 1840, Malan married in 1843 Caroline Selina, daughter of the Rev. O. M. Mount. After a year (1844-5) as perpetual curate of Crowcombe, Malan accepted the living of Broadwindsor, Dorset, which he held till 1885. In 1849-50 he made a long tour in southern Europe, Asia Minor, Mesopotamia, and Armenia, illustrating this, like all his travels, by excellent sketches, some of which have been published. In 1855-6 Malan's Chinese learning came into notice by his publication of two works on controversies of the time: (1) 'On the translation of the word "God" in Chinese' ('Who is God in China?') London, 1855; (2) 'The Threofold San-tze King or Trilateral Classic . . . translated . . . with notes,' London, 1856, with reference to the alleged Christianity of the rebel chief Tae-ping Wang. During the next twenty

years Malan was much occupied with theological controversy, but published meanwhile some of his most valuable work illustrative of the Christian East, especially translations from the Syriac, Coptic, Ethiopic, Armenian, and Georgian literatures. In 1872 he made a sudden and highly characteristic visit to the Crimea, Georgia (where he was the guest of Bishop Gabriel and preached in Georgian at the cathedral of Kutaie), and Armenia.

In 1881 Malan joined in the onslaught made by John William Burgon [q.v. Suppl.] on the revised version of the New Testament, contributing to his articles, and himself publishing a new version of Matthew i-vi, with an appendix giving the Lord's Prayer in seventy-one languages. This he followed up in 1882 by a work directed against the Greek text of Drs. Westcott and Hort, which, however, produced no lasting impression. Shortly before leaving Broadwindsor (1885) he presented his great library, some four thousand volumes, to various institutions, Osoma's books and manuscripts being appropriately given to the Hungarian Academy of Sciences, the patristic collections to Koble Library, and the rest to the Indian Institute, Oxford. After his retirement Malan lived at Bournemouth till his death, which happened there on 25 Nov. 1894; he was buried in Bournemouth cemetery. During his last years his chief literary employment was the compilation of his 'Notes on Proverbs' (3 vols. published 1889, 1892-3), a huge work in which, taking the Salomonic text as a basis, he illustrated it by parallels from the vast range of his reading in non-Christian oriental literature.

In practical knowledge of oriental languages Malan had certainly no equal in England, and probably none in the world; yet he was scarcely perhaps an orientalist in the scientific sense of the term. His publications were all (save one on drawing and two on ornithology) of an ecclesiastical nature, while even on biblical ground his ultra-conservatism is seen in his opposition to modern progressive Hebrew criticism, quite analogous to his position above described, regarding New Testament research. The biography published by his son illustrates both his ability in drawing and his great skill in oriental calligraphy. Against the latter we must set his hopeless and wholly unpractical aversion to oriental transliteration. In botany and ornithology he had advanced beyond the amateur stage, and in manual arts such as fly-fishing, bookbinding, and a performer's knowledge of the construction of musical instruments he was also proficient. Of his numerous publications (over fifty) the

following, besides those already mentioned, are the chief: 1. 'The Gospel according to St. John, translated from the eleven oldest versions, except the Latin . . . with notes,' London, 1862. 2. 'Meditations on our Lord's Passion . . . from the Armenian,' London, 1863. 3. 'History of the Georgian Church,' translated from the Russian of Josselian, London, 1868. 4. 'Life . . . of S. Gregory the Illuminator . . . from the Armenian,' 1868. 5. 'Liturgy of the Orthodox Armenian Church,' translated, London, 1870. 6. 'Conflicts of the Holy Apostles . . . Epistle of S. Dionysius from Ethiopic MSS., and the Assumption of S. John from the Armenian,' London, 1871. 7. 'Misawo, the Japanese Girl, translated from the Japanese,' 1871. 8. 'The Divine Liturgy of S. Mark . . . from a Coptic MS.,' London, 1872. 9. 'The Coptic Calendar from an Arabic MS.,' London, 1878. 10. 'History of the Copts . . . from the Arabic of . . . El Magrizi,' London, 1878. 11. 'The Divine Etyologia . . . of S. Gregory . . . from a Coptic MS.,' London, 1875. 12. 'The Book of Adam and Eve . . . from the Ethiopic,' London, 1882.

[Solomon Caesar Malan . . . by his eldest surviving son, Rev. A. N. Malan, London, 1897; review in *Athenaeum*, 12 Feb. 1898; obituary notice by Prof. Maodonell in *Journal R. Asiatic Soc.* 1896.] O. B.

MALCOLM, SIR GEORGE (1818-1897), general, born at Bombay on 10 Sept. 1818, was the only son of David Malcolm, a Bombay merchant, who was the brother of Admiral Sir Pulteney and General Sir John Malcolm [q.v.] He was commissioned as ensign in the E.I.C. service on 10 June 1836, and was posted to the 1st Bombay native infantry on 18 July 1837. He served in the Afghan war of 1839 as deputy-assistant commissary-general and baggage-master with the Bombay division, and was present at the capture of Ghazni and occupation of Kabul. In August 1840, at the head of a detachment of Sind horse, he joined the force sent under Major Oliborn to relieve Kahan in Baluchistan, took part in the attempt to force the Nafusk pass, and was mentioned in despatches for his gallantry. He was also engaged in the operations against Nusseer Khan and the Brahoes and the capture of their camp near Kanda on 1 Dec. He received the medal.

He became lieutenant on 31 Aug. 1840. He served under Colonel John Jacob [q.v.] during the subjugation of Sind, and was present at the battle of Shadadpur and the capture of Shalipur. In the second Sikh war he commanded the 2nd Sind horse, and was

present at the siege of Multan and the battle of Guprat. He was mentioned in despatches (*London Gazette*, 19 April 1849), received the medal, and on becoming captain in his regiment (1st Bombay native infantry) he was given a brevet majority on 22 June 1849. He became lieutenant-colonel on 23 Nov. 1854.

He served in the Persian war of 1856-7, and commanded a small field force during the Indian mutiny. On 29 Nov. 1857 he stormed the fortified village of Halgalli. He took possession of Shorapur on 9 Feb. 1858, and on 2 June he captured the fort of Nargund, the strongest in the South Maratha country. He was mentioned in despatches, received the medal, and was made C.B. on 21 March 1859. He became colonel in the army on 30 Aug. 1860, and major-general on 15 Dec. 1867. In the expedition to Abyssinia in 1868 he commanded the second division, which guarded the line of communications. He was included in the vote of thanks of parliament, was made K.C.B. on 14 Aug. 1868, and received the medal. He was promoted lieutenant-general on 20 May 1876, and general on 1 Oct. 1877, and was placed on the unemployed supernumerary list on 1 July 1881. He received the G.C.B. on 29 May 1886.

He died at Leamington on 6 April 1897. On 19 Oct. 1852 he married Wilhelmina Charlotte, youngest daughter of the Rev. Henry Alright Hughes. She survived him. In 1888 he printed for private circulation at Karachi 'Remarks on the Indian Army' (eighteen pages), in which he dwelt on the danger of relying on European troops and of neglecting and discrediting the native army, as had been the tendency since the mutiny.

[*Times*, 7 April 1897; *Stocqueler's Memorials of Afghanistan*, pp. 112-21; *Malleon's Indian Mutiny*, iii. 126, &c.; *Burke's Landed Gentry*; *Official Record of the Expedition to Abyssinia*.] E. M. L.

MALLESON, GEORGE BRUCE (1825-1898), colonel and military writer, born in London on 8 May 1825, was second son of John Malleon of Wimbledon, by Lucy (Nesbitt), whose father was colonial secretary in the Bahamas. He was educated at Wimbledon and at Winchester College, where he became an ardent cricketer. Through Colonel Oliphant, a director of the East India Company, he was given a direct commission as ensign on 11 June 1842, and was posted to the 85th Bengal native infantry on 20 Sept. He obtained a lieutenantancy in the 38rd B.N.I. on 28 Sept. 1847. He was appointed to the commissariat department on 30 Nov. 1852, and

served in the second Burmese war, which resulted in the annexation of the lower province in 1853. On 28 March 1856 he was appointed an assistant military auditor-general, and he was engaged with accounts at Calcutta during the mutiny. He wrote 'The Mutiny of the Bengal Army,' which was published anonymously in 1857, and was known as 'the red pamphlet.' In this he pointed to Lord Dalhousie's administration, and especially the annexation of Oudh, as mainly responsible for the revolt.

He was promoted captain on 16 Aug. 1861, major in the Bengal staff corps on 18 Feb. 1863, lieutenant-colonel on 11 June 1868, and colonel in the army on 11 June 1873. He was appointed a sanitary commissioner for Bengal in 1868, and controller of the military finance department in 1868. In 1869 he was chosen by Lord Mayo to be the guardian of the young Maharajah of Mysore; he held this post till 1 April 1877, when he retired on full pay. He had been made C.S.I. on 31 May 1872.

He had been a frequent contributor to the 'Calcutta Review' since 1857, and was also a correspondent of the 'Times.' After his retirement he devoted himself to literature, dealing chiefly with military history, especially Indian. He had a broad grasp, great industry, a vigorous and picturesque style, but was apt to be a strong partisan. He did much to draw attention to Russian progress in Central Asia, and its dangers to British rule in India. He died at 27 West Cromwell Road, London, on 1 March 1898. In 1856 he married Marian Charlotte, only daughter of George Wynyard Battye of the Bengal civil service, and sister of three distinguished soldiers, Quintin, Wigram, and Frederick Battye, all of the Guides, and all killed in action. She survived her husband, and on 14 June 1899 received a civil list pension of 100*l.* in recognition of his eminence as an Indian and military historian.

He was author of the following works:

1. 'The Mutiny of the Bengal Army,' 1857, 2 pts. 8vo.
2. 'History of the French in India,' 1868, 8vo.
3. 'Recreations of an Indian Official' (biographical articles on Anglo-Indians, &c., reprinted from periodicals), 1872, 8vo.
4. 'Studies from Genoese History,' 1875, 8vo.
5. 'Historical Sketch of the Native States of India,' 1875, 8vo.
6. 'Essays and Lectures on Indian Historical Subjects,' 1876, 8vo.
7. 'Final French Struggles in India and in the Indian Seas,' 1878, 8vo.
8. 'History of the Indian Mutiny' (in continuation of vols. i. and ii. of Kaye's 'Sepoy War'), 1878-80, 3 vols. 8vo.
9. 'History of Afghanistan,' 1879, 8vo.

10. 'Herat, the Garden and Granary of Central Asia,' 1880, 8vo. 11. 'The Founders of the Indian Empire: Lord Olive,' 1882, 8vo. 12. 'The Decisive Battles of India,' 1883, 8vo. 13. 'Captain Musafir's Rambles in Alpine Lands,' 1883, 8vo. 14. 'The Battle-fields of Germany,' 1884, 8vo. 15. 'London' (series of military biographies), 1884, 8vo. 16. 'Prince Eugene of Savoy' (same ser.), 1888, 8vo. 17. 'The Russo-Afghan Question and the Invasion of India,' 1885, 8vo. 18. 'Ambushes and Surprises,' 1885, 8vo. 19. 'Prince Metternich' (Statesman ser.), 1888, 8vo. 20. 'Wellesley' (same ser.), 1889, 8vo. 21-2. 'Akbar' and 'Dupleix' (Rulers of India ser.), 1890, 8vo. 23. 'Refounding of the German Empire,' 1893, 8vo. 24. 'Warren Hastings,' 1894, 8vo. 25. 'The Lakes and Rivers of Austria, Bavaria, and Hungary,' 1897, 8vo.

[Times, 2 March 1898; E. I. Registers; Allibone's Dictionary, supplement; private information.] E. M. L.

MANGLES, ROSS DONNELLY (1801-1877), chairman of the East India Company, born in 1801, was the son of James Mangles (*d.* September 1838) of Woodbridge, near Guildford, by his wife Mary, youngest daughter of John Hughes of Guildford. He was named after Admiral Sir Ross Donnelly [q. v. Suppl.], on whose ship his relative, James Mangles [q. v.], first served. He was educated at Eton and the East India Company's College at Haileybury. On 30 April 1819 he entered the Bengal civil service as a writer. He arrived in India in the following year, and on 28 Sept. 1821 he was appointed assistant to the secretary to the board of commissioners for the ceded and conquered provinces. In 1822 he was acting collector of government customs and town duties at Farnkhábad, and on 12 June 1823 he was nominated assistant to the secretary to the board of revenue for the Lower Provinces and acting commissioner of the Sundarbans. On 20 Aug. 1825, during the first Burmese war, he became secretary to the commissioner of Pegu and Ava. On 21 April 1826 he was appointed deputy-secretary in the judicial and territorial departments. After a visit to England extending from April 1828 to November 1831, he became on 6 Dec. officiating junior secretary to the sadr board of revenue. On 3 April 1832 he was nominated deputy-secretary in the general department; on 22 Feb. 1833 magistrate and collector of Tipperah; on 1 July magistrate and collector of customs and land revenue at Chittagong; and on 4 Nov. magistrate and

collector of Agra. On 13 May 1835 he was placed in the important post of secretary to the government of Bengal in the judicial and revenue departments. This office he continued to hold until his final return to England early in 1839. It was one of especial authority, because, during the absence of the governor-general, George Eden, earl of Auckland [q. v.], who was also, in accordance with custom, lieutenant-governor of Bengal, the administration of affairs of the province fell almost entirely into the hands of the secretary. So great was Mangles's influence, that the natives used to say that there were over them three English lords—'Lord Colvin [see JOHN RUSSELL COLVIN], Lord Auckland, and Lord Mangles.' On 28 May 1838 he also filled the position of temporary member of the sadr board of revenue.

On his return to England he turned his attention to politics, and at the general election of 1841 he was returned to parliament on 1 July in the liberal interest for Guildford, a borough which his father had represented from 1831 till 1837. This seat he retained until 1858. He gained a high reputation in parliament as an authority on India matters. He was elected a director of the East India Company on 14 April 1847, and filled the post of chairman in 1857-8, when he was succeeded by Sir Frederick Currie [q. v.], the last chairman of the company. Mangles retired from parliament on his appointment, on 21 Sept. 1858, as a member of the council of India. This office he held until 1874, when he resigned his seat on account of advancing age. He died in London at 28 Montagu Street, Montagu Square, on 16 Aug. 1877. On 16 Feb. 1830 he married Harriet, third daughter of George Newcome of Upper Wimpole Street. By her he had issue. His son, Ross Mangles, obtained the Victoria Cross for gallant conduct near Arrah in 1857 during the Indian mutiny.

Mangles was the author of: 1. 'A Brief Vindication of the East India Company's Government of Bengal from the Attacks of Messrs. [Robert] Riokards and [John] Crawford' [q. v.], London, 1830, 8vo. 2. 'Christian Reasons of a Member of the Church of England for being a Reformer,' London, 1840, 8vo. He contributed several articles on Indian affairs to the 'Edinburgh Review.'

[Illustrated London News, 9 Oct. 1858 (with portrait); Times, 21 Aug. 1877; Ann. Reg. 1877, ii. 150; Dodwell and Miles's Bengal Civil Servants, 1839; Temple's Men and Events of my Time in India, 1882, p. 412.] E. I. C.

MANNING, ANNE (1807-1879), miscellaneous writer, eldest child of William Oke Manning (1778-1839), insurance broker of Lloyd's, London, and granddaughter of James Manning, unitarian minister of Exeter, was born in London on 17 Feb. 1807. Her mother was Joan Whatmore, daughter of Frederick Gibson, principal surveyor of the London Docks, cousin, ward, and heir-at-law of Charles Lamb's 'most consistent living model of modern politeness,' Joseph Paice (*Essays of Elia*: 'Modern Gallantry'). William Oke Manning [q. v.] was her brother; James Manning, sergeant-at-law [q. v.], her uncle; Sir William Montague Manning (1811-1895), attorney-general, and judge of the supreme court of New South Wales, joint author of Neville and Manning's 'Reports in Court of Queen's Bench,' 3 vols., 1834, was her first cousin.

Anne was educated by her mother, an accomplished scholar. The associations of Old Chelsea, whither the family removed from Brunswick Square when she was eight, aroused her interest in history. She acquired a knowledge of several foreign languages, had a taste for science, and obtained a gold medal of the Royal Academy of Arts for a copy of Murillo's 'Flower Girl.' The Mannings moved into John Galt's house when he left Chelsea.

Her first book, 'A Sister's Gift: Conversations on Sacred Subjects,' London, 1820, 12mo, written for the brothers and sisters whom she taught, and published on her own account, realised a profit of 60%. The next, 'Stories from the History of Italy,' London, 1831, 8vo, was the only one published under her own name. 'Village Belles,' her first story (3 vols., 1838, 8vo; 2nd edit. 1859), was written at Norbury Priory, near Mickleham, which was the Mannings' home for seven years.

'The Maiden and Married Life of Mistress Mary Powell, afterwards Mistress Milton,' told in diary form, first appeared in 'Sharpe's Magazine' in 1849, and brought Miss Manning considerable notice. She was known thenceforward as 'the author of Mary Powell.' The tale was reprinted 1849, 1855 (3rd edit.), 1860, 1874, and with a sequel, 'Deborah's Diary,' 1859 and 1860. Even more successful was 'The Household of Sir Thomas More,' which appeared in the same magazine, and was republished 1860, 1870, and 1887. Of both these stories (of which French and German translations also appeared), and of 'Cherry and Violet, a Tale of the Plague,' handsome editions, illustrated by Messrs. Jolliffe and Railton, and with introductions by the Rev. W. H. Hutton, were

issued 1897, 1895, and 1896 respectively. An attack was made ('Fraser's Magazine,' vol. lii., July 1855, p. 104) upon them as 'spurious antiques,' and the public was seriously warned not to accept them as authentic diaries. They were of course intended as fiction. Both Archbishop Tait and Cardinal Manning spoke in high terms of their historical accuracy.

About 1850 Miss Manning settled at Reigate Hill, and remained there until near her death at her sisters' house at Tunbridge Wells on 14 Sept. 1879. She was buried with her parents in Mickleham churchyard, near Dorking.

A most prolific writer, Miss Manning was at her best in her historical tales of the sixteenth century. All her books evince extensive reading, and some of them perhaps a gentle pedantry. Her 'Family Pictures' and 'Passages in an Ancestress's Life' contain interesting autobiographical reminiscences.

Other works by her, all published at London, are: 1. 'Queen Philippa's Golden Rule,' 1851, 8vo. 2. 'The Drawing-room Table Book,' 1852, 4to. 3. 'The Colloquies of Edward Osborne, Citizen and Clothworker,' 1852, 1853, 1860; 4th ed. 1900, 8vo. 4. 'The Provocations of Madame Palissy,' 1853; 3rd ed. 1880, 8vo. 5. 'Cherry and Violet, a Tale of the Great Plague,' 1853, 8vo; 2nd ed. 1870. 6. 'Jack and the Tanner of Wymondham,' 1854, 8vo. 7. 'Chronicles of Merry England,' 1854, 8vo. 8. 'Claude the Colporteur,' 1854, 8vo. 9. 'The Hill Side: Illustrations of some of the simplest Terms used in Logic,' 1854, 8vo. 10. 'Some Account of Mrs. Clarinda Singmaster,' 1855, 8vo. 11. 'Stories from the History of the Caliph Haroun Al Raschid,' 1855, 8vo. 12. 'A Sabbath at Home,' 1855, 8vo. 13. 'The Old Chelsea Bun House,' 1855, 8vo; 2nd ed. 1860, 8vo; 3rd ed. 1899, 8vo. 14. 'The Week of Darkness: a short Manual for the Use and Comfort of Mourners,' 1856, 12mo. 15. 'Tasso and Leonora: the Commentaries of Ser Pantaleone degli Gambacorti,' 1856, 8vo. 16. 'The Good Old Times: a Tale of Auversgne,' 2nd ed. 1857, 8vo. 17. 'Lives of Good Servants,' 1857, 8vo. 18. 'Helen and Olga: a Russian Story,' 1857, 8vo. 19. 'This Year Nine: a Tale of the Tyrol,' 1858, 8vo. 20. 'The Ladies of Bever Hollow,' 1858, 8vo. 21. 'Poplar House Academy,' 1859, 8vo, 2 vols. 22. 'Autobiography of Valentine Duval,' translated, 1860, 12mo. 23. 'The Day of Small Things,' 1860, 8vo. 24. 'Town and Forest,' 1860, 8vo. 25. 'The Cottage History of England,' 1861, 12mo. 26. 'Family Pictures,' 1861, 8vo. 27. 'Chro-

nicle of Ethelfled,' 1861, 8vo. 28. 'A Noble Purpose Nobly Won' (Joan of Arc), 1862, 8vo; 2nd ed. 1862; 3rd ed. 1870, 8vo. 29. 'Meadowleigh,' 1863, 8vo. 30. 'The Duchess of Trajette,' 1863, 8vo. 31. 'An Interrupted Wedding,' 1864, 8vo. 32. 'Belforest,' 1865, 8vo. 33. 'Selvaggio: a Tale of Italian Country Life,' Edinburgh, 1865, 8vo. 34. 'Miss Biddy Frobisher,' 1866, 8vo. 35. 'The Lincolnshire Tragedy: Passages in the Life of the Faïre Gospeller, Mistress Anne Askewe, recounted by Nicholas Moldwarp,' 1866, 8vo. 36. From 1868 to 1876 Miss Manning contributed regularly articles, verso, and stories to Dr. Whittemore's magazine, 'Golden Hours,' in which the following serials by her, apparently never republished, appeared: 'Madame Prosci and Madame Bloay: a Story of the Siege of La Rochelle,' 1868; 'Rosita,' 1869; 'On the Grand Tour,' 1870; 'Octavia Solara,' 1871; 'Illusions Dispelled,' 1871.

MANUCHE or **MANUCCI**, **COSMO** (*n.* 1652), dramatist, of Italian origin, probably belonged to the Florentine family of Mannucci, some members of which were in the service of the Medici (cf. CROLLANZANZA, *Dizionario Storico-Blasonico*, ii. 66; ADEMOLLO, *Marrietta de' Ricci*, ed. Passerini, ii. 632-3). In 1587 one Giacompo Manucci was among the agents in Italy who were in correspondence with the English foreign office (*Hatfield Papers*, iii. 262). Cosmo was doubtless related to Francesco Manucci, who was at one time in the domestic service of Edward Wotton, first baron Wotton [q. v.], and from 1624 in that of Edward Conway, first viscount Conway (cf. *Cal. State Papers*, Dom. 1623-5, pp. 263, 288, 426, 434; 1628-9, p. 348). He seems to have himself joined the household of James Compton, third earl of Northampton, who encouraged his literary tastes and ambitions. During the civil wars he joined the royalists and obtained

commissions in the king's army as captain and major of foot. He commonly described himself as Major Cosmo Manuche. He served continuously to the end of the war in England, and then joined the royalists in Ireland. Returning to England, he sought a livelihood by 'boarding scholars' and writing plays, most of which he dedicated to Lord Northampton. His poverty was great. In his need he did not disdain the service of the Protector. On 4 June 1656 he sent, through Secretary Thurloe, a petition to Cromwell begging for the payment of 20*l.*, which he claimed to be the balance of an account due to him for 'making discoveries of the disturbers of our present happy government' (*Cal. State Papers*, Dom. 1656-8, p. 348). At the time of the Restoration he represented to adherents of Charles II that he had often suffered imprisonment during the Protectorate for his loyalty to the cause of the king. On 12 Dec. 1661 Lord Berkeley of Stratton, Sir Gilbert Talbot, and Sir Lewis Dyve signed a certificate attesting Manuche's military achievements in Charles I's behalf, and the present ill-health and destitution not only of himself but of his wife and two children (*Egerton MS.* 2628, f. 34).

No less than twelve plays—three in print and nine in manuscript—have been assigned to Manuche. The two by which he is best known were published in 1652, with his name on the title-page. The titles run: 'The Just General: a Tragi-Comedy, written by Major Cosmo Manuche. London, Printed for M. M. T. O. and G. Bedell, and are to be sold at their Shop at the Middle Temple gate in Fleet Street, 1652;' and 'The Loyal Lovers: a Tragi-Comedy Written by Major Cosmo Manuche. London, Printed for Thomas Eglesfield at the Brazen Serpent in St. Paul's Church-yard, 1652.' Each is described as a tragi-comedy. In neither does the language show any trace of its author's foreign origin. According to his own account 'The Just General' was his first literary effort. Neither piece was acted. 'The Just General' is dedicated to the Marquis of Northampton and his wife Isabella, and has, by way of prologue, a dialogue between characters called 'Prologue' and 'Critick.' 'The Loyal Lovers' is defaced by much coarseness. Hugh Peters was furiously denounced under the name of 'Sodome.' Manuche's metrical methods are curious. In the 'Loyal Lovers' there is some prose, but the rest of that play and the whole of the 'Just General' are written in an eccentrically irregular form of blank verse, which is rhythmical and not metrical, and is barely distinguishable from

prose. A third printed play, a tragedy, called 'The Bastard,' which was published anonymously also in 1652, has been assigned traditionally to Manuche, and that theory of authorship is accepted by Charles Lamb, who gives a quotation from it in his 'Specimens of English Dramatic Poets.' Langbaine traces its plots to episodes in 'The English Lovers' and in Oespedes's 'Gerardo, the unfortunate Spaniard' (Engl. transl. by Leonard Digges, 1622). In the prologue the author describes his work as translated from the Spanish. A small part of 'The Bastard' is in prose, the rest is in blank verse of a more regular kind than that in Manuche's undoubted work.

Bishop Percy found, about 1770, nine manuscript plays other than those already named in the Marquis of Northampton's library at Castle Ashby, which he attributed to Manuche's pen. Eight, which, according to Percy, were written on folio sheets, were all in the same handwriting. Of these, two in blank verse, entitled respectively 'The Banished Shepherdess' and 'The Feast: a comedy,' had dedications to the Marquis of Northampton, which were signed 'Cos: Manuche.' The third and fourth, 'The Mandrake' (a comedy in prose) and 'Agamemnon: a tragedy,' were unfinished. The fifth was a blank-verse tragedy, 'Leontius, King of Cyprus;' the sixth, 'The Captives,' seems to be an adaptation in prose from Plautus; the seventh, 'Mariamne,' a blank-verse tragedy, was 'very much torn;' and the eighth, a tragedy in blank verse without a title, opened with a scene between three characters named Macrinus, Papinianus, and Ardentius. A prose untitled comedy in quarto MS., in which the first character is called Hermengildus, was also at Castle Ashby in Bishop Percy's time, and was tentatively ascribed by Percy to Manuche. Of these pieces only the comedy called 'The Feast' is still known to be in the library at Castle Ashby, together with an unsigned poem, in another handwriting, which is assigned to Manuche in the catalogue.

[Authorities cited: Langbaine's *English Dramatic Poets* (with Bishop Percy's manuscript notes in British Museum Library, O 45, d. 15); Phillips's *Theatrum Poetarum*.] S. L.

MARGARET, the MAID OF NORWAY (1283-1290), queen of Scotland, born in 1283, was daughter of Erio II of Norway. Her mother, who died at or soon after her birth, was Margaret, daughter of Alexander III of Scotland [q. v.], by his queen Margaret, daughter of Henry III [q. v.]. Alexander, the only surviving son of Alexander III, having died before the end of 1283, the nobles of Scotland met at Scone on 5 Feb. 1284 and

bound themselves to acknowledge Margaret as heir of the kingdom, reserving the rights of any children who might thereafter be born to the king, and of any posthumous child who might be born to his son Alexander. On 19 March 1286 Alexander III was killed, and on 11 April the estates appointed six regents to govern for the infant queen. Edward I obtained a bill of dispensation from Honorius IV in May 1287, that his sons and daughters might marry within the prohibited degrees, and in May 1289 sent ambassadors to Nicolas IV to obtain the pope's consent to the marriage of his son Edward and Margaret. Eric, who was largely indebted to the English king, sent three ambassadors to England in September, as from himself and Margaret, to request Edward to secure the rights of the queen. At Edward's instance four commissioners were sent by the regents of Scotland to meet them and three commissioners appointed by himself at Salisbury, where on 6 Nov. it was agreed that before 1 Nov. next following Eric should send Margaret either to England or Scotland free from any matrimonial engagement; Edward promised that if Scotland was in a settled state he would send her thither unengaged, on receiving a promise from the Scots that they would not give her in marriage except as he should ordain and with her father's consent. The bill of dispensation for the marriage of the young Edward and Margaret was obtained a few days later.

Tidings of the proposed marriage having reached Scotland, the estates of that kingdom at a meeting at Brigham in March 1290 wrote to Edward warmly approving his design, and to Eric urging him to send his daughter to England speedily. By the articles of Margaret's marriage treaty, arranged on 11 July, Edward promised that the kingdom of Scotland should remain separate and independent, saving his rights in the marches and elsewhere. He requisitioned a ship at Yarmouth to fetch Margaret, and caused it to be fitted out and victualled by Matthew de Columbers, his butler. The ship was manned by forty seamen, and as Eric seems to have been expected to accompany his daughter great provision was made for the voyage, thirty-one hogheads and one pipe of wine, ten barrels of beer, fifteen salted oxen, four hundred dried fish and two hundred stock fish, five hundred walnuts, and two loaves of sugar being put on board. The ship arrived at Bergen, and took Margaret on board without her father. On 7 Oct. William Fraser (*d.* 1297) [q. v.], bishop of St. Andrews, wrote to Edward saying that he and the English proctors appointed for

the marriage had heard that Margaret had been ill, and that it was then generally believed that she had died on her voyage at one of the Orkneys. The report was true. Nothing is known of the circumstances of her death or burial. About ten years later a young woman came to Norway from Germany declaring herself to be Margaret, Eric's daughter. She said that she had been kidnapped at the Orkneys by a woman of high rank, Ingeborg, the wife of Thore Hakonsson, and had been sold by her. Many believed her story. The king, Hakon V, who had succeeded his brother Eric, caused her to be tried, and she was burnt alive at Bergen in 1301. Her cruel death excited much compassion; she was believed by many to have been Eric's daughter, and was for a time revered at Bergen as a saint.

MARKS, HENRY STACY (1829-1898), artist, the youngest of four children, was born on 18 Sept. 1829 in Great Portland Street, West, and baptised in All Souls', Langham Place. His father, Isaac Daniel Marks, after practising for a time as a solicitor in Bloomsbury, took to his father's business of a coach-builder in Langham Place. The artist's father was a devoted student of Shakespeare, which accounts for the subjects of some of his earliest paintings. The firm, Marks & Co., prospered at first, and it was understood that Henry should carry it on. His talent for drawing was shown very early, and when he left school he studied heraldry, so that he might be able to paint the crests and coats of arms on carriage doors and panels. Sufficient employment of this kind was quickly found for him in his father's business, but at the same time he attended evening classes at the well-known art school in Newman Street of James Mathews Leigh [q. v.] In 1851, having failed in the previous year, he obtained admission to the Academy schools, but continued his studies with Leigh. A picture called 'Hamlet, Horatio, Osric,' painted in 1851, was hung in the Portland Gallery with Rossetti's 'Annunciation.' (Mathewley, Leigh's successor, sat for the Hamlet.) The possessor of much dry humour, and a good comic actor, Marks was deservedly popular and never wanted

friends among artists. The closest in those early days were Philip Hermogenes Calderon, Mr. Val Prinsep, Mr. W. W. Oulson, Mr. G. A. Storey, and Mr. Alfred Parsons.

In January 1852 he stayed for five months in Paris with Calderon. He studied first with M. Picot, pupil of David, and afterwards in the Ecole des Beaux-Arts. In his absence his father's firm failed, and from that time forward he had to depend solely on his own exertions.

In 1853 he exhibited for the first time at the Royal Academy. His work was a half-length of 'Dogberry.' 'With many other students,' Marks wrote, 'I was much influenced by the pre-Raphaelite school, and that influence was very evident in the picture.' It was placed next to Holman Hunt's 'Strayed Sheep,' had the advantage of being very well hung, and found a purchaser. Henceforth Marks was a frequent exhibitor at the Royal Academy, and he soon found a generous admirer in Charles Edward Mudie [q. v.], the founder of Mudie's Library. Before 1860 Mudie bought two of his most important paintings, 'Toothache in the Middle Ages' (1856), and 'Dogberry's Charge to the Watch' (1859). To the same period belonged the 'Gravedigger's Riddle,' which he also sold. Next in point of interest came the 'Franciscan Sculptor's Model,' a very humorous subject: the matter in hand a gargoyles; the model a country bumpkin, with features burlesqued to convey the idea of spouting. In 1860 Mudie invited Marks to accompany him to Belgium, and in 1863 he repeated the visit with his friends Yeames and Hodgson. In the 'Jester's Text,' painted in 1862, there are traces of Flemish influence.

In order to supplement his resources Marks did much besides painting pictures. He practised drawing on wood, contributed cuts to a paper called 'The Home Circle,' and illustrated some books. He also taught drawing for a short time, was largely employed by the firm of Clayton & Bell, the makers of stained glass, and did decorative work of all sorts. He designed the proscenium both for the Gaiety Theatre, London, and the Prince's Theatre, Manchester. The merit of his varied work attracted Ruskin's attention, and letters from Ruskin show how sincere was his appreciation of Marks's work. The studies in natural history, in which Marks in course of time specialised, particularly appealed to Ruskin, who saw in Marks's animals characteristics not unlike those which he discerned in Turner and Bewick. Marks all his life was a close observer of the ways of birds, and his excellent draw-

ings of them came to be very popular. Though not altogether in sympathy with Marks's high spirits and humour, Ruskin would not have him repress it. 'Some very considerable part of the higher painter's gift in you,' he wrote to Marks, 'is handicapped by that particular faculty (i.e. humour), which nevertheless, being manifestly an essential and inherent part of you, cannot itself be too earnestly developed.'

In 1874 an introduction to Hugh Lupus Grosvenor, first duke of Westminster [q. v. Suppl.], resulted in commissions for the paintings in Eaton Hall, Cheshire. His first undertaking was a frieze representing the Canterbury Pilgrims, which occupiess two walls of a large saloon. They are painted on lengths of canvas more than thirty-five feet in extent. The designs for the work, executed in water-colours, were exhibited at the Royal Academy in 1875. The paintings, commenced in 1876, were completed in 1878. There followed a further commission for paintings of birds for the walls of a smaller room.

These birds (twelve panels in all) were exhibited at Agnew's Gallery in May 1880. Ruskin wrote of them: 'I must say how entirely glad I am to see the strength of a good painter set upon Natural History, and this intense fact and abstract of animal character used as a principal element in Decoration.' Marks executed similar decorative work for Stewart Hodgson's houses in South Audley Street, London, and Lythe Hill, Haslemere.

In 1862 Marks removed from Camden Town to Hamilton Terrace, St. John's Wood. With Regent's Park close at hand, he pursued his studies of birds, and he and some friends who lived near founded the artists' club known as the 'Oliquo.' Among his most intimate friends were Frederick Walker and Charles Keene. He had first met Walker at the Langham Society's Sketching Club, and Walker's twin-sister married Marks's younger brother.

In January 1871 Marks was elected, together with Walker and Woolner, to the association of the Royal Academy. He had exhibited there in the previous year 'St. Francis preaching to the Birds.' He was admitted an associate of the Water-colour Society in the following March. After the appearance of 'Convocation' in the summer of 1878 he was elected a full member of the Academy. His diploma work, 'Science is Measurement,' is one of his finest achievements. In 1883 he was elected a full member of the Royal Water-colour Society. The chief of his later works are 'The Ornitho-

logist,' 1873; 'Jolly Post Boys,' 1875; 'The Apothecary,' 1876; 'The Gentle Craft,' 1883; 'The Professor,' 1883; 'A Good Story,' 1885; 'The Hermit and Pelicans,' 1888; 'News in the Village,' 1889; 'An Odd Volume,' 1894. In 1889 and again in 1890 he delighted the art-loving world with exhibitions of birds at the rooms of the Fine Art Society in Bond Street; but it is not only on these that his reputation depends. The best of the subject-pieces are equally good of their kind. All his oil paintings are in pure colour, and their freshness of hue shows at present no diminution. His land and sea scapes in water-colours also have notable serenity and breadth. His favoured resort was the Suffolk coast, and he painted many scenes round Southwold and Walberswick.

In 1896, on account of failing health, he joined the 'retired' Academicians. He died at St. Edmund's Terrace, Primrose Hill, on 9 Jan. 1898, and was buried in Hampstead cemetery. He was twice married: first, in 1850, to Helen Dryedale; and secondly, in 1893, to Mary Harriet Kempe.

A somewhat rambling autobiography which Marks wrote in his latest years appeared after his death, under the title 'Pen and Pencil Sketches,' 2 vols. 1894. His portrait was frequently painted. A half-length showing the profile painted by Mr. Onless may be considered the best. Another portrait was by Calderon. A water-colour drawing by Mr. Harkomer, done at one sitting, is exact as a likeness and splendidly drawn.

[Marks's Pen and Pencil Sketches, 1894, 2 vols.; Times, 11 and 14 Jan. 1898; Life and Letters of Frederick Walker, by Marks's nephew, John George Marks, 1898; private information.]

E. R.

MARRYAT, FLORENCE, successively Mrs. Oxborn and Mrs. Lean (1838-1899), novelist, born at Brighton on 9 July 1838, was sixth daughter and tenth child of Captain Frederick Marryat [q. v.] and his wife Catherine, daughter of Sir Stephen Shairp of Houston, Linlithgowshire. She was educated at home, and was always a great reader. On 13 June 1854, at the age of sixteen, she married at Penang T. Ross Church, afterwards colonel in the Madras staff corps, with whom she travelled over nearly the whole of India. She had by him eight children. She outlived him, and in 1890 married, as her second husband, Colonel Francois Lean of the royal marine light infantry.

Her first novel, 'Lois's Conflict,' written to distract her mind in the intervals of nursing her children with scarlet fever, appeared in 1865. Between that date and this

year of her death she published some ninety novels, many of which, notwithstanding their mediocre character, were translated into German, French, Swedish, Flemish, and Russian, and became popular in America. From 1872 to 1876 she edited the monthly periodical called 'London Society.'

In 1872 she published in two volumes the 'Life and Letters of Captain Marryat;' it does not present a complete portrait of her father; the scanty material is supplemented by too many trifling details. In the latter years of her life she was much attracted to spiritualism. Although a Roman catholic, she received permission from her director, Father Dalgairns of the Brompton oratory, to pursue researches of the kind in the cause of science. 'There is no Death,' published in 1891, gives a detailed account of the various media with whom she came in contact, and of the séances she attended. Although it bears ovident marks of the author's sincerity, it is difficult to believe that a large element of fiction does not enter into the volume. Other books dealing with the subject are 'The Risen Dead' (1893) and 'The Spirit World' (1894). 'Tom Tiddler's Ground,' a book of travel (1886), is an irresponsible account of America.

A woman of varied accomplishments, she added to the rôles of author and novelist those of playwright, comedy actress, operatic singer, giver of lectures and entertainments, and manager of a school of journalism. She acted in a drama of her own, entitled 'Her World,' produced in London in 1881. She died at St. John's Wood, London, on 27 Oct. 1899.

[Man and Women of the Time, 1899; Alliance's Dict., Suppl. ii. 983; Athenæum, 4 Nov. 1899; Times, 28 Oct. 1899.] E. L.

MARSHALL, ARTHUR MILNES (1852-1893), naturalist, born at Birmingham on 8 June 1852, was the third son of William P. Marshall, for many years secretary of the Institution of Civil Engineers and himself an enthusiastic naturalist. In 1870, while still at school, he graduated B.A. in the London University, and in the following year entered St. John's College, Cambridge, to read for the natural science tripos. At that time the school of biology was just arising. Francis Balfour [q. v.] had given it a great impetus, and Marshall was one of the first to take advantage of this change. In 1874 he came out senior in his tripos, and after graduating B.A. was appointed in the early part of 1875 by the Cambridge University to their table at the now zoological station at Naples. In the summer of the

same year Marshall returned to Cambridge, and during the October term he joined Balfour in giving a course of lectures and laboratory work in zoology.

Marshall's next step was to qualify himself for a medical career. In 1877 he won an open science scholarship at St. Bartholomew's hospital, and in the same year he passed the M.B. examination at Cambridge, obtained the London degree of D.Sc., and was elected to a fellowship at St. John's College. These successes were followed by his appointment, in 1879, at the early age of twenty-seven, to the newly established professorship of zoology at Owens College, Manchester, and Marshall soon became known for his wonderful skill in teaching and his talent for organisation. His insight into what had to be done—whether it were a research on some zoological problem or the reconstruction of a department of study—was only equalled by the rapid and skilful way in which he accomplished this end in view.

In zoological science Marshall's name is intimately connected with important discovery in embryology. At the time of his appointment to the chair at Owens College he was already known as the author of important memoirs on the origin and development of the nervous system in the higher animals; and after his election Marshall continued, both by his own contributions and in conjunction with his pupils, to influence the work and views of fellow-naturalists. Between 1878 and 1882 Marshall published 'The Development of the Cranial Nerves in the Chick,' 1878; 'The Morphology of the Vertebrate Olfactory Organ,' 1879; 'Observations on the Cranial Nerves of Scyllium,' 1881 (in conjunction with W. Baldwin Spencer); 'On the Head-cavities and associated Nerves of Elasmobranchs,' 1881. These papers appeared in the 'Quarterly Journal of Microscopical Science,' and in 1882 Marshall published a memoir on 'The Segmental Value of the Cranial Nerves' in the 'Journal of Anatomy and Physiology.' The importance and originality of these solid contributions to knowledge were widely recognised, and, together with his later researches upon the anatomy of Pannatulid corals, they form Marshall's most important contributions to zoology.

Marshall's lasting work, however, was his development of zoological teaching and his organisation of the courses of biological study at the Victoria University. As a teacher Marshall excelled. He was clear, accurate, enthusiastic, and keenly alive to the difficulties of those who approach zoological

problems for the first time. By forcible and often picturesque language he would point out where the trouble lay and how to overcome it. The lucidity, thoroughness, and accuracy of Marshall's teaching may to some extent be estimated by a study of his three text-books, 'The Frog' (1882, 7th edit. 1900), 'Practical Zoology' (in conjunction with Dr. C. Herbert Hurst) (1887, 5th edit. 1899), and 'Vertebrate Embryology' (1893). Some idea of his clear and logical style of delivery as a lecturer may be gained from his 'Biological Essays and Addresses' (1894), and 'The Darwinian Theory' (1894). The way in which he embodied the point at issue in some happy phrase made an ineffaceable impression upon his audience. Thus the theory that animals recapitulate in their own development the ancestry of the race will never be forgotten by those who heard it compressed into the pregnant phrase, 'They climb up their genealogical tree.'

Perhaps Marshall's greatest distinction was his capacity for organisation. As secretary, and subsequently as chairman, of the board of studies, Marshall rendered most valuable services in the founding and administration of the Victoria University. The correlation of the different sciences in the Faculty of Science is largely due to his labours. He was also secretary of the extension movement initiated by the university, and gained for it the success which invariably attended any organising work that he undertook.

Marshall was a man of great and tireless energy, and his attractive personality rendered him very popular with his friends, colleagues, and students. He was an excellent gymnast, and kept himself in training by constant practice. His chief recreation was mountain climbing. Though he was dissuaded by the untimely death of his friend Francis Balfour from beginning to climb till he was thirty, Marshall subsequently spent part of almost each long vacation in climbing in Tyrol, Switzerland, or on the Mont Blanc chain; and he frequently passed the Easter and Christmas vacations on the mountains of Wales and of the English lake district. He was always a careful climber, and had acquired considerable experience of rock-work. On 31 Dec. 1893, while he was engaged with a party of friends in photographing the rocks of Deep Ghyll on Soafell, a rock gave way beneath him, and falling backwards he was killed instantaneously. His death could not be attributed to rashness; it was the result of one of those accidents which cannot be eliminated from the sport of mountaineering.

A crose cut on the rocks below Lord's Rake marks the spot where his body fell.

Marshall graduated M.A. in 1878 and M.D. in 1882. He was elected a fellow of the Royal Society in 1885, and served on its council 1891-2. He was president of section D at the meeting of the British Association at Leeds in 1890, and gave one of the popular discourses before the British Association at the Edinburgh meeting in 1892. He was for many years president of the Manchester Microscopical Society. A list of his chief memoirs is given in 'The Owens College, Manchester,' 1900, pp. 210, 211.

[Obituary notices in Proceedings of the Royal Society, 1894-5, vol. lvii. pp. iii-v, and Nature, 11 Jan. 1894, p. 260; information kindly supplied by Prof. H. B. Dixon, F.R.S., and personal knowledge.] F. W. G.

MARSHALL, BENJAMIN (1787?-1835), animal painter, born about 1787, exhibited thirteen pictures, chiefly portraits of racehorses and their owners, at the Royal Academy, 1801-12 and 1818-9. His portraits of sporting characters included those of J. G. Shaddick, 1806, and Daniel Lambert, 1807. Two pictures of fighting cocks, exhibited in 1812, were engraved in mezzotint by Charles Turner in the same year with the titles of 'The Cock in Feather' and 'The Trimm'd Cock.' Other engraved pictures are 'Hap-hazard' and 'Muly Moloch,' racehorses belonging to the Earl of Darlington, engraved as a pair by W. and G. Cooke, 1805, from pictures at Raby Castle; 'The Earl of Darlington and his Foxhounds,' by T. Dean, 1805, and the companion subject, 'Francis Dukinfield Astley and his Harriers,' by R. Woodman, 1809; 'Sir Teddy,' mezzotint by Charles Turner, 1808; 'Sancho,' a pointer belonging to Sir John Shelley, etched by Charles Turner in 1808; and 'Diamond,' a racehorse, engraved in mezzotint by W. Barnard in 1811.

Sixty paintings of sportsmen, horses, and dogs by Marshall were engraved by John Scott for Wheble's 'Sporting Magazine,' vols. vii-lxxxi, and eight types of horses by Marshall, also engraved by Scott, appeared in 'The Sportsman's Repository,' 1820. Marshall's exhibited and engraved works represent but a small proportion of the commissions which he carried out for patrons of the turf and masters of hounds throughout the country. A number of his pictures of horses are in the collection of Sir Walter Gilbey. About 1800-10 Marshall was living at 23 Beaumont Street, Marylebone. He had various later addresses in London, but was often described as 'Marshall of Newmarket,' where he chiefly lived. He died in

the Hackney Road, at the age of sixty-eight, on 24 July 1835.

[Royal Academy Catalogues; Gent. Mag. 1835, ii. 331; Banks's Index of Engravings in the Sporting Magazine, pp. 17, 109; Rodgrave's Dict. of Artists.] O. D.

MARSHALL, EMMA (1830-1899), novelist, youngest daughter of Simon Martin, a partner in Gurney's Norwich bank, who married, at St. Michael-at-Plea, Norwich, in 1809, Hannah (Ransome), a quakeress, was born at Northrepps Mill House, near Cromer, in 1830. The family soon removed to Norwich. Miss Martin has depicted her early childhood very faithfully in one of her first stories, 'The Dawn of Life' (1867). She was educated at a private school until the age of sixteen. The proximity of Norwich Cathedral and its precincts strongly influenced her subsequent line of thought. When as a girl she read Longfellow's 'Evangolino,' she was so much impressed with it that she wrote to the poet, and thus began a correspondence that lasted until his death. About 1849 she left Norwich with her mother to live at Olifton, Bristol, where acquaintance with Dr. Addington Symonds gave them a passport to the society of the place. In 1854 she married Hugh Graham Marshall, who was in the service of the West of England bank. The early years of her married life were spent at Wells, Exeter, and Gloucester; and Longfellow, in reference to the continual flitting from one cathedral town to another, called her 'Queen of Summer, temple-haunting Martlet.' There were three sons and four daughters of the marriage. She finally settled at Olifton, and began to write from a desire to amuse and instruct young people. Her first story, 'Happy Days at Fernbank,' was published in 1861. Between that date and her death she wrote over two hundred stories. This enormous production was stimulated by heavy losses in 1878, when the failure of the West of England bank not only swept away her husband's income and position, but involved him as a shareholder in certain liabilities. Those Mrs. Marshall cleared off with indefatigable courage. Of 'Life's Aftermath' (1876), perhaps the most popular of her novels, thirteen thousand copies have been issued. She had a special faculty for turning to account dim legend or historical incident, and her books generally have some celebrated historical character for the central figure round whom the story is woven; in 'Under Salisbury Spiro' (1890) it is George Herbert, in 'Penhurst Castle' (1894) it is Sir Philip Sidney. Her last book, 'The Parson's Daughter,' was finished by her daughter Beatrice after her mother's death, and published

in 1899. All her tales have a high moral and religious tone. Many have been translated; several were included in the Tauchnitz Library. John Nichol and J. A. Symonds, among others, were warm in their praises of them. Canon Ainger, when advocating that a memorial, which ultimately took the form of a brass, with an inscription by him, should be placed in Bristol Cathedral, spoke of 'the high and pure quality of her literary work,' and declared that her stories 'have been the means of awakening and cultivating a taste for history and literature throughout the English-speaking world.'

Mrs. Marshall died on 4 May 1899 at Olifton, and was buried on the 9th in the cemetery of Long Ashton. Two portraits are included in 'Emma Marshall, a Biographical Sketch,' by her daughter, Beatrice Marshall, 1900.

[Memoir by Beatrice Marshall, 1900; Allibone's Dict. Suppl. ii. 1078-9; Western Daily Press, 5 and 10 May 1899; Bristol Times and Mirror, 5 May 1899.] E. L.

MARSHALL, WILLIAM CALDER (1813-1894), sculptor, born at Gilmour Place, Edinburgh, on 18 March 1813, was eldest son of William Marshall, goldsmith, and Annie Calder, his wife. Educated at the high school and university, he commenced his art studies at the Trustees' Academy in 1830, and four years later went to London, where he worked under Sir Francis Legatt Chantrey [q. v.] and Edward Hodges Baily [q. v.], and in the schools of the Royal Academy, where he gained a silver medal in 1835. He then spent two years (1836-8) in Rome, and in 1839 he settled permanently in London. In 1835, two years after he had exhibited first in the Royal Scottish Academy, he exhibited in London, and in 1814 he was elected an associate of the Royal Academy, and in 1852 an academician. He had been elected A.R.S.A. in 1840, but resigning when he received the London honour, he was made an honorary member at a later date. In recognition of his services as a British commissioner at the Paris Exposition of 1878 he was appointed chevalier of the Legion of Honour. He retired from the Royal Academy in 1890, exhibited there for the last time in the following year, and, having completed his last work in 1893, died in London on 16 June 1894.

He was a hard worker, and during his long career produced a great number of works. These were principally poetic and ideal in intention, and were very popular. He executed a number of commissions for the Art Union of London, and engravings of many of his sculptures are to be found in

the 'Art Journal.' Classic and mythological subjects, such as 'Thetis and Achilles,' or 'Ajax praying for Light,' and 'Zephyr and Aurora,' or 'Hebe,' and motives derived from the Bible or Shakespeare, were favourites with him. These often took the form of groups, and one of his best-known pieces is the group symbolic of 'Agriculture' on the Albert Memorial in Hyde Park. In 1887 he was awarded the first premium (700*l.*) in the competition for the Wellington Memorial, but fortunately the design of Alfred Stevens [q.v.] was afterwards adopted. He also produced a number of memorial statues, of which the marbles of Lords Clarendon and Somers, in the houses of parliament at Westminster, and of Sir George Grey, in Cape Town, and the bronze of Sir Robert Peel, in Manchester, may be named.

His style was of its time, and pseudo-classicism in his hands was informed by no richness of fancy or real power of technique. A certain elegance of design and type and conscientiousness of execution are the greatest merits his art possesses. An exhibition of his works was held in his studio in Ebury Street, London, after his death; and his executors presented the original models of his more important pieces to museums and galleries throughout the kingdom.

He was twice married: first, in 1842, to Marianne, daughter of Dr. Lawrie, Edinburgh, who died the same year; and secondly, in 1845, to Margaret, daughter of Joseph Calder of Burnhouse, Mid-Caldor, by whom he had four sons and two daughters.

J. L. O.

MARTIN, LADY (1816-1898), actress. [See FAVORIT, HOLLDN.]

MARTIN, SIR WILLIAM FANSHAWE, fourth baronet (1801-1895), admiral, son of Sir Thomas Byam Martin [q.v.], was born on 5 Dec. 1801. He entered the navy in June 1818, served under his father's flag off the Scheldt, and in January 1816 was appointed to the *Alceste*, then going to China with Lord Amherst [see MAXWELL, SIR MURRAY; MACLEOD, JOHN]. After his return he was in the Prince Regent yacht with Sir Edward Hamilton [q.v.], and in the Glasgow frigate in the Mediterranean with Captain Anthony Maitland. On 15 Dec. 1820 he was promoted to be lieutenant of the *Forte*, and a few months later was moved into the *Aurora*, going out to the South American station, where, on 8 Feb. 1823, he was promoted to be commander of the *Fly* sloop.

In her he rendered valuable assistance to the British merchants at Callao in a time of civil war, and was ever afterwards best known in the navy as 'Fly' Martin. He attained post rank on 5 June 1824; from 1826 to 1831 he commanded the *Samarang*, a 28-gun frigate, in the Mediterranean; in 1844 and 1845 he was flag-captain at Sheerness, and from 1849 to 1852 was commodore in command of the Lisbon squadron. On 28 May 1853 he was promoted to the rank of rear-admiral. From 1853 till his promotion to be vice-admiral on 13 Feb. 1858, he was superintendent of Portsmouth dockyard, and in 1858 he was one of the lords of the admiralty. In 1860 he was appointed to the command of the Mediterranean station, with his flag in the *Marlborough*. He held this for three years, and in that time effected a reform almost amounting to a revolution in the methods of naval discipline. Many of the ships were manned by 'bounty' men and were in a state bordering on mutiny. Even the flag-ship's crew was far from being a good one. But by tact, by care, by unremitting attention, and by judicious severity he brought the fleet into that admirable order which is still referred to in the navy as one of the glories of the past. When the commander-in-chief gave an order, he not only meant it to be obeyed but saw that it was obeyed, and the insistence was not always agreeable to the respective captains and commanders. He was thus by no means generally loved by officers of the higher ranks; but if not loved, he was feared, and the work was done. On 28 June 1861 Martin was made K.C.B., and on 14 Nov. 1863 became an admiral; on the death of his cousin, Sir Henry Martin, third baronet he succeeded to the baronetcy on 4 Dec. 1863; and from 1866 to 1869 was commander-in-chief at Plymouth. In April 1870 he was put on the retired list in accordance with the scheme brought out by Hugh Culling Eardley Childers [q.v. Suppl.] On 24 May 1873 he was made a G.C.B., and in September 1878 he was appointed rear-admiral of the United Kingdom. During his later years he resided principally at Upton Grey, near Winchester, and there he died on 24 March 1895.

Martin was twice married: first, in 1826, to Anne Best, daughter of the first Lord Wynford; she died in 1836, having had two sons who died young, and two daughters. Secondly, to Sophia Elizabeth, daughter of Robert Hurt of Wirksworth, by whom he had issue, besides five daughters, one son, Richard Byam Martin, who succeeded to the baronetcy. In 1879 Martin published a small pamphlet, 'Cyprus as a Naval Station and

a Place of Arms,' which, as an exposition of Mediterranean strategy from one of the great masters of the art, is deserving of very close attention.

J. K. L.

MARTINEAU, JAMES (1805-1900), unitarian divine, youngest son and seventh child of Thomas Martineau (d. 21 June 1826), candle and bombazine manufacturer, by his wife Elizabeth (d. 26 Aug. 1818, aged 78), eldest daughter of Robert Rankin, sugar refiner, of Newcastle-on-Tyne, was born in Magdalen Street, Norwich, on 21 April 1806. His father, of Huguenot lineage, had a maternal descent from John Meadows or Meadowe [q. v.], the ejected puritan, which connected him with the family of John Taylor (1694-1761) [q. v.], the hebraist (TAYLOR, *Suffolk Bartholomews*, 1840). His mother was a woman of great force of character and 'quickness of feeling' (Martineau's letter in *Daily News*, 30 Dec. 1881). His eldest brother, Thomas Martineau, M.D. (d. 3 June 1824, aged 20), was at the time of his early death reckoned the abbot of the family; but the personal charm of James was marked in boyhood. In 1816 he entered the Norwich grammar school, of which Edward Valpy [q. v.] became high master in that year. Among his schoolfellows were (Sir) James Brooke [q. v.], rájá of Saráwak, and George (Henry) Borrow [q. v.]. In after life Borrow would not meet Martineau, having been hoisted on his back to receive a well-earned birching (*Life of F. P. Cobbe*, 1894, ii. 117). Martineau, whose taste was for mathematics, did not proceed to the highest form, but was well grounded in classics, and on his eightieth birthday wrote some very good Latin verses in reply to his old friend Thomas Hornblower Gill, the hymn-writer (*Inquirer*, 20 Jan. 1900, p. 12). He was not 'physically robust,' and 'the tyranny of a large public school' did not suit him (letter in *Daily News*, ut sup.). At the suggestion of his sister, Harriet Martineau [q. v.], he was sent (1819) to the boarding-school of Lant Carpenter [q. v.] at Bristol; to Carpenter's influence in the discipline of character he pays the highest tributes (*Memoirs of Lant Carpenter*, 1842, p. 342; *Life of Mary Carpenter*, 1879, p. 9; cf. *Unitarian Magazine*, 1834, p. 186). Leaving school in 1821, he was apprenticed to Samuel Fox at Derby, with a view to becoming a civil engineer; he boarded with Edward Higginson (see under HIGGINSON, EDWARD), unitarian mini-

ster at Dorby, whose eldest daughter he afterwards married. The purely mechanical work of the machine-room did not satisfy him. The premature death (31 Jan. 1821, aged 29) of Henry Turner, unitarian minister at Nottingham (son of William Turner, 1761-1859; see under TURNER, WILLIAM, 1714-1794), who had married (1819) Martineau's cousin, Catharine Rankin (d. 1 May 1894, aged 97), produced his 'conversion' (*Proceedings* in connection with his retirement, 1885, p. 28), and decided him for the ministry.

In September 1822 he entered Manchester College, York, as a divinity student under Charles Wellbeloved [q. v.]. Classics and history were taught by John Kenrick [q. v.], a scholar of distinction. Philosophy fell to William Turner (1788-1853) [see under TURNER, WILLIAM, 1714-1794], who taught the Hartleyan determinism, then in vogue with unitarians, but felt its difficulties (*Christian Reformer*, 1854, p. 136). The first York student to adopt the libertarian view was William Mountford (1810-1883), author of 'Euthanasia' (1850), who broke with the Hartleyan philosophy while at York (1833-8). Martineau gained at York the highest honours (*Christian Life*, 23 June 1900, p. 302); his successful oration in 1825 bore the characteristic title 'The Necessity of cultivating the Imagination as a Regulator of the Devotional Feelings.' His father's death (1826) left on the family a burden of undischarged liabilities, all of which were paid in full. His mother's anxiety for his health, injured by 'intemperate study' (KENRICK), led her to propose his removal to Göttingen; Kenrick thought the Göttingen system of lecturing for a session on 'one evangelist, one prophet,' inferior to Wellbeloved's plan of going through the Old or New Testament in a year (unpublished letter of Kenrick, 16 April 1826). Leaving York in 1827 he preached (4 July) one of the annual sermons of the Eastern Unitarian Association at Halesworth, Suffolk, the other preacher being Michael Maurice, father of (John) Frederick Donison Maurice [q. v.]

In 1827 he became, for a year, assistant and virtually *locum tenens* in Lant Carpenter's school at Bristol. Next year he was called to Dublin as co-pastor (assistant and successor) to his aged kinsman, Philip Taylor [see under TAYLOR, JOHN, 1694-1761], and colleague with Joseph Hutton (d. 7 Feb. 1856, aged 90), grandfather of Richard Holt Hutton [q. v. Suppl.], in the congregation of Eustace Street, founded by Samuel Wintor, D.D. [q. v.], on independent principles, but latterly known as proshyterian. It was

connected with the 'southern association,' known (from 1809) as the 'synod of Munster' (*Facts in Reply to . . . George Mathews*, 1842, p. 4). By ministers of this body Martineau was ordained on 26 Oct. 1828; the ordination service, first used at Waterford on 2 Aug. 1826 (*Christian Moderator*, September 1820, p. 184) at the ordination of William M'Cance (d. 26 June 1882), was published (1829) with a valuable historical appendix [see ARMSTRONG, JAMES, D.D.] Martineau's confession of faith reflects the theology of Carpenter rather than that of Wallbøelved, and on the person of Christ carefully selects what was common ground with Arianism, but is remarkable at that date for its silence on the inerrancy and inspiration of scripture and the whole question of miracles. He bought a house, married, and took pupils. He was a chief promoter and the first secretary of the 'Irish Unitarian Christian Society,' founded 17 March 1830, and still in being. For his congregation he compiled a hymn-book (Dublin, 1831, 12mo); it was only in local and temporary use.

His Dublin ministry was highly appreciated, though 'an expression implying the simple humanity of Christ' lost him 'the most attached friend' among his hearers (memorial preface to THOMAS A *Spiritual Faith*, 1896, p. viii). By the death of Philip Taylor (27 Sept. 1831) he succeeded to a share of *regnum domini*, but resigned (October 1831) rather than benefit by a 'religious monopoly,' though willing to retain office without this increase of income. Among his reasons (letter in *Monthly Repository*, 1831, p. 882) he specifies the opinion that the *domum*, by endowing presbyterianism, 'stifles our predilection for what many of us believe to be the better system, that of the independents.' His congregation accepted the resignation (13 Nov.) by a majority of one, and made him a handsome presentation. He was invited to his colleague with John Grundy [q. v.] at Paradise Street chapel, Liverpool, and entered on his duties there on 1 July 1832. His salary was 200*l.*, and he continued to take pupils. One of them, his colleague's son, describes him at that period as 'benevolently ugly, if ugly at all, with his rough-cast features, wild upstanding black hair, low broad forehead, and swarthy complexion' (F. H. GRUNDY, *Pictures of the Past*, 1879, p. 45). In addition to private pupils, he had public classes on scientific subjects, e.g. a course of ten lectures (16 April-18 June 1833) on chemistry at the Mechanics' Institution, Slater Street.

By Grundy's resignation (1835) he became sole pastor. He never administered baptism, substituting a service of dedication. In 1836 he took a leading part in founding the Liverpool domestic mission. An indication of his local influence is afforded by the circumstance that in 1837 the Wesleyan conference was urged to make special appointments at Liverpool, a reason assigned being the presence there of 'the brilliant Martineau' (GRUNDY, *Side Lights on the Conflicts of Methodism*, 1899, p. 247).

His 'Rationale of Religious Enquiry' (1836, 12mo) had made him widely known as a writer of exceptional power; in this volume of lectures he denied the Christian name to unbelievers in the recorded miracles of Christ, a judgment defended in the second edition (same year), and recalled in the third (1845), under the influence of Joseph Blanco White [q. v.] The impression of his force and originality was deepened by the part he took (1839) in the Liverpool unitarian controversy, and not least by the preliminary correspondence with thirteen local Anglican divines, headed by Fielding Ould (*Unitarianism Defended*, 1839, 8vo; *Theological Review*, January 1877, p. 85). Channing wrote of his lectures as 'among the noblest efforts of our times' (letter of 22 June 1840 in *Memoir*, 1848, ii. 399). Martineau's own reference (*Memorial Preface*, ut sup. p. xiii) to his attitude in this controversy as contrasted with that of John Hamilton Thom [q. v.] seems due to defective memory. In 1840 he published a hymn-book ('Hymns for the Christian Church and Home') which rapidly took the place of that associated with the name of Andrew Kippis, D.D. [q. v.] It is still in use, being but partially superseded by Martineau's later collection, 'Hymns of Praise and Prayer' (1878).

Retaining his congregational charge, he became (October 1840) professor of mental and moral philosophy and political economy in his *alma mater*, removed back from York to Manchester, and known as Manchester New College (*M.N.C. Introductory Lectures*, 1841; *Essays, Reviews, and Addresses*, 1891, iv. 3). In the syllabus of his lectures John Stuart Mill [q. v.] 'noticed the change' which was beginning to affect his philosophical views (*Types of Ethical Theory*, 1889, p. xii). Channing had noted it earlier (letter of 29 Nov. 1839, in *Memoir*, ut sup. p. 488).

The fruit of his Paradise Street ministry was published in two volumes of sermons, 'Endeavours after the Christian Life' (1st ser. 1843, 12mo; 2nd ser. 1847, 12mo;

often reprinted), unsurpassed for beauty and charm by his later writings, and realising his ideal that a sermon should be a 'lyric' utterance. In a remarkable sermon, 'The Bible and the Child' (July 1845, reprinted, *Essays*, ut sup. iv. 389), he first distinctly broke with the biblical conservatism of his denomination. Pending the removal of his congregation to a more modern structure, he was set free from 16 July 1848 till the opening (18 Oct. 1849) of the new church in Hope Street, his pastoral duties being undertaken by Joseph Henry Hutton (1822-1899), elder brother of R. H. Hutton; one of the few occasions on which the latter occupied a pulpit was at Paradise Street during this interval.

Martineau spent the fifteen months with his family in Germany, taking a winter's study at Berlin. R. H. Hutton, who had been his pupil in Manchester, read Plato and Hegel with him (*Proceedings*, ut sup. p. 88). His studies were mainly directed by Trendelenburg. He regarded this break as a 'second education,' and 'a new intellectual birth,' involving the complete 'surrender of determinism' (*Types*, ut sup. p. xiii). His earlier standpoint had been determinist and utilitarian (cf. his article on Bentham's 'Deontology,' *Monthly Repository*, Sept. 1834). He wrote for the 'London Review' (1836) and for the 'London and Westminster Review' from the amalgamation (1836) till January 1851. From 1838 he wrote for the 'Christian Teacher,' then edited by J. H. Thom, whom he joined, with John James Tayler [q.v.] and Charles Wicksteed (1810-86), in editing the 'Prospective Review' (1845-54), of which John Kentish [q.v.] said that its title must have been suggested by 'the Irish member of the firm,' while John Gooch Roberts [q.v.], alluding to its motto 'Respecto, Aspice, Prospice,' described it as 'a magazine of allspice.' To this quarterly, and to its successor the 'National Review' (1855-1864), edited by R. H. Hutton and Walter Bagot, Martineau, who was much consulted by the latter, contributed some of his best critical work; later he wrote occasionally for the 'Theological Review,' edited by Charles Beard [q.v. Suppl.] His drastic treatment ('Mosmeric Atheism' in *Prospective*, No. xxvi, May 1851) of 'Letters on the Laws of Man's Nature and Development' (January 1851), by Henry George Atkinson and Harriet Martineau (who edited the volume), was never forgiven by the latter. This masterpiece of satire, coming after a coolness of some years' standing, due to a refusal to destroy his sister's letters to him-

self, produced an alienation which Martineau made fruitless efforts to remove (cf. *Daily News*, 30 Dec. 1884, 2 and 6 Jan. 1885).

For three and a half years after the removal (7 Feb. 1851-Oct. 1857) of Manchester New College to University Hall, Gordon Square, London, Martineau travelled to town once a fortnight in the session to deliver his lectures, till in 1857 he left Liverpool to share with Tayler the theological teaching of the college, as professor of mental, moral, and religious philosophy. This arrangement was not effected without strenuous protest (led by Robert Brook Aspland [q.v.], who resigned the secretaryship, and joined by Martineau's brothers-in-law, Samuel Bache [q.v.] and Edward Higginson [q.v.]) against confining the teaching to one school of thought. He returned to the pulpit in 1859, becoming colleague (20 Feb.) with Tayler in the charge of Little Portland Street chapel, left vacant by the death of Edward Tagart [q.v.]; from 1860 he was in sole charge. Of his London ministry there are sketches by Frances Power Cobbe (*Life*, 1804, ii. 145; *Inquirer*, 20 Jan. 1900, p. 11). From 1858 to 1868 he was a trustee of Dr. Williams's foundations. In his letter (6 Aug. 1859) to Simon Frederick Macdonald (1822-1862) on 'the unitarian position,' followed by a second letter 'Church-Life? or Sect-Life?' (14 Oct. 1859), 'in reply to the critics of the first' (both reprinted in *Essays*, ut sup. ii. 371), he pleaded for restricting unitarian profession to individuals and societies, leaving congregations unpledged to distinctive doctrine.

At midsummer 1866 John Hoppus [q.v.] vacated the chair of mental philosophy and logic in University College, London. Martineau's candidature was unsuccessful, mainly through the opposition of George Groto [q.v.], who raised the anti-clerical cry. In protest against this limitation, Augustus do Morgan [q.v.] resigned the mathematical chair, and William Ballantyne Hodgson [q.v.] resigned his seat on the college council. Meanwhile Martineau was busy with denominational controversies, issuing in the formation of a 'Free Christian union,' which celebrated its first anniversary (1 June 1869) with sermons by Athanasius Coquerel fils and Charles Kegan Paul, and lasted a couple of years. He was a member of the 'Metaphysical Society' (2 June 1869-12 May 1880), which owed its inception to Tennyson. In 1869 he became principal of Manchester New College, and in 1872, under medical advice, he gave up preaching; his friends presented him with inscribed plate and 5,800*l.* In the same year he received

the LL.D. diploma from Harvard. The most striking sermons of his London ministry were published in 'Hours of Thought on Sacred Things' (1st ser. 1876, 8vo; 2nd ser. 1879, 8vo).

His college address (6 Oct. 1874), criticising the address (19 Aug.) of John Tyndall [q. v.] to the British Association at Belfast, led to a controversy (1875-6) with Tyndall, who wrote in the 'Fortnightly Review,' Martineau replying in the 'Contemporary.' The brilliance of his papers (reprinted, *Essays*, ut sup. iv. 163) culminating in his 'Ideal Substitutes for God' (1879), won him wide repute as a champion of theism. He received the diplomas of S.Th.D. Leyden (1876), D.D. Edinburgh (1884), D.C.L. Oxon. (20 June 1888), Litt.D. Dublin (1892). In 1882 appeared his 'Study of Spinoza' (2nd ed. 1883, 8vo), in which he maintained that Spinoza's philosophy does not reach the point of theism. His college work had been lightened by the appointment (1876) of Charles Barnes Upton as joint professor of philosophy; at Michaelmas 1885 he resigned the principalship, having passed the age of eighty. In 1886-7 he was president of the college. On his eighty-third birthday an address was presented to him bearing names of the stamp of Tennyson, Browning, Renan, Kuonen, Jowett, and Sunday (the text, with 649 signatures, is in Knight's 'Inter Amicos,' 1901, pp. 89 sq.).

Much of Martineau's college work was incorporated in his later publications, on which his reputation as a philosophic thinker will mainly rest. His 'Types of Ethical Theory' (Oxford, 1885, 2 vols. 8vo; 3rd ed. 1889, 8vo) has been used as a text-book at Oxford and Calcutta; portions of an analysis, based on lectures by Henry Stephens, were published at Calcutta in 1890 (see also *The Law of Duty: a Suggested Moral Text-book, based on the Ethical and Religious Writings of Dr. J. Martineau*, Madras, 1889, 8vo, by T. E. SLATOR). His 'Way out of the Trinitarian Controversy' (a sermon of earlier date, first printed, *Christian Reformer*, 1886; reprinted, *Essays*, ut sup. ii. 525) is based on the theory that the real object of worship, in both creeds, is the 'Second Person' under different names. Of his 'Study of Religion' (Oxford, 1888, 2 vols. 8vo; 1889, 8vo) there is an 'Analysis' (1900) by Richard Acland Armstrong. The brilliant elaboration of the 'design argument' marks the recurrence of his thought to a position which he had long disparaged, if not discarded; it was resumed with modifications made necessary by the Darwinian doctrine of evolution. To save free-will, Martineau (after Socinus) excludes

the divine foreknowledge of contingencies; but as in his view all the lines of action, between which choice lies, lead to the same goal, free-will 'only varying the track' (ii. 270), the result seems indistinguishable from fatalism. In 1888 he introduced at Leeds a comprehensive plan of organisation and sustentation for the unitarian body, under the character of 'English presbyterians.' The scheme, somewhat resembling that of James Yates (1789-1871) [q. v.], was not adopted, though certain of its suggestions have borne fruit. On the formation (14 May 1889) of a 'provincial assembly' by London unitarians, Martineau resisted the proposal of Robert Spears [q. v. Suppl.] to make the term 'Christian' a part of its title. The latest phases of his theological teaching must be sought in 'The Seat of Authority in Religion' (1890, 8vo; 1892, 8vo), in which more space is given to the polemic than to the reconstructive side of his subject; hence it has been described as 'the unseating of authorities.' Of his New Testament criticism it has been remarked as 'strange, that whenever our Lord's language is at issue with Dr. Martineau's philosophy, the evangelists have been bad reporters.' He lectured at University Hall, Gordon Square (January-March 1891), on the 'Gospel of Luke;' and (1893) on the newly discovered 'Gospel according to Peter.' He had opposed the removal (1889) of Manchester New College to Oxford, but took part in the opening of the new buildings, conducting the communion service (19 Oct. 1893) in the chapel of Manchester College.

Till a few months before the close of his long life he showed no symptom of failing faculty, unless a slight deafness be reckoned and some defects of memory. Within a year of his death an old friend calling to see him found that 'the venerable youth had gone to a popular concert.' Always abstemious and never using tobacco, he disused alcohol in the period 1842-9, and gave it up in the sixties (Russett, *Study and Stimulants*, 1883, p. 97); he had previously been troubled with hereditary gout. Till 1898 he spent the summer and autumn at his highland residence, The Polchar, Aviemore, Inverness-shire, where he proved himself an experienced mountaineer. His strenuous character and æsthetic sense marked every detail of his work; he was an excellent man of business, and his most ordinary correspondence had distinction and a high finish. Old age gave grandeur to his countenance, and a refined gentleness to his demeanour. In his conversation as in his letters there was a rare combination of dignified modesty and

courtly grace. His spoken addresses were simpler in style than most of his literary works, which, when richly wrought, reminded his critics of a kaleidoscope (R. B. Aspland's phrase; see also *Life of F. P. Cobbe*, ut sup. p. 146). The delivery of his sermons was vivid and even dramatic, though without action; his lectures were mechanically dictated. Both sermons and lectures were written in Doddridge's shorthand. His politics were of the old whig school; he was against disestablishment, desiring a comprehensive national church; he took the side of the southern states in the American war; in Irish politics he was strongly averse to home rule; he was opposed to free education and advocated a common religious teaching in board schools. An outside estimate of his services to speculative theology, by P. T. Forayth, D.D., is in the 'London Quarterly,' April 1900, p. 214 (cf. R. H. Hutton in *Proceedings*, ut sup. pp. 36-40). To fix the ultimate value of his contributions to philosophy no attempt can be made here; as an intellectual and moral force, he impressed himself on his generation both by his writings and by his personality.

He died at 85 Gordon Square on 11 Jan. 1900 in his ninety-fifth year, and was buried at Highgate cemetery on 16 Jan. He married (18 Dec. 1828) Helen (d. 9 Nov. 1877, aged 73), eldest daughter of Edward Higginson, and had issue three sons and five daughters, of whom one son and three daughters survived him. His portrait was painted by C. Agar (1816, engraved 1847); by G. F. Watts (1874, engraved 1874), not a very successful likeness (cf. *Life of F. P. Cobbe*, 1894, ii. 94); by Mr. Alfred Emslie (1888, reproduced in photogravure). A seated statue by Mr. H. R. Hope Pinker (1898) is in the library of Manchester College, Oxford; and there are at least two earlier busts executed during his Liverpool ministry, and a terra-cotta bust (1877) by James Mullins.

His chief publications are enumerated above. To those may be added, besides many single sermons and addresses: 1. 'Home Prayers, with Two Services for Public Worship,' 1801, 12mo (the services first published 1862). 2. 'Faith . . . Self-Surrender,' 1897, 12mo (four sermons). Three collections of his papers were published in America: 'Miscellanies,' Boston, U.S.A., 1852, 8vo (edited by Thomas Starr King); 'Studies of Christianity,' 1858, 12mo (edited by William Rounsvillo Alger; includes his first printed sermon, 1830); 'Essays, Philosophical and Theological,' Boston, Mass., 1866 (includes, in error, an article on

'Revelation' by R. H. Hutton, New York, 1879, 8vo.) His own selection was published as 'Essays, Reviews, and Addresses,' 1890-1, 4 vols. 8vo. He prefixed a valuable introduction to E. P. Hall's translation of Bonet-Maury's 'Early Sources of Unitarian Christianity,' 1881, and edited, with introduction, second editions of works by J. J. Tayler, and posthumous sermons by J. H. Thom. Two original hymns are in his collection of 1810, another is in his collection of 1873. His 'Religion as affected by modern Materialism' (1874) was translated into German by Dr. Adolf Sydow in 1878; four of his sermons were translated into Dutch, 'Gedachten,' Leyden, 1893, 8vo.

RUSSELL MARTINEAU (1881-1898), orientalist, eldest son of the above, was born in Dublin on 18 Jan. 1881. Educated at Heidelberg, University College, London, and Berlin, he graduated B.A. London, 1860, M.A. (classics) London, 1864. Having acted as domestic tutor, he was appointed (1867) on the staff of the British Museum library, and rose by successive promotions to the post of assistant-keeper (1884), which he held till superannuated in 1896. His department (though oriental studies were his forte) was early printing; he improved this collection of Luther's works (first editions), catalogued that section, and also this article 'Bible.' In 1867 he also became, on Ewald's recommendation, lecturer on Hebrew language and literature in Manchester New College, London, was promoted to be professor in 1869, and resigned in 1874. His all-round scholarship was of exceptional thoroughness, and he excelled as a painstaking teacher. He was a Milbert trustee, and a trustee of Dr. Williams's foundations. His health suffered from an epileptic tendency. He died at 5 Eldon Road, Hampstead, on 14 Dec. 1898. He married (1801) Frances Bailey, but had no issue. He published: 1. 'A Short Dissertation on the True Pronunciation of the Divine Name,' 1809, 8vo. 2. 'The Roots of Christianity in Mossaism,' 1809, 8vo (address at Manchester New College). 3. 'Notes on the Pronunciation of English Vowels in the Seventeenth Century,' 1892, 8vo (Philological Society). 4. 'The Song of Songs,' 1892, 8vo; 'The Song of Songs again,' 1896, 8vo (reprinted from 'American Journal of Philology'). He translated Gregorovius's 'Corsica,' 1855, 8vo, and Goldziher's 'Mythology among the Hebrews,' 1877, 8vo; and edited the translation of a section of Ewald's 'History of Israel,' 1897, 2 vols. 8vo; last edition, 1893, 8vo. With his brother, Basil Martineau, and James Thornely Whitehead (1834-1898) he edited the mu-

sical edition (1870) of his father's 'Hymns of Praise and Prayer;' he published also some tunes and an anthem separately. He wrote for the 'Theological Review' and the 'Spectator,' and contributed to 'Bibliographica' (1895) and to Murray's 'Oxford Dictionary' (*Inquirer*, 24 Dec. 1898; *Christian Life*, 24 Dec. 1898).

[Life and Letters of Martineau by Principal Drummond and Professor Upton was published in 1902, and a study by J. E. Carpenter in 1905. See also Dublin Univ. Mag., April 1877 (with portrait), Cassell's National Portrait Gallery, No 78 (7 Nov. 1877, with memoir by Rev. Charles Wicksteed, on the basis of Martineau's autobiographical memoranda); Julian's Dict. of Hymnology, 1892, p. 715; *Inquirer*, 20 Jan. 1900 (special number; portrait), The Bookman, Feb. 1900 (portrait); Jackson's James Martineau, 1900 (two portraits); authorities cited above; personal recollection] A. G.

MASSIE, THOMAS LEEKE (1802-1898), admiral, was born at Oddington Hall, Cheshire, on 20 Oct. 1802. He entered the navy in October 1818 on board the *Rocheport*, flagship in the Mediterranean of Sir Thomas Francis Fremantle [q. v.] and later on of Sir Graham Moore [q. v.] In different ships he continued serving in the Mediterranean; was wrecked in the *Columbine* brig on the coast of the Morea, 25 Jan. 1824; was in the *Marlin* at the demonstration against Algiers [see NAALM, SIR HARRY BURKARD]; was frequently engaged in boat affairs with Greek pirates, and was in the *Asia* at Navarino on 20 Oct. 1827. For this he was rewarded with promotion to lieutenant on a death vacancy, 11 Nov. 1827. As a lieutenant he served mostly in the Channel, North Sea, and Lisbon station; was for three years on the South American station with Captain Robert Smart in the *Satellito*, and for two years in the Mediterranean as first lieutenant of the *Carysfort* with Henry Byam Martin. On 28 June 1838—the queen's coronation—he was made commander; and in 1839 was, with some others, sent out to Constantinople to assist in organising the Turkish navy. They were, however, recalled after about six months; and in March 1840 Massie was appointed (as second captain) to the *Thunderer* with Maurice Frederick Fitzhardinge Berkeley, afterwards Lord Fitzhardinge [q. v.] In the *Thunderer* he took part in the operations on the coast of Syria in the summer and autumn of 1840, culminating in the capture of Acre, for which he was promoted to be captain on 17 March 1841. In April 1849 he was appointed to the *Cleopatra*, which he commanded in the East Indies and China and

during the Burmese war. In September 1854 he commissioned the *Powerful*, which during the latter part of 1855 and 1856 was on the North American station. He had no further service, but became rear-admiral on 7 Nov. 1860, vice-admiral on 2 April 1866, and admiral on 20 Oct. 1872, being placed on the retired list in 1886. He died at Ochester on 20 July 1898.

[O'Byrne's Naval Biogr. Dict.; Times, 21 July 1898; Navy Lists.] J. K. L.

MAX MÜLLER, FRIEDRICH (1828-1900), orientalist and philologist, was the only son of the distinguished poet Wilhelm Müller (1794-1827), and of Adelheid, eldest daughter of President von Basedow, prime minister of the small duchy of Anhalt-Dessau. Born at Dessau on 6 Dec. 1828, and losing his father when scarcely four years old, he lived with his mother and attended the grammar school of his native town till 1836. He early showed a talent for music and came into contact with several distinguished composers, such as Felix Mendelssohn and Carl Maria von Weber. He was the godson of the latter, and received his name Max from the leading character in the 'Freischütz,' which had been finished just before his birth. For a time he seriously contemplated taking up music as a profession, but was dissuaded from doing so by Mendelssohn. The last five years of his school life he spent at Leipzig, living in the family of Dr. Carus, an old friend of his father, and continuing his education at the 'Nicola-Schule' there. He had decided to adhere to the study of the classical languages; but in order to qualify for a small bursary from Anhalt-Dessau he found he would have to pass his examination of maturity ('Abiturienten-examen'), not at Leipzig, but at Zerbst, a small town in that state. For this purpose he was obliged to acquire a considerable knowledge of mathematics and other non-classical subjects in an incredibly short time; nevertheless he succeeded in passing his examination with distinction. He accordingly entered the university of Leipzig in the spring of 1841. There he attended no fewer than ten courses of lectures, on the average, during each term on the most varied subjects, including the classical lectures of Professors Haupt, Hermann, Becker, besides others on old German, Hebrew, Arabic, psychology, and anthropology. He was, however, soon persuaded by Professor Hermann Brockhaus, the first occupant of the chair of Sanskrit, founded in 1841, to devote himself chiefly to learning the classical

language of ancient India. The first result of these studies was his translation of the now well-known collection of Sanskrit fables, the 'Hitopadesa,' which he published when only twenty years of age (Leipzig, 1844).

He graduated Ph.D. on 1 Sept. 1843, when not yet twenty, but continued his studies at Leipzig for another term. Then, in the spring of 1844, he went to Berlin. Here he attended, among others, the lectures of Franz Bopp, the celebrated founder of the science of comparative philology, and those of Schelling, the eminent philosopher. To the early influence of the former may be traced his studies in the subject which he represented in the university of Oxford for thirty-two years; to the teachings of the latter was doubtless largely due that interest in philosophy which he maintained to the end of his life.

In March 1845 he migrated to Paris, where he came under the influence of Eugène Burnouf, eminent not only as a Sanskritist, but also as the first Zend scholar of his day. One of his fellow-students at Paris was the great German orientalist, Rudolf Roth, the founder of Vedic philology; another was the distinguished classical Sanskrit scholar, Dr. Theodor Goldstücker. At Burnouf's suggestion young Max Müller set about collecting materials for an *editio princeps* of the 'Rigveda,' the most important of the sacred books of the Brahmans, and the oldest literary monument of the Aryan race. He accordingly began copying and collating manuscripts of the text of that work, as well as the commentary of Sāyana, the great fourteenth-century Vedic scholar. All this time he was entirely dependent on his own exertions for a living, having a hard struggle to maintain himself by copying manuscripts and assisting scholars in other ways.

In pursuance of his enterprise he came over to England in June 1846, provided with an introduction to the Prussian minister in London, Baron Bunsen, who subsequently became his intimate friend. Receiving a recommendation to the East India Company from him and from Horace Hayman Wilson [q. v.], he was commissioned by the board of directors to bring out at their expense a complete edition of the 'Rigveda' with Sāyana's commentary. Having, in company with Bunsen, visited Oxford in June 1847 for the meeting of the British Association, at which he delivered an address on Bengali and its relation to the Aryan languages, he returned to London. Early in 1848 he went back to Paris for the purpose of collating manuscripts. Suddenly the revolution broke out, when the young

orientalist, fearing for the safety of the precious manuscripts in his keeping, hurriedly returned to London, where he, accompanied by Bunsen, was the first to report to Lord Palmerston the news that Louis Philippo had fled from the French capital.

As the first volume (published in 1849) of his edition of the 'Rigveda' was being printed at the university press, he found it necessary to migrate to Oxford. There he settled in May 1848 and spent the rest of his life. In 1850 he was appointed deputy Taylorian professor of modern European languages, and in the following year was, at the suggestion of Dean Gaisford, made an honorary M.A. and a member of Christ Church. On succeeding to the full professorship in 1854 he received the full degree of M.A. by decree of convocation. As Taylorian professor he lectured chiefly on German and French, including courses on middle high German and on the structure of the Romance languages. He was made a curator of the Bodleian library in 1856, holding that office till 1863; re-elected in 1881, he retired in 1894. In 1858 he was elected to a life fellowship at All Souls' College.

In 1859 he married Georgiana Adelaide, daughter of Mr. Riversdale Granfell, who already included among his brothers-in-law J. A. Froude, Charles Kingsley, and Lord Wolverton. In the same year he published his important 'History of Ancient Sanskrit Literature,' which, dealing with the Vedic period only, contained much valuable research in literary chronology, based on an extensive knowledge of works at that time accessible in manuscript only.

In May 1860 Horace Hayman Wilson, professor of Sanskrit at Oxford, died. Max Müller, whose claims were very strong on the score of both ability and achievement, became a candidate for the vacant chair. He was opposed by (Sir) Monier Monier-Williams [q. v. Suppl.], an old member of Balliol and University colleges, who had been professor of Sanskrit at the East India College at Haileybury till it was closed in 1858. The election being in the hands of convocation—a body consisting of all masters of arts who keep their names on the books of the university—came to turn on the political and religious opinions of the candidates rather than on their merits as Sanskrit scholars. Party feeling ran high. His broad theological views, as well as the fact of his being a foreigner, told against Max Müller, especially in the eyes of the country clergy, who came up to Oxford in large numbers to record their votes. The election took place on 7 Dec. 1860, when Monier-Williams won

the day with a majority of 223, the votes in his favour being 833 against 610 for Max Müller.

There can be little doubt that this defeat was a bitter disappointment to Max Müller, and exercised a very decided influence on his subsequent career as a scholar. Sanskrit studies had formed the main interest of his intellectual life for almost twenty years. Had he been successful in the contest, his activity would probably have been almost entirely limited to his favourite subject, and, though he would in that case have been less famous, he would doubtless have produced, during the latter half of his life, works of more permanent value in the domain of research.

His marvellous industry was now largely deflected into other channels. He began to pay considerable attention to comparative philology, delivering two series of lectures on the science of language at the Royal Institution in 1861 and 1863. These lectures soon raised him to the rank of the standard authority on philology in the estimation of the English public. Though much of what is contained in them is now out of date, there can be no doubt that they not only for the first time aroused general interest in the subject of comparative philology in England, but also exercised in their day a valuable stimulating influence on the work of scholars. Here he first displayed that power of lucid popular exposition and of investing a dry subject with abundant interest, which has more than anything else contributed to make his name at least as famous as that of any other scholar of the nineteenth century. Another of his works, in spite of its title, 'The Science of Thought' (1887), is largely concerned with the subject of language, its main thesis being the inseparability of thought and language. In 1866 he was appointed oriental sub-librarian at the Bodleian, but, finding the work uncongenial, resigned the post after holding it for two years. In 1868 Max Müller, vacating the Taylorian chair, was nominated to the new professorship of comparative philology, founded on his behalf. This chair he held down to the time of his death, retiring, however, from its active duties in 1876. Four years after his election he was invited to accept a professorship of Sanskrit in the newly founded university of Strasburg. Though he declined this appointment, he consented to deliver a course of lectures at Strasburg during the summer term of 1872. The honorarium which he received for the work he handed over to the university authorities, who founded with it a triennial prize, called

the 'Max Müller Stipendium,' for the encouragement of Sanskrit scholarship.

Max Müller was not only the introducer of comparative philology into England; he also became a pioneer in this country of the science of comparative mythology founded by Adalbert Kuhn with his epoch-making work, 'Die Herabkunft des Feuers,' published in 1819. Beginning with his essay on 'Comparative Mythology,' which appeared in 1856, he wrote a number of other papers on mythological subjects, concluding his labours in this domain with a large work in 1897. His mythological method, based on linguistic equations, has hardly any adherents at the present day. Formost of his identifications, as of the Greek *Erinyes* with the Sanskrit *Saranyū*, have been rejected owing to the more stringent application of phonetic laws which now prevail in comparative philology. Nor does his theory of mythology being a 'disease of language,' any longer find support among scholars. Nevertheless his writings have proved valuable in this field also by stimulating mythological investigations even beyond the range of the Aryan family of languages.

Allied to his mythological researches was his work on the comparative study of religions, which was far more important and enduring. Here, too, he was a pioneer; and the literary activity of the last thirty years of his life was largely devoted to this subject. He began with four lectures on the 'Science of Religion' at the Royal Institution in 1870. These were followed by a lecture on 'Missions,' which dealt with the religions of the world, and was delivered in Westminster Abbey at the invitation of Dean Stanley in December 1873. He further led off the annual series of Hibbert lectures with a course on 'The Origin and Growth of Religion,' delivered in the chapter-house of Westminster Abbey in 1878. Subsequently he discussed four different aspects of religion as Gifford lecturer before the university of Glasgow during the years 1888 to 1892.

Of even more far-reaching influence than all these lectures on religion was the great enterprise which Max Müller initiated in 1876, when he relinquished the active duties of the chair of comparative philology. This was the publication by the Oxford University Press, under his editorship, of the 'Sacred Books of the East,' a series of English translations, by leading scholars, of important non-Christian oriental works of a religious character. This undertaking has done more than anything else to place the

historical and comparative study of religions on a sound basis. Among the 'Sacred Books' are several of the earliest Indian legal works and texts on domestic ritual. The series is thus also a valuable source for the comparative study of law and custom. By its publication Max Müller therefore rendered an inestimable service to the science of anthropology. Of the fifty-one volumes of the series, all but one and the two concluding index-volumes had appeared before the death of the editor. Over thirty volumes represent the Indian religions of Brahmanism, Buddhism, and Jainism, being translations from Sanskrit, Pāli, and Prākṛit; but the series also includes versions of Chinese, Arabic, Zoroastrian, and Pahlavi works. Max Müller himself contributed three complete volumes and part of two others to the series.

Though disabled by his deafness in 1860 from officially representing Sanskrit in the university, Max Müller continued to promote Sanskrit studies in many ways. In the first place he finished in 1873 his 'Rigveda,' a second revised edition of which was completed in 1892. This was his *magnum opus*, which will secure him a lasting name in the history of Sanskrit scholarship. He also published several important Sanskrit texts. Thus he initiated the Aryan series in the 'Anecdota Oxoniensia' with four publications of his own, partly in collaboration with pupils; and the three other contributions which had appeared down to the end of 1900 were all undertaken at his instigation. He also brought out some Sanskrit books of an educational character, besides publishing several translations of Sanskrit works. In 1883 he further printed a series of lectures on the value of Sanskrit literature, which he had delivered at Cambridge, under the title of 'India, what can it teach us?' The main importance of this book lies in the 'Renaissance theory' which it propounds. His endeavours to prove that for several hundred years there was a cessation of literary activity in India, owing to the incursions of foreigners, but that there was a great revival in the sixth century A.D. This theory, though now disproved by the evidence of inscriptions, exercised a decidedly stimulating influence on Indian chronological research.

Max Müller was, moreover, always ready, in spite of his dislike of regular teaching, to help students of Sanskrit informally. Thus he gave up much of his valuable time to directing the studies of three young Japanese who came to Oxford on purpose to learn Sanskrit, and all of whom published valuable work connected with ancient India under his guidance. One of them, Bunyiu Nanjio,

translated, at his instance, in 1892, the Chinese catalogue of the many hundreds of Buddhist Sanskrit books which were rendered into Chinese from the first century A.D. onwards. Another, Kenyū Kasayama, compiled a list of Sanskrit Buddhist technical terms, which was edited by him in the 'Anecdota Oxoniensia' series; while the third, Takakusu, at his instigation, translated from the Chinese, in 1896, the travels of the pilgrim I-tsing, who visited India during the years 671-690 A.D. Again, the first three Sanskrit books published by Monist-Williams's successor in the Boden chair were undertaken under Max Müller's influence. It was through him also that most of the European Sanskrit scholars who went out to India in the sixties and seventies received their appointments. As one of the delegates of the Clarendon Press he acted as literary adviser to the university on Indian subjects for more than twenty years (1877-98). He constantly stirred up scholars to search for rare and important Sanskrit manuscripts. This insistence led, for example, to the discovery in Japan of a Sanskrit manuscript dating from the sixth century, the oldest known at that time (1880). He himself acquired, in connection with his edition of the 'Rigveda,' a valuable collection of Vedic manuscripts from India, to the number of nearly eighty.

Max Müller had a great literary gift, doubtless inherited from his father. A foreigner by birth and education, he attained command of an English style excelled by few native writers. This he displayed in numerous contributions to English journals, especially the 'Edinburgh' and 'Contemporary' reviews, in the 'Fortnightly' and the 'Nineteenth Century.' Most of these were subsequently republished in a collected form in his 'Chips from a German Workshop' (4 vols.) Some of the most attractive of his articles, consisting of reminiscences, appeared only a year or two before his death in book form, under the title of 'Auld Lang Syne' (vol. i. 1898, vol. ii. 1900). The posthumous colouring of his temperament was perhaps most clearly exhibited in 'Dontschio Lisbe' (1867), one of his early works, which, in its original German, has passed through thirteen editions, and has been translated into French, Italian, and Russian, as well as English. This romance describes, in the form of recollections, the love of a young student for an invalid princess; and though the scene is laid in the old castle of Dessau, the story is purely imaginary.

Max Müller also now and then discussed important public questions, such as the

Linguistic training of British officers at the time of the Crimean war, and the necessity of founding an oriental institute for the practical teaching of eastern languages in the interests of British trade. He also championed the German cause during the Franco-Prussian war in letters to the 'Times.'

It was only by a remarkably methodical arrangement of his work and disposition of his time that he managed not only to get through an enormous amount of literary work, but to deal punctually with a vast correspondence. Though he fell dangerously ill during a visit to Germany in June 1899, and after a remarkable recovery had a relapse a year later, his literary activity continued to within ten days of his death, which took place at Oxford on 28 Oct. 1900; he was buried in Holywell cemetery, Oxford, on 1 Nov. In the last year of his life he defended the justice of the British cause in the Transvaal war against Professor Mommsen in German journals, and contributed three articles on the religions of China to the 'Nineteenth Century' in September, October, and November, 1900. On his deathbed he dictated to his son alterations and corrections in his autobiography, which unfortunately brings the story of his life only down to his early days at Oxford.

Max Müller's family consisted of three daughters and a son. His eldest daughter died at Dresden in 1876; the second, Mary Emily, married to Mr. F. C. Conybeare, fellow of University College, Oxford, died in 1896; the third, Beatrice Stanley, married, in 1890, Mr. Colyer Fergusson, eldest son of Sir James Ranken Fergusson, bart., and died in 1902. His son entered the diplomatic service.

Max Müller's world-wide fame was largely due to his literary gifts and the extensive range of his writings, as well as to his great ability, industry, and ambition. But it was undoubtedly enhanced by a combination of opportunities such as can rarely fall to the lot of any scholar. When he began his career Vedic studies were in their infancy, and he had the good fortune to become the first editor of the 'Rigveda,' the most important product of ancient Indian literature. Again, nothing was known about comparative philology in England when he came over to this country; being the first in the field, he introduced and popularised the new science, and was soon regarded as its chief exponent. He was, moreover, the first to inaugurate the study of comparative mythology in this country. Lastly, it was not till the latter half of the nineteenth century

that the necessary conditions were at hand for founding a science of religion. At this precise period Max Müller was thus to supply the needed stimulus by means of his Hibbert lectures, and to collect the requisite materials in the 'Sacred Books of the East.' Thus there was a great opening in four highly important branches of learning; but no one could have taken adequate advantage of them all unless he had been, like Max Müller, one of the most talented and versatile scholars of the nineteenth century. Though much in his work and methods may already be superseded, the great stimulating influence his writings have exercised in many fields will give him a strong claim to the gratitude of posterity.

Scholar and voluminous writer though he was, Max Müller was at the same time quite a man of the world. Familiar from his earliest days with court life on a small scale at Dessau, he was, when quite a young man, a frequent visitor at the Prussian embassy in London. By Baron Bunsen he was introduced to the late prince consort, and so came to be well known to Queen Victoria and the royal family. He was also personally acquainted with several of the crowned heads of Europe, such as the Emperor Frederick, the present German Emperor, the King of Sweden, the King of Roumania, and the Sultan of Turkey. He knew most of the leading men of the day, foreigners as well as Englishmen, and entertained many of them at Oxford. His house was a place of pilgrimage to all Indians visiting England; for, owing to his 'Rigveda' and his writings on Indian philosophy and religion, he was far better known in India, though he never visited that country, than any other European scholar has ever been.

On account of his social qualities Max Müller was much in request as president of societies and congresses. Thus he was the first president of the English Goethe Society, and in that capacity delivered his inaugural address on 'Carlyle and Goethe' in 1886. He was also president of the International Congress of Orientalists, held in London in 1892, and took a prominent part in most of the series of oriental congresses which began in 1874.

Probably no other scholar ever obtained more of the honours which are bestowed on learning. He was one of the knights of the Prussian order 'Pour le mérites,' a knight of the Corona d'Italia, and a privy councillor in this country. He received the Northern Star (first class) from the King of Sweden, and subsequently the grand cordon, and was decorated with the orders of the French

legion of honour, the Bavarian Maximilian, the German Albert the Bear, and the Turkish Medjidieh. He was an honorary doctor of Berlin, Bologna, Buda-Pesth, Cambridge, Dublin, Edinburgh, and Princeton. He was a foreign associate of the Institute of France, of the Reale Accademia dei Lincei at Rome, of the Royal Berlin, Sardinian, Bavarian, Hungarian, and Irish academies, of the Imperial Academy of Vienna, of the Royal Society of Upsala, and of the American Philosophical Society; a corresponding member of the Royal Academy of Lisbon, and of the Royal Society of Göttingen; an honorary member of the Royal Asiatic Society of Great Britain and Ireland, of the German Oriental Society, and of more than twenty other important learned societies.

A portrait of Max Müller, by Mr. G. F. Watts, R.A., has been presented by the painter to the National Portrait Gallery, London; there is another by Herkomer, and a bust by Mr. Bruce-Joy, both in the possession of his widow.

After Max Müller's death a fund was opened at Oxford to commemorate his services to learning and letters. Among the contributors were King Edward VII. and several Indian princes, while the German emperor gave the munificent donation of 5000*l.* The amount collected from all sources was devoted to a 'Max Müller Memorial Fund,' to be held by the university of Oxford in trust 'for the promotion of learning and research in all matters relating to the history and archaeology, the languages, literatures, and religions of ancient India.' A Japanese 'Society for Oriental Research' has also been founded at Tokyo in commemoration of Max Müller. His admirable library was acquired by the university of Tokyo in July 1901.

As Max Müller's writings were so numerous and ranged over so many fields, a classification of them under different heads will afford the best survey of his works.

SANSKRIT.—'*Hitopadeśa*,' translated into German, Leipzig, 1844; '*Meghadūta*,' translated into German, Königsberg, 1847. '*Rig Veda Saṃhitā*, the Sacred Hymns of the Brahmins translated and explained' (twelve hymns to the Maruts), London, Trübner, 1869; the same, with thirty-six additional hymns, under the title of '*Vedic Hymns*,' in '*Sacred Books of the East*,' vol. xxxii. 1891. '*Rigveda*,' with Śāyana's 'Commentary,' 6 vols. London, 1849-73; 2nd edit. 4 vols. London, 1890-2; text only, 2 vols. 1873; 2nd edit. 1877. '*Hitopadeśa*,' text, with interlinear translation, 2 parts, London, 1864-1865. '*Rigveda-Prātiśākhya*,' text, with

German translation, Leipzig, 1859-60. '*Vajrachhedikā*' ('*Anecdota Oxoniensia*,' Aryan Series, pt. i.), 1881; '*Sukhāvatīvyūha*,' in collaboration with Nanjio, *ib.* 1883; '*Prajñā-pāramitā-hṛdaya-sūtra*,' in collaboration with Nanjio, *ib.* 1884; '*Dharmasaṃgraha*,' prepared by K. Karawara, and edited by Max Müller and H. Wenzel, *ib.* 1885. '*The Upanishads*,' pt. i., '*Sacred Books of the East*,' vol. i. 1879, pt. ii. vol. xv. '*The Larger and Smaller Prajñā-pāramitā-hṛdaya-Sūtra*,' *ib.* vol. xlix. 1894. '*A History of Ancient Sanskrit Literature*, as far as it illustrates the Primitive Religion of the Brahmins,' London, 1859; 2nd edit. 1880. '*A Sanskrit Grammar*,' London, 1866; 2nd edit. 1870; new and abridged edition by A. A. Macdonell, 1880. '*India, what can it teach us?*' London, 1883; new edit. 1892; reprinted 1895; in collected edition, 1899. Introduction to Takakusu's Translation of I-tsing, Oxford, 1896.

PALI.—'*The Dhammapada*,' translated from Pāli, in Rogers's Burmese translation, London, 1870; reprinted in the '*Sacred Books of the East*,' vol. x.; 2nd edit. 1898.

SCIENCE OF RELIGION.—'*On Missions*' (lecture delivered in Westminster Abbey), London, 1873. '*Introduction to the Science of Religion*,' London, 1873; new edit. 1892; reissue, 1899. '*The Origin and Growth of Religion*, as illustrated by the Religions of India,' London, 1878; 2nd edit. 1878; new edit. 1882, 1891; re-issue, 1898. '*Natural Religion*,' London, 1890; 2nd edit. 1892. '*Physical Religion*,' London, 1891; new edit. 1898. '*Anthropological Religion*,' London, 1892; new issue, 1898. '*Theosophy, or Psychological Religion*,' London, 1893; new edit. 1895; new impression, 1899.

COMPARATIVE MYTHOLOGY.—'*Essay on Comparative Mythology*, part i. of Oxford Essays, 1856. '*Essays on Mythology and Folklore*,' ('*Chips*,' vol. iv.) ; new impression, 1900. '*Contributions to the Science of Mythology*,' 2 vols. London, 1897.

COMPARATIVE PHILOLOGY.—'*On the Stratification of Language*' (Rade Lecture), London, 1868. '*The Science of Language*,' 2 vols. London, 1861 and 1863; 14th edit. 1885; new edit. 1890; last edition, 1899. '*On the Results of the Science of Language*' (inaugural lecture in German), Strasburg, 1872. '*Essays on Language and Literature*' ('*Chips*,' vol. iii.) ; last edit. 1899. '*Biographies of Words and the Home of the Aryas*,' London, 1888; new edit. 1898.

PHILOSOPHY.—'*Kant's Critique of Pure Reason*,' translated, London, 1881; new edit. 1890. '*The Science of Thought*,' London 1887. '*Three Lectures on the*

Vedānta Philosophy, London, 1894. *'The Six Systems of Indian Philosophy*, London, 1899.

BIOGRAPHY. — *'Biographical Essays* (*'Chips*, vol. ii.), London, 1884; new impression, 1898. *'Rāmakṛṣṇa, his Life and Sayings*, London, 1898; twice reprinted, 1899; in collected edition, 1900. *'Auld Lang Syne*, vol. i. London, 1898 (8 editions), vol. ii., *'My Indian Friends*, London, 1899; *'My Autobiography. A Fragment*, London, 1901.

GERMAN. — *'The German Classics from the Fourth to the Nineteenth Century*, London, 1858; new and enlarged edit. 2 vols. London, 1880. *'Deutsche Liebe*, 1st edit. Leipzig, 1857; 13th edit. 1898 (altogether 18,000 copies); a pirated translation, under the title of *'Memoires*, has had an enormous sale in America; French transl. 1878; a new transl. 1900; English transl. (by Mrs. Max Müller) London, 1878; 4th edit. 1899. *'Wilhelm Müller's Poems*, edited with introduction and notes, Leipzig, 1868. *'Schiller's Correspondence with Duke Friedrich Christian of Schlewig Holstein*, edited with introduction and notes, Leipzig, 1875; *'Scherer's History of German Literature*, translated by Mrs. Conybeare and edited by F. Max Müller, Oxford, 1885; new edit. 1891.

A collected edition of Max Müller's essays, entitled *'Chips from a German Workshop*, was published in four volumes between 1867 and 1875; a new edition came out in 1880. *'Last Essays* appeared in 1901, and a full collected edition of his works 1898-1901.

[This memoir is based on Max Müller's Leipzig Lecture-book (*Collegienbuch*); on Oxford University Notices from 1850 onwards; on *'Auld Lang Syne*, vol. i.; on *'My Autobiography*; on details supplied by Mrs. Max Müller; and on personal knowledge. Mrs. Max Müller issued Max Müller's Life and Letters in 1902 (2 vols.).] A. A. M.

MAXSE, FREDERICK AUGUSTUS (1838-1900), admiral and political writer, second son of James Maxse (d. 1864) of Amos Vale, Bristol, by Lady Caroline Fitzhardinge (1803-1886), daughter of Frederick Augustus, fifth earl of Berkeley, was born in 1838. Sir Henry Berkeley Fitzhardinge Maxse [q. v.] was his elder brother. He entered the navy, obtained his lieutenancy in 1862, and as naval aide-de-camp to Lord Raglan after the battle of the Alma, displayed a conspicuous gallantry in carrying despatches, which caused his promotion to the rank of commander in December 1855. He retired from the service in 1867, becoming

rear-admiral in 1875, and unsuccessfully contested the borough of Southampton in the radical interest at the general election of November 1868. He was also beaten in a subsequent contest for Tower Hamlets in February 1874; nor did he ever succeed in entering parliament. Indeed the curious idiosyncrasies which made his character an interesting study to his friend Mr. George Meredith (see *Beauchamp's Career*) unfitted him for modern political life. His liberalism was of no school, and on certain questions, e.g. woman's suffrage and home rule, he was as tenaciously conservative as the highest of Tories. He was an occasional contributor to periodical literature, and his articles on the conduct of certain of the operations in the Crimea, which appeared in the *'National Review* under the titles *'Admiral Lord Lyons*, *'My Two Chiefs in the Crimea*, *'Lord Raglan's Traducers*, and *'The War Correspondent at Bay*, during the first quarter of 1899, constitute a valuable accession to the materials at the disposal of the future historian.

Maxse died on 25 June 1900. He married, in 1862, Cecilia, daughter of Colonel Steele, by whom he left issue two sons—Major Frederick Ivor Maxse of the Coldstream guards, and Mr. L. J. Maxse, editor of the *'National Review*—and two daughters, the younger of whom, Violet, married Lord Edward Cecil.

His separate publications are the following: 1. *'The Education of the Agricultural Poor, being an Address at a Meeting of the Botley and South Hants Farmers Club*, London, 1868, 8vo. 2. *'Our Political Duty: a Lecture*, London, 1870, 8vo. 3. *'A Plea for Intervention*, London, 1871, 8vo. 4. *'The Causes of Social Revolt: a Lecture*, London, 1872, 8vo. 5. *'Objections to Woman Suffrage: a Speech . . . at the Electoral Reform Conference held at the Freemasons' Tavern, 17 Nov. 1874*. 6. *'Whether the Minority of Electors should be represented by a Majority in the House of Commons? A Lecture upon Electoral Reform*, London, 1875, 8vo. 7. *'Woman Suffrage: the Counterfeit and the True. Reasons for opposing both*, London, 1877, 8vo; new edit. 1884. 8. *'National Education and its Opponents: a Lecture*, London, 1877, 8vo. 9. *'The French Press and Ireland: two Letters on the Irish Question addressed to "La Justice"*, London, 1888, 8vo. 10. *'Home Rule: an Expostulation*, London, 1889, 8vo. 11. *'Judael a Political Tract, dedicated to the Intelligent Parliamentary Elector*, London, 1894, 8vo. For uncollected articles see *'National Review*, August 1895, Septem-

ber 1890, May 1897, January, February, March, April, July 1899, June 1900.

[Walford's County Families; Gent. Mag. 1854 ii. 497, 1869 i. 671; Ann. Reg. 1855, ii. 356; Times, 27 June 1900; Brit. Mus. Cat.; Kingslake's Invasion of the Crimea, 6th edit. iv. 23.] J. M. R.

MAXWELL, SIR WILLIAM EDWARD (1846-1897), governor of the Gold Coast, was born in 1846.

His father, **SIR PETER BENSON MAXWELL** (1817-1893), chief justice of the Straits Settlements, born at Cheltenham in January 1817, was the fourth son of Peter Benson Maxwell of Birdstown, co. Donegal. He was educated at Paris and at Trinity College, Dublin, where he graduated B.A. in 1839. He entered the Inner Temple on 14 Nov. 1838, removed to the Middle Temple on 16 Nov. 1840, and was called to the bar on 19 Nov. 1841. He was recorder of Penang from February 1856 to 1866, and recorder of Singapore from 27 July 1866 to 1871. From 1867 to 1871 he was chief justice of the Straits Settlements, and in 1883 and 1884 he was employed in reorganising the judicial tribunals of Egypt. He was knighted at Buckingham Palace on 30 Jan. 1866, and died in France at Grasse, in the department of Alpes-Maritimes, on 14 Jan. 1893. He married, in July 1842, Frances Dorothea, only daughter of Francis Syngo of Glanmore Castle, co. Wicklow. He was the author of two legal works of some importance: 1. 'An Introduction to the Duties of Police Magistrates in the Settlement of Prince of Wales Island, Singapore, and Malacca,' Penang, 1866, 8vo. 2. 'On the Interpretation of Statutes,' London, 1875, 8vo; 2nd edit. 1883 (*Times*, 18 Jan. 1893; *Boase, Modern Biogr.* 1897; *Foster, Men at the Bar*, 1885; *Foster, Baronetage and Knighthg*).

His younger son, William Edward, entered Repton in 1860, and was employed from 1865 to 1869 in the supreme court at Penang and Singapore. In 1867 he qualified as an advocate at the local bar, and in September 1869 he was appointed a police magistrate and commissioner of the court of requests at Penang. In February 1870 he was placed in the same offices in Malacca, in August 1871 at Singapore, and in 1872 in Province Wellesley. In May 1874 he was nominated a temporary judge of the supreme court of Penang. In September he was appointed assistant government agent for Province Wellesley, and in November 1875 he accompanied, as deputy commissioner, the Larut field force, which punished the murderers of James Wheeler

Woodford Birch, the British resident at Perak. For his services he was mentioned in the despatches and received a medal. In February 1878 he became assistant resident in Perak and a member of the state council. In 1881 he was called to the bar by the Society of the Inner Temple, and in the following year he was commissioned to visit the Australian colonies and report on the Torrens land registration system (see **TORRENS, SIR ROBERT RICHARD**). On returning to the Straits Settlements he became commissioner of land titles, and in 1883 was gazetted a member of the executive and legislative councils. In 1881 he was employed by the foreign office on a mission to the west coast of Atchin to obtain the release of the survivors of the British ship *Nisero*, who had been in captivity for ten months. He was successful in his task, received the thanks of government, and was created C.M.G. From 1884 to 1889 he was acting resident councillor at Penang, and in 1889 British resident at Selangor. In 1892 he was nominated colonial secretary of the Straits Settlements, and from September 1893 till January 1895 he was acting governor. In March 1895 he was nominated governor of the Gold Coast. He found the colony on the brink of a war with the Ashantis, who made frequent slave raids, and refused to pay the balance of the war indemnity due to the British government. On 17 Jan. 1898 an expedition under Sir Francis Scott entered Kumassi without resistance, and made prisoner the Ashanti king, Prempeh. Maxwell, who was nominated K.C.M.G. in 1896, visited England in the summer, and addressed large meetings at Liverpool and Manchester on the future of the Gold Coast and Ashanti, returning to the Gold Coast in October. He died at sea off Grand Canary on 10 Dec. 1897. In 1870 he married Lillias, daughter of James Abernigh-Mackay, chaplain in the Indian service.

[*Times*, 16 Dec. 1896; *Pall Mall Gazette*, 8 Jan. 1901; *Colonial Office Lists*; *Burke's Peerage*; *Baden-Powell's Downfall of Prempeh*, 1896.] E. I. C.

MAYNARD, WALTER, pseudonym. [See **BEALD, THOMAS WILLIAMS**, 1828-1894.]

MEADE, SIR ROBERT HENRY (1835-1898), civil servant, second son of Richard Meade, third earl of Clanwilliam, and of his wife, Lady Elizabeth, daughter of George Herbert, eleventh earl of Pembroke, was born on 16 Dec. 1835, and educated at Eton and Exeter College, Oxford, where he matriculated on 7 Dec. 1854 and graduated B.A.

in 1850 and M.A. in 1800. On 1 June 1839 he entered the foreign office. He was despatched to Syria with Lord Dufferin's special mission on 31 July 1860, and returning in September 1861 was selected to accompany the prince of Wales in his tour through Palestine and Eastern Europe in 1861-2. In the autumn of 1862 he accompanied Earl Russell to Germany in attendance upon the queen. On 27 Nov. 1862 he was appointed a groom of the bedchamber to the prince of Wales. In 1863 he accompanied Earl Granville abroad with the queen.

In June 1864 Meade became private secretary to Earl Granville as president of the council, and was with him till July 1866; he then resumed his work in the foreign office. When Lord Granville became, on 10 Dec. 1868, secretary of state for the colonies, Meade accompanied him as private secretary to the colonial office. On 21 May 1871 Meade was appointed to an assistant under-secretaryship of state in the colonial office; thenceforward he devoted himself to the ordinary and responsible duties of that post. He was appointed a royal commissioner for the Paris exhibition on 22 Jan. 1877, and a British delegate to the conference on African questions at Berlin on 24 Oct. 1884 (see *Parl. Papers*, c. 4290, of 1885, for his conversations with Prince Bismarck). In February 1892 he became permanent under-secretary for the colonies under Lord Knutsford, and subsequently served under Lord Ripon and Mr. Chamberlain. Latterly his health became indifferent; he was anxious to retire in 1895, but stayed on at the request of the secretary of state for a year longer. However, towards the end of 1896 he fell and broke his leg one evening in entering an omnibus upon leaving the office. He never returned to his work. Ill-health and the sudden death of his daughter broke him down completely, and he died on 8 Jan. 1898 at an hotel in Belfast. He was buried at Taplow, near Maidenhead. He became O.B. on 21 March 1885, K.C.B. in 1894, and G.C.B. in 1897.

Meade had considerable practical common sense and much tact, and he was besides a man of peculiar charm, greatly liked by all who knew him. He was one of a knot of official liberals who formed a little coterie in the service of the crown from about 1870 to 1890.

Meade married, first, on 19 April 1865, Lady Mary Elizabeth, daughter of Henry Lascelles, third earl of Harewood; she died on 7 Feb. 1866, leaving one daughter, who predeceased her father in 1897. Meade married, secondly, on 18 April 1880, Caro-

line Georgiana, daughter of Charles William Grenfell of Taplow Court, Maidenhead; she died on 5 March 1881, leaving a son, Charles Francis, who survived him.

[Foreign Office List, 1895; Colonial Office List, 1896; Foster's Alumni Oxon. 1715-1886; Times, 10 Jan. 1898; Burke's Peerage, s.v. 'Clanwilliam'; personal knowledge.] C. A. H.

MELVILL, SIR JAMES COSMO (1792-1861), last secretary of the East India Company, born at Guernsey in 1792, was the third son of Philip Melvill (1762-1811), afterwards lieutenant-governor of Pondicherry Castle in Cornwall, by his wife, Elizabeth Carsey (d. 1844), youngest daughter of Peter Dobree of Beauregarde, Guernsey. Henry Melvill [q. v.] was his elder brother. James entered the home service of the East India Company in February 1808. He soon displayed unusual abilities, and rose by rapid steps to the highest permanent position at the East India House. In 1824 he was appointed auditor of Indian accounts. While in this position he gave important evidence in 1830 before a parliamentary committee vindicating the company's conduct of its China trade from the attack of William Huskisson [q. v.], and again in 1832 before another committee on Indian affairs in regard to the accounts of the company (Thornton, *Hist. of British Empire in India*, 1858, pp. 501, 508). In 1834 he became financial secretary, and in 1836 chief secretary, an office which he held until the termination of the company's existence as a governing body in 1858. After his retirement from the service of the company he was appointed government director of Indian railways, and it is said that he was offered appointments of high rank in the Indian government, but declined them. Melvill was elected a fellow of the Royal Society on 14 Jan. 1841, and was created K.C.B. on 5 Sept. 1853. He died at Tandridge Court, near Godstone in Surrey, on 23 July 1861. In March 1815 he married Hester Jean Frances (d. 10 April 1864), youngest daughter of William Marmaduke Sellon of Harleeden in Middlesex. By her he had numerous issue.

[Memoirs of Philip Melvill, 1812; Ann. Reg. 1861, ii. 469; Gent. Mag. 1861, ii. 334; Bosse's Collect. Cornub. 1890; London Review, 27 July 1861; Bell's British Folks and British India Fifty Years Ago, 1891.] E. I. O.

MENDS, SIR WILLIAM ROBERT (1812-1897), admiral, eldest son of Admiral William Bowen Mends (1781-1864), and nephew of Sir Robert Mends [q. v.], was born at Plymouth on 27 Feb. 1812. In May

1825 he entered the Royal Naval College at Portsmouth, and on passing out in December 1826 was shortly afterwards appointed to the *Thetis*, a 46-gun frigate, going out to the South American station. He was still in the *Thetis* when she was wrecked on Cape Frio on 5 Dec. 1830. It was Mends's watch at the time the ship struck, but as the night was dark and thick and it was raining heavily, he was held guiltless, the blame falling entirely on the captain and master. Mends was considered to have behaved very well in a position extremely difficult for one so young and inexperienced, and several of the members of the court offered to take him with them. After passing his examination he joined the *Actæon* in the Mediterranean, which in 1832 was at Constantinople when a Russian army of upwards of twenty thousand men was there, consequent on the terrible defeat of the Turks by Ibrahim Pasha at Konieh. The intervention of the western powers demanded the withdrawal of this force, and Mends was deeply interested in watching its embarkation, making careful notes of their manner and methods of embarking the cavalry and guns. Men, horses, and guns, with all their stores and baggage, were got on board within twelve hours, and Mends treasured up the experience for future use. In the summer of 1834 the *Actæon* returned to England and was paid off; and in January 1835 Mends was appointed to the *Pique* with Captain Henry John Rous [q.v.] In July the ship was sent out to Canada, and on the homeward voyage, on 22 Sept., struck heavily on a reef off the coast of Labrador. After several anxious hours she was got off, and, though she was much damaged and was leaking badly, and her main and mizen masts were badly sprung, Rous determined to proceed. Five days later her rudder, which had also been injured, was carried away, and the ship left helpless in a heavy westerly gale. With admirable seamanship she was steered for several days by means of a weighted hump cable towed astern and controlled by a spar lashed across the ship's stern: it was not till 6 Oct. that they were able to ship a jury rudder; and on the 13th they anchored at St. Helen's after a voyage that has no parallel in the annals of the nineteenth century. Mends then learnt that he had been promoted to the rank of lieutenant on 11 Aug.

In December he was sent out to join the *Vernon* at Malta. A year later he was moved into the *Oledonia* and then to the *Rodney*, from which, in July 1838, he went to be flag-lieutenant of Sir John Louis, the second in command on the station and super-

intendent of Malta dockyard. He continued with Louis, sometimes afloat, but mostly at Malta, till July 1843; afterwards, from November 1843 he was in the *Fox* frigate with Sir Henry Blackwood on the coast of Ireland and in the *East Indies* till, on 2 Jan. 1847, he received the news of his promotion, on 9 Nov. 1846, to be commander. In January 1848 he was appointed to the *Vanguard*, in which, a couple of months later, he had the misfortune to lose some of the fingers of his left hand, which was carried into a block and badly crushed. It was this, more than the loss of the fingers, which caused trouble; and for years afterwards he suffered from severe attacks of neuralgia. The *Vanguard* went home and was paid off in March 1849; and in July 1850 Mends was appointed to the *Vengeance*, again with Blackwood, who, however, died after a short illness at Portsmouth on 7 Jan. 1851, and was succeeded by Lord Edward Russell [q.v.] Towards the end of the summer the *Vengeance* went to the Mediterranean, but came home in December 1852, when, on 10 Dec., Mends was advanced to post rank in acknowledgment of the excellent order the ship was in.

In October 1853 he was selected by Sir Edmund (afterwards Lord) Lyons [q.v.] to be his flag-captain in the Mediterranean, if Captain Symonds, then in the *Arcthusa*, should prefer to remain in the frigate. If Symonds should prefer to join Lyons, it was understood that Monds should have the *Arcthusa* [see SYMONDS, SIR THOMAS MATTHEW CHARLES]. Mends accordingly took the *Agamemnon* out and joined the fleet in the Sea of Marmora on Christmas Eve, when, as previously arranged, he took command of the *Arcthusa*. In her he took a particularly brilliant part in the bombardment of Odessa on 22 April 1854; 'we stood in twice,' Mends wrote, 'lacked close off the Mole and engaged the works on it in reverse . . . pouring in a destructive fire as we went about.' He was promptly recalled by the commander-in-chief, who seems to have considered that he was needlessly risking the ship. 'I expected a reprimand when I went on board the admiral to report, but the enthusiasm of the fleet and the cheers given to us as we passed along the lines mollified the chief, and I was simply told not to go in again.' The French officers who had witnessed the manoeuvre called on Monds to compliment him on it; and many years afterwards a French writer in the '*Revue des Deux Mondes*' referred to it as a brilliant *tour de force*. In June Lyons and Symonds had found that they did not get on well together, and it was proposed to Monds to re-exchange into the *Agamem-*

non, which he did. From that time his individuality is lost in that of the admiral, except that, as chief of Lyons's staff, he had the direction of many points of detail on which much depended. By far the most important of these were the embarkation of the troops at Varna and the subsequent landing of them in the Crimea on 14 Sept. The whole thing was admirably done without a hitch and without loss; and though, to the world at large, it appeared to be done by Lyons, Lyons himself and the navy fully recognised that the credit belonged to Mends.

In February 1856 Lyons moved his flag to the Royal Albert, Mends accompanying him. In all the operations of the year he had his full share; he was nominated a C.B. on 5 July; and in December was ordered to take the ship to Malta, the admiral remaining in the Black Sea with his flag in the *Caradoc*. While crossing the Sea of Marmora the stern-gland—the metal bearing of the screw-shaft as it passes through the stern-post—gave way, and an alarming rush of water followed. During the next day the ship pursued her voyage, the engines pumping the water out; but on 28 Dec. Mends decided that it was necessary to beach the ship, which was cleverly done in Port Nicolo, in the island of Zee. There a cofferdam was built inside round the hole, and, the ship's safety being thus secured, she proceeded to Malta under sail, and arrived there on 7 Jan. 1856. Mends continued in command of the Royal Albert till March 1857, when he was appointed to the *Hastings*, guardship in the Mersey, from which, four years later, he was appointed deputy-controller-general of the coast-guard at the admiralty. He held this office for about a year, and in May 1862 was appointed director of transports, with the duty of organising and administering the transport department of the admiralty. Here he remained for more than twenty years, during which period there were several exceptional calls on his office, which were answered in a manner that testified to the thorough working order in which things were kept. On 1 Jan. 1869 he became a rear-admiral, on 20 May 1871 a K.C.B., vice-admiral on 1 Jan. 1874, admiral on 15 June 1879, and on 24 Nov. 1882 was nominated a G.C.B., with especial reference to his work in connection with the expedition to Egypt.

In February 1883 he retired and settled down at Alverstoke, within easy distance of his many old friends at Portsmouth. Here he lived peacefully for the next twelve years. In July 1894 his wife died after an illness of days, and the blow 'practically killed him,'

though he survived for three years. He died on 26 June 1897, the day of the great naval review in commemoration of the queen's diamond jubilee. Mends married, at Malta in December 1837, Melita, daughter of Dr. Stilon, a Neapolitan by birth, who had served as a medical officer in the French army at Maida, and been sent as a prisoner to England, where he married, entered the navy, and some years later settled in private practice at Malta. The '*Life*' of Mends (1899) which was written by his son, Bowen Stilon Mends, formerly a surgeon in the navy, is largely made up of extracts from Mends's letters and journals. It has thus a considerable historical value, especially as to the Russian war, being the strictly synchronous opinions of a man who, from his official position and his personal relations with Sir Edmund (afterwards Lord) Lyons, had very good opportunities of knowing what was being done or not done; at the same time the factor of Lyons's personality is to be allowed for.

[The *Life* by his son, above mentioned (with portraits); *Barclay Wilmot's Life of Lord Lyons*.]
J. K. L.

MERCIER, HONORÉ (1840-1894), premier of Quebec, was born on 15 Oct. 1840 at Ste.-Athanasie in Lower Canada, where his father had been an early settler. Educated at the Jesuit College, Montreal, he entered the office of Messrs. Laframboise & Papineau and began the study of law in 1860. In 1862 he abandoned law for a time and undertook the editorship of '*Le Courier*' to support the Macdonald-Sciotte ministry. He took an active part in founding the *parti national* of that time, and vigorously opposed confederation. When it seemed inevitable he finished his course in law and was called to the Montreal bar in 1867. Practising first at Ste.-Hyacinthe, and later in Montreal, he attained a fair standing in his profession.

Mercier was elected to the House of Commons in 1872 as opposition member for Rouville in the province of Quebec. He was not a candidate at the following election, and, being unsuccessful in the campaign of 1878, retired from dominion politics. Thereupon (Sir) Henry Gustave Joly, premier of Quebec, offered the post of solicitor-general to Mercier, who accepted this office and held it till the cabinet resigned in October 1879. Mr. Joly retired from the leadership in 1883, whereupon Mercier became liberal leader in the local house, his constituency being Ste.-Hyacinthe. Seeing that his party could not make head against the ecclesiastical

and conservative power, he formed an alliance with the ultramontanes who were then rising into power. He recurred also to his project of a so-called *parti national*, a party French-Canadian in race and catholic in religion, but open equally to liberals and conservatives. The year 1885 gave him his opportunity, because the north-west rebellion then broke out and the execution of Louis Riel [q. v.] followed. Mercier turned to political account the French-Canadian racial sympathies for the half-breed leader and, forming a combination with (Sir) Charles Alphonse Pelletier, a well-known conservative, swept the constituencies in the elections of 1886, and became premier of the province on 29 Jan. 1887. He continued in that office for five years. Among his useful measures may be ranked the consolidation of the local statutes and the establishment of an agricultural department.

On 21 Oct. 1887 he called a conference of the premiers of the several provinces at Quebec to discuss amendments to the constitution. His endeavours to extend the boundaries of the province to Hudson's Bay were carried to a successful issue after his death—in 1896.

His financial measures took a wide range. He failed to convert part of the local debt, which then amounted to the gross sum of \$19,500,000, by substituting four in the place of the subscription rate of five per cent. interest. He laid increased taxation on commercial transactions, persons, and corporations, and his measures for the purpose were confirmed. In 1888 he launched in Paris a loan for \$3,500,000 at four per cent., and another in 1891 for \$4,000,000 at the same rate. He was enthusiastically received in France in April 1891, and was decorated with the legion of honour. Passing thence to Rome, the grand cross of Gregory the Great was bestowed on him for his services to the church. The king of the Belgians made him commander of the order of Leopold I.

While he increased taxation and accumulated debt, his distributions to railways, colonisation purposes, public buildings, and improvements were liberal. But after the elections of 1890, when Mercier was again returned to power by a large majority, a spending fever seems to have taken hold of Mercier and many of his party. Then began what is called '*la danse des millions*.' It proceeded apace till the crash came at the end of 1891.

Mercier never enjoyed the confidence of the episcopate and secular clergy. But, overbearing all opposition in the provincial

contest, he resolved to attack the conservative party of the dominion, and, entering warmly into the election to the dominion parliament of 1891, made a serious change in the Quebec delegation to Ottawa. In this he necessarily alienated many of his conservative allies. Further, investigations begun in the senate resulted in tracing to Mercier or his agents the sum of \$100,000, part of \$260,000 which the local house had voted to the Baie des Chaleurs railway. The money, it was alleged, was spent in the late elections. Thereupon the lieutenant-governor issued a royal commission to inquire into the matter (21 Sept. 1891), and evidence was taken which was confirmatory. Mercier sought to ignore the commission and its proceedings, taking his stand on constitutional grounds: that the proper body to investigate the charges was the legislature, not the commission, and that while he possessed the confidence of the house he was entitled to the confidence of the lieutenant-governor. His opponents had used a similar argument, when the lieutenant-governor, Letellier de St. Just, dismissed the conservative administration in 1878. In this instance it was of no avail. The ministry was dismissed, the De Beucherville cabinet was gazetted (December 1891), the house dissolved, and on appeal to the electors Mercier and his following were hopelessly defeated.

In 1892 an indictment was laid against him for conspiring to defraud the province, but the prosecution failed. The result was on the whole beneficial to Mercier, and the trial helped to re-establish him in public credit. He began to take an active part in politics once more, and on 8 April 1893 delivered what is considered to be his best speech, before an immense audience at Sohmer Park, Montreal. It is published under the title of '*L'Avenir du Canada*.' Morcier died on 30 Oct. 1894. On 29 May 1866 he married Leopoldine Boivin of Ste. Hyacinthe, and, after her death, Virginie St.-Denis of the same place on 9 May 1871.

MERIVALE, CHARLES (1808-1893), historian and dean of Ely, second son of John Herman Merivale [q. v.] by Louisa Heath, daughter of Henry Joseph Thomas Drury [q. v.], was born at No. 14 East Street, Red Lion Square, London, on 8 March 1808. His father being a unitarian and his mother a churchwoman, he was brought up without any very definite dogmatic instruction, but in an atmosphere of sober practical piety. He was carefully taught by his mother, and took kindly to learning, especially to Roman history, which, with his brother Herman, he converted into a sort of game which they played with their hoops in Queen Square. He also attended for a short time a private day school kept by one Dr. Lloyd, at No. 1 Keppel Street, Bloomsbury, and was afterwards grounded in Greek by his father. In January 1818 he was entered at Harrow, where he was contemporary with Charles Wordsworth [q. v.] (afterwards Bishop of St. Andrews), Richard Chenevix Trench [q. v.] (afterwards Archbishop of Dublin), and Henry Edward (afterwards Cardinal) Manning [q. v.] There he wrote an immense quantity of Latin verse, committed to memory the *Eclogues* and *Georgics* of Virgil, the whole of *Caecilius* and *Juvenal*, and the greater part of *Lucan*. For relaxation he read Southey's 'History of Brazil,' an achievement which gave him courage to attack Mill's 'History of British India,' when it afterwards became his duty to do so. He also passed muster in the cricket field, and in 1821 played in the match against Eton. An Indian writership being offered, he was removed in that year to Hallsbury College, where he took prizes in classics and Persian, and was first in the class list when a casual perusal of Gibbon's 'Autobiography' awakened conflicting interests. His bent was at once fixed for the life of a student, the prospect of an Indian career became manifestly odious to him, and his father consented to transfer him to Cambridge. The writership which he should have taken was given to John Laird Muir Lawrence [q. v.]

At Cambridge, accordingly, in the autumn of 1826, Merivale matriculated, being entered at St. John's College. He graduated B.A. (senior optimo and fourth classic) in 1830, having in the preceding year gained the Browne medals for Latin verse, and proceeded M.A. in 1833 and B.D. in 1840. He also rowed for the university in the first contest with Oxford at Henley in 1829, and in the following summer accomplished the feat of walking from Cambridge to London in one day. In his early graduate days he

belonged to the coterie of so-called 'Apostles,' whose symposia are celebrated by Tennyson in 'In Memoriam' (lxxxvi), and to a smaller society called the 'Hermathena.' Among his special friends were Henry Alford [q. v.] (afterwards Dean of Canterbury), William Hepworth Thompson [q. v.] (afterwards Master of Trinity), Joseph Williams Blakeley [q. v.] (afterwards Dean of Lincoln), James Spedding [q. v.], and John Mitchell Kemble [q. v.], the son of the actor. He was at this time a liberal in politics, and interest in the impending Belgian revolution drew him to the Netherlands in the summer of 1831. On his return to England he trifled with Anglo-Saxon, Saint-Simonianism, and Freemasonry, but on his election to a fellowship in 1833 took holy orders and settled down to historical work. In the reaction which followed the Parliamentary Reform Act of 1832 he went over to the conservative party, to which he thereafter steadfastly adhered; but the high Toryism of St. John's College proved uncongenial, and he was reconciled to continued residence there only by his failure in 1835 to obtain the chair of classics at King's College, London, and subsequent disappointments. Meanwhile he studied German, travelled in Bavaria and Austria (1836), and felt a growing interest in Roman history. Though by no means an enthusiastic, he was a conscientious and efficient tutor, and in 1836 and the following year was one of the examiners for the classical tripos. His ecclesiastical views were of the moderate type, and the four sermons which he delivered as select preacher to the university in November 1838 were warmly commended by Whewell, and led to his appointment in the following year as select preacher at Whitshall. As a scholar he was more of a Latinist than a Grecian, and little short of a devotee to Latin verse composition. He had no speculative interests, and though he had studied political economy under Malthus at Hallsbury, he entertained no respect for that science, and remained throughout life a convinced protectionist. Nevertheless, in matters academic he was a moderate reformer, and helped to establish the law, moral sciences, and physics triposes, which, however, he afterwards characterised as 'sickly growths.' He was naturally inclined to a reclusal life, and, even when fairly absorbed in the study of Roman history, was satisfied with a single brief visit to Rome in the autumn of 1845. The leisure necessary for his historical work he secured by accepting in 1848 the rectory of Lawford, Essex, with which he united the chaplaincy

to the speaker (John Evelyn Donison) of the House of Commons from February 1863 until his preferment in November 1869 to the deanery of Ely. He was Hulsean lecturer in 1862, was reappointed select preacher at Whitehall in 1864, and in that and the following year delivered the Boyle lectures. In 1862 and 1871 he examined for the Indian civil service. In 1866 he received the honorary degree of D.O.L. from the university of Oxford.

Merivale made no figure in convocation, and after allowing himself to be added to the committee for the revision of the authorised version of the New Testament in February 1871, withdrew from it in the following October. He identified himself with no ecclesiastical party, abhorred polemics, and as a preacher was solid and judicious rather than eloquent. Though inclined to comprehension as the only means of averting the disruption of the church, he approved the Public Worship Regulation Act of 1874. His later years were spent in almost entire seclusion at Ely, where he enlarged the school and partially restored the cathedral. He also organised the commemoration in 1873 of the foundation of Ely Minster, of which he published an account, entitled 'St. Etheldreda Festival: Summary of Proceedings, with Sermons and Addresses at the Bissaxtanary Festival of St. Etheldreda at Ely, October 1873,' Ely, 1874, 4to. On 17 Feb. 1892 he had a slight attack of paralysis; a second, towards the close of November 1893, was followed by his death on 27 Dec. His remains were interred in Ely cemetery, his monument with epitaph by Dr. Butler, master of Trinity, was placed in Ely Cathedral. He married, on 2 July 1850, Judith Mary Sophia, youngest daughter of George Frova of Lincoln's Inn and Twyford House, Bishop's Stortford, by whom he left issue.

Merivale contributed the version of 'Der Kampf mit dem Drachen' to his father's translation of the minor poems of Schiller (1844); but thenceforth his German studies were subordinate to his historical work. He was collaborating on a 'History of Rome,' projected by the Society for the Diffusion of Useful Knowledge, when the fortunate failure of the enterprise set him free to recast and continue the work independently and with other publishers. Such was the origin of his 'History of the Romans under the Empire,' London, 1850-54, 7 vols. 8vo; new edn. 1865, 8 vols. The sterling merits of this work, which embraces the period from the rise of the Gracchi to the death of Marcus Aurelius, thus forming a prologue to Gibbon's 'Decline and Fall,' are uncontested,

while its recognised blamish, neglect of epigraphical sources, was hardly to be avoided in the circumstances in which it was written. The vogue of the first three volumes was such as to induce him to issue a popular epitome of them in one volume, entitled 'The Fall of the Roman Republic: a short History of the last Century of the Commonwealth,' London, 1853, 8vo; 5th edit. 1863. He also edited as parerga 'C. Sallustii Crispi Catilina et Jugurtha,' London, 1852, 8vo, and 'An Account of the Life and Letters of Cicero, translated from the German of Bernhard Rudolf Abeken,' London, 1854, 12mo, and in 1857 contributed the article on Niebuhr to the 'Encyclopædia Britannica.' About the same time he formed a connection with the 'Saturday Review,' which lasted for some years. His 'Boyle Lectures'—1. 'The Conversion of the Roman Empire,' and 2. 'The Conversion of the Northern Nations'—appeared in 1861 and 1860 respectively (London, 8vo). More definitely apologetic was his lecture for the Christian Evidences Society, entitled 'The Contrast between Pagan and Christian Society,' London, 1872, 8vo. His 'General History of Rome from the Foundation of the City to the Fall of Augustulus,' London, 1875, 8vo, is a convenient epitome of a vast subject: an abridgment by O. Pullor appeared in 1877. 'The Roman Triumvirates' (Epochs of Ancient History Soc.), London, 1876, 8vo; 'St. Paul at Rome' (S. P. O. K.), London, 1877, 8vo; 'The Conversion of the Continental Teutons' (S. P. O. K.), London, 1878, 8vo; and 'Four Lectures on some Epochs of Early Church History delivered in Ely Cathedral,' London, 1879, 8vo, complete the tale of his historical and apologetic writings.

Merivale's prize poems are printed in 'Prousiones Academicæ,' Cambridge, 1828, iii. 27, 35. His 'Koatei Hyperionis Libr. Tres. Latine reddidit C. Merivale,' London, 1863, 8vo; 2nd edit., with a collection of minor pieces from 'Arundines Oami' in 1882, evinces the assiduity with which in after life he cultivated his unusual gift for Latin verse. His 'Homer's Iliad in English Rhymed Verse,' London, 1869, 8vo, did not add to his reputation. His university sermons, 'The Church of England a faithful Witness of Christ, not destroying the Law, but fulfilling it,' appeared at Cambridge in 1839, 8vo, and were followed by 'Sermons preached in the Chapel Royal at Whitehall,' Cambridge, 1841, 8vo. He also published three separate discourses, besides a pamphlet entitled 'Open Fellowships; a Plea for submitting College Fellowships to University Competition,' and a memoir of his brother, Herman Merivale,

C.B., reprinted from the 'Transactions' of the Devonshire Association for the advancement of Science, Literature, and Art, 1884, 8vo. His 'Autobiography,' a fragment reaching no further than his ordination, was edited with his epistolary remains by his daughter, Judith Anne Merivale, for private circulation, in 1898 and published in 1899, London, 8vo.

[Autobiography and Letters above mentioned; Tennyson's Life, i. 47; Charles Wordsworth's, Annals of my Early Life, p. 56; Goulburn's Life of Dean Burgon, ii. 139; Life and Letters of Dean Alford; Gent. Mag. 1850, ii. 423; Ann. Reg. 1863 ii. 358, 1869 ii. 276; Times, 28 Dec. 1893, Guardian, 10 Jan. 1894, 22 Nov. 1899; Athenæum, 30 Dec. 1893, 17 Sept. 1898; Academy, 21 Oct. 1899.] J. M. R.

METFORD, WILLIAM ELLIS (1824-1899), inventor, born on 4 Oct. 1824, was the elder son of William Motford, a physician, of Flook House, Taunton, by his wife, M. E. Anderdon. He was educated at Sherborne school between 1838 and 1841, and was apprenticed to W. M. Peniston, resident engineer under Isambard Kingdom Brunel [q. v.], on the Bristol and Exeter railway. From 1846 to 1850 he was employed on the Wilts, Somerset, and Weymouth railway. After 1850 he worked for Thomas Evans Blackwell in connection with schemes for developing the traffic of Bristol, and subsequently acted for a short time under Peniston as engineer on the Wycombe railway, residing at Bourne End. During this period he designed an improved theodolite with a travelling stage and a curved arm upholding the transit axis, and also invented a very good form of level (cf. *Journal of Institution of Civil Engineers*, February 1856).

In March 1856 Metford was elected an associate of the Institution of Civil Engineers, and early in 1857 he obtained an important appointment on the East India Railway under (Sir) Alexander Rendel. He arrived at Monghyr on 18 May to find that the mutiny had just broken out. With the aid of the railway staff he took a leading part in organising the defence of the town. His ceaseless exertions largely contributed to the safety of the garrison, but they permanently impaired his health, and within a year he found himself obliged to abandon his engagement and return to England.

Metford's interest in rifle shooting began in boyhood, his father having established a rifle club with a range in the fields near Flook House, and he gave constant attention to it in the intervals of his engineering studies. Late in 1852 or early in 1853 he suggested a hollow-based bullet for the En-

field rifle, expanding without a plug. It was brought out with the assistance of Pritchett, who was awarded 1,000*l.* by government for the invention on its adoption by the small-arms committee. In 1854 Metford investigated the disturbance of the barrel by the shock of the explosion, which affects the line of flight of the bullet, a difficulty which had led to much misunderstanding. In 1857 the select committee found his form of explosive rifle bullet the best of those submitted to them, and in 1863 it was adopted by government. In March 1869, however, it was declared obsolete in accordance with the resolution of the St. Petersburg convention against the employment of such missiles in warfare. Metford's chief distinction in rifle progress, however, is that he was the pioneer of the substitution of very shallow grooving and a hardened cylindrical bullet expanding into it, for deep grooving and bullets of soft lead. In 1865 his first match rifle appeared, having five shallow grooves and shooting a hardened bullet of special design (Patent No. 2488). In 1870 he embarked seriously on the production of a breechloading rifle, paying the closest attention to every detail of the barrel and cartridge. Before long his first experimental breechloading rifles appeared, and at Wimbledon in 1871 two of them were used, with one of which the principal prize for military breechloading rifles was won by Sir Henry St. John Halford [q. v. Suppl.], whose acquaintance he had made in 1862 at the Wimbledon meeting, and who henceforth was his friend and assistant in his experiments. From 1877 the record of the Metford rifle was an unbroken succession of triumphs. Between that date and 1891 it failed only four times to win the Duke of Cambridge's prize, while it took a preponderating share of other prizes.

The advance in military small arms abroad, and especially the increased rapidity of loading, caused the appointment of a committee in February 1883 to deal with the question. Motford designed for them the detail of the .42 bore for the rifle provisionally issued for trial early in 1887, and on the adoption of the .303 magazine rifle, known as the Lee-Enfield, he gave much assistance in designing the barrel, chamber, and cartridge.

In 1888 the war-office committee on small arms selected as the pattern for British use a rifle which combined the Metford bore with the bolt-action and detachable magazine invented by the American, James P. Lee. This arm, known as the Lee-Metford rifle, was long in use.

In 1892 Metford's health finally broke down, and henceforth he was precluded from active work. He died at his house at Redland, Bristol, on 14 Oct. 1899. About 1856 he married a daughter of Dr. Wallis of Bristol.

[Privately printed memoir of W. E. Metford (with portrait). This memoir appeared in an abbreviated form in the Proceedings of the Institution of Civil Engineers, 1900, vol. cxi.]

E. I. C.

MIDDLETON, JOHN HENRY (1846-1896), archaeologist, architect, professor of fine art, and museum director, born at York on 5 Oct. 1846, was the only surviving child of John Middleton, architect, of York, and Maria Margaret, his wife, daughter of James Pigott Pritchett [q. v.], architect, of York, and his first wife, Peggy Maria Torry. As a child he was taken by his parents to Italy, where he acquired a love of that country and its language, which lasted throughout his life. On their return his parents settled at Cheltenham, where his father practised as an architect, and where Middleton himself was educated, first at the juvenile proprietary school, and afterwards at Cheltenham College. In 1865 he was matriculated at Exeter College, Oxford. Middleton, though far from being an eccentric recluse, or of as weakly a constitution as his appearance seemed to denote, displayed from his youth an acutely nervous and fastidious temperament, liable to strong emotions and to deep depression. This was accentuated in 1868 by the shock caused by the sudden death of a close friend at Oxford, which brought on a severe and painful illness, which confined him to his room for five or six years; hence he did not graduate in the ordinary course. During this period, however, by assiduous reading and study he laid the foundations of that remarkable, painstaking, and accurate knowledge of art and archaeology, for which he was afterwards so highly distinguished. On his recovery he started off on a series of travels of an arduous and adventurous nature. He visited America, crossing it to Salt Lake City and the Rocky Mountains, and descending into Mexico. He travelled in Greece, Asia Minor, Egypt, and North Africa. He undertook a special journey to Fez in Morocco to study the philosophy of Plato as taught there, and in the disguise of a pilgrim effected admission into the Great Mosque, which no unbeliever had previously succeeded in doing, and also was presented to the sultan as one of the faithful. On his return he adopted the profession of an architect, studied for a time in the office of Sir George Gilbert Scott [q. v.], and became a partner in his father's

business at Storey's Gate, Westminster. The profession was, however, never congenial to him, and after his father's sudden death in February 1885 he placed the business in thorough working order, and disposed of it to others.

Middleton had never ceased to pursue his favourite studies of art and archaeology, and even went through a course in the schools of the Royal Academy. His extensive and accurate knowledge became well known, and brought him many friends, among others William Morris [q. v. Suppl.], with whom Middleton travelled in Iceland. In June 1879 he was elected a fellow of the Society of Antiquaries, and was a frequent contributor to their 'Proceedings' and their publications; he was elected a vice-president of the society in 1891. He was also a considerable contributor to the 'Encyclopædia Britannica' (9th edition), as well as to many weekly and other periodicals. He made a special study of the antiquities of Rome, and in 1885 published those as 'Ancient Rome,' a revised edition of which appeared in 1898. In 1892 he followed this with another work, 'Remains of Ancient Rome.' In these works Middleton was the pioneer of the serious and scientific study of Roman antiquities, and his work, if it has been to a great extent supplemented, has not as yet been superseded. In 1880 he was elected Slade professor of fine art at Cambridge, and given the honorary degree of M.A. at Cambridge in 1886, and at Oxford in 1887, followed by those of Litt.D. at Cambridge in 1892, and D.C.L. at Oxford in 1894; he was also honoured with a doctor's degree at the university of Bologna. He was twice re-elected to the professorship. In 1888 he was elected a fellow of King's College, Cambridge. In 1889 he was appointed to be director of the Fitzwilliam Museum at Cambridge, a post which offered him opportunities for a further display of his knowledge in 'Engraved Gems of Classical Times' (1891), 'Illuminated MSS. of Classical and Medieval Times' (1892), and a catalogue of 'The Lowe Collection of Gems' (1892). Middleton was also appointed a lecturer at the Royal Academy in London. In 1892 he was selected to fill the important post of art director of the South Kensington Museum, a department then sadly in need of reform and reorganisation. Several reforms of great importance were at once initiated and carried out by Middleton at South Kensington. Unfortunately this strain of difficult and uncongenial departmental work brought on threatenings of the disease from which he had suffered in his

early youth, and for which he had frequently to have recourse to opiates. An accidental overdose of morphia cut short his life at the Residences, South Kensington Museum, on 10 June 1896. His body was cremated at Woking, and the remains interred at Brookwood cemetery. Middleton married, in December 1892, Bella, second daughter of William J. Stillman, American correspondent of the 'Times' at Rome, by whom he left one child.

[Private information.]

L. C.

MILLAIS, SIR JOHN EVERETT (1829-1896), painter of history, genre, landscape, and portraits, and president of the Royal Academy, born at Southampton on 8 June 1829, was the youngest son of John William Millais, who belonged to an old Norman family settled in Jersey for many generations, and Emily Mary, daughter of John Evamy, and the widow of Enoch Hodgkinson, by whom she had two sons. The father (who died in 1870) was noted in the island of Jersey for his good looks and charming manners. He was also a good musician and a fair artist, and held a commission in the Jersey militia. He arrested Oxford who shot at the queen in 1840. The Millais lived at Le Quaihouse, just outside St. Heliers, before they removed to Southampton, where Sir John and his elder brother William Henry (also an artist, and the author of 'The Game Birds of England') were born. The family returned to Jersey soon after Millais's birth, and there he developed a taste for natural history and sketching. A frame containing drawings done when only seven years old was exhibited at the Royal Academy in the winter of 1898. He drew a portrait of his maternal grandfather, John Evamy, fishing, when he was eight years old, and another of his father when he was eleven. He was sent to school, but showed no inclination for study, and was expelled for biting his master's hand. Among the friends of the Millais at Jersey were the family of the Lempriers, one of whom (afterwards General Lempriere), the grandson of Philip Raoul Lempriere, Seigneur of Rosolle Manor, was the model for the Huguenot in Millais's famous picture of that name. In 1835 the family removed to Dinan in Brittany, where the child delighted the French military officers by his sketches. One of the colonel smoking a cigar, and another of the 'tambour major' are specially mentioned in his biography by his son. In 1837 the family once more returned to Jersey, where John received his first instruction in art from a Mr. Bessel,

the best drawing-master in the island, who soon confessed that he could not teach his pupil anything more, and in 1838 he came to London with an introduction to Sir Martin Archer Shee [q. v.], the president of the Royal Academy. On the way he sketched Mr. (afterwards Sir Joseph) Paxton [q. v.] asleep in the coach. Sir Martin told his parents that it was their plain duty to fit their son for the vocation for which nature had evidently intended him, and in the winter of 1838-9 he was sent to the well-known school of Henry Sass [q. v.] in Bloomsbury. In the same year he obtained a silver medal from the Society of Arts, and in 1840 became a student at the Royal Academy. Here he carried off every prize. His first picture in oils was 'Cupid crowned with Flowers,' painted in 1841. In 1843 he gained the first silver medal for drawing from the antique, and when seventeen the gold medal for an oil painting, 'The Young Man of Benjamin seizing their Brides.'

Millais still retained his disinclination for ordinary studies, and received all his education (except in art) from his mother, who read to him continually. He wore his boyish costume of gounfred tunic and wide falling collar till long past the usual age, and for this reason was called 'the child' by his fellow-students at the academy—a name which stuck to him long afterwards. He was tall and slim, high-spirited and independent, though very delicate. He was fond of cricket and of fishing, and made many friends. As early as 1840 he was asked to breakfast by Samuel Rogers, and met Wordsworth, and in 1846 he stayed with his half-brother, Henry Hodgkinson, at Oxford, and was introduced to Wyatt, the dealer in art, at whose house he frequently stayed as a guest during the next three years. On a window in the room he occupied he painted in oils 'The Queen of Beauty' and 'The Victorious Knight.' Wyatt bought his picture of 'Cymon and Iphigenia' (now belonging to Mr. Standen), painted in 1847 for the Royal Academy, but not exhibited. To 1849 belongs a portrait by Millais (exhibited in 1850) of Wyatt and his grandchild. Other acquaintances made at Oxford were Mr. and Mrs. Combe of the Clarendon Press, with whom he became intimate, and Mr. Drury of Shotover Park. He earned money also, and from the age of sixteen defrayed the greater part of the household expenses in Gower Street, where he lived with his family. In 1845 he was engaged to paint small pictures and back-grounds for a dealer named Ralph Thomas for 100*l.* a year. He recorded his delight

at receiving his first cheque (still preserved) by endorsing it with a drawing of himself. They fell out, and Millais threw his palette at Thomas, and so ended the connection for a while, but it was afterwards renewed (though not for long) at an increased salary of 150*l.* a year.

In 1846 Millais exhibited at the Royal Academy for the first time. The subject of his picture was 'Pizarro seizing the Inca of Peru.' This was followed in 1847 by 'Elgiva seized by the Soldiers of Odo,' John (known as Lester) Wallack, the actor [see under WALLACK, JAMES WILLIAM, *ad fin.*], who married Millais's sister, sat for Pizarro. In 1847 also he entered unsuccessfully into the competition at Westminster Hall for the decoration of the houses of parliament, sending an oil picture of 'The Widow's Mite' (ten feet seven inches by fourteen feet three inches), since cut up. He did not exhibit at the academy in 1848.

Down to this time his career had differed from those of other academy students only by its distinguished success, and his pictures had shown little if any divergence from the ordinary ideals and methods taught in the schools; but about the beginning of 1848 he and Mr. Holman Hunt, deeply conscious of the lifeless condition into which British art had fallen, determined to adopt a style of absolute independence as to art dogma and convention, which they called 'Pre-Raphaelitism.' The next to join the movement was Dante Gabriel Rossetti [q.v.], who at this time was struggling with the technical difficulties of painting under the instruction of Holman Hunt, but was unknown to Millais. The three met together at the Millais's house in Gower Street, where Millais showed them engravings from the frescoes in the Campo Santo at Pisa, and all agreed to 'follow' them. The result was the formation of the celebrated 'Pre-Raphaelite Brotherhood,' consisting of seven members. There has been much dispute as to what were the precise principles of the brotherhood; but, according to Millais, 'the Pre-Raphaelites had but one idea, to present on canvas what they saw in nature,' and to this idea he adhered from first to last. Another disputed point is the influence of Rossetti on Millais's earlier work. This was entirely denied by Millais himself; but it was probably greater than he knew, for Rossetti's picture of 'The Girlhood of Mary Virgin' was clearly the forerunner of Millais's 'Christ in the House of his Parents,' and there was a spirit of poetical romance in Millais's work while their closest intercourse lasted (1848-52) which slowly faded away afterwards. The intense intel-

lectual and spiritual influence of Rossetti on the brotherhood generally cannot be denied. He was the ruling spirit of their short-lived organ, 'The Germ' (4 parts, 1850), for which Millais made one or two sketches and an etching and wrote a story, though none of them appeared. (A copy of the etching will be found in 'British Contemporary Artists.') On the other hand Millais was very independent and impatient of control, and would not read the first volume of 'Modern Painters' (1841), in which principles like those practically followed by the Pre-Raphaelites were first recommended to young artists. It is also to be remembered that Rossetti was at this time a mere tyro in painting, whereas Millais was a trained artist, and that of love of nature and skill in expressing it Millais could learn nothing from Rossetti.

At all events it is quite certain that Mr. Holman Hunt and Millais were most intimately associated in all their views and in their practice. They had worked together in complete sympathy from the days of their studentship, and they together started the new movement. The depth of the gulf between it and the old is clearly seen if we compare the 'Pizarro' of 1846 with the 'Isabella' of 1849—a banquet scene from Keats's poem of 'Isabella and the Pot of Basil' founded on a story by Boccaccio. In this nearly all the characters were painted from his relatives and friends. Among them were three at least of the brotherhood, the two Rossettis, Dante and William, and F. G. Stephens, and it contains all the characteristics of 'Pre-Raphaelite' work—most minute imitation of nature down to the smallest detail, all persons and objects studied directly from the originals, and disregard of composition, generalisation, and all convention. The tale was told with dramatic power, and the expression of the heads, with the exception of the lovesick Lorenzo, was excellent. Millais never again painted a composition of so many figures, or of greater patience and success in execution. The picture was bought by Mr. Windus, was for a time in the possession of Thomas Woolner [q.v.], the sculptor (and one of the brethren), and is now in the gallery of the corporation of Liverpool. It was exhibited in 1849.

Millais's next important picture was a supposed scene in Christ's childhood, treated as an incident in the ordinary life of a carpenter's family. It is usually known as 'The Carpenter's Shop,' or 'Christ in the House of his Parents,' but in the catalogue of the Royal Academy it had, in place of a title, a quotation from Zechariah xiii. 6. The boy has wounded the palm of his hand with a

naïf. His mother kneels by him and kisses him. St. Joseph, St. Anne, and St. John, undistinguishable from ordinary human beings, play different parts in the little drama of sympathy, just as a carpenter's family might do any day in any country. They are all English in type. Such a treatment of a scene in the life of the Holy Family aroused great hostility. The 'Times' stigmatised it as 'revolting,' and its minute finish of detail as 'loathsome.' Violent attacks came from nearly all quarters, including 'Blackwood,' and even from Charles Dickens in 'Household Words,' who afterwards owned his mistake. Another picture of this year, 1850, 'Ferdinand lured by Ariel,' met with scarcely better reception from the critics, and was refused by the dealer for whom it was painted. Nevertheless, 'The Carpenter's Shop' was bought for 150*l.* by a dealer named Farrer, and 'Ferdinand' by Mr. Ellison of Sudbrooke Holme, Lincolnshire, for the same sum. About this time Millais began to feel that the excessively minute handling which was one of the characteristics of the Pre-Raphaelites was a mistake (see WILLIAM BELL SCOTT'S *Autobiographical Notes*, i. 278), but little difference in this respect is to be noted in his work of the next few years. The most notable of these were: 'The Return of the Dove to the Ark,' and 'The Woodman's Daughter,' from a poem by Patmore, and 'Mariana of the Moated Grange' (all exhibited in 1851); 'The Huguenot' and 'Ophelia' (1852); 'The Proscribed Royalist' and 'The Order of Release' (1853). 'The Return of the Dove,' though the girls who are receiving the bird were very plain, was exquisitely painted, and Ruskin wished to buy it; but it was purchased by Mr. Combe for 150 guineas, who bequeathed it to the university of Oxford. The background of 'The Woodman's Daughter' was a wood near Oxford, and the strawberries which the squire's boy is offering to the labourer's daughter were purchased in Covent Garden—four for 5*s.* 6*d.* 'Mariana' was purchased by Mr. Windus, and now belongs to Mr. H. F. Makine. 'The Huguenot,' the figures of which were painted from Mr. Arthur (afterwards General) Lempriere and Miss Ryan, was bought by a dealer named White for 800*l.* 'Ophelia' was a portrait of Miss Siddall (Mrs. D. G. Roseetti), and the scene was painted by the side of the Ewell at Kingston. For 'The Proscribed Royalist' Arthur Hughes, the well-known painter, set, Miss Ryan again appearing in the female figure. The scene was a little wood near Hayes in Kent. In 'The Order of Release' the female figure was painted from Mrs.

Ruskin, who was afterwards to become his wife. During these years Millais was wont to spend much time in the country to paint his backgrounds, lodging at farmhouses and cottages, in company with his brother, Mr. Holman Hunt, and Charles Allston Collins. Having settled upon the piece of landscape he meant to introduce, he would paint it day by day with exact fidelity and almost microscopic minuteness. Such backgrounds, not only in his pictures, but those of Holman Hunt and their followers, form a very distinct feature of the strict 'Pre-Raphaelite' period. For literal truth to nature's own colours and rendering of intricate detail, those by Millais stand almost alone, especially the river scene in 'Ophelia.'

All this time Millais was fighting hard for his new principles of art, and suffered much from the antagonism of critics, dealers, and others, including many artists of his older school; but he managed to sell his pictures in spite of all, and gradually achieved popularity also. With the exhibition of 'The Huguenot' the fight may be said to have been won, as far at least as the public were concerned. Its sentiment, its refinement of expression, and thorough execution appealed to nearly all who saw it. But Millais and the Pre-Raphaelite cause had many supporters and sympathisers, the most important of whom was John Ruskin (q. v. Suppl.), who expressed his enthusiasm in letters to the 'Times' and in his pamphlet called 'Pre-Raphaelitism' (1851). Millais first met Ruskin in this year, and two years afterwards he was joined by Ruskin and his wife at Wallington, the Trevelyan's house in Northumberland, and went to Scotland with them. He made several architectural designs for Ruskin, and in 1854 painted a portrait of him standing by the river Finlass, which was bought by Sir Thomas Dyke Acland (q. v. Suppl.). In the autumn of 1853 he took to hunting with John Leesh (q. v.), and in November of the same year he was elected an associate of the Royal Academy. By this time the brotherhood, whose meetings had always been few and far between, had died a natural death, and Millais had soon to lose the companionship of Mr. Holman Hunt, who went to Syria in February 1854. In this year Millais did not exhibit at the Royal Academy, but in 1855 he sent three pictures, including 'The Rescue,' a scene from a fire in a modern town house, with a frantic mother seizing her two children from the arms of a fireman. This was painted in honour of brave firemen, and was a new departure, for the scene was completely modern, and the conception was entirely his own. The mother was painted

from Mrs. Nassau Senior, the sister of Tom Hughes [q. v. Suppl.], author of 'Tom Brown's School Days.' Ruskin, in his notes on the principal pictures in the academy, declared it to be 'the only great picture exhibited,' adding that it was 'very great,' and that 'the immortal element is in it to the full.' In the great Paris Exhibition of 1855 Millais was represented by 'The Order of Release,' 'Ophelia,' and 'The Return of the Dove.' This was the year of Leighton's 'Cimabue,' and the two painters met for the first time. In July of this year (1855) Millais married Euphonia Chalmers, the oldest daughter of George Gray of Bowerswell, Porth, who had obtained a decree of the 'nullity' of her marriage with John Ruskin. They went to live at Annat Lodge, near Bowerswell. In the garden of this residence was painted the celebrated picture of 'Autumn Leaves,' which was exhibited in 1856 with 'Peace Concluded, 1850,' 'The Blind Girl,' 'L'Enfant du Régiment,' and a 'Portrait of a Gentleman.' 'Autumn Leaves' represents four girls hopping up dead leaves in a warm twilight or afterglow; 'Peace Concluded,' a wounded officer and his wife, with their children playing with animals out of a Noah's ark—a cock, a bear, a lion, and a turkey, symbolical of the nations engaged in the late war in the Crimea. In his 'Notes' Ruskin strongly praised 'Autumn Leaves' and 'Peace Concluded,' indeed, his praise of the latter was extravagant. Of 'Autumn Leaves' he said it 'is by much the most poetical work the painter has yet conceived, and also, as far as I know, the first instance existing of a perfectly painted twilight,' and of both he prophesied that they would 'rank in future among the world's best masterpieces.' 'The Blind Girl' contained two figures—the blind girl and her companion, a younger girl, resting on a bank beside a common. The blind girl, with red hair and a concertina, is not beautiful, but the group is pathetic from its very truth and simplicity. The background—one of the best the artist ever painted—represents the common and village of Icklesham, near Winchelsea. 'L'Enfant du Régiment,' now called 'The Random Shot,' is supposed to be an incident in the French Revolution, and represents a wounded child lying on a soldier's cloak in a church. The tomb on which the cloak is spread was painted from one in Icklesham church.

In the spring of 1857 Millais took lodgings in Savile Row. His studio in Langham Chambers was shared with his friend, J. D. Luard, from 1853 to 1860, when Luard died. The principal pictures exhibited in 1857 were

'Sir Isumbras at the Ford' and 'The Escape of a Heretic.' The knight is old, in golden armour, mounted on a black horse, and is bearing with him two poor children across the river. In front of him a girl is seated, and a boy clings to him from behind. Behind, under a brilliant evening sky, is a landscape composed from the Bridge of Eden and the range of the Ochills, with a tower painted from old Eleho Castle. On the further bank are two nuns.

The comparative freedom with which he was now painting offended Ruskin, who devoted to 'Sir Isumbras' several pages of stern reproof, declaring, in his 'Notes' for 1857, that the change in the artist's manner from the years of 'Ophelia' and 'Mariana' 'is not only Fall—it is Catastrophe.' This picture was very cleverly caricatured in a lithograph by F. Sandys, in which the horse is turned to a donkey branded J. R., the knight into Millais, while Dante Rossetti and Holman Hunt take the places of the girl and the boy. 'Sir Isumbras' was bought by Charles Reade, the novelist, and is now in the possession of Mr. R. V. Benson, at whose request the artist repainted the horse and its trappings. Ruskin was equally severe on 'The Escape of the Heretic' on account of its subject and the violence of its expression. Millais's next important pictures were 'Apple Blossoms' or 'Spring,' and 'The Vale of Rest,' which were exhibited in 1859 (he sent no picture to the academy in 1858). The subject of 'The Vale of Rest' (two nuns in a convent garden, one digging a grave) had occurred to him during his honeymoon, and 'Apple Blossoms' was commenced in 1856. The first was distinguished by its impressive sentiment and the background of oaks and poplars seen against an evening sky. The face of one of the nuns was of repellent ugliness, and was repainted in 1862 from a Miss Lane. 'The Vale of Rest' is now in the Tate Gallery. Both pictures were painted at Bowerswell. In 'Apple Blossoms' some beautiful girls are sporting in an orchard under boughs of brilliant apple blossom, painted with great force and freedom. The central figure is Miss Georgiana Moncrieff (Lady Dudley); Lady Forbes, two sisters-in-law, and a model sat for the others. Ruskin extolled the power with which these pictures were painted, and called 'The Vale of Rest' a 'great picture,' but still insisted on the deterioration of the artist. At this time Millais still seems to have suffered much from the animosity of critics and others, and to have felt anxiety about the future; but he sold all his pictures at good prices, and in 1860 took a house in Bryanston Square,

from which he moved to 7 Cromwell Place, South Kensington, in 1862. In 1860 he exhibited 'The Black Brunswicker,' a parting scene between an officer and his fiancée before the battle of Waterloo. The officer was painted from a private in the life guards, and the lady from Miss Kate Dickens (Mrs. Parugini), the daughter of Charles Dickens. The picture was less refined in conception than his other historic love scenes, 'The Huguenot' and 'Proscribed Royalist,' but it was painted with great skill, and may be said to terminate the period of transition from his first or Pre-Raphaelite manner, and that of complete breadth and freedom. Other changes besides that of style begin to be more marked. He became less assiduous in his search for subjects, less romantic in his feeling, more content to paint the life about him, without drawing much upon his imagination, or even his faculty for refined selection. The portrait element, always strong in his work, became stronger, and his family furnished ready subjects for many pictures. At the same time his invention was much employed in illustration, especially of Trollope's novels, 'Orley Farm,' 'Framley Parsonage,' 'The Small House at Allington,' 'Rachel Ray,' and 'Phineas Finn,' for which he made eighty-seven drawings, beginning with 'Framley Parsonage' in the 'Cornhill Magazine.' Trollope was one of his friends at this time with Thackeray, Wilkie Collins, and John Leech. From 1860 to 1869 he was continually employed in designs to be cut upon wood for Bradbury & Evans, Macmillan, Huret & Blackett, Chapman & Hall, Smith, Elder, & Co., Dalziel Bros., Mr. Gambart, Moxon (the illustrated edition of Tennyson). He was one of the most prolific and the cleverest of all the book illustrators of this period, so celebrated for its revival of woodcutting, and one or more cuts from his designs are to be found in 'Once a Week,' 'The Cornhill,' 'Punch,' 'The Illustrated London News,' 'Good Words,' 'London Society,' and many books. Later in life (1879) he illustrated 'Barry Lyndon' for the edition deluxe of Thackeray's works. He also made many water-colour replicas of his pictures. He was elected a Royal Academician in 1863. Among his most celebrated historical and poetical pictures of this period (1860-70) were 'The Eve of St. Agnes' (1863), 'Romans leaving Britain' and 'The Evil One sowing Tares' (1865), 'Jephthah' (1867), 'Rosalind and Celia' (1868), 'A Flood,' 'The Boyhood of Raleigh,' and 'The Knight Errant' (1870). The subject of 'The Eve of St. Agnes' is taken from Keats's poem. The heroine is

his wife, and the moonlit room in which 'her rich attire creeps rustling to her knees' is at Knole House, Kent. It was painted in five days and a half, in December 1862, and is one of the finest of his works. It now belongs to Mr. Val Prinsep, R.A. 'The Knight Errant' is remarkable from the fine execution of a full-length life-size female figure, the only one to be found in the artist's works. Of the others the most successful, perhaps, were 'The Evil One sowing Tares,' a version in oils of one of a fine series of designs for 'The Parables of Our Lord,' published by Bradbury & Evans, 'A Flood' (a child carried in its wooden cradle down the swollen stream), and 'The Boyhood of Raleigh,' in which two boys (his own sons Everett and George) are listening to the strange tales of a sailor returned from the Spanish main. The newest element in his work of this period was supplied from his own nursery, which afforded subjects for many very popular pictures, like 'My First Sermon,' 'My Second Sermon,' 'Sleeping,' 'Waking,' 'Sisters,' 'The First Minuet,' and 'The Wolf's Den.'

Portraits of other children were also among his greatest successes, like 'Leisure Hours,' the daughters of Sir John Pender with a bowl of goldfish, and 'Miss Nina Lehmann' (Lady Campbell). Most of his pictures were now single figures, with more or less sentiment, like 'Stella' and 'Vanessa,' 'The Gambler's Wife,' 'The Widow's Mite,' and 'Swallow, Swallow.' A more important composition, 'Pilgrims to St. Paul's' (Greenwich pensioners before Nelson's tomb), appealed to national feeling. Technically he had reached full maturity, evidently exulting in his command over his materials and indulging occasionally in a rivalry with the broadest style of Velazquez, as in 'Vanessa,' and 'A Souvenir of Velazquez,' his diploma picture. Belonging to this period, though not exhibited till 1871, was the grandest of his biblical pictures called 'Victory, O Lord,' representing Aaron and Hur holding up the hands of Moses on the top of the hill (Exodus xvii. 12).

While at work no one worked harder than Millais, but no one enjoyed his holidays more, or was more convinced of the importance of long and thorough ones. Every year he spent some months in the country, usually in Scotland, where he could indulge his love of shooting and salmon fishing. Most, if not all, of his pure landscapes were also painted there. In 1856 he took the manse of Brig-o-Turk in Glenfinlas, and in 1860 the shooting of Kineraig, Inverness-shire, with Colonel Aitkin. In 1865

he was shooting with Sir William Harcourt near Inverary, and afterwards visited Florence and Italy in company with Sir William and his wife, and in 1868 he was shooting again with Sir William and with Sir Edwin Landseer, and went with Mr. Frith to Paris, where they made the acquaintance of Rosa Bonheur.

'Chill October,' his first exhibited pure landscape, afterwards bought by Lord Armstrong, was at the academy in 1871, and was painted in the open air from a backwater of the Tay just below Kinfauns, near Perth. It was followed by 'Scotch Firs' and 'Winter Fuel,' painted in 1874, 'The Fringe of the Moor' (1875), 'Over the Hills and Far Away' and 'The Sound of many Waters' (1876), all of which were equally remarkable for their truth to nature and fine execution, but they were without the pathetic sentiment of 'Chill October.' It was to portrait and landscape that he devoted himself mainly after 1870, and to single figures of children and pretty girls under fancy titles like 'Cherry Ripe,' 'Little Miss Muffet,' 'Cuckoo,' 'Pomona,' 'Olivia,' and many more which were very popular in engravings and in coloured prints for the illustrated newspapers. None of these paintings were perhaps more beautiful or popular than 'Sweetest eyes were ever seen,' 'Caller Herrin,' and 'Cinderella,' for which Miss Bentrice Buxton sat. Inspired by a stronger sentiment were 'The North-West Passage' (1874), 'The Princes in the Tower' (1878), 'The Princess Elizabeth' (1879), and two illustrations of Scott, 'Effie Deans' and 'The Master of Ravenswood,' painted for Messrs. Agnew in 1877 and 1878. 'The North-West Passage' represents a determined old mariner (a portrait of Edward John Trelawny [q.v.]) in a room overlooking the sea and strewn with charts. He listens to a young woman who is reading some tale of Arctic exploration. The artist never painted a finer head than that of the sailor, and the execution throughout is so fine that the picture is regarded by some as his masterpiece. 'A Yeoman of the Guard' (1877), with his age-worn face and uniform of scarlet and gold, is as strong in character, and perhaps the artist's most splendid effort as a colourist. It was, however, as a portrait painter that he added most to his great reputation during the last twenty-five years of his life. Among his most celebrated sitters were the Marquises of Salisbury, Hartington (Duke of Devonshire), and Lorne (Duke of Argyll), the Earls of Shaftesbury, Beaconsfield, and Rosebery,

Lord Tonnyson, W. E. Gladstone, John Bright, Sir Charles Russell (Lord Russell of Killowen), Cardinal Newman, George Grote, Sir William Sturndale Bennett, Sir James Paget, Sir Henry Thompson, Thomas Carlyle, Wilkie Collins, Sir Henry Irving, J. C. Hook, R.A., and Du Maurier, one of the most intimate of all his friends. All these portraits are lifelike and powerful, giving the very presence of the originals, and inspiring even their clothes with individuality. He was never more successful than in realising the grand head and keen expression of W. E. Gladstone, whom he painted in 1879, 1885, and 1890. He drew Charles Dickens after his death. He was on very friendly terms with Gladstone, Lord Beaconsfield, Lord Rosebery, and indeed with nearly all his sitters.

Among his best portraits of ladies may be mentioned 'Hearts are Trumps' (the three Misses Armstrong), Mrs. Ceventry Patmore, Mrs. Bischoffshoim, Mrs. F. H. Myers, Mrs. Stibbard (his wife's sister), Mrs. Jopling, the Duchess of Westminster, and Lady Campbell. To his portraits of children already mentioned may be added Miss Dorothy Thorpe, Lady Peggy Primrose (afterwards Countess of Crewe), and the Princess Marie of Edinburgh, which belonged to Queen Victoria.

In 1875 Millais took a trip to Holland with some of his wife's family, and was greatly impressed by the masterpieces of Rembrandt, Franz Hals, and Van der Helst. In 1878 Millais was represented at the Paris Exhibition by 'Chill October,' 'A Yeoman of the Guard,' 'Madam Bischoffshoim,' 'Hearts are Trumps,' and 'The Bride of Lammermoor,' which greatly increased his reputation in France, and he was made an officer of the legion of honour. In this year came the greatest sorrow of his life in the loss of his second son, George, who had nearly completed his twenty-first year. In 1879 he left Cromwell Place for a house built for him at Palace Gate from the designs of Philip Charles Hardwick, where he remained till he died. In 1880 he painted his own portrait for the Uffizi Gallery at Florence. He still paid his annual visit to Scotland, and in 1881 took a house at Murthly, Little Dunkeld, Perthshire, with good fishing and shooting. At Murthly or its neighbourhood all his other landscapes were painted: 'Murthly Moss,' 'Murthly Water,' 'Dew-drenched Furze,' 'Lingering Autumn,' and others. In 1881 a small exhibition of his pictures was held by the Fine Art Society. On 16 July 1885, at Gladstone's suggestion, he was created a baronet,

and among his other honours were honorary degrees at the universities of Oxford (9 June 1850) and Durham. He was an associate of the Institute of France, an honorary member of the Royal Scottish and Royal Hibernian academies, a member of the academies of Vienna, Belgium, Antwerp, and of St. Luke, Rome, and San Fernando, Madrid; was an officer of the order of Leopold, of the order of St. Maurice, and of the Prussian order, 'Pour le Mérite.' In 1886 a large collection of his works was exhibited at the Grosvenor Gallery.

In 1891 his tenancy of Murthly expired, and he took a shooting with residence at Newmill, which was burnt down in January 1892. About this time his health began to fail. After a bad attack of influenza he was troubled with a swelling in his throat, and suffered much from depression. He still, however, worked whenever he could, and executed with enjoyment several pictures, including 'St. Stephen,' 'A Disciple,' and 'Speak! Speak!' which was purchased out of the Chantry bequest. The admirable portraits of Mr. John Hare the actor and Sir Richard Quain also belong to his last years. The last subject picture exhibited by him was 'The Forerunner' (St. John Baptist), which was painted as well as ever, though somewhat trivial in motive.

In 1895, in consequence of the illness of the president, Sir Frederic (afterwards Lord) Leighton [q. v. Suppl.], he was called upon to preside at the Royal Academy banquet, a task he accomplished with great difficulty, owing to the weakness of his voice. On the death of Lord Leighton, on 25 Jan. 1896, he was unanimously elected to succeed him in the presidential chair, but he did not live long to enjoy the honour. He gradually failed, and died of cancer in the throat on 13 Aug. 1896, and was buried in St. Paul's Cathedral on the 20th. He left a widow and six children; Lady Millais died on 23 Dec. 1897 of the same disease; a pencil drawing by herself of Millais's portrait of her is given in Millais's 'Life,' i. 218, and another portrait of her drawn by G. F. Watts, R.A., is the frontispiece of the second volume. Millais's eldest son Everett, who had succeeded to the baronetcy, died on 7 Sept. 1897. The third baronet Sir John Everett Millais, was son of the second baronet.

Notwithstanding the opposition he had to conquer as a Pre-Raphaelite, Millais's career was one of almost continuous success and prosperity, and perhaps there is no greater proof of his popularity than the number (over a hundred) of his pictures which were

separately engraved on steel. The winter exhibition of the Royal Academy 1898 was entirely devoted to his works.

It is too early to fix precisely the position of Millais as an artist, but there is no doubt that he was one of the greatest painters of the nineteenth century, and that he did more than any other of his generation to infuse a new and healthy life into British art. There was nothing of the idealist or visionary in his designs, and he had not a great imagination; but he could paint what he saw with a force and a truth which have seldom been excelled, and his intense love of nature and of his kind filled his work with life and poetry.

As a man Millais was frank, manly, and genial, not over-refined, but devoid of affectation. Though of no great intellectual power, he had a strong fund of common sense, and, if not a great reader, was fond of poetry (especially Tennyson and Keats), of the best fiction, and of books of travel, and he could write graceful and humorous verses. In manner and appearance he resembled a country gentleman rather than an artist. He was devoted to his art, but not blind to the advantages of success and prosperity. He was the life of his own family, and regarded with affection by a very large and distinguished circle of acquaintance; but he did not care for ordinary social gatherings, and preferred to spend his evenings at the Garrick Club, where he was sure to meet a number of congenial friends. In person he was very handsome, his face (which in his youth Rossetti described as that of an angel) retained great beauty throughout life, and his figure grew well-knit and strong. His fine presence and cheery voice made themselves felt wherever he went, and there were few who knew him well who would not echo the words of Sir George Reid, P.R.S.A., who wrote of him as 'one of the kindest, noblest, most beautiful and lovable men I ever knew or ever hope to know.'

Besides the portrait of Millais which was painted by himself for the Uffizi Gallery, there are portraits of him by John Philip in 1841, by G. F. Watts, R.A., in 1871, and by Sir Henry Thompson, bart., in 1881. These, with sketches of him by his brother, W. H. Millais, John Leech, and others, are reproduced in J. G. Millais's 'Life and Letters' (1899).

The following works of Millais are to be found in public galleries, National Gallery, Trafalgar Square: 'Portrait of W. E. Gladstone' (1879) and 'A Yeoman of the Guard.' National Gallery of British Art:

'Ophelia,' 'The Vale of Rest,' 'The Knight Errant,' 'The North-West Passage,' 'Mercy,' 'St. Bartholomew's Day, 1572,' 'Saint Stephen,' 'A Disciple,' 'Speak! Speak,' 'The Order of Release, 1746,' and 'The Boyhood of Raleigh.' Victoria and Albert Museum: 'Pizarro seizing the Inca of Peru' and 'Lord Lytton.' The National Portrait Gallery: 'Lord Beaconsfield,' 'Thomas Carlyle,' 'Wilkie Collins,' and 'Leech.' Oxford University Gallery: 'The Return of the Dove' and 'Portrait of Thomas Combe.' Manchester Corporation Gallery: 'Autumn Leaves,' 'A Flood,' 'Victory, O Lord,' 'Winter Fae,' and 'Bishop Fraser.' Birmingham Art Gallery: 'The Huguenot' (1856), 'The Widow's Mile,' and 'The Blind Girl.' Holloway College: 'Princess in the Tower' and 'Princess Elizabeth.' Liverpool Art Gallery: 'Isabella,' 'The First Minuet,' and 'The Martyr of the Solway.' St. Bartholomew's Hospital: 'Sir James Paget' and 'Luther Holden.' University of London: 'George Grote.' British and Foreign Bible Society: 'Lord Shaftesbury.' University of Glasgow: 'Dr. Caird.' Corporation of Oldham: 'F. O. Barlow, R.A.'

MILLIGAN, WILLIAM (1821-1893), Scottish divine, was born at Edinburgh on 15 March 1821, the eldest of seven children of the Rev. George Milligan and his wife, Janet Fraser. His father, a licentiate of the church of Scotland, was then engaged in teaching at Edinburgh, and Milligan was sent to the high school, where he was dux of his class. In 1832, when his father became minister of the Fifeshire parish of Elie, he was transferred to the neighbouring parish school of Kilmouchar, and thence proceeded in 1835 to the university of St. Andrews. Though only fourteen years of age, he earned from that day, by private teaching, as much as paid his class-fee, much to his parents' relief, for Elie was a 'small

living.' Graduating M.A. in 1839, and devoting himself to the ministry, he took his divinity course partly at St. Andrews and partly at Edinburgh, and for a time he was tutor to the sons of Sir George Suttie of Prestongrange. During the disruption controversy of 1843 Milligan adhered to the church of Scotland. He wrote to his father that he was resolved to 'remain in . . . and lend any aid he could to those who are ready to unite in building up, on principles agreeable to the word of God, the old church of Scotland.' He was at this time assistant to Robert Swan, minister at Abercrombie; next year he was presented to the Fifeshire parish of Cameron and ordained.

In 1845 his health gave cause for anxiety, and he obtained a leave of absence for a year, which he spent in Germany, studying at Halle. He made the acquaintance, among others, of Neander, in whom he found a kindred spirit. Promoted in 1850 to the more important parish of Kilmouchar, he married, in 1859, Annie Mary, the daughter of David Macbeth Moir [q. v.]; and in 1860 he was appointed first professor of biblical criticism in the university of Aberdeen. He worked hard; but his liberal politics and mild broad-church views were not congenial to many of his colleagues, and his amiability concealed from his students the real strength of his character. Nevertheless his power and influence grew, and in 1870 he joined the company formed for the revision of the English New Testament. From that time onward he was a prolific writer. His style, prolix at first, became pure and graceful, and in such works as those on the resurrection and ascension of Jesus Christ and on the Revelation of St. John he took a foremost place among British theologians. In the church courts, too, his rise was steady. In 1872 he was sent, together with the Rev. J. Marshall Lang (now Principal Lang) as a representative from the general assembly of the church of Scotland to the assembly of the presbyterian church in the United States; in 1875 he was elected deputy-clerk of the general assembly; and in 1886 he succeeded Principal John Tulloch [q. v.] as principal clerk.

Already in 1882, partly in recognition of his work as a New Testament reviser, he had been elevated to the moderator's chair. His address on the occasion was notable for its declaration that, in any scheme for church reunion in Scotland, the Scottish episcopalianism must be considered; while its enunciation of doctrine concerning the church called forth the warm approval of Canon Liddon [q. v.], who wrote and

thanked him for it. Although in his earlier days his humanitarian feelings, and his enthusiasm for liberty and progress, had allied him with those who were then called broad churchmen, Milligan did not have at any period of his career the slightest sympathy with the disregard for doctrine which has sometimes marked the members of that school. Ultimately he ranged himself with high churchmen, being, he declared, impelled to join them by increased study of the New Testament. His doctrine of the church he gathered for himself from the Epistle to the Ephesians, on which he had contributed an important article to the ninth edition of the 'Encyclopædia Britannica.' His views on the importance of dogma and on the sacraments he learned, as he believed, from St. John, of whose writings he was a lifelong student and diligent expositor. This development of his opinions in no way limited his width of sympathy, nor did it interfere with the friendly intercourse, ecclesiastical as well as social, that he had been wont to hold with nonconformists—with Wesleyans like Dr. W. F. Moulton [q. v. Suppl.], or with independents like Principal Fairbairn. He had been a member for years of the Church Service Society. In 1892, when the Scottish Church Society was constituted 'to defend and advance catholic doctrine as set forth in the ancient creeds, and embodied in the standards of the church of Scotland, &c.,' he took an important part in its formation, and accepted office as its first president. The last letter he wrote from his death-bed was to the first conference of this society, then being held in Glasgow. A few days previously he had said that the greatest need of the church of Scotland was the restoration of a weekly celebration of the eucharist.

Milligan was keenly interested in social and especially in educational questions. In 1888 he went to Germany to inquire about technical education and continuation schools in that country; and the next year he visited Sweden to see the working of the Gottenburg licensing system. In Aberdeen he was an active philanthropist; and all over Scotland his services as a preacher were in much request.

When on the eve of retiring from his chair at Aberdeen owing mainly to failing eyesight, Milligan was suddenly seized with illness which soon proved fatal. He died at Edinburgh on 11 Dec. 1893. His wife, by whom he left issue, survived him. He left unfinished a work on the Epistle to the Hebrews, and forbad the publication of the parts he had written; some of his notes, however, have been used in a work on the

same subject, since published by his eldest son, the Rev. George Milligan.

There is a portrait of Milligan by Sir George Reid, P.R.S.A., at King's College, Old Aberdeen (one of the artist's happiest likenesses). In 1898 an altar-table, bearing an inscription from the pen of his friend and colleague, Principal Sir William Geddes [q. v. Suppl.], was erected to his memory in the College Chapel, Old Aberdeen.

Milligan's literary productiveness began in 1855, when he contributed the first of a series of papers to Kittlo's 'Journal of Sacred Literature.' In 1857 he addressed a 'Letter to the Duke of Argyll on the Education Question.' 'The Decalogue and the Lord's Day' (1866) was evoked by the controversy stirred in Scotland by a speech of Dr. Norman MacLeod's (1812-1872) [q. v.], as his 'Words of the New Testament' (1873)—written in conjunction with Dr. Roberts—belonged to the literature of New Testament revision. In 1878 appeared a volume on the 'Higher Education of Women;' and the next year he contributed to the 'Encyclopædia Britannica' his important article on the 'Epistle to the Ephesians,' 'The Resurrection of our Lord' and his 'Commentary on St. John' (in conjunction with Dr. Moulton) (1882), his 'Commentary on the Revelation' (1883), his 'Discussions on the Apocalypse' (1883), his 'Baird Lectures on the Revelation of St. John' (1886), 'Elijah' (1887), 'The Resurrection of the Dead' (1890), 'The Ascension and Heavenly Priesthood of our Lord,' and his presidential address on the 'Aims of the Scottish Church Society' (1892), were all productions of his ripened powers. Besides these he contributed many articles to periodicals. His last article was a notice 'In Memoriam' of Dr. Hort, which appeared in the 'Expository Times' (1893).

[In Memoriam, a memoir drawn up for his family by his Wife, Aberdeen, 1894; Aurora Borealis, Aberdeen, 1899; private information; personal recollections.] J. C.

MILLS, SIR CHARLES (1825-1895), first agent-general for the Cape Colony, was born in 1825 at Ischl, Hungary, and educated chiefly at Bonn. On 1 Feb. 1843 he enlisted as a private in the 98th regiment, and went to China, where he very soon attracted some notice, was made staff clerk in the adjutant-general's office, and excused ordinary duty. He seems to have readily mixed and become well known in the general society of the station, though nominally only 'Corporal Mills.' When his regiment was ordered to India in 1848, he was offered a clerkship in the consular service, but pre-

ferred to go into active military service. He was accordingly with his regiment through the Punjab campaign, and was present in 1849 at Chillianwallah, where he was wounded. He received the medal. On 6 June 1851 he received a commission as ensign in the 98th regiment, became adjutant on 17 June 1851, and on 22 Nov. 1854 was promoted lieutenant in the 50th foot.

Mills, having returned home with his regiment, became, in 1855, brigade-major under General Woolridge, who was charged with the formation of a camp of instruction for the German legion at the Crimea, and went to the seat of war with the legion under Sir Henry Storks [q.v.] During this war he gained special credit for his share in suppressing an attempt at mutiny among some of the Turkish troops. He received the order of the Medjidie.

At the close of the Crimean war, when the German legion was disbanded, it was proposed to make a military settlement of Germans on the eastern border of British Kaffraria. Mills, who now left the army, was selected as officer in charge of the settlement; he arrived at Cape Town in January 1858, and became successively sheriff of Kingwilliamstown and secretary to the government of Kaffraria. He had brought out three thousand men, who prospered almost without exception; he has himself stated that for seven years he was their 'guide, philosopher, and friend,' and looked upon this as the most successful work of his life. He had intended writing an account of the settlement, but never did so.

In 1865, when Kaffraria was incorporated with the Cape Colony, Mills retired on a pension. Subsequently, in 1866, he was elected to represent Kingwilliamstown in the parliament of the Cape, where he supported the government, opposing the party which at that time demanded responsible government. Sir Philip Wodehouse [q.v. Suppl.], who was then governor, eventually persuaded him to resign political life and enter the colonial service, and in 1867 appointed him chief clerk for finance in the colonial secretary's office. In 1872 he became permanent under-secretary in the same office when self-government was conferred on the colony; in this capacity he rendered considerable service in organising the Cape civil service. In 1880 he was sent to London to arrange as to the adjustment of expenditure on the Zulu war. When in 1882 the Cape government decided to have an agent-general of their own in London, Mills was at once selected for the position, which he took up in October 1882.

As agent-general Mills was a familiar and popular figure at all functions in which the colonies were interested. In 1888 he was executive commissioner for the Cape at the Colonial and Indian Exhibition. In 1887 he was delegate for the Cape at the colonial conference. In 1894 he was one of the delegates of the Cape at the intercolonial conference at Ottawa, and this was his last special service. He died at 110 Victoria Street, London, on 31 March 1896, and was buried at Highgate cemetery. He had been made C.M.G. in 1878, K.C.M.G. in 1885, and C.B. in 1886. He was a governor of the Imperial Institute.

Mills was in later years stout and florid, very cheery in manner, and fond of society. He was always reckoned businesslike and capable; at times working exceedingly hard, as when he stayed almost continuously in the colonial secretary's office for over three months in 1872. There are portraits of him in the colonial secretary's office, and in the Civil Service Club, at Cape Town.

[Times, 1 April 1896; Cape Times, 2 April 1896; Onpo (weekly) Argus, 3 April 1896, p. 6; Cape Illustrated Magazine, April 1895; Army Lists, 1860-8.] C. A. H.

MILNE, SIR ALEXANDER, first baronet (1806-1890), admiral of the fleet, second son of Sir David Milne [q.v.], was born on 10 Nov. 1806. In February 1817 he entered the Royal Naval College, and in 1819 first went afloat in the Leander, his father's flagship on the North American station. He afterwards served in the Conway with Captain Basil Hall [q.v.], in the Albion with Sir William Hoste [q.v.], and in the Ganges, flagship of Sir Robert Waller Otway [q.v.], on the South American station. In June 1827 he was appointed acting-lieutenant of the Cadmus brig on the Brazilian station, his commission being confirmed on 8 Sept. In 1830 the brig returned to England, and Milne was promoted to the rank of commander, 25 Nov. In December 1836 he commissioned the Snake sloop for service in the West Indies, where, in November and December 1837, he captured two slavers, having on board an aggregate of 665 slaves. He was promoted, 30 Jan. 1839, to be captain of the Crocodile, in which, and later on in the Cleopatra, he continued in the West Indies or on the coast of North America, and in charge of the Newfoundland fisheries, till November 1841. From April 1842 to April 1845 he was his father's flag captain at Devonport; and from October 1846 to December 1847 flag captain to Sir Charles Ogle at Portsmouth. For

the next twelve years to June 1859 he was a junior lord of the admiralty, and in acknowledgment of his long administrative service during a time of war and reorganisation he was made a civil K.C.B. on 20 Dec. 1858; he had previously been made a rear-admiral, 2 Jan. 1858.

In 1860 Milne was appointed to the command of the West Indies and North American station, which, during the tension of feeling caused by the American civil war, he exercised with great judgment and tact. The duration of his command was extended by a year, and on 25 Feb. 1864 he was nominated a military K.C.B., with authority to wear both orders. He was promoted vice-admiral 13 April 1865, and admiral 1 April 1870. From June 1866 to December 1868 he was senior naval lord of the admiralty, and from April 1869 to September 1870 was commander-in-chief in the Mediterranean. During the last two months of the time the Channol fleet joined the Mediterranean on the coast of Portugal, and the two were exercised together under the command of Milne, who was also desired to report on the behaviour of the Captain [see BURGESS, HUGH TALBOT; COLDS, GOWEN PIPERS]. On 3 Sept. he inspected the ship, and commented on the very unusual state of things—the water washing freely over the lee side of the deck. In the very exceptional circumstances he did not think it necessary to do more than express his dislike of this to Coles; and indeed, in view of the strong feeling that had been excited in favour of the invention, it is almost certain that the outcry would have been very great if Milne had ordered the ship's sails to be furled, and the ship had in consequence weathered the gale in safety. It would have been said that he was prejudiced against the ship, and had refused to give her a fair trial. On the early morning of 7 Sept. the Captain turned over bodily and went to the bottom.

On 24 May 1871 Milne was made a G.C.B., and from 1872 to 1876 was again first naval lord of the admiralty. On 1 Nov. 1876 he was created a baronet. During his long career he was a member of many commissions and committees. He was a commissioner for the exhibition of 1861 in London, and again for that of 1867 in Paris; in 1879 he was chairman of Lord Carnarvon's committee to inquire into the state of defences of our colonies, and in 1881 of a commission on the defence of British possessions and commerce. In 1887 he was chairman of a committee of officers of the navy and marines for the presentation of a 'jubilee offering'

to the queen. The presentation, of silver models of the Britannia, a first-rate ship of war in 1837, and of the Victoria, a first-class battleship of 1887, was actually made at Windsor on 22 Nov. 1888. During his later years he resided principally at Inversesk House, Musselburgh, and there he died, in consequence of a chill followed by pneumonia, on 29 Dec. 1896. He married in 1850, Euphemia, daughter of Archibald Cochran of Ashkirk, Roxburghshire, and by her (who died on 1 Oct. 1889) left issue, besides two daughters, one son, Archibald Berkeley Milne, a captain in the navy, who succeeded to the baronetcy.

[O'Byrne's Nav. Biogr. Dict.; Men and Women of the Time (1895); Times, 30 Dec. 1896; Burke's Peerage and Baronetage; Navy Lists.] J. K. L.

MITCHELL, ALEXANDER FERRIER (1822–1899), Scottish ecclesiastical historian, born at Brechin on 10 Sept. 1822, was son of David Mitchell, convener of local guilds, and his wife Elizabeth, daughter of James Ferrier of Broadmyre. After being educated at Brechin grammar school, he proceeded in 1837 to St. Mary's College, St. Andrews, winning an entrance bursary in classics. He graduated M.A. in 1841, and in 1844 was licensed to preach. After acting as assistant to the ministers at Meigle and Dundee, he was in 1847 ordained by Meigle presbytery to the charge of Dunnichen. Adhering to the established church during the secession movement, he became in 1848 a member of the general assembly. In the same year, when only twenty-six, he was appointed professor of Hebrew in St. Mary's College, and was one of the first to introduce into Scotland a scientific method of teaching Hebrew. As convener from 1856 to 1875 of the committee of the mission to the Jews, Mitchell did much to develop missions in the Levant, which he visited himself in 1857. His main interests lay, however, in Scottish ecclesiastical history, and in 1868 he succeeded John Cook as professor of divinity and ecclesiastical history in St. Mary's College.

Mitchell held his chair for twenty-six years, and during that period published a number of valuable works on Scottish ecclesiastical history. He was an active member of the Scottish Historical and Text Societies, and took a prominent part in the general councils of the Presbyterian Alliance, attending the meeting at Philadelphia in 1880. In 1885 he was elected moderator of the church of Scotland, and the address he delivered at the close of the session was separately published (Edinburgh and Lon-

don, 1885, 4to). In 1894 he retired from his professorship, and in 1895 was presented with his portrait, painted by Sir George Reid. He was made D.D. of St. Andrews in 1892, and honorary LL.D. of Glasgow in 1892. He divided his later years between his house at Gowan Park, near Brechin, and 56 South Street, St. Andrews. He died at St. Andrews on 22 March 1899, and was buried in Brechin cathedral churchyard. He married, in 1852, the eldest daughter of Michael Johnstone of Archbank, near Moffat, and was survived by three sons and four daughters.

Mitchell published: 1. 'The Westminster Confession of Faith,' 1866, 8vo; 3rd ed. 1867. 2. 'The Wedderburns and their Work,' 1867, 4to. 3. 'Minutes of the Westminster Assembly' (with Dr. John Struthers), 1874, 8vo. 4. 'The Westminster Assembly' (Baird Lectures), London, 1883, 8vo; new edit. Philadelphia, 1895. 5. 'Catechisms of the Church of Scotland,' Edinburgh, 1886, 8vo. 6. 'The Scottish Reformation,' ed. D. Hay Fleming, with biographical sketch by Dr. James Christie, London, 1900, 8vo. Mitchell also edited for the Scottish Text Society the 'Right Vey to Hounie,' by John Gau [q. v. Suppl.], in 1888, and the 'Gude and Godlie Ballatis' from the 1567 version in 1897. For the Scottish Historical Society he edited in 1892 and 1899 two volumes of 'The Records of the Commissions of the General Assembly,' 1040-50. He also published an edition of Archbishop Hamilton's 'Catechism' (1882), and three lectures at St. Giles's, Edinburgh (St. Giles's Lectures, 1st ser. No. 4, 4th ser. No. 1, and 6th ser. No. 8). Of his numerous contributions to periodical literature and encyclopedias a list of the most important is given in Dr. Christie's memoir (pp. xxvi-xxvii).

[Mitchell's Works in Brit. Mus. Libr.; Dr. Christie's biogr. sketch prefixed to the Scottish Reformation, 1900; A. K. H. Boyd's 'Twenty-five Years of St. Andrews,' I. 22, II. 221; Mrs. Oliphant's 'Memoir of Principal Tulloch,' p. 7; Knight's 'Principal Shairp and his Friends; Who's Who, 1899; Times, 23 March 1899; English Hist. Review, January 1901.]

A. F. P.

MITCHELL, PETER (1824-1899), Canadian politician, was born of Scottish parents at Newcastle in the county of Northumberland, New Brunswick, on 24 Jan. 1824. Educated at the county grammar school, he studied law and was called to the bar of the province of New Brunswick in 1848. He practised his profession for four years, and then entered into partnership with a Mr. Flaws in the business of lumbering and

shipbuilding. In 1858 he was elected to the assembly as member for his native county, and, two years later, became minister in the cabinet of Samuel Leonard Tilley [q. v.]. He was called to the New Brunswick legislative council in 1860.

Mitchell took no part in the Charlottetown conference of 1864, whose object was a union of the maritime provinces only. But when in the same year the larger scheme of uniting British America arose, he attended the meeting at Quebec (10 Oct.) as delegate of his province, and assisted in drawing up the basis of confederation known as the Quebec resolutions. On the delegates' return the government of (Sir) Samuel Leonard Tilley [q. v.] submitted the plan to the popular vote, and was defeated by a large majority (1865). Albert Smith then formed a cabinet whose element of cohesion was opposition to confederation. Shortly afterwards Lieutenant-governor Gordon, who had himself opposed this measure, received instructions to forward the movement. For this purpose he called Mitchell to his assistance, and a line of action was taken which, however necessary in the circumstances, can scarcely be considered constitutional to-day. On 8 March 1866 Gordon addressed the houses and declared in favour of union. During the negotiations and debates that ensued, so many supporters deserted the ministers that they resigned in a body (18 April). Mitchell was thereupon asked to form a cabinet on the basis of confederation. He became himself premier and president of the council, while Tilley took office as provincial secretary. Dissolving the assembly, he forthwith appealed to the people. The moment was well chosen, for the Fenian invasion of the frontier had demonstrated the need of consolidating British America. The real issue at the polls thus became confederation or annexation to the United States. Mitchell triumphed by a vote of nearly four to one.

A short session followed, the house sitting from 26 June till 7 July. The legislature was content to vote confidence in the ministry and leave their course of action 'unfettered by any expression of opinion other than what had been given by the people and their representatives.' In the final confederation conference which took place at Westminster on 4 Dec. 1866, the New Brunswick delegates had, therefore, a free hand. They made use of it to obtain concessions that gratified the province: a representation of twelve members in the dominion senate and fifteen in the dominion House of Commons; a reservation of export duties in

new logs, since commuted for \$150,000 a year; a guarantee for the intercolonial railway. Mitchell was very active in obtaining these. It is observable also that he favoured the federal principle with Sir George Etienne Cartier [q. v.], as against Sir John Alexander Macdonald's avowed leaning towards legislative union. The British North America Act received the royal assent on 29 March 1867.

On the proclamation of the dominion (1 July 1867) Mitchell was sworn of the privy council of Canada, and became a member of the cabinet with the portfolio of marine and fisheries. Thereupon he took up his residence in Ottawa. On 25 Oct. following he was raised to the senate by proclamation. He sat in that body till 13 July 1872, when he resigned in order to assist the administration in the commons. Elected by his old constituency, he continued to represent it in the second, third, fifth, and sixth parliaments. After the Macdonald government fell (6 Nov. 1873), he removed to Montreal and assumed the editorship of the 'Herald' newspaper. From that date he owned no party ties, though he advocated liberal principles both in the house and in his organ. He suffered defeat in the elections of 1891 and 1896. On 1 March 1897 he received an inspectorship of fisheries for the Atlantic provinces.

Mitchell's six years of ministerial life as inspector of fisheries were of permanent benefit to the dominion. To the guardianship of two thousand miles of coast on the Atlantic was immediately added the care of the great lakes and rivers, and, after 1871, the Pacific coast from the straits of Fuca to Alaska. His legislation regulating such subjects as navigation, pilotage, lighthouses, quarantine, fisheries, and the like, proceeds broadly on the assumption, since disputed, that the dominion is vested as well with proprietary right in as with legislative power over them. His department soon became one of the most important in Canada. The annual yield of the Atlantic fisheries alone rose from \$4,186,000 in 1849 to \$10,260,000 in 1873.

Mitchell's reputation rests mainly on his conduct of the fisheries negotiations with the United States. The presence of American fishermen on the British North American coasts and bays caused international complications in his department. 'The shortest way,' he says, 'to avoid fishery troubles is for the United States to cease trespassing . . . or make a fair bargain.' Otherwise, he recommended the strict enforcement of the Canadian rights. After trying other means with small success, he in 1860 commissioned six provincial cruisers to protect the fisheries.

The English government, however, did not acquiesce except under conditions which Mitchell declined to accept. When in 1871 the Washington treaty was under discussion between the United States and Great Britain, Mitchell's influence led to the insertion of articles whereby the Canadian fisheries were thrown open to the United States for twelve years in consideration of a sum to be ascertained by an arbitration board (arts. xviii-xxv.) In 1876 Canada was awarded \$4,500,000. The Canadian right was thereby clearly established, and its value placed beyond question.

In July 1899, as he was leaving the parliamentary buildings, Ottawa, he was stricken by paralysis. He seemed to recover, but on 25 Oct. following he was found dead in his rooms in the Windsor Hotel, Montreal. In 1853 he married Mrs. Gough, a widow of St. John, New Brunswick; she died in 1889.

Mitchell was the author of several pamphlets, including: 1. 'A Review of President Grant's Message,' Montreal, 1870, which concerns the fisheries; and 2. 'Notes of a Holiday Trip,' Montreal, 1880, a reprint of letters to the 'Montreal Herald' on Manitoba and the north-west territories.

MIVART, ST. GEORGE JACKSON (1827-1900), biologist, third son of James Edward Mivart (z. 1856), hotel proprietor, of Brook Street, Grosvenor Square, London, was born on 30 Nov. 1827. He received his early education at the grammar school, Clapham, under Charles Pritchard [q. v.], and at Harrow. He subsequently studied at King's College, London, with the view of graduating at Oxford, but, having joined in 1844 the Roman catholic church, he proceeded to St. Mary's College, Oscott. His change of faith is said to have been prompted by a taste for Gothic architecture, and finally determined by a study of Milner's

'End of Religious Controversy.' Admitted on 15 Jan. 1846 student at Lincoln's Inn, he was there called to the bar on 30 Jan. 1851, but preferred a scientific to a forensic career. He was member from 1849 of the Royal Institution, and fellow from 1858 of the Zoological Society, to whose 'Proceedings' he was for more than thirty years a frequent contributor. In 1862 he was appointed lecturer on comparative anatomy in St. Mary's Hospital, London, and elected (20 March) fellow of the Linnean Society, of which he was secretary from 1874 to 1880, and was elected vice-president in 1892. In 1869 he was elected F.R.S. in recognition of the unusual merits of his memoir 'On the Appendicular Skeleton of the Primates,' communicated through Professor Huxley in 1867 ('Phil. Trans.' clvii. 299-430). Among others of his earlier scientific papers may be mentioned 'Notes on the Osteology of the Insectivora' ('Journal of Anatomy and Physiology,' Cambridge and London, 1867-8, i. 280-312, ii. 117-54; translated in 'Annales des Sciences Naturelles,' 5ième série, 'Zoologie,' tom. viii. 221-84, ix. 311-72); 'Appendicular Skeleton of Simia' ('Trans. Zool. Soc.' vol. vi, 1866); 'Notes on the Myology of Iguana Tuberculata' ('Proc. Zool. Soc.' 1867, pp. 766-97); 'Notes on the Myology of Menobranchius Lateralis' (ib. 1869, pp. 450-66); 'On some Points in the Anatomy of Echidna Hystrix' ('Trans. Linn. Soc.' vol. xxv. pt. iii. [1868], pp. 379-403); and 'On the Vertebrate Skeleton' (ib. vol. xxvii. pt. iii. [1871], pp. 369-92). Though greatly stimulated by Darwin, Mivart never became a Darwinian; and in 1871 freely criticised the great naturalist's hypothesis both in the 'Quarterly Review' (vol. cxxxi. p. 47) and in a substantive essay 'On the Genesis of Species' (London, 8vo); an assertion of the right of private judgment which led to an estrangement from both Darwin and Huxley. Three subsequent works: 1. 'Lessons in Elementary Anatomy,' London, 1873, 8vo. 2. 'Man and Apes,' London, 1873, 8vo. 3. 'The Common Frog,' London, 1874, 8vo, established his reputation as a specialist. He was already known as an attractive lecturer at the Zoological Gardens and the London Institution, and in 1874 he was appointed professor of biology at the short-lived Roman catholic University College, Kensington. During the decade 1870-80 he enriched the 'Transactions' of the Zoological Society (vols. viii. and x.) with several important papers, viz.: 1. 'On the Axial Skeleton of the Ostrich'; 2. 'On the Axial Skeleton of the Struthionidae'; 3. 'On the Axial Skeleton of the Polecanidae';

4. 'Notes on the Fins of Elasmobranchs; with Considerations on the Nature and Homologues of Vertebrate Limbs.' To the 'Encyclopædia Britannica' (9th edit.) he contributed the articles 'Ape' (reproduced in substance in Flower and Lydekker's 'Introduction to the Study of Mammals,' 1891), 'Reptiles' (anatomy), and 'Skeleton.' In 1879 he was president of the biological section of the British Association at Sheffield, and delivered an address on Buffon, which was included in his 'Essays and Criticisms,' London, 1892, ii. 193. In 1881 appeared his elaborate monograph, 'The Cat: an Introduction to the Study of Back-boned Animals, especially Mammals' (London, 8vo), which for fulness and accuracy of detail and lucidity of exposition is worthy to rank with Huxley's 'Crayfish.' Subsequent studies in the anatomy of the Eluroid, Arctoid, and Cynoid carnivora appeared in the 'Proceedings' of the Zoological Society 1882, 1885, and 1890. His researches on the last group bore fruit in 'Dogs, Jackals, Wolves, and Foxes'; a monograph of the Canidae, London, 1890, 4to. Other papers in the 'Proceedings' of the same society (1895) laid the basis of his 'Monograph of the Lorises, or Brush-tongued Parrots composing the Family Loridae,' London, 1896, 4to. Mivart received in 1876 the degree of Ph.D. from the pope, and in 1884 that of M.D. from the university of Louvain, in which he was professor of 'the philosophy of natural history' from 1890 to 1893.

Despite his rejection of Darwinism, Mivart always professed himself an evolutionist. As such, however, he can be ranked with no school. He never wavered in maintaining an essential disparity between organic and inorganic matter, and between human reason and the highest faculties of the brutes. Natural selection he relegated to an extremely subordinate place, and attributed the formation of specific characters to a principle of individuation, which he postulated as the essence of life (see *Essays and Criticisms*, ii. 377-8, and *The Origin of Human Reason*, London, 1889, pp. 298-303). Evolution thus understood he attempted by a theory of derivative creation to reconcile with the catholic faith, between which and modern thought he aspired to play the part of interpreter (see his paper, 'One Point in Controversy with the Agnostics,' in *Essays on Religion and Literature*, ed. Manning, 3rd ser. London, 1874, 8vo). In November 1874 he joined the Metaphysical Society, in which, as in the wider arena of the monthly reviews, he opposed a neo-scholastic realism to the prevalent agnosticism. In 1876 he collected his philo-

sophical articles under the title 'Lessons from Nature as manifested in Mind and Matter,' London, 8vo. 'Nature and Thought,' an attempt to refute Berkeley in Berkeley's own method of dialogue, appeared in 1882 and other works (all London, 8vo) in the following order: 'A Philosophical Catechism' (1834), 'On Truth: a Systematic Inquiry' (1889), 'The Helpful Science' (1895), and 'The Groundwork of Science: a Study of Epistemology' (1898). In these treatises he laboured to re-establish philosophy upon a pre-Cartesian basis, with only such modifications of form as were imperatively demanded by the problems of the age. But this attempt to refurbish the scholastic armoury of his church was combined with a theological liberalism which eventually brought him into collision with her. His neo-catholicism was adumbrated in 'Contemporary Evolution,' London, 1876 (a reprint of articles in the 'Contemporary Review'), and more explicitly formulated in a series of papers in the 'Nineteenth Century,' viz.: 1. 'Modern Catholics and Scientific Freedom' (July 1885); 2. 'The Catholic Church and Biblical Criticism' (July 1887); 3. 'Catholicity and Reason' (December 1887); 4. 'Sins of Belief and Disbelief' (October 1888); 5. 'Happiness in Hell' (December 1892), which, with two explanatory papers (February and April 1893), was placed on the Index Librorum Prohibitorum, 21 July 1893; and 6. 'The Continuity of Catholicism' (January 1900). The last article, with another entitled 'Some Recent Apologists,' which appeared contemporaneously in the 'Fortnightly Review,' brought his orthodoxy formally into question and led to his excommunication by Cardinal Vaughan (18 Jan.) An article, 'Scripture and Roman Catholicism,' which appeared in the 'Nineteenth Century' in the following March, completed his repudiation of ecclesiastical authority. He died of diabetes at his residence, 77 Inverness Terrace, London, W., on 1 April following. He was married. His son, Dr. F. St. George Mivart, became medical inspector of the local government board.

It is to be regretted that Mivart did not confine himself strictly to scientific work, in which his real strength lay. In mastery of anatomical detail he had few rivals, and perhaps no superior, among his contemporaries; but his eminence in this department was not gained without a degree of preoccupation which left him scanty leisure for the study of the delicate and controversial questions on which he attempted to arbitrate.

Besides the works mentioned above, Mivart was the author of: 1. 'Introduction Générale

à l'Etude de la Nature. Cours professé à l'Université de Louvain,' Louvain, Paris, 1891. 2. 'Birds: the Elements of Ornithology,' London, 1892, 8vo. 3. 'Types of Animal Life,' London, 1893, 8vo. 4. 'An Introduction to the Elements of Science,' London, 1894, 8vo. 5. 'Castles and Manor: a Tale of our Time,' London, 1900, 8vo. For his uncollected papers not specified above see the Zoological Society's 'Transactions' and 'Proceedings' from 1864 (with which compare 'Zoological Record' and 'Zoologist,' 3rd ser. viii. 281); 'Transactions of the Linnean Society,' 2nd ser. (Zool.), i. 513; 'Proceedings of the Royal Society,' 1888, No. 263; 'Popular Science Review,' viii. 111, ix. 366, xiv. 372, xv. 225; 'Contemporary Review,' April 1875, May, July, September, October 1879, January, February, April 1880, May 1887; 'Fortnightly Review,' January, April 1886, September 1895, May 1896; 'Nineteenth Century,' August, December 1893, August 1895, January, December 1897, August 1899; 'Dublin Review,' October 1876, October 1891.

M. R.

MOLTENO, SIR JOHN CHARLES (1814-1886), South African statesman, the son of John Molteno, deputy controller of the legacy office, Somerset House, and of Caroline Bower, his wife, was born on 5 June 1814 in his father's house in London. The family was of Milanese extraction, but had long been domiciled in England. Losing his father at an early age, he was educated at Ewell, and after a short experience in the office of a city shipbroker he sailed for South Africa in 1831 to take up duties in the public library at Cape Town. In 1837, when twenty-three years of age, he started a commercial business of his own, and was for the next ten years engaged in a spirited endeavour to open up new markets for colonial produce; but a succession of adverse circumstances proved fatal, and in 1841 he abandoned his Cape Town business and devoted himself to developing the wool trade on a property which he had acquired in Beaufort West. From this date till 1852 he lived an isolated life in the great Karoo, forming an intimate ac-

quaintance with the life and characteristics of the frontier colonists, especially those of Dutch blood.

He took part as a burcher and commandant in the Kafir war of 1846, and formed a strong opinion of the unsuitability of British troops and British regular officers for such warfare. The dictatorial tone adopted towards the colonists, together with the incapacity displayed by the queen's officers, was a strong factor in determining his future attitude towards the intervention of the home government in military matters.

In 1852 he returned to mercantile pursuits, and founded the firm of Alport & Co., which he combined with a large banking business, and he rapidly grew to be one of the wealthiest and most influential citizens in the Beaufort district. In 1854 representative institutions were introduced in the Cape Colony, and Molteno became the first member for Beaufort in the legislative assembly, and by his skill in debate and profound knowledge of the needs of the country soon raised himself to the front rank. During the governorship of Sir George Grey [q. v. Suppl.] he was generally found in sympathy and support with him, but on the appointment of Sir Philip Wodehouse [q. v. Suppl.] in 1862 he was driven into a strong policy of opposition. The leading cry among Cape politicians was for responsible government, and for many years Molteno took the foremost place in the battle. When, with the approval of the secretary of the colonies, Lord Kimberley, it was conceded in 1872 by Sir Henry Barkly [q. v. Suppl.], the new governor, Molteno was by common consent designated as the first Cape premier.

The first years of his administration were marked by great prosperity, by a vast increase in railroad communication, and by the rehabilitation of the colonial finances. The acquisition of the diamond fields had a considerable share in this, but the main credit may fairly be attributed to the administrative and financial capacity of Molteno, and to the confidence that he inspired.

This peaceful epoch was not of long duration. Lord Carnarvon was resolved to force on his policy of South African confederation. Molteno was not opposed to confederation in itself, but insisted that it must come gradually from within and not from without, and that at the present time it would impose unduly onerous burdens on the Cape Colony. Lord Carnarvon was unfortunate in his choice of James Anthony Froude [q. v. Suppl.] the historian, whom he sent out as an unofficial representative of the home government in 1876. Failing to obtain Molteno's

assistance, Froude started an unconstitutional agitation throughout South Africa which, by stirring up the race antagonism between English and Dutch, sowed the seeds of future calamities. Molteno and his colleagues procured the rejection of a scheme for a conference on the subject of confederation, and the Cape parliament refused to allow him even to discuss the subject with the home government when he was in England during the following year.

In April 1877 Sir Henry Bartle Edward Frere [q. v.] succeeded Sir Henry Barkly at the Cape. He came out as the special exponent of Lord Carnarvon's views, and it was not long before he came into conflict with Molteno. The latter was a thorough-going exponent of colonial rights, and prepared to insist on them to their fullest extent. Sir Bartle had no experience of self-governing colonies. It would have been difficult under any circumstances for the two to work in harmony; Frere's preconceived notions on confederation and native policy rendered it impossible. The war with the Galesas in 1877-8 brought matters to a crisis. The governor contended that the commander-in-chief at the Cape was the only person who could command the colonial troops; Molteno insisted that, though the governor, as such, had power over the colonial forces, it could only be exercised with and by the advice of his responsible ministers. The ministers were unyielding, and on 6 Feb. 1878 Frere took the strong step of dismissing them, under circumstances which showed little consideration for Molteno's long services.

Molteno had reckoned on the support of his parliamentary majority, which had never failed him hitherto, but in the debate which followed his dismissal the legislative assembly supported his successor, (Sir) Gordon Sprigg. Deeply chagrined, and feeling hopeless before Sir Bartle Frere's policy, to which he was opposed in every respect, he retired from public life. In 1881, after Frere's recall, Molteno entered for a short time Mr. Scanlen's administration as colonial secretary, but in August 1882 he finally withdrew from politics, receiving the decoration of a K.C.M.G., and followed by widely expressed appreciations of his past services. After a short sojourn in England he returned to the Cape and died at Claremont on 1 Sept. 1886.

Sir John Molteno was a man of commanding presence and of great physical strength. In private life he was of most simple and unostentatious habits. He was thoroughly representative of the early English settlers at the Cape, and enjoyed the

full confidence of the Dutch. His ideas were formed before the days of imperialism, and the interests of the Cape ranked first with him, but in his efforts to secure the annexation of Damaraland he showed better statesmanship than Lord Carnarvon.

There is a bust photograph of Molteno, about life size, in the houses of parliament, Cape Town.

He was three times married: first, to Maria Hewitson; secondly, in 1841, to Elizabeth Maria, a daughter of Hercules Crosse Jarvis, by whom he left issue; thirdly, to Sobella Maria, the daughter of Major Blenkins, C.B., who survived him, and by whom he left issue.

[Life and Times of Sir John Molteno by his son, Percy A. Molteno (1899), and the authorities there quoted; Martineau's Life of Sir Bartle Frere.] J. B. A.

MOMERIE, ALFRED WILLIAMS (1848-1900), divine, born in London on 22 March 1848, was the only child of Isaac Vale Mummery (1812-1892), a well-known congregational minister, by his wife, a daughter of Thomas George Williams of Hackney. He was descended from a French family of Huguenot refugees, and early in life resumed the original form of his surname—Momerie. He was educated at the City of London School and at Edinburgh University, where he won the Horsliehill and Miller scholarship with the medal and Bruce prize for metaphysics, and graduated M.A. in 1875 and D.Sc. in 1876. From Edinburgh he proceeded to St. John's College, Cambridge, where he was admitted on 17 March 1875 and was senior in the moral science tripos in 1877, graduating B.A. in 1878 and M.A. in 1881. He was ordained deacon in 1878, and priest in 1879, as curate of Leigh in Lancashire. On 5 Nov. 1879 he was elected fellow of St. John's College, and in 1880 he was appointed professor of logic and mental philosophy at King's College, London. In 1883 he was chosen morning preacher at the Foundling Hospital.

Between 1881 and 1890 he published numerous books and collections of sermons on the philosophy of Christianity, which attained considerable vogue. Their style was brilliant, their views latitudinarian. Like his predecessor, Frederick Denison Maurice, Momerie found himself obliged to sever his connection with King's College in 1891, and in the same year he resigned the Foundling preachership also. With the permission of the bishop of London he subsequently preached on Sundays at the Portman rooms. He died in London on 6 Dec. 1900, at 14 Chilworth Street. In 1896 he married

Ada Louisa, the widow of Charles E. Berne. In 1887 he received the honorary degree of LL.D. from Edinburgh University.

Momerie's chief works are: 1. 'Personality the Beginning and End of Metaphysics,' London, 1879, 8vo; 4th edit. 1889. 2. 'The Origin of Evil, and other Sermons,' London, 1881, 8vo; 6th edit. Edinburgh, 1890, 8vo. 3. 'Defects of Modern Christianity, and other Sermons,' Edinburgh, 1882, 8vo; 2nd edit. 1885. 4. 'The Basis of Religion,' Edinburgh, 1883, 8vo; 2nd edit. 1886. This work was a criticism of (Sir) John Robert Seeley's 'Natural Religion.' 5. 'Agnosticism and other Sermons,' Edinburgh, 1884, 8vo; 2nd edit. 1887. 6. 'Preaching and Hearing, and other Sermons,' Edinburgh, 1886, 8vo; 3rd edit. 1890. 7. 'Inspiration and other Sermons,' Edinburgh, 1889, 8vo; 2nd edit. 1890. 8. 'Church and Creed: Sermons preached in the Chapel of the Foundling Hospital,' London, 1890, 8vo. 9. 'The Religion of the Future, and other Essays,' Edinburgh, 1893, 8vo. 10. 'The English Church and the Romish Schism,' 2nd edit. Edinburgh, 1896, 8vo.

[Times, 8 Dec. 1900; Who's Who, 1901; The Eagle, xxii 244-6; Crockford's Clerical Directory; Allibone's Dict. of English Lit.] E. I. C.

MONCK, SIR CHARLES STANLEY, fourth Viscount Monck in the Irish peerage, and first Baron Monck in the peerage of the United Kingdom (1819-1894), first governor-general of the dominion of Canada, was born at Templemore, in the county of Tipperary, on 10 Oct. 1819, being the eldest son of Charles Joseph Kelly Monck, third Viscount Monck of Ballytrammion, by Bridget, youngest daughter of John Willington of Killoshane in the county of Tipperary. Educated at Trinity College, Dublin, he graduated B.A. at the summer commencement of 1841, and was called to the Irish bar at King's Inn in June of the same year. On 20 April 1849 he succeeded as fourth viscount in the Irish peerage.

In 1848 he unsuccessfully contested the county of Wicklow in the liberal interest, but four years later entered the House of Commons as member for Portsmouth (July 1852). On the resignation of Lord Aberdeen's ministry in 1855 he became a lord of the treasury in Lord Palmerston's government (7 March 1855). His term of office lasted three years, until March 1858, when the Earl of Derby formed a ministry. Monck was defeated at Portsmouth in the general election of 1859.

On 28 Oct. 1861 he was appointed by Lord Palmerston captain-general and gover-

nor-in-chief of Canada, and governor-general of British North America. Scarcely had he entered on his duties in the month following when there came the news of the 'Trent affair,' which for a time threatened to embroil England and the United States in a war. Diplomacy, however, dispelled the cloud, and the local irritation was calmed by Monck's patience and firmness. A more serious trouble arose in 1864, when certain confederates, having found refuge in Canada during the American civil war, plotted to turn their asylum into a basis for petty attacks on the United States, e.g. seizing vessels on the lakes, attacking defenceless ports, breaking open prisons as at Detroit, robbing banks as at St. Albans. By patrolling his frontier from point to point, and setting small armed craft on the lakes, Monck diligently guarded his long boundary line of two thousand miles, kept the peace between the nations, and received the approbation of the imperial authorities (1864). But his exertions were not so highly appreciated in the United States. Immediately after the 'St. Albans affair,' General Dix put forth a proclamation threatening reprisals (4 Dec. 1864). Next year the Republic denounced the reciprocity treaty of 1854 for other than commercial reasons, and suffered, if she did not encourage, the attempts of the Fenians against British North America. Once more the militia were called forth and the frontier patrolled. At the Niagara peninsula some nine hundred Fenian marauders made an inroad into Canadian territory and were repulsed with considerable loss by the militia on 2 June 1866. Difficulties with the United States continued during the greater part of Monck's term of office, but his government also synchronised with the formation of the federated dominion of Canada.

In 1864 Monck had welcomed a proposition emanating from George Brown [q. v. Suppl.], for the introduction into Canada of a federal constitution (memorandum of Lord Monck, 15 June 1864). The governor took an active interest in the conference on the subject held at Charlottetown and Quebec (1864), and in the conduct of the Quebec resolutions, which embodied the federal constitution, through the local houses of parliament (1865). He likewise brought his influence to bear in favour of union on the lieutenant-governors of Nova Scotia and New Brunswick. In the autumn of 1866 he came to England, as well to assist at the Westminster conference as to advise the imperial authorities, Sir John Michel administering affairs in his absence. On 4 June following his appointment was renewed

under 30 Vict. cap. 3, and his title declared to be Governor-general of the Dominion of Canada. In accordance with the terms of Queen Victoria's proclamation he took the oath of office and constituted the privy council of Canada on 1 July 1867. Having thus inaugurated the federation successfully, the governor-general resigned office on 13 Nov. 1868. He left Canada the next day.

On 12 July 1866 he was created a peer of the United Kingdom as Baron Monck of Ballytramon in the county of Wexford. He received the honour of the grand cross of St. Michael and St. George on 23 June, and was called to the privy council on 7 Aug. 1869. Trinity College, Dublin, bestowed on him the degree of LL.D. in 1870.

After his return to Ireland, where he had been a commissioner of charitable donations and bequests in 1851, he was appointed a member of the Church Temporalities and National Education commissions (1871). He continued to administer the former till 1881. In the following year he was chosen, with Mr. Justice O'Hagan and Mr. Litten, to carry out the provisions of the new Irish Land Acts, and sat on the commission until 1884. From 1874 to 1892 he held the office of lord-lieutenant and custos rotularum in and for the county of Dublin. He died on 29 Nov. 1894. On 23 July 1844 Monck married his cousin, Elizabeth Louisa Mary (d. 16 June 1892), fourth daughter of Henry Stanley Monck, earl of Rathdowne. By her he had issue two sons, of whom the elder, Henry Power, succeeded to the peerage, and two daughters.

MONCREIFF, JAMES, first **BARON MONCREIFF OF TULLIBOLIE** (1811-1895), lord justice-clerk of Scotland, son of Sir James Wellwood Moncreiff [q. v.], baronet, and Ann, daughter of George Robertson, R.N., was born at Edinburgh on 29 Nov. 1811. He was edu-

ated at the high school and university of Edinburgh. Naturally quick and intelligent, he carried off the principal honours at both institutions, including the medal in 'Christopher North's class of moral philosophy in 1828. He was called to the Scottish bar in 1833, where in a few years he gathered a large practice. But, partly from natural bent and early training, he pursued politics with a keener activity even than that with which he followed law. In the forensic arena he was in the thick of the church disruption fight, as he was engaged as counsel in the leading conflicts of that exciting time—the Lethendy, the Marnoch, the Auchterarder, and the Oul-salmond cases. With his father and his elder brother, Sir Henry Wellwood Moncreiff [q. v.], he came out with the seceders. At this period he became one of the first contributors to the 'North British Review,' which was started in the interest of the dissenters in 1814.

Moncreiff first entered the House of Commons as M.P. for the Leith Burghs, which he represented from April 1851 to April 1859, when he retired because he was averse to dividing the liberal party in the constituency. In April 1859, with Adam Black [q. v.], he was elected one of the members for the city of Edinburgh, and re-elected in 1865. In 1868 he resigned his seat, and was elected for the representation of Glasgow and Aberdeen universities. In February 1860 Moncreiff was appointed solicitor-general for Scotland in Lord John Russell's administration, and in April 1861 he succeeded Andrew Rutherford [q. v.] as lord advocate. In February 1862 he went out of office on the resignation of the Russell ministry on their defeat over the militia bill, but came in again with Lord Aberdeen's coalition government in December 1862. Among the measures introduced and carried by the lord advocate were an act to abolish religious tests in the Scottish universities, acts to amend the law of entail, to amend the bankruptcy laws, to diminish the number of sheriffs, and to amend the law of evidence. In February 1864 he introduced a bill to establish a uniform system of valuation and rating in Scotland, and an education bill for Scotland, which was rejected. On this occasion Spencer Horatio Walpole [q. v.] said his speech was 'as beautiful in language as it was clear and perspicuous in its statements.' When the coalition ministry was defeated in February 1866, and Lord Palmerston succeeded, Moncreiff was retained as lord advocate, and on 23 March he reintroduced his education bill, which was passed, but thrown out by the Lords, as it was the following

year. Moncreiff was also responsible for the important bankers' act in 1856. On the fall of Kars, the lord advocate was put up to reply on behalf of the government to the attack of Lord John Manners [q. v.], and in 1859 he was selected by the government to compliment Mr. Speaker Denison on his re-election to the chair in the House of Commons. Excepting the year of the Derby-Dismail administration (February 1858–June 1859), Moncreiff was lord-advocate till July 1866. His only other year of office was from December 1868 to October 1869, when he succeeded George Patton [q. v.] as lord justice-clerk. From 1868 to 1899 he was dean of the faculty of advocates—the premier position at the Scottish bar.

During his long career in parliament Moncreiff guided the passing of over a hundred acts of parliament, and his name will ever be associated with the reform of legal procedure and mercantile law. As lord advocate he was engaged as public prosecutor in many important cases, notably the trials of Madeline Smith, Wislowsky, and the directors of the Western bank. In 1856 he defended the 'Scotsman' in the libel action raised by Mr. Duncan McLaren [q. v.], one of the members for the city of Edinburgh. In January 1857 he was presented with the freedom of his native city for the part he took in regard to the Municipal Extension Act. In 1859 he became lieutenant-colonel of the first rifle volunteer corps in Scotland—that of the city of Edinburgh. In 1860 he benefited Edinburgh by passing his annuity tax bill—a subject in which, as a free churchman, he took the keenest interest—and in the following year he benefited Scotland by carrying the important bill relating to burgh and parochial schools. In 1861 he was engaged as leading counsel in the defence of Sir William Johnston, one of the directors of the Edinburgh and Glasgow bank, and in 1863–4 he was counsel in the famous Yelverton case.

For nineteen years Lord Moncreiff occupied the judicial bench, presiding over the trials in the judiciary court of Chantrelle (1878), the City of Glasgow bank directors (1878), the dynamitards (1883), and the crofters (1886). Extra-judicially he was occupied in many other matters. As a lecturer he was in great request, and delivered numerous orations in Edinburgh and Glasgow on subjects of literary, scientific, and political interest to the Philosophical Institution, Royal Society, Juridical Society, Scots Law Society, and other bodies. Moncreiff also published anonymously in 1871 a novel entitled 'A Visit to my Discontented Cousin,' which

was reprinted, with additions, from 'Fraser's Magazine.' He was also a frequent contributor to the 'Edinburgh Review.' In 1858 he received the degree of LL.D. from Edinburgh University; from 1868 to 1871 he was rector of Glasgow University, from which he received the degree of LL.D. in 1879, and in 1869 he was appointed a member of the privy council. On 17 May 1871 he was created a baronet; on 1 Jan. 1874 he was made a baron of the United Kingdom; in 1878 he was appointed a royal commissioner under the Endowed Institutions (Scotland) Act, and in 1883 he succeeded his brother as eleventh baronet of Tullibole. In September 1888 he resigned the position of lord justice-clerk, and took up the preparation of his 'Memorials,' which are yet to be published. On these he was engaged till his death on 27 April 1895. There is a portrait of Moncreiff, painted by Sir George Reid, P.R.S.A., on the wall of the parliament house in Edinburgh.

Lord Moncreiff married, on 12 Sept. 1831, Isabella, only daughter of Robert Bell, procurator of the church of Scotland, and sheriff of Berwickshire and Haddingtonshire, and by her (who died on 19 Dec. 1881) he had five sons and two daughters. His eldest son, Henry James, second Baron Moncreiff, was from 1888 to 1906 a lord of session, at first under the title of Lord Wellwood, and afterwards as Lord Moncreiff.

MONIER-WILLIAMS, SIR MONIER (1819-1899), orientalist, was the third of the four sons of Colonel Monier Williams, R.E., surveyor-general, Bombay presidency, and of his wife, Hannah Sophia, daughter of Thomas Brown of the East India Company's civil service, reporter-general of external commerce in Bengal. Born at Bombay in 1819, he came to England in 1829, where he was educated at private schools at Chelsea and Brighton, and afterwards at King's College School, London. He matriculated at Oxford in March 1837, but did not go into residence at Balliol College till Michaelmas 1838. In the following year he rowed in his college eight at the head of the river. Having received a nomination to a writership in the East India Company's civil service in November 1839, he passed his examination at the East India House in December. He then left Oxford and went into residence at the East India Company's college, Haileybury, in January 1840, whence he passed out head of his year. He was about to proceed to the east when the news arrived that his

youngest brother had been killed in the unsuccessful attempt to relieve the beleaguered fort of Kalun in Sind. This entirely changed the course of his career; for, yielding to the urgent desire of his widowed mother that he should now not leave the country, he decided to relinquish his appointment and remain in England. He therefore returned to Oxford in May 1841; but as Balliol was full, and no provision existed in those days for out-college residence, he joined University College. He now entered upon the study of Sanskrit under Professor Horace Hayman Wilson [q. v.], and gained the Boden scholarship in 1843. Graduating B.A. in the following year, he was appointed to the professorship of Sanskrit, Persian, and Hindustani, at Haileybury. This office he held for about fifteen years, till the college was closed after the Indian mutiny in 1858, and the teaching staff was pensioned off. After spending two or three years at Cheltenham, where he held an appointment at the college, he was elected Boden professor of Sanskrit in the university of Oxford by convocation in December 1860, when Professor Max Müller [q. v. Suppl.] was his opponent.

In the early seventies Monier Williams conceived the plan of founding at Oxford an institution which should be a focus for the concentration and dissemination of correct information about Indian literature and culture. This project he first brought before congregation at Oxford in May 1875. With a view to enlisted the sympathies of the leading native princes in his scheme, he undertook three journeys to India in 1875, 1876, and 1883; and his persevering efforts were so far crowned with success that he collected a fund which finally amounted to nearly 34,000*l.* By rare tenacity of purpose he succeeded in overcoming all the great difficulties in his way, and the Indian Institute at last became an accomplished fact. The foundation-stone was laid by the Prince of Wales in 1883. The building was erected in three instalments, the first being finished in 1884, and the last in 1896, when the institute was formally opened by Lord George Hamilton, the secretary of state for India. Monier Williams subsequently presented to the library of the institute a valuable collection of oriental manuscripts and books to the number of about three thousand. By his sister's desire, and at her own expense, an excellent portrait of him was painted in oils by Mr. W. W. Ouseley, R.A., in 1880, and was presented by her to the institute.

Monier Williams was a fellow of Balliol College from 1882 to 1888; was elected

an honorary fellow of University College in 1892, and was keeper and perpetual curator of the Indian Institute. He received the honorary degree of D.C.L. from Oxford in 1876, of LL.D. from Calcutta, and of Ph.D. from Göttingen. He was knighted in 1886, and became a K.C.I.E. in 1887, when he assumed the additional surname of Monier.

Failing health obliged Sir Monier to relinquish in 1887 his active professorial duties, which had become very onerous owing to the institution of the honour school of oriental studies at Oxford in 1886. He ceased to reside in the university, spending the winter months of every year in the south of France. The last years of his life he devoted chiefly to the completion of the second edition of his 'Sanskrit-English Dictionary.' He gave the final touches to this last proof-sheet of this work only a few days before his death. He died at Cannes on 11 April 1899. His remains were brought back to England and interred in the village churchyard at Chessington, Surrey. In 1848 Monier Williams married Julia, daughter of the Rev. F. J. Faithfull, rector of Hatfield, and had by her a family of six sons and one daughter.

Monier-Williams's activity as a scholar was directed mainly towards the practical side of Sanskrit studies, and to the diffusion in England of a knowledge of Indian religions. Taking little interest in the oldest phase of Indian literature, represented by the Vedas, he devoted himself almost exclusively to the study of the later period, or that of classical Sanskrit. The three texts of which he published editions are Kālidāsa's plays 'Vikramorvaśī' (1849) and 'Śakuntalā' (1853; 2nd ed. 1876), besides the 'Nalopākhyāna, or Episode of Nala' (2nd ed. 1879), from the 'Mahābhārata.' He further wrote several works relating to the language of ancient India, a 'Sanskrit Grammar' (1846), which reached a fourth edition in 1876, an 'English-Sanskrit Dictionary' (1851), a 'Sanskrit Manual for Composition' (1862), and a large 'Sanskrit-English Dictionary' (1872; 2nd ed. 1899). Monier-Williams was also a successful translator of Sanskrit. His rendering of 'Śakuntalā' in prose and verse (1853) reached a sixth edition in 1894, and his 'Indian Wisdom' (1875), which consists chiefly of translated specimens of Sanskrit literature, appeared in a fourth and enlarged edition in 1898. Shortly before and after the beginning of his career as Boden professor, he wrote some Hindūstāni manuals. One of these was 'An Easy Introduction to

the Study of Hindūstāni' (1858), and another his 'Practical Hindūstāni Grammar' (1862).

Ever since his inaugural lecture at Oxford on 'The Study of Sanskrit in relation to Missionary Work in India' (1861), Monier-Williams was a frequent advocate of the claims of missionary enterprise in India. This interest led him to devote much of his time to writing books meant to diffuse a knowledge of Indian religions in England. Most of them have enjoyed a considerable popularity. These works are entitled 'Hinduism' (1877), 'Modern India and the Indians' (1878), 'Religious Life and Thought in India' (1883), 'Buddhism' (1889), and 'Brahmanism' (1891).

[Personal knowledge and information supplied by members of the family, especially Mr. C. Williams, an elder brother of Sir M. Monier-Williams.] A. A. M.

MONK-BRETTON, BARON. [See DODSON, JOHN GEORGE, 1825-1897.]

MONSELL, WILLIAM, BARON EMLY (1812-1894), politician, born on 21 Sept. 1812, was the only son of William Monsell (d. 1822) of Tervoe, co. Limerick, who married in 1810 Olivia, second daughter of Sir John Allen Johnson Walsh of Ballykilcavan, Queen's county. He was educated at Winchester College from 1826 to 1830, and among his schoolfellows were Roundell Palmer (afterwards Earl of Selborne) and W. G. Ward (SPELBOURN, *Memorials*, II. ii. 411). On 10 March 1831 he matriculated from Oriel College, Oxford, but left the university without taking a degree.

At the general election in August 1847 Monsell was returned to parliament for the county of Limerick, and represented it, as a moderate liberal, without a break until 1874. He joined the Roman Catholic church in 1850, and throughout his parliamentary career spoke as the leading representative of its hierarchy. As a resident and conciliatory landlord he was popular with his tenantry, and in the House of Commons he promoted the cause of agricultural reform. His prominence in parliament is shown by his selection to propose the re-election of Speaker Denison (*Hansard* , February 1866, pp. 4-7; DENISON, *Diary*, pp. 184-5).

Monsell filled many offices. He was clerk of the ordinance from 1862 until the office was abolished in February 1867, and from that date to September 1867 he was president of the board of health. On 13 Aug. 1865 he was created a privy councillor. For a few months (March to July 1866) he was vice-president of the board of trade and

paymaster-general. He served as under-secretary for the colonies from December 1868 to the close of 1870, and as postmaster-general from January 1871 to November 1878. On 12 Jan. 1874 he was raised to the peerage as Baron Emly. His name is identified with the abortive scheme for the 'establishment of an Irish national university upon a federal basis,' which Gladstone brought forward in 1873. The pamphlets published by Gladstone in 1874-5 against Vaticanism met with his disapproval (PURCELL, *A. P. de Lisle*, ii. 54-65).

With the rise of the land league Monsell lost his popularity. He opposed the movement for home rule, and he was accordingly removed from the chairmanship of the board of poor-law guardians. He had been high sheriff of Limerick in 1885, and he was made lord-lieutenant of the county in 1871. He was also vice-chancellor of the royal university of Ireland.

Lord Emly died at Tervoe on 20 April 1894, and was buried in the family vault at Kilkeedy. He married, on 11 Aug. 1836, Anna Maria Charlotte Wyndham Quin, only daughter of the second earl of Dunraven. She died at St. Leonard's, Sussex, on 7 Jan. 1855 without leaving issue. In 1857 he married Bertha, youngest daughter of the Comte de Montigny. She died on 4 Nov. 1890, leaving one son, who succeeded to the peerage, and one daughter.

Monsell contributed to the 'Home and Foreign Review.' He was an intimate friend of Cardinal Newman (PURCELL, *Manning*, ii. 312-20), was closely associated with Montalembert and his party, and was 'an enthusiastic advocate of liberal catholicism and political reform.' He published in 1860 'A Lecture on the Roman question.'

Reg. 1894, p. 159; Tablet, 28 April 1894, pp. 661-2; Ward's W. G. Ward and the Catholic Revival, pp. 143-4, 185-6, 205, 224-8, 243, 268-70; Ward's W. G. Ward and the Oxford Movement, p. 5.] W. F. C.

MONTAGU, JOHN (1797-1853), colonial official, born on 21 Aug. 1797, was the youngest son of Lieutenant-colonel Edward Montagu (1755-1790) [q.v.] He was educated at Okeham in Surrey and at Parson's Green, near Knightsbridge. On 10 Feb. 1814 he was appointed, without purchase, to an ensigncy in the 52nd foot. He was present at Waterloo, and on 9 Nov. 1815 was promoted to a lieutenantancy by purchase; he also

bought his company in the 64th foot in November 1822, exchanging into the 40th foot on 7 Aug. 1823. In the same year he proceeded to Van Diemen's Land (now Tasmania) with the lieutenant-governor, (Sir) George Arthur [q.v.], and on his arrival in May 1824 was nominated his private secretary. This post he retained until 1827, holding his captaincy on half-pay. In 1828 Van Diemen's Land, which had hitherto been attached to New South Wales, was constituted a separate colony, and Montagu became clerk of the executive and legislative councils. This office he held until 1829, when his military duties recalled him to England. In 1830 Sir George Murray (1772-1846) [q.v.], secretary of state for the colonies, offered to reappoint him on condition of his quitting the army. He accordingly sold out on 10 Sept. and returned to Van Diemen's Land. In 1832 he took charge for a year of the colonial treasury, and in 1834 he was nominated colonial secretary. In October 1836 Arthur relinquished the government to Sir John Franklin [q.v.], under whom Montagu retained his office. From February 1839 to March 1841 he was absent on a visit to England, and on his return he found himself involved in differences with the governor. He behaved to Franklin in a somewhat arbitrary manner, insisting on the dismissal of several government officials, although the governor was not convinced of their culpability. Finally Franklin reinstated one of these officers, and Montagu in consequence ceased to co-operate cordially in the work of administration, openly charged him with suffering his wife to influence his judgment, and finally declared himself unable to rely upon the accuracy of the governor's statements. On 25 Jan. 1842 Montagu was suspended from office. He sought a reconciliation, and Franklin, in his despatch to Lord Stanley [see STANLEY, EDWARD GEORGE GEORFFREY SMITH, fourteenth EARL OF DUNBY], with great generosity, spoke highly of his ability, and recommended him for other employment. Colonial sympathy was largely on Montagu's side, and Stanley, after investigation, came to the conclusion that Franklin was not justified in his action, and that Montagu's dismissal was unwarranted.

In 1843 Montagu was nominated colonial secretary at the Cape of Good Hope, a post which he retained until death. He arrived at the Cape and entered on office on 28 April. Shortly after his arrival he submitted to the governor, Sir George Thomas Napier [q.v.], a project for improving the financial condition of the colony. Napier recognised its

merits, and it was carried into effect under Montagu's superintendence. The condition of the colony showed immediate improvement, and the passage of time showed the amelioration to be permanent. He also realised the importance of encouraging immigration, and by a system of bounties nearly seventeen hundred settlers were brought into the colony in three years. During the government of Sir Peregrine Maitland [q. v.], Montagu distinguished himself by his able conduct of the financial arrangements necessitated by the Kaffir war. He also rendered the colony signal service by promoting the construction of good roads across the mountain passes into the interior. They were chiefly made by convict labour, and Montagu was successful in introducing a new system, by which the condition of the criminals was much improved. The road carried over Oradock's Kloof was named Montagu Pass, and is now part of the great trunk line between the western and eastern districts. The scene of another great engineering feat at Bain's Kloof, in the mountain range which separates Worcester and the districts beyond from the Cape division, was designated Montagu Rocks.

On the outbreak of the Kaffir war in December 1850 the governor, Sir Harry George Wakelny Smith [q. v.], was besieged in Fort Cox. Montagu exerted himself to the utmost to raise levies, and rendered the governor assistance of the greatest importance. On 2 May 1851 he was compelled to leave Cape Colony owing to ill-health brought on by overwork. He died in London on 4 Nov. 1853, and was buried in Brompton cemetery on 8 Nov. In April 1823 he married Jessy, daughter of Major-general Edward Vaughan Worsley. Montagu's transfer from Tasmania to the Cape seriously injured his private fortune. He left his family impoverished, and on 23 Oct. 1854 his wife received a civil-list pension of 300*l*.

Memoir of John Montagu (with portrait), 1855; Fenton's Hist. of Tasmania, 1884, pp. 134, 139-40, 142, 158-9; Franklin's Narrative of some Passages in the History of Van Dieman's Land during the Last Three Years of Sir John Franklin's Administration, privately printed, 1845; Weet's Hist. of Tasmania, Launceston, 1852, i. 225-7; Theal's Hist. of South Africa] E. I. C.

MONTGOMERY, SIR HENRY CONYNGHAM, second baronet (1803-1878), Madras civil servant, was the eldest son of Sir Henry Conyngham Montgomery (d. 1830). The father served in India for many years as a cavalry officer, commanding the

governor-general's bodyguard during a part of the time when Richard Colley (Marquis Wellesley) [q. v.] was governor-general; he was created a baronet on 3 Oct. 1808, and married Sarah Mercer (d. 1854), daughter of Leslie Grove of Grove Hall, co. Donegal. The Montgomery family were a branch of the Scottish Montgomeries, of whom the Earl of Eglintoun is the head, and had settled in Ireland in co. Donegal.

The subject of this article was educated at Eton and at the East India College, Haileybury, to which institution he was nominated as a student on 1 Aug. 1821. He did not, however, go out to India until 1825, having been permitted to leave Haileybury early in 1822 for the purpose of serving as assistant private secretary on the staff of Lord Wellesley, who was at that time lord-lieutenant of Ireland. There seems at one time to have been an intention that the young student should give up his Indian writership and remain on Lord Wellesley's staff, on the chance of the latter being able to provide for him in the public service in England; but on the advice of Sir John Malcolm [q. v.], a friend of his father, who went over to Dublin for the purpose of combating the idea, the intention was abandoned, and early in 1824 Montgomery returned to Haileybury, passing through college at the end of that year.

In 1825 he proceeded to India, reaching Madras on 9 Nov. In those days it was the custom for the young civil servants to remain for two years at the presidency town, prosecuting their studies in the native languages. Montgomery was therefore not appointed to the public service until 18 Jan. 1827, when he was gazetted assistant to the principal collector and magistrate of Nellore. On 31 Jan. 1830 he succeeded his father as second baronet. He subsequently served in various grades of the revenue department in the districts of Tanjore, Salem, Tinnevely, and Bellary, completing his revenue service in the provinces as collector of Tanjore. In all these districts he had made his mark as an able and careful administrator, and the result was that in 1843 he was sent on a special commission to the Rájahmundry (now called the Godávery) district to inquire into the causes of its impoverished condition and to suggest a remedy. It was upon his recommendation, based upon his experience in Tanjore, that Captain (afterwards Sir Arthur) Cotton [q. v. Suppl.] was deputed to Rájahmundry to investigate the question of utilising the waters of the Godávery for the purpose of irrigating the delta of that river, as had been done in Tanjore and Trichinopoly in the case of the Cávry and Coleroon rivers.

Montgomery's report and recommendations on the condition of the Rájahmundry district elicited high commendation from the government of Madras, and two years later he was selected by the Marquis of Tweeddale [see GEORGE HAY, eighth MARQUIS OF TWEEEDALE] to fill a vacancy in the government secretariat. He served as secretary to government in the revenue and public works departments until 1850, when he was promoted to the chief secretaryship. In 1855 he was appointed by the court of directors a member of the governor's council, which post he held until 1857, when, his health failing, he returned to England, and in the course of that year resigned his appointment and retired from the Indian civil service. In the following year, on the establishment of the council of India in London, Montgomery was appointed to be one of the first members of the new council, and this position he retained until 1876, when he finally retired from official life. On the occasion of his retirement he was appointed, at the recommendation of the Marquis of Salisbury, then secretary of state for India, to be a member of the privy council, an honour which is very rarely conferred upon Indian civil servants.

Montgomery's official career was eminently successful. He was not a brilliant man, but he was an extremely useful public servant. As a very young man he was remarked for the carefulness and accuracy of his work. When he became the head of a district, he was regarded as one of the ablest district officers in the presidency to which he belonged. He certainly had the advantage of possessing influential friends. Lord Wellesley had formed a high opinion of him when he worked in Dublin in the lord-lieutenant's private office, and did not fail to exert his influence on his behalf. Sir John Malcolm was also a kind friend to him. But he fully justified their recommendations. By his report upon the Rájahmundry district, and by the recommendations which he made for improving its condition, he rendered a service to the state, the benefits of which still remain. In the higher posts which he subsequently filled in Madras, as secretary and chief secretary to government and member of council, he fully maintained his previous reputation. By the successive governors under whom he served in the secretariat and in council, the Marquis of Tweeddale, Sir Henry Pottinger, and Lord Harris, he was trusted as a wise and conscientious advisor. During his long service in the Indian council, extending over eighteen years, he was highly esteemed

both by successive secretaries of state and by his colleagues in the council. His minutes, when he found himself called upon to dissent from the decisions of the secretary of state or of a majority of the council, were models of independent but courteous criticism. He retained to the last a keen interest in the presidency in which the whole of his Indian services had been passed. Indeed, it has been sometimes thought that he carried beyond due limits his advocacy of the claims of his old presidency, as in the case of the Madras harbour project, which was sanctioned by the India office, mainly at his instance, but has been a heavy burden upon the Indian revenues without compensating results. On political questions concerning the south of India he was a high authority. When the nawáb of the Carnatic died in 1858, Montgomery supported Lord Harris in advocating the extinction of the titular nawábship as a mischievous remnant of a state of things which, for political reasons, it was inexpedient to maintain. But he was not opposed in principle to the maintenance of native dynasties. In 1863 he wrote a cogent minute dissenting from the refusal of the secretary of state in council to restore to the rajah of Mysore the administrations of the territories of that state. The policy which on this occasion Montgomery opposed had been supported by two successive governors-general, the Marquis of Dalhousie and Earl Canning, but was subsequently reversed.

Montgomery died suddenly in London on 21 June 1878. In appearance he was singularly handsome, although small in stature. In manner he was invariably courteous, and his courtesy was the outcome of a kindly nature. He possessed in a conspicuous degree the rare virtue of readiness to admit error when he found that he had misjudged another. He married, on 3 March 1827, Leonora, daughter of General Richard Pigot, who survived him, dying on 16 June 1889. He left no children, and was succeeded as third baronet by his brother, Admiral Sir Alexander Leslie Montgomery (1807-1888).

[Personal knowledge, from 1816 to Sir Henry's death in 1878; private papers, lent by the present baronet, Sir Hugh Montgomery, including letters from the Marquis Wellesley, from the eighth Marquis of Tweeddale, from the first Sir Henry Pottinger, and from the late Lord Harris; official papers and parliamentary returns at the India Office.] A. J. A.

MOON, WILLIAM (1818-1894), inventor of the embossed type known as Moon's type for the blind, was descended from an old Sussex family seated at Rother-

field; but he was born at Horsemonden, Kent, on 18 Dec. 1818. He was the son of James Moon of Horsemonden, by his wife, Mary Funnell Moon. During his childhood his parents removed to Brighton, but William remained for some time at Horsemonden. At the age of four he lost the sight of one eye through scarlet fever, and the other eye was seriously affected. He was educated in London, and when about eighteen years old he settled at Brighton with his widowed mother. He was studying with the intention of taking holy orders; but the sight of the remaining eye gradually failed, in spite of several surgical operations. In 1840 he became totally blind. He had previously made himself acquainted with various systems of embossed type, and now began to teach several blind children, who were formed with some deaf mutes into a day school in Egremont Place, Brighton. In Frere's system (see FRERE, JAMES HATLEY), and the others previously used for teaching the blind, contractions are very extensively used; Moon, after some years' teaching, judged this system to be too complicated for the vast majority of blind persons, especially the aged, and accordingly constructed a system of his own in 1846. He employed simplified forms of the Roman capitals, almost entirely discarding contractions; and after he had constructed his alphabet he found that all the twenty-six letters are only nine placed in varying positions. By the help of friends interested in the blind, type was procured, and Moon began a monthly magazine. His first publication, 'The Last Days of Polycarp,' appeared on 1 June 1847; 'The Last Hours of Cranmer' and devotional works followed. Next he began to prepare the entire Bible, discontinuing the monthly issue for a time. As his supply of type was insufficient for so extensive an undertaking, he tried stereotyping, and after much experimenting succeeded in the invention of a process by which he could produce a satisfactory plate at less than one-sixth of the ordinary price. He put his process into use in September 1848, and the stereotypor then engaged was employed on the work till Moon's death, and afterwards. The publications have always been sold under cost price, the deficiency being made up by contributions from the charitable public. In 1852, when the greater part of the Bible was still unprinted, a formal report was published, with a defence of Moon's system against objectors, who had sneered at the cost and bulk of his publications; he argued that the Frere and other systems depending upon contractions com-

plicated the notation so far that the books were useless to the majority of the blind. He soon extended his system to foreign languages, beginning with Irish and Chinese; the principal languages of Europe were next employed, and before his death the Lord's Prayer or some other portion of Scripture was embossed in 476 languages and dialects, for all of which the original nine characters are found sufficient. The 'ox-ploughing' succession of lines is adopted. The works printed in foreign languages are almost entirely portions of the Bible; in English a large selection is available, including very many devotional works, some scientific treatises, and selections from Shakespeare, Milton, Burns, Scott, Longfellow, and other standard authors.

Moon met with a girl born blind, who supposed that horses stood upright and walked with two legs; this suggested to him embossed 'Pictures for the Blind,' teaching them by the touch to realise the forms of common objects. He also issued embossed diagrams for Euclid, music, and maps, both geographical and astronomical. He was made a fellow of the Royal Geographical Society in 1852, a fellow of the Society of Arts in 1859, and in 1871 the university of Philadelphia created him LL.D. He warmly advocated home teaching societies for the blind, which by his efforts were founded in many places; and lending libraries of Moon's books exist in eighty towns of the United Kingdom, in Paris, Turin, and various cities of the United States and the British colonies. In furtherance of these objects he often travelled through Scotland, Ireland, and the continent; in 1889 he visited the United States. He received great help, especially in the matter of lending libraries, from Sir Charles Lowther, with whom he became intimate in 1855, and who remained his closest friend, dying only a few days after him. On 4 Sept. 1856 Sir Charles laid the foundation-stones of a new building at 104 Quisen's Road, near the Brighton railway station; in these premises, since considerably enlarged, the entire production of the embossed books is still carried on.

In 1885 Moon spent several months in Sweden. As the jubilee of his work approached, a movement for a testimonial to him was originated in Scotland; and on 16 April 1890 he was presented with a chiming clock, worth of £502., and an illuminated address. His devotion to evangelistic work, of which the publishing was only a portion, brought on a slight paralytic stroke in the autumn of 1892, after which his activity was necessarily lessened. He died sud-

denly on 10 Oct. 1891, and was buried on the 15th in the extramural cemetery at Brighton, many of his blind pupils attending the funeral and singing over the grave. Some years before his death he had made over the freehold site of his promises to trustees for the continuance of his work in publishing embossed books for the blind.

Moon was twice married—in 1813 to Mary Ann Caudle, daughter of a Brighton surgeon, who died in 1861; and in 1866 to Anna Maria Gladale, a granddaughter of William Leveson [q. v.], the composer of 'Auld Robin Gray.' By the first marriage he had a son, who was of great assistance to him in arranging his types for foreign languages, and became a physician in Philadelphia; and a daughter, who now superintends the undertaking that Moon inaugurated.

Moon wrote: 1. 'A Memoir of Harriet Pollard, Blind Vocalist,' 1860. 2. 'Blindness, its Consequences and Ameliorations,' 1868. 3. 'Light for the Blind,' 1873. He composed a set of twelve tunes to devotional poetry, which were printed both in his embossed type and in ordinary music notation.

[Rutheford's William Moon and his Work for the Blind, 1898 (with portraits); Brighton Herald, 13 and 20 Oct. 1894; Illustrated London News, 20 Oct. 1894 (with portrait); Record, 3 June 1895; information from Miss Moon, who kindly revised this article.] H. D.

MOORE, HENRY (1831-1890), marine painter, born at York on 7 March 1831, was the second son of the portrait painter, William Moore (1790-1851) [q. v.], by his second wife Sarah Collingham, and the fourth child and ninth son of the whole family of fourteen. Albert Joseph Moore [q. v.] was his brother. Henry was educated at York and was taught painting by his father. He entered the Royal Academy schools in 1853, and exhibited his first picture, 'Glen Clunie, Braemar,' at the Royal Academy in the same year. He was a constant exhibitor at the Royal Academy from that time onwards. He exhibited at the Portland Gallery from 1855 to 1860, and at the British Institution from 1855 to 1865. It was also in 1855 that he sent the first of many contributions to the gallery of the Society of British Artists in Suffolk Street. He was a member of that society from 1867 to 1876. He was also a constant contributor, both in oils and water-colours, to the Dudley Gallery from 1865 to 1882. He became an associate of the Old Water-colour Society in 1876, and a full member in 1880. He contributed in later years to the Grosvenor

Gallery and the New Gallery. He was elected an associate of the Royal Academy on 4 June 1885, and an academician on 4 May 1893.

Almost all his early pictures were landscapes, painted in many parts of England, or, about 1856, in Switzerland. It was towards 1870 that he began to devote himself almost exclusively to the marine subjects in which the best work of his maturity was done. He had a profound and scientific knowledge of wave-form, acquired at the cost of exposure in all weathers, and he was generally content to paint the sea itself without introducing ships or human figures. He made his studies chiefly in the English Channel. He was a fine colourist, and held the foremost rank among English marine painters of his day. Among the most remarkable of his Academy pictures are 'A White Calm' (1858), 'The Launch of the Lifeboat' (1870), now in the Walker Art Gallery, Liverpool, 'Out-paws off the Land,' which was bought out of this funds of the Chantrey Bequest in 1885, and is now at Millbank, 'The Clearness after Rain' (1887), which won for the painter the grand prix and logion of honour at the Paris Exhibition of 1889, 'A Breezy Day in the Channel' (1888), 'Shine and Shower' (1889), 'Summer at Sea' (1893), and 'Britannia's Realm.' An exhibition of ninety pictures by Moore, entitled 'Afloat and Ashore,' was held by the Fine Art Society in 1887. The total number of pictures exhibited by Moore was not far short of six hundred. Shortly before his death an exhibition was held at York of the works of the father, William Moore, and his five artist sons, Edwin, William, John Collingham, Henry, and Albert Joseph.

Moore lived for many years at Hampstead, but died at Margate on 22 June 1895. He married in 1860 Mary (d. 1890), daughter of Robert Bollans of York. He had two daughters by this marriage.

MOORE, JOHN BRAMLEY (1800-1886), chairman of Liverpool Docks. [See **BRAMLEY-MOORE**.]

MORGAN, SIR GEORGE OSBORNE (1820-1897), first baronet, lawyer and politician, was eldest son of Morgan Morgan, for thirty-one years vicar of Conway, Carnarvonshire, by Fanny Nonnon, daughter of John Nonnon of Liseberg, Gothenburg, who was descended on the mother's side from the Huguenot family of De Lorent. His younger brother was John Edward Morgan, M.D.,

professor of medicine at Owens College, Manchester (d. 4 Sept. 1892), and his youngest brother, the Rev. Henry Arthur Morgan, D.D., became master of Jesus Coll., Cambridges.

Georgs Osborne Morgan, who derived his name of Osborne from the marriage in 1764 of Egbert Nonnen, his great-grandfather, with Anns Osborne of Burnage, Cheshire, was born at Gothenburg in Sweden on 8 May 1826, during the temporary occupancy by his father of the post of chaplain there. At the age of fifteen, after spending some time at the Friars' school, Bangor, he entered Shrewsbury School under Dr. Kennedy (see KENNEDY, BENJAMIN HALL), who said of him that he had never known a boy 'with such a vast amount of undigested information.' His father had intended him for Cambridge and the church, but he preferred Oxford and matriculated from Balliol on 30 Nov. 1843. He then returned to Shrewsbury, and while still a schoolboy performed the extraordinary feat of obtaining the Craven scholarship at Oxford (18 March 1844), afterwards going back again to school. In the following autumn he stood for a scholarship at Balliol. He was awarded an exhibition, the two scholarships being won by Henry John Stephen Smith [q.v.] and Sir Alexander Grant (1826-1884) [q.v.], and he then went into residence. In 1846 he was *proximus accessit* for the Ireland scholarship, and in the same year he won the Newdigate prize for English verse, the subject being 'Settlers in Australia.' When he became under-secretary for the colonies in 1886, this poem was republished by the 'Melbourne Argus,' and enjoyed considerable popularity in Australia. In 1847 he migrated as a scholar to Worcester, and from that college obtained a first class in the school of *literæ humaniores* in the Michaelmas term of the same year, graduating B.A. in 1848. He obtained the chancellor's English essay prize in 1850 upon the theme 'The Ancients and Moderns compared in regard to the Administration of Justice,' and was elected Stowell civil law fellow of University College. He obtained the Eldon law scholarship in 1851. He had now determined upon the bar as a profession, having been admitted a student of Lincoln's Inn on 6 June 1850. While at Balliol his principal friend was (Sir) Alexander Grant. At the dinner at Balliol on the occasion of the opening of the new hall (10 Jan. 1877) Osborne Morgan, in responding for the bar, acknowledged the debt he owed to Jowett's influence [see JOWETT, BENJAMIN, Suppl.]. During his short residence as civil law fellow at University he took pri-

vate pupils, among them Viscount Peel, Sir M. E. Grant Duff, and Lord-justice Chitty. His most intimate friends at this period, which was marked by vehement religious controversies, were the opponents of trinitarianism, such as Arthur Penrhyn Stanley [q.v.], William Young Sellar [q.v.], and Arthur Hugh Clough [q.v.]. He figures in Clough's poem 'The Bothis' as Lindsay.

In 1851 Morgan left Oxford. The present archbishop of Canterbury had offered him the vice-presidency of Kneller Hall, a training college for teachers then recently established at Twickenham, but he was resolutely bent upon the bar, and entered as a pupil in the chambers of equity counsel in Lincoln's Inn. Meanwhile he contributed political leading articles to the 'Morning Chronicle,' and after the staff of that newspaper founded the 'Saturday Review' he wrote very occasionally for the new periodical. He was called to the bar at Lincoln's Inn on 6 June 1853, and practised as an equity draughtsman and conveyancer. He rapidly acquired a practice, and received a number of pupils to read in his chambers, among them Mr. Justice Byrne, Sir C. P. Ilbert, and Sir Robert Herbert. In 1858 he published 'Chancery Acts and Orders, being a Collection of Statutes and General Orders recently passed.' This, with slight variations in the title, ran through six editions, the second being published in 1860, and the last in 1885. He also became one of the four joint editors of 'the New Reports,' which contained cases decided in this course of equity and common law between November 1862 and August 1865, the first of the six volumes appearing in March 1863. Among the reporters associated with him in this series were Lord-chancellor Herschell, the speaker of the House of Commons (the Right Hon. W. O. Gully), Lord Davey, Lord-justice Bowen, Lord-justice Rigby, and others.

In 1861 Morgan published a sympathetic lecture on the Italian revolution of 1860. He had already begun his political career by holding meetings in his chambers at Lincoln's Inn for the promotion of church disestablishment and the abolition of university tests. Although a clergyman's son, he had been led to form opinions unfavourable to the establishment in consequence of abuses witnessed by him in the Welsh church. He became intimate with Edward Miall [q.v.], the leader of the militant nonconformists. His opinions on these subjects and his nationality designated him for a Welsh seat in parliament, and in 1859 he accepted an invitation to stand for Carnarvon

borough, but withdrew in order to avoid division in the liberal party. A similar incident took place in 1867 in connection with Denbigh borough. In 1868, on Miall's recommendation, he was invited to stand for Denbighshire. He was returned as junior colleague to Sir Watkin Williams Wynn on 24 Nov. 1868. His maiden speech, delivered on 15 March 1869, was in support of the second reading of the university tests abolition bill. It struck the attention of Bright, and led to a friendship maintained throughout the rest of his life. On 6 July Osborne Morgan seconded Henry Richard's resolution upon the subject of evictions of liberal tenants by Welsh landlords during the recent elections. During this session too he first addressed himself to a question which long occupied his energies, that of the law affecting married women's property (14 April 1869), and he supported by a speech the second reading of Sir Wilfrid Lawson's permissive prohibitory liquor bill (12 May). On 10 Feb. 1870 he first introduced the measure with which his name was long associated, the burials bill permitting any Christian service in a parish churchyard, and on the same day he obtained the leave of the house to introduce the places of worship (sites) bill, facilitating the acquisition of land for religious purposes. From this bill, as introduced in 1870, W. E. Forster borrowed the clauses of the Elementary Education Act of that year empowering school boards to acquire land compulsorily. The places of worship (sites) bill did not become law till 1873. In 1871 and 1872 he seconded Sir Roundell Palmer's resolutions in favour of the creation of a general school of law, which led to the institution of examinations by the Inns of Court before calling students of law to the bar. He had been appointed a Queen's counsel on 23 June 1869, and elected a benchor of Lincoln's Inn in the Michaelmas term following. In 1890 he became treasurer. His profession led him to take much interest in the reform of the land laws. During the session of 1878 he acted as chairman of the select committee on land titles and transfer, and drafted its report dated 24 June 1879. He also contributed an article upon the same subject to the 'Fortnightly Review' for December 1879, and in 1880 reprinted it as a pamphlet under the title 'Land Law Reform in England.' On all topics directly associated with law, such as the bills for the reconstitution of the courts of judicature (1873 and 1875), he frequently addressed the house. He supported the measure for the reform of the universities of Oxford and Cambridge (1877),

Mr. (now Sir George) Trevelyan's resolution for the extension of the suffrage to the counties (1879), and the Welsh Sunday closing bill, which became law in 1891. For ten successive sessions he introduced the burials bill, sometimes carrying it through the House of Commons by considerable majorities, but it was not finally passed by the House of Lords till 1880.

On the accession of Gladstone to power in that year Osborne Morgan became a member of the ministry as judge-advocate-general, and retired from the bar. He was also nominated a privy councillor. Upon the introduction by him on 28 March 1891 of the annual army discipline &c. bill, he provided for the abolition of the punishment of flogging, and carried it in spite of a strong opposition. He had sole charge of the married women's property bill, 1882, a bill which, bristling with legal difficulties, required exceptionally skilful handling in its passage through the House of Commons. It became law the same session. He took a warm interest in Welsh intermediate and higher education. On 14 March 1884 he supported by a speech Mr. (now Lord) Rendel's motion in favour of placing Aberystwyth College, 'in respect of status recognition and support, on an equal footing with the colleges at Cardiff and Bangor.' He was anxious to improve the education of women, and took part in the foundation of a women's hostel at Bangor College. An 'Osborne Morgan exhibition' was founded in the University College of North Wales after his death to commemorate his services. After the redistribution of the constituencies in 1885 Osborne Morgan, as sitting member, had the natural right of choice between East and West Denbighshire. West Denbighshire was held to be a safe liberal seat, whereas East Denbighshire was the centre of the influence of the Wynn family. With characteristic courage and self-sacrifice he chose the constituency which no liberal but himself could hope to contest with any prospect of success. In the result he won the election by 303 votes, and the Wynn family was deposed from the representation of the county for the first time for 182 years. This service was rewarded, on Gladstone's accession to office in February 1880, by the appointment of Osborne Morgan as parliamentary under-secretary for the colonies. As his chief, Lord Granville, sat in the House of Lords, the labour of representing the department in parliament chiefly fell upon Osborne Morgan. His tenure of office lasted only six months, but it was marked by exceptional activity. The distress

which he experienced at a narrative of sufferings endured by Welsh settlers in Patagonia, as well as by other emigrants to Canada, led to his foundation of the emigration inquiry office, still a useful government institution. A glance at the index to Hansard for this session shows the number and variety of the questions connected with his department which engaged his attention. The strain proved excessive, and a stubborn contest for East Denbighshire with his former opponent, Sir W. W. Wynn, which Osborne Morgan won by the narrow majority of only twenty-six (7 July 1886), led to a severe illness, from which he never quite recovered. But his apparently inexhaustible energy showed itself throughout the sessions of 1887-92. During three months of 1888, and the sessions of 1889-92, and in the parliament of 1892-5 he was alternately chairman of the standing committees on law and trade.

In July 1892 he again won East Denbighshire, this time by the substantial majority of 765 against his former opponent. But he felt his health unequal to the resumption of office, and accepted Gladstone's offer of a baronetcy. Nevertheless, his activity in the house continued, especially on all matters affecting Wales, and he was unanimously chosen leader of the Welsh party. He died on 26 Aug. 1897, and was buried in the churchyard of Llantysilio near Llangollen. His last public appearance, a week before his death, was at an eistedfodd at Chirk, at which he delivered a speech on the effects of music upon character.

Osborne Morgan was, physically as well as mentally, a Celt. He had a Celtic ardour and imaginative disposition. His Newdigate prize, his passion for Tennyson's verse, and his temperament combined to fasten upon him at Oxford the name of 'the poet.' His ambition to develop Welsh education was part of a larger ambition of endowing Wales with the qualifications to stand by the side of 'the predominant partner' as a nationality with a character and aims of its own. His Celtic sympathies threw him, at the outset of his career in parliament, into the cause of Irish disestablishment, and at its close into that of Irish home rule. Yet he had been 'brought up to look with equal horror on democracy and dissent.' The change came with Oxford, and through the group of liberal thinkers whom he there made his friends.

Like many of Kennedy's pupils, Osborne Morgan wrote elegant Greek verse, as is attested by two compositions published in the 'Sabinæ Corolla,' 1890, pp. 70, 363.

He retained to the last his fondness for his school, of which he became a governor, and for classical literature, and in the year of his death (1897) published, with a dedication to Gladstone, a translation into English hexameter verse, perhaps a reminiscence of Clough's influence, of the 'Eclogues of Virgil,' which was very favourably received. He contributed various articles on current topics to the 'Contemporary,' 'Fortnightly,' and 'Nineteenth Century' Reviews. He was an excellent raconteur and brilliant conversationalist. He married in 1856 Emily, daughter of Leopold Reiss of Eccle, Lancashire, who survived him. He left no issue.

A portrait was the property of his widow, painted by Edgar Hanley and exhibited at the Royal Academy in 1882. Two engraved portraits were published by Morris & Co. in 1869 and 1897 respectively.

I. S. L.

MORLEY, WILLIAM HOOK (1815-1860), orientalist and lawyer, born in 1815, second son of George Morley of the Inner Temple, distinguished himself in 1838 by discovering a missing manuscript of Rashidud-din Jāmī'a Tawārīkh (see ELLIOT's *History of India*, iii. 10, and *R.A.S.J.* for 1889, vi. orig. ser.) He entered the Middle Temple on 12 Jan. 1838, was called to the bar in 1840 and in 1846, and in 1849-50 published a valuable digest of cases decided in the Supreme Courts of India (London, 2 vols. 8vo; new ser. vol. i. only, 1862). He was a trustee of the Royal Asiatic Society, and during the last year of his life also librarian; he published a 'Catalogue of the Historical Manuscripts in the Arabic and Persian Languages' in the possession of the society (London, 1854, 8vo). In 1856 he published a splendid folio, being a description of a planisphere astrolabe constructed for Shāh Sultan Husain Safavi. He also edited in 1848, for the Society for publishing Oriental texts, Mir Khwand's 'History of the Atabeks of Syria and Persia,' with a description of Atabak coins by William Sandye Vaux [q. v.]

His latter days were clouded by domestic distress, owing to the death of his wife. He died at 85 Brompton Square, London, on 21 May 1860.

MORRIS, RICHARD (1833-1894), English scholar and philologist, was born at Bormondsey on 8 Sept. 1833, of Welsh parentage. He was trained for an elementary schoolmaster at St. John's College, Battersea, but his education was for the most part self-acquired. In 1869 he was appointed Winchester lecturer on English language and literature in King's College school. In 1871 he was ordained, and served for two years as curate of Christ Church, Camberwell. From 1875 to 1888 he was head-master of the Royal Masonic Institution for Boys at Wood Green, and afterwards for a short time master of the old grammar school of Dedham in Essex. His diploma of LL.D. came from Lambeth, being given him in 1870 by Archbishop Tait. The university of Oxford conferred upon him the honorary degree of M.A. on 28 May 1874.

As early as 1867 Morris showed the bent of his mind by publishing a little book on 'The Etymology of Local Names.' He was one of the first to join as an active member the Chaucer, Early English, and Philological societies, founded by his lifelong friend, Dr. F. J. Furnivall. None of his colleagues surpassed him in the devotion which he expended upon editing the oldest remains of our national literature from the original manuscript sources, on the same scientific principles as adopted by classical scholars. Between 1862 and 1880 he brought out no less than twelve volumes for the Early English Text Society, of which may be specially mentioned three series of 'Homilies' (1808 seq.) and two of 'Alliterative Poems' (1864). In 1866 he edited Chaucer for the 'Aldine Poets' (2nd edit. 1891). This was the first edition to be based upon manuscripts since that of Thomas Tyrwhitt [q. v.], and remained the standard one until it was superseded by Professor Skeat's edition (1894-7). In 1869 he edited Spenser for Macmillan's 'Globe' edition, again using manuscripts as well as the original editions. In 1867 he published at the Clarendon Press, Oxford, 'Specimens of Early English,' which has been augmented in subsequent editions by Professor Skeat. These are books for scholars and students. But Morris's long experience as a schoolmaster induced him to undertake a series of educational works, which have contributed largely to place the teaching of English upon a sound basis. The first of

these was 'Historical Outlines of English Accidence' (1872), which, after passing through some twenty editions, was thoroughly revised after his death by Mr. Henry Bradley and Dr. L. Kellner. Two years later (1874) he brought out 'Elementary Lessons in Historical English Grammar,' and in the same year a primer of 'English Grammar.' From both of these tens of thousands of boys and girls have learnt their earliest knowledge of their own tongue, which they will never need to unlearn.

Scarcely had Morris struck out this remunerative line of authorship when he deliberately turned aside to devote the remainder of his life to what is probably the least appreciated of all the branches of philology—the study of Pali, the sacred language of Buddhism. In this case the stimulus came from his intimacy with Professor Rhys Davids, the founder of the Pali Text Society. For that society he edited, between 1862 and 1888, four texts, being more than any other contributor down to that time. But he did not confine himself to editing. His familiarity with the development of early English caused him to take a special interest in the corresponding position of Pali, as standing midway between the ancient Sanskrit and the modern vernaculars, and as branching out into various dialects known as Prakrits. These relations of Pali he expounded in a series of letters to the 'Academy,' which are valuable not only for their lexicographical facts, but also as illustrating the historical growth of the languages of India. The very last work he was able to complete was a paper on this subject, read before the International Congress of Orientalists in London in September 1892. Unfortunately he could not himself correct the proofs of this paper as printed in the 'Transactions.'

For the last two years of his life Morris was prostrated by an incurable and distressing illness, which he bore with characteristic fortitude, preserving his cheerfulness and his love of a good story to the last. He retired to the railway-side hamlet of Harold Wood in Essex, and there he died on 12 May 1894. He was buried at Hornchurch, within which parish Harold Wood is included. In 1893 Gladstone had conferred upon him a pension of 150*l.* on the civil list; and on 2 June 1896 new pensions of 25*l.* each were created in favour of his three daughters. The greater part of his valuable philological library was acquired by the bookseller, Mr. David Nutt.

[Personal knowledge; private information.]
J. S. O.

MORRIS, WILLIAM (1834-1896), poet, artist, manufacturer, and socialist, was the eldest son and third child of William Morris, a partner in the firm of Sanderson & Co., bill brokers in the City of London, and of Emma Shelton, daughter of Joseph Shelton, a teacher of music in Worcester, and son of John Shelton, proctor in the consistory court of that city. He was born on 24 March 1834, at Elm House, Clay Hill, Walthamstow, his father's suburban residence. In 1840 the family removed to Woodford Hall (now known as Mrs. Gladstone's Convalescent Home), the park of which was contiguous with Epping Forest. As a boy, therefore, Morris had the free daily range of that unique tract of country, then little changed since mediæval or even since prehistoric times; and these surroundings fostered his natural keenness of eye and romantic bent of temper. He learned to read very young, and never remembered a time when he could not read, but was not notably precocious otherwise. His earlier education was at a small private school in the neighbourhood; from January 1848 until December 1851 he was at Marlborough College, and then lived for nearly a year as a private pupil with the Rev. F. B. Guy, afterwards canon of St. Albans, and then assistant master at the Forest School, Walthamstow. He matriculated at Exeter College, Oxford, in June 1853, and went into residence in January 1853.

Morris went up to Oxford with an unusual amount of varied knowledge and a character already strongly marked and well developed. Lovers of the middle ages was born in him, and was reinforced by the wave of Anglo-catholicism which had just spread over England, and which had come as a highly stimulating influence on families brought up, like his, in a somewhat stagnant evangelicism. Already as a boy he had acquired a singularly minute knowledge of trees, flowers, and birds. At Marlborough he had, with the aid of the school library and all the specimens of ancient building within reach, made himself a good antiquary, 'knowing,' as he afterwards said, 'most of what was to be known about English Gothic; and Savernake Forest and the Wiltshire downs made a background in complete harmony with his growing sense of romance and love of beauty. At Oxford he at once formed a close friendship with Edward Burne-Jones [q. v. Suppl.], who had entered at Exeter together with him, and had brought, from the very different surroundings of middle-class life in Birmingham, an enthusiasm, a knowledge, and a high idealism, which at all points confirmed and

supplemented his own. Until Morris's death the two men lived in the closest intimacy, not only of daily intercourse but of thought and work. They were the two foremost figures in a group of undergraduates, chiefly Birmingham schoolfellows of Burne-Jones, which was perhaps more remarkable than any which Oxford has produced since.

At Exeter Morris read only for a pass degree, and mixed little in the general life of the college. But he was an incessant, swift, and omnivorous reader, and his prodigious memory enabled him in those few years to lay up an enormous store of knowledge. Religious perplexities, under which, in 1854, he was on the point of joining the Roman communion, passed over soon afterwards; ecclesiastical history and Anglican theology were in turn mastered and put aside, and their influence was gradually replaced by an artistic and social enthusiasm in which Carlyle, Ruskin, and Kingsley were the chief modern leaders whom he followed. When he came of age in 1855 he still cherished a fancy of devoting his considerable fortune to the foundation of a monastery in which he and his friends might combine an ascetic life with the organised production of religious art. This ideal became gradually enlarged and secularised, but remained, in one form or another, his ideal throughout life.

In the autumn of 1854 Morris had made his first visit to northern France, and in the long vacation of 1855 he repeated the tour in company with Burne-Jones and William Fulford, another member of the undergraduate circle, who were now known among themselves as 'the Brotherhood.' During this tour, under the added impulse of his boundless enthusiasm for French Gothic, he definitely renounced the purpose of taking orders with which he had gone to Oxford, and made up his mind to be an architect. As soon as he had passed his final schools that winter, he articulated himself as a pupil to George Edmund Street [q. v.], already one of the most prominent architects of the revived English Gothic, who then had his headquarters in Oxford as architect to the diocese. The articles were signed on 25 Jan. 1856. In Street's office Morris formed an intimate and lifelong friendship with the senior clerk, Philip Webb [q. v.], which had an important influence over the development taken by English domestic architecture during the next generation. He worked in Street's office for the rest of that year, first at Oxford, and afterwards in London when Street removed thither in the autumn. Meanwhile Burne-Jones had left Oxford without

taking a degree in order to begin life as a painter in London. The influence of Rossetti was immensely strong on both; and when Morris also came to London and shared rooms with Burne-Jones, Rossetti succeeded in convincing him that he too ought to be a painter. Towards the end of the year he quitted Street's office, took a studio for himself and Burne-Jones at 17 Red Lion Square, Holborn, and plunged at the beginning of 1857 into a new life.

He had already proved his powers in imaginative literature. The faculty of story-telling he had possessed even as a schoolboy; and at Oxford he had found that story-writing came to him just as easily. About the same time he had begun to write lyrical poetry; his first attempts being marked (together with many mannerisms and immaturities) by an originality and power rare in any beginner. 'The Willow and the Red Cliff,' the first piece of verse he ever wrote, has, except for a few echoes of Tennysonian phrase, nothing in it that is not wholly Morris's own, and shows a directness of spiritual vision comparable to that of Blake. To this and the other pieces belonging to the same year, Chatterton may offer the nearest English parallel; and neither Keats nor Tennyson (Morris's two master poets among the moderns) had shown a more certain voice in their first essays in poetry.

Morris was one of the originators of the celebrated 'Oxford and Cambridge Magazine,' which was conducted and written by the members of the brotherhood and some of their friends, and paid for by him, during the twelve months of 1856. He contributed to it eight prose tales (of which 'The Hollow Land' is the most remarkable), one or two essays and reviews, and five poems, including the 'Sunrise Dawn,' which many critics would place among the first rank of lyrics of the imagination. When he began life as a painter he did not abandon poetry, and during 1857 wrote, besides a number of pieces which he afterwards destroyed, and others of which only fragments survive, most of the poems published by him in March 1858 in the volume entitled 'The Defence of Guenevere and other Poems.' Poetry, however, was now only his relaxation (as in a sonnet it always afterwards continued to be), and his regular work was drawing, painting in oil and water-colour, modelling, illuminating, and designing. During the last three months of 1857 he was working, together with Rossetti, Burne-Jones, Hughes, Pollen, Prinsep, and Stanhope, on the celebrated tempera decorations of the walls and roof of the newly built debating hall of the Oxford

Union Society. He painted one of the ten bays of the walls, and designed, and executed with some help from friends, the ornamentation of the whole roof. While engaged on this work at Oxford he made the acquaintance of the lady whom he afterwards (20 April 1859) married, Miss Jane Burden.

For several years after his marriage Morris was absorbed in two intimately connected occupations: the building and decoration of a house for himself, and the foundation of a firm of decorators who were also artists, with the view of reinstating decoration, down to its smallest details, as one of the fine arts. Meanwhile he was practising less and less the specific form of decoration known as painting; the latest of the few pictures painted by him do not go beyond 1862. The house he made for himself was the first serious attempt made in this country in the present age to apply art throughout to the practical objects of common life. It was built, from designs jointly framed by Morris and Webb (the latter being the responsible architect), at Upton in Kent; it is still extant, though in greatly changed surroundings, with a considerable amount of its decoration, under its original name of Red House, given to it when the use of red brick without stucco was a startling novelty in domestic architecture. Its requirements, and the problems it suggested, had a large share in leading to the formation, in April 1861, of the firm of Morris, Marshall, Faulkner, & Co., manufacturers and decorators, and to the whole of Morris's subsequent professional life. Rossetti, Burne-Jones, Madox Brown, and Webb were Morris's partners in the firm, together with C. J. Faulkner and P. P. Marshall, the former of whom was a member of the Oxford Brotherhood, and the latter a friend of Brown and Rossetti. The decoration of churches was from the first an important part of the business. On its non-ecclesiastical side it gradually was extended to include, besides painted windows and mural decoration, furniture, metal, and glass wares, cloth and paper wall-hangings, embroideries, jewellery, printed cottons, woven and knotted carpets, silk damasks, and tapestries. The first headquarters of the firm were at 8 Red Lion Square. The work shown by it at the Exhibition of 1862 attracted much notice, and within a few years it was doing a pretty large business. In the autumn of 1864 a severe illness obliged Morris to choose between giving up his home in Kent and giving up his work in London. With great reluctance he did the former, and in 1865 established himself

under the same roof with his workshops, in Queen Square, Bloomsbury.

During the five years (1860-5) at Red House, poetry had been almost laid aside in the pressure of other occupation. The unfinished drafts of a cycle of lyric-dramatic poems called 'Scenes from the Fall of Troy' are the only surviving product of that period. But on his return to London he resumed the writing of poetry in a completely new manner and with extraordinary copiousness. The general scheme of the 'Earthly Paradise' had been already framed by him; and in 1866 he began the composition of a series of narrative poems for this work, which he continued for about four years to pour forth incessantly. One of the earliest written, the 'Story of the Golden Fleece,' outgrew its limits so much that it became a substantive epic of over ten thousand lines. It was separately published, under the title of 'The Life and Death of Jason,' in June 1867, and gave Morris a recognised position in the foremost rank of modern poets. The three volumes of the 'Earthly Paradise,' successively published in 1868-70, contained twenty-five more narrative poems, connected with one another by a framework of intricate skill and singular fitness and beauty. Several more are still extant in manuscript, and others again were destroyed by their author; but those actually published (including the 'Jason') extend to over fifty thousand lines. In this fluent copiousness of narration, as well as in choice and use of metres, and in other subtler qualities, Morris went for his model to Chaucer, whom he professed as his chief master in poetry.

This torrent of production did not lead him to slacken in his work as a decorative manufacturer, to which at the beginning of 1870 he began to add that of producing illuminated manuscripts on paper and vellum, executed in many different styles, but all of unapproached beauty among modern work. About the same time he had made his first acquaintance with the Icelandic Sagas in the original, and begun to translate them into English. One of these translations, that of the 'Völsunga-saga,' was published under the joint names of Morris and his Icelandic tutor, E. Magnússon, in May 1870. In the previous month he had sat to Watts for the portrait, now presented by the painter to the National Portrait Gallery, which represents Morris at the prime of his vigour and the height of his powers.

The completion of the 'Earthly Paradise' was followed by a pause in Morris's poetical activity. In the summer of 1871 he made a journey through Iceland, the effects of

which upon his mind may be traced in much of his later work. In the same year he acquired what became his permanent country home, Kelmscott Manor House, a small but very beautiful and wholly undisfigured building of the early seventeenth century on the banks of the Thames near Lechlade. Around this house that 'love of the earth and worship of it,' which was his deepest instinct, centred for all the rest of his life.

For several years about this time there may be traced in all Morris's work a restlessness due to the constant search after fresh methods of artistic expression, and the growing feeling that, inasmuch as true art is co-extensive with life, the true practice of art involves at every point questions belonging to the provinces of moral, social, and political doctrine. A prose novel of modern English life, begun in the spring of 1871 and never completed, was one of these essays in fresh methods. Another was the poem of 'Love is Enough,' begun after Morris's return from Iceland, and published at the end of 1872: a singular and imperfectly successful attempt to revive, under modern conditions, the dramatic method of the later middle ages, and the Middle-English alliterative verse which had been driven out of use by foreign metres in the fifteenth century. For the next two years his leisure was mainly occupied by work as a scribe and illuminator; to this period belong, among other works, the two exquisite manuscripts of FitzGerald's 'Omar Khayyám' belonging to Lady Burne-Jones and Mrs. J. F. Horner. Towards the end of 1874 the dissolution of the firm of Morris, Marshall, Faulkner, & Co. became necessary for various reasons, and questions which arose as to the claims of the outgoing partners led to a period of much difficulty and trouble. The effect on Morris after the first shock was a bracing one; and if the first period of his life had ended with the completion of the 'Earthly Paradise,' a second now opened which, without the irrecoverable romance of youth, was as copious in achievement upon a much wider field.

The first products of this new period were in literature. He had been for some time engaged in the production of a magnificent folio manuscript of the 'Æneid,' and in the course of that work had begun to translate the poem into English verse. The manuscript was finally laid aside for the translation, and the 'Æneids of Virgil' was published in November 1875. It had been preceded earlier in the year by a volume of translations from the Icelandic under the title of 'Three Northern Love Stories,' and was followed almost at once by the com-

position of his longest poem, the epic of 'Sigurd the Volsung and the Fall of the Niblungs.' This was published at the end of 1876. Morris himself thought it his highest, if not his best, work in poetry. In it the influence of the north is seen at its height, and for the time has expelled, or driven below the surface, his romantic mediævalism and all traces of the Chaucerian manner. Here as elsewhere he owed little to English predecessors or contemporaries. His inspiration was drawn directly from the northern epics of the tenth to twelfth centuries, where it did not derive from models still more ancient and more universal; and the 'Sigurd' is at once the most largely and powerfully modelled of all Morris's poetical works, and the poem which approximates most nearly to the Homeric spirit and manner of all European poems since the 'Iliad' and 'Odyssey.'

During the period of the composition of 'Sigurd the Volsung' Morris had taken up, with his customary vehement thoroughness, the practical art of dyeing as a necessary adjunct of his manufacturing business. He spent much of his time at Staffordshire dyo works in mastering all the processes of that art and making experiments in the revival of old or discovery of new methods. One result of these experiments was to reinstate indigo-dyeing as a practical industry, and generally to renew the use of those vegetable dyes which had been driven almost out of use by the anilines. Dyeing of wools, silks, and cottons was the necessary preliminary to what he had much at heart, the production of woven and printed stuffs of the highest excellence; and the period (1876-8) of incessant work at the dyo-vat was followed by a period during which (1877-8) he was absorbed in the production of textiles, and more especially in the revival of carpet-weaving as a fine art. Amid these manifold labours he was also taking more and more part in public affairs. From 1876 onwards he was an officer and one of the most active members of the Eastern Question Association. In 1877 he founded the Society for the Protection of Ancient Buildings. In 1879 he became treasurer of the National Liberal League. In those years he began the practice of giving lectures and addresses (at first chiefly to working designers and art students), which remained afterwards one of his main occupations. The work of the firm, partly in consequence of the new departures now taken, partly from a wider knowledge and greater appreciation of its products, was steadily expanding. The premises at Queen

Square had already become too small for it. Morris and his family had been driven out in 1872 that the whole house might be utilised for workrooms (he then lived first at Turnham Green, and from 1878 for the rest of his life on the Upper Mall of Hammersmith), and in 1881 the establishment was removed to large premises at Merton Abbey near Wimbledon, a sale-room and counting-house having been already set up in Oxford Street in the West End of London.

Since the completion of the 'Sigurd,' Morris's production in creative literature had almost ceased. Only a few months after its publication he had declined to be put in nomination for the professorship of poetry at Oxford, and since then his life had been more and more that of a manufacturer and a man keenly interested in public affairs, and less that of a man of letters and artist. In 1882 a combination of convergent causes profoundly altered his political attachments and his attitude towards politics. His enthusiasm for liberalism, after many severe checks from the whiggery of his party leaders, had been converted into open disgust by the Irish coercive legislation of 1881 and the timidity or aversion with which the liberal government regarded his favourite projects of social reform. Looking back in his forty-ninth year over what he had done and what he had failed to do, and looking to the future in the light of the past, he found himself forced reluctantly to the conclusion that hitherto he had not gone to the root of the matter; that, art being a function of life, sound art was impossible except where life was organised under sound conditions; that the tendency of what is called civilisation since the great industrial revolution had been to dehumanise life; and that the only hope for the future was, if that were yet possible, to reconstitute society on a new basis.

The Democratic Federation—a league of London working men's radical clubs with leanings towards state-socialism—was the only organisation at hand which seemed to Morris, from this point of view, to be at work in the right direction. In the belief that better conditions of life for the working class—which substantially included the objects towards which that body worked—were the necessary first step towards all further progress, and that they could be attained by properly organised action on the part of the working class itself, Morris joined the federation in January 1888. He had a few days before been elected an honorary fellow of Exeter College, Oxford. The doctrine of the federation rapidly developed within that year

into professed socialism, and Morris led rather than followed in this change. He supported the federation largely with money, and devoted himself almost wholly to writing, speaking, and organising in its service. In 1881 jealousies among the leaders and differences of opinion with regard to policy led to a disruption of the federation. The seceders organised themselves as a separate body under the name of the Socialist League, and Morris, much against his will, was forced into a leadership of this group, among whom he was conspicuous alike by means, education, and character. To the service of the league he gave himself up with even more complete devotion, managing and financing their journal, the 'Commonweal,' preaching socialism among the working class in most of the industrial centres of Great Britain, and addressing street meetings regularly with the view of organising discontent towards a social revolution. In connection with one of these meetings in East London he was arrested in September 1885, but discharged without trial. During this period he wrote much in the 'Commonweal,' and also published many socialist tracts and pamphlets, both prose and verse. Not until the spring of 1886 did he begin to find time for literature other than that of direct socialism. He then took up a task, or rather to him a recreation, delightful in itself and the more pleasant by contrast with his political work, the translation of the 'Odyssey' into English verse. His 'Odyssey' was published in 1887, as was a volume of essays and addresses entitled 'The Aims of Art.' In 1888 followed a second volume of addresses, called 'Signs of Change,' and the most remarkable of his prose writings, 'A Dream of John Ball,' a work of singular elevation and beauty, which may be classed either as a romance or as a study in the philosophy of history. In the same year he had taken his head managers into partnership, and thus relieved himself from much of the routine work of his manufacturing business.

Increased leisure, and the conviction (finally confirmed by the events of 13 Nov. 1887 in Trafalgar Square) that no social revolution was now practicable, and that the true work of socialists lay in education towards revolution by influence on opinion, were leading Morris by this time, on the one hand towards a more passive socialism, and on the other towards the resumption of other and older interests. The ideal human life of the future lay far beyond reach; he now once more reverted to that of a remote or fabulous past, in a series of prose

romances which he went on writing for the remainder of his life. The first of these, 'The House of the Wolfings' (1880), is a story in which a romantic and supernatural element is combined with a semi-historical setting, of life in a Teutonic community of Central Europe in the time of the later Roman empire. It was followed by 'The Roots of the Mountains' (1890), a story of somewhat similar method, but of a less defined place and time. The former of these stories is in a vehicle of mixed prose and verse used with remarkable skill, which he did not repeat, although the subsequent romances include passages of lyrical verse. Next came 'The Story of the Glittering Plain' (1890), 'The Wood beyond the World' (1894), 'Child Christopher' (1895), and 'The Well at the World's End' (1896), the longest and most elaborate of his romances. 'The Water of the Wondrous Isles' and 'The Story of the Sundering Flood,' the last two of the series, were only published after his death (1897, 1898). Midway between those romances and the literature of socialism is the romantic pastoral of 'News from Nowhere,' describing the England of some remote future under realised communism, which appeared in the 'Commonweal' in 1890, and was published as a book in 1891.

The socialist league had since 1887 been dwindling in numbers and losing coherence: its control passed in 1889 into the hands of a group of anarchists, and in 1890 Morris formally withdrew from it. He had already become absorbed in a new work, that of reviving the art of printing as it had flourished in the later years of the fifteenth century. The Kilmecott Press was started by him at Hammersmith during 1890. He designed for it three founts of type and an immense number of ornamental letters and borders, and superintended all the details of printing and production. In 1893 he also became his own publisher. One of the earliest of the Kilmecott Press books was a volume of his own shorter poems, chiefly lyrics and ballads, entitled 'Poems by the Way' (1891), the greater number of which were now published for the first time. Fifty-three books in all were issued from the Press between April 1891 and March 1898, when it was wound up by Morris's executors. They fall broadly under three heads: (1) Morris's own works; (2) reprints of English classics, mediæval and modern, beginning with that of Caxton's 'Golden Legend' (1892), and ending with the Chaucer of 1896, which competent judges have pronounced the finest printed book ever pro-

duced; (3) various smaller books, originals or translations, including a series of stories translated by Morris from mediæval French. These, with a full account of the inception and working of the Kelmscott Press, are set forth in a history of the Press by Morris's secretary, Mr. S. O. Cockrell, which was the last book issued from it (1898).

During these years Morris also took an active part in various movements towards organising guilds of designers and decorative workmen, and continued to write and speak on behalf of the principles of socialism with no loss of conviction or enthusiasm. He also formed, with special relation to his work as a printer, a collection of early printed books, and, a little later, another of illuminated manuscripts of the twelfth to the fifteenth centuries; both of these were at his death among the choicest collections existing in private ownership. On the death of Tennyson in 1894 the question of Morris's succession to the laureateship was entertained by the government, but was laid aside on an expression being obtained from him of his own disinclination for such an office. In 1896 his health began to give way under the strain of a crowded and exhausting life. When the magnificent Kelmscott Chaucer was finished in June 1896 he had sunk into very feeble health, and he died at Hammersmith on 3 Oct. in that year. His widow and two daughters survived him.

Morris was a singular instance of a man of immense industry and force of character, whose whole life, through a long period of manifold activity and multifarious production, was guided by a very few simple ideas. His rapid movements from one form of productive energy to another often gave occasion for perplexity to his friends as well as for entire scorn from his opponents. But in fact all those varying energies were directed towards a single object, the re-integration of human life; and he practised so many arts because to him art was a single thing. Just so his work, in whatever field, while it expressed his own ideas with complete sincerity, bore an aspect of mediævalism, because it was all produced in relation to a single doctrine: that civilisation had over since the break-up of the middle ages been, upon the whole, on a wrong course, and that in the specific arts as well as in the general conduct of life it was necessary to go back to the middle ages, not with the view of remaining at the point which had been then reached, but of starting afresh from that point and tracing out the path that had been missed. So long as any human industry existed which had once

been exercised as an art in the full sense, and had now become mechanical or commercial, so long Morris would instinctively have passed from one to another, tracing back each to its source, and attempting to reconstitute each as a real art so far as the conditions of the modern world permitted. When he became a socialist, it was because he had realised that these existing conditions were stronger than any individual genius or any private co-operation, and that towards a new birth of art a new kind of life was necessary. To gain this whole he was willing for a time to give up the parts. When convinced by experience that the whole was for his own generation unattainable, he renounced his work on specific arts, to use his own words, 'because he could not help it, and would be miserable if he were not doing it.'

The fame of Morris during his life was probably somewhat obscured by the variety of his accomplishments. In all his work after he reached mature life there is a marked absence of extravagance, of display, of superficial cleverness or effectiveness, and an equally marked sense of composition and subordination. Thus his poetry is singularly devoid of striking lines or phrases, and his wall-papers and chintzes only reveal their full excellence by the lastingness of the satisfaction they give. His genius as a pattern-designer is allowed by all qualified judges to have been unequalled. This, if anything, he himself regarded as his specific profession; it was under the designation of 'designer' that he enrolled himself in the socialist ranks and claimed a position as one of the working class. And it is the quality of design which, together with a certain fluent ease, distinguishes his work in literature as well as in industrial art. It is yet too early to forecast what permanent place he may hold among English poets. 'The Defence of Guenevere' had a deep influence on a very limited audience. With 'Jason' and the 'Earthly Paradise' he attained a wide popularity; and these poems, appearing as they did at a time when the poetic art in England seemed narrowing into mere labour on a thrice-ploughed field, not only gave a new scope, range, and flexibility to English rhymed verse, but recovered for narrative poetry a place among the foremost kinds of the art. A certain diffuseness of style may seem to be against their permanent life, so far as it is not compensated by a uniform wholesomeness and sweetness which indeed marks all Morris's work. In 'Sigurd the Volsung' Morris appears to have aimed higher than in his other poems, but not to have reached his

aim with the same certainty; and his own return afterwards from epic to romance may indicate that the latter was the ground on which he was most at home. The prose romances of his later years have so far proved less popular in themselves than in the dilutions they have suggested to other writers. Here as elsewhere Morris's great effect was to stimulate the artistic sense and initiate movements. So likewise it was with his political and social work. Much of it was not practical in the ordinary sense; but it was based on principles and directed towards ideals which have had a wide and profound influence over thought and practice.

In person Morris was rather below the middle height, deep-chested and powerfully made, with a head of singular beauty. The portrait by Watts has been already mentioned. An 'Adoration of the Kings,' painted by Burne-Jones in 1801, and formerly belonging to G. F. Bodley, R.A. (d. 1908), contains an excellent portrait of him as a young man (the kneeling king in the centre of the composition); and there is another head of him, also a very good likeness, in the altar-piece of Llandaff Cathedral, painted by Rossetti about the same time.

[Life of William Morris, by J. W. Mackail, 1899; William Morris, his Art, his Writings, and his Public Life, by Aymor Vallance, 1897; A Description of the Kelmscott Press, &c., by S. C. Cockerell, 1898; The Books of William Morris, by H. Buxton Forman, O.B., 1897; private information.] J. W. M.

MORRISON, ALFRED (1821-1897), collector of works of art and autographs, second son of James Morrison (1790-1867) (q. v.), founder of the firm of Morrison, Dillon, & Co., Fore Street, London, was born in 1821, and received from his father a large fortune. He was high sheriff of Wiltshire in 1867. He was a devoted and discriminating collector. His houses at Fonthill and Carlton House Terrace, London, were full of rich Persian carpets, fine examples of Chinese porcelain, Greek gems and gold work, and miniatures, but he specially interested himself to seek out artistic craftsmen in all countries, and employed them for years in the slow and careful production of masterpieces of cameo-cutting, inlaying of metals, and enamelled glass. In this manner he became the possessor, and, in a way, the originator, of many remarkable specimens, which he was proud to believe equalled anything produced during the most famous periods of artistic excellence. Between 1860 and 1878 he formed an extensive collection of engravings, of which a part was described in a printed 'Annotated Catalogue and Index

to Portraits by M. Holloway' (1868, large 8vo). His collection of pictures was small but choice, and included the finest Clouet out of France and the best Goya outside Spain.

The chief occupation of the last thirty years of his life was the accumulation of an extraordinary collection of autographs and letters, perhaps never rivalled by any private person, no less remarkable for its extent than for its completeness and historical and literary interest. It contains every kind of epistolary document dealing with politics, administration, art, science, and literature, ranging from the fifteenth to the nineteenth centuries, and especially relating to the public and private life of monarchs, statesmen, and other persons of mark of all European countries, particularly Great Britain, France, and Italy. Many of the manuscripts are of great importance. The correspondence between Nelson and Lady Hamilton was for the first time fully printed in his catalogue. The papers of Sir Richard Bulstrode, who died in 1711 at the age of 101, contain his new letters, which may be looked upon as a companion to, and a continuation of, Pepys's 'Diary.' Morrison printed for private distribution two series of handsome volumes describing the collection. The first series, in large 4to, with full descriptions of the documents and many facsimiles, was the subject of an elaborate review by M. Léopold Delisle (*Journal des Savants*, Août-Septembre 1893). The second series is in a more handy form, without facsimiles but with a more ample reproduction of the text of the documents.

Morrison died at Fonthill, Wiltshire, on 22 Dec. 1897, at the age of seventy-six. He married, in 1866, Mabel, daughter of the Rev. R. S. C. Ohermside, rector of Wilton, Wiltshire. His wife survived him with two sons—Hugh (b. 1868), and James Archibald, styled M.P. for the Wilton division of Wiltshire in October 1900—and two daughters. He was a man of fastidious taste, of retiring disposition, and of wide information on the subjects in which he was interested.

The catalogues of his autographs are: 1. 'Catalogue of the Collection of Autograph Letters and Historical Documents formed between 1865 and 1882, compiled and annotated under the direction of A. W. Thibaudsau' [London], printed for private circulation, 1883-92, 6 vols. large 4to (facsimiles, the name of Thibaudsau appears on the titles of vols. i-iii.; only 200 copies). 2. Second series, 1882-93 [London], 1893-6, A to D, 3 vols. large 8vo. 3. 'The Hamilton and Nelson Papers, 1766-1816' [London], 1893-4, 2 vols. large 8vo. 4. 'The Blessington Papers' [London],

1895, large 8vo. 5. 'The Bulstrode Papers,' vol. i., 1067-75 [London, 1897], large 8vo.

[Times, 27 Dec. 1897, p. 7; Burke's Landed Gentry, 1898, i. 1068; Annual Register, 1897, p. 204; Murray's Handbook for Wilts and Dorset, 1899, pp. 410-11.] H. R. T.

MORTON, GEORGE HIGHFIELD (1826-1900), geologist, was the son of George Morton, a brewer, by his wife Elizabeth Bartenshaw, both of Liverpool. He was born in that city on 9 July 1826, went to school there, and when about sixteen years old became interested in geology. Going into business as a house decorator, he devoted every spare minute to his favourite study, exploring the country round Liverpool, and pushing his researches into North Wales and Shropshire. He formed a large and valuable collection of fossils, of which those from the Trias downwards have been acquired by the British Museum of Natural History, and the remainder by the Liverpool University College. Morton became F.G.S. in 1858, and was awarded the Lyell medal of that society in 1892. He was a member of various local societies, notably of the Geological Society of Liverpool, of which he was founder in 1859, honorary secretary for twenty-six years, and twice president. Also for several years after 1864 he was lecturer on geology at Queen's College, Liverpool. He died on 30 March 1900. His wife, whose maiden name was Sarah N. Ascroft, died about two years before him, but one son and four daughters survived. He wrote, beginning in 1850, numerous papers on the district already mentioned, which have appeared in the publications of various societies, and, though in failing health, read his last one about a fortnight before his death; but his chief work is the volume entitled 'Geology of the Country round Liverpool,' of which the first edition was published in 1863, a second, revised and enlarged, in 1891, with an appendix in 1897. As a geologist Morton was characterised by accuracy, thoroughness, orderliness, and caution. He cared more for the advancement of science than for his own reputation, and was a worthy representative of a class—the painstaking and indefatigable local geologists—to whom the science is so much indebted.

[Obituary notice, Geological Mag. 1900, p. 288; Royal Soc. Cat. of Papers; private information, and personal knowledge.] T. G. B.

MOULTON, WILLIAM FIDDIAN (1835-1898), biblical scholar, born at Lock, Staffordshire, on 14 March 1835, was the second son of James Egan Moulton, a Wes-

leyan minister, who died in 1806, and Catherine, daughter of William Fiddian, a well-known Birmingham brass-founder of Huguenot descent. His grandfather had been, like his father, a Methodist preacher; and among his ancestors was John Bakewell, Wesley's friend. William was educated at Woodhouse Grove school, near Leeds, and Wesley College, Sheffield, of which he afterwards became a master. After having taught for a year in a private school at Devonport, he in 1854 went as an assistant master to Queen's College, Taunton, where he remained for four years. While at Taunton he graduated B.A. with mathematical honours at London University in 1854, and M.A. two years later, when he was awarded the gold medal for mathematics and natural philosophy. Subsequently he also won the university prizes for Hebrew, Greek, and Christian evidences. In 1858 he entered the Wesleyan ministry, and was appointed a classical tutor at Wesley College, Richmond, Surrey. He held that position for sixteen years, during which he gave much of his time to biblical studies. On the suggestion of a correspondent, Dr. Ellicott, afterwards bishop of Gloucester and Bristol, Moulton published in 1870 a translation of Winer's 'Grammar of New Testament Greek,' accompanied with valuable notes, in which several errors were corrected and not a little original scholarship was shown. A new edition appeared in 1876, and a complete recast of the whole work had been begun under his supervision at the time of Moulton's death. In the year in which the first edition of Winer was issued, Moulton was invited to become one of the committee of revisers of the New Testament. He was only thirty-five, by far the youngest of the company. He acted throughout with the Cambridge group, who preferred linguistic accuracy to literary picturesqueness. Yet he was especially responsible for the renderings from older English versions which were inserted from collations of black-letter Bibles made by his wife. He afterwards acted as secretary to the Cambridge committee for the revision of the Apocrypha.

Meanwhile Moulton had in 1872 been chosen at an unprecedentedly early age a member of the Legal Hundred of the Wesleyan connexion. Two years later, in 1874, he was appointed the first head-master of the newly founded Leye school, Cambridge, where he entered upon his duties in February 1875, and remained for the rest of his life. In 1874 he received the degree of D.D. from Edinburgh, and in 1877 was made an honorary M.A. of Cambridge. While devoting

the greater part of his time to his duties as head of a public school and taking great interest in the work of teaching, Moulton still continued his literary labours. In 1878 he published a 'History of the English Bible,' a popular exposition of the researches undertaken in connection with his labours as a reviser. It had originally been printed in the form of articles in Cassell's 'Bible Educator'; a second edition appeared in 1882, and was followed by others. He contributed to Bishop Ellicott's 'Commentaries' the volume on Hebrews (1879), and, in conjunction with William Milligan [q. v. Suppl.], that on St. John's Gospel (1880) in Schaff's International Series. In 1879 he wrote a preface to Ruel's 'Synthetic Latin Delectus,' in 1880 an introduction to the life of the Rev. B. Heliier, and in 1893 a preface to Pocock's 'Methodist New Testament Commentary.' Moulton and Geden's 'Concordance to the Greek Testament' (1897) was revised by him, though he was obliged to leave most of the actual work to Professor Geden and his own son, the Rev. James Hope Moulton. At the time of his death he had very nearly completed the marginal references to the revised version of the New Testament. In 1890 he was president of the Wesleyan conference, and preached the memorial sermon on John Wesley, which was printed. In addition to his educational and literary work, he also undertook in his later years the duties of a justice of the peace at Cambridge.

Moulton died suddenly while walking near the Leys school on 5 Feb. 1898. He was held in high estimation for his personal character, and enjoyed the friendship of eminent Anglican divines, and others outside his own communion. As a Greek scholar he was among the foremost of his time, while he was also a learned hebraist, an able mathematician, and a devoted student of English literature. He gained the affection as well as the respect of his pupils, and under him the Leys school early attained an excellent standing among public schools. He was also an admirable preacher. Moulton married a daughter of the Rev. Samuel Hope, and left two sons, the Rev. James Hope Moulton, sometime fellow of King's College, Cambridge, and the Rev. William Fiddian Moulton, formerly fellow of St. John's College, Cambridge.

G. LE G. N.

MOUNT-TEMPLE, BARON. [See Cowper, WILLIAM FRANCIS, 1811-1868.]

MOWBRAY (formerly **CORNISH**), SIR JOHN ROBERT, first baronet (1815-1899), 'father of the House of Commons,' born at Exeter on 8 June 1815, was the only son of Robert Stribling Cornish of that city, and his wife Marianne, daughter of John Powning of Mill's Court, near Exeter. Admitted at Westminster School on 16 Sept. 1829, he matriculated from Christ Church, Oxford, on 23 May 1833, was elected student in 1836, was president of the Union, and graduated B.A. in 1837 with a second class in *lit. hum.*, and M.A. in 1839. In 1841 he was called to the bar from the Inner Temple and went the western circuit. On 19 Aug. 1847 he married Elizabeth Gray, only surviving child of George Isaac Mowbray of Bishopwearmouth, Durham, and Mortimer, Berkshire, having previously on 28 July assumed by royal license the surname Mowbray. He now abandoned law for politics, and on 25 June 1853 was elected in the conservative interest member of parliament for Durham city, which he represented until the general election of 1868; he then succeeded Sir William Heathcote as junior member for Oxford University, for which he sat until his death. In 1858 and again in 1860 Lord Derby appointed Mowbray judge-advocate-general; and from 1866 to 1868 and from 1871 to 1892 he was church estates commissioner. On 30 Nov. 1868 he was created hon. D.O.L. of Oxford, in 1875 he was elected hon. fellow of Hertford College, and in 1877 hon. student of Christ Church. On 8 May 1880 he was created a baronet and sworn of the privy council. From 1874 to his death Mowbray was chairman of the House of Commons' committee of selection and committee on standing orders, and on the death of Charles Pelham Villiers [q. v.] in 1898 he became 'father of the house.' He was held in highest respect by both parties, but rarely spoke except on such ceremonial occasions as when moving the re-election of Mr. Speaker Peel in January 1886, the election of Sir Matthew White (now Viscount) Ridley as speaker in April 1895, in which he was unsuccessful, and the re-election of Mr. Speaker Gully after the general election in the following August. His 'Seventy Years at Westminster,' parts of which appeared in 'Blackwood's Magazine,' was posthumously published (London, 1900, 8vo), and contains some instructive and

entertaining material for the parliamentary history of the period. He died at his house in Onslow Gardens on 23 April 1899, and was buried at Strathfield Mortimer on the 27th. A portrait, painted by Mr. Sargent in 1898, is reproduced as frontispiece to Mowbray's 'Seventy Years at Westminster.' A bronze bust of Mowbray by Mr. Conrad Dressler was on 22 April 1901 unveiled by Mr. Speaker Gully in committee-room No. 14 in the House of Commons. By his wife, who predeceased him on 16 Feb. 1899, aged 76, he left issue three sons and two daughters; the eldest son, Robert Gray Cornish Mowbray, who succeeded as second baronet, was sometime fellow of All Souls' and M.P. for the Preetwich division of Lanarkshire from 1886 to 1895, and from 1900 to 1906 M.P. for Brixton.

A. F. F.

MUIRHEAD, GEORGE (1715-1778), professor at Glasgow University, born on 24 June 1715, was second son of John Muirhead of Teggelsheugh, Stirlingshire, a patri-mony held for generations by this branch of the Muirheads of Lauchop. Matriculating at Glasgow in 1728, and graduating M.A. Edinburgh in 1743, he was in 1746 ordained minister of Mingail, Wigtonshire, and within a year was promoted to the parish of Dysart in Fife. In December 1752 he resigned this charge, on being elected professor of oriental languages in the university of Glasgow, and on 2 Dec. 1754 he was promoted to the chair of humanity, which he held with distinction till his death on 31 Aug. 1778. He was 'an enthusiastic and accomplished classical scholar,' and with James Moor [q. v.], professor of Greek, superintended the noble edition of Homer in 4 vols. fol., printed by Robert and Andrew Foulis of Glasgow (the 'Iliad' in 1756, the 'Odyssey,' with the 'Hymns' and 'Fragments,' in 1758). He also supervised the equally beautiful edition of Virgil, printed somewhat later under the same auspices. In memory of Muirhead his surviving brothers (John of Teggelsheugh, and Patrick, 1718-1807, who succeeded George as minister of Dysart) founded in 1776, with a gift of 100*l.*, the 'Muirhead Prizes,' which are given annually in the humanity class of Glasgow College.

[Nisbet's Heraldry; Account of the Family of the Muirheads of Lauchop, a very rare work, n. d., but, from internal evidence, about 1750;

Memorials of the Rev. Robert Morehead, D.D. (with supplementary notes on the Family of Muirhead or Morehead of Lauchop), by Charles Morehead; Dedic. instituting Bursaries, Scholarships, and other Foundations in the College and University of Glasgow, printed for the Maitland Club, 1850; the Snell Exhibitions, by W. Innes Addison; private information.]

B. M. S.

MUIRHEAD, JAMES PATRICK (1813-1898), biographer of James Watt the engineer, born 26 July 1813 at The Grove, Hamilton, Lanarkshire, was son of Lockhart Muirhead, LL.D. George Muirhead [q. v. Suppl.] was his great-uncle. His grandfather, Patrick Muirhead, was minister of Dysart. His father was principal librarian, and from 1808 to 1829 regius professor of natural history, in Glasgow University; he married, in 1804, his cousin, Anne Campbell (of the Ballochleven family), whose mother (born Muirhead), first cousin of James Watt, left a valuable manuscript record of the engineer's youth, and was the subject of one of Raeburn's finest portraits.

James Patrick was educated first at Glasgow College, where between 1826 and 1833 his name appears frequently in the prize lists (especially for Latin verse). Gaining on 3 Feb. 1832 a Snell exhibition at Balliol College, Oxford, he matriculated there on 6 April 1832; but spending his long vacations in Alpine expeditions, and in the study of German rather than in working for honours, he only took a third class in *lit. hum.* on graduating B.A. in 1835 (M.A. 1838). Admitted advocate at Edinburgh in 1838, he published during the same year 'Disputatio Juridica ad Lib. XII. Tit. ii. Digest = de Jurisjurando sive voluntario sive necessario sive Judiciali,' and for eight years he practised law in Edinburgh. In 1844 he married Katharine Elizabeth, second daughter of Matthew Robinson Boulton of Tew Park and Soho. His wife fully shared his classical and literary tastes, but she found the climate of Edinburgh so uncongenial that in 1846 Muirhead gave up a promising career at the Scottish bar, and eventually (1847) settled at Hassley Court, Oxfordshire, a property of his wife's family. While still at Oxford he had become acquainted with his kinsman, the great engineer's son, James Watt (the younger) of Aston Hall, Birmingham. Disabled by growing infirmities from writing a long-contemplated memoir of his father, the younger Watt decided to commit the task to Muirhead. Thenceforth Muirhead was mainly occupied on this labour. The firstfruits of this employment was the issue in 1839 of Muirhead's translation (with original notes and appendix) of Arago's 'Éloge Historique

de James Watt,' as read before the Académie des Sciences, 8 Dec. 1884. In the controversy respecting the priority of Watt or of Henry Cavendish [q. v.] in the discovery of the composition of water, Muirhead took infinite pains to sift every particle of evidence. Not satisfied with free access to the Watt and Boulton papers, and to such living authorities as Brewster, Davy, Jeffrey, and Brougham, he visited Paris in 1842 to confer with Arago, Berzelius, and other savants, and in 1846 published a clear vindication of Watt's rights, with introduction, remarks, and appendix, in 'The Correspondence of the late James Watt on his Discovery of the Theory of the Composition of Water.' This was followed in 1854 by three quarto volumes, entitled 'The Mechanical Inventions of James Watt,' a work of great labour which offers a rich mine to the scientific student. The third volume, illustrated by thirty-four admirable engravings of machinery by Lowry, deals with the 'specifications of patents;' the second with 'extracts from correspondence.' But the 'introductory memoir' (vol. i.) was of more general interest, and became the nucleus of the fuller 'Life of James Watt' which Muirhead published in 1858 (2nd edit. 1859). This work, scholarly in style and sympathetic in tone, avoids with careful accuracy the errors of unfounded claim, no less than of unfounded detraction.

Muirhead, though devoted to books, was a keen angler and a good shot. In 1857 he edited the 'Winged Words on Chantrey's Woodcocks,' a collection of epigrams by various writers, inspired by Chantrey's feat in killing at one shot and then immortalising in sculpture two woodcocks flushed at Holkham. To this volume Muirhead contributed an introduction and original verses. Subsequently Muirhead and his wife devoted much time to the education of their children. In 1875 another book saw the light, 'The Vaux de Vire of Maître Jean le Houx, Advocate, of Vire. Edited and translated into English Verse, with an Introduction.' There Muirhead investigated and rejected the claims of Olivier Basselin, the miller, in favour of Jean le Houx. It won him a delightful letter from the aged poet Longfellow. Between August 1882 and March 1891 Muirhead contributed to 'Blackwood's Magazine' nine original poems and twenty graceful translations from English and old French poems into Latin or English verse—compositions which, owing to his signature, 'J. P. M.,' were occasionally attributed in error to Professor J. P. Mahaffy. Until near the end of his life he amused himself with effusions of this kind, some of which he

printed privately, as 'Folia Caduca,' 'Iter Johannis Gilpini, auctore R. Scott, with psface by J. P. M.,' 'Domina de Shalott.' Copies of the last—a free translation into rhyming Latin of Tennyson's verses—arrived from the binder a few hours after the translator had breathed his last, in his eighty-sixth year, on 15 Oct. 1898.

Mrs. Muirhead predeceased her husband in 1890. Their six children survived him, the eldest son being Lionel Boulton Campbell Lockhart Muirhead. Colonel Herbert Hugh Muirhead, Royal Engineers, was the third son.

MULHALL, MICHAEL GEORGE (1836-1900), statistical compiler, third son of Thomas Mulhall of St. Stephen's Green, Dublin, was born at 100 Stephen's Green on 29 Sept. 1836. He was educated at the Irish College, Rome, went out to South America, and founded in 1861 the Buenos Ayres 'Standard,' said to be the first daily paper in English to be printed in that continent. As a journalistic venture it was daring, but success was the ultimate reward, and Mulhall did not finally abandon his connection with the enterprise until 1894, making frequent journeys between Buenos Ayres and the British Isles. In 1869 Mulhall issued the first English book printed in Argentina, a 'Handbook of the River Plate,' which went through six editions. In 1873 he published in London 'Rio Grande do Sul and its German Colonies,' which was followed in 1878 by 'The English in South America' (Buenos Ayres, 8vo). For some years previous to this Mulhall, who had a large European correspondence, had been collecting materials with a view to a survey of the whole field of his favourite study, statistics. In 1880 he brought out his 'Progress of the World in Arts, Agriculture, Commerce, Manufactures, Instruction, Railways, and Public Wealth, since the beginning of the Nineteenth Century,' a useful supplement to the invaluable record of George Richardson Porter [q. v.], which had been completed in 1851. It was followed up in 1881 by 'The Balance Sheet of the World, 1870-80,' and in 1883 by his 'Dictionary of Statistics,' a standard work of reference (revised editions, 1886, 1892, 1899). Few modern compilations have been more extensively used or abused. Mulhall has been charged with

guess-work, but unfairly; for although some of his data are far from being as trustworthy as could be desired, his deductions are all carefully worked out, and the whole volume was most carefully printed, owing to the indefatigable zeal of his proof-corrector, Marion Mulhall (born Murphy), whom he had married at Buenos Ayres in 1878, and to whom he dedicated his chief work. Mulhall further issued a 'History of Prices since 1850' (1885), 'Fifty Years of National Progress' (1887), 'Industries and Wealth of Nations' (1890), and 'National Progress in the Queen's Reign' (1897). In 1896, at the instance of the Hon. Horace Plunkett, he travelled extensively in Western Europe, collecting material for the recess committee's report upon the prospect of a department of agriculture for Ireland. Mulhall, who was *cameriere segreto* of the pope (who sent him his blessing *in articulo mortis*), died at Killybeg Park, Dublin, on 13 Dec. 1900. He was buried at Glasnevin cemetery, beside his only child who had died at Buenos Ayres in 1886. He was survived by his widow, the writer of a valuable book of travel, 'Between the Amazon and the Andes' (1881), for which she received a diploma from the Italian government.

[Times, 14 Dec. 1900; Tablet, 22 Dec. 1900; Illustrated London News, 22 Dec. 1900 (portrait); Allibone's Dict. of Engl. Lit. Suppl.; Brit. Mus. Cat.; private information.] T. S.

MÜLLER, FRIEDRICH MAX (1823-1900), philologist. [See MAX MÜLLER.]

MÜLLER, GEORGE (1805-1898), preacher and philanthropist, born at Kropfenstadt near Halberstadt on 27 Sept. 1805, was the son of a Prussian exciseman. Though a German by birth, he became a naturalised British subject, and for over sixty years was identified with philanthropic work in England. When four years of age his father received an appointment as collector in the excise at Heimersleben. When ten years of age he was sent to Halberstadt to the cathedral classical school to be prepared for the university. His mother died when he was fourteen, and a year later he left school to reside with his father at Schoenebeck, near Magdeburg, and to study with a tutor. After two and a half years at the gymnasium of Nordhausen he joined the university of Halle. Though he was intended for the ministry, Müller was a prodigal youth, but at the end of 1825 a change came over his disposition, and he was thenceforth a man of self-abnegation, devoting himself exclusively to religious work.

For a brief period Müller gave instructions

in German to three American professors, Charles Hodge of Princeton being one of them. In 1826 he resolved to dedicate himself to missionary work either in the East Indies or among the Jews in Poland. In June 1828 he was offered an appointment by the London Society for promoting Christianity among the Jews, and he arrived in London in March 1829 to study Hebrew and Chaldee and prepare for missionary service. But in 1830, finding that he could not accept some of the rules of the society, he left, and became pastor of a small congregation at Teignmouth, at a salary of 55*l.* a year. In the same year he married Mary Groves, sister of a dentist in Exeter, who had resigned his calling and 1,500*l.* a year to devote himself to mission work in Persia. Towards the close of the same year Müller was led to adopt the principles with which henceforth his name was associated, that trust in God, in the efficacy of sincere prayer, is sufficient for all purposes in temporal as well as in spiritual things. He accordingly abolished pew-rents, refused to take a fixed salary, or to appeal for contributions towards his support—simply placing a box at the door of the church for freewill offerings—and he resolved never to incur debt either for personal expenses or in religious work, and never to lay up money for the future.

After about two years in Teignmouth Müller went to Bristol, where he remained for the rest of his life. There he and others carried on a congregation, schools, a Scriptural Knowledge Institution, and other organisations, but the work among orphans was that by which he was chiefly known. The suggestion and the pattern of the Bristol orphanages were taken from the orphanages which Müller had visited in early life at Halle; these were erected in 1720 by a philanthropist named Francke, whose biography greatly influenced Müller. Beginning with the care of a few orphan children, Müller's work at Bristol gradually grew to immense proportions, latterly no fewer than two thousand orphan children being fed, clothed, educated, cared for, and trained for useful positions in five enormous houses which were erected on Ashley Down. These houses cost 115,000*l.*, all of which, as well as the money needed for carrying on the work—20,000*l.* annually—was voluntarily contributed, mainly as the result of the wide circulation of Müller's autobiographical 'Narrative of the Lord's Dealings with George Müller' (London, pt. i. 1837, pt. ii. 1841; 3rd edit. 1845) which was suggested to him by John Newton's 'Life.' This book con-

veyed to people in all parts of the world knowledge of Müller's work, his faith, and his experiences. As a consequence, gifts of money and goods flowed in without direct appeal.

In 1838 the biography of the great evangelist, George Whitefield, helped to intensify Müller's religious fervour, and, after he had passed his seventieth year, he set out on a world-wide mission, which, with brief intervals at home, covered seventeen years. He travelled over much of Britain and of the continent of Europe, made several journeys to America, and visited India, Australia, China, and other parts to preach the gospel.

In the course of his life Müller received from the pious and charitable no less than 1,500,000*l.*; he educated and sent out into the world no fewer than 123,000 pupils; he circulated 275,000 bibles in different languages, with nearly as many smaller portions of Scripture; and he aided missions to the extent of 255,000*l.* He supported 189 missionaries, and he employed 112 assistants. The record of his life seems to associate itself more closely with primitive and puritan periods of history than with modern times.

Müller was found dead in his room on the morning of 10 March 1898.

Müller was twice married. His first wife died in 1870. In 1871 he married Miss Susannah Grace Sangar, who accompanied him in his missionary tours; she died in 1895. From 1832 till his death in 1898 Henry Craig assisted Müller. In 1872 Mr. James Wright, who married Müller's only child, Lydia, became his assistant, and this work was carried on under Mr. Wright's superintendence after Müller's death.

[The Lord's Dealings with George Müller (London), 6 vols. 1885; Annual Reports of Scriptural Knowledge Institution; Memoir of George Müller, reprinted from the Bristol Mercury, 1898; Pierson's George Müller of Bristol, with introduction by James Wright, 1899.]

T. B. J.

MUMMERY, ALBERT FREDERICK (1855-1895), political economist and Alpine climber, born on 10 Sept. 1855 at Maileon-Dieu, Dover, was son of William Rigden Mummery of Dover. His business was that of a tanner at Dover and Canterbury in partnership with his brother. Being a man of means he devoted his leisure to economic studies and to mountaineering. In 1889, in conjunction with Mr. J. A. Hobson, he published 'The Physiology of Industry' (London, 8vo), a criticism of several current economic theories. He was a well-known climber both in the Alps and in the Caucasus,

and in 1895 he published 'My Climbs in the Alps and Caucasus' (London, 8vo), a work of great merit. In 1895 he was mountaineering in the Nanga Parbat group of the Kashmir Himalayas. He was last seen on 23 Aug., and it is believed that he was overwhelmed by an avalanche while traversing a snow pass.

[Alpine Journal, November 1895; information kindly given by Mrs. A. F. Mummery.]

E. I. C.

MUNDELLA, ANTHONY JOHN (1825-1897), statesman, was born at Leicester on 28 March 1825. His father, Antonio Mundella, a native of Monte Olimpino, near Como, had come to England some years before as a political refugee, and after many hardships settled at Leicester, where he married a wife of Welsh descent, Rebecca, daughter of Thomas Allsopp. He remained a Roman Catholic, but the children were brought up as Protestants. Young Mundella attended the national school of St. Nicholas in Leicester, but his schooling ended at the age of nine. Its chief feature was the reading aloud of the Bible and of English poets, especially Milton. This, with his mother's tales from Shakespeare, was the commencement for him of a thorough knowledge and peculiarly keen enjoyment of the English classics. His first work was in a printing office. At eleven years he was apprenticed to Mr. Kempson, a hosiery manufacturer in Leicester, and at nineteen he was engaged as a manager by Messrs. Harrie & Hamel in the same town and trade. Shortly after, in 1845, he married Mary (d. 1890), daughter of William Smith, formerly of Kibworth Beauchamp in Leicestershire. To this union with a woman of rare strength, sweetness, and dignity of character, he and his family attributed much of the success as well as the joyousness of his life.

In 1848 he was taken into partnership by Messrs. Hine & Co., hosiery manufacturers in Nottingham, and continued in this business till he had acquired a sufficient fortune to devote himself to public life. Meanwhile he took an active part in local politics, served as sheriff and town councillor, and was one of the first five volunteers enrolled in the Robin Hood volunteer corps, in which he was for some time a captain. While a lad at Leicester he had declared himself on a chartist platform for 'the party of the working men.' When he entered on his political career he was a radical, ardent for the extension of the franchise, hostile to all that savoured of religious inequality, anxious for the pacification of Ireland, a strong free-trader, and, above all, in most complete sym-

pathy with the class from which he had raised himself. In 1806, a time of much exasperation between employers and employed, he succeeded in forming the 'Nottingham board of conciliation in the glove and hosiery trade,' for the termination and prevention of disputes by constant conference between representatives of each side. This was the first permanent and successful institution of the kind in this country. It at once began to be copied in other towns, and to attract the attention of foreign observers. Incidentally it led Mundella into parliament, for he was invited to lecture on this subject at Sheffield, and this lecture and his settlement of a grave labour conflict at Manchester suggested the request that he should stand for the former city against John Arthur Roebuck [q. v.], whose bitter tone towards labour movements had caused much irritation. His first contest at Sheffield took place during the motion which followed the famous trade union outrages there [see BROADBENT, WILLIAM, Suppl.] He had a robust faith in the British working classes, and in the essential soundness of trade unionism, which he regarded as the basis of improved relations between masters and men. Defeating Roebuck, he was returned to parliament by Sheffield in 1868, and he represented Sheffield (from 1885, the Brightside division of that city) till his death, nearly thirty years later.

In parliament Mundella mainly devoted his efforts to procuring legislation in favour of labour, and was especially zealous in the cause of popular education. Strongly averse to any toleration of disorder, he was persistent in urging the amendment of certain provisions of the law upon offences arising in labour disputes, as straining the principles of criminal jurisprudence against working men in the mistaken interest of employers. He criticised keenly the Criminal Law Amendment Act, 1871, and his efforts contributed to secure Mr. (afterwards Viscount) Cross's legislation of 1875, which to a great extent gave effect to his views. In 1878 he put a stop, by effective exposure in parliament, to a system of frauds by which the Truck Act had previously been defied.

With this work must be associated his principal, though not his only, contribution to factory legislation. In 1874 he introduced a bill to reduce the hours of labour for children and young persons in textile factories from sixty to fifty-four hours a week, to raise the age at which 'half-time' may begin from eight to ten, and the age for 'full-time' work from thirteen to fourteen, to shorten the duration of half-time work, and otherwise to strengthen the law in question. Although

his bill did not become law, he brought about, by his agitation in this matter, the passing in the same year of Mr. (afterwards Viscount) Cross's Factories (Health of Women, &c.) Act, which effected most of his objects. Ten years after, at a great demonstration in Manchester, his wife received a fine bust of him by Sir Edgar Boehm, the gift of 'eighty thousand factory workers, chiefly women and children, in grateful acknowledgment of her husband's services.'

Even more important was Mundella's parliamentary work in connection with education. His early struggles had taught him what want of education meant. As a manufacturer he felt the national need of technical training. His business took him at times to Chemnitz, where his firm had a branch factory; what he there saw led him to study closely the educational systems of Saxony, Prussia, and other states. Thereafter he devoted himself to preaching at public meetings, as Matthew Arnold preached in literature, that this country should not be behind its neighbours in public provision for education. In parliament he made his mark by insistence on the same text. And none rated more highly than Forster his share in procuring the Education Act of 1870.

In the debates upon this measure Mundella stood out as one mainly interested in getting the utmost done for the teaching of children. He consequently held a moderate attitude on the vexed religious question. While he was himself a member of the church of England, he was anxious for the protection of religious liberty, and no less anxious in 1870 that the progress of popular education should not be sacrificed to excessive fears in this regard. He gratefully recognised the past work of denominational schools and desired its continuance, but his ideal would have been best satisfied by the presence throughout the country of undenominational schools under public management. The religious difficulty, he said, was made not by but for the people whose children were to be taught. He wished the bible to take the place in the future education of children that it had taken in his own; and twenty-five years later he was enthusiastic in the belief that the religious teaching of good board schools, supplemented as it was by the Sunday schools, gave a more valuable result than anything for which the partisans of denominational schools were striving. He was early a prominent advocate of compulsory education, which, partially applied by the acts of 1870 and 1876, was made universal in England by his own act of 1881.

On the return of the liberals to power in 1880 Mundella entered Gladstone's go-

vernment, and was appropriately appointed (3 May) vice-president of the committee of council for education, and sworn of the privy council. His administration as vice-president was chiefly marked by the code of 1882. Up to that time the government grant had been assessed almost entirely on the results of individual examination in certain elementary subjects. Hence the attention of teachers and inspectors had in too many cases been directed rather to the number of children who had been prepared to 'pass' the examination than to the skilled methods, the discipline, and general intelligence which should characterise the school as a whole. Mundella's code sought to correct this tendency in three ways: 1. By the recognition for the first time in the infant schools of the manual employments and organised play devised by Fröbel. 2. By the introduction of a 'merit grant' designed to reward other forms of excellence than those which could be tabulated in an examination schedule, and to encourage the inventiveness and independent efforts of good teachers. 3. By giving greater scope and variety to the list of optional or 'specific' subjects for use in the higher classes. In these and other ways the code of 1882 made a substantial advance towards many of the most beneficial educational reforms of later years. An important step was taken at the same time in the re-organisation of the inspectorate by establishing a system of annual conferences to be held by the chief inspectors in their several districts.

The development of the South Kensington (afterwards the Victoria and Albert) Museum was also a most congenial subject of Mundella's official work. Outside his office various labours in connection with societies and institutions for technical instruction, for the higher education of women, for the training of schoolmasters, for teaching the blind and the deaf and dumb, for Sunday schooling, and latterly in raising and administering funds for giving poor school-children meals, occupied most of his time.

Mundella left office with Gladstone's government in June 1885. On 6 Feb. 1886, when Gladstone again returned to power, he became president of the board of trade, and was admitted to the cabinet. He adopted Gladstone's home-rule views, and held his post until the defeat of the government in the following July. The chief mark he left on the board of trade was by virtue of his creation of the labour department. This Mundella started in 1886, when he appointed Mr. Burnett, secretary of the Amalgamated Engineers' Trade Society, as labour corre-

spondent. The department was developed by the next administration. After the general election in July 1892 Mundella became once more president of the board of trade, with a seat in the cabinet. He then further strengthened the labour department, and began making its information more widely useful by the publication of the 'Labour Gazette.' A most characteristic act of his administration in the same office was the appointment of two railway servants as inspectors of accidents on railways. At the same time he was able to render another signal service to industrial peace. The settlement of the great coal strike of 1893 by Lord Rosebery as conciliator took place under Mundella's administration at the board of trade. He attached much importance to making such intervention in industrial disputes one of the regular and authorised functions of the board, and had already in 1892 introduced a bill for this purpose. There was then no time to pass it, but he continued to press the matter, and the subsequent passing of substantially the same measure by Mr. Ritchie, his successor in the board of trade on the return to office of the unionists in 1895, was one of the public events which interested him most in the closing years of his life.

It was in 1894-5 that, as chairman of the departmental committee on poor-law schools, Mundella directly rendered his last most important public service. In this committee his power of diligent and thorough investigation, his fine enthusiasm, and his deep sympathy with the claims and the best aspirations of the poor were conspicuously displayed, and the report of his committee convinced the public of the need of reforms which have since been effected. In particular the report demonstrated the evil of herding pauper children together in institutions cut off from the rest of the world.

Meanwhile, in 1894, Mundella had retired from the government under painful circumstances. He had been a director of the New Zealand Loan Company from 1870 to 1892, when he resigned this position upon again taking office. Among his colleagues in the directorate of the company were Sir James Fergusson, at one time postmaster-general, the late Sir George Russell, and Sir John Gorst, now vice-president of the council. The company, once very prosperous, went into liquidation in 1893, and in the following year a public inquiry was held as to its affairs. Feeling that his previous position of director might cast doubt on the impartiality of his department, Mundella at an early stage of these proceedings offered his resign-

nation of the presidency of the board of trade. The prime minister (Lord Rosebery) requested him to withdraw it, but later on he insisted upon it, and his resignation took effect on 12 May 1894. He gave his reasons for it in the House of Commons on the 24th. As for the bearing of these proceedings upon his character, the opinion of a stout political opponent intimately acquainted with the facts can here be given. In a letter, not at the time intended for publication, Lord James of Hereford (then Sir Henry James) wrote: 'It seems strange to me that, after having had an intimate acquaintance with Mundella for nearly thirty years, I should now be writing in regard to him a letter which may be regarded as of an exculpatory character. I say it is strange, because during all our intimacy I have had full reason to know by what a high standard of rectitude his conduct has been controlled. My object, however, in writing to you is to say that I have had an opportunity of obtaining some insight into the affairs of the New Zealand Loan Company and Mr. Mundella's connection therewith. I can discover nothing in all those proceedings, so far as I know them, which ought to disentitle Mr. Mundella to the confidence of any man.'

Nevertheless a suffering, poignant in proportion to his keen sense of honour, shook the health of his robust frame. In the succeeding general election of 1895, which proved so disastrous to his party, his constituents returned him unopposed, and his former colleagues invited him to take his place again upon the front opposition bench. His energy in and out of parliament returned; in particular he took a prominent part in debate on the education bills of 1896 and 1897. But on the night of 18 June 1897 he was struck with paralysis, and he died on 21 July at his house, 16 Elvaston Place, Queen's Gate. A memorial service was held at St. Margaret's on the 20th, and he was buried at Nottingham on the 27th.

His life was one of unroosting public activity, characterised throughout by a certain eager and warm-hearted combativeness, but characterised too by a modest estimate of the range of his own capacities, and by unselfish desire that good work should be done, whether he or another got the praise. Few strenuous partisans have counted in their circle of friends so many of their foremost opponents. To those friends he left the recollection of a man full of fire and fight; shrewd, but none the less simple-minded and tender of heart. In parliament he seldom spoke except to put the house in possession of his own experience. Voice, manner, pre-

sence, temperament, and intense but genial conviction lent him oratorical resources which he used with powerful effect in popular meetings. His relation to Gladstone was that of enduring trust and personal loyalty. His history is in part merged in that of the political cause of which he was a champion; but he is to be remembered as one of the two or three who established the British state system of popular education, and as a great and successful labourer for industrial peace.

The bust of Mundella, by Boshm, passed to his daughter, Mrs. Roby Thorpe, Stowe House, Lichfield; an oil painting by Cope is in the mayor's parlour, Sheffield; and a replica in the possession of his daughter, Miss Mundella, 18 Elvaston Place, W.—both presented by 'constituents independent of party.'

[Private information; *Hansard's Debates*; *Revue des Deux Mondes*, 1898; pamphlet biography published by the Sheffield Independent Company in 1897.]

MUNK, WILLIAM (1816-1898), physician, eldest son of William Munk, an ironmonger, and his wife Jane Kenward, was born on 24 Sept. 1816 at Batfield, Sussex, and after education at University College, London, graduated M.D. at Leyden in 1837. He began practice in London in September 1837, and in 1844 he became a licentiate of the Royal College of Physicians of London, and in 1854 a fellow. In 1857 he was elected the Harveian librarian of the college, and held office till his death. In that year he published 'Memoirs of the Life and Writings of J. A. Paris, M.D.' [see PARIS, JOHN ALEXANDER], and in 1861 'The Roll of the Royal College of Physicians of London,' in two volumes. A second edition of this work appeared in 1878 in three volumes, and it is the best general work of reference on the physicians of England. It is exact in its references to the manuscript records of the College of Physicians, and contains much information from other sources, the origin of which is not always indicated, but which is generally valuable. Its bibliography is imperfect and does not show any profound acquaintance with the contents of English medical books, yet almost every subsequent writer on subjects relating to the history of physicians owes something to Dr. Munk. In 1884 he edited 'The Gold-headed Cane' of Dr. William MacMichael [q.v.], and in 1887 published 'Euthanasia, or Medical Treatment in aid of an Easy Natural Death,' and in 1895 'The Life of Sir Henry Hallford, Bart., M.D.' The College of Physicians voted him one hundred guineas in consideration of this work. He also published some 'Notes Harveianæ'

in the 'St. Bartholomew's Hospital Reports' (vol. xxii.); and in 1885 'Marvodia,' a genealogical account of the Marwoods, a Devonshire family; and wrote several essays on medical subjects in the 'Lancet.' He was elected physician to the Smallpox Hospital in February 1853, and held office there for forty years. When Prince Arthur (afterwards duke of Connaught) had smallpox at Greenwich in October 1867 he was called in consultation. He long resided at 40 Finsbury Square, London, enjoyed a considerable practice, and there died on 20 Dec. 1898. He was of short stature. His portrait, by the Hon. John Collier, hangs in the dining-room of the Royal College of Physicians, to which, in the last year of his life, it was presented by the fellows in memory of the great service which he had rendered to the college by the publication of the 'Roll.' He became a Roman catholic in 1842, and from 1867 to 1868 was the medical adviser of Cardinal Wiseman. He had much information, and readily imparted it in aid of the studies of others. He admired the College of Physicians, but late in life was inclined to think that in it, and in the world at large, past times were the best. He was for many years an active member of the committee of the London Library. He married, 30 April 1849, Emma, eighteenth child of John Luke of Exeter, and left two sons and three daughters.

[Lancet, 1898, vol. ii.; British Medical Journal, 1896, vol. ii.; Works; personal knowledge; private information.] N. M.

MURPHY, DENIS (1838-1896), historical writer, was born at Newmarket co. Cork, in 1833. Having been trained in various jesuit colleges of England, Germany, and Spain, he was admitted to the Society of Jesus as a novitiate in his sixteenth year. He became an active and devoted missionary priest, but soon began to devote his chief attention to teaching and historical research. He was professor of history and literature at the jesuit colleges of Clongowes Wood, Limerick, and finally at University College, Dublin. His best known work, published at Dublin in 1883, was 'Cromwell in Ireland,' an excellent account of the suppression of the catholic rebellion of 1648-9, which gives evidence of great research, and is destitute of sectarian prejudices. The text is accompanied with good maps, plans, and illustrations. A new edition appeared in 1885. Another important historical work was his edition of O'Clery's 'Life of Hugh Roe O'Donnell,' 1898, 4to, which he was the first to render into English. The parallel

bilingual text is preceded by an historical introduction. Murphy also published 'The Annals of Clonmacnoise' (1896) and a 'History of Holy Cross Abbey.' He edited for many years the 'Kildare Archaeological Journal,' to which he contributed some valuable papers, and was connected with similar publications in Cork, Waterford, and Belfast. His last published work was 'A School History of Ireland' (in T. A. Findlay's School and College Series), issued in 1894, which is remarkable for containing a eulogy of Charles Stewart Parnell. Just before his death he was at work upon 'The Martyrs of Ireland,' an account of Roman catholics who had been put to death since the time of Henry VIII, a compilation suggested to him by the Irish bishops. Murphy received the honorary degree of LL.D. from the royal university of Ireland in recognition of his historical writings. He was vice-president of the Royal Irish Academy and a member of the council of the Royal Society of Antiquaries in Ireland. He was found dead in his bed, on the morning of 18 May 1896, in his rooms at University College, St. Stephen's Green, Dublin, and was buried in Glasnevin cemetery on 20 May.

[The Irish Catholic, 28 May 1896; Tablet, 23 May 1896; Times, 25 May; Brit. Mus. Cat.; Allibone's Dict. Engl. Lit. (Suppl.)]

G. L. G. N.

MURRAY, SIR CHARLES AUGUSTUS (1806-1895), diplomatist and author, second son of George Murray, fifth earl of Dunmore (1762-1836), and Lady Susan Hamilton, daughter of Archibald, ninth duke of Hamilton, was born on 22 Nov. 1806. He was educated at Eton and Oriel College, Oxford, where he matriculated on 21 May 1824, and graduated B.A. and was elected to a fellowship of All Souls' in 1827; he proceeded M.A. in 1832. While an undergraduate Murray had John Henry (afterwards cardinal) Newman [q.v.] as his tutor. 'He never inspired me,' wrote Murray, 'or my fellow-undergraduates with any interest, much less respect; on the contrary, we disliked, or rather distrusted, him. He walked with his head bent, abstracted, but every now and then looking out of the corners of his eyes quickly, as though suspicious. He had no influence then; it was only when he became vicar of St. Mary's that the long dormant power asserted itself, and his sermons attracted hundreds.'

Murray's chief undergraduate friend was Sidney Herbert (afterwards Baron Herbert of Lea) [q.v.], but it was in company with Lord Edward Thynne, son of the second Marquis of Bath, that Murray, who was a

great athlete, performed his most famous feat of endurance. Having been 'gated' for some minor offence, Murray made a bet that he would ride to London, sixty miles, and back in one day. Leaving Oxford shortly after 8 A.M. he and Thynne rode to London, changed their clothes, mounted two hacks and rode in the park, dined at a club, saw the first act of a play, and were back at the gate of Oriel three minutes before midnight. They had relays of horses at Henley and Maidenhead.

After taking his degree, Murray was admitted student of Lincoln's Inn in 1827 and read for the bar with Nassau Senior (q.v.) His mother's house was a favourite rendezvous of literary and political characters, and Murray, an exceedingly handsome and agreeable young man, with a strong taste for general literature, and an excellent classical scholar, formed many friendships with men distinguished in both fields. He became a frequent guest at Samuel Rogers's breakfast table, and has left abundant notes of scenes and incidents which he witnessed there. When travelling in Germany in 1830 he formed the acquaintance of Goethe, then minister of the grand duchy of Weimar.

In 1834 he sailed for America in a ship of 530 tons, which, encountering a series of gales, followed by a baffling calm, took fourteen weeks and two days to accomplish a voyage which a modern ocean liner would do in about six days. In the following year Murray joined a tribe of wandering Pawnees, and his sojourn of three months in the wilderness, involving a number of exciting adventures and narrow escapes, was afterwards described in his 'Travels in North America' (London, 1839), which passed through three editions. This work retains considerable interest at this day, containing minute and graphic pictures of people and scenes which have since undergone such rapid and sweeping change. During his stay in America, Murray became enamoured of Eliza, daughter of James Wadsworth, a wealthy gentleman living near Niagara, who disapproved of their betrothal, and forbade all intercourse between the lovers. Fourteen years later, in 1849, Mr. Wadsworth died, and Murray married his daughter in 1850. The only intercourse which had passed between them in the interval was through the indirect means of a novel written by Murray, 'The Prairie Bird' (1844), in which he managed to convey the assurance of his unalterable constancy.

In 1838 Murray was appointed groom-in-

waiting at the court of Queen Victoria, and, a few months later, master of the household, an office which he held till 1843, when he entered the diplomatic service as secretary of legation at Naples. In 1846 he became consul-general in Egypt during the viceroyalty of the famous Mohammed Ali, where he remained till 1853, when he was appointed to Berne as minister to the Swiss confederation. His wife died in 1851 in giving birth to a son, Charles James, M.P. for Coventry from 1895 to 1906. Murray's official connection with Egypt was rendered notable to the British public by his success in securing, in 1849, for the Zoological Society the first hippopotamus that ever came to England. The animal was safely lodged in the gardens in May 1850, and lived there till its death in 1878.

In 1854 Lord Clarendon selected Murray to proceed as envoy and minister plenipotentiary to the court of Persia, which turned out an unfortunate mission for him. The shah was entirely under control of his grand vizier, Sadr Azim, an unscrupulous intriguer, who, suspecting Murray of interference with his ascendancy, made odious charges against the British envoy, and rendered necessary Murray's withdrawal from Tehran to Bagdad. In 1856 an ultimatum was despatched to the shah's government demanding the recall of Persian troops from Herat and an apology for 'the offensive imputations upon the honour of her majesty's minister.' No notice having been vouchsafed to this missive, war was declared by Great Britain on 1 Nov. 1856; Bushire was bombarded on 17 Dec., and surrendered to General Stalker. General Outram having defeated the Persian army near Kooshah on 8 Feb. 1857, and again at Mohammerah on 24 March, peace was concluded at Bagdad on 2 May. Blame for the hostilities was most unjustly imputed to Murray in parliament and in the 'Times,' but Lord Clarendon and Lord Palmerston vigorously defended him in the two houses, and after the peace he resumed his duties at the Persian court. Murray himself attributed the disfavour he incurred from the shah's government to a novel policy initiated by the British cabinet, under which the custom of giving presents, an immemorial part of oriental diplomacy, was strictly prohibited, and the queen's representative had to go empty-handed before the shah and the sadr, while the French and Russian ministers came with their hands full of gifts.

In 1859 the Persian mission was transferred to the India office, and Murray, preferring to serve under the foreign office, was appointed minister at the court of Saxony.

On 1 Nov. 1862 he married the Hon. Edythe Fitzpatrick, daughter of the first Baron Castletown, and in 1866 received the rank of K.C.B., having been a companion of the Bath since 1848, and was appointed minister at Copenhagen. The climate of Denmark proving too severe for Lady Murray, Sir Charles applied for and obtained the British legation at Liebon, which he kept till his final retirement from the service in 1874. He was sworn of the privy council on 13 May 1875.

Murray's remaining years were spent in cultivated leisure. A charming manner, an immense and varied store of reminiscences, united to a handsome and striking appearance, rendered him a very well-known figure in society; but the associates he liked best were literary men, with whom he maintained constant intercourse, personal and epistolary. An excellent linguist, he devoted much study to oriental languages and philology, upon which, and upon theology, he left a quantity of notes and fragmentary treatises.

Sir Charles Murray resided during his later years at the Grange, Old Windsor, spending the winter months in the south of France. He died in Paris on 3 June 1895. There is a portrait of Murray by Willis Maddox at the Grange, Old Windsor. His intellectual gifts and singular versatility were such as might have raised him to greater eminence than he attained; no doubt they would have done so had less affluent circumstances compelled him to concentrate his energy upon a single object.

He published the following works: 1. 'Travels in North America,' 2 vols. 1839; 2nd ed. 1843; 3rd ed. 1854. 2. 'The Prairie Bird,' 1844, and many subsequent editions. 3. 'Hasean; or, the Child of the Pyramid,' 1857. 4. 'Nour-ed-dyn; or, the Light of the Faith,' 1888. 5. 'A Short Memoir of Mohammed Ali,' 1898 (posthumous).

H. E. M.

MYERS, FREDERIC WILLIAM HENRY (1843-1901), poet and essayist, was born on 6 Feb. 1843 at Keswick in Cumberland. His father was the Rev. Frederic Myers [q. v.], perpetual curate of St. John's, Keswick, and his mother was Susan Harriet, youngest daughter of John Marshall of Hallstead (a beautifully situated house on the left bank of Ulleswater), who was M.P. in 1832 for the undivided county of Yorkshire. Mrs. Myers was her husband's second wife, married in

1842; and Frederic was the eldest of their three sons. When he was seven years old his father's health failed; and on the death of the latter in 1851 the family moved to Blackheath, where the eldest boy for three years attended a preparatory day school, under the Rev. R. Cowley Powles, a well-known teacher. In 1856 Mrs. Myers took a house at Cheltenham; and in August of the same year Frederic, aged 13, was entered at Cheltenham College, then in the fifteenth year of its existence, under its second principal, the Rev. W. Dobson. His taste for poetry was unmistakable from the first. He has himself recorded the delight which the study of Homer, Æschylus, and Lucræcius brought him from the age of fourteen to sixteen, and the 'intoxicating joy' which attended the discovery of Sappho's fragments in an old school book at the age of seventeen. His enthusiasm for Pindar, which also dates from his school days, is well remembered by his college friends in their eager undergraduate discussions; and it may well be doubted if there ever lived another English boy who had learned for his pleasure the whole of Vergil by heart before he had passed the school age.

His great ability and particularly his poetic powers were recognised at once by schoolfellows and teachers alike. He had a very distinguished career at Cheltenham College; he won the senior classical scholarship in his first year; in 1858, besides gaining the prize for Latin lyrics, he sent in two English poems, in different metres, which were both successful; in 1859 he entered for the national 'Robert Burns Centenary' competition with a poem which was placed second in the judges' award. In October 1859 he left the school, and passed a year of private study, part of the time with Mr. Dobson, who had in the summer resigned the head-mastership. But though Myers had left, he was qualified to compete again for the college prize for English verse, which he won in 1860 with a remarkable poem on the 'Death of Socrates.' In the same year he was elected the first minor scholar of Trinity College, Cambridge, and went into residence in October. At the university few men have won more honours. The record is as follows: a college scholarship and declamation prize; two university scholarships (the Bell and the Craven); no less than six university prizes (the English poem twice, the Latin poem, the Latin essay three times); second classic in the spring of 1861; second in the first class of the Moral Sciences Tripos in December of the same year, and fellow of Trinity in 1865.

Immediately after graduating in 1804, he took a four months' tour on the continent, visiting Italy, Greece, Smyrna and the islands, and Constantinople; and in the next summer he spent a large portion of the long vacation in Canada and the United States. In the course of this visit he swam across the river below the Niagara Falls, being, it is believed, the first Englishman to perform this dangerous feat. In the October term of 1806 he was appointed classical lecturer in Trinity College, Cambridge, and held the office for four years; but his bent was not for teaching, and he resigned the lectureship in 1809. Two years later he accepted a temporary appointment under the education department, and in 1812 he was placed on the permanent staff of school inspectors, a post which he held until within a few weeks of his death.

He was married on 13 March 1880, by Dean Stanley (an old friend of his father's), in Henry VII's chapel, Westminster Abbey, to Evelyn, youngest daughter of Charles Tennant of Oadston Lodge, North. In 1881 he and his wife took up their abode in Cambridge, which was their home from that time forward.

Apart from his official duties and the circle of his family and friends, the chief interests of a life that was outwardly uneventful were centred round two things—first, his literary work; and, secondly, the systematic investigation into mesmerism, clairvoyance, automatism, and other abnormal phenomena, real or alleged.

His work in poetry was intermittent, and was practically confined, as far as the published pieces are concerned, to the fifteen years between 1807 and 1882. Many of these poems appeared first in magazines, and were afterwards collected and reissued with additions. The first to appear was the poem entitled 'St. Paul' (London, 1807, 8vo). This was composed for the Scutonian prize, an English verse competition at Cambridge, confined to graduates; but it failed to obtain the prize, possibly because it did not conform to the traditional requirements, though of all Myers's poems it is perhaps the most widely known. In 1870 appeared a small volume of collected pieces, which in a few years was exhausted, and which the author never reprinted as a whole. But he continued to write occasional pieces, which were published in magazines; and in 1882 a new collection was issued, which was entitled, from the latest written and most important poem, 'The Renewal of Youth.' This poem, containing many passages of striking beauty, was a sort of palinode to 'The Passing of Youth,' written

from another point of view eleven years earlier, and included in the 1882 volume. There were also a few poems from the 1870 collection, as well as various shorter pieces written in the intervening twenty years. This book and 'St. Paul,' now published separately, represent for the public the author's work in poetry. That he ceased for the remaining eighteen years of his life to seek expression for his thoughts and feelings in verse, except on the rarest occasions, could not be ascribed by any one who knew him either to a loss of interest or to the least decay of power. The true reason was no doubt the growing absorption of his leisure, during the last twenty years of his life, in the work of psychical research.

His poetic work was known at first to comparatively few, but of late years has had a steadily increasing public; and the compressed force, the ardent feeling, the vivid and finished expression, and, above all, the combined imaginativeness and sincerity of his best work (particularly his latest poem, 'The Renewal of Youth'), could leave few qualified readers in doubt of the genuineness of his poetic gift.

His prose papers were written at various times previous to 1883, when they were collected in two volumes, with the title 'Essays, Classical and Modern,' which have been twice reprinted, in 1888 and 1897. They fall naturally into two groups, according as they are concerned with poetry (as in the essays on Virgil, Rossetti, Victor Hugo, and Trench), or touch on the questions of religious thought, or on the psychological, moral, and spiritual subjects and problems which tended more and more to occupy his mind. The latter emerge in, or underlie, the papers on Mazzini, Renan, and George Eliot, on Marcus Aurelius, and on Greek Oracles. Of the first group the most remarkable is undoubtedly the paper (which first appeared in 1870 in the 'Fortnightly Review') on Virgil, the poet who above all others had been the object of his reverence and enthusiasm from early boyhood, and whom he later describes as 'one of the supports of his life.'

Myers's monograph on Wordsworth was published in 1881 in the series of 'English Men of Letters;' and after all that men of genius have written about Wordsworth, from Ruskin and Matthew Arnold downwards, there are not a few readers who owe a special debt to the penetrating and illuminating criticism of this little volume. Mr. John Morley justly describes Myers's work as 'distinguished as much by insight as by admirable literary grace and power.' The same insight and skill appear in the brief

essay on Shelley contributed in 1880 to Ward's 'English Poets,' where Myers adopts the happy device of stating the case against Shelley of the average intelligent but unimaginative critic. Myers's defence is all the more effective, because he so well understands the feelings of the assailants. In the same year in which Myers's 'Essays' first appeared (1888) he issued a new edition of his father's book, 'Catholic Thoughts,' with a preface by himself.

While residing as lecturer in Trinity College he was brought into close relations with Professor Henry Sidgwick [q. v. Suppl.], who became one of his most valued friends. It was largely due to their friendship that Myers was led to take a great interest in the higher education of women, of which, from 1870 onwards, Sidgwick was an active promoter. About the same time, or even earlier, Myers had begun to give much attention to the phenomena of mesmerism and spiritualism, and he speaks (1871) of 'the sympathetic and cautious guidance' which his friend was able to give him in such matters. The poem called 'The Implicit Promise of Immortality' (1870) suggests that another reason, strongly drawing him to such studies, was a deep modification of his early religious beliefs. To the 'intensely personal emotion' which underlay (as he records) the early poems of 'St. Paul' and 'John the Baptist' (1867-8) had succeeded for the time 'disillusion caused by wider knowledge;' and for fresh light, it would seem, he began to look to the scientific study of imperfectly explored phenomena. However this may be, he was one of the small band of men who in 1882, after several years of inquiry and experiment, founded the Society for Psychical Research, of which the purpose was to collect evidence, and to carry on systematic experiments in the obscure region of hypnotism, thought transference, clairvoyance, spiritualism, apparition, and other alleged occurrences, in regard to which the common attitude has been well described as being mainly either *a priori* disbelief or undiscerning credulity. The chief workers, besides Myers and Professor and Mrs. Sidgwick, were at first Professors Balfour Stewart and Barrett, Mr. Hodgson, Edmund Gurney [q. v.], and Mr. F. Podmore.

By 1886, when the first considerable result of these labours was published in the two large volumes entitled 'Phantasms of the Living,' the society numbered nearly seven hundred members and associates, including many distinguished men of science in England, France, Italy, Germany, Russia, and America. The 'Phantasms of the Living'

was the joint work of Messrs. Myers, Podmore, and Gurney, the heaviest part of the labour being borne by Gurney. The introduction was contributed by Myers, and he there formulates the central theses of the book, of which the gist is contained in the two claims (1) 'that telepathy, or the transference of thought and feeling from one mind to another by other than the recognised sense channels, is a proved fact of nature;' and (2) 'that phantasms (or impressions) of persons undergoing a crisis, especially death, are perceived with a frequency inexplicable by chance, and are probably telepathic.' The other considerable work of Myers in the same field, which has already appeared, is the long series of papers on the 'Subliminal Self,' which are printed in the society's 'Proceedings.' This work is briefly described by Professor William James (*Essays in Popular Philosophy*, 1897) as 'the first attempt to consider the phenomena of hallucination, hypnotism, automatism, double personality, and mediumship, as connected parts of one whole subject.' Of the permanent value of this work it is impossible to speak yet with confidence; it must be—it was recognised by himself as being—largely provisional. His own labours in this field were continued after 1882 with the same devoted strenuousness. The definite study was practically completed before his death. The results appeared in 1903 in the posthumously published book entitled 'Human Personality and its Survival of Bodily Death' (2 vols.) The last work published in his lifetime was a small collection of essays called 'Science and a Future Life' (1898), in which are included the two papers 'Tennyson as Prophet' and 'Modern Poets and Cosmic Law.' These are the maturest and most eloquent expression of his views on poetry, especially in relation to the great questions that engrossed his later years. 'Fragments of Prose and Poetry,' edited by his widow, appeared in 1904.

In the striking essay on 'Georgs Eliot,' written shortly after her death in December 1880, he speaks with unreserved admiration of the noble and unselfish spirit in which she faced the consequences of her belief that death was the end. But he adds: 'There were some to whom . . . this resignation seemed premature; some whose impulse to a personal life beyond the grave was so preoccupying and dominant, that they could not readily acquiesce in her negations, nor range themselves unreservedly as the fellow-workers of her brave despair.' No reader can fail to see that he is here speaking of himself.

His health failed rather suddenly in the autumn of 1900, and he went abroad for

the winter by medical advice, though encouraged to hope that rest would work a complete cure. But early in 1901 grave symptoms returned, and he died at Rome on 17 Jan. in his fifty-eighth year. A tablet was placed to his memory in the protestant cemetery, where are Kents's grave and Shelley's memorial, and he was buried beside his father and mother in Keswick churchyard, within sight of his old home.

All who knew him agree that he was a man of rare and high intellectual gifts, original, acute, and thoughtful; subtle in insight, abundant in ideas, vivid and eloquent in expression; a personality at once forcible, ardent, and intense.

[Personal memories and private information, the Oheltenham College Register; his own published work, and private diaries and papers.]
A. S. K.

N

NAIRNE, SIR CHARLES EDWARD (1836-1899), lieutenant-general, born on 30 June 1836, was son of Captain Alexander Nairne, of the East India Company's service. He was educated at Addiscombe, and was commissioned as second lieutenant in the Bengal artillery on 7 Dec. 1855. He became lieutenant on 27 April 1858. He served in the Indian mutiny and received the medal, and in the Yusufzai expedition of 1863. He was promoted second captain in the royal artillery on 24 March 1865, and major on 2 Nov. 1872. From 1875 to 1880 he commanded a battery (now L battery of B brigade) of horse artillery, and served with it in the second Afghan war as part of the Peshawar field force, receiving the medal.

He became regimental lieutenant-colonel on 1 May 1880, and in the Egyptian expedition of 1882 he commanded the horse artillery at the two actions of Kassassin and at Tel-el-Kehir. He was mentioned in despatches (*London Gazette*, 2 Nov. 1882), was made C.B. on 18 November, and received the medal with clasp, the bronze star, and the Medjidie (3rd class). He became colonel in the army on 1 May 1884. He was colonel of the depot staff of the horse artillery from 1882 to 1885, and commandant of the school of gunnery at Shoeburyness for the next two years. On 1 April 1887 he was appointed inspector-general of artillery in India, with the local rank of brigadier-general. He held this post for five years, and brought about a great improvement in the shooting of the field artillery (*Monarchs, Forty-one Years in India*, p. 528).

He was promoted major-general on 6 Nov. 1890, and commanded a district in Bengal from 28 March 1892 to 4 Sept. 1893, when he was appointed to the chief command in Bombay. There it fell to him to carry out the reorganisation scheme by which the three presidential armies were to be merged in one, and he did this with tact and ability. He became lieutenant-general on 17 Nov.

1895, and was made K.C.B. on 23 June 1897. From 20 March to 4 Nov. of 1895 he was acting commander-in-chief in India. He left that country with a high reputation as an administrator, and he had just been appointed president of the ordnance committee when he died in London on 19 Feb. 1899. He was buried on the 22nd at Charlton cemetery with military honours. In 1860 he married Sophie, daughter of the Rev. John Dupré Addison, vicar of Fleet, Dorset. She survived him.

[Times, 21 Feb. 1899; Records of the Royal Horse Artillery; Lord Roberts's Forty-one Years in India, ed. 1898.]
E. M. L.

NAPIER, SIR FRANCIS, ninth BARON NAPIER OF MURCHISTON in the Scottish peerage, first BARON ETTRICK OF ETTRICK in the peerage of the United Kingdom, and eleventh (Nova Scotia) baronet of Scott of Thirlestane (1810-1898), diplomatist and Imilian governor, born in 1810 at Thirlestane in Sulkirkshire, was the eldest son of William John Napier, eighth baron Napier of Murchistoun [q. v.]. On his father's death on 11 Oct. 1834 he succeeded to the peerage and baronetage at the age of fifteen. He was educated partly by private tutors at Thirlestane and at school at Saxe-Meiningen, and afterwards at Trinity College, Cambridge, which he entered in 1835. He left Cambridge without a degree, and passed some time at Geneva under the guardianship of the Rev. Walter Paterson, and there acquired a command of foreign languages which proved to be most useful to him in after-life. He also studied very carefully the writings of Gibbon, which no doubt helped to mould his own style. In 1840 he was appointed to the diplomatic service, and after serving as an attaché at Vienna and at Constantinople, and subsequently as secretary of legation at Naples, and to the embassy at St. Petersburg and Constantinople, he was sent as envoy to the United States of America, whence he was

transferred to the Hague. From December 1860 to September 1861 he was ambassador at St. Petersburg, and from September 1861 to January 1866 at Berlin. In these various diplomatic posts Lord Napier established a high reputation. Many years ago Edward Robert Bulwer Lytton, first earl of Lytton [q. v.], told the writer of this article that he regarded Napier as the only man of genius in the diplomatic service in his time. When secretary of legation at Naples in 1848 and 1849, he was *chargé d'affaires* for eighteen months, including the critical period of the Sicilian insurrection. On that occasion the judgment and tact with which he discharged his duties were highly appreciated by Lord Palmerston, then secretary of state for foreign affairs, by whom Napier's talents, as manifested in the higher diplomatic appointments which he subsequently held, were regarded as justifying an expectation that he would rise to the highest offices in the state. Both by Lord Aberdeen and Lord Clarendon his services were much valued. In the United States he was considered to have been the most acceptable envoy they had up to that time received from Great Britain. As ambassador at St. Petersburg he was a *persona grata* to the emperor Alexander II, who wished to confer upon him the highest Russian order, that of St. Andrew, because he considered that Lord Napier had worked for peace between England and Russia which at that time was threatened. This proposal having to be abandoned, as no British envoy could accept a foreign order, the emperor sat for his portrait, which he presented to Napier. A similar compliment was afterwards paid to him by the king of Prussia.

In January 1866 Napier was appointed governor of Madras. This office he held for six years, having been invited by George Douglas Campbell, eighth duke of Argyll [q. v. Suppl.], then secretary of state for India, to prolong his tenure of the office beyond the usual time. The duties of an Indian governor are very different from those which had previously devolved upon Napier; but his administration fully justified the promise of his previous career. He went very thoroughly into all the questions which came before him, mastering the facts, and recording his views with a fulness and clearness which left nothing to be desired. A few months after taking charge of the government he found himself confronted by a serious famine in Ganjam, the northern district of the presidency. He at once repaired to the district and visited the affected tracts, stimulating the district officers by his example, and setting on foot the measures

which were necessary to meet the calamity. It is not too much to say that there was no branch of the administration to which he did not devote time and attention. Whether it was a question relating to the assessment of the land revenue, or the garrison required to maintain the peace of the presidency, or the strength of the police, or the establishment of municipal and local government—all these matters received from Napier full and careful consideration; but the business to which he devoted special attention was that connected with the public health. Hospitals, dispensaries, and everything relating to the care of the sick and the prevention of diseases were to him objects of the deepest interest. As secretary to the embassy at Constantinople he had made the acquaintance and had acquired the friendship of Miss Florence Nightingale, to whom his official position had enabled him to render valuable assistance in carrying out her work. Throughout his residence in India he kept up a correspondence with her on subjects connected with the public health in that country. He also from the first took a great and practical interest in developing public works, and especially works of irrigation. He fully recognised the great value of the irrigation works carried out or devised by Sir Arthur Cotton [q. v. Suppl.] He visited them all at an early period after assuming the government, and during the six years that he remained in India he gave steady encouragement to the completion and development of the various irrigation systems then in operation. It was while Napier was governor of Madras that the Pennar anicut was built, and some progress made with the distributing canals. During that time also the Rushikuliya anicut in Ganjam was projected and planned, and the great work of diverting the Periyar river in Travancore from its natural channel, leading down to the western coast, where the water was not required, into the river Vainai on the eastern side of the peninsula, was brought by Napier before the government of India and the secretary of state. This remarkable work was successfully completed a few years ago.

Very shortly after Napier's arrival at Madras he visited Calcutta and made the acquaintance of Sir John Lawrence [see LAWRENCE, JOHN LAIRD MAIR, first BARON LAWRENCE], with whom he established most friendly relations, as he afterwards did with the Earl of Mayo. Napier from the first recognised the respective positions of the supreme government of India and of the minor governments, and did everything in

his power to diminish the friction and the presidential jealousies which are so often detrimental to the efficiency of Indian administration. At the same time, whenever he perceived a tendency to override the legitimate interests of the presidency entrusted to his charge, he did not fail to remonstrate. It may be truly affirmed that at no period in the history of British India, since the days of Sir Thomas Munro [q.v.], were the relations of the government of India and of the Madras government more satisfactory than they were during the six years in which Napier presided over the government of Madras.

In February 1872, in consequence of the assassination of the Earl of Mayo (see *BOURKE, RICHARD SOUTHWELL*), it devolved upon Napier to assume temporarily the office of governor-general of India. During the time, a little short of three months, that the temporary governor-generalship lasted, no business of very great importance arose, and Napier, on being relieved by Lord Northbrook, returned to England. For his Indian services he was created a baron of the United Kingdom, with the title of *Baron Napier* (16 July 1872). In the same year he took the chair at the meeting of the social science congress which was held at Plymouth. The address which he delivered on that occasion called forth some comment at the time as being unduly socialistic; but several of the measures which Napier then suggested have been since embodied in the county councils and parish councils acts. In this address, as in many of his utterances, he evinced the greatest sympathy with the condition of the poor, both in the rural and in the urban districts. An address delivered on 29 April 1873 at the annual meeting of the Society for the Propagation of the Gospel was, with those of Canon (afterwards Bishop) Lightfoot and Bishop Kelly, published in the same year under the title 'Missions, their Temporal Utility, Rate of Progress, and Spiritual Foundation.' In 1874 he delivered an address on education at the social science congress held at Glasgow. While he continued to live in London he served for some time on the London school board and took an active part in its proceedings. He also served as chairman of the dwellings committee of the Charity Organisation Society. He subsequently took up his residence on his estate in Scotland, and in 1883 he presided over a royal commission which was appointed to inquire into the condition of the crofters and cottars in the highlands and islands of Scotland. This was a congenial duty, which gave full scope to his

sympathy with the poor. This report, which was drafted by him, was thorough and exhaustive. It was vehemently attacked in the 'Nineteenth Century' for November 1884 by the late Duke of Argyll, whose criticisms were replied to by Napier in an effective article in a subsequent number of the same review. The report was followed by the appointment of a permanent commission, which deals with all questions concerning the crofters and cottars. During the latter years of his life Napier resided almost entirely in Scotland, acting as convener of his county, and interesting himself generally in local affairs. He was extremely popular with people of all classes on and in the neighbourhood of his estate, to whom he had endeared himself by his kindly and generous nature. He was a LL.D. of Edinburgh, Glasgow, and Harvard. He died very suddenly on 19 Dec. 1893 at Florence, where he and Lady Napier and Ettrick had spent their honeymoon fifty-three years before, and where they had gone to pass the winter. He had married, in 1818, Anne Jane Charlotte, only daughter of Robert Manners Lockwood of Dun-y-Graig in Glamorganshire. Lady Napier, who survived her husband, was appointed a member of the imperial order of the crown of India shortly after it was constituted. Lord Napier left three sons, and was succeeded in his titles and estate by his eldest son, William George.

Napier's career was undoubtedly a very brilliant one up to a certain point. As the representative of Queen Victoria at two of the most important courts in Europe and at Washington, he had discharged his important functions with admirable judgment and tact. His government of Madras had been so successful that he was invited to retain it beyond the usual time. His long official experience and dignified bearing would have seemed to point him out as the most fitting successor to Lord Mayo, whose loss India was at that time deploring. He certainly had shown himself to be possessed of qualifications which few governors-general of India had displayed before being appointed to that high post. He was an eloquent speaker. His reply to an address which was presented to him by the natives of Madras on his departure from India has seldom been surpassed in felicity of diction and pathos. But he was passed over. After his return to England he might have been expected to follow with eminent success a political career. But he was without the pecuniary means of meeting the expenses of parliamentary life, and, although not

destitute of ambition, he was too proud to press his claims. Thus it came about that Lord Palmerston's prediction was unfulfilled.

[Foreign Office List for 1808; Phillimore's *Life of Admiral of the Fleet Sir William Parker, Bart., G.C.B.*, vol. iii. London, 1880); Minutes recorded by Lord Napier when Governor of Madras; Address delivered at the Social Science Congress, September 1872; Report of Her Majesty's Commissioners of Inquiry into the Condition of the Crofters and Cottars in the Highlands and Islands of Scotland, 1884; *Nineteenth Century*, November 1881 and March 1885; *Longman's Magazine*, February 1899; family information and personal knowledge acquired by the writer when closely associated with Lord Napier in the government of Madras.]
A. J. A.

NEWMAN, FRANCIS WILLIAM (1805-1897), scholar and man of letters, third son of John Newman (*d.* 29 Sept. 1824), banker, by his wife Jemima (*d.* 17 May 1830), youngest child of Henry Fourdrinier, and sister of Henry Fourdrinier [q. v.], was born in London on 27 June 1805. His father, of Dutch descent, was 'an admirer of Benjamin Franklin and Thomas Jefferson,' and 'had learned his morality more from Shakspeare than from the Bible;' his mother, of Huguenot extraction, has been incorrectly described as a Calvinist (F. W. NEWMAN, *Contributions*, 1891, p. 62). He followed his brothers to the large private school of the Rev. George Nicholas, D.C.L., at Ealing; in 1821 he was 'captain' of the school, and in the autumn of that year, having been confirmed by William Howley [q. v.], then bishop of London, whom he thought 'a made-up man,' he went to Oxford. He lodged with his brother, John Henry Newman [q. v.], the future cardinal, first at Seale's coffee-house, then from Easter 1822 at Palmer's in Merton Lane, with Joseph Blanco White [q. v.], who joined them at breakfast and tea. On 29 Nov. 1822 he matriculated from Worcester College. Going into residence in 1824, he found an 'engraving of the Virgin' on the wall of his room, and, directing its removal, learned that it had come by his brother's order. He notes this as the point at which he began definitely to 'resist' his brother's influence. In 1826 he took his B.A., with a double first in classics and in mathematics, and was elected fellow of Balliol. On his taking the degree, the whole assembly rose to welcome him, an honour paid previously only to Sir Robert Peel on taking his double first. His brother's verses on his twenty-first birthday (1826) show that

he expected him to take orders ('shortly thou must buckle on the sword'). From 1826 he saw no foothold for a doctrine of the future life apart from revelation. He was in Dublin (1827-8) as tutor in the household of 'an Irish peer.' Here he met John Nelson Darby [q. v.], and attended nonconformist worship for the first time. Returning to Oxford in the autumn of 1828, he aided in looking after the poor at Littlemore. Pusey's first books, on German theology (1828-1830), 'delighted' him by their mixture of pietism and rationalism.

In 1830 he resigned his fellowship, being unable to take his M.A. through unwillingness to subscribe the articles. Through Darby he had become acquainted with Anthony Norris Groves [q. v.], whom he followed (September 1830) on a mission to Bagdad with John Vesey Parnell [see under PARNELL, HENRY BROOK], first BARON COXFLETON] and Edward Crinin; his 'Personal Narrative' (1850, 12mo) consists of letters (23 Sept. 1830 to 14 April 1833) revised 'to suit the writer's maturer taste.' At Aleppo he fell in with a Mohammedan carpenter, and was impressed by his calm retort that God, in giving to the English great gifts, had withheld the knowledge of the true religion.

Leaving the East in order to obtain more volunteers for missionary enterprise, Newman reached England again in 1833, about the time of his brother's return from Italy, and was received 'kindly, if stillily;' he had communicated with baptists, and was zealous for intercommunion of all protestants. His non-acceptance of an 'evangelical formula' estranged him from Darby. He became classical tutor (1834) in the Bristol College (an unsectarian institution, existing from 1830 to 1841), and was baptised (7 July 1836) in Broadmead chapel (though he was against making adult baptism a term of communion) and married. At Bristol he lectured also on logic; the 'Lectures' were published (Oxford, 1838, 8vo). In October 1840 he became professor of classical literature in Manchester New College (now Manchester College, Oxford), removed in that year from York to Manchester. His opening address was published in 'Introductory Lectures, Manchester New College' (1841, 8vo). He published an abridged translation of Hubert's 'English Universities' (1843, 8vo). His 'Catholic Union' (1844, 12mo; 2nd edit. 1854, 12mo) was a plea for a 'church of the future' on an ethical basis, leaving theological questions open. In 1846 he was appointed to the chair of Latin in Univer-

sity College, London. He further accepted, in February 1848, the principalship of University Hall (an institution founded by unitarians in Gordon Square), and delivered (20 July) an address on occasion of the laying the foundation stone, but resigned the principalship in November, through dissatisfaction with structural arrangements of the building. As professor of Latin literature his methods were in marked contrast to those of Henry Maldon [q. v.], the professor of Greek; he succeeded in awaking interest in his subject rather than in promoting depth of study; his prelections, always without notes, were bright and vivid. He introduced the Italian mode of pronouncing Latin. Two of his favourite books for class translation were returned into Latin by himself, 'Hiawatha' (1802, 12mo) and 'Robinson Crusoe' ('Robilins Crusoe', 1884, 8vo). He had earlier published English versions of Horace's Odes in unrhymed metres (1853, 12mo; 1876, 8vo), and of Homer's Iliad (1856, 8vo; 1871, 8vo); the latter, specially intended to be read by working men, was severely criticised by Matthew Arnold, who, admitting Newman's 'great ability and genuine learning,' thought he had 'failed more conspicuously than any' of his predecessors, 'for want of appreciating' the 'nobleness' of Homer (ARNOLD, *On Translating Homer*, 1861, 16mo; NEWMAN published *A Reply*, 1861, 16mo). Later, his philological publications extended to Arabic and to African dialects. He held the Latin chair till 1869, when he became emeritus professor.

Meantime he had acquired a special repute by his writings on subjects of religion, of which the most important were his 'History of the Hebrew Monarchy' (1847, 8vo; 1853, 12mo), a study rendered obsolete by more recent research; his pietistic treatise on 'The Soul' (1849, 12mo; 3rd edit. 1852, 12mo), perhaps the most influential of his works; his 'Phases of Faith' (1850, 12mo; 1852, 12mo), an autobiographical account of his religious changes, which excited much controversy, producing 'The Eclipse of Faith' (1852, 8vo), by Henry Rogers (1806-1877) [q. v.], with Newman's 'Reply' (1853, 8vo), and Rogers's 'Defence' (1854, 8vo); and his 'Theism, Doctrinal and Practical', 1858, 4to. The working of his mind, which had gradually led him to the rejection of historical Christianity, left his theistic attitude unshaken, though of immortality he could not speak with certain voice. He occasionally conducted the service at South Place Chapel, Finsbury, and perhaps elsewhere. In 1876 he joined the

British and Foreign Unitarian Association, and was made a vice-president in 1879.

In political questions, especially those bearing on social problems, he took a keen interest. He was the friend of Mazzini and Kossuth, and published 'Reminiscences of Kossuth and Pulszky' (1888, 8vo). Women's suffrage he warmly espoused; provincial councils he regarded as 'the restoration of the heptarchy.' To vaccination he was as keenly opposed as to vivisection, while he became a strong advocate of a vegetarian diet. On these, as on religious topics, he wrote much in later life. Some of his controversial pamphlets were produced under the auspices of Thomas Scott (1808-1878) [q. v.] With his eldest brother there was latterly no close intimacy, but no breach of friendly feeling; from 1852 they united in supporting their 'very eccentric' brother, Charles Robert Newman (d. 1884). In 1877 John Henry Newman wrote, 'Much as we love each other, neither would like to be mistaken for the other' (OLDCASTLE, *Cardinal Newman*, 1890, p. 5). He published, after the cardinal's death, 'Contributions chiefly to the Early History of the late Cardinal Newman' (1891, 8vo, two editions), important for the biographies of both men, though it bears marks of defective memory, and some of its criticisms are more trenchant than just.

He died at 15 Arundel Terrace, Weston-super-Mare, on 4 Oct. 1897, and was buried in the cemetery there on 9 Oct. In the funeral address the Rev. John Temperley Grey, congregationalist, affirms that 'of late his attitude to Christ had undergone a great change,' an impression which seems at variance with the tenor of his last publication (1897). His slender form and neuter physiognomy were often made more striking by peculiarities of dress. His habits were very simple; he regularly conducted family prayers after breakfast. He was twice married, but had no issue; his first wife being a daughter of Sir John Keenaway, British resident at Hyderabad.

Besides the works mentioned above, he published the following:

- I. LINGUISTIC: 1. 'A Collection of Poetry for . . . Elocution,' 1850, 8vo. 2. 'Homeric Translation in Theory and Practice,' 1861, 8vo (reply to Matthew Arnold). 3. 'The Text of the Iguvine Inscriptions,' 1864, 8vo. 4. 'A Handbook of Modern Arabic,' 1866, 8vo. 5. 'Translations of English Poetry into Latin Verse,' 1868, 8vo. 6. 'Orthoëpy . . . Mode of Accenting English,' 1869, 8vo. 7. 'Dictionary of Modern Arabic,' 1871, 8vo, 2 vols. 8. 'Libyan Vocabulary,' 1882,

8vo. 9. 'Comments on the Text of Eschylus,' 1884, 8vo; 'Supplement... and Notes on Euripides,' 1890, 8vo. 10. 'Kab-bal Vocabulary,' 1887, 8vo.

II. MATHEMATICAL: 11. 'The Difficulties of Elementary Geometry,' 1841, 8vo. 12. 'Mathematical Tracts,' Cambridge, 1888, sq. 8vo. 13. 'Elliptic Integrals,' Cambridge, 1889, 8vo (an instalment had been published in the 'Dublin and Cambridge Magazine' forty years before).

III. HISTORICAL: 14. 'Four Lectures on the Contrasts of Ancient and Modern History,' 1847, 16mo. 15. 'Regal Rome,' 1852, 8vo. 16. 'The Crimes of the House of Hapsburg,' 1858, 8vo.

IV. SOCIAL AND POLITICAL: 17. 'A State Church not Defensible,' 1845, 12mo; 1848, 12mo. 18. 'On Separating... Church from State,' 1843, 12mo. 19. 'Appeal to the Middle Classes on... Reforms,' 1848, 8vo. 20. 'On... Our National Debt,' 1849, 8vo. 21. 'Lectures on Political Economy,' 1851, 12mo. 22. 'The Ethics of War,' 1860, 8vo. 23. 'English Institutions and their... Reforms,' 1866, 8vo. 24. 'The Permissive Bill,' Manchester, 1866, 8vo. 25. 'The Cure of the great Social Evil,' 1869, 8vo; first part reprinted as 'On the State Provision for Vice,' 1871, 8vo; second part reprinted, 1889, 8vo. 26. 'Europe of the near Future,' 1871, 8vo. 27. 'Lecture on Women's Suffrage,' Bristol [1869], 8vo. 28. 'Essays on Diet,' 1888, 8vo. 29. 'The Land as National Property' [1880], 8vo. 30. 'The Corruption now called Neo-Malthusianism,' 1889, 8vo; 1890, 8vo. 31. 'The Vaccination Question,' 6th edit. 1895, 8vo.

V. RELIGIOUS: 32. 'On the Relation of Free Churches to Moral Sentiment,' 1847, 8vo. 33. 'Thoughts on a Free and Comprehensive Christianity,' Ramsgate [1865], 8vo. 34. 'The Religious Weaknesses of Protestantism,' Ramsgate, 1866, 8vo. 35. 'On the Defective Morality of the New Testament,' Ramsgate, 1867, 8vo. 36. 'The Bigot and the Sceptic,' Ramsgate [1869], 8vo. 37. 'James and Paul,' Ramsgate, 1869, 8vo. 38. 'Anthropomorphism,' Ramsgate, 1870, 8vo. 39. 'On the Causes of Atheism' [1871], 8vo. 40. 'The Divergence of Calvinism from Pauline Doctrine,' Ramsgate, 1871, 8vo. 41. 'The Temptation of Jesus,' Ramsgate [1871], 8vo. 42. 'On the Relation of Theism to Pantheism, and on the Galla Religion,' Ramsgate, 1872, 8vo. 43. 'Thoughts on the Existence of Evil,' Ramsgate [1872], 8vo. 44. 'On the Historical Depravation of Christianity,' 1873, 12mo. 45. 'Ancient Sacrifice,' 1874, 8vo. 46. 'Hebrew Theism,' 1874, 8vo. 47. 'The Two

Theisms' [1874], 8vo. 48. 'On this and the other World' [1875], 8vo. 49. 'Religion not History,' 1877, 8vo. 50. 'Morning Prayers,' 1878, 8vo; 1882, 8vo. 51. 'What is Christianity without Christ?' 1881, 8vo. 52. 'A Christian Commonwealth,' 1883, 8vo. 53. 'Christianity in its Cradle,' 1884, 8vo; 1886, 8vo. 54. 'Life after Death?' 1886, 8vo; 1887, 8vo. 55. 'The New Crusades; or the Duty of the Church to the World,' Nottingham, 1886, 8vo. 56. 'Hebrew Jesus: His true Creed,' Nottingham, 1895, 8vo. Posthumous was 57. 'Mature Thought on Christianity,' 1897, 8vo, edited by Mr. George Jacob Holyoake.

Several of other lectures and 'lay sermons' came from his pen; three of them were reprinted in 'Discourses,' 1875, 8vo; three volumes of his 'Miscellanies' appeared in 1869-80, 8vo. He edited Kossuth's 'Speeches' (1853, 12mo, condensed), and Smith's 'Fruits and Farnaceae' (1880, 12mo, abridged). He wrote much in 'Fraser's Magazine,' the 'Westminster,' 'Prospective,' and 'Theological' Reviews, the 'Reasoner,' the 'Index' (Boston, U.S.A.), and other periodicals.

[L. Giberne Sieveking's Memoir and Letters of Francis W. Newman, 1909; Times, 6 Oct. 1897; Inquirer, 9 Oct. and 27 Nov. 1897; In Memoriam, Emeritus Professor F. W. Newman, 1897 (portrait); Christian Reformer, 1863, p. 336; Letters and Correspondence of J. H. Newman, 1891.] A. G.

NEWTN, SAMUEL (1821-1898), principal of New College, London, born in 1821, was son of Elisha Newth, by his wife, the eldest daughter of J. Killick. His father was an early convert of Rowland Hill (1744-1833) [q.v.], with whom he was associated at the Surrey congregational chapel, so that Newth's boyhood was passed under the sway of vigorous religious influences, and he came into contact with all the leading congregationalists of the time. His early education was conducted by his father, who instructed him in Greek, Latin, Hebrew, French, and Italian, after which, in 1837, he entered Coward College. He graduated B.A. and then M.A. in the university of London with high mathematical honours, and after ordination settled, in 1842, at Brosely, Shropshire, where for three years he was minister of the congregational chapel. In 1845 he was appointed professor of classics and mathematics at Western College, Plymouth, one of the congregational colleges for training candidates for the ministry.

While holding this appointment he published two elementary text-books on natural philosophy, 'The Elements of Statics, Dyna-

mics, and Hydrostatics' (1851), and 'A First Book of Natural Philosophy' (1854), which are distinguished by clearness and simplicity of treatment, and were long recognised as standard text-books.

In 1855 he was appointed professor of mathematics and ecclesiastical history at New College, St. John's Wood, another of the congregational colleges, where he remained until 1889. In his work at this college, the students attending which number from thirty to forty, the varied character of Newth's attainments was of special value. In 1867 he added the teaching of classics to his other duties, and in 1872 succeeded Robert Hailley [q. v.] as principal of the college. This post and the professorships of New Testament exegesis and ecclesiastical history he retained until his resignation in 1889, after which, however, he still maintained his position as a member of the college council.

Newth's great work lay in the influence which he exerted as principal of New College on the minds of the divinity students who came under his care. Although his rule was strict, he gained their affection and esteem. He was a most accurate scholar in all of the many branches of learning which he cultivated, and was deeply versed in the history of the nonconformist colleges. In 1870 his ability and reputation as a Greek scholar were recognised by his appointment as a member of the company of New Testament revisers, and he took an active part in the revision which was completed in 1880. A general account of the labours of the revisers, together with an historical sketch of the whole question of biblical translation, was given by him in a series of 'Lectures on Bible Revision,' published in 1881.

Newth attained a very high position among congregational divines, and received the highest honours at the disposal of the congregational union. In 1875 the degree of D.D. was conferred upon him by the university of Glasgow, and in 1880 he was elected chairman of the congregational union of England and Wales, while he also officiated as chairman of the London congregational board, and organised the congregational library at the Farringdon Street Memorial Hall. For the last eight years of his life he resided at Aoton, where he died on 30 Jan. 1893.

In addition to the works already mentioned Newth published 'Mathematical Examples,' 1859, and 'Christian Union,' an address delivered to the congregational union, 1880; and edited 'Chambers of Imagery,' a series of sermons by his brother,

the Rev. Alfred Newth, 1876, to which he contributed a memoir of the author. He was also the author of an essay on 'The New Testament Witness concerning Christian Churches,' contributed to a series of essays by various writers published under the title 'The Ancient Faith' in 1897, and wrote numerous articles in the 'Cyclopedia of Biblical Literature.'

[Short biographical notices are given in the Times, 31 Jan. 1898; Nature, lvi. 322; the British Weekly, 3 Feb. 1898; the Independent, 3 Feb. 1898; Congregational Year Book, 1899, p. 62; 'Dr. S. Newth,' a memorial address by Joseph Parker, British Weekly, 3 Feb. 1898; Some Memories of Dr. Newth, the Independent, 3 Feb. 1898.]

A. H.-N.

NEWTON, SIR CHARLES THOMAS (1816-1894), archaeologist, second son of Newton Dickinson Hand Newton, vicar of Olungunford, Salop, and afterwards of Dredwardine in the same county, was born in 1816. He was educated at Shrewsbury School (then under Samuel Butler), and at Christ Church, Oxford (matriculating 17 Oct. 1833), where he graduated B.A. in 1837 and M.A. in 1840.

Already in his undergraduate days Newton (as his friend and contemporary, Ruskin, tells in *Præterita*) was giving evidence of his natural bent; the scientific study of classical archaeology, which Winkelmann had set on foot in Germany, was in England to find its worthy apostle in Newton. In 1840, contrary to the wishes of his family, he entered the British Museum as assistant in the department of antiquities. As a career the museum, as it then was, can have presented but few attractions to a young man; but the department, as yet undivided, probably offered to Newton a wider range of comparative study in his subject than he could otherwise have acquired.

In 1852 he was named vice-consul at Mytilene, and from April 1852 to January 1858 he was acting consul at Rhodes, with the definite duty, among others, of watching over the interests of the British Museum in the Levant. In 1854 and 1855, with funds advanced by Lord Stratford de Redcliffe, he carried on excavations in Calymnos, enriching the British Museum with an important series of inscriptions, and in the following year he was at length enabled to undertake his long-cherished scheme of identifying the site, and recovering for this country the chief remains, of the mausoleum at Halicarnassus. His residence in the Levant was further marked by researches at Onidus and Branchidæ, both of which resulted in important gains to the nation, and by the disinter-

ment of the famous bronze Delphian serpent in the Hippodrome at Constantinople. From 10 June 1859 to 16 Jan. 1861 he was consul at Rome, but was the following year recalled to take up the newly created post of keeper of Greek and Roman antiquities at the British Museum. On 27 April 1861 he married the distinguished painter, Ann Mary, daughter of Joseph Severn [q. v.], himself a painter and the friend of Keats, who had succeeded Newton in Rome; she died in 1866 at their residence, 74 Gower Street, Bloomsbury [see NEWTON, ANN MARY].

Newton's keepership at the museum was marked by an amazing wealth of important acquisitions, which were largely attributable to his personal influence or initiation. Thus in the ten years 1864-74 alone he was enabled to purchase no less than five important collections of classical antiquities: the Farnese, the two great series of Castellani, the Pourtales, and the Illacas collections, representing in special grants upwards of 100,000*l.*; only those who know what labour and tact are involved in the capture of even the smallest 'special grant' can appreciate what this implies. Meanwhile his work in the Levant, bringing to the museum the direct results of exploration and research, was being continued by his successors and friends: Billiotti in Rhodes, Smith and Porcher at Cyrene, Lang in Cyprus, Dennis in Sicily, in the Cyrenaica, and around Smyrna, Pullan at Priene, Wood at Ephesus were all working more or less directly under Newton on behalf of the museum.

Of his own work as a scholar in elucidating and editing the remains of antiquity, the list of his writings given below is only a slight indication; nor was this confined to writing alone. In 1855 he had been offered by Lord Palmerton (acting on Liddell's advice) the regius professorship of Greek at Oxford, rendered vacant by Dean Galeford's death, with the definite object of creating a school of students in what was then a practically untried field of classical study at Oxford. The salary, however, was only nominal, and Newton was obliged to decline the post, which was then offered to and accepted by Benjamin Jowett [q. v. Suppl.] In 1880, however, the Yates chair of classical archaeology was created at University College, London, and by a special arrangement Newton was enabled to hold it coincidentally with his museum appointment. As antiquary to the Royal Academy he lectured frequently. In the latter part of his career he was closely associated with the work of three English societies, all of which owed to him more or less directly their inception and a large part

of their success; the Society for the Promotion of Hellenic Studies, at the inaugural meeting of which he presided in June 1879; the British School at Athens, started in February 1885; and the Egypt Exploration Fund, which was founded in 1882. In 1889 he was presented by his friends and pupils, under the presidency of the Earl of Carnarvon, with a testimonial in the form of a marble portrait bust of himself by Boehm, now deposited in the Mausoleum room at the British Museum; the balance of the fund was by his own wish devoted to founding a studentship in connection with the British school at Athens. In 1885 he resigned the museum and academy appointments, and in 1888 he was compelled by increasing infirmity to give up the Yates professorship. On 28 Nov. 1894 he died at Margate, whither he had gone from his residence, 2 Montague Place, Bedford Square.

In 1874 Newton was made honorary fellow of Worcester College, Oxford, and on 9 June 1875 D.C.L. of the same university; LL.D. of Cambridge, and Ph.D. of Strasburg in 1879; C.B. on 10 Nov. 1875, and K.C.B. on 21 June 1887. He was correspondent of the Institute of France, honorary director of the Archaeological Institute of Berlin, and honorary member of the Accademia dei Lincei of Rome.

He was editor of the 'Collection of Ancient Greek Inscriptions in the British Museum' (1874 &c. fol.), and author of numerous other official publications of the British Museum; also of a treatise on the 'Method of the Study of Ancient Art,' 1850; a 'History of Discoveries at Halicarnassus, Cnidus, and Branchidae,' 1832-3; 'Travels and Discoveries in the Levant,' 1806; 'Essays on Art and Archaeology,' 1880; and of many papers in periodicals, among which may be specially noted a 'Memoir on the Mausoleum' in the 'Classical Museum' for 1847.

[*Revue Archéologique*, 1894, xxv. 273; *Times*, 30 Nov. 1894; *National Review*, January 1895, p. 616; *Classical Review*, 1895, p. 81.]

O. S.-H.

NICHOL, JOHN (1833-1894), professor of English literature and author, born on 8 Sept. 1833 at Montrose, where his father was then rector of the academy, was only son of the astronomer, John Pringle Nichol [q. v.], by his first wife. From 1836 onwards Glasgow was his home, and from 1842 to 1848 he went to school at the Western Academy, without, according to his own account, deriving much advantage from it. His imaginative powers were, however, early stimulated by foreign travel, and by excursions nearer home, especially in Arran. In 1848

he entered the university of Glasgow. His seven years of student life at Glasgow were marked by eager work and ardent enthusiasms devoted in part to the revival of the 'liberal cause' in the university. His fellow students, Dr. John Service [q. v.], Dr. Henry Crosskoy, and Dr. Edward Caird, at one time master of Balliol, remained his closest friends through every subsequent stage of his career. Before he left Glasgow Nichol printed for private circulation a volume of poems of remarkable promise, entitled 'Leaves' (Edinburgh, 1852).

In 1855, at the late age of twenty-two, Nichol entered Balliol College, Oxford. There in the following year he gained one of the Glasgow Snell exhibitions. He graduated in 1859 with first-class honours in the final classical school. At first Oxford pleased him, but disenchantment and bitterness followed, although he conceived a lasting admiration for Benjamin Jowett [q. v. Suppl.], then tutor of his college, and formed many enduring friendships, with (among other undergraduates of Balliol) George Rankine Luke (afterwards senior student and tutor of Christ Church, whose premature death by drowning in the Isis in 1862 was mourned by Nichol in a passionate sonnet); Thomas Hill Green [q. v.], Albert Vonn (afterwards Professor) Dicey, and Algernon Charles Swinburne. With these and a few kindred 'spirits of flame' from other colleges Nichol formed in 1856-7 the Old Mortality Society, for the purpose of seriously discussing literary and other topics. It is said that members of the society showed a 'marked tendency towards professorial positions;' but few literary and philosophical societies of the kind have better vindicated their transitory fame (PROFESSOR DIXON, *op. cit.* KNIGHT, p. 147).

Nichol's studies at Oxford took a philosophical rather than a linguistic direction; and owing probably to the defects of his early training he never became a very accurate scholar. A few months after he had gained his first class he lost his father; but, in accordance with the paternal wish, he became on 12 Nov. 1859 a member of Gray's Inn. He seems never to have been actually called to the bar. After graduating B.A. (he declined to proceed to M.A. till 1874, after the abolition of university tests), he resided at Oxford, successfully engaging in the work of a 'philosophical coach for greats.' This he carried on at intervals, latterly chiefly by vacation parties, till 1873. But already in 1859 he was intent upon securing a Scottish professorial chair. While a candidate for the professorship of logic and Eng-

lish literature at St. Andrews in 1859, he privately printed a volume of 'Fragments of Criticism' (Edinburgh, 1860), consisting of condensed Oxford lectures on ancient philosophy and of English literary criticisms, partly reprinted from the 'Westminster Review' and from university periodicals, especially the audacious 'Undergraduate Papers'. The volume included noticeable estimates of Carlyle, whose influence Nichol in these days reflected with striking force, Tennyson, Browning, in the tardy popularisation of whose work Nichol was pre-eminently instrumental, and his intimate friend, Sydney Thompson Dobell [q. v.], to whose 'Poems' (1875) and 'Thoughts on Art, Philosophy, and Religion' (1876) he afterwards wrote introductions, accompanied, in the former instance, by a memoir. Nichol's candidature at St. Andrews was unsuccessful, but at a later date (1873) that university conferred on him the honorary degree of LL.D.

In April 1862, a year after his marriage, Nichol was appointed by the crown to the newly established chair of English language and literature in the university of Glasgow. This post he filled till his resignation of it in 1869. In the interval, from various motives—chiefly from an ineradicable restlessness of disposition—he was an unsuccessful candidate for several other educational posts; but his success as a professor at Glasgow was from first to last extraordinary. He was a brilliant example of a genuinely Scottish type of academical teacher, who had assimilated the enlightened spirit of Oxford. It was his habit to write out his lectures with extreme care, and to subject them to incessant revision. Several of his pupils subsequently attained literary distinction; but more important was the general influence, incalculable alike in breadth and depth, exercised by him during a quarter of a century upon the progress of culture among the general body of his students.

Two of the earlier of Nichol's occasional courses on English literature (in 1858 and 1869) were, at Jowett's request, redelivered at Oxford. From 1866 he was one of the most distinguished pioneers of the movement afterwards known as university extension, and he lectured with conspicuous success in many English and Scottish towns. Indeed, as a popular lecturer on literature he had in his day few, if any, rivals. His activity was not, however, exhausted by his labours of this sort at home and abroad. He was associated with his friend, Professor Knight of St. Andrews, in the foundation in 1867 of the New Speculative Society, which held its first meeting at his house in Glasgow, and

was afterwards divided into three branches, at Glasgow, Edinburgh, and St. Andrews respectively. He was also keenly interested in politics. In his youth his foreign politics had been coloured by his father's intimacy with Kossuth and Mazzini, both of whom he afterwards came to know personally. As an Oxford undergraduate he had warmly sympathised with the north in the great American civil war. In course of time his political sentiments took a pronouncedly conservative hue; but in matters ecclesiastical he always remained a consistent liberal. He was warmly interested in educational politics, and addressee delivered by him on national education (Glasgow, 1869), and on university reform (Glasgow, 1888), attested the vigour of his public utterances.

In the autumn of 1865 Nichol paid a visit to the United States, where he made the personal acquaintance of Emerson and Longfellow. In later years he was a frequent visitor to the continent, while other long vacations were devoted to literary work in Scottish country retreats. On resigning his chair at Glasgow in 1889, he spent much time abroad; but in the autumn of 1890 he settled definitively in London, ultimately in Kensington. In November 1891 he revisited Glasgow, on the occasion of the presentation of his portrait by Mr. Orchardson, R.A., and delivered a characteristic address to the subscribers, mostly members of the university. In London, while his pen remained active, he occasionally lectured in public. The death of his wife in January 1894 broke the main-spring of his powers, and he died on 11 Oct. of the same year. He was cremated four days afterwards at Woking, his ashes being taken to St. George's cemetery, Edinburgh, where she had been laid to rest.

From 1853 onwards Nichol and his sister Agnes (afterwards the wife of Professor William Jaok) had found a second mother in his father's second wife, Elizabeth Pease, at whose house in Edinburgh (Huntley Lodge) he was in his later years a frequent visitor. On 10 April 1861 he married Jane Stewart, eldest daughter of Henry Glasford Bell (q. v.), afterwards sheriff of Lanarkshire. The union, of which were born a son and two daughters, was one of perfect happiness.

From first to last Nichol's chief ambition was a literary eminence which he never realised, and, owing to a constitutional nervousness rather than to vanity, he nursed the delusion that his literary claims were belittled by a critical clique. But if as a poet he missed fame, he vindicated his right to a high place among writers of spirited, sincere, and thoughtful verse. His historical

drama, 'Hannibal' (Glasgow, 1878), remained his most notable original effort in poetry. 'The Death of Themistocles and other Poems' (Glasgow, 1881) added a fine dramatic fragment of a cognate kind, with which was printed a selection of lyrics full of fire and intensity. If, as Jowett said, Nichol's prose style 'bristled too much,' it was often tipped with fire. As a critic he was distinguished by independence of judgment founded on philosophic thought, and by perfect fearlessness of sympathy. His chief critical works were his 'Byron' in the 'English Men of Letters' series (1880), which went some way towards converting Mr. Swinburne from his unduly deprecatory opinion of that poet; his 'Robert Burns: a Summary of his Career and Genius' (Edinburgh, 1882), which was designed as an introduction to Paterson's library edition, and proved one of the most finished in form as well as concentrated in treatment of all Nichol's prose productions; his 'Francis Bacon' (2 vols., Life and Philosophy, in 'Blackwood's Philosophical Classics for English Readers,' 1888-9); and 'Carlyle,' the fruit of a life's intellectual and moral sympathy ('English Men of Letters' series, 1892). Besides an admirable historical review of 'American Literature' for the 'Encyclopædia Britannica,' 1882 (reprinted in a revised and enlarged edition, 1885), Nichol contributed to T. H. Ward's 'English Poets' (from 1880), and to many reviews and journals. He endeavoured to meet some of the requirements of his teaching of literature by his 'Tables of European Literature' (Glasgow, 1878, and later editions, that of 1888 including 'America') and 'Tables of Ancient Literature' (Glasgow, 1877), as well as by his 'Primer of English Composition' (1879), and his 'Questions and Answers' on the same (1890).

[Of Nichol's earlier years (1833-51) he in 1881 wrote for the eye of his wife a series of picturesque reminiscences under the title of *Leavees from my Life*. These are printed in the full Memoir of John Nichol, by Professor Knight, Glasgow, 1898. See also obituary notices by E. C. (Edward Caird) in *Glasgow Herald*; by J. S. C. (J. S. Cotton) in *Academy*, and T. W. (Theodore Watts-Dunton) in *Athenæum*; and A. M. Stoddart, Elizabeth Pease Nichol (1899). This article is also based on private information and personal knowledge.] A. W. W.

NICHOLSON, HENRY ALLEYNE (1844-1899), biologist, born at Penrith, Cumberland, on 11 Sept. 1844, was son of John Nicholson, a distinguished biblical scholar, and himself the son of the Rev. Mark Nicholson, sometime president of Codrington

College, Barbados. His mother, Annio Elizabeth, was a daughter of Captain Henry Varing, R.N., of Lyme Regis. Spending his boyhood among the hills of Cumberland and Westmoreland, he received his early education at Appleby grammar school. On leaving the latter he was sent to the university of Göttingen, where he became a student in zoology under Keferstein, and took the degree of Ph.D. Returning to Britain he studied medicine and natural science at the university of Edinburgh from 1862 till 1867; he took the degree of bachelor of science in 1866, and in the same year he was awarded the Baxter scholarship as the most distinguished graduate in science. In the following year (1867) he proceeded to the degrees of bachelor of medicine, master of surgery, and doctor of science; his doctoral thesis, 'On the Geology of Cumberland,' gaining him the gold medal of the university for that year. In all the subjects of examination he gained a first class; and when, in 1869, he took the M.D. degree he was awarded the Elliot medical scholarship, as occupying the highest position among the graduates. Even in his schooldays he had devoted much attention to the geology of his native county and Westmoreland; and while a student at Edinburgh he learnt anatomy under Goodsir, zoology under Allman, and botany under Balfour, thus laying the foundation of that wide zoological knowledge which subsequently stood him in good stead.

In 1869 he received his first appointment, that of lecturer on natural history in the extra-academical school of medicine at Edinburgh. This he held till 1871, when he visited Toronto, where he was offered and accepted the professorship of natural history in the university. This chair he retained for three years, exchanging it in 1874 for the professorship of comparative anatomy and zoology in the Royal College of Science, Dublin. No sooner, however, had he accepted the latter post than he was offered the professorship of biology in the Durham College of Physical Science. Assuming the latter appointment in preference to the former, he filled this office till 1875, when the offer of the chair of natural history at the university of St. Andrews induced him to remove to that city. Here he practically created a zoological school, and assisted in the extension of university teaching to Dundee. Nicholson remained at St. Andrews till 1882, when he was appointed regius professor of natural history in the university of Aberdeen—a post which he held at the time of his death. When he first succeeded

to this chair, zoology was the chief science on which he had to lecture; but a change in the curriculum elevated geology to a more important status than previously. And it was to this branch of science that Nicholson now mainly devoted his energies; the lectures in zoology, except for the summer course, being delivered by his assistant, Dr. Alexander Brown.

In addition to the official posts already noticed Nicholson delivered in London the annual course of Swiney lectures in geology from 1878 till 1882, and he was reappointed in 1890, continuing his lectures till 1894. During the illness of Sir Charles Wyville Thompson [q. v.], then professor of natural history at Edinburgh, Nicholson, for the greater part of the session of 1878, and the whole of those of the two following years, discharged the duties of that office. In 1850 he was appointed examiner in natural history and the cognate branches of science to the university of New Zealand.

In 1867 Nicholson was elected a fellow of the Geological Society of London, and in 1888 was awarded by the council the Lyell medal. He was also a fellow of the Linnean Society, and in 1897 was admitted to the fellowship of the Royal Society.

Nicholson died at Aberdeen on 19 Jan. 1899. As a lucid lecturer Professor Nicholson attained well-merited celebrity; and as his bias inclined to the palaeontological aspect of zoology, it was in this walk that he gained his highest reputation. His most important investigations are perhaps those connected with the palaeozoic fossils known as graptolites, which occur, although not abundantly, in the slates and shales of his native hills. Connected closely with this study was the work of unravelling the tangled skein of the geological succession of the palaeozoic rocks of the lake district; and to this task his contributions, some of which were written conjointly with Mr. J. E. Marr, are of the highest value.

Nicholson's name is, however, most widely and generally known through his zoological and palaeontological text-books, which have been largely adopted, not only in the universities and colleges of the United Kingdom, but likewise in many of those of other English-speaking countries. The earliest of these is 'A Manual of Zoology for the use of Students,' the first edition of which appeared in 1870 in two volumes, and the seventh (greatly enlarged and rewritten) in one volume in 1887. The year 1872 saw the issue of the first edition of 'A Manual of Palaeontology for the use of Students,' in one volume. The second edition, which

was expanded to two volumes, appeared in 1879; while the third and enlarged edition, written in collaboration with the author of the present notice, was published in 1889. His other works of the same nature are: 'Introduction to the Study of Biology' (1872), 'The Ancient Life-History of the Earth' (1877), and 'Synopsis of the Classification of the Animal Kingdom' (1882).

In addition to these works Professor Nicholson contributed more than 150 papers and memoirs to the publications of various scientific societies, scientific periodicals, &c. To quote even the most valuable of them is impossible, but mention must be made of 'A Monograph of the British Graptolites' (1872) and 'A Monograph of the British Stromatoporoids' (1886), both published by the Palaeontographical Society. Like several of his geological papers, his last palaeontological memoir, 'The Phylogeny of the Graptolites,' was the joint product of himself and his friend, Mr. Marr. To the ninth edition of the 'Encyclopædia Britannica' he contributed the articles 'Buffon,' 'Corals,' 'Cuttle-fishes,' and 'Cuvier.'

NIMROD, pseudonym. [See APPERLEY, CHARLES JAMES, 1779-1843.]

NIXON, JOHN (1815-1899), pioneer of the steam-coal trade in South Wales, born at Barlow in Durham on 10 May 1815, was the only son of a tenant farmer of that village. He was educated at the village school and at Dr. Bruce's academy at Newcastle-on-Tyne, famous as the training-place of many great engineers. Leaving school at the age of fourteen, Nixon was set to farm-work for a time, and shortly after was apprenticed to Joseph Gray of Garesfield, the Marquis of Bute's chief mining engineer. On the expiry of his indentures he became for two years overman at the Garesfield colliery. At the end of this time, in 1839, he undertook a survey of the underground workings of the Dowlais Company in South Wales. Some years later he accepted the appointment of mining engineer to an English company, working a coal and iron field at Languin near Nantes. He perceived, however, that the enterprise was destined to fail, and did not hesitate to inform his employers of his opinion. After labouring for

some time to carry on a hopeless concern he returned to England.

During his first visit to Wales Nixon had been impressed by the natural advantages of Welsh coal for use in furnaces. On his return from France he found that it was beginning to be used by the Thames steamers. He perceived that there was a great opening for it on the Loire, where coal was already imported by sea. At the time, however, he was unable to obtain a supply with which to commence a trade. Mrs. Thomas of the Graig colliery at Merthyr, who supplied the Thames steamers, was disinclined to extend her operations, and Nixon was compelled to return to the north of England. But business again taking him to South Wales, he chartered a small vessel, took a cargo of coal to Nantes, and distributed it gratuitously among the sugar refineries. He succeeded also in inducing the French government to make a trial of it. Its merits were at once perceived; the French government definitely adopted it, and a demand was created among the manufactories and on the Loire. Returning to Wales he made arrangements for sinking a mine at Verfa to secure an adequate supply. After being on the point of failure from lack of capital he obtained assistance and achieved success. Continuing his operations in association with other enterprising men of the neighbourhood, he acquired and made many collieries in South Wales. In 1897 the output of the Nixon group was 1,250,000 tons a year. Nixon succeeded, after a long struggle, in inducing the railway companies of Great Britain to adopt Welsh coal for consumption in their locomotives. He had great difficulty also in persuading the Great Western Railway Company to patronise the coal traffic, which now forms so large a part of their goods business. Much of Nixon's success was due to his improvements in the art of mining. He introduced the 'long wall' system of working in place of the wasteful 'pillar and stall' system, and invented the machine known as 'Billy Fairplay' for measuring accurately the proportion between large coal and small, which is now in universal use. He also made improvements in ventilating and in winding machinery. He was one of the original movers in establishing the sliding-scale system, and one of the founders of the Monmouthshire and South Wales Coalowners' Association. He was for fifteen years chairman of the earlier South Wales Coal Association, and for many years represented Wales in the Mining Association of Great Britain. Nixon materially contributed to the growth of Cardiff

by inducing leading persons in South Wales to petition the trustees of the Marquis of Bute in 1853 for increased dock accommodation, and by persuading the trustees, in spite of the objections of their engineer, Sir John Rennie [q. v.], to increase the depth

of the East Dock. He died in London, on 3 June 1899 at 117 Westbourne Terrace, Hyde Park, and was buried on 8 June in the Mountain Ash cemetery, Aberdare valley [Vinecent's Life of John Nixon, 1900 (with portrait).]

O

O'BYRNE, WILLIAM RICHARD (1823-1896), author of the 'Naval Biographical Dictionary' (1840, 8vo), born in 1823, was elder son of Robert O'Byrne and his wife Martha Trougher, daughter of Joseph Clark. He was scarcely out of his teens when he conceived the idea of compiling and publishing a record of the service of every living naval officer of the executive branch. For six years he worked at this, publishing the first parts in 1845, and completing the volume of fourteen hundred closely printed royal 8vo pages in 1849. The labour must have been very great, for the admiralty records were in a semi-chaotic state, and it was mainly to them that he trusted. He had, indeed, a very extended correspondence with the subjects of his memoirs, but he seems in all cases to have checked their statements by the official documents. The work is one of almost unparalleled accuracy—a fact which the present writer has had very many occasions to test and to prove. On the other hand, the work has no literary pretensions; the bare facts are stated in the blindest possible way; the book is a register and nothing more; invaluable as a work of reference, but not intended to be read. Financially the book was not a success, as far as the author was concerned. An edition of two thousand was sold at 42s. a copy; but out of the proceeds 100% was all that O'Byrne received as payment for six years' labour and expenses. In acknowledgment of the value of his work the admiralty awarded him 100%, and Sir Francis Thornhill Baring (Lord Northbrook) [q. v.] appointed him librarian at the admiralty; but, going out of office shortly afterwards, his successor, the Duke of Northumberland, refused to confirm the appointment. On this a testimonial from officers of the navy was set going, and at a meeting at the Royal United Service Institution O'Byrne was presented with a piece of plate and a purse of 400%. In 1857 he was especially elected a member of the Athenæum Club.

In 1859 he began a second edition of the Dictionary, brought up to date, and containing also the memoirs of officers of the civil

branches of the service. This—which is by no means so accurate as the first edition—did not pay, and was not carried beyond the letter G, with the less regret on O'Byrne's part, as about that time, on the death of his cousin Georgiana O'Byrne, he succeeded to the Cabinteely estate, co. Wicklow, which had been in the family for very many generations, though probably not quite for fifty-four, as they claimed. In 1872 he was high sheriff of Wicklow, and was M.P. for the county from 1874 to 1880. But the property to which he had succeeded was heavily mortgaged, and on the depreciation of Irish land he was unable to pay the interest. The mortgages foreclosed, and O'Byrne was left practically destitute. The following years were years of privation and struggle. In 1881 he was awarded 100% from the royal bounty, and endeavoured to get the admiralty to appoint him officially, at a regular salary, to prepare a new edition of his Dictionary. The admiralty refused to do this, or to further the project in any way, as—under the modern improved system of keeping the records—the work would be useless to them, while the fact that it would not pay a publisher to take it up seemed to show that the public did not want it. During his later years O'Byrne's health broke down, and he was mainly dependent on the work of his daughter, whose exertions at this very trying time are spoken of as beyond all praise. In the summer of 1896 he was granted 125% from the royal bounty, but too late to be of personal advantage. He died in South Kensington on 7 July 1896. His wife, by whom he had one daughter, predeceased him.

J. K. L.

OLIPHANT, MARGARET OLIPHANT (1828-1897), novelist and historical writer, born at Wallyford, near Musselburgh, on 4 April 1828, was daughter of Francis Wilson and his wife, Margaret Oliphant. George Wilson (1818-1859) [q. v.] and Sir Daniel Wilson [q. v.] were her father's second cousins. Her first recollections were of Lass-

wade, near Edinburgh, next of Glasgow, where her father carried on some business, and then of Liverpool, where he had an appointment in the customs. He appears to have been of a reserved disposition and singularly indifferent to his family. Her mother, on the other hand, was energetic, eager, and sarcastic, and her daughter recognised a strong resemblance in her to Mrs. Carlyle, when she came to know the latter in later years. After a while the family removed to Birkenhead. Both parents were devoted to the Scottish free church movement, which occurred when Mrs. Oliphant was fifteen, and the consequent discussions stimulated her faculties and tended to inspire her first book, 'Passages in the Life of Mrs. Margaret Matland' (1849). Later in life she regretted 'its foolish little polemics,' but it is a surprising work for an authoress of twenty-one. Notwithstanding the obstacle of the lowland dialect, it was highly successful—Colburn, who, to the author's surprise, had promptly accepted it, giving her 150*l.* upon its attaining the third edition. 'Caleb Field,' her next novel (1851), attracted comparatively little notice, but 'Merkland,' published in the same year, was a great success, and continues to rank among her best novels. She came to London about this time to look after an unsatisfactory brother, and on 4 May 1852 married at Birkenhead her cousin, Francis Wilson Oliphant [q. v.], an artist, principally engaged in designing stained glass. They settled at Harrington Square, near the Hampstead Road, and Mrs. Oliphant began to be known in London literary society. Housekeeping expenses were for this time met by the alliance which she formed with Messrs. Blackwood; she was introduced to the firm by David Macbeth Moir [q. v.], and the connection continued unbroken all her life. Four novels from her pen successively appeared in 'Blackwood's Magazine': 'Katie Stewart' (1853), 'A Quiet Heart' (1854), 'Zaidee' (1856), and 'The Athalings' (1857). In the interim her parents had removed to London, where her mother died in September 1854; another brother had married and gone out to Canada (where his cousin Daniel Wilson had in 1853 been appointed professor of English literature at Toronto), an event destined to have momentous consequences for her; and a daughter and a son had been born to her. In January 1859 she was dismayed by the sudden failure of her husband's health. The case proved to be one of incurable consumption. It was necessary to break up the London establishment at a great sacrifice, and remove to Rome, where Oliphant died in October 1859. Three months later Mrs.

Oliphant gave birth to a posthumous child—a second son, who, with her elder son and her daughter, were through life to depend entirely on their mother's exertion. Mrs. Oliphant's circumstances at the time of her husband's death are thus summed up by herself: 'A thousand pounds of debt. Two hundred pounds insurance money. Some furniture warehoused. My faculties, such as they are.' They proved adequate to bring her 400*l.* for each novel, an amount soon greatly increased by the success of her series of four novels, entitled 'Chronicles of Carlingford,' three of which were published anonymously in 'Blackwood's Magazine' between 1862 and 1866. The earliest was 'Salem Chapel,' 1863, 2 vols.; and it was followed by 'The Rector and the Doctor's Family' (1863), 'The Perpetual Curate' (1864, new ed. 1865), and 'Miss Marjoribanks' (1866). The last of the series was published in 1876, and entitled 'Phoebe Junior: a last Chronicle of Carlingford.' These were frequently taken for the work of George Eliot, and although the more acute critics never fell into this error, the surface resemblance is very strong. The characters talk and behave very like George Eliot's, and with no less consistency and truth to nature, but the mind behind them is manifestly of less intellectual calibre. The authoress's versatility and quickness at taking a hint are evinced by her undoubtedly true assertion that, when writing 'Salem Chapel,' which was received as an oracle upon dissent, she knew nothing about chapels unconnected with the free church of Scotland. She must have studied George Eliot attentively, and probably Mrs. Gaskell also. Mr. Blackwood was so impressed by the success of 'Salem Chapel' that he voluntarily offered the authoress 1,500*l.* for 'The Perpetual Curate,' to the horror of his cashier. Another important work, in a different line, was Mrs. Oliphant's 'Life of Edward Irving' (2 vols. 1862, new ed. same year, 1864 and 1865), to write which she mingled with the Irvingites, who expected her to join them and were proportionately disappointed. Mrs. Oliphant was nevertheless too much of an Irvingite in the strictly personal sense to be entirely impartial; her account of Irving's courtships is defective; and it is amazing to find a biographer of him disclaiming both the obligation and the ability to express any opinion touching the phenomena of 'the tongue.' The great interest and freshness of the book arise in large measure from the employment of Irving's own words whenever possible.

Mrs. Oliphant, who, upon her return from Italy, had for a short time established her-

self at Edinburgh, was now living at Ealing, where she was visited by Jane Welsh Carlyle (*Letters*, iii. 154-5, 324-5, 334). In 1864 she went again to Rome, where she encountered one of the heaviest afflictions of her life in the death of her daughter. Returning in broken spirits she soon found, as she deemed, a new burden imposed upon her by the return of her widowed brother from Canada with three children. Without hesitation, she received them into her house, and took upon herself the entire charge of their education and maintenance—a truly heroic action, which, so great were her energy and capacity for work, might not have overtaxed her if she had acted more wisely in the education of her own children. By attempting to bring them up at Eton, she involved herself in perpetual embarrassment: ever honourably redeeming obligations, and ever of necessity contracting new ones, she lived under a sense of continual distress and humiliation, all the more intolerable from the contrast between the externally bright and smooth aspect of her household, and the inner consciousness of its struggling mistress. Thus expensively and at the same time inefficiently educated, it is no wonder that the boys misunderstood their real position, formed no habits of self-help or self-reliance, and, almost obliged to enter upon university careers, where nothing but the highest talent and the most determined industry could have insured success, proved little better than broken reeds, though not absolutely bad sons. It is this disappointment, even more than their premature death, that casts so deep a gloom upon the autobiography of the successful authoress. The elder, Cyril Francis, lived to thirty-five, mainly upon his mother's resources; dying in 1890, he left nothing behind him but a 'Life of Alfred de Musset,' published in 1890 in his mother's 'Foreign Classics for English Readers.' The younger, Francis Romano, wrote a considerable part of a not very satisfactory 'Victorian Age of English Literature' (2 vols.), published under his and his mother's joint names in 1892, and shortly before his death in 1894 obtained an appointment in the British Museum, which he lost from inability to pass the medical test. Maternal anguish has seldom been more touchingly expressed than in Mrs. Oliphant's lamentations on her bereavements.

In 1866 Mrs. Oliphant removed to Windsor to be near her sons at Eton, and the rest of her life might have been described as slavery to the pen, if writing had not been a real enjoyment to her. She probably found

relief in the visionary world of her creations from pecuniary cares and parental disappointments; assuredly she cannot have suffered herself to brood much over these. In addition to the constant stream of fiction, she took up biographical and semi-historical literature, producing such books as 'The Life of St. Francis of Assisi' (1871), 'The Makers of Florence' (1874; 2nd edit. 1877; 3rd edit. 1881), 'The Makers of Venice' (1887), 'The Makers of Modern Rome' (1895), useful digests of information, brightened by her eye for the picturesque and her happy talent for describing scenery. She also took charge of two important undertakings in connection with her publisher, Mr. Blackwood, and his magazine. His series of monographs on foreign classics was edited by her, and for that series she wrote the volumes on Dante (1877) and Cervantes (1880). For 'Blackwood's Magazine' she long continued to review the literature of the day in monthly surveys, entitled 'Our Library Table.' Her criticisms, like most of her work, are excellent but not masterly. She is always shrewd, commonly well-informed, usually impartial, and knows how to make the review of even a dull book attractive by some bright touch of observation or scenic description. But she is rarely illuminating, never profound, and her criticism seldom does more than express the average sentiment of the most cultivated class of readers. Of her numerous later novels, while none stand quite at the height of 'Salom Chapel,' not one could be considered a failure. She gave little sign of having written herself out, and set an example, admirable but hard for voluminous authors to follow, of making no capital, either out of her own private affairs or those of her neighbours. 'The Wizard's Son' (1883) may perhaps have borne some reference to the uneasy relations between her mother and her husband. It counted among her best works; others worthy of especial mention were 'Agnes' (1866), 'Madonna Mary' (1867), 'Ombra' (1872), 'Innocent' (1878), 'Carith' (1877), 'Hester' (1888), and 'The Ladies Lindores' (1888). A remarkable class of her work was that dealing with the occult and unseen. A strong element of mysticism found relief in such books as 'A Beleaguered City' (1880), founded on a mediæval legend of a city invested and occupied by the dead, and 'A Little Pilgrim in the Unseen' (1882). There was quite as much sense of reality here as in her more everyday writings. The same feeling in some degree inspired her indulgent biography (1891) of her brilliant and eccentric cousin, Laurence Oliphant (1829-1891) [q. v.] and of the poor wife who had so much

to endure from him. As in the case of her 'Life of Irving,' she succeeded well in biography whenever she could feel sympathetic. Her lives of Count Montalembert (1872), the statesman and thinker she admired, and whose 'History of the Monks of the West' she translated (1867-79, 7 vols.); of her intimate friend, Principal Tulloch (1888); and of Dr. Chalmers (1893), the hero of her youth, are excellent; while her life in the 'Men of Letters' series of Sheridan (1883), a character entirely alien to her own, is the least satisfactory of her writings.

The principal events of Mrs. Oliphant's later years were a visit to the Holy Land in 1890 to collect materials for her 'Mémorial of Laurence Oliphant and Alice Oliphant, his Wife' (1892). She also produced 'Jerusalem, its History and Hope' (1891), and her two sons died respectively in 1890 and 1894. Bowed down by grief, she was not prostrated; she continued to write as formerly; and although in the preface to her last book, 'The Ways of Life' (1897), she touchingly hints an apprehension that she may have written herself out, the pair of stories it contains—not, indeed, quite her most recent productions—are quite upon her usual level. She was less successful with a more important undertaking, the history of the publishing house of Blackwood (1897, 2 vols.) Either her heart was not in the work or the mass of material overwhelmed her; a third volume, added by an authoress of far inferior celebrity, is in every way superior. Her health was failing when, early in 1897, she undertook a journey to Siena with the view of writing a book, one chapter of which actually appeared in 'Blackwood's Magazine' in July 1898. On her return she was evidently worse, and continued to sink until her death at Windsor on 25 June, retaining, however, such mental vigour to the last as to have written some spirited verses on the queen's jubilee a few days previously. She was buried at Eton on 29 June 1897. Her scattered tales were collected after her death, and published with a generous recognition of her supremacy as a delineator of Scottish life by a more modern master of the art, Mr. J. M. Barrie. Another posthumous publication, revealing her in a new light in many respects, was the melancholy autobiographical fragment, with its appendix of correspondence, published in 1899. Written under the influence of her sore bereavements, it naturally exhibits a depression which, considering the amount of work she performed, cannot have been habitual with her. It nevertheless shows what a hard life the brilliant and successful authoress had lived, and how severe the strain had been that had

enabled her to meet the domestic and business obligations she had undertaken. It had been her destiny to live for and be lived upon by others, and, except as regarded the family she had so courageously adopted, to find disappointment in all the tenderest relations of life.

Most distinguished novelists who have not completely attained the highest rank have written themselves, so to speak, into form, passing through a period of apprenticeship before reaching a level which they have long retained, and ending by writing themselves out. Mrs. Oliphant's literary history is different. Totally inexperienced in composition, she began by a book which she never very greatly surpassed, and the end of her career found her almost as fresh as at the beginning. It seemed a natural criticism that she should have devoted herself to some concentrated effort of mind which would have placed herself in the front rank; but the probability is that she made the best possible use of her powers. Her great gifts—invention, humour, pathos, the power of bringing persons and scenes vividly before the eye—could hardly have been augmented by any amount of study, and no study could have given her the incommunicable something that stamps the great author. She resembled the George Sand of George Sand's later period in her consummate ease of production, but she had never known the Frenchwoman's day of genius and enthusiasm. Her work as a biographer and compiler, which alone would have made a respectable reputation for many authors, was probably of service to her as a distraction from mental strain. Refreshed by a change of environment, she returned with new zest to 'my natural way of occupying myself,' as she described the composition of her fictions.

Mrs. Oliphant was the author of nearly a hundred separate publications, a full list of which and of her equally numerous contributions to 'Blackwood' is printed as an appendix to her 'Autobiography' (1899). The more important, besides those already mentioned, are: 1. 'Agnes Hopetoun's School,' 1859; new edit. 1872, 1880. 2. 'The House on the Moor,' 1860; new edit. 1876. 3. 'The Last of the Mortimers,' 1861; new edit. 1875. 4. 'Historical Sketches of the Reign of George the Second,' 1869; 3rd edit. 1875. 5. 'At His Gates,' 1872; new edit. 1885. 6. 'Whiteladies,' 1876; new edit. 1879. 7. 'Within the Precincts,' 1879; new edit. 1883. 8. 'The Literary History of England in the end of the Eighteenth and beginning of the Nineteenth Century,' 1882, 3 vols. 9. 'It was a Lover and his

Laes,' 1883; new edit. 1884. 10. 'Royal Edinburgh,' 1891. 11. 'A House in Bloomsbury,' 1894, 2 vols. 12. 'Sketches of the Reign of Queen Anne,' 1894. 13. 'A Child's History of Scotland,' 1896. 14. 'Jeanne d'Arc,' 1896. 15. 'The Two Brontës,' 1897.

[Brit. Mus. Cat.; Autobiography and Letters of Mrs. Oliphant, arranged and edited by Mrs. H. Coghill, 1899; Blackwood's Magazine, 1897; Who's Who, 1897.] R. G.

O'NEILL, SIR BRIAN MACPHEILIM (*d.* 1574), chief of the O'Neills of Clandeboy, was son of Phelim Daengh O'Neill, and was descended from Hugh Roy O'Neill, the founder of the Clandeboy branch of the O'Neills. His father's sister Mary was mother of Shane O'Neill [q. v.], who was thus Brian's cousin. Brian's father seems to have died early in Mary's reign, and in 1560 Brian and his brother Hugh Mac Phelim went to Dublin, and promised to serve the queen 'lyke as by report they have of long time done' (*Illust. MSS. Comm.* 15th Rep. App. iii. 2). Orders were given, on 29 May 1560, for their protection against the Scots, and on 15 Sept. following the English government made a division of their lands in 'Clandeboy' (*ib.* p. 9). Details of this arrangement are not given, but its effect was to enable Brian to claim the chieftainship of both upper and lower Clandeboy to the exclusion of his uncle and elder brother Hugh (*Montgomery MSS.* ed. Hill, pp. 58-9; Hill, *Macdonnells of Antrim*, p. 147). By this compact the English government secured O'Neill's loyalty, and for many years he was a thorn in the side of Shane O'Neill, Turlough Luineach O'Neill [q. v.], and other rebellious chiefs of Ulster, and he requited himself for his services to Elizabeth by plundering the religious houses in his part of the country.

After Shane O'Neill's death in 1567 Brian became, next to Turlough Luineach, the most important O'Neill in Ireland. In that year he was recommended to Elizabeth as 'the man that heretofore hath longest and most constantly stayed on your majesty's party like a true subject.' He received Elizabeth's thanks on 6 July 1567, was knighted by Sir Henry Sidney [q. v.] at Knockfergus in the following September, and for several years was more effective than the English captains in holding Turlough Luineach in check. On 4 May 1570 he was placed on a commission to survey the Ards, co. Down, and soon afterwards he undertook the whole cost of victualling Carrickfergus. These friendly relations were, however, disturbed in 1572 by Sir

Thomas Smith's project for planting the Ards with Englishmen [see SMITH, Sir THOMAS (1513-1577.)] Sir William Fitzwilliam (1520-1599) [q. v.] endeavoured to persuade Brian that the project was not directed against the O'Neills; but Brian produced a copy of Smith's pamphlet, which left little room for doubt, came to an understanding with his old enemy, Turlough Luineach O'Neill, and with the Scots, and ravaged the Ards.

The project of colonisation was, however, now taken up by Walter Devereux, earl of Essex [q. v.], who invaded Ulster, and compelled Brian O'Neill to submit. He was granted a pardon on 10 Dec. 1572 (*Cal. Fianta*, No. 2180) on condition of bringing in a number of cattle as security; but, discovering the weakness of Essex's force, O'Neill drove off his cattle, renewed his compact with Turlough Luineach, burnt Carrickfergus, and killed Sir Thomas Smith's son on 18 Oct. 1573. Satisfied with his victory, O'Neill declined to be made a tool in the general conspiracy against Elizabeth; and when the Spanish agent, Antonio de Guara, sent Rowland Turner to secure his co-operation, O'Neill refused to entertain the suggestion (*Cal. State Papers, Ireland*, 1569-73, p. 508).

Essex, however, was determined to subdue O'Neill, and in 1574 prepared for a fresh campaign in Ulster. On 13 May he wrote to the lord-deputy that O'Neill had been proclaimed a traitor, and 200*l.* put upon his head; but in the same letter he said that O'Neill would accompany him against the Scots, and hand over Belfast to the queen (*ib.* 1574-86, p. 23). On 17 June O'Neill was granted a fresh pardon (*Cal. Fianta*, No. 2413), in the same month his two sons were at Dublin as pledges for his good faith, and on 11 July the council instructed Essex to use Brian's aid in fortifying Belfast, which, in pursuance of his promise, he seems to have surrendered to the English. In the autumn Essex advanced north, professedly against the Scots; but from the fact that on 8 Oct. he sent Burghley notes for the plantation of Tyrone and Clandeboy, it is probable that his design was really against the O'Neills. He made an appointment with Brian at Massarene on 16 Oct., and early in November invited him to a banquet at Belfast. O'Neill came unsuspectingly, and was there with his wife and children seized by Essex, most of his attendants being slain. On the 14th Essex published an account of O'Neill's 'treasons,' and promised that he should be tried by 'order of law.' No further particulars are known

of O'Neill's fate, but on the 24th Essex referred to him as dead, and according to the 'Four Masters' O'Neill and his wife were summarily executed. Even English officials dashed the proceeding, and the Irish writers naturally charged Essex with the blackest treachery.

O'Neill's wife was a daughter of Brian Carragh Macdonnell, 'captain of Glenconkene' (*Cal. State Papers*, Ireland, 1509-78, pp. 372-3); his son, Shane MacBrian O'Neill, was on 4 Sept. 1588 made captain of Nether Glendeboye (*Cal. Fiant's*, No. 4201).

ORMSBY, JOHN (1829-1895), author, born at Gortner Abbey, co. Mayo, on 25 April 1829, was the eldest son of George Ormsby (d. 1830), a captain in the 3rd dragoon and high sheriff of co. Mayo in 1827, and his wife Marianne, third daughter of Humphrey Jones of Mullinabro, co. Kilkenny. He was a direct descendant of the Ormsby family which migrated from Lincolnshire to co. Mayo in the reign of Elizabeth. On the death of both parents during his childhood, he was placed under the guardianship of Denis Browne, dean of Emly. He was educated at Dr. Homan's private school at Sea-point, and at Trinity College, Dublin, where he graduated B.A. in 1843, and he won a silver medal for chemistry at the university of London in 1846. Two years later he was admitted at the Middle Temple, but he was never called to the bar. His literary tastes were developed early, and he contributed papers of travel to 'Fraser's Magazine,' to the 'Saturday Review,' and to the early numbers of the 'Cornhill' and the 'Pall Mall Gazette.' He lived at this period in King's Bench Walk in the Temple, a 'denizen of Bohemia, but of the cultivated and scholarlike Bohemia,' and his friends often remarked that he would be an 'excellent representative of Warrington in "Pendennis."' He was extremely well read in eighteenth-century literature, and especially in Defoe, Fielding, and Boswell.

He was a member of the Alpine Club almost from its inauguration in 1858. He was one of the first party to climb the Pic de Grivola in August 1859, and he contri-

buted an amusing paper on 'The Ascent of the Grivola' to the second volume of the second series of 'Peaks, Passes, and Glaciers,' by members of the Alpine Club (1862). In 1864 he published 'Autumn Rambles in North Africa,' travel sketches from La Grande Kabylie and Tunis during 1863-4, originally contributed for the most part to 'Fraser,' with illustrations by the author. In 1876 he collected in volume form his 'Stray Papers,' including some amusing pieces, 'Sandford and Merton,' 'Mme. Tussaud's,' and 'Swift on the Turf.'

Ormsby is memorable chiefly for his work in the domain of Spanish literature. His acquaintance with Spain, with its political and literary history, was both deep and wide. He had thoroughly explored the country, and during one prolonged expedition through its mountainous districts he suffered privations which had the effect of entirely destroying his power of hearing. For the last ten or twelve years of his life excessive deafness cut him off almost entirely from social intercourse; but his pen was never idle, and he mainly devoted himself to translations from the Spanish. Published in 1879, his translation of the 'Poema del Cid' is, if we except Frere's fragmentary renderings, the only version in English. The condensation into prose of the less interesting passages leaves it to some extent incomplete; but 'in all essentials—in spirit, grace, fidelity—Ormsby's verses come as near the spirit of the great Spanish epic as a translation may.' His rendering of 'Don Quixote' (4 vols. 8vo, 1886) is another excellent piece of work, valuable both for its accurate scholarship and for the bibliographical and other appendices—one upon 'The Proverbs of Don Quixote.' Among his predecessors Ormsby accords a generous appreciation to Shelton (whom it had been his first design merely to edit), to Jervas (1742), and to Alexander J. Duffield (1881); but is unable to say much for either John Phillips (1687), Peter Motteux (1701), or Smollett (1755). Ormsby's health began to fail in June, and he died at Ramsgate on 30 Oct. 1895. Dying unmarried, he was succeeded at Gortner Abbey by his sister, Miss Marianne Ormsby.

OSBORNE MORGAN, SIR GEORGE (1826-1897), politician. [See MORGAN.]

ORTON, ARTHUR (1834-1898), the Tichborne claimant, born at Wapping in 1834, was the twelfth and youngest child of George Orton, a butcher there. At the age of fifteen he was sent to sea, and, having deserted at Valparaíso, made his way up country to Malipilla, where he remained for eighteen months, receiving much kindness from a family named Castro. In 1851 he was back in England, and, entering his father's business, became an export slaughterman. In November 1852 he emigrated to Australia, and after March 1854 ceased to correspond with his family.

In the spring of 1866 it was rumoured that Roger Tichborne, the eldest son of Sir James Francis Doughty Tichborne, tenth baronet (d. 11 June 1862), who was believed to have been drowned at sea, had been discovered in Australia. The Tichbornes were a Hampshire Roman catholic family of great wealth. Sir James Doughty Tichborne, by his marriage with Henriette Félicité, the daughter of Henry Seymour of Knoyle, had, besides his elder son Roger Charles, who was born on 5 Jan. 1829, the younger son Alfred Joseph, who succeeded his father as eleventh baronet in 1862 and died in February 1866, leaving a posthumous heir, Sir Henry, the twelfth baronet. The elder son, Roger, spent his early years with his parents at Paris, proceeded to Stonyhurst, and finally obtained a commission in the 6th dragoon guards (the Carabiniers). He sold out in 1852, after three years' service, and went to South America for sport and travel. In 1854 he embarked at Rio in the *Bella*, a ship which was never again heard of; but the discovery of her long boat and other articles of wreckage left no doubt she had foundered with all hands, and in July 1855 Roger's will was proved. Alone among the family his mother persisted in believing that he was not dead, and in inserting advertisements for him in the English and colonial papers.

In November 1866 she learnt through an agency in Sydney that a man answering the description of her son had been found at Wagga Wagga in New South Wales. A long correspondence ensued, the tone and substance of which ought to have put her on her guard; but with an engerness bordering on insanity she had made up her mind, before seeing a line of his handwriting or learning a single particular of his life, that her correspondent was her son. In accordance with her repeated entreaties he was induced to leave Australia, and he arrived in London on Christmas day 1866.

Of the identity of this claimant with Arthur Orton there is no doubt. At Wagga Wagga he bore the name of Tom Castro, borrowed from his South American benefactors, and he had passed the twelve previous years in humble positions, acting as stockman, mail-rider, and in all probability bushranger and horse-thief. He was now carrying on a small butcher's business, and was just married to an illiterate servant girl. The difficulties in the way of his claim were so enormous that in all probability he was only driven to England by the fact that he had raised large sums in Australia on his expectations. His idea, apparently, was to obtain some sort of recognition from Lady Tichborne and to return to Sydney with what money he could collect.

After paying a flying visit to Tichborne House—he had never before been in Hampshire in his life—the claimant met the dowager in Paris. She professed to recognise him at their first meeting, which took place in his hotel bedroom on a dark January afternoon. Unsatisfactory as this identification was, she never departed from her belief. She lived under the same roof with him for weeks at a time, accepted his wife and children, and allowed him 1,000*l.* a year. Her recognition was not followed by any of the rest of the family, who declared unanimously that the claimant was an impostor, and that he failed to recognise them or to recall any incident in Roger's life.

On the other hand, the claimant secured important allies in the old family solicitor, Mr. Hopkins, and a Winchester antiquary named Baigent, who was intimately acquainted with the Tichborne family history. This had a powerful effect in Hampshire. A large number of the county gentry became converts, while the villagers hailed the return of one of the old stock. Starting with a faint glimmering of knowledge acquired from Bogle, the old negro servant of a former baronet, who had accompanied him from Sydney, and aided by a most tenacious memory, the claimant succeeded in eliciting isolated facts which he used with startling effect. He took into his employment a couple of old carabiniers, who had been servants to Roger Tichborne, and in a short time he was so completely master of small details of regimental life that more than a dozen of Roger's brother officers and an unlimited number of private soldiers were convinced of the claimant's identity.

Bills were filed in chancery against the trustees of the Tichborne estate, and in June 1868 an issue was directed to be tried in the common pleas as to whether the

claimant was the heir of Sir James Tichborne. Previously to this, however, he had been cross-examined on one of his affidavits, and had committed himself to a large number of facts. He had described his rescue from the Bella's boat by a ship called the Osprey, and, aided by Roger's diaries and letters, which had been preserved by Lady Tichborne, had transferred to the former a good many of his own wanderings and adventures.

Meanwhile the trustees learnt that it was freely asserted in Australia that Tom Castro originally bore the name of Orton, and their attention was directed to Wapping, whither it was discovered that the claimant had repaired on the first night of his arrival in England. The parents were dead, but he had made inquiries after the surviving members of the family. During his absence from England to attend an inquiry in South America for the purpose of testing the alleged visit to Melipilla, Charles Orton declared to the trustees that the claimant was his brother Arthur, and had ever since his return kept up close relations with himself and his sisters.

In consequence of this and of the Melipilla inquiry establishing the fact that Roger had never been there, but that Arthur Orton had, the claimant's solicitor and a large number of his supporters withdrew from the case. The claimant was penniless and owed huge sums. Lady Tichborne had died in April 1868, and Mr. Hopkins was also dead. Left to himself, he might have thrown up the attempt; but behind him were a number of creditors. Fresh sums were obtained by the issue of 'Tichborne Bonds,' and eventually, after a long delay to take evidence in Australia, his ejectment action against the trustees of the Tichborne estate came on before Chief-justice Bovill and a special jury.

The trial of this action lasted for 102 days, between 11 May 1871 and 5 March 1872. Serjeant Ballantine led for the claimant, Sir John (afterwards Lord chief-justice) Coleridge [q. v. Suppl.] and Mr. Hawkins, Q.C. (afterwards Sir Henry Hawkins, Lord Brampton), for the trustees. The claimant himself was not put in the box until something like forty of his witnesses had been called. His cross-examination at the hands of Sir John Coleridge lasted twenty-two days, and was remarkable alike for the colossal ignorance displayed by him and for the acuteness and bulldog tenacity with which he faced the ordeal. To quote Sir John's own words: 'Did you ever see a more clever man, more ready, more astute, or with more ability in dealing with information and making use of

the slightest hint dropped by cross-examining counsel?' His deficiencies are summed up by the same authority. 'The first sixteen years of his life he had absolutely forgotten; the few facts he had told the jury were already proved, or would hereafter be shown, to be absolutely false and fabricated. Of his college life he could recollect nothing. . . . About his amusements, his books, his music, his games, he could tell nothing. Not a word of his family, of the people with whom he lived, their habits, their persons, their very names.' 'When he reappears in 1865 he has undergone a physical and a moral miracle: a slight, delicate, undersized youth has developed into an enormous mass of flesh.'

Indeed, this physical discrepancy is one of the most remarkable features of the whole imposture. Roger Tichborne had been slight and delicate with narrow sloping shoulders, a long narrow face, and thin straight dark hair. The claimant, though about the same height, was of enormous bulk, scaling over twenty-four stone, big-framed and burly, with a large round face and abundance of fair and rather wavy hair. There can be little doubt that he did present points of resemblance to several male members of the Tichborne family, but, curiously enough, Roger was described by the witnesses as a bad-looking copy of his beautiful French mother, and utterly unlike the Tichbornes. Moreover, Roger, born and educated in France, spoke and wrote French like a native; the claimant did not know a word of French. Roger's English correspondence was often ungrammatical, with traces of foreign idiom; the claimant's letters were monuments of vulgar illiteracy; yet there were strange coincidences both in spelling and expression.

Over one hundred persons swore to the claimant's identity; they were drawn from every class and with few exceptions were perfectly genuine in their belief, though the most influential and respectable of them were called prior to the claimant's cross-examination. It was not until Sir John Coleridge, in a speech of unparalleled length, laid bare the whole conspiracy and placed the inception of the fraud before the world, that the result ceased to be doubtful. Up till then educated and legal society had been evenly divided. The first witness called for the defendant trustees swore to having tattooed Roger at Stonyhurst, whereas the claimant had denied having been tattooed and his arm showed no marks. After several members of the Tichborne and Seymour families had been in the box, the jury declared that they required no further evidence, on which

Serjeant Dallantine elected to be non-suited (5 March 1872).

The chief-justice, Bovill, ordered the immediate arrest of the claimant for perjury, and he was detained in Newgate until bail for 10,000*l.* was forthcoming; but he was not brought to trial until April 1873. The trial took place at bar before Chief-justice Cockburn and Justices Mellor and Lush, Mr. Hawkins leading for the crown, and the claimant being represented by Edward Vaughan Hyde Kenealy [q. v.] An enormous mass of evidence was called on both sides, but the better-class witnesses, including nearly all Roger's brother officers, had forsaken the claimant. The Orton part of the case was now for the first time gone into, and there was a vast amount of cross-swearing, but the testimony of Arthur's former sweetheart and the refusal of Kenealy to put the Orton sisters into the box were fatal to the claimant. Kenealy's mismanagement of the case, his altercations with the bench, and the fatal policy of attempting to establish the claimant's identity instead of leaving the prosecution to prove their case, destroyed all chance of acquittal. On 28 Feb. 1874, the 188th day of the trial, the jury after half an hour's deliberation found that the claimant was Arthur Orton, and he was sentenced to fourteen years' penal servitude.

The verdict and sentence caused enormous excitement in the country among the half-educated classes who had subscribed largely to the defence, and who were assured that the prosecution was the outcome of a conspiracy fomented by the Jesuits. An agitation spread through the country which at one time threatened to become dangerous. Kenealy, disbarred for his flagrant breaches of professional etiquette, was returned to parliament in order to advocate the claimant's cause, and on 23 April 1875 he moved in the House of Commons to refer the conduct of the trial and the guilt or innocence of the prisoner to a royal commission. The motion was rejected by 433 votes to 1, and the agitation gradually subsided.

Orton, whose conduct in prison had been exemplary, was released in 1884. All practical interest in the case had died away, and his efforts to resuscitate it ended in ridicule. He survived for fourteen years, gradually sinking into poverty, and he died in obscure lodgings in Marylebone on 2 April 1898.

In 1895 he had published in the 'People' newspaper a signed confession in which were described the inception of the fraud and the means by which it was carried into effect.

He is said to have afterwards rescanted, and the name engraved on his coffin was 'Sir Roger Charles Doughty Tichborne.' The possibility of the claimant having been Roger Tichborne has been long since abandoned by all sane persons, but there are still some who maintain that he was an illegitimate member of the Tichborne family. Of this theory no proof has ever been adduced, and the facts elicited at the two trials render the identity of the claimant with Arthur Orton as clear as a proposition in Euclid. The resistance of his claim cost the Tichborne estates 90,000*l.*, and the cost of the trial at bar was not less.

[There is no complete report of the ejectment action; the printed shorthand notes only contain the cross-examination of the claimant and the speech of Sir John Coleridge; the rest of the proceedings are to be found in the newspapers of the date. The complete shorthand notes of the criminal trial have been printed. See also the summing-up of the Lord Chief Justice, revised by himself, *The Trial at Bar of Sir Roger Tichborne*, edited by Dr. Kenealy; *Famous Trials*, ed. J. B. Aitay, 1899; *Reminiscences of Serjeant Ballantine*; *Life of Lord Bowen*, by Sir H. Cuninghame; 'People' for June and July 1895; *Annual Register*, 1871-1874; and *Law Reports*, 6 App. Ca. 229.]

J. E. A.

OTTLEY, SIR FRANCIS (1601-1649), royalist, born in 1601, was son and heir of Thomas Ottley of Pitchford, Shropshire. The family claimed to be a younger branch of the Oteleys of Oteley, near Ellesmere, but had been settled at Shrewsbury in the fifteenth century (*BURKE, Visitation of Seats and Arms*, 2nd ser. i. 193; *Visitation of Shropshire*, 1623, pp. 178, 382), and his mother was Mary, daughter of Roger Gifford, M.D. He matriculated from Lincoln College, Oxford, on 4 Dec. 1618, but left the university without a degree, and in 1620 was entered as a student of the Inner Temple. He took an active part in local affairs, and on the outbreak of the civil war became one of the leading royalists in Shropshire; he was knighted on 21 Sept. 1642. He was made governor of Shrewsbury, and on 2 Jan. 1642-3 compelled the inhabitants, under threats of death, to sign a declaration against parliament (*Cal. State Papers*, Dom. 1642-1643, p. 487). In 1644 he resigned the governorship, possibly in resentment at Prince Rupert's harsh dealing with the townspeople (*OWEN and BLAKEWAY, Hist. of Shrewsbury*, ii. 445), and was nominated by the royalists as sheriff of Shropshire, Thomas Mytton [q. v.] being the parliamentary and officially recognised tenant of the post (*List of Sheriffs*, 1898, p. 120). Ottley was therefore not in

Shrewsbury when it was surprised on 23 Feb. 1644-5. He continued to fight on the royalist side in Shropshire (cf. Webb, *Civil War in Herefordshire*, i. 241, 290, 381, ii. 128), but surrendered to the parliamentarians at Bridgenorth on 26 April 1646. The conditions were that he was to be allowed to go to Pitchford, and at the end of two months to make his choice between submission and banishment (articles printed in *Cal. State Papers*, Dom. 1645-7, pp. 422-3). He chose to submit, and on 16 June following petitioned to be allowed to compound for his delinquency. His fine was eventually fixed at 1,200l. on 26 June 1649, but Otley died in London on 11 Sept. following. He married (*Harleian MS.* 1241, f. 33b) Lucy, daughter of Thomas Edwards, sheriff of Shropshire in 1621, and by her had, besides other issue, a son, Sir Richard, who was gentleman of the privy chamber to Charles II, and represented Shropshire in parliament from 1661 till his death on 10 Aug. 1670. The family died out early in the nineteenth century, when Pitchford passed to Charles Cecil Cope Jen-

kinson, third and last earl of Liverpool [q. v.]

Otley carefully preserved the papers which passed through his hands, and they are of some importance for the history of the civil war in Shropshire and the neighbouring counties. Carte had access to them (cf. his *History*, iv. 455), but made little use of them. They were, however, utilised by Owen and Blakeway in their 'History of Shrewsbury' (i. 415-44), and have recently been printed in 'Collectanea Topographica et Genealogica,' v. 291-301, vi. 21-37, vii. 84-110 and 303-319.

Shrewsbury*; Blakeway's *Sheriffs of Shropshire*; Visitation of Shropshire, 1623 (*Harleian Soc.*); Le Nere's *Pedigrees of Knights*, p. 79, *Collectanea Top. et Gen.* vols. v. vi. and vii; Burke's *Visitation of Seats and Arms*; Webb's *Civil War in Herefordshire*; Foster's *Alumni Oxon.* 1500-1714; *Notes and Queries*, 2nd ser. iv. 331, 358, 408, 8th ser. viii. 387.] A. F. P.

P

PAGET, Sir AUGUSTUS BERKELEY (1823-1896), diplomatist, the fourth son of Sir Arthur Paget [q. v.], who was second son of the first earl of Uxbridge, and a brother of Henry William Paget, first marquis of Anglesey [q. v.] and of Sir Edward Paget [q. v.], was born on 16 April 1823. He was privately educated, and in 1840 he entered the service of the crown as clerk in the secretary's department of the general post office. He was soon transferred to the audit office, and again on 21 Aug. 1841 to the foreign office.

Paget then decided to enter the diplomatic service, and on 2 Dec. 1843 obtained an appointment as temporary attaché at Madrid, where he remained till 1846. On 6 Feb. 1846 he was appointed précis writer to the foreign secretary, Lord Aberdeen, but on 26 June became second paid attaché to the British embassy at Paris. Here he witnessed the *coup d'état* of 1848, and the establishment of the second empire; on 18 Dec. 1861 he became first paid attaché. On 12 Feb. 1852 he was promoted to be secretary of legation at Athens at a time when diplomatic relations with Greece were more or less in abeyance, so that his position was peculiar and required much tact. On 8 Dec. 1852 he went on to Egypt and acted as consul-general till 19 Feb. 1853, returned

to England on leave of absence on 27 May 1853, and was transferred to the Hague as secretary of legation on 14 Jan. 1854. Here he acted as chargé d'affaires from 7 May to 21 Oct. 1855, and again from 3 July to 24 Aug. 1856. He was transferred to Lisbon on 18 Feb. 1857, and acted as chargé d'affaires from 9 July 1857 to 14 Jan. 1858. On 1 April 1858 he was sent to Berlin and acted as chargé d'affaires from 17 June to 20 Nov. 1858. On 13 Dec. 1858 he was appointed envoy extraordinary and minister plenipotentiary to the king of Saxony. On 6 June 1859 he was gazetted to the post of minister at the court of Sweden and Norway, but on 6 July this appointment was cancelled in favour of that to Denmark.

As minister at Copenhagen Paget saw the accession of Christian IX at the close of 1863, and had to play a leading part in regard to the Schleswig-Holstein difficulty in 1864; nor was his position much less difficult when in 1866 Prussia meditated war against Austria. On 9 June 1866 he was sent to Portugal as envoy extraordinary. Appointed on 6 July 1867 to Italy as envoy extraordinary and minister plenipotentiary to Victor Emmanuel, he represented Great Britain in Italy during one of the most critical periods of Italian history; he saw the entry of the Italian troops into Rome and

the beginning of a new era of national life. It is admitted that in this trying period his tact was conspicuous. He remained in Italy for a long time, becoming ambassador extraordinary on 24 March 1876. On 12 Sept. 1883 he relinquished this post and, after a short period of leave, became ambassador at Vienna on 1 Jan. 1884. From that post he retired on 1 July 1893. He devoted much of the leisure which now came to him to the preparation of his father's memoirs. These he published in 1895 under the title of 'The Paget Papers.'

He died at Hatfield suddenly, at the close of a short visit to the Marquis of Salisbury, on 11 July 1896. He is buried at Tardebigg, Bromsgrove, near the seat of his son-in-law, Lord Windsor.

Paget's upright and manly character was much valued by the sovereigns with whom he had to deal; his influence was rather that of the English gentleman than of the astute diplomatist. He was created C.B. on 10 Feb. and K.C.B. on 10 March 1863, a privy councillor in 1876, and G.C.B. in 1883.

Paget married, on 20 Oct. 1800, the Countess Walpurga Ehrungarde Holena de Hohenenthal, maid of honour to the princess royal of Prussia, and left three children—one son in the army, another in the diplomatic service; his daughter married the fourteenth Lord Windsor, first earl of Plymouth.

[Foreign Office List, 1896; Annual Register, 1896; Times, 13 July and 17 July 1896.]

C. A. II.

PAGET, Sir JAMES (1814-1899), surgeon, born at Great Yarmouth on 11 Jan. 1814, was the eighth of the seventeen children of Samuel Paget and Sarah Elizabeth, his wife, daughter of Thomas Tolver of Chester. Sir George Paget [q.v.] was an elder brother. The father was a brewer and shipowner, who served the office of mayor of Great Yarmouth in 1817. James was educated at Yarmouth at a private school, and was apprenticed in 1830 to Charles Costerton, a St. Bartholomew's man, in practice as a surgeon at Yarmouth. He found time during his apprenticeship to write and publish jointly with one of his brothers a book on the natural history of Great Yarmouth. Paget came to London in the autumn of 1834 to enter as a student at St. Bartholomew's hospital, and in February 1835, while he was working in the dissecting-room, he called the attention of his teachers to some little white specks in the muscles of one of the subjects. He borrowed a microscope, showed that the specks were cysts containing worms, and read a paper on the subject before the Abernethian Society on 6 Feb. 1835. His

observations were afterwards confirmed by Professor (Sir) Richard Owen [q.v.], and the parasite has been well known ever since under the name *Trichina spiralis*. In 1835-1836 Paget filled the post of clinical clerk under Dr. Peter Mere Latham (1789-1876) [q.v.], because he was unable to afford the fee demanded by the surgeons of the hospital for the office of dresser. He was admitted a member of the Royal College of Surgeons of England on 13 May 1836, and, after a short visit to Paris, he settled in London, and supported himself by teaching and writing. He was sub-editor of the 'Medical Gazette' from 1837 to 1842, and in 1841 he was elected surgeon to the Finsbury dispensary.

At St. Bartholomew's Hospital Paget was appointed curator of the museum in succession to W. J. Bayntin in 1837, and in 1839 he was chosen demonstrator of morbid anatomy, in which position he proved himself so good a teacher that on 30 May 1843 he was promoted to be lecturer on general anatomy and physiology. On 10 Aug. 1843 he was elected warden of the college for students, then first established at St. Bartholomew's Hospital, a post he resigned in October 1851. In 1846 he drew up a catalogue of the anatomical museum of the hospital, and on 24 Feb. 1847 he was chosen an assistant surgeon after a severe contest, the opposition being based upon the ground that he had never served the office of dresser or house-surgeon, posts which had been considered hitherto essential qualifications in every candidate for the surgical staff. He lectured on physiology in the medical school from 1859 to 1861, was promoted full surgeon in July 1861, held the lectureship on surgery from 1865 to 1869, resigned the office of surgeon in May 1871, and was immediately appointed a consulting surgeon to the hospital.

At the Royal College of Surgeons of England Paget was admitted one of the first fellows, when that order was established in 1843, and he prepared the descriptive catalogue of the pathological specimens contained in the Hunterian Museum, which appeared at intervals between 1846 and 1849. He was Arris and Gale professor of anatomy and surgery from 1847 to 1852, a member of the council from 1865 to 1880, a vice-president in 1873 and 1874, chairman of the midwifery board in 1874, president in 1876, representative of the college at the General Medical Council from 1876 to 1881, Hunterian orator in 1877, the first Bradshaw lecturer 'on some new and rare diseases' in 1882, and the first Morton lecturer on cancer and cancerous diseases in 1887.

As early as 1858, and while he was still

only an assistant surgeon at St. Bartholomew's Hospital, Paget was appointed surgeon-extraordinary to the queen. He attended Queen Alexandra, when princess of Wales, during a long surgical illness, and was made surgeon to King Edward VII, when prince of Wales; from 1867 to 1877 he held the post of serjeant-surgeon-extraordinary, and in 1877 he became serjeant-surgeon to Queen Victoria on the death of Sir William Ferguson [q. v.] He was created a baronet in August 1871.

Paget was president of the three chief medical societies in London; he filled the chair of the Clinical Society in 1869, of the Royal Medical and Chirurgical Society in 1876, and of the Pathological Society of London in 1887. He was appointed a member of the senate of the university of London in 1860, and on the death of Sir George Jessel [q. v.] in 1883 Paget became vice-chancellor of the university, a post he retained until 1895. He was chosen president of the International Congress of Medicine at the meeting held in London in 1881. He was elected F.R.S. in 1851, and among many other distinctions he held the honorary degrees of D.C.L. (Oxford), LL.D. (Cambridge), F.R.C.S. (Edinburgh and Ireland), and M.D. (Dublin, Bonn, and Würzburg).

Sir James Paget died at his house, 5 Park Square West, Regent's Park, on 30 Dec. 1899, and was buried at Finchley cemetery, after a funeral service in Westminster Abbey. An excellent likeness of Paget is in the great hall at St. Bartholomew's Hospital. It is a three-quarter-length in oils by (Sir) J. E. Millais, R.A., painted by subscription in 1878. A bust, by Sir J. Edgar Boehm, bart., R.A., stands in the Royal College of Surgeons of England; there is a replica in the museum of St. Bartholomew's Hospital, dated 1887.

He married, in 1844, Lydia, daughter of the Rev. Henry North, domestic chaplain to the Duke of Kent, and by her had four sons and two daughters, the second son Francis becoming successively dean of Christ Church, Oxford, and bishop of Oxford, and the third son Henry Luke was made suffragan bishop of Ipswich in 1906. Lady Paget died in 1895.

Paget was a surgeon who advanced his art by showing how pathology might be applied successfully to elucidate clinical problems, when as yet there was no science of bacteriology. He may therefore be fairly considered as one of the links connecting Hunterian surgery with the developments which have taken place during the last quarter of a century, owing to a recognition of the part played by micro-organisms in the

production of disease. The position which Paget occupied as a teacher in a large medical school, his persuasive eloquence, and the classical English of his writings, gave him great authority among his contemporaries, and enabled him to exercise a much wider influence than would have been expected from his modest demeanour and somewhat retiring disposition. He was *facile princeps* as a teacher, not by reason of his originality, but because he was able to grasp the principle and clothe it briefly and clearly in exquisite language. Scrupulously honest and fair-minded he acquired one of the chief surgical practices in London. During the busiest period of his life he was invariably punctual, and was never outwardly in a hurry. He had strong religious convictions, which appear in many passages of his writings, and he was always careful in the religious observances of the church of England.

Paget's works are: 1. 'A Descriptive Catalogue of the Pathological Specimens contained in the Musum of the Royal College of Surgeons of England,' 4to (vol. i. 1846, vol. ii. 1847, vol. iii. 1848, vols. iv. and v. 1849). A second edition of the 'Catalogue' was published between 1882 and 1885, edited by Sir James Paget, with the assistance of J. F. Goodhart, M.D., and A. H. G. Doran, F.R.C.S. 2. 'A Descriptive Catalogue of the Anatomical Museum of St. Bartholomew's Hospital,' new edit. vol. i. 1847, vol. ii. 1862. These two catalogues laid the foundation of Paget's reputation. They made him a pathologist, trained him to be an accurate observer, and taught him to write terse English. 3. 'Lectures on Surgical Pathology,' London, 1853, 2 vols. 8vo; revised and edited by (Sir) William Turner, London, 1863, 8vo; 3rd edit. 1870; 4th edit. 1876. These volumes contain, with omissions and additions, the six courses of lectures (1847-52) delivered at the Royal College of Surgeons of England under the Arris and Gals bequests. They were the direct outcome of Paget's work in the Hunterian museum, and their publication gave a great impulse to the study of pathology, which had been flagging for some time before their appearance. 4. 'Clinical Lectures and Essays,' ed. Howard Marsh, London, 1875, 8vo; translated into French, Paris, 1877, 8vo. 5. 'Studies of Old Cases Books,' London, 1891, 8vo. Paget also communicated many papers to the various medical societies and journals. He wrote the lives of eminent surgeons and physicians in the biographical division of Knight's 'Penny Cyclopædia' (London, 1833-44); he assisted

Dr. William Sonhouse Kirkes [q. v. Suppl.] in the first edition of the 'Handbook of Physiology' (London, 1843, 8vo; 15th edit. 1890); and he wrote an interesting introduction to South's 'Memorials of the Craft of Surgery in England' (London, 1886).

[Personal knowledge; Times, 1 Jan. 1900, p. 4; British Medical Journal, 1900, i. 49; Lancet, 1900, i. 52; St. Bartholomew's Hospital Journal, 1900, vii. 50; additional information kindly given by Stephen Paget, esq., F.R.C.S. Eng.]

D.A. P.

PAGET, JOHN (1811-1893), police magistrate and author, was the second son of Thomas Paget of Humberstone, Leicestershire, where he was born on 14 May 1811. His father was a banker in Leicester, and head of the Huguenot family descended from Valerian Paget who fled to England after the massacre of St. Bartholomew (SMILNS, *The Huguenots*, p. 517). The boy was entirely educated at home. For some years he was assistant in his father's bank. He entered the Middle Temple on 16 Oct. 1835, and was called to the bar on 2 Nov. 1838. In 1842 he published the 'Income Tax Act,' with an introduction; and in 1854 a 'Report of Dr. Radcliffe's Judgment in the Consistorial Court of Dublin,' with 'observations on the practice of the ecclesiastical courts.' From 1850 till 1855 he was secretary first to Lord Chancellor Truro and secondly to Lord Chancellor Cranworth, and in 1864 he was appointed a magistrate at the Thames police court; he was transferred from it to the Hammersmith and Wandsworth courts, and on their separation he presided over the court at West London till his resignation in 1880.

Paget devoted his leisure to literary pursuits. He was a contributor to 'Blackwood's Magazine' between 1860 and 1888. His papers adversely criticising Macaulay's views of Marlborough, the massacre of Glencoe, the highlands of Scotland, Claverhouse, and William Penn were reprinted in 1861 with the title of 'The New Examen.' Other articles, entitled 'Vindication,' and dealing with Nelson, Lady Hamilton, the Wigtown martyrs, and Lord Byron; 'Judicial Puzzles,' dealing with Elizabeth Canning, the Campden Wonder, the Annesley case, Eliza Fenning, and Spencer Cowper's case; and 'Essays on Art,' dealing with the elements of drawing, Rubens and Ruskin, George Cruikshank and John Leech, were included in a volume and called 'Paradoxes and Puzzles: Historical, Judicial, and Literary,' which appeared in 1874.

Paget was also a skilful draughtsman, and his illustrations to 'Bits and Bearing-reins'

(1875), by Edward Fordham Flower [q. v.], largely helped to make the reader understand the cruelty caused to horses by the method of harnessing against which Flower protested. In early days Paget was an ardent whig, and enrolled himself among those who were prepared to fight for the Reform Bill. He joined the Reform Club when it was founded in 1836, and was a member of the library committee there for twenty-four years, being chairman of it from 1861 to 1865. On 1 March 1839 he married Elizabeth, daughter of William Rathbone of Greenbank, Liverpool. He died on 28 May 1893 at 28 Boltous, London, leaving a widow and two daughters.

[Private information; Foster's Men at the Bar, p. 349; Paget's Works in Brit. Mus. Libr.]

F. R.

PALGRAVE, FRANCIS TURNER (1824-1897); poet and critic, eldest son of Sir Francis Palgrave [q. v.], the historian and antiquary, was born at Great Yarmouth, in the house of his maternal grandfather, Dawson Turner [q. v.], a banker of that town, on 28 Sept. 1824. His childhood was spent partly there, but chiefly in his father's suburban residence at Hampstead. He grew up, in both houses, amid an atmosphere of high artistic culture and strenuous thought. He was familiar from infancy with collections of books, pictures, and engravings, and when he first visited Italy with his parents at the age of fourteen, was already capable of appreciating, and being profoundly influenced by, what he saw there both in art and nature. This gravity and sensibility beyond his years was further reinforced by the fervid anglo-catholicism of his family. His earlier education was at home; he was afterwards (1838-43) a day boy at Charterhouse, from which in 1842 he gained a scholarship at Balliol College, Oxford, and went into residence there in 1843. There he joined the brilliant circle which included Arnold, Clough, Doyle, Sellar, and Shairp, and which has been commemorated by the last-named of these in the posthumous volume of poems entitled 'Glon Desseray,' prefaced and edited by Palgrave himself forty years later. He took a first class in classics in 1847, having already, some months previously, been elected a fellow of Exeter College; he did not graduate until 1856, when he took both his B.A. and M.A.

Early in 1846 Palgrave had been engaged for some months as assistant private secretary to W. E. Gladstone, then secretary of state for war and the colonies. Soon after completing his probationary year at Exeter

he returned to the public service by accepting an appointment under the education department, in which the rest of his active life was spent. From 1850 to 1855 he was vice-principal, under Dr. Temple, the present archbishop of Canterbury, of Kneller Hall, a government training college for elementary teachers at Twickenham. Tennyson was then living in the neighbourhood, and the acquaintance begun in 1849 between the two grew into a warm and lasting friendship. In 1855 Palgrave returned to London on the discontinuance of the training college, and served in Whitehall, first as examiner and afterwards as assistant secretary of the education department, till his retirement in 1884. In 1864 he had published 'Idyle and Songs,' a small volume of poems which has not achieved permanence. He was for several years art critic to the 'Saturday Review,' and contributed a large number of reviews and critical essays dealing with art and literature to the 'Quarterly Review' and other periodicals.

Much of the inner history and not a little also of the outward incident of his life up to this time is recorded in the remarkable volume published by him pseudonymously in 1858, under the title of 'The Passionate Pilgrim,' the *Dichtung und Wahrheit* of a highly cultured and delicately sensitive mind. The work is now little known, but is notable for the mingled breadth and subtlety of its psychology, and is only marred by a slight overloading of quotation. This was, however (and the same may be said of much of his later writing), no ostentation of learning, but the natural overflow of unusual knowledge and a power of critical appreciation which was in excess of his own creative faculty. Here, as so often elsewhere, the imaginative precocity fostered in him by his early surroundings had to be paid for by a certain lack of sustained force in his mature work.

During annual holidays spent with Tennyson in England or abroad, the scheme and contents of the 'Golden Treasury' were now being evolved. It was published in 1861, and obtained an immediate and decisive success which has continued for over forty years. The enterprise was one often attempted before, and often renewed since; but it at once blotted out all its predecessors, and retains its primacy among the large and yearly increasing ranks of similar or cognate volumes towards which it has given the first stimulus. In itself it is, like all anthologies, open to criticism both for its inclusions and its omissions. In later editions some of these criticisms were admitted and met by

Palgrave himself. But it remains one of those rare instances in which critical work has a substantive imaginative value, and entitles its author to rank among creative artists.

In 1862 Palgrave was employed in the revision of the official catalogue of the fine art department of the exhibition of that year, and the compilation of a descriptive handbook to the art collections there, and also wrote a memoir of Clough, who had died the autumn before. In 1866 he published a volume of 'Essays on Art,' and a critical biography of Scott prefixed to a collected edition of his poems. Among other productions of this period were an edition of 'Shakespeare's Poems' (1865), a volume of Hymns (1867), another of 'Stories for Children' (1868), and one of 'Lyrical Poems' (1871). 'The Children's Treasury of English Song,' a companion volume for children to the 'Golden Treasury,' and the result, like it, of many years of thought and selection, appeared in 1875. The other anthologies made by him may be mentioned here together: 'Chrysmela,' a volume of selections from Herrick (1877), 'Tennyson's Select Lyrics' (1885), and the 'Treasury of Sacred Song' (1889). A second series of the 'Golden Treasury,' the response to many appeals for inclusion of later poets, was published only in the year before his death. In it the selection made failed to give general satisfaction; and indeed the judgments in poetry of a man of seventy are likely to have lost much and gained little in the years of declining life. By that time too the way he had opened thirty-five years before was thronged with followers, and the new volume took a place only as one among the crowd. Two more volumes of original poems, the 'Visions of England' (1881) and 'Amenophis' (1892), complete the list of his own contributions to English poetry.

In 1884 Palgrave resigned his assistant secretaryship in the education department. The remainder of his life was divided between London and the country house at Lyme Regis which he had bought in 1872, with almost annual visits to Italy. In 1878 he had been made an honorary LL.D. of Edinburgh University, and in 1885 he was elected to the professorship of poetry at Oxford, vacated by the death of John Campbell Shairp [q. v.] He had already declined to be put in nomination for that chair in 1867 as Arnold's successor, and had actually been a candidate in 1877, but had withdrawn then in Shairp's favour. He held the chair for two quinquennial terms (1885-95). It is singular that during nearly forty years its

successive occupants from Arnold to Palgrave were all contemporaries, and all members of the same group of Balliol scholars.

A volume of his Oxford lectures, 'Landscapes in Poetry' (1897), collected and revised by him after he vacated the chair, was Palgrave's last published work. His health had been for some years failing, and he died after a brief illness on 24 Oct. 1897. He had married, in December 1862, Cecil, daughter of J. Milnes Gaskell, M.P., who predeceased him on 27 March 1890, and left surviving him a son and four daughters.

Palgrave was one of those men whose distinction and influence consist less in creative power than in that appreciation of the best things which is the highest kind of criticism, and in the habit of living, in all matters of both art and life, at the highest standard. This quality, which is what is meant by the classical spirit, he possessed to a degree always rare, and perhaps more rare than ever in the present age. Beyond this, but not unconnected with it, were qualities which only survive in the memory of his friends—childlike transparency of character, affectionateness, and quick human sympathy.

[Francis Turner Palgrave, by G. F. Palgrave, 1899 (a Memoir by his daughter); Bosso's Reg. Coll. Exon. (Oxford Hist. Soc.); personal knowledge.] J. W. M.

PALMER, ARTHUR (1841-1897), classical scholar and critic, born at Gwolph, Ontario, Canada, on 14 Sept. 1841, was the sixth child of the Ven. Arthur Palmer, archdeacon of Toronto, by his first wife, Hester Madeline Crawford. He was educated, first by his father, then at the grammar school, Gwolph, under the Rev. Edward Stewart. After about four years at the grammar school, he left it in 1856. In 1857 he went to Cheltenham, where he remained less than a year, having had, as he used to say, 'just a sweet taste of English public school life.' The principal at the time was William Dobson. He entered Trinity College, Dublin, in 1859, obtained a university scholarship in 1861, and in 1863 he graduated with senior moderatorship and gold medal in classics, as well as a junior moderatorship and silver medal in experimental and natural sciences. In 1867 he was elected a fellow, and in 1880 succeeded Professor Tyrrell in the chair of Latin. In 1888 he succeeded Judge Webb as public orator. He was M.A. (1867) and Litt.D. of his own university, and honorary LL.D. of Glasgow (1890) and D.O.L. of Oxford (1894). From 1867 to 1880 he was a college tutor, and as such exercised a marked influence of the best kind on a large number of pupils, all

of whom remember him with esteem and affection, many of them having received from him substantial help in after life. His contributions to classical scholarship were mainly emendations of the Latin and Greek texts, an art in which he may be fairly said to occupy a foremost place among modern scholars. He was most successful in his corrections of the text of Plautus, Catullus, Propertius, Horace, and Ovid, and he has made many convincing conjectures in Aristophanes, while he aided largely in constituting the text of the *editio princeps* of Bacchylides (1897), and made many excellent suggestions in the first edition of Herondas (1891). Specimens of some of his cleverest and most convincing emendations will be found in an obituary notice in 'Hermathena,' No. xxiv. 1898.

Palmer had special qualifications for the emendation of poetry. His memory was stored with all that is finest in poetry, ancient and modern, his taste and ear were perfect, and his feeling for style singularly fine and just. His versions in 'Kottabos' and 'Dublin Translations,' few but choice, exhibit his skill in reproducing the idiom and spirit of Latin poetry.

In youth his personal appearance was very attractive. He was a fair cricketer, and for some seasons he successfully captained a team of old university cricketers who assumed the name of Stoics. He was a good racket-player and golfer. As a conversationalist he was delightful, and he greatly enjoyed society until failing health forced him largely to forego it. His health till middle age was excellent, but during the last ten years of his life he suffered much from disease of the bladder, and died of a cancerous growth in the region of that organ on 14 Dec. 1897.

On 4 Oct. 1879 he married Miss Frances Greene of Clevedon. By her he had two sons: Arthur, born on 13 May 1881, and Uther, born on 20 April 1892.

His published works are: 1. 'Heroides' of Ovid, 1874; new edit. (revised and enlarged, with the transl. of Planudes), 1898, Clarendon Press Ser. 2. 'Elegies' of Propertius, 1880. 3. 'Satires' of Horace, London, 1883, 8vo; 5th edit. 1893. 4. 'Amphitruo' of Plautus, 1888. 5. 'Records of the Tercentenary Festival of the Dublin University,' 1892. 6. 'Catullus' in Macmillan's Parnassus Series, 1896. Palmer also contributed articles, chiefly critical, to 'Hermathena,' the 'Journal of Philology,' 'Classical Review,' and other periodicals.

R. Y. T.

PALMER, SIR ARTHUR HUNTER (1819-1898), colonial politician, born at Armagh on 28 Dec. 1819, was the elder son of Lieutenant Arthur Palmer, R.N. (d. 30 April 1886), by his second wife Emily (1791-1826), daughter of Robert Hunter of Dublin and Downpatrick. He was educated at Youghal grammar school, emigrated to New South Wales in 1838, and for twenty-three years was associated with Henry Dangar's stations, of which he ultimately became general manager. In 1866 Palmer was returned to the legislative assembly of Queensland for Port Curtis, and in August 1867 became colonial secretary and secretary for public works in the government of Sir Robert Ramsey Mackenzie. In September he took the additional portfolio of secretary for lands, and in November 1868 he retired with his colleagues. In May 1870 he formed an administration in which he was premier and colonial secretary, and in 1873 he also acted as secretary for lands. In 1874 his government resigned office, and Palmer himself, leaving Port Curtis, was elected for Brisbane. In the first administration of Sir Thomas McIlwraith [q. v. Suppl.] he was colonial secretary and secretary for public instruction from January 1879 to December 1881, when he was appointed president of the legislative council. In the same year he was created K.C.M.G. He administered the government of Queensland on several occasions during a vacancy in the governorship. He was honorary colonel of the Queensland defence force, a trustee of the Queensland Museum, and a director of the Queensland National Bank. He died at Brisbane on 20 March 1898. On 8 June 1866 he married Cecilia Jessie (d. 31 Aug. 1886), daughter of Archibald Moeman of Armidale, New South Wales. By her he had three sons and two daughters.

E. I. C.

PALMER, GEORGE (1818-1897), biscuit manufacturer, born on 18 Jan. 1818 on Upton farm in Long Sutton, Somerset, which had long been the property of his yeoman ancestors, was the son of William Palmer (d. 1826) and his wife Mary (d. 1880), daughter of William Isaac, both being members of the Society of Friends. The boy was educated for a time in the school at Sidcot, near Weston-super-Mare, which belonged to that religious body, and about 1832 was apprenticed to a relative at Taunton to learn the business of a miller and confectioner.

At midsummer 1841 Palmer entered into partnership at Reading with Thomas Huntley, and established the biscuit business of Huntley & Palmer, near the upper part of London Street. Not long afterwards they purchased some property in King's Road, Reading, and applied steam-machinery to the manufacture of their biscuits. The result was a marvellous success, and the profits grew to large proportions. Huntley died in 1857, when the concern became the sole property of Palmer and his two brothers, Samuel and William Isaac Palmer. This vast establishment, the largest of its kind in existence, has been for many years of world-wide fame. It covers many acres in the King's Road, and more than 6,000 persons are employed in it.

Palmer took much interest in the British schools established at Reading by Joseph Lancaster, and was a member of the first school-board in the town. From December 1850 he was a member of the town council; he became alderman in 1859, and remained so until his retirement in 1883. In 1867 he was elected mayor of Reading. At a by-election in May 1878 he was returned to parliament in the liberal interest for the borough of Reading, and sat for it until 1885, when he retired from the representation on the constituency losing one of its members. He then contested the south or Newbury division of Berkshire, but was defeated after a close contest.

Palmer married, at the Friends' meeting-house, Basingeloke, on 17 Jan. 1850, Elizabeth Sarah, daughter of Robert Meteyard of that town. She died at Reading, 30 March 1894, and her husband never recovered from the shock of her death. He died at his house, The Acacias, Reading, on 19 Aug. 1897, and was buried on 23 Aug. in the same grave with her in the Friends' burial-ground, Church Street, Reading. He left four sons and three daughters. His eldest son, George William Palmer, was M.P. for Reading from 1898 to 1904, and became a privy councillor in 1906.

Palmer was a munificent benefactor to his adopted town, and to all its charitable institutions. He and his brother Samuel gave a site for an art gallery at the corner of Valpy Street, Reading, as a memorial of their brother, William Isaac. He presented to the town two recreation-grounds, the first being part of the ground known as the 'King's Meadow,' and the other being the 'Palmer Park,' comprising forty-nine acres at the east end of Reading. On the day of the opening of the Palmer Park, on 4 Nov. 1891, he was made the first honorary freeman of the borough, and an artistic statue

of him, erected by public subscription in recognition of his services and gifts, was unveiled at the east end of Broad Street, Reading.

[Reading Observer, 21 and 28 Aug. 1897; private information.] W. P. C.

PARKES, SIR HENRY (1815-1890), Australian statesman, was born on 27 May 1815 on Lord Leigh's Stoneleigh estate, Warwickshire, where his father, Thomas Parkes, was a small tenant farmer. Parkee received his early education at village schools in the neighbourhood. Owing to the misfortunes of his parents he was compelled to earn his own living as a child of eight. Yet by assiduous self-culture in after years Parkes became one of the most widely read of Australian public men, and a devoted lover of English literature. In very early manhood Parkee migrated from Stoneleigh to Birmingham, where he was apprenticed, and became an ivory turner. On 11 July 1836 he married, at the parish church, Edgbaston, Clarinda, daughter of Robert Varney of Birmingham. The father of the bride, a well-to-do man, promptly disowned her. 'They married without any provision for their wretched life except the work they could obtain from day to day, and went back from Edgbaston to live in the little room at Birmingham where she had lodged when alone' (*An Emigrant's Home Letters*, p. 10).

After losing two children and passing through many hardships, Parkes and his wife went to London preparatory to emigrating to Australia. They remained in the metropolis, suffering much privation, from November 1838 to March 1839, when they sailed as 'bounty emigrants' to Sydney, arriving on 25 July 1839. The young wife gave birth to a child a few days before landing, and they reached Sydney without a friend to greet them or a letter of introduction to 'unlock a door.'

Parkee's first experiences in Australia were disappointing. 'For fully twelve months I could not muster sufficient fortitude to write to my friends in England of the prospect before us. Finding nothing better, I accepted service as a farm labourer at 30% a year, and a ration and a half, largely made up of rice. Under this engagement I worked for six months on the Rogentville estate of Sir John Jamison, about thirty-six miles from Sydney, assisting to wash sheep in the Nepean, joining the reapers in the wheat field, and performing other manual labour on the property' (*Fifty Years of Australian History*, p. 4).

Returning to Sydney, Parkes found

various humble employments: he worked in an ironmonger's store, and then in an iron foundry, and was for a while a tide-waiter in the customs. At last he fell back on his own trade and opened a shop as an ivory and bone turner, adding the sale of toys and fancy goods. In this historic shop in Hunter Street began Parkee's career as a public man. Here he was wont to write amatory verses for the 'Atlas,' edited by Robert Lowe (afterwards Viscount Sherbrooke) (q.v.), and, reverting to an earlier sympathy with chartism in England, became known as a powerful working-class agitator. From Hunter Street he issued a manifesto in favour of Lowe's candidature for Sydney, which resulted in his election in 1848 (*Life and Letters of Lord Sherbrooke*).

The great question then agitating the Australian public was the transportation of criminals. On 8 June 1848 the convict ship *Flashy* entered Port Jackson, when a monster demonstration to oppose the landing of the criminals took place, at which Lowe was the principal speaker. On this occasion, speaking from the standpoint of a working-class colonist, Henry Parkes made his first public oration to an audience of some eight thousand enthusiastic citizens. Henceforth he was recognised as a leader of the anti-transportation movement which finally triumphed against the forces of English and colonial officialism.

In 1849 Parkes founded the 'Empire' newspaper as the organ of liberalism in New South Wales. The first number appeared on 28 Dec. 1850, and Parkes was editor and chief proprietor of the journal throughout its stormy career until its death in 1857. His account of his journalistic struggles (*Fifty Years of Australian History*, chap. iv.) is perhaps the most interesting passage in prose from his pen. The truth is that Parkes lacked not only money, but prudence, experience, and foresight, so that his ambitious enterprise, despite his own great abilities and untiring energy, was foredoomed to financial failure.

During this troubled period Parkes was returned to the legislative council by a two to one majority for Sydney. Referring to his labours on the 'Empire,' and his activity in the legislative council, he himself characteristically remarks: 'I at once entered into the work with an astonishing amount of zeal. Sitting up all night was a recreation to me. I did not know what weariness could mean. I would leave the council when it adjourned and go to the "Empire" office, where I would remain until daylight. Day and night I was at work. Very often

I was thirty-six and forty-eight hours without going to bed. I believe in those days I could have gone into the fire

As blithely as the golden-girdled bee
Sucks in the poppy's sleepy flower

for the sake of my convictions' (*Fifty Years of Australian History*).

Parkes threw himself with unbounded energy into the great struggle for the establishment of responsible government in New South Wales. It was on this question that he found himself in the fiercest conflict with the actual founder of that system, William Charles Wentworth [q. v.], whose aim was to copy as far as possible the English system with an upper house of colonial peers, while Parkes insisted on a democracy pure and simple. In this struggle it was inevitable that Parkes should conquer.

On the establishment in 1858 of responsible government, Parkes was elected for East Sydney (1858-61). During this period he was an active supporter of (Sir) John Robertson [q. v.] as a land reformer, and became on most questions the recognised leader of the democratic party. In 1861 Parkes and William Bede Dalley [q. v. Suppl.] came to England as commissioners of emigration. Parkes addressed large public meetings in the north of England and the midlands, and made the personal acquaintance of Carlyle, Cobden, Bright, and Thomas Hughes. He sent a number of interesting letters to the 'Sydney Morning Herald,' which were subsequently published in London under the title 'Australian Views of England' (1869). These letters display keen political insight, and present a number of faithful portraits of the leading English public men of the day (see 'Sir Henry Parkes in England' in A. PATCHETT MARTIN'S *Australia and the Empire*, 1889).

Returning to Sydney in 1863 Parkes soon re-entered parliament, and, in January 1866, accepted office for the first time as colonial secretary in Martin's ministry [see MARTIN, SIR JAMES]. During his term of office he passed the Public Schools Act in the teeth of fierce clerical opposition, especially from the influential Roman catholic body. On 13 March 1868 a murderous attack on the Duke of Edinburgh was made by an alleged fenian named O'Farrell in Sydney Harbour; Parkes, from his official position, was mainly responsible for the execution of the criminal, and for the passage of the Treason Felony Act (1868). Resigning office in 1868, Parkes was in 1871 elected for Mudgee, and in the next year became prime minister of New South Wales, having formed a coalition

with Sir John Robertson. It was mainly owing to the enormous influence of Parkes at this time that New South Wales, unlike the other Australian colonies, adhered to free trade. In 1875 the Parkes ministry resigned over the subject of the release of Gardiner, a notorious bushranger; but in 1878 he was again prime minister and colonial secretary. In the previous year he had been created K.C.M.G.

Parkes revisited England in 1882 while still holding office as prime minister, and was received with much distinction in London. But on his return to Sydney his government was defeated, and he himself was rejected at the polls for East Sydney. Thereupon he again revisited England and spent much time in congenial political and literary society, including that of Lord Tennyson, who formed a high regard for him. Parkes himself published two or three slender volumes of verse, in which, among much that is crude and unfinished as to mere technique, there are occasional evidences of poetic ability and fervour.

In January 1887 he once more became the dominant power in New South Wales, forming his fourth administration and bringing the colony back again to free-trade principles, from which it had temporarily departed. He was created G.C.M.G. in 1888, and very fittingly, as the statesman who had kept the banner of free trade floating in his own colony, he was awarded the gold medal of the Cobden Club. In January 1889 he retired from the administration of New South Wales in favour of Mr. (afterwards Sir) George Dibbs, who held office for only a couple of months, when Parkes became for the fifth and last time prime minister. It was during this period that the question of Australian federation first assumed a practical shape. Although Parkes displayed considerable antagonism to Service's scheme or a federal council, he was nevertheless recognised throughout Australia as the foremost advocate of the wider scheme of federation [see SERVICE, JAMES, Suppl.]. In February 1890 Parkes attended the intercolonial conference in Melbourne, while he presided over the Sydney convention of 1891, which practically laid the foundations of the Australian commonwealth. Parkes's attitude towards both Australian and imperial federation is eloquently set forth in the volume of his speeches on 'The Federal Government of Australasia,' published in 1890, and dedicated to Lord Carrington. It was in his Melbourne oration that Parkes summed up the matter in a single famous phrase—'the crimson thread of kinship.' When the common-

wealth was inaugurated (January 1901), the invaluable life-work of Sir Henry Parkes was specially marked at the state banquet in Sydney by the entire company rising and drinking to his honoured memory in solemn silence.

In 1895, at the time of his second wife's death, Parkes opposed Mr. G. H. Reid, who had succeeded him as the free-trade leader, but was defeated for the King division of Sydney. This was the end of his political career. Towards the close of his life, and partly as the result of a severe accident, Parkes suffered great pain; while dopsite, or perhaps in consequence of, his long life of devotion to the public interest, he was left in most straitened circumstances. He died on 27 April 1896. Of all contemporary public men, except perhaps Gladstone, Sir Henry Parkes was the most frequently photographed and caricatured. A fine marble bust was executed of him by his friend Thomas Woolner, R.A., as well as many portraits by local artists.

Parkes was thrice married. After the death in 1888 of his first wife, he married successively Mrs. Dixon in 1889 (who died in 1895), and almost on his deathbed he married his servant. His eldest son, Mr. Varney Parkes, became a well-known public man in the colony.

Outside politics, which was the business of Parkes's life, his restless energies wore much engrossed with literary subjects, and his most cherished friendships were among men of letters. In Australia, almost alone among prominent public men, he generously befriended struggling authors; while the list of his own published works is by no means unimportant or scanty.

He published: 1. 'Stolon Moments,' 1842. 2. 'Murmurs of the Streamlet' (volumes of early poems). 3. 'Australian Views of England,' London, 1860, 8vo (a selection of letters by Parkes written to the 'Sydney Morning Herald' in 1861 and 1862). 4. 'Speeches of Henry Parkes, collected and edited by David Blair,' Melbourne, 1876, 8vo. 5. 'The Boastful Terrorist and other Poems. By a Wanderer,' Melbourne, 1885, 8vo. 6. 'Fragmentary Thoughts' (poems dedicated to Alfred, Lord Tennyson), Sydney, 1889, 8vo. 7. 'Federal Government of Australia,' speeches delivered 1889-90, Sydney, 1890, 8vo. 8. 'Fifty Years in the making of Australian History' (Parkes's autobiography), London, 1892, 8vo. 9. 'Sonnets and other Verse' (dedicated to Hallam, Lord Tennyson), London, 1895, 8vo. 10. 'An Emigrant's Home Letters,' English edit. London, 1897, 8vo.

PARR, HARRIET (1828-1900), novelist, who wrote under the pseudonym of HOLME LEE, was born at York on 31 Jan. 1828. Her father, William Parr, was a traveller in silks, satins, and coloured kids, and her mother was Mary Grandage of Halifax, Yorkshire. Miss Parr was educated at York, and early in life devoted herself to literature as a profession. In 1854 she published, under the pseudonym Holme Lee, her first novel, 'Maud Talbot.' It did not attract much attention, but she sent her second novel, 'Gilbert Massinger,' to Charles Dickens, who was much impressed by it (FORSTER, *Life of Dickens*, ii. 474-5). Its length prevented its appearance in 'Household Words,' and in 1855 it was separately published. Even in this form it had a considerable sale, which was much increased when it was reissued in a cheap single volume in 1862. It was translated into Italian in 1860. Another novel, published in 1855, 'Thorney Hall,' reached a second edition in 1862, and was translated into French in 1860. Between 1854 and 1862 Miss Parr published some thirty novels, all of them refined in tone, somewhat sentimental, and written in an easy, unaffected style (cf. *Athenæum*, 1862 i. 186, 1871 ii. 79, 387, 1872 i. 687). These merits, supplemented by the enthusiastic support of Charles Edward Mudie [q. v.], secured Miss Parr considerable popularity as a writer of fiction *virginibus puerisque*. Her more serious work consisted of three books published under her own name: 1. 'The Life and Death of Jeanne d'Arc,' 2 vols. 1866; 2. 'Maurice and Eugénie de Guérin,' 1870; and 3. 'Echoes of a Famous Year,' 1872. The first of these was a solid and creditable performance (cf. *Athenæum*, 1866 ii. 9, 1870 i. 386).

Miss Parr passed her later years at Shanklin, Isle of Wight, where she died on 18 Feb. 1900. An oil portrait of her, painted about 1848 by George Lance [q. v.], belonged to her brother, Mr. George Parr, of 31 Canonbury Park.

[Private information; Brit. Mus. Cat.; Lit. Your Book, 1901, pp. 101-2; authorities cited.] A. F. P.

PATMORE, COVENTRY KERSEY DIGHTON (1828-1896), poet, the eldest son of Peter George Patmore [q. v.], was born at Woodford in Essex on 28 July 1828. He was educated privately and with no view to any special profession; in the main his own teacher, but, as he warmly acknowledged, profiting greatly by his father's precepts as regarded English literature. In 1839 he spent six months at a French school at St. Germain. Upon his return he addicted himself for a time to scientific pursuits, and afterwards thought of taking holy orders, but was discouraged partly by his father's inability to support him at the university, partly by scruples relating solely to the position of the church of England; for, although his father was a free-thinker, his own studies and reflections had already reconciled him to orthodox Christianity. He had begun to write poetry in 1840, and in 1844 published a slender volume containing, with minor pieces, four narrative poems: 'The River,' 'The Woodman's Daughter,' 'Lillian,' and 'Sir Hubert,' strikingly original and individual in style and thought, though not without traces of Tennyson and Coleridge. As narratives they are wholly uninteresting, almost vapid; but the weakness of construction is relieved by strokes of psychological insight and descriptive power altogether surprising at the author's age. In many respects the volume anticipated the principles and the work of the pre-Raphaelites in another sphere of art, and paved the way for the writer's subsequent relations with the leaders of that movement. It brought a letter of warm praise and sound advice from Bulwer, and an absurd denunciation enlivened by a clever parody from 'Blackwood,' but otherwise attracted little notice beyond the author's own circle.

In the following year (1845) the embarrassment of Patmore's father, due to unfortunate railway speculations, threw him entirely upon his own resources. Up to this time his circumstances had been good, and he had made no serious effort to earn a living. He now earned a scanty subsistence by translations and contributions to periodicals until, in November 1846, the recommendation of Richard Monckton Milnes (afterwards Lord Houghton) [q. v.], at the instance of Mrs. Procter, obtained for him an appointment as assistant in the printed book department of the British Museum. The post was congenial to Patmore, and he proved himself highly efficient. He appears to have about this time assisted Milnes in the preparation of the 'Life and Letters of Keats' (1848), but to what extent is difficult to determine. No part of

it can have been written by him. Feeling now comparatively at ease in his circumstances, he married, in September 1847, Emily Augusta Andrews (b. 29 Feb. 1824), daughter of a congregationalist minister, a lady possessed of mental and personal charms far beyond the common, and a model of gracious geniality and clear common sense. She was herself the author of some small useful books, under the pseudonym of 'Mrs. Motherly,' and assisted her husband in the compilation of his excellent collection of poetry for children, 'The Children's Garland,' published in 1862. The union was most happy, although the cares and expenses of an increasing family, and, after a time, of Mrs. Patmore's declining health, frequently made Patmore's situation one of considerable anxiety. He never compromised his independence, and laboured hard to provide for his family by writing in reviews, especially the 'Edinburgh' and 'North British,' efforts the more creditable as the work was uncongenial to him. He wanted the first qualification of a literary critic, sympathy with his author. An egotist and a mystic, he could take no vital interest in any one's ideas but his own, and hence his treatment of other authors is in general unsatisfactory; while his fine taste, intuitive insight, and careful study of æsthetic laws frequently render his isolated observations of great value. One exception to this habitual indifference to other men's work was the admiration he at this time entertained for Tennyson, with whom he had as much intercourse as the elder poet's distance from town and dislike to letter-writing would allow. Another friendship, which had more important results, was his acquaintance with Ruskin, who had been the pupil of Mrs. Patmore's father; Ruskin's enthusiasm for architecture was fully shared by Patmore, who wrote on this subject with far more enjoyment and spontaneity than upon literature. Patmore had made in 1849 the acquaintance of the pre-Raphaelite group of artists, with whom he had much in common, and to whose organ, 'The Germ,' he contributed a remarkable essay on Macbeth, as well as verses. They were almost succumbing to the universal hostility aroused by their originality and their peculiarities, when, at Patmore's prompting, Ruskin wrote the memorable letter to the 'Times' which turned the tide of public opinion. Another important service rendered by Patmore was his promotion of the volunteer movement after Louis Napoleon's *coup d'état* in December 1851. Others came forward simultaneously, but the idea was original with him.

Meanwhile neither private cares nor public interests had interrupted Patmore's poetical work. In 1858 he published 'Tamerton Church Tower,' which he had begun as early as 1848. Like his former productions, it is a narrative poem, and as such quite pointless and uninteresting, but full of exquisite vignettes of scenery. The volume, which reached a second edition in the same year, included revised versions of the poems of 1844 and now pieces, some of great beauty. Among these were specimens of 'The Angel in the House,' the long poem now occupying all the time and thought he could devote to it, and designed to be the apothecosis of married love. The first part, 'The Betrothal,' was published anonymously in 1854. The anonymity was owing to Patmore's alarm at the unfavourable reception of his father's book, 'My Friends and Acquaintance,' published earlier in the same year. The name alone, he fancied, would condemn him; although, as portions of the poem had already appeared in 'Tamerton Church Tower,' his precaution was in reality quite futile. It would have been wiser to disarm criticism by removing the numerous trivialities which disfigured a beautiful poem; but this could not be expected, for Patmore could not see them. He had no perception of the sublime in other men's writings or of the ridiculous in his own. The great writers whom he sincerely admired were admired by him for any other quality than their grandeur; and although the reverse of conceited as regarded his own works, and continually labouring to amend their defects, the worst defect they had was never admitted by him. Although, however, the 'Angel's' occasional lapses into bathos afforded a handle to detractors, the voice of the higher criticism was always for it. Tennyson, Browning, Ruskin, Carlyle were lavish of sincere praise, and even its commercial success (though the author himself was disappointed) was greater than could have been reasonably expected in the case of a book so entirely original and so devoid of meretricious allurement. 'The Betrothal' was followed in 1856 by 'The Espousals' (new editions of both parts appeared in 1858, 1863 two ed., and 1866); in 1860 by 'Faithful for Ever,' a poem of disappointed love; and in 1862 by 'The Victories of Love,' a poem of bereavement. In the collected edition of his works 'Faithful for Ever' was amalgamated with 'The Victories of Love.' It must be said that the quality of poetical achievement went on *decreasing*, though there are exceedingly fine things in 'Faithful for Ever.' The four poems nevertheless constitute

among them such a body of deep and tender and truly poetical thought on love and lovers, embellished with charming pictures of English scenery and household life, as no other poet has given us. The obvious and unanswerable criticism is that the poet's professed subject of married life is only approached in the least successful parts of the poem, and hardly grappled with even there. The reason is plain: its domesticities were found incapable of poetical treatment.

If Patmore retained any desire to pursue the subject of connubiality further, it must have been checked by his irreparable loss in the death of his wife on 5 July 1862. She had long been sinking from consumption, and her life had been prolonged only by his devoted care. She left him three sons and three daughters. His feelings found an inadequate expression in 'The Victories of Love,' but he had reached the turning-point of his career, and the break with his past was irreparable. He went abroad for his health, embraced (1864) the Roman Catholic religion, which he would probably have professed many years earlier but for the influence of his wife, and found a second mate in Mariamne Caroline Byles (b. 28 June 1822), a lady of noble though reserved manners, and singular moral excellence. His family followed his example, and with the exception of two sons old enough to go forth into life, and a daughter who after a while entered a convent, remained under his roof. He retired from the British Museum, and, after short residences in Hampstead and Migate, bought the estate to which he gave the name of Heron's Ghyll, near Uckfield in Sussex. This he so improved by building and planting as to be able after some years to dispose of it at a greatly enhanced price. He then settled at The Mansion, Hastings, a fine old house which had attracted his fancy when a child. Tranquillity and retirement had brought back the poetical impulse; in 1868 he had printed for private circulation nine odes, remarkable alike for their poetry and for their metrical structure, or rather, perhaps, their musical beauty in the absence of definite metrical form. They may be regarded as rhythmical voluntaries, in which the length of the lines and the incidence of the rhymes are solely determined by the writer's instinctive perception of the requirements of harmony, and the rich and varied music thus attained contrasted no less strikingly with the metrical simplicity of 'The Angel in the House' than did the frequent loftiness of the thoughts and audacity of the diction with the quiet feeling and unostentatious depth of the earlier work. Other similar compositions

were gradually added, and in the collective edition of the poet's works in 1877 the whole took shape as 'The Unknown Eros and other Odes' (another edit. 1878; 3rd edit. 1890), forty-two odes in two books. It is not likely that these will ever attain the popularity eventually won by 'The Angel in the House,' nor are they nearly so well adapted for 'human nature's daily food.' But they frequently exhibit the poet at greater heights than he had reached before, or without them would have been deemed capable of reaching; and the lofty themes and fine metrical form have in general acted as an antidote to his worst defect, his tendency to lapse into prose. The effusions of inward feeling, frequently most pathetic in expression, and the descriptions of external nature, of mirror-like fidelity, are alike admirable, and often transcendently beautiful. The weak parts are the expressions of political and ecclesiastical antipathies, mere splenetic outbursts alike devoid of veracity and of dignity; and a few mystical pieces in which, endeavouring to express things incapable of expression, the poet has only accumulated glittering but frigid conceits. The gulf between 'The Angel in the House' and the 'Odes' is partly filled by 'Amelia,' first published in 1878, an exquisite little idyll akin to the former in subject, and to the latter in metrical structure, and not unjustly esteemed by the author his most perfect work. He meditated a much more ambitious poem, which, taking the Virgin for its theme, was to have embodied his deepest convictions on things divine and human. Finding the necessary inspiration denied, he recorded his thoughts in a prose volume entitled 'Sponsa Dei,' which he ultimately destroyed, professedly upon a hint from a Jesuit that he was divulging to the uninitiated what was intended for the elect, but in reality, no doubt, because he had failed to satisfy himself; and partly, perhaps, from apprehension of censure in his own communion. His relations with the church of which he had become a member were curious; he detested and despised her official head in his own country, abused the priesthood as individuals, and made no point of the pope's temporal power, while he performed four pilgrimages to Lourdes, and desired to be buried in the garb of a Franciscan friar. There can be no question of the perfect sincerity of his Roman Catholic profession, and as little that this was but the exterior manifestation of the mysticism which, as he tells us in an interesting autobiographical fragment, had possessed his being from his youth.

Patmore's latter years passed in tranquil-

lity, except for family bereavements. In 1880 he lost his second wife, in memory of whom he erected an imposing Roman Catholic church at Hastings, designed by Mr. Basil Champneys, afterwards his biographer. In 1882 his daughter Emily died, and in 1888 his son Henry (see below). In 1881 he married Miss Harriet Robson, by whom he had a son. In 1891 a change in the ownership of his Hastings residence obliged him to remove, and he settled at Lymington. His poetical works had been definitively collected in 1886, with a valuable appendix on English metrical law, enlarged from an early essay in the 'North British Review.' In 1877 he wrote a memoir of his old friend Bryan Waller Procter [q. v.], at the desire of Mrs. Procter. About 1885 he became a frequent contributor of essays and reviews to the 'St. James's Gazette,' then edited by his intimate friend, Mr. Frederick Greenwood. Selections from these contributions, with additions from other sources, were published in 1889 and 1893, under the respective titles of 'Principles in Art' and 'Religio Poetæ.' In 1895 Patmore published 'Rod, Root, and Flower,' observations and meditations, chiefly on religious subjects, which probably embodied much of the destroyed 'Sponsa Dei.' He died at Lymington after a brief attack of pneumonia on 26 Nov. 1896.

Patmore's character was curiously unlike the idea of it generally derived from 'The Angel in the House.' Instead of an insipid amiability, his dominant characteristic was a rugged angularity, steeped in Rembrandt-like contrasts of light and gloom. Haughty, imperious, combative, sardonic, he was at the same time sensitive, susceptible, and capable of deep tenderness. He was at once magnanimous and rancorous; egotistic and capriciously generous; acute and credulous; nobly veracious and prone to the wildest exaggerations, partly imputable to the exuberance of his quaint humour. His capacity for business was as remarkable as his intellectual strength, and was not like this warped and flawed by eccentricity. This inequality of character is reflected in his poetry. No one had sounder views on the laws of art, no one strove more earnestly after worthiness of subject and unity of impression, and yet the themes of all his objective poems are trivial or unsuited to his purpose, and his subjective pieces, with few exceptions, attract chiefly by the beauty of isolated details. He was the last man to write, as he aspired to do, the poem of his age, but no contemporary poet offers such a multitude of thoughts 'as clear as truth, as strong as light,' and descriptions of exquisite charm and photo-

graphic accuracy, easily detached from their context and remembered for their own sakes. His prose style, without attaining to eloquence, which he never attempted, is a pattern of dignified simplicity, and of lucidity slightly tinted by the hues of feeling. His critical powers were of the highest, but were impaired by his besetting sin of egotism. A few of the greatest writers excepted, he could take no strong interest in any man's work but his own; his attitude towards other men's ideas was that of Omar towards the Alexandrian library, and his essays on their writings affect with a painful sense of inadequacy. They are, nevertheless, well worth reading for the detached remarks, often most subtle and penetrating. His religious and moral aphorisms also have much worth; and this is even more true of those casually expressed in the fragments of correspondence published by Mr. Champneys than of those which he himself gave to the world. In other departments of thought he is little better than a wasted force, chiefly on account of his disharmony with his own age.

Patmore's portrait, painted in 1804 by Mr. J. S. Sargent, R.A., is in the National Portrait Gallery. Several other portraits, as well as likenesses of members of his family, are reproduced in Mr. Champneys's biography.

HENRY JOHN PATMORE (1800-1883), the youngest son of Coventry Patmore by his first wife, was born on 8 May 1800. He was chiefly educated at Ushaw College, where he obtained numerous prizes, but which, to judge by his youthful letters published by Mr. Champneys, cannot have done much to stimulate his intellectual powers. Apparently, however, this childishness was but, in Emersonian phrase, 'the screen and shawl in which Pan protects his well-beloved flower;' for the little poems published after his death are not only excellent in themselves, but constitute a psychological phenomenon. They possess in an eminent degree those qualities of ease, symmetry, and finish which are usually the last to be expected in the work of so young a man; they are sufficiently like the older Patmore's work to seem almost written by him, while yet discoloured from his by a subtle and indefinable aroma of their own. That Henry Patmore would have proved a charming lyrical poet can hardly be doubted; whether he would have been anything more can scarcely be conjectured in the absence of any clear evidence how far his limitations were natural, and how far due to a mistaken system of education. His health had always been feeble, and, debilitated by a serious

illness in 1881, he succumbed, on 24 Feb. 1883, to an attack of pleurisy. A selection from his poems was privately printed at Dr. Daniell's Oxford press, and partly incorporated with the edition of his father's works published in 1886.

[Almost all attainable information respecting Patmore is to be found in the *Memoirs and Correspondence* (1900), edited by his friend Mr. Basil Champneys. Mr. Edmund Gosse has contributed two highly interesting papers of recollections to the *Contemporary Review* (January 1897) and *North American Review* (March 1897). Selections from Patmore's poetry, respectively entitled '*Florilegium Amantis*' (1879) and '*Poetry of Pathos and Delight*', have been edited by Dr. R. Garnett, C.B., and by Mrs. Moynoll.] R. G.

PATRICK, ROBERT WILLIAM COCHRAN- (1842-1897), under-secretary of state for Scotland. [See COCHRAN-PATRICK.]

PATTERSON, SIR JAMES BROWNE (1833-1895), Australian statesman, born at Link Hall in Northumberland on 18 Nov. 1833, was the youngest son of James Patterson, a district road inspector. He was educated at Alnwick, and emigrated to Victoria in 1852 on the discovery of gold. After mining unsuccessfully at the Forest Creek goldfields, he engaged in farming on the river Loddon at Glenlyon, near Daylesford, in 1856, and finally settled in this Castlemaine district, where he conducted the business of a slaughterman at Oshewton. On 5 Dec. 1870 Patterson, after two unsuccessful candidatures, was returned to the colonial legislative assembly for Castlemaine, a seat which he retained until his death. He was a strong advocate of protection in trade, supported the ministry of Sir James McCulloch [q. v.] in 1870 and 1871, and was an active opponent of (Sir) Charles Gavan Duffy's administration in 1871 and 1872. He supported James Goodall Francois [q. v.], who came into power in June 1872, but not very strenuously; and when, in July 1874, Francois transferred the premiership to George Biscoe Kerferd, Patterson joined the opposition, led by (Sir) Graham Berry. On the resignation of the Kerferd ministry in August 1875, Berry took office and gave Patterson the position of commissioner of public works and president of the board of land and works. On 7 Oct. the ministry were defeated by a coalition between McCulloch and Kerferd, and Patterson remained out of office until May 1877, when Berry, being returned with an immense majority, restored Patterson to the same

offices, giving him the additional charge of postmaster-general. In that ministry there was a small inner cabinet consisting of Berry, Major William Collard Smith, Patterson, and, afterwards, Sir Bryan O'Loughlen. Of these Patterson was the most active and carried most weight in the government. In March 1880 Berry's ministry fell, but in July another general election on the question of the reform of the constitution brought him back to power. On returning to office he retained only Patterson and Smith among his former colleagues. Patterson was appointed minister of railways. Profiting from experience he was extremely moderate in his counsels. Largely owing to his advocacy a compromise on the subject of the reform of the constitution was effected, by which the legislative council was enlarged and strengthened. He also made an unsuccessful effort to exempt the railway system from political influence.

On the defeat of the ministry in July 1881 Patterson went into opposition, but he had ceased to be a strong partisan. Convinced that the colony required a stable government, he and Simon Fraser succeeded in bringing about a coalition in 1883 between Berry and James Service [q. v. Suppl.] Under these leaders the country enjoyed a period of political tranquillity. In April 1889 he accepted the portfolio of minister of the customs in Duncan Gillies's ministry, which he had at one time strongly opposed, and succeeded in passing a new tariff, which consisted almost entirely of new or increased duties. This tariff he subsequently acknowledged he regretted more than anything in his political career. From June to September 1890 he filled the additional office of minister of public works, and from September to November that of postmaster-general. The energy with which he persuaded his colleagues to call out the troops in Melbourne in consequence of the disorders of the great maritime strike hastened the downfall of the ministry at the close of 1890. On 23 Jan. 1893, after a visit to England, he overthrew the administration of William Shiels, and was invited to form a ministry in which, besides the office of premier, he held that of minister of railways. Realising the unsound financial position of the colony, he sought a remedy in retrenchment and the development of the export trade. Early in his ministry, however, an astonishing succession of bank failures shattered public credit. He resisted incitements to extreme measures of relief for particular institutions, prepared by interested or panic-stricken persons, but he consented to the doubtful expedient of de-

claring a bank holiday of five days to give the banks time to collect their resources. Government's popularity was impaired by the financial distress, and in August 1894 Patterson was defeated on the budget. His successors, however, continued his financial policy.

Patterson was created K.C.M.G. in 1894, and died at Murrumbidgee, near Melbourne, on 30 Oct. 1895. He was buried in Melbourne cemetery on 1 Nov. In 1857 he married Miss Walton. His wife died on 2 Dec. 1894, leaving an only child, who married Mr. A. Kaeppl.

[Melbourne Argus, 31 Oct. 1895; Mennell's Dict. of Australian Biogr. 1892; Annual Register.] E. I. C.

PAYN, JAMES (1880-1898), novelist, was born at Cheltenham on 28 Feb. 1880. His father, William Payn, was clerk to the Thames commissioners, and lived at Maidenhead. He was popular in the county, kept the Berkshire harriers, and was compared to a hero of the old English comedy. He died too early to be distinctly remembered by his son, who became the pet of his mother, an affectionate and beautiful woman. Payn's father had begun to initiate him in various country sports; but from a very early age he preferred books, and devoured such fiction as he could obtain. He was known as a story-teller at a preparatory school, to which he was sent at the age of seven. He suffered much bullying, and did not find Eton, to which he was sent at eleven, more congenial. He was hurt by the rejection of an article written for a school magazine, and the classical lessons gave him a permanent dislike of Greek and Latin. He was always a very poor linguist. He was taken from Eton to be sent to a 'crammer' for the Woolwich academy, to which he had received nomination. He passed third in the examination for the academy, but had to leave it after a year on account of his health. It was then decided that he should take orders, and he passed a year with a private tutor in Devonshire. Here he found himself for the first time in congenial surroundings. He had been disgusted with the rigid discipline and the coarse amusements of his comrades at Woolwich, and had relieved himself by boyish escapades and by nursing his literary tastes. From Devonshire he sent an article describing the academy to 'Household Words,' then edited by Dickens. Its publication produced a remonstrance from the governor of the academy, and incidentally led to Payn's first communication with Dickens, for whom he always entertained the warmest regard

and admiration. While in Devonshire he also succeeded in gaining admittance of various pieces of verse to periodicals. In October 1847 he entered Trinity College, Cambridge. He cared nothing for the regular course of study. He became president of the union, and was a popular member of various societies. He made many warm friendships among his contemporaries, and was kindly welcomed by some of the college authorities, especially William George Clark [q. v.] and George Brimley [q. v.] He retained many of his college friendships to the last. During his undergraduate career he published two volumes of verse, the first of which, 'Stories from Boccaccio' (1852), was warmly praised by Brimley in the 'Spectator.' Payn was greatly encouraged, and soon determined to devote himself to the profession of literature.

He took a first class in the examination for the ordinary degree at the end of 1852. He was already engaged to Miss Louisa Adelaide Edlin, and the marriage took place on 28 Feb. 1854. He had now to make his living. He first settled in the Lakes at Rydal Cottage, 'under the shadow of Nab Scar.' He was already known to Miss Mitford, a neighbour and friend of his father in early years. She introduced him to Miss Martineau, then residing at Graemere, and both literary ladies encouraged and advised him. He soon became a regular contributor to 'Household Words' and 'Chambers's Journal.' In 1858 he became 'co-editor' with Leitch Ritchie [q. v.] of 'Chambers's Journal,' and settled in Edinburgh. A year later he became sole editor. He became a warm friend of Robert Chambers [q. v.], one of the proprietors, and made some pleasant acquaintances at Edinburgh. Both the climate and the puritanism of Scotland were uncongenial to him, and he was glad to remove to London in 1861, where he continued to edit the journal. Payn now settled in the Maida Vale district, and remained there for the rest of his life. He thoroughly enjoyed London life. He has described some impressions of his rambles in a volume called 'Melbourne in London.' He had met Dickens in 1856, and soon made himself known in the literary circles in which Dickens was the great light. Payn rarely left London, and says that for the twenty-five years preceeding 1884 he had only taken three days of consecutive holiday once a year. Upon the death of Robert Chambers in 1871, William Chambers became the chief proprietor of the journal. Differences of opinion arose, and Payn resigned the editorship in 1874. He then became reader to Messrs. Smith, Elder, &

Co., and from 1883 till 1896 edited the 'Cornhill Magazine' for the firm. Payn's first novel, 'The Foster Brothers,' founded on his college experiences, appeared in 1859. From that date he was a most industrious writer of novels, long and short. His 'Lost Sir Massingbard,' which appeared in 'Chambers's Journal' in 1864, is said to have raised the circulation by twenty thousand copies, and permanently advanced his popularity. 'By Proxy,' published independently in 1873, was, he says, the most popular of his novels, and fully established his position. At a later period Payn became widely known by a weekly column of lively anecdotes and gossip contributed to the 'Illustrated London News.' As a novelist Payn was much influenced by, though he did not imitate, Dickens. In his writing, as in his life, he was the simplest and least affected of men. He made no pretence to profound views of human nature, but overflowed with spontaneous vivacity and love of harmless fun. He had a singularly quick eye for the comic, and remarkable skill in constructing ingenious situations. The same qualities marked his short essays and his conversation. He had a great store of anecdote, and was most charming in conversation. He took a lively interest in most subjects of the day, though literary matters always held the first place in his mind. Nobody could be more generous in recognising the merits of his contemporaries; and, as an editor, he took a special pleasure in helping young aspirants in the profession to which he was always proud of belonging. In later years he became crippled by rheumatism. Constant pain produced occasional fits of depression, but never soured his temper or weakened his elasticity of spirit. He had been on friendly terms with most of the literary men of his time. He was most retentive of old friendships, and constantly adding new ones to the number. He had been a good whist player from his college days, and in London a daily rubber was his main recreation. When he was confined to his house, members of his club arranged to get up a game there twice a week. The personal charm was heightened by the gallantry with which he met his sufferings, and few men have been so deservedly popular in a large circle. After his health had compelled him to give up his editorship he still devoted himself to literary work; but his strength was failing, and he died on 25 March 1898 at his house in Warrington Crescent, Maida Vale.

Payn's domestic life had been thoroughly happy. His sense of the blessing is pathetically indicated in the essay called 'The Back-

water of Life,' which gives the title to a posthumous volume of essays. Mrs. Payn survived him, with two sons and five daughters, the third of whom, Alicia Isabel, married in 1885 Mr. G. E. Buckle, editor of the 'Times,' and died in 1898.

Payn's publications include: 1. 'Stories from Boccaccio,' 1852. 2. 'Poems,' 1853. 3. 'Stories and Sketches,' 1857. 4. 'Leaves from Lakeland,' 1858. 5. 'The Foster Brothers,' a novel, 1859. 6. 'The Bateman Household,' 1860. 7. 'Richard Arbour,' 1861 (republished under the title of 'A Family Scapgrace,' 1869). 8. 'Malibous in London,' 1862. 9. 'Furness Abbey and Neighbourhood,' 1862; new edit. 1869, 4to. 10. 'Lost Sir Massingberd: a Romance of Real Life,' 1864, 2 vols.; 4th edit. 1878. 11. 'Married beneath him,' 1865, 3 vols. 12. 'People, Places, and Things,' 1865; new edit. 1876. 13. 'The Cliffards of Clyffe,' 1866, 3 vols. 14. 'Mirk Abbey,' 1866, 3 vols.; new edit. 1869. 15. 'Lights and Shadows of London Life,' 1867, 2 vols. 16. 'The Lakes in Sunshine,' illustr. 1867; new edit. 1870. 17. 'Carlyon's Year,' 1868, 2 vols. 18. 'Blondel Parva,' 1868, 2 vols. 19. 'Bentinck's Tutor,' a novel, 1868, 2 vols. 20. 'Found Dead,' 1869. 21. 'A County Family,' 1869, 3 vols.; new edit. 1871. 22. 'Maxims by a Man of the World,' 1869. 23. 'A Perfect Treasure; or, Incident in the Early Life of Marmaduke Drake, Esq.,' 1869. 24. 'Gwendoline's Harvest,' a novel, 1870, 2 vols. 25. 'Like Father, like Son,' 1870, 3 vols. 26. 'Won—not Wood,' 1871. 27. 'Cecil's Tryst,' a novel, 1873, 3 vols. 28. 'A Woman's Vengeance,' 1872, 3 vols.; new edit. 1874, 1 vol. 29. 'Murphy's Master,' 1873, 2 vols. 30. 'The Best of Husbands,' 1874. 31. 'At her Mercy,' 1874, 3 vols. 32. 'Walter's Word,' 1875, 3 vols.; new edit. 1879. 33. 'Halves,' 1876, 3 vols.; new edit. 1880. 34. 'Fallen Fortunes,' 1876, 3 vols. 35. 'What he cost her,' a novel, 1877, new edit. 1880. 36. 'By Proxy,' 1878, 2 vols.; 1880, 1 vol.; new edit. 1898. 37. 'Less Black than we're painted,' 1878, 3 vols. 38. 'High Spirits: being certain Stories written in them,' 1879, 3 vols.; 1880, 1 vol. 39. 'Under one Roof: a Family Episode,' 1879, 3 vols.; 1880, 1 vol. 40. 'A Marine Residence, and other Tales,' 1879, 12mo; new edit. 1881. 41. 'A Confidential Agent,' 1880, 3 vols. 42. 'From Exile,' 1881, 3 vols.; new edit. 1883. 43. 'A Grape from a Thorn,' 1881, 3 vols. 44. 'Some Private Views: Essays from the "Nineteenth Century Review,"' 1882; new edit. 1883. 45. 'For Cash only,' a novel, 1882, 3 vols.; new edit. 1882, 1 vol. 46. 'Kit: a Memory,'

1883, 3 vols.; new edit. 1885. 47. 'Thicker than Water,' 1883, 3 vols.; new edit. 1884. 48. 'Some Literary Recollections,' 1884; new edit. 1885. 49. 'The Canon's Ward,' 1884. 50. 'In Peril and Privation,' 1885. 51. 'The Talk of the Town' (or the story of the forger, William Henry Ireland), 1885. 52. 'The Luck of the Darralls,' 1885; new edit. 1886. 53. 'The Hair of the Ages,' 1886. 54. 'Glowworm Tales,' 1887. 55. 'Holiday Tasks,' 1889. 56. 'A Prince of the Blood,' two edits. 1888. 57. 'The Eavesdropper,' 1888. 58. 'A Mystery of Mirbridge,' 1888. 59. 'The Burnt Million,' 1890. 60. 'The Word and the Will,' 1890. 61. 'Notes from the "News,"' 1890. 62. 'The Modern Dick Whittington,' 1892; another edit. 1893. 63. 'A Stumble on the Threshold,' 1892; 2nd edit. 1893. 64. 'A Trying Patient,' 1893. 65. 'Gleams of Memory,' 1894. 66. 'In Market Over,' 1895. 67. 'The Disappearance of George Driffel,' 1896. 68. 'Another's Burden,' 1897. 69. 'The Backwater of Life,' with an Introduction by Leslie Stephen, 1899.

[Introduction by the present writer to the 'Backwater of Life,' 1899; written on information from the family. See also autobiographical notices in 'Some Literary Recollections,' 1884, and 'Gleams of Memory,' 1896.] L. S.

PEARSON, JOHN LOUGHBOROUGH (1817-1897), architect, born in Brussels in 1817, was the son of William Pearson, etcher and water-colourist, whose father, a solicitor, belonged to a family possessing property in the neighbourhood of Durham. After pupillage (1831) in the office of Ignatius Bonomi [see BONOMI, JOSEPH, the elder] at Durham, young Pearson continued his architectural training in London, first under Anthony Salvin [q. v.], and next with Philip Hardwick [q. v.]; under Hardwick he was engaged upon the drawings of the hall and library of Lincoln's Inn, which are said to owe at least as much to the assistant as to the master. In 1843 Pearson began independent practice. His first office was in Keppel Street, Bloomsbury, and his first works were for Yorkshire, such as Ellerker Chapel in 1843, the churches of Elloughton and Wauldby in 1844, Ellerton in 1846, and North Ferriby, completed in the same year. In 1860 Pearson began the first of the London churches with which his name is associated. Holy Trinity, Bessborough Gardens, designed for Archdeacon Bentinck, was looked upon by the contemporary leaders of the Gothic revival as a conspicuous example of good work. The style adopted was the 'geometric' type of Gothic,

and the church is remarkable for the dimensions of the chancel, which, owing to a peculiarity of the site, is made wider than the nave.

Pearson had already begun his work as a restorer on the churches of Lea, Lincolnshire, Llangasty Talillyn, and others. He had also (1818) done his first domestic work, a house at Troborfydd. In 1853 he was elected a fellow of the Society of Antiquaries. Various works of church restoration belong to this period—such as Ecton in Rutlandshire, Braintree and Ashen in Essex, and Stinchcombe in Gloucestershire, the reseating of Fuirford Church in the same county, and the reconstruction of the groining of Stow Church, Lincolnshire; this last gave him an introduction to a branch of art in which he achieved great success. Pearson's second London church, St. Peter's, Vauxhall, begun about 1859, showed (like Freeland Church, Dalton Helme, Scarborough, Daylesford, and others) traces of the French study then in vogue with Sir George Gilbert Scott [q. v.] and his school. It has a nave and chancel equal in width and height, aisles, a baptistery, a narthex, and an apse. It draws its light almost entirely from the clerestory, is vaulted throughout with stone ribs and brick filling, and is said to have cost little more than 6,000*l*. Pearson was by this time in full practice, and works followed one another with rapidity. Yorkshire still supplied many opportunities, a new church at Broomfleet in 1867, and another with vicarage at Appleton-le-Moors (1863), restorations in the same year at Bishop Wilton and South Cayo, shortly followed by Bishop Burton (1859), Ilkston (1860), Lasingham (1862, a particularly interesting work), and both Riccall and Hemsworth in 1864.

Babworth, Nottinghamshire, was restored in 1858, Nibloy, Gloucestershire, in the next year, and in 1860, the year in which Pearson became a fellow of the Royal Institute of British Architects, he designed the new church of Rhydydwyn, and subsequently many similar works in Wales.

It was not till 1870 that Pearson received his first appointment as architect to a cathedral fabric. In that year he was consulted at Lincoln, where he restored the groining of the north transept, rebuilt part of the south-west tower, and repaired the chapter-house and cloister. About the same time he was engaged on the building of another great London church, that of St. Augustine, Kilburn, remarkable for its size, for its moderate price (11,200*l*. in the first instance), for its new treatment of the gallery problem, and for its highly suc-

cessful use of stock-brick for the interior wall surface. It is of a thirteenth-century type, though not exclusively English in its plan. In 1872 Pearson built Wentworth Church, Yorkshire, for Lord Fitzwilliam, a good imitation of fourteenth-century work. In 1874 he built his fourth great London church, that of St. John, Red Lion Square, with its vicarage. Here Pearson showed his skill in occupying an unpromising site, and the church is as remarkable in point of plan as in the beauty of the Early English detail employed.

Horsforth Church, near Leeds, in the thirteenth-century manner, belongs to the same year, and Headingly Church in the same neighbourhood to 1885. In 1878 Pearson received a gold medal at Paris and the knighthood of the legion of honour. In 1879 he was selected as architect for the new cathedral of Truro; this appointment may be said to have coupled Pearson with Sir Christopher Wren as the only architects of English cathedrals consecrated since the middle ages. Except for the fact that a portion of the old parish church was incorporated as one of the south choir aisles, the building is an entirely new one, thus distinguishing the task from those works of alteration which have been undertaken in other towns to suit parish churches to the needs of new dioceses. It is the greatest ecclesiastical opportunity which has been offered to any modern architect, and it was used by Pearson in a manner which showed him a consummate master of the art of building according to mediæval precedent.

The outer walls are faced with Penryn granite, the dressings being of Bath stone. The internal ashlar is also of granite, contrasted with columns of polyphant. The incorporation of the portion of old building (which in date is later than the style adopted for the main fabric) not only gives rise to interesting changes of level, but also controls the disposition of the columns in the choir which was made to follow the spacing of the bays in the old church. It was the necessity of supporting the south buttresses of the choir that gave rise to the picturesque double row of shafts which separates the old work from the new. The total length of the cathedral when completed will be three hundred feet, the height of the central spire 250 feet, the width of nave twenty-nine feet, and the height of vaulting seventy feet. The part first completed (which omitted all the nave except two bays and the upper part of the tower) cost 74,000*l*., and the fittings cost 15,000*l*. more. It was consecrated on

3 Nov. 1887, the foundation-stone having been laid by the Prince of Wales, as duke of Cornwall, on 20 May 1880. In this same year, 1880, Pearson received the gold medal of the Royal Institute of British Architects, on the council of which he at one time served, and was honoured by the full membership of the Royal Academy, having been an associate since 1874. In 1879 he had designed St. Alban's Church, Birmingham, in which town he also, in 1896, built the church of St. Patrick. St. Agnes, Liverpool, dates from 1883, Speks in the same county from 1873, and Norley Church in Cheshire from 1878.

Of Pearson's works of restoration the best known is the north transept of Westminster Abbey, the front of which (though largely designed from fragments found in the old walls) he may be said to have rebuilt. The portals had already been handled by Sir George Gilbert Scott. His other work in the abbey consisted of general repairs. Pearson's proposals for the restoration at Westminster Hall were the subject of a select parliamentary committee in 1885, before which the architect argued against much opposition, but with ultimate success, in favour of re-erecting between the buttresses on the west side a building such as in his opinion had once existed there before. This building was carried out, in Ketton stone, and the committee-rooms and other apartments of which it consists are approached by a staircase from the floor of Westminster Hall. Pearson's report to this committee was fully illustrated with plans and diagrams, and disclosed very completely the history of the building.

Other small works by Pearson in the same neighbourhood were the replacement of the nondescript porch of St. Margaret's Church by a new one of correcter Gothic, sundry alterations in Westminster School, and some new canon's houses.

Besides Lincoln, already mentioned, Pearson was engaged in cathedral restoration at Peterborough, Canterbury, Bristol, Rochester, Chichester, and Exeter. At the last-named he rebuilt part of the cloister and formed a chapter-library above it. The Chichester appointment came only just before his death, though he completed a design for the new tower. At Rochester he restored the Norman west front and ornamented the screen. At Canterbury he reinstated St. Anselm's Chapel. At Bristol, besides various repairs, he finished the western towers from the design of George Edmund Street [q.v.], rearranged the choir with a new marble floor, and designed the altar screen, sedilia,

and choir screen, and restored the ancient gateway. At Peterborough he twice had to face the storm of criticism. The central tower was bound to come down, and it was restored on the numbered-stone system; but controversy arose over the question whether the pointed arches of the tower piers should be restored as pointed arches, or whether the Norman character of the surrounding work should be a sufficient argument for making the new arches circular. The question was referred to the archbishop of Canterbury, who decided for the pointed form, and also gave his vote against Pearson's original design for a new tower. This later controversy, which concerned itself with the great narthex at the west front, began in 1896. A strong opposition, which took the form of newspaper correspondence (see *Times*, December 1896, January 1897), combated Pearson's intention of reconstructing the arches, which were evidently insecure, and argued for the retention *in situ* of all the existing external stones. With characteristic unconcern Pearson, who was sure of his ground, took no part in the controversy, if he even read the letters of his opponents, and before his death carried out a great part of the work, in which of course he preserved every possible portion of the ancient masonry. His interior work at this cathedral included the elaborate marble pavement of the sanctuary, the bishop's throne, the stalls, and the baldachino.

Pearson's art was neither exclusively Gothic nor wholly ecclesiastical. Trebarfydd, a country house already mentioned, was of a late fifteenth-century type. Quar Wood (Gloucestershire), which followed, was certainly Gothic, but Roundwick (Sussex) was Tudor in character, and Lechlade Manor Jacobean. Westwood House, Sydenham, shows something of a François I treatment, while the offices for the Hon. W. W. Astor on the Thames Embankment display a free type of Renaissance work. This building is an excellent and rich design, exhibiting to the full the versatility of its author's genius. For the same employer Pearson carried out works at Carlton House Terrace and Cliveden, Buckinghamshire, previously owned by the Duke of Westminster.

Among Pearson's other works in London and neighbourhood should be mentioned the Catholic Apostolic Church, near the Regent's canal, noticeable externally for a deeply recessed west window; the sedilia, font, and font-cover at St. Andrew's, Wells Street; a chapel at the Middlesex Hospital; the restoration of St. Mary-the-Less, Lambeth; St. Helen's, Bishopsgate; and All Hallowe

Barking; the new and important churches of St. Michael, Croydon (1880), and St. John, Upper Norwood (1881); the building of St. Peter's Home, Kilburn, and various schools. He did little work at Oxford, only additions to a hospital in the suburb of Cowley and the reredos at New College; but at Cambridge he carried out extensions at Sidney Sussex and Emmanuel Colleges, and did a similar task at the university library, where the existing fragment of the fifteenth-century gateway was cleverly incorporated.

It is impossible to give here a complete list of Pearson's works, but the following entirely new churches are worthy of special notice: St. Barnabas and All Saints at Hove, Brighton (the latter with a striking tower); St. Matthew at St. Leonards-on-Sea; St. Stephen, Bournemouth; High Cliffe, near Winchester; All Saints, Torquay (St. Matthias in the same town was only remodelled by Pearson); Sutton-Weavey, Chute Forest, Porton, and Laverstoke—all in Wiltshire; Oakhill, Somerset; St. James, Weybridge; Tilsey, near Godstone; Ilersham, Surrey; Freeland, Oxfordshire (with vicarage and school); Daylesford, Worcestershire; Norley, Winton, and Thurston in Cheshire; Daybrook, near Nottingham; Wentworth, for the Earl of Fitzwilliam; Darlington; Cullercoats, for the Duke of Northumberland; and two churches in the Isle of Man, Kirkbraddan, and St. Matthew, Douglas. St. John, Redhill, was practically rebuilt by Pearson, as was also the church at Chislewick. Pearson made a complete design for Brisbane Cathedral, under the instructions of Bishop Webber, his former employer at Red Lion Square; this was opened in 1901.

In Scotland Pearson's only works were the Gloumalmond infirmary and a new church at Ayr. In Wales, besides the church already mentioned, he designed those of Solva, Port Talbot, and Tretower. His principal domestic works not already mentioned were St. Peter's Convalescent Home at Woking, a residence for the Hon. O. Lawley at Exminster, and two others at Rustington, Sussex, and Great Warley near Bruntwood, besides numerous vicarages in different parts of the country. He designed a mausoleum at Tunbridge Wells and a chapel in Byzantine style for the cemetery at Malta.

Pearson was fully engaged in work to the end of his life, and, dying after a short illness at 18 Mansfield Street on 11 Dec. 1897, was honoured with a funeral in Westminster Abbey. He married, in 1863, Jennima, daughter of Henry Curwen Christian (she died in 1895); by her he had one son, Frank Loughborough Pearson, who was for

many years intimately associated with his father's work, and continued after his death the additions to Wakefield Cathedral, the north-western tower of Chichester Cathedral, and the building of Truro Cathedral, of which the nave was completed in 1903.

A good portrait of Pearson was painted in oils by Mr. W. W. Ouless, R.A., and is now in the possession of Mr. Frank Pearson. He was a man of moderate height and pleasant aspect, with a full beard and moustache and gentle expressive eyes. Having few interests outside his art he gave his whole mind to it, was intensely industrious, and exceptionally modest. Though far from unsociable he was unusually retiring. Unlike many of his brother-architects, he never wrote or lectured on the subject of his art. From the time when he first started his work in London he never lived in the country; his first office was changed for one in Delahay Street, Westminster, and before he took his final office and residence in Mansfield Street he had for a time a home in Harley Street.

PEMBROKE, thirteenth EARL OF. [See THOMAS GEORGE ROBERT CHARLES, 1850-1896.]

PENDER, SIR JOHN (1816-1896), pioneer of submarine telegraphy, born on 10 Sept. 1816, was son of James Pender, of the Vale of Leven, Dumbartonshire, and Marion Mason. He was educated at the high school of Glasgow, where he received a gold medal for a design, and after a successful career as a merchant in textile fabrics in Glasgow and Manchester he made the extension of submarine telegraphy his principal study. On the formation of the first Atlantic Cable Company in 1856, Pender was one of the original 345 contributors of 1,000*l.* towards the expenses of the necessary experiments, and, as a director of that company, he shared the failures and disappointments which for eight years baffled all attempts to bring the scheme to a successful issue [see BRIGHT, SIR CHARLES TILSTON, Suppl.] The snapping of the cable of 1865 in mid-ocean during the historic voyage of the *Great Eastern* proved the financial ruin of the Atlantic Company. Many of the original supporters of the enterprise were dead, many more were utterly discouraged by repeated failures, and the abandonment of the project was imminent, when, through the efforts of Pender, Sir William Thomson (now Lord Kelvin), Sir Charles Bright, and a few others,

the Anglo-American Company was formed, and negotiations were opened with Messrs. Glass, Elliot, & Co. and the Gutta Percha Company for the manufacture of a new cable of greater strength and value than any previous one; but the latter company refused to proceed without a guarantee. It was at this crisis that Pender offered his personal security for a quarter of a million sterling, when the two companies were amalgamated under the name of the Telegraph Construction and Maintenance Company, with Pender as chairman. Not only was the new cable successfully laid in 1866, but the broken one was recovered. To Pender's energy was afterwards largely due the formation of that great system of eastern telegraphs which, under the names of the Eastern and Eastern Extension Telegraph Companies, link together the whole of our Asiatic and Australasian possessions, and through his exertions the cables of the Eastern and associated companies surround the continent of Africa [cf. CLARK, *LATIMER*, Suppl.] Successful as a pioneer, Pender's sound commercial instincts always stood him in good stead as an organiser and administrator. In his later years he devoted much attention to the electric lighting of London, being chairman of the Metropolitan Electric Supply Company, the largest undertaking of its kind in this country.

Pender sat as liberal member for Totnes in 1862-6, but was unseated on petition. In 1868 he unsuccessfully contested Louthgownshire, but was member for the Wick Burghs, as a liberal, from 1872 to 1885, and, as a liberal unionist, from 1892 to 1896, when he resigned. He unsuccessfully contested the Wick Burghs in 1885, Stirling Burghs in 1886, Wick Burghs again in 1886, and Govan in 1889. In recognition of his services to the empire Queen Victoria made him in 1888 a K.C.M.G., when Lord Derby presided at a banquet given in his honour, and in 1892 he was promoted to a grand cross of the same order. Sir John held many foreign orders, among them the legion of honour and the grand cordon of the Medjidie. He was also a fellow of the Imperial Institute, of the Royal Society of Edinburgh, of the Royal Geographical Society, and of the Scottish Society of Antiquaries. In 1869 he published 'Statistics of the Trade of the United Kingdom from 1840.' He died of paralysis at Footercray Place, Kent, on 7 July 1890, and was buried in the parish churchyard. A portrait by Sir Hubert Herkomer, R.A., is in the possession of Sir James Pender.

Sir John was twice married: first, on 28 Nov. 1840, to Marion, daughter of James

Cairns of Glasgow, and by her (who died on 16 Dec. 1841) he had James, M.P. for Mid-Northamptonshire from 1895 to 1900, who was created a baronet in 1897; secondly, on 12 June 1851, to Emma, only surviving child and heir of Henry Denison of Daybrook, Arnold, Nottinghamshire, and by her (who died on 8 July 1890) he had two sons and two daughters. The elder son of the second marriage, Henry Denison, died in 1881; the younger, (Sir) John Cuthbert Denison-Pender, became managing director, director, or chairman of numerous telegraph and cable companies. The younger daughter, Marion Denison, married Sir George William des Vœux, governor of Hong Kong, 1887-91.

PEPPER, JOHN HENRY (1821-1900), exhibitor of 'Pepper's Ghost,' born at Westminster on 17 June 1821, was educated at Loughborough House, Brixton, and King's College school, Strand. In 1840 he was appointed assistant chemical lecturer at the Granger school of medicine, in 1847 he gave his first lecture at the Royal Polytechnic in Regent Street (founded in 1838), and in 1848 he was appointed analytical chemist and lecturer to that institution. Some four years later he became 'honorary' director of the Polytechnic at a fixed salary, a post which he held for twenty years. He lectured frequently at the Polytechnic, and was invited to numerous schools, at which he delighted juvenile audiences by popular experiments, illusions, and magic-lantern displays. He also issued a series of unpretentious manuals of popular science, which had a wide circulation. They include 'The Boy's Playbook of Science' (1860), 'The Playbook of Metals' (1861), 'Scientific Amusements for Young People' (1861), and 'Cyclopædic Science Simplified' (1869). On the title-pages of these he describes himself as fellow of the Chemical Society, and honorary associate of the Institution of Civil Engineers. His title of professor was conferred upon him 'by express minute of the Polytechnic board,' and was not therefore, he was careful to explain, that of a hairdresser or a dancing-master.

During the winter of 1862, when the Polytechnic was suffering severely from the reaction that followed the heavy business due to the exhibition of that year, Pepper succeeded in reviving the popularity of the institution and ensuring its future by means of an optical illusion, described by the

'Times' as the most wonderful ever put before the public. In September 1858 Henry Dircks [q.v.] of Blackheath had communicated to the British Association the details of an apparatus for producing 'spectral optical illusions' (see *Mech. Mag.* 7 Oct. 1858; *Engineer*, 1 Oct. 1858). The idea was rejected by several entertainers, but Dircks had sufficient faith in it to have the necessary apparatus made. Peppor no sooner saw this than he cordially welcomed the invention, and, after some not very important modifications in the machinery, exhibited the 'ghost' for the first time on 24 Dec. 1862, in illustration of Dickens's 'Haunted Man.' On 5 Feb. 1863 the apparatus was patented in the joint names of Peppor and Dircks, both renouncing any pecuniary claim upon the Polytechnic.

Dircks afterwards complained, with some apparent justification, that he had been deluded into this arrangement, and that his name as that of sole inventor was unduly obscured in the advertisements of the exhibition. Popularly known as 'Peppor's Ghost,' the illusion had an enormous vogue, was visited by the Prince and Princess of Wales (19 May 1863), commended to Windsor, and transferred to the boards of many London theatres, to the Châtelet at Paris, to Wallack's Theatre, New York, and to the Crystal Palace. In March 1872 Peppor temporarily transferred his exhibit to the Egyptian Hall. Shortly after this he went out to Australia and was appointed public analyst at Brisbane. In 1890 he returned to England and reintroduced his 'ghost' at the Polytechnic, but the spectre failed to appeal to a sophisticated public, and its proprietor withdrew into private life and wrote 'The True History of Peppor's Ghost' (1890). The 'Professor' died in Colworth Road, Leytonstone, Essex, on 20 March 1900.

S.

PERRY, GEORGE GRESLEY (1820–1897), church historian, born at Olmehill in Somersetshire on St. Thomas's day, 1820, was the twelfth and youngest child of William Perry, an intimate friend and neighbour of Hannah More [q.v.]. He was educated at Ilminster under the Rev. John Allen, and in 1837 he won a scholarship on the Bath and Wells foundation at Corpus Christi College, Oxford. In 1840 he graduated B.A. with a second class in *lit. hum.* His fellowship at

Corpus would have followed in due course, but meanwhile a vacancy occurred in the Wells fellowship at Lincoln College, for which Perry was the successful competitor, Mark Pattison [q.v.], who was then just beginning his intellectual reform of the college, strongly pressing his claims. He graduated M.A. in 1843, and was ordained by the bishop of Oxford—deacon in 1844 and priest in 1845. He held for a short time, first, the curacy of Wick on the coast of Somerset, and then that of Combe Florey, near Taunton; but in 1847 he returned to Oxford as college tutor at Lincoln, which office he held until 1852. During the last year of his fellowship occurred the memorable contest for the rectorship, described with such painful vividness in Pattison's 'Memoir.' In this contest Perry took a leading and characteristically straightforward part. It was he who first told Pattison that the junior fellows wished to have him for their head, and from first to last he supported Pattison heartily.

In 1852 Perry accepted the college living of Waddington, near Lincoln, and there he remained to the end of his days. He entered upon his duties on Low Sunday, 1852, and next October married Eliza, sister of George Salmon, at one time provost of Trinity College, Dublin, a most happy union. The life of a country clergyman suited Perry. He was always fond of country pursuits, understood the minds of country people, and could profitably employ the leisure which such a life affords. He attended well to his country parish, and also threw himself heartily into the work of the diocese, which showed, as far as it could, its appreciation of him. In 1861 Bishop Jackson made him a non-residentiary canon and rural dean of Longoboby; in 1867 his brother clergy elected him as their proctor in convocation; and they continued to re-elect him (more than once after a contest) until he voluntarily retired in 1893. In 1891 Bishop King appointed him to the archdeaconry of Stow, which he held until his death.

Perry's parochial and diocesan work still left him abundance of time for study, which he employed conscientiously for the benefit of the church. The earliest work which brought him into notice in the literary world was his 'History of the Church of England,' in 3 vols. 8vo, the first of which appeared in 1860, the third in 1864. Its fairness and accuracy were at once recognised, and its value was increased by the fact that it was the first general history which included the dreary but highly important period of the eighteenth century, previous historians, as a

rule, having stopped short at the Revolution of 1688. In 1868 he published for S.P.C.K. a short 'Life of Henry Hammond' and a similar 'Life of Robert Boyle,' and among his other minor works were 'The Bishop's Daughter,' 1860; 'Vox Ecclesiae Anglicanae,' 1868, being extracts from English theologians; 'History of the Crusades,' no date; 'Victor, a Story of the Diocletian Persecution,' no date; 'Croyland Abbey,' no date. In 1872 came a book which greatly enhanced his reputation, the 'Life of Bishop Grosseteste.' His intimate knowledge of the university of Oxford and also of the diocese of Lincoln, with both of which Grosseteste was so closely connected, at once rendered this task a labour of love to him, and enabled him to carry it out successfully. This was followed in 1879 by an equally good 'Life of St. Hugh of Avalon, Bishop of Lincoln,' though of course he had here to come into competition with the 'Magna Vita' (Rolls Ser.) In 1886 appeared a yet more successful production of his pen, a 'History of the Reformation in England,' written for the 'Epochs of Church History' series edited by Canon (afterwards Bishop) Creighton [q.v. Suppl.]. This work gave scope for the development of Perry's most characteristic merits—his power of condensation and of seizing the salient points of a subject, his fairness, and his accuracy. Moreover, although Perry was a good all-round historian, the Reformation period was that with which he was most familiar. The volume ranks among the best of an excellent series. The same merits are found in his larger publication, 'The Student's English Church History,' the Second Period (1509–1717) appearing in 1878, the First Period (598–1509) in 1881, and the Third Period (1717–1884) in 1887. He also left two posthumous works. One was the 'Diocesan History of Lincoln,' for the series published by S.P.C.K. This he took up after the death of Edmund Venables [q.v.], and incorporated in it the work which Venables had done. It was not published until after his death, in 1897; but he lived just long enough to correct the final proofs. The other was the 'Lives of the Bishops of Lincoln from Remigius to Wordsworth.' In this he had been engaged for several years in conjunction with Canon Overton, to whom he proposed the joint undertaking, 'as a pious tribute to our common *alma mater*' (i.e. Lincoln College, of which bishops of Lincoln were founders, benefactors, and *ex-officio* visitors), but the work has not yet (1901) appeared. Perry was also a contributor to periodical literature and to the 'Dictionary of National

Biography.' He died on 10 Feb. 1897, and was buried in Waddington churchyard. A tablet to his memory in Waddington church and a window in the chapter house of Lincoln Cathedral were erected by public subscription. He lost his wife in 1877. By her he had three sons and four daughters, five of whom survived him.

PETERSON, PETER (1847–1899), Sanskrit scholar, the son of John Peterson, merchant of Leith, and Grace Montford Anderson, was born in Edinburgh on 12 Jan. 1847. His father and paternal grandfather were natives of Shetland, and hence Peterson was wont to describe himself as a Shetlander. From the high school at Edinburgh he passed to the Edinburgh University, where he graduated with first-class honours in classics in 1867. It was here that he commenced the study of Sanskrit under Professor Aufrecht. After a visit, partly for study, to Berlin, he proceeded in 1869 to Lincoln College, Oxford, in which university he continued Sanskrit under Sir Monier Monier-Williams [q.v. Suppl.] and Friedrich Max Müller [q.v. Suppl.], gaining the Boden (university) scholarship in Sanskrit in 1870, and then joining Balliol College, from which he graduated in 1872. On 2 Jan. 1873 he joined the Indian educational service, and went to Bombay as professor in Elphinstone College. He also held the post of university registrar during the greater part of his career. During his first nine years in India Peterson seems to have done little original work. Indeed in 1881 the Bombay government actually proposed to transfer him to a chair of English, making over the Sanskrit teaching to Professor Bhandarkar of Poona. In 1882, however, he commenced the work for which he will be chiefly remembered, the search for Sanskrit manuscripts in the northern part of the Bombay presidency and circle. Many of his discoveries were of high literary value, and his six reports on the search (1888–90) are in every sense excellent reading. His exploration of Jain literature has been especially appreciated. Most of his editions of Sanskrit texts were issued in the 'Bombay Sanskrit Series,' of which, with Professor Bhandarkar, he was in joint charge. Of these the most important were: 'Kādambari' (1883), with an elaborate introduction containing parallels with the analogous romance literature in Greek, and the anthologies

'Śaṛiṅgadhara-paddhati' (1886) and 'Suhāshita-vali' (1888), the latter edited jointly with Pandit Durgāprasād. He also edited, mainly for educational purposes, but with considerable originality, the 'Īlitopadeśa' (1887), portions of the 'Rāmāyana' (1883), and of the 'Rigveda' (1888-92), part of the last-named being accompanied by translations of noteworthy ability as to style, though the notes bear evidence of hasty work. For the 'Bibliotheca Indica' he edited (1890) the 'Nyūyabindu' with its commentary, a Buddhist text discovered by himself in a Jain library; and he was engaged at the time of his decease for the same series with a Jain Sanskrit text, 'Upamitibhava-prapañca-kathā,' three numbers of which have been issued.

Peterson, who was master of a fluent English style, wrote constantly for the Bombay daily press, and made some attractive editions of English classics for native use.

As an official and resident in India much of Peterson's success was due to his tact and sympathy with natives of all classes. This is well brought out in the speech made to the Bombay Asiatic Society on the occasion of his death by Professor Bhandarkar, whom he was appointed to supersede, but who remained one of his closest friends. To this also was due his success in unearthing the jealously concealed manuscripts of the Jains at Oambay and elsewhere. In 1883 the university of Edinburgh conferred on him the degree of D.Sc. in philology, and in 1895 he was chosen president of the Bombay branch of the Royal Asiatic Society, which he had often served as secretary. He was also a popular member of the Bombay municipal corporation.

He died at Bombay on 28 Aug. 1899. Peterson married, on 29 Oct. 1872, Agnes Christall, who died in September 1900. Several children of the marriage survived him; a son entered the India civil service.

[Personal knowledge; private information; Peterson's Works; Journals of the Royal Asiatic Society (London), and of its Bombay branch, 1899; obituaries in *Advocate of India* and *Athenæum*.] O. B.

PHAYRE, SIR ROBERT (1820-1897), general, born 22 Jan. 1820, was son of Richard Phayre of Shrewsbury, and brother of General Sir Arthur Purves Phayre [q. v.] He was educated at Shrewsbury school and commissioned as ensign in the East India Company's service on 26 Jan. 1839, being posted to the 25th Bombay native infantry,

and became lieutenant on 1 Dec. 1840. He served in the first Afghan war with his regiment, was engaged with the Belochs under Nuseer Khan at Kotra and Gandava in December 1840, and was mentioned in despatches. He took part in the Sind campaign of 1843, and was severely wounded at Meeanee. He was again mentioned in despatches for gallant conduct by Sir Charles Napier (*London Gazette*, 9 May 1843). In 1844 he was appointed assistant quartermaster-general in Sind, and from 1851 to 1856 was specially employed in clearing mountain roads in the Southern Mahratta country. In 1856-7 he carried out the departmental arrangements connected with the Persian expedition. In March 1857 he was appointed quartermaster-general to the Bombay army, and acted in this capacity throughout the mutiny, his services being warmly commended by Sir Hugh Ross (Lord Stratthairn) on 15 May 1860. He held this office till 1868. He had become captain in his regiment on 28 Dec. 1848, and was made brevet major on 10 June 1857, and major in the Bombay staff corps on 18 Feb. 1861.

He became brevet lieutenant-colonel on 6 Jan. 1863, and colonel five years afterwards. He took part in the Abyssinian expedition as quartermaster-general, was mentioned in despatches (*London Gazette*, 30 June 1868), was made C.B. and aide-de-camp to Queen Victoria, and received the medal.

From 1868 to 1873 he was political superintendent of the Sind frontier, and commandant of the frontier force. In March 1873 he was appointed resident at Baroda. He made strong representations of the misgovernment of the gaelwar, Malhar Rao, and a commission which investigated his charges found that they were substantially proved. The gaelwar received a warning and was advised to change his ministers, but matters did not improve. The friction between the resident and the gaelwar increased, and at the instigation of the latter an attempt was made on 9 Nov. 1874 to poison Phayre, by putting arsenic and diamond dust in his sherbet. The Baroda trial followed, and the deposition of the gaelwar on 23 April 1875. But the Indian government had previously decided to change the resident at Baroda, and Phayre, declining to resign, was superseded by Sir Lewis Pelly on 25 Nov. 1874.

Reverting to military employment, Phayre commanded a brigade, first in Bombay and afterwards in Rajputana, from 10 May 1875 to 4 May 1880. Having been promoted major-general on 1 Jan. 1880, he was then appointed to the command of the reserve

division of the army engaged in the second campaign of the second Afghan war, and had charge of the line of communication by Quetta to Kandahar. After the disaster of Maiwand, on 27 July, he was directed to push forward to Kandahar, besieged by Ayoub Khan; but he was delayed by want of troops and transport, and Kandahar was delivered by General (afterwards Earl) Roberts from Kabul before his arrival. He was mentioned in despatches, was included in the vote of thanks of parliament, was made K.C.B. on 22 Feb. 1881, and received the medal.

He commanded with distinction a division of the Bombay army from 1 March 1881 to 2 March 1883, and for some months acted as provincial commander-in-chief at Bombay. On 22 Jan. 1887 he was placed on the unemployed supernumerary list. He had become lieutenant-general on 1 Nov. 1881, and became general on 22 Jan. 1889. He received the G.C.B. on 26 May 1894. He died in London on 28 Jan. 1897. In 1843 he had married Diana Bunbury, daughter of Arnold Thompcon, formerly paymaster of the 81st regiment. She survived him. He took an active part in religious and philanthropic movements, and published some pamphlets in 1890: 1. 'The Bible versus Corrupt Christianity.' 2. 'The Foundation of Rock or of Sand: which?' (in reply to Henry Drummond). 3. 'Monasticism unveiled.'

PHILLIPS, MOLESWORTH (1755-1832), lieutenant-colonel and companion of Captain Cook, born on 15 Aug. 1755, was son of John Phillips of Swords, co. Dublin. His father was natural son of Robert Molesworth, first viscount Molesworth [q. v.] He first entered the royal navy, but on the advice of his friend Sir Joseph Banks [q. v.] he accepted a commission as second lieutenant in the royal marines on 17 Jan. 1776. In this capacity he was selected to accompany Captain Cook on his last voyage, extending over nearly three years [see Cook, JAMES]. He sailed with Cook from Plymouth on 12 July 1776, and was with the marines who escorted Cook when he landed at Hawaii on 14 Feb. 1779 and was attacked by the natives, one of whom stabbed him fatally. Phillips, unable any longer to use his fusée, drew his sword and despatched the man. Wounded, faint from loss of blood, and alone, his marines having been killed, except two, who were swimming from shore, he

plunged into the sea and reached a boat. But perceiving a wounded private pursued by natives he jumped into the water and rescued him. Webber's picture of the 'Death of Captain Cook' represents Phillips firing from a sitting posture at the native who stabbed Cook.

On 1 Nov. 1780 Phillips was promoted captain, and on 10 Jan. 1782 he married Susanna Elizabeth, third daughter of Dr. Charles Burney (1726-1814) [q. v.], and sister of Madame D'Arblay and of James Burney [q. v.], Phillips's friend, who, like him, had accompanied Cook on his last voyage. This marriage brought Phillips into connection with the Burneys' literary and musical friends—Dr. Johnson, Mrs. Thrale, and others. He was promoted brevet major on 1 March 1794, and brevet lieutenant-colonel on 1 Jan. 1798. From 1784, for the sake of his wife's health, he lived for a time at Boulogne, but after the French revolution the Phillipses resided chiefly at Mickleham, Surrey, not far from Juniper Hall, where Talleyrand was residing, to whom Phillips showed much kindness and hospitality. When the English government obliged the former to seek refuge in America, the colonel assisted him in fitting out for the voyage and accompanied him to Falmouth. From 1796 to 1799, during the alarm of a French invasion of Ireland, Phillips felt it his duty to reside on the Irish estates at Beleetton, which he had inherited from an uncle. On 6 Jan. 1800 his wife died. She was buried at Neston on the 12th.

Phillips with his family visited France in 1802, where they were detained under Napoleon's decree. He appealed to Talleyrand, who allowed two letters to remain unanswered. A third, couched in rather strong terms, produced an order for the release of the party, who returned to England in the summer of 1804. When passing through Paris Phillips in vain solicited an audience of his former friend (ALAN, *Napoleon's British Visitors*). After his return to England he became acquainted with Southey, Mary and Charles Lamb, who described him as 'the high-minded associate of Cook, the veteran colonel, with his lusty heart still sending cartels of defiance to old Time' (LAMB, *Works*, ed. Fitzgerald, vi. 75), and with John Thomas Smith (1766-1833) [q. v.], whom he supplied with various anecdotes for his 'Nollekens and his Times' (i. 164, 200, ii. 218). He died of cholera at his house in Lambeth on 11 Sept. 1832, and was buried in St. Margaret's, Westminster. A stone in the churchyard is inscribed with his initials and date of death.

By Susanna Burney Phillips had issue two sons, Norbury and William, and one daughter, Frances, who kept house for her grandfather, Dr. Burney, and married C. C. Hapori (A. R. Ellis, *Early Diary of Frances Burney*, 1889, ii. 270). Phillips also left issue by a second marriage with Ann, daughter of Capt. Gabriel Maturin (31st and 35th regiments), secretary to Gen. Thomas Gage [q. v.]

PHIPPS, CHARLES JOHN (1835-1807), architect, son of John Rashleigh Phipps and his wife Elizabeth Ruth Neno, was born at Lansdowne, near Bath, in 1835, and was articled in the office of Wilcox & Fuller of that city, with whom he remained till 1857. After a year's travel he opened practice in Bath, and was successful in 1862 with a design for the reconstruction of the Bath Theatre, which was completed in 1863, and which marked the direction of a future career, at variance both with the wishes of his parents, who disapproved of theatres, and with his training, which was Gothic and ecclesiastical. Phipps's early designs for buildings and furniture may be classed with the school of Godwin and Burgess, whereas the theatrical works which rapidly followed his first success were naturally conceived in the more appropriate classic manner.

On transferring his office to London Phipps became recognised as an authority on theatre construction, and erected or altered more than a score of playhouses in London alone. The Gaiety was the first in date, and it was followed by the construction or alteration of the Queen's, Long Acre (since destroyed), Vaudeville, Strand, Sadler's Wells, Variety (Hoxton), Haymarket, Savoy, Princess's, Prince of Wales's, Shaftesbury (1888), Lyric (1889), Hengler's Cirque (subsequently altered by Phipps to serve as a skating palace), the theatre of the Lyric Club, and finally, his principal work (completed in 1897), Her Majesty's Theatre, Haymarket.

He reconstructed the stage and auditorium of the Lyceum, Comedy, St. James's, and Globes, and superintended the erection of the Garrick in 1889 and the Tivoli in 1890. Phipps was associated with Mr. T. E. Knightley in the planning of the Queen's Hall, Langham Place, but the elevations are attributable to the latter (see *Builder*, 1897, lxxii. 519). Outside London Phipps designed the Theatres Royal at Plymouth, Torquay, Brighton, Eastbourne, Swansea, Worcester, Nottingham, Sheffield, South Shields, Darlington, and Portsmouth, at which last he also designed the Empire Palace. For Bristol he constructed the Prince's Theatre; for Hastings the Gaiety; for Wolverhampton and Dover the Grand and the Tivoli respectively; and for Liverpool he both built the Rotunda and remodelled the Alexandra. Phipps designed the opera houses at Leicester, Northampton, and Leamington, and there are further specimens of his theatre work in Scotland at Edinburgh, Glasgow, Dumfries, and Aberdeen, in Ireland at Dublin, Belfast, Londonderry, and Cork. He twice rebuilt (1873 and 1883) the Theatre Royal at Glasgow, and also twice rebuilt (1880, 1896) the theatre of the same name at Edinburgh, where he also carried out the Lyceum. His works at Dublin are the Gaiety and the Leinster Hall. Phipps's principal designs of a non-theatrical character were the Devonshire Club, St. James's Street; the Carlton Hotel, Haymarket, part of the same design as Her Majesty's Theatre, which was carried out and modified after his death; the Lyric Club, Lyric Chambers, and flats in Shaftesbury Avenue; various business premises in the Strand, Ludgate Hill, and Moorgate Street; the Savoy Turkish Baths and the militia barracks at Bath. For fifteen years he was advising architect to Drury Lane Theatre, and was consulted by committees of the House of Commons and by colonial governments on questions of theatre construction and acoustics. He was a fellow (1866) of the Royal Institute of British Architects, serving on its council in 1876-8, and also of the Society of Antiquaries. He died at 26 Mecklenburgh Square on 25 May 1897.

Phipps married on 10 April 1860 Miss Honnor Hicks, by whom he had issue two sons and three daughters. For some time previous to his death he had been associated in partnership with his son-in-law, Mr. Arthur Blomfield Jackson.

PICKERSGILL, FREDERICK RICHARD (1820-1900), historical painter, son of Richard Pickersgill, a naval officer, and Anne Witherington, and nephew of Henry William Pickersgill (1782-1875) [q.v.], was born in London on 26 Sept. 1820. He received his first instruction in drawing from his maternal uncle, William Frederick Witherington (1785-1805) [q.v.], and entered the Royal Academy schools at an early age. In 1839 he exhibited his first picture, 'The Brazen Age,' a subject from Hesiod, at the Royal Academy. This was followed by 'The Combat between Hercules and Achelous' (1840), 'Amoret's Deliverance from the Enchanter' (1841), 'Œdipus cursing his son Polynices' (1842), and 'Dante's Dream,' a subject from the 'Purgatorio,' canto 27 (1843). In 1843 his cartoon 'The Death of King Lear' gained one of the additional prizes of 100*l.* at the Westminster Hall competition for the decoration of the new Houses of Parliament; a lithograph of this composition, by Frank Howard, appeared in the same year. In 1844 he exhibited at Westminster Hall a fresco, 'Sir Calepins rescuing Sarcus,' which did not obtain a prize. A series of academy pictures, illustrating Spenser's 'Faerie Queene,' of which the first had appeared in 1841, was continued by 'Florimel in the Cottage of the Witch,' 1843 (engraved by Periam for the 'Art Journal'), 'Amoret, Amylin, and Prince Arthur in the Cottage of Schlauder,' 1845, 'Idleness' and 'The Contest of Beauty for the Girdle of Florimel,' 1848. Later pictures of this series were a second 'Idleness,' 1852, and 'Britomart Unarming,' 1855. A spirited scene from 'Comus' was exhibited in 1844, and a subject from the history of Venice in 1846.

These early works had given evidence of considerable power, and their colour showed the influence of William Etty [q.v.], without suffering from the same faults of drawing; but it was in 1847 that Pickersgill first became prominent as a rising artist. His academy picture of that year represented early Christians in a chapel in the catacombs, but a much more important work was 'The Burial of Harold at Waltham Abbey,' exhibited at Westminster Hall. A first-class prize of 500*l.* was awarded to this picture, and it was at once purchased for an equal sum for the Houses of Parliament. An engraving of it by F. Bacon was published in 1851 for the Art Union of London. As the result of his achievements of 1847 Pickersgill was elected, on 1 Nov. in that year, an associate of the Royal Academy at the unusually early age of twenty-seven. He then

removed from 8 Leigh Street, Burton Crescent, his residence since 1830, to 36 Mornington Crescent, Hampstead Road. This was his home till 1865; he then lived at East Mouleey, Surrey, till 1873, when his appointment as keeper of the Royal Academy gave him an official residence at Burlington House.

In 1819 he exhibited 'Circe with the Syrens Three,' from 'Orlando Furioso'; in 1850, his most productive year, 'Samson Betrayed,' 'The Raps of Proserpine,' 'A Scene during the Invasion of Italy by Charles VIII,' and three sketches from the story of 'Imalda'; in 1851, a subject from Tasso; in 1852, 'Pan and Syrinx' and 'The Adoration of the Magi'; in 1853 and 1854, scenes from Venetian history, one of which, 'The Death of Francesco Porsari' (1854), was bought by the prince consort. 'Christian being conducted into the Valley of Humiliation' (engraved by Greatbach for the 'Art Journal') appeared, with 'John sending his Disciples to Christ,' in 1855; 'Christ blessing little Children' and a scene from 'Love's Labour's Lost' in 1856; 'The Duke Orsino and Viola' in 1857. In June of that year Pickersgill was elected to full membership of the Royal Academy. His diploma picture, a Spanish subject entitled 'The Bribe,' was his sole contribution to the exhibition of 1858. 'Warrior Poets of the South of Europe contending in Song' and 'Dahila asking Forgiveness of Samson' were the pictures of 1859; in 1860 he was absent, but in the following year he exhibited subjects from 'As you like it' and 'The Tempest,' and 'Pirates of the Mediterranean playing Dice for Prisoners,' which was engraved by Ridgway for the 'Art Journal.' 'The Return of a Crusader' appeared in 1862, 'Isabella, Duchess of Clarence,' in 1863, a subject from Shakespeare in 1864, 'A Royalist Family, 1651,' in 1865, 'Lovers' in 1866, 'Columbus at Lisbon' in 1868, 'A Honiton Lace Manufactory' in 1869, and 'Mary Stuart accused of Participation in her Husband's Murder' in 1871. Pickersgill did not exhibit in 1867 or 1870, and the picture of 1871 was his last, with the exception of a pathetic subject with a quotation from Tennyson's 'Mariana in the South,' ending with the words 'To live forgotten and do forlorn,' which was exhibited in 1875. He still, however, took an active interest in the Royal Academy, and held the offices of keeper and trustee from 1873 to 1887. In 1888 he retired finally from the academy, and spent the remainder of his life at the Towers, Yarmouth, Isle of Wight, where he died on 20 Dec. 1900.

Pickersgill had one son, who predeceased him, by his marriage, on 5 Aug. 1847, with Mary Noorouz Elizabeth, eldest daughter of James Hook, judge in the mixed commission courts of Sierra Leone, Africa, and sister of Mr. J. O. Hook, R.A. Mrs. Pickersgill died on 21 June 1886.

A portrait of Pickersgill, painted by Henry Gibbs, became the property of his son's widow, and a plaster bust made by H. Montford in 1887, an excellent likeness of the painter, belonged to Miss O. J. Hook of Bognor.

Pickersgill was not a prolific painter, for he exhibited only fifty pictures at the academy, and six at the British Institution (1811-7), during the thirty-seven years of his active career. His British Institution pictures included a subject from Spenser, scenes from 'The Taming of the Shrew' and 'King Henry IV, Pt. I,' act iii. sc. 1, 'Hunon and Amanda' from Wieland's 'Oberon,' and 'Gaston de Foix before the Battle of Ravenna.' Among other works may be mentioned 'The Fairy Yacht,' an engraving of which, by F. Bacon, was published in 1850, and 'The Birth of Christianity,' which formed part of the Jones bequest (1882) to the South Kensington Museum. His design for a lunette in fresco in the large hall of the same museum, 'The Industrial Arts in Time of Peace,' was not carried out; a sketch and a finished design for this subject are the property of the museum. His work was of a kind now out of fashion; but it had solid technical merits, while few artists of his period had so much genuine imagination or were so happily inspired by the masterpieces of English poetry. In addition to his oil-paintings Pickersgill designed illustrations to Maasinger's 'Virgin Martyr' (1844), Milton's 'Comus' (1858), and Poe's 'Poetical Works' (1858). He issued six 'Compositions from the Life of Christ,' engraved on wood by Dalziel, in 1850, and illustrated the 'Lord's Prayer,' jointly with H. Alford, in 1870. He was also a contributor to Dalziel's Bible Gallery (1881).

O. D.

PICKLE THE SPY, pseudonym. [See MAODONELL, ALASTAIR RUADH (1725?-1761), thirteenth chief of Glengarry.

PITMAN, SIR ISAAC (1818-1897), the inventor of phonography, born at Trowbridge, Wiltshire, on 4 Jan. 1818, was son of Samuel Pitman, who then held the post of overseer in an extensive cloth factory, and who afterwards established a factory of his

own. He acquired the rudiments of an English education in the grammar school of his native town, but he left it at the age of thirteen, and subsequently received lessons from a private teacher in his father's house. In 1831 it was decided that he should become a schoolmaster, and he accordingly went through a brief course of training at the college of the British and Foreign School Society in Borough Road, London. He was sent in January 1832 to take charge of an endowed school at Barton-on-Humber, Lincolnshire. Four years later he removed to Wotton-under-Edge, Gloucestershire, where he was invited by a committee to establish a school on the model of the British and Foreign schools. In 1837 he was dismissed from the mastership because he had given grave offence to the managers by joining the 'New Church,' founded by Emmanuel Swedenborg, of which during the remainder of his life he was a devoted adherent. He was also a strict vegetarian. In June 1839 he settled in Bath, and established at 5 Nelson Place a private school, which he conducted till 1848.

He had begun to learn Taylor's system of shorthand about 1829 [see TAYLOR, SAMUEL], and it was this apparently trivial circumstance that altered the whole tenor of his career. Having derived great advantage from the use of the system in the saving of time, he earnestly desired to popularise the stenographic art by having it taught in schools as part of the ordinary curriculum. At that period there were no cheap shorthand manuals in existence. He therefore drew up a brief exposition of Taylor's method, which was to be illustrated with two plates and sold for threepence. This he forwarded in the spring of 1837 to Samuel Bagster (1771-1852) [q. v.], the London publisher, whose friendship he had previously gained by the gratuitous correction of references in the 'Comprehensive Bible.' The manuscript was shown to an experienced reporter, who pronounced against the reproduction of a system already in the market, and in forwarding this opinion Bagster intimated that if an original system were devised by his correspondent he would undertake the publication of it. Pitman at once set to work, and on 15 Nov. 1837 'Stenographic Sound-Hand' made its appearance in the shape of a little fourpenny book with two neatly engraved plates. In the introduction the inventor set forth the advantages of a system of shorthand written by sound over methods which followed the current orthography. He admitted that previous shorthand authors had to a limited extent

adopted the phonetic principle, though mainly in regard to the consonants; but he supplied a greatly improved and extended vowel scale which is undoubtedly the most original feature of his scheme. It is a curious fact that he altogether discarded the looped letters of the Taylor alphabet, and assigned the small circle, with an alternative character, to the representation of the letter *s*, as had been done in the system of William Mason (*N.* 1672-1709) [q. v.], published in 1682. He also introduced the principle of 'pairing' the consonants and of 'shading,' or the use of thin and thick strokes for indicating cognate consonants. In this rare booklet, immature and incomplete though it be, the stenographic expert will at once recognise the main features of the present highly developed system of phonography.

This manuscript of the second edition was ready in the autumn of 1830, but its publication was deferred till the penny post came into operation on 10 Jan. 1840. It then appeared in the form of a penny plate with this title: 'Phonography, or Writing by Sound, being also a New and Natural System of Short Hand.' Some copies, mounted on canvas and bound in cloth, with two chapters from the New Testament as additional exercises, were sold at one shilling each. Several important improvements were introduced into this second edition. The steel plate was beautifully engraved, but in almost microscopic characters, so that it was not well adapted to become a medium for learning the system. Copies were, however, widely distributed to schoolmasters all over the country, and, when these had been well circulated, Pitman began his phonographic propaganda by devoting his school holidays to lecturing tours. The third edition of 'Phonography' was brought out at the close of 1840 in an octavo volume, with fuller explanations of the system, and altogether better adapted for the purpose of instruction in the art. The fourth edition appeared in 1841, the fifth in 1842, the sixth in 1844, the seventh in 1845, the eighth in 1847, the ninth in 1852, the tenth (with a new vowel scale) in 1857, the eleventh in 1862, and the twelfth in 1867. There were many later issues, but these were not designated as separate editions. In addition to the manuals, a very large number of books were published in illustration of the system, such as 'Copy Books,' the 'Class Book,' the 'Exercises,' the 'Teacher,' the 'Reporter's Companion,' and a 'Phonetic Shorthand and Pronouncing Dictionary of the English Language.' Many standard works were also printed in the

phonographic shorthand characters, including the Bible, the Book of Common Prayer, Bacon's 'Essays,' Bunyan's 'Pilgrim's Progress,' Cowper's 'Poetical Works,' Craik's 'John Halifax,' Dickens's 'Pickwick Papers' and 'Oliver Twist,' Goldsmith's 'Vicar of Wakefield,' Hughes's 'Tom Brown's Schooldays,' Washington Irving's 'Tales and Sketches,' Johnson's 'Rasselas,' Macaulay's 'Essays' and 'Biographies,' Milton's 'Paradise Lost,' More's 'Utopia,' Scott's 'Waverley,' and Swift's 'Gulliver's Travels.'

Meanwhile the phonographic crusade had met with extraordinary success. Pitman found it necessary, in 1843, to give up his school, and to abandon travelling and lecturing, in order to devote himself to the production of instruction books and other literature. By this time other labourers had come into the field, to whose co-operation the progress of the new movement was greatly indebted. His brothers Joseph and Benjamin (afterwards known in America as Benn Pitman) lectured throughout the country, sometimes together and sometimes separately. Thomas Allen Reed joined Joseph Pitman in 1843, and, having acquired great facility as a phonographic writer, was able to demonstrate by practical experiments the capabilities of the new system in the hands of an expert penman. Among the other lecturers and teachers were Pitman's brothers, Henry and Frederick in England, and Jacob in Australia. From time to time phonographic 'Festivals' were held, at which the progress already made was reviewed, and workers in the cause were stimulated to fresh exertions. A 'Phonetic Society' was also established. The enthusiastic propaganda extended to America and Australia, and wherever the English tongue was spoken the number of phonographers daily increased. At the present time phonography is doing nine-tenths of the shorthand writing and reporting of the English-speaking communities, and there is no other stenographic system that can approach it in the extent to which it is taught and used. Among shorthand clerks and amanuenses Pitman's is almost the only method employed. Several variations of the system have been published in the United States, but they are based on the original alphabet. The framework of phonography has been subjected to severe criticism, especially by Edward Pocknell, Thomas Anderson, and Hugh L. Callendar, who have, however, failed in their attempts to devise superior systems of their own. Pitman's system has been adapted to French, German, Dutch, Spanish, Italian, Welsh,

Bengali, Marathi, Tamil, Chinese, Japanese, and Malay.

Pitman devoted much of his energy to the advancement of the spelling reform, and in 1844 he for the first time addressed his readers in phonotypy, or a phonetic printing alphabet, with a sufficient number of new letters to supply the deficiencies of the common alphabet. In the promotion of this movement he had for some years the assistance of Alexander John Ellis [q. v. Suppl.] The introduction of new types, although it made possible the use of a scientifically perfect alphabet, proved to be an insurmountable obstacle to the general adoption of phonetic printing, and after experiments with new types extending over forty years Pitman adopted, in 1888, with some additions, the rules recommended by the American Spelling Reform Association and the American Philological Society in order to secure the phonetic representation of the language without the addition of new letters to the alphabet. Another of Pitman's cherished schemes for the introduction of a duodecimal method of arithmetical notation, in substitution of the decimal numeration, also proved abortive.

From 1817 to 1855 the first Phonetic Institute in Albion Place, Bath, was the head-quarters of phonography and the spelling reform; the institute was removed to Parsonage Lane in 1855, to Kingston's Buildings in 1874, and finally to a new building in the suburbs of Bath in 1889.

The first International Congress and Jubilee of Phonography were jointly celebrated in London in 1887, under the presidency of the Earl of Rosebery. On this occasion a fine bust of Pitman, by Thomas Brock, was presented to him and his family. In 1889 a replica of this jubilee bust was presented to Pitman by the citizens of Bath, and it was placed in the Royal Literary and Scientific Institution of that city. On 18 July 1894 Pitman received the honour of knighthood 'at Windsor Castle, on the ground of his great services to stenography, and the immense utility of that art.'

Soon afterwards he retired from partnership with his sons, and conferred on them his interests in the phonographic text-books and other works of which he was the author. At the time of his retirement he had been uninterruptedly engaged in the work connected with his invention of phonography for fifty-seven years, and had edited the 'Phonetic Journal' for fifty-two years.

He died at Bath on 22 Jan. 1897, and in accordance with his wishes his remains were cremated at Woking. He was twice married, first, in 1835, and secondly, on 21 April 1861,

to Isabella, daughter of James Masters, by whom he left two sons, Alfred and Ernest. A mural tablet to his memory was unveiled on 15 July 1901 at 17 Royal Crescent, Bath, where Pitman resided in his later years.

PITT-RIVERS, AUGUSTUS HENRY LANE FOX (1827-1900), lieutenant-general, anthropologist, and archaeologist, son of William Augustus Lane Fox of Hope Hall, Yorkshire, and his wife Lady Caroline, daughter of John Douglas, eighth earl of Morton, was born on 14 April 1827. He was known by his father's surname of Lane Fox until 1880, when he assumed the name of Pitt-Rivers on eventually inheriting the estates of his great-uncle, George Pitt, second Baron Rivers (1751-1828). He was educated at Sandhurst Military College, and received a commission in the grenadier guards in 1845. His subsequent commissions were dated: captain 2 Aug. 1850, brevet-major 12 Dec. 1854, major 15 May 1857, lieutenant-colonel 22 Jan. 1867, major-general 1 Oct. 1877, lieutenant-general 1 Oct. 1882. He soon showed a talent for organisation and experimental research, which led to his being employed in investigations as to the use and improvement of the rifle in the early times of its introduction into the British army. These investigations were carried on by him at Woolwich, Enfield, Hythe, and Malta, between 1851 and 1857. He may be considered the originator of the Hythe school of musketry, of which he brought the first plans before Lord Hardinge, and for which he organised the system of practice and the education of musketry instructors. When stationed at Malta he had the duty of superintending the training of the troops in this new musketry practice, at the critical moment when his successful trials had led to

their being armed with the Minié rifle in place of the smooth-bore perouseion musket known by the name of 'Brown Bess.' This antiquated weapon was finally discarded towards the end of the campaign, the new Enfield rifle coming into general use. Lane Fox served with distinction in the Crimean war, where he was present at the battle of the Alma and the siege of Sebastopol, was mentioned in despatches, and placed on the staff. He remained on the active list till 1898, and from 3 March 1893 was colonel of the South Lancashire regiment.

By the time of his return home, however, the unconscious training in precise methods which he had acquired in the course of his professional work was already leading him into the scientific career which henceforth took the largest share of his life. In examining the firearms of various pattern which came under his notice to be reported on, he became aware that their successive changes did not result from far-reaching steps of inventive imagination, but from long courses of minute and even accidental alterations, taken advantage of to render the new model an improvement on its predecessors. The intermediate stages he found were apt to disappear and be forgotten after having led to fresh changes, only such models becoming established as reached a temporary limit of excellence, whilst often they branched off in useless directions and became abortive. About this time of Colonel Fox's life the tides of scientific thought in the direction of biological evolution had fairly set in, and the analogy of the doctrine of development of species to what he perceived to be the normal course of human invention more and more impressed his mind. In order to follow out this line of thought, he collected series of weapons till they lined the walls of his London house from cellar to attic. The method of development-series extending itself as appropriate generally to implements, appliances, and products of human life, such as boats, looms, dress, musical instruments, magical and religious symbols, artistic decoration, and writing, the collection reached the dimensions of a museum. It was at first housed by government at Bethnal Green and South Kensington, and an illustrated catalogue was drawn up by Fox (Science and Art Department, 1874). At length, the available accommodation no longer sufficing, it was presented in 1883 to the university of Oxford, who built for it the Pitt-Rivers Museum in connection with arrangements for a lectureship of anthropology. Under the charge of the curator, Mr. H. Balfour, the collection has since then doubled, while the soundness

of its system has been verified by the manner in which the main principle of stages of development has been adhered to. Though it might not be desirable that the development method should supersede the geographical or national arrangements usual in museums of human art and history, it has already had a marked effect in promoting their use as means of instruction, and superseding the mere curiosity cabinets of past centuries.

In connection with these studies, anthropology and archaeology naturally divided his attention. Among other contributions to the study of paleolithic stone implements, so important in Europe from their belonging to the remotely ancient period of the extinct mammoth and rhinoceros, he confirmed the discovery of Lord Avebury that similar implements characterised the earliest stages of culture in Egypt. On General Pitt-Rivers removing his home in 1880 to Rushmore, in the midst of his newly inherited estates on the Wiltshire downs, which had been dear forest till two generations before, he found himself the owner of many prehistoric monuments scarcely interfered with since the ages when this frontier-ground between the Romano-British and West Saxons had been the scene of their long struggle for possession. He devoted himself to the congenial task of exploring villages, forts, and burial-mounds scattered over Cranborne Chase and along the Wansdyke. With his usual thoroughness he purged himself of the great fault of the older antiquaries, that of destroying in the quest of antiquities the ancient structures themselves. The large illustrated volumes, with exact drawings and tables, in which he records his excavations, would enable a modern contractor to refurnish the tombs and forts with their contents in place. The carrying out of this work raised English archaeology to a new and higher level. In addition, accurate models of the interments, &c., were placed in the local museum of Farnham, Dorset, not far from Rushmore, which General Pitt-Rivers built; there also he made the experiment of collecting, as a means of popular instruction, series of specimens illustrating the development of common appliances, such as ploughs, looms, and pottery. General Pitt-Rivers published no works on a large scale except 'Excavations in Cranborne Chase, near Rushmore, on the borders of Dorset and Wilts;' and 'King John's House,' privately printed in 5 vols. 4to, 1887-88; but his lesser writings, 'Primitive Locks and Keys' (London, 1888), 'Antique Works of Art from Benin' (privately printed, 1900), and numerous contributions to scientific

periodicals are full of valuable scientific observation. He was elected F.R.S. in 1870, and in 1886 received from the university of Oxford the honorary degree of D.C.L. He was a vice-president of the Society of Antiquaries, and in 1881-2 president of the Anthropological Institute, of which he was an energetic supporter. On the passing of the Ancient Monuments Preservation Act (1882), he became the first inspector of ancient monuments.

Pitt-Rivers died at Rushmore on 4 May 1900. In 1853 he married the Hon. Alice Margaret, daughter of the second Baron Stanley of Alderley, and had issue six sons and three daughters, of whom the second, Alice, became in 1884 the second wife of Sir John Lubbock (now Lord Avebury).

E. B. T.

PLAYFAIR, LYON, first **BARON PLAYFAIR** of St. Andrews (1818-1898), was born on 21 May 1818 at Chunar, Bengal, and was the son of George Playfair, chief inspector-general of hospitals in Bengal, by his wife Janet, daughter of John Ross of Edinburgh. James Playfair [q. v.] was his grandfather; Sir Robert Lambert Playfair [q. v. Suppl.] was his younger brother.

Lyon was sent home to St. Andrews, the seat of his father's family, at the age of two, and received his early education at the parish school, from which he proceeded to the university of St. Andrews in 1832. On leaving this university, Playfair spent a very short time in Glasgow as clerk in the office of his uncle, James Playfair, and then (1835) commenced to study for the medical profession, entering the classes of Thomas Graham [q. v.] in chemistry at the Andersonian Institute in Glasgow. In 1837, on Graham's appointment to a chair in London, Playfair entered the classes of the Edinburgh University with the object of completing his medical course, but his health broke down and he was compelled to abandon his work. He then visited Calcutta, where, at his father's wish, he again entered a business house, only to leave it after a very short interval, and return to England to resume the study of chemistry. After spending some time as private laboratory assistant to Graham at University College, London, he worked with Liebig at Giessen (1839-40), where he graduated Ph.D. In 1841 he became chemical manager of Thomson's calico works at Primrose, near Olithorpe, but resigned this position in the following year, and was appointed

honorary professor of chemistry to the Royal Institution, Manchester, a post which he occupied until 1845.

Playfair had visited Giessen at the moment when Liebig, at the height of his fame as an investigator and teacher, was beginning to turn his attention to the applications of organic chemistry to agriculture and vegetable physiology, and was engaged in the composition of his celebrated work on these subjects. Playfair, as Liebig's representative, presented this book to the British Association for the Advancement of Science at the Glasgow meeting (1840), as part of a report on the state of organic chemistry, and he afterwards prepared the English edition of the book. Its publication attracted the attention of scientific men interested in the rational pursuit of agriculture, to which Liebig's influence gave a great impulse. Consequently, when Playfair proposed in 1842 to apply for the professorship of chemistry at Toronto, Sir Robert Peel was induced to seek an interview with him, and persuade him to stay at home. Thenceforth constant use was made of his services in public inquiries and on royal commissions.

In 1845 Playfair was appointed chemist to the Geological Survey, afterwards becoming professor in the new School of Mines at Jermyn Street, and in this capacity was engaged in many investigations, among the most important of which were the determination of the best coals for steam navigation, and the inquiry into the condition of the potato disease in Ireland (1845).

Although Playfair returned from Giessen in 1841, inspired with something of Liebig's enthusiasm for research, the amount of purely scientific investigation which he carried out was relatively small, owing to the fact that his time was largely spent in inquiries which rather involved the practical applications of scientific principles than the discovery of new facts. His most important investigations are those on the nitroprussides, a new class of salts which he discovered, on the atomic volume and specific gravity of hydrated salts (in conjunction with Jenle), and on the gases of the blast furnaces (in conjunction with Bunson). He was elected F.R.S. in 1848, and was president of the Chemical Society in 1857-8, and of the British Association in 1885 at Aberdeen, while he twice acted as president of the chemistry section of the British Association.

In 1850 Playfair was appointed a special commissioner and member of the executive committee of the Great Exhibition of 1851. He took an active part in the general organisation of the exhibition, in securing the

adequate representation of the various British industries, and in arranging the juries of award and appeal, as well as in the judicious investment of the large surplus that the exhibition realised. His services in these respects were rewarded by the commandership of the Bath, and by his appointment to the position of gentleman usher in the household of the Prince Consort. His connection with the Great Exhibition of 1861 led to his taking a prominent part in furthering the Prince Consort's endeavours to secure for the nation technical instruction in the application of science to industry, with which he was in full agreement. At the close of the exhibition he made a private inquiry into the state of education and technical instruction on the continent of Europe, and lectured on the subject after his return.

In 1863 the department of Science and Art was formed, and Playfair was made secretary for science, Sir Henry Cole [q. v.] occupying a similar position for art. In 1865 the department was reorganised, and Playfair was made secretary of the united departments. As secretary of the Science and Art department Playfair took a leading share in the organisation of the Royal College of Science and the South Kensington Museum, afterwards (1899) renamed the Victoria and Albert Museum.

On the death of William Gregory (1803-1858) [q. v.] in 1858 Playfair was appointed to the chair of chemistry at Edinburgh, which he occupied until 1869. On his appointment he resigned his post in the Prince Consort's household and in the Science and Art department, but was still engaged largely in public work, serving on many royal commissions, and taking an active part in the exhibition of 1862.

The various committees of inquiry and royal commissions in which he took a leading part included those on the health of towns, the herring fishery, the cattle plague, the civil service (which was reorganised on the 'Playfair scheme'), the Scottish universities, endowed schools, and the Thirlmere water scheme. But these employments did not by any means exhaust his activity. In 1869 he became a member of the commission of the 1861 exhibition, and in 1874 was appointed a member of the committee of inquiry which undertook the management of the commission's business affairs. In 1883 he became honorary secretary of this committee, and succeeded in bringing about a most important improvement in its financial prospects, which at the time of his appointment were most unsatisfactory. The surplus funds of the exhibition had been invested in land at South

Kensington, part of which was utilised for residential buildings, and part to provide sites for buildings of national importance and for educational institutions. In 1883 there was a considerable annual deficit, but in 1889, when Playfair resigned his honorary secretaryship, this had been converted into an income of 5,000*l.* per annum, and has since considerably increased. This money was employed to found science scholarships of 150*l.* a year, to be held by advanced students nominated by the science colleges of this country and the colonies.

In 1868 Playfair was returned to parliament in the liberal interest as member for the universities of Edinburgh and St. Andrews, which he continued to represent until 1885. On his election to the House of Commons he resigned his chair at Edinburgh (1869) and returned to London, where he henceforth resided. His influence in parliament was steadily exerted in favour of the improvement of both the education and the social and sanitary surroundings of the people. While he represented the universities, he in fact confined himself entirely to social and educational questions. A number of his speeches in parliament and elsewhere on these subjects were collected and published in 1889, under the title 'Subjects of Social Welfare.' In 1873 he became postmaster-general in Gladstone's first ministry, but the government went out of office early in the following year. In the parliament of 1880 he was elected chairman and deputy speaker of the House of Commons, a position which he held until 1883, when he resigned this very onerous office and was made K.O.B. As chairman during the period of active obstruction by the Irish members in 1881-2, he showed great tact and firmness, but his action in expending sixteen members *en bloc* on 1 July 1882, although strictly in accord with precedent, was the occasion of much unfavourable comment from the press. The cabinet also declared that they could no longer support the interpretation of the rule. The persons who expressed themselves most confident of his fairness, patience, and impartiality were the Irish members themselves. The incident led indirectly to his resignation of the post.

At the election of 1885 he withdrew from the representation of the universities, and, identifying himself more closely than before with party politics, was returned as liberal member for South Leeds. That constituency he continued to represent until 1892. Playfair joined Gladstone's home rule ministry of 1886 as vice-president of the council, but left office within five months of his ap-

pointmont, on the resignation of the ministry in June.

In 1802 Playfair's many services to the State were rewarded, on Gladstone's accession to power for the fourth time, by his elevation to the peerage under the style of Baron Playfair of St. Andrews. In the same year he was made lord-in-waiting to the queen. His time was still devoted to public affairs, and in 1804-5 he served as a member of the aged poor commission, and afterwards took an active part in negotiations for the arbitration of the Venezuela question, in which his intimate knowledge of American politics, gained during his annual visits to his third wife's home, was of great service. In 1805, on the recommendation of Lord Rosebery, he received the order of Grand Cross of the Bath.

In 1806 his health began to fail. He passed the winter of 1807 at Torquay, but returned in April to his residence in Onelow Gardens, where he died on 29 May 1808. He was buried at St. Andrews. Playfair was below the average height, and was strikingly intellectual in appearance. He was gifted with great delicacy and tact, had a strong sense of humour, and was an admirable conversationalist. He received many honours from foreign governments in connection with his work at various international exhibitions.

Playfair was married three times: first, in 1816, to Margaret Eliza, daughter of James Oakes of Riddings House, Alfreton, who died in 1856; secondly, in 1857, to Jean Ann, daughter of Orawley Millington of Crawley House, who died in 1877; thirdly, in 1878, to Edith, daughter of Samuel Hammond Russell of Boston, United States of America. By his first wife he had an only son, George James Playfair, who succeeded him as second baron.

[Memoirs and Corresp. of Lyon Playfair by Sir Wemyss Reid (containing a large amount of autobiographical matter), 1890; biographical sketch in *Nature*, lvi. 128, by Sir Henry Roscoe; Lucy's Diary of Two Parliaments, 1886, vol. ii.]

A. H. N.

PLAYFAIR, SIR ROBERT LAMBERT (1828-1899), author and administrator, born at St. Andrews in 1828, was the grandson of James Playfair [q. v.], principal of the university of St. Andrews, and the third son of George Playfair (1782-1846), chief inspector-general of hospitals in Bengal, by his wife Janet (d. 1862), daughter of John Ross. Sir Lyon Playfair, baron Playfair [q. v. Suppl.], was his older brother. Robert entered the Madras artillery on 12 Jan. 1846. On 28 Sept. 1858 he attained the rank of cap-

tain, and on 18 Feb. 1861 he was transferred to the Madras staff corps. On 30 June 1862 he was given the local rank of lieutenant-colonel at Zanzibar, and on 12 June 1866 he was promoted to be major in the staff corps. He retired from the army as lieutenant-colonel on 1 Nov. 1867. From November 1848 to May 1850 Playfair was associated with Sir James Outram [q. v.] in a quasi-political mission to Syria. From 28 March 1852 till 26 Sept. 1853 he served as assistant executive engineer at Aden. In 1854, when Outram became first political resident there, he chose Playfair as his assistant. In this capacity under Outram and his successors Playfair remained at Aden from 8 July 1854 till 17 Dec. 1862. He acted as temporary political resident from 19 April 1860 till 30 Oct. 1861, and from 10 Jan. till 3 April 1862. While assistant resident he took a share in putting down the traffic in slaves between Arabia and Somaliland, and in the events connected with the British occupation of Perim in 1857. At the time of his appointment he had qualified as interpreter in the Arabic language, and he put this period of his residence to good account by making researches into the history of that part of Arabia. His work was published at Bombay in 1859 as No. 40 of the 'new series of 'Selections from the Records of the Bombay Government,' under the title 'History of Arabia Felix or Yemen from the Commencement of the Christian Era to the Present Time.' It included an account of the British settlement at Aden. In 1860 he was elected a fellow of the Royal Geographical Society.

On 17 Dec. 1862 Playfair was appointed political agent at Zanzibar, and on 18 July 1863 was nominated consul there. On 20 June 1867 he became consul-general in Algeria, where he remained during the rest of his diplomatic career. On 16 March 1885 he was made consul-general for Algeria and Tunis, and on 2 Aug. 1889 consul-general for the territory of Algeria and the northern coast of Africa. He acquired an extensive knowledge not only of Algeria, but of the Mediterranean countries generally, visiting among other places the Balearic Islands and Tunis, where in 1876 he explored the previously almost unknown Khomair country. In 1874 he contributed to Murray's series 'A Handbook for Travellers in Algeria,' a second edition including Tunis appeared in 1878, and a fifth in 1896. In 1881 he wrote for the same series 'A Handbook to the Mediterranean Cities, Coasts, and Islands,' which reached a third edition in 1890. During his residence in Algeria he studied the official archives of the con-

ulate, and in 1884 issued 'The Scourge of Christendom' (London, 8vo), an interesting account of the British relations with that country till the time of the French conquest in 1890. His most valuable work, however, in connection with the Barbary states was of a bibliographical character. In 1888 he published 'A Bibliography of Algeria from the Expedition of Charles V in 1541 to 1887' (London, 8vo). This work, which originally appeared among the 'Supplementary Papers' of the Royal Geographical Society, was completed in 1898 by a supplement carrying the bibliography from the earliest times to 1895. In 1889 he brought out 'The Bibliography of Tripoli and the Cyrenaica' (London, 8vo), from the earliest times to 1889, which was also included among the 'Supplementary Papers,' and finally in 1892 he prepared, in conjunction with Dr. Robert Brown, 'A Bibliography of Morocco from the earliest Times to 1891' (London, 8vo). These works were of the most exhaustive character, comprising a list of articles and papers as well as of separate works. 'The Bibliography of Tunisia' (London, 1889, 8vo), which completes the series, was prepared by Henry Spencer Ashbee [q.v. Suppl.]

On 29 May 1886 Playfair was nominated K.C.M.G. At the meeting of the British Association at Leeds in 1890 he presided over the geographical section. He retired from the diplomatic service on a pension on 1 Dec. 1896. In January 1899 he received the honorary degree of LL.D. from the university of St. Andrews. He died at his residence, Queen's Gardens, St. Andrews, on 18 Feb. 1899. In 1861 he married Agnes, daughter of Major-general Thomas Webster of Belgarvie in Fife. By her he had five sons and two daughters.

Besides the works already mentioned Playfair was the author of 'Travels in the Footsteps of [James] Bruce' [q.v.] (London, 1877, 4to), which was illustrated with facsimiles of Bruce's original drawings. He also published in 1880 in the 'Asiatic Quarterly' (ii. 141) 'The Story of the Occupation of Perim,' and in 1899 in 'Chambers's Journal' 'Reminiscences' of Aden and Algeria, an interesting series of papers which have not appeared in book form.

[Playfair's works; Geographical Journal, 1899, xiii. 439; Times, 20 Feb. 1899; Foreign Office Lists; Goldsmid's James Outram, 1881, ii. 90; Wemyss Reid's Memoirs and Correspondence of Lyon Playfair, 1899, p. 28.] E. I. C.

PLIMSOLL, SAMUEL (1824-1898), 'the Sailors' Friend,' born on 10 Feb. 1824 at Bristol, was the fourth son of Thomas Plimsoll

of Bristol by his wife Priscilla, daughter of Josiah Willing of Plymstock. He was educated first by the curate at Penrith, where his parents resided in his early youth, and afterwards at Dr. S. Eadon's school at Shafesfield. On leaving school he became a solicitor's clerk. Later on he was clerk and afterwards manager in a brewery, and in 1851 he acted as an honorary secretary for the Great Exhibition. In 1853 he came to London and established himself as a coal merchant, and in 1862 published pamphlets on the export coal trade and on the inland coal trade of England.

After some unsuccessful attempts to enter parliament in the radical interest, Plimsoll was returned for Derby in 1868, and from the first devoted himself to the question of mercantile shipping. In 1870 he opened his campaign by proposing a resolution condemning unnecessary loss of life and property at sea, and insisting upon the compulsory load-line as the reform to be advocated. This resolution, and also a bill which the government had introduced on the same subject, were withdrawn owing to pressure of business; but Plimsoll kept the question before the public. In 1871 he introduced a bill on the lines of his resolution, and again had to withdraw it. In 1873 he published an attack on shipowners entitled 'Our Seamen.' This work raised a storm of controversy, and resulted in such an awakening of public feeling that an address was passed calling for the appointment of a royal commission. Under the chairmanship of Edward Adolphus Seymour, twelfth duke of Somerset [q.v.], who, having himself been first lord of the admiralty, possessed technical knowledge of shipping, a powerful commission sat in 1873 and examined many witnesses, including Plimsoll himself. The report of the commission did not support his favourite idea of a fixed load-line, but nevertheless he introduced another bill in 1874, and was defeated by a majority of only three. The government was now obliged to deal with the alleged grievances, and brought in a merchant shipping bill in 1875. This was so materially altered in the course of debate that Disraeli resolved to withdraw it. In protesting against this action, on 22 July 1875, Plimsoll violently attacked the class of shipowners, and caused a scene in the House of Commons. He admitted that the expressions he had used applied to members of the house and refused to withdraw. He was ordered to retire by the speaker, Henry Bouverie William Brand (afterwards Viscount Hampden) [q.v.], and Disraeli moved 'that the honourable gentleman be reprimanded.'

manded.' Finally action was postponed for a week, and Plimsoll apologised to the house. There is no doubt that this exciting incident had the effect of attracting public attention, so that the government was obliged to hurry through a measure which now stands in the statute book as the Merchant Shipping Act, 1876.

In 1880 Plimsoll gave up his seat at Derby to Sir William Harcourt, and never again entered the house, although he unsuccessfully contested a few elections. His interest in the British sailor remained as keen as before, and he expended large sums of money and a good deal of his time in promoting further reforms and in insisting upon the efficient administration of the existing laws. For the latter purpose he visited the ports of foreign countries to inquire into the condition of our merchant ships and their crews. In 1800 he published a pamphlet on cattle ships, and in the same year became president of the Sailors' and Firemen's Union. He held this post for several years under the distinct understanding that his duty should be limited to presiding at the annual congress and advising as to parliamentary action. From the financial affairs of the union and their policy in trade disputes he expressly dissociated himself. He contributed many articles to the 'Nineteenth Century' and other periodicals, and published several pamphlets, chiefly on mercantile shipping.

After a long illness Plimsoll died on 3 June 1898 at Folkestone, where he had resided for some years. His writings and speeches were severely criticised for their violence of language, their exaggeration of fact, and the want of technical knowledge displayed in them. On the other hand he possessed an unusual amount of enthusiasm, which he was able to impart to others.

Plimsoll was brought up a congregationalist, and never left that body, but he was equally attached to all denominations of evangelical Christianity.

Plimsoll married his first wife, Eliza Ann, daughter of Hugh Railton of Chapelton, near Sheffield, in 1858. She died in Australia in 1882. There were no children by this marriage. He married his second wife, Harriot Frankish, daughter of Mr. Joseph Armitage Wade, J.P., of Hull and Hornsea, in 1885. By this marriage there were six children, of whom a son, Samuel Richard Cobden Plimsoll, and two daughters survived him.

[Hansard's Parl. Debates; H. W. Lucy's Diary of Two Parliaments; private information.]

E. O.

PLUME, THOMAS (1680-1704), archdeacon of Rochester, and founder of the Plumian professorship of astronomy, was the second son of Thomas Plums, alderman, of Maldon, Essex, by his third wife, Helen. He was baptised at All Saints', Maldon, 18 Aug. 1630, according to the entry in the register, but in his will Plume bequeaths communion plate to the church 'in thankfulness for my Baptism there Aug. the 7th, 1630.' Plume was doubtless using the new style, which was eleven days behind the new. He was educated at Chelmsford grammar school, and on 29 Feb. 1645 was admitted a pensioner at Christ's College, Cambridge, where he matriculated 11 July 1646, and graduated B.A. and M.A. in 1649. He was admitted B.D. *per literas regis* 1661, and D.D. 27 June 1673 (*Grad. Cant.* 1828, p. 378). He was instituted vicar of Greenwich on 22 Sept. 1653, Richard Cromwell, Lord Protector, being patron. Not far off, at Cheam, Surrey, was John Hacket [q. v.], whose friendship Plume had already for some time enjoyed. After Hacket was appointed (1681) bishop of Lichfield, he made use of Plume's services to buy books for him, and to transact other business in London. His records, 16 March 1607, his 'promise of the next prebend that shall be void if I live so long, to Mr. Plume of Greenwich, who is of great merit' (*Tanner MS.*, Bodleian Lib. xlv. f. 108). The promised prebend did not come from Hacket, but when he died the bishop left Plume 10*l.* and two volumes of manuscript sermons. These Plume edited under the title of 'A Century of Sermons,' prefixing a life and death of the author in 54 folio pages (London, 1675; new ed. 1886, 12mo).

Plume's father had been a prominent presbyterian at Maldon, but he himself subscribed the declaration under the Act of Uniformity on 28 July 1662. Between 1665 and 1669 both Pepys and Evelyn visited Greenwich church on Sundays, and they have recorded their commendations of Plume's 'excellent preaching' and 'very good' sermons. He held also the sinecure of Merston, Kent, where was no church, parsonage, manor house, or inhabitants. On 10 June 1679 he was installed archdeacon of Rochester.

He remained vicar of Greenwich until his death at Longfield Court, the archdeacon's residence, on 20 Nov. 1704. On 24 Nov. he was buried in the churchyard of Longfield. Plume's portrait, which he 'forbad to be ever brought into' his library, now hangs in the council chamber at Maldon.

Plume was unmarried, and left the considerable wealth he had acquired mainly for charitable objects. The sums of 1,000*l.*,

200*l.*, and 202*l.* 12*s.* 6*d.* he devoted to the foundation of a chair at Cambridge, bequeathing the money to Dr. Covell, master of Christ's College, Dr. Bentley, master of Trinity, Francis Thompson, D.D., of Caius, and William Whiston, Lucasian professor, to 'erect an observatory and to maintain a professor of astronomy and experimental philosophy, and to buy or build a house with or near the same.' The statutes for the trust were to be made with the advice of Sir John Ellis, master of Caius, 'Mr. Newton in London [Sir Isaac Newton], and Mr. Flamsteed, the royal mathematician at East Greenwich.' They were confirmed by letters patent issued under the great seal, 11 June 1707. The money was invested in an estate at Balsham, Cambridge-shire, purchased soon after Plume's death; Roger Cotes [q.v.] was appointed the first professor, 16 Oct. 1707; and the king's gate of Trinity College, although objected to by Flamsteed, was appropriated to his use. An observatory was built soon after over the gateway, partly by subscription raised by Richard Bentley [q.v.] the master, who described it (*Correspondence*, ed. Wordsworth, p. 451) as 'the commodiouslest building for that use in christendom.' In May 1792, however, report was made that 'the professor had neither occupied the said rooms and lands, or fulfilled the conditions for at least fifty years; the observatory and the instruments belonging to it were, through disuse, neglect, and want of repairs, so much dilapidated as to be entirely unfit for the purposes intended.' The trustees agreeing to its removal, it was in 1797 demolished.

The existing astronomical observatory, in the south wing of which the Plumian professor occupies rooms, was erected in 1822. Plume's gift has centred upon the professorship, although in the original bequest the observatory was placed first. It may be added that Robert Smith (1689-1768) [q.v.], Cotes's relative and successor, says that Plume was induced to found the chair through reading Huygens's 'Cosmotheoros' (1698), recommended him by Flamsteed, whom doubtless he knew at Greenwich (Edlinston, *Correspondence of Sir Isaac Newton*, lxxv).

To his native town, where he had already erected a school and library, Plume gave his books, manuscripts, and 'my large Mapp of the World.' This has now disappeared. The library keeper was to have 40*l.* a year and a house, the library was to be open to students free of charge, and books might be borrowed on proper security; it was thus practically a free library. For the support of the school Plume bequeathed a house in Maldon and the farm of Ilney in Mundon, out of which

also a weekly lecture was to be maintained in All Saints', Maldon, while the vicarage was augmented by 200*l.* Ten poor boys of the two parishes were to be taught and clothed in green baize, and an exhibition for an Essex scholar established at Christ's College, Cambridge.

Plume also anticipated the present poor-law system by giving 200*l.* and the residue of his estate to purchase tenements and stock for setting the pauper inhabitants to work 'according to Mr. Commine's direction and his Draught sent me by Doctor Thompson,' and for erecting a workhouse for the poor of Maldon and neighbouring villages. To his old school at Chelmsford he left books for a standing library. Others of his charitable bequests included 1,000*l.* to buy in the titles of small livings worth under 100*l.* a year; 100*l.* to Bromley College; various gifts to the city of Rochester, including a large sum towards repairing the cathedral; almshouses to Greenwich, and a trust to maintain a lecture at Dartford and Gravesend, and to augment poor livings in the diocese under 60*l.* value. Although a bachelor he devised 100*l.* to encourage the marriage of ten maids who had lived seven years in service.

PLUNKET, WILLIAM CONYNGHAM, fourth BARON PLUNKET (1828-1897), archbishop of Dublin, born on 26 Aug. 1828, at 30 Upper Fitzwilliam Street, Dublin, was the eldest son of the Hon. John Plunket, Q.C. (afterwards third Baron Plunket). William Conyngham Plunket, first Baron Plunket [q.v.], was his grandfather. His mother was Charlotte, third daughter of Charles Kendal Bushe [q.v.], lord-chief-justice of Ire-

land. Plunket received his early education first at a day school in Dublin, afterwards at Ssaforth rectory, near Liverpool, under the Rev. William Rawson, of whom W. E. Gladstone had earlier been a pupil. While there he narrowly escaped drowning. Ultimately, in 1842, he was sent to Cheltenham College, then recently opened under Dr. Dobson. Here his career was brilliant, and he rose to be head of the school. But early in his eighteenth year his health broke down from overwork, and when some years later he entered at Trinity College, Dublin, he was not able to read for honours; he graduated B.A. in 1858. This breakdown led Plunket to abandon an ambition for a political career, and to turn his thoughts to the church. It was not, however, until 1857, when in his thirtieth year, that his recovery was complete enough to enable him to seek ordination. He became chaplain and private secretary to his uncle Thomas, second Lord Plunket, then bishop of Tuam, and in the following year was appointed rector of the united parishes of Kilmoylan and Cumber in that diocese.

The early years of Plunket's ministerial life brought him into close contact with the evangelising movement in Connemara and Mayo, and fostered that sympathy with struggling protestant communities which was to be so strongly evinced during his episcopal career in his relation to the reformers in Spain, Portugal, and Italy. He became an active member of the Irish Church Missions Society, travelling through every district of West Connaught in aid of its work, and frequently visiting England to solicit financial support for the movement.

On 11 June 1863 Plunket was married to Anne, daughter of Sir Benjamin Lee Guinness (q. v.), a lady whose philanthropic labours have left a permanent memorial in the valuable training institution known as the St. Patrick's Nursing Home in Dublin. The alliance was one in every way fortunate for Plunket, and led among other things to his nomination in 1861 to the treasurerhip of St. Patrick's Cathedral, then in course of restoration through the munificence of his father-in-law. Five years later he was appointed precentor, and his direct connection with the national cathedral lasted down to his election to the bishopric of Meath in 1876.

On the death in 1866 of his uncle, the second Lord Plunket, and the succession of his father to the title, Plunket became the direct heir to the peerage, and thenceforward his life was spent for the most part in or near Dublin, within a few miles of which

the family seat is situated. His energy, earnestness, and administrative ability combined with his high social position to place him in the position of a leader among the evangelical party in the Irish church. Plunket's removal to Dublin was synchronous with the active revival of the long lumbering agitation against the Irish church establishment, and he threw himself with all his vigour into the task of resisting the attack. But he was among the first to recognise that the result of the general election of 1868 sealed the fate of the establishment, and at once turned his attention to the business of obtaining the best possible terms for the church and its clergy. In the subsequent task of reconstruction Plunket took a foremost part, and was looked on as the leader of those who, in the debates in the general synod of the church of Ireland upon the constitution and liturgy of the disestablished church, sought to procure a radical revision of the prayer-book in an evangelical direction. He had always been animated by a strong belief in the possibility of reunion between the Anglican churches and the other protestant communities; and, apart from his evangelical opinions, his action was prompted by the hope of smoothing the path to reunion. But, though thoroughly loyal to his own church, and enjoying the universal respect that his transparent sincerity compelled, he failed to persuade the synod to adopt his policy, save in relation to some important liturgical alterations, and more particularly to the ornaments rubric.

In 1871, on the death of his father, Plunket succeeded to the peerage. Five years later, on the death of Dr. Butler, he was elected to the bishopric of Meath, a diocese which ranks in the Irish church next after the archbishopric of Dublin, and was consecrated in the cathedral at Armagh on 10 Dec. 1876. His tenure of this see lasted for exactly eight years, and during that period Plunket spent much time in Dublin, and devoted great attention to the question of religious education in the Irish national schools. The institution for providing trained teachers in connection with the church of Ireland, long known as the Kildare Place Schools, had fallen to a low standard of efficiency, and threatened to collapse for lack of funds. Mainly through the instrumentality of Plunket this institution was restored to complete efficiency, affiliated to the national board of education, placed, in common with analogous Roman catholic seminaries, on an equality with the chief government training colleges, and provided

with funds for building. It has ever since occupied, under the title of the Church of Ireland Training College, a foremost place among denominational educational institutions in Ireland. Plunket's activity in educational matters led to his nomination by the viceroy in 1895 as a member of the board of national education. He was also a senator of the Royal University of Ireland; and the honorary LL.D. of Cambridge University conferred on him in 1888 was also in part a recognition of his interest in education.

In 1884, on the resignation, through failing health, of Archbishop Richard Chenevix Trench [q.v.], Plunket was elected archbishop of the united dioceses of Dublin, Glendalough, and Kildare, with which was combined, until 1887, the deanery of Christ Church Cathedral. It was in this position that Plunket became most widely known beyond the limits of his own church through his warm and disinterested championship of the cause of the protestant reformers in Spain. His action in this regard exposed him to considerable obloquy in England, where Plunket's action was viewed by some as an intrusion upon the episcopal domain of the Spanish Roman catholic bishops, and was deprecated by most of the Anglican bishops. In Ireland it excited not a little disapproval among members of his own communion, though from a different standpoint. Plunket's persistent exertions in this cause extended over eighteen years; he undertook three separate journeys to Spain to satisfy himself of the reality of the reformation, and gave money without stint in its support. In 1894 he determined that the time for conferring consecration on Señor Cabrera, the leader of the movement in Spain, had arrived, and on communicating his resolution to the Irish bishops to visit Spain in company with two other members of their body, the majority of his brother prelates declined to oppose his action. He accordingly left Ireland in the autumn of 1894, accompanied by the bishops of Clogher and Down, and on 23 Sept. of that year the ceremony of consecration was performed.

Almost as keen as his interest in the Spanish reformers was Plunket's sympathy with the reformed church in Italy. In 1896 he became president and chairman of the Italian Reform Association, and was active in his support of Count Campello and the leaders of that body. In his efforts in their behalf he was fortunately able to act in co-operation with the English bishops, and thus his Italian labours earned him none of the odium which his intervention in Spain excited.

In the autumn of 1896 the closeness of the union which, despite disestablishment, still exists between the churches of England and Ireland, was exemplified by the visit to Ireland, on Plunket's invitation, of Archbishop Edward White Benson [q.v. Suppl.] The English primate assisted at the reopening of the restored cathedral of Kildare, a diocese united with that of Dublin, and was the guest of Plunket at his residence at Old Connaught. The visit did much to mitigate the asperity of English criticism on Plunket's ultra-evangelical leanings. Benson died suddenly at Hawarden on his way home from Ireland; and Plunket died at the Palace, St. Stephen's Green, on 1 April 1897. Lady Plunket had predeceased him by eight years. He was buried at Mount Jerome cemetery, Dublin, after a public funeral in St. Patrick's Cathedral. He was succeeded as fifth Baron Plunket by his eldest son, William Lee Plunket (b. 1864).

Handsome in appearance, tall, and of a fine presence, Plunket inspired the warmest personal affection among relatives and intimates; but his aspect in public was one of almost lugubrious solemnity. An admirably lifelike statue by Hamo Thornycroft was unveiled in Dublin on 16 April 1901 by the viceroy, Earl Cadogan.

Plunket's purely intellectual endowments were not striking; and though he showed on some occasions not a little of the oratorical power hereditary in his family, he was not a great preacher. He was essentially a man of affairs. But by virtue of the eminence of his position, both hereditary and acquired, and by reason of the remarkable powers of work which reinforced his intense earnestness, and by the charm of a really engaging personality, he was able to accomplish much that abler men might have failed to achieve. He was extremely popular with all classes and creeds in Ireland; his ardent love of his country earning him the goodwill even of those to whom he was politically opposed; and his wide tolerance made him *persona grata* with the presbyterian and methodist bodies, whose ministers he delighted to welcome to his residence at Old Connaught.

[William Conyngham Plunket, fourth Baron Plunket, and sixty-first Archbishop of Dublin: a Memoir by F. D. How, 1900; Archbishop Benson in Ireland, by the Rev. J. H. Bernard; Seddall's Life of Edward Nangle; Brooke's Recollections of the Irish Church.] O. L. F.

POCOCK, NICHOLAS (1814-1897) historical writer, born at Falmouth in January 1814, was eldest son of Nicholas Pocock

of Falmouth and grandson of Nicholas Pocock (1741 ?-1821) [q. v.] the marine painter. Isaac Pocock [q. v.] and William James Pocock [q. v.] were his uncles. He was educated at a private school in Devonshire by the Rev. John Mauley, and on 8 Feb. 1831 matriculated from Queen's College, Oxford, as Michel exhibitor; in 1834 he was elected scholar. He graduated B.A. in that year with a first class in the final mathematical school, and a second class in *lit. hum.* In 1835 he won the Johnson mathematical scholarship and the senior mathematical scholarship in 1836. In 1837 he graduated M.A., and in 1838 became Michel fellow of Queen's, where he was afterwards mathematical lecturer. He had the reputation of being the best mathematical tutor of his time, and among his pupils was Bartholomew Price [q. v. Suppl.]; he was public examiner in mathematics in 1839, 1844, and 1848, and in *lit. hum.* in 1842 and 1852. He was ordained deacon in 1838 and priest in 1855, but never held any ecclesiastical preferment. He married in 1852 a daughter of James Cowles Prichard [q. v.], and retired to Clifton, where he spent the remainder of his life with the exception of a year when he was in charge of Codrington College, Barbados. He died at Clifton on 4 March 1897, being survived by his widow and several sons and daughters.

Pocock edited in 1817 the third edition of Hammond's 'Miscellaneous Theological Works,' and in 1852 published 'The First two Books of Euclid . . . with additional figures.' Afterwards he devoted himself almost exclusively to the history of the Reformation in England. His great work was his monumental edition of Gilbert Burnet's 'History of the Reformation,' published in seven volumes by the Clarendon Press in 1864-5; the seventh volume consists entirely of Pocock's dissertations on Burnet's authorities, sources, and errors, and the whole work embodies the results of much careful and laborious research. He made an extensive collection of original records, two volumes of which were issued by the Clarendon Press in 1871 under the title 'Records of the Reformation;' they are very valuable so far as they go, but the publication was unfortunately stopped with the year 1535 on the ground of inadequate sale, and Pocock's collections remained for the most part in manuscript with the exception of those published in 'Troubles connected with the Prayer-Book of 1549' (Camden Soc. 1884, 4to). Pocock also edited for the Camden Society Harpsfield's 'Treatise of the Protracted Divorce of Catherine of Aragon,'

1878, and contributed numerous articles on Reformation history to the 'Saturday Review,' the 'Union Review,' 'Quarterly Review,' 'Church Quarterly,' and 'English Historical' Reviews, and to the 'Athenaeum' and 'Academy.' He also wrote a few articles for the earlier volumes of this 'Dictionary.' He did much to discredit the traditional protestant view of the Reformation, and, though his work is somewhat marred by theological bias, the masses of new material he brought to light have laid subsequent writers under a debt of gratitude to him.

His other works include: 1, 'The Ritual Commission,' Bristol, 1872. 2, 'The Abolition of the Thirty-nine Articles,' 3 parts, London, 1874. 3, 'The Principles of the Reformation,' London, 1875. 4, 'The Recovery from the Principles of the Reformation,' London, 1877.

[Foster's Alumni Oxon. 1715-1886; Crookford's Clerical Directory, 1897; Times, 11 March 1897; Guardian, 1897, i. 396; Pocock's works in Brit. Mus. Library, esp. his preface to 'Troubles' (Camden Soc.); and information from the Rev. J. R. Magrath, Provost of Queen's College, Oxford]

A. F. P.

POLE, WILLIAM (1814-1900), engineer, musician, and authority on whist, fourth son of Thomas Pole of Birmingham, was born there on 22 April 1814, and educated at a private school at Birmingham kept by a Mr. Guy. In 1829 he was apprenticed for six years to Charles H. Capper, an engineer in practice at Birmingham. On the expiry of his apprenticeship he removed to London, and obtained temporary employment as a draughtsman by Messrs. Cottam & Mallon, and then as manager of an engineering factory belonging to Thomas Graves Barlow. On 7 April 1840 he was elected a member of the Institution of Civil Engineers, and in 1849 he was awarded a Telford medal for a paper on the laws of friction, read on 7 Feb. He was elected a full member on 12 Feb. 1866, served on the council from 1871 to 1885, and was honorary secretary from 1885 to 1896, when he was elected honorary member. In 1814 he published his book on the 'Cornish Pumping Engine,' and in the same year he was appointed by the East India Company first professor of engineering at Elphinstone College, Bombay. In 1845 he did some surveying for what afterwards became the Great Indian Peninsula railway, but in 1847 ill health compelled him to return to England, and in 1848 he became business manager to James Simpson, hydraulic engineer at Westminster.

Under Simpson he assisted at the establishment of the Lambeth Water Company's works at Thames Ditton, and with David Thomson he patented an improved pumping engine (*Proc. Inst. Mech. Engineers*, July 1862). In 1850 he was engaged by Robert Stephenson [q. v.] to work out the calculations for his Britannia bridge over the Menai Straits, and in 1852 he was awarded a silver medal by the Society of Arts for his mathematical calculations on the action of the crank in the steam engine.

In 1852 Pole became assistant to James Meadows Rendel [q. v.]; he accompanied Rendel to Italy in 1853 to report to the Italian government on the harbours at Genoa and Spezzia, and Pole personally explained his reports to Cavour. In the following year he went with Rendel to Hamburg to attend the international conference on methods for improving the navigation of the Elbe, and in 1855 again with Rendel he surveyed the coast of the German Ocean on behalf of the Prussian government, with a view to selecting the best harbour. In October of the same year M. de Lesseps consulted him on the proposed Suez canal, but Pole's chief work under Rendel was in connection with railways, and during these years he took out several patents for improved methods of railway construction, e. g. a patent for railway wheels, 11 Jan. 1856, and one for fish-joints of railways, 10 Nov. 1860 (*Index of Patentes*, 1860-60).

After Rendel's death Pole was appointed in January 1867 assistant to Sir John Fowler [q. v. Suppl.], whom he accompanied to Algeria to survey for the proposed French railways in that colony. In 1858 he became a consulting engineer on his own account at 3 Storey's Gate, Westminster, and from that time until his death he was constantly employed on government work. In 1861 he was a member of Sir John Dalrymple Hay's committee appointed to investigate the application of iron armour to war ships and land fortifications; he took a large part in drawing up the committee's report issued in five volumes, and in 1876 wrote a reply to hostile criticisms which was issued as a parliamentary paper. In 1865 he was secretary of the royal commission appointed to investigate the principles of railway legislation in Great Britain and Ireland, and in 1867 he was secretary to the royal commission on the London water supply; its report, issued in 1869, was mainly Pole's work. From 1870 until Aug. 1899 he was one of the metropolitan gas referees, and in June 1882 he was placed on this royal commission to inquire into the condition of the

Thames and disposal of sewage. In 1884-5 he was secretary of the departmental committee on the South Kensington Museum. In 1871 he was appointed consulting railway engineer in England to the Japanese government, and in 1883 received the Japanese order of the Rising Sun. In 1880 he assisted in the government inquiry into the Tay Bridge disaster, and he was frequently consulted by large provincial municipalities such as Manchester, Liverpool, and Birmingham, on questions connected with their water supply.

In addition to his practical work Pole was for many years actively employed as a lecturer and writer on engineering and other scientific topics. From 1859 to 1867 he was professor of civil engineering at University College, Gower Street, in 1865 he delivered six lectures before the royal school of naval architecture and marine engineering, and he occasionally gave lectures to the royal engineer students at Chatham. He contributed numerous papers to the 'Proceedings of the Institution of Civil Engineers,' many of which were also issued separately. For a paper on the mountain railway up the Rigi he was awarded a Telford premium in 1873. He contributed several chapters to Jeaffreson's 'Life of Robert Stephenson' (1864), one to the 'Life of I. K. Brunel' (1870), completed Sir William Fairbairn's 'Life' (1877), and wrote a 'Life of Sir W. Siemens' (1888). He also wrote on 'Colour Blindness' in the 'Philosophical Transactions' for 1869, and as early as 1844 had published a translation of Gessert's 'Art of Painting on Glass.' He was much interested in photography and in astronomy. He accompanied the astronomical expedition to Spain in July 1860, and published an account of it in 'Macmillan's Magazine' for that year.

But the subjects in which Pole became almost as eminent as in engineering were music and whist. When only seventeen years of age he had been appointed organist to a Wesleyan chapel at Birmingham; this he soon exchanged for the post of organist at a congregational chapel in the same town, and on his removal to London he was in December 1836 elected organist of St. Mark's, North Audley Street, London. He graduated Mus. Bac. at Oxford on 18 June 1860, and Mus. Doc. on 17 Dec. 1867. In 1875 his report on the music at the Crystal Palace determined the directors to continue the concerts, and from 1878 to 1891 he was examiner for musical degrees in London University. In 1877 he gave a course of lectures at the Royal Institution on the theory of music, afterwards pub-

lished as 'The Philosophy of Music' (1877; 2nd edit. 1887; 4th edit. 1896). In 1879 he published 'The Story of Mozart's Requiem,' and in 1881 he declined the offer of the professorship of acoustics at the Royal Academy of Music. In 1880 he was elected a vice-president of the Royal College of Organists. He contributed several articles to Grove's 'Dictionary of Music,' and published in 1872 an arrangement for four hands of 'Three Songs' (London, fol.), and in 1879 'The Hundredth Psalm; motett for eight voices.'

As an exponent of whist Pole ranks with 'Cavendish' [see JONES, HENRY, Suppl.] and James Clay [q. v.]. He was a constant habitué of the card-room at the Athenæum, but his play is said not to have been so successful as his books on the game. His first contribution to whist literature was his 'Essay on the Theory of the Modern Scientific Game,' issued as an appendix to the sixteenth edition of 'Short Whist . . . by Major A.' (1866). In this form it passed through two editions; it was separately published in 1870, and since then has gone through more than twenty editions. In 1888 he brought out his 'Philosophy of Whist' (6th edit. 1892); he also contributed the article on whist to Bohn's 'Handbook of Games' (1889), compiled some rhymed rules for whist players, which had a large circulation, and was a frequent contributor on the subject to periodical literature.

This variety of attainments brought Pole many honours; he was elected a fellow of the Royal Society on 6 June 1861, was placed on its council in 1868, and served as vice-president in 1875 and 1888. In 1861 he was elected a member of the Athenæum under rule two, and in 1877 he became a fellow of the Royal Society of Edinburgh. In 1888 he represented both the Royal Society and the university of London at the eighth centenary of Bologna University. He died at his residence, 9 Stanhope Place, on 30 Dec. 1900. His wife Matilda, youngest daughter of Henry Gauntlett, rector of Olney, and sister of Pole's friend, John Henry Gauntlett [q. v.], predeceased him in October 1900, leaving issue several sons and daughters. A portrait, reproduced from a lithograph published in 1877, is prefixed to Pole's privately printed autobiographical 'Notes' (1898).

POLLOCK, SIR CHARLES EDWARD (1823-1897), judge, fourth son of chief baron Pollock [see POLLOCK, SIR JONATHAN FREDERICK], by his first wife, Frances, daughter of Francis Rivers, was born on 31 Oct. 1823. He was educated at St. Paul's school from 1833 to 1841, and, dispensing with a university course, served a long and varied apprenticeship to the law as private secretary and (from 1846) marshal to his father, and also as pupil to James (afterwards Sir James) Shaw Wiles [q. v.]. On 18 Jan. 1842 he was admitted student at the Inner Temple, where he was called to the bar on 29 Jan. 1847, and elected bench on 10 Nov. 1866.

For some years after his call Pollock won the home circuit without success. Meanwhile, however, he made himself known as a reporter in the court of exchequer, then unusually efficient [cf. ALDERSON, SIR EDWARD HALL, and PARKE, SIR JAMES, BARON WENSLEYDALE], and as a legal author (see infra). By these means he gradually worked his way into practice, and after holding the complimentary offices of 'tubman' and 'postman' in the court of exchequer, took silk on 23 July 1866.

As a leader he had for some years a large and lucrative practice, especially in mercantile cases, and on the retirement of Baron Channell in 1873 he was raised to the exchequer bench (10 Jan.), invested with the office (13 Jan.), and knighted (5 Feb.). The consolidation of the courts effected by the Judicature Acts gave him in 1876 the status of justice of the high court, but did not alter his official designation. It was, however, provided that no new barons of the exchequer should be created, and the death of Baron Huddleston (5 Dec. 1890) left Pollock in exclusive possession of one of the most ancient and honourable of our judicial titles. A similar historic distinction, that of representing the ancient and doomed order of serjeants-at-law, he shared with Lords Esher and Penzance, and Sir Nathaniel (afterwards Lord) Lindley. On the dissolution of Serjeants' Inn in 1882 he was re-elected bench of the Inner Temple.

Pollock tried, in April 1876, the unprecedented case of the *Queen v. Keyn*, arising out of the sinking of the British vessel *Strathclyde* by the German steamship *Frankonia*. The collision occurred within three miles of the English coast, and Keyn, the

master of the Franconia, to whose culpable negligence it was imputed, was indicted for manslaughter and found guilty. Pollock deferred judgment pending the decision of the question of jurisdiction by the court for the consideration of crown cases reserved, and concurred with the majority of that court in quashing the conviction (Cox, *Criminal Cases*, xiii. 403). He took part in several other important decisions of the same tribunal. In the St. Paul's reredos case in 1889 he differed from Lord Coleridge, and his judgment was sustained by both the court of appeal and the House of Lords. Pollock was vice-president of the Rochester Diocesan Association, a member of the Commons' Preservation Society, and of the Board of Conservators of Wimbledon Common. He died at his residence, Tho Croft, Putney, on 21 Nov. 1897, leaving a well-merited reputation for sound law and unaffected piety. He married thrice: first, on 1 Sept. 1848, Nicola Sophia, second daughter of the Rev. Henry Herbert, rector of Rathdowney, Queen's County, Ireland; secondly, on 26 May 1858, Georgiana, second daughter of George William Archibald, LL.D., M.R., of Nova Scotia; thirdly, on 23 Dec. 1865, Amy Menella, daughter of Hassard Hume Dodgson, master of the court of common pleas and cousin of Charles Lutwidge Dodgson (Lewis Carroll) [q.v. Suppl.] He had issue by all three wives. His portrait, etched from a sketch made in court, is in 'Pump Court' for March 1884.

Pollock was joint author, with J. J. Lowndes and Sir Peter Maxwell, of 'Reports of Cases argued and determined in the Queen's Bench Practice Court: with Points of Practice and Pleading decided in the Courts of Common Pleas and Exchequer' (1850-1), London, 1851-2, 2 vols. 8vo. He was also joint author, with F. P. Maude, of 'A Compendium of the Law of Merchant Shipping; with an Appendix containing all the Statutes of practical utility,' London, 1853, 8vo; 4th ed. by Pollock and (Sir) Gainsford Bruce, 1881. He was author of the following works: 1. 'The Practice of the County Courts,' London, 1851, 8vo (Supplements entitled (1) 'An Act to facilitate and arrange proceedings in the County Courts, 15 & 16 Vict. c. 64; together with the Absconding Debtors Act,' 14 & 15 Vict. c. 52, London, 1852, 8vo. (2) 'The Practice of the County Courts in respect of Probate and Administration,' London, 1858, 8vo. (3) 'Equitable Jurisdiction of the County Courts,' London, 1865, 12mo; last edition, including supplements, revised by H. Nicol and H. C. Pollock, London, 1880, 8vo. 2. 'A Treatise on the Power of the Courts of Com-

mon Law to compel the production of documents for inspection; with an Appendix containing the Act to amend the Law of Evidence, 15 & 16 Vict. c. 99, and notes thereto,' London, 1851, 8vo; reprinted with Holland and Chandler's 'Common Law Procedure Act of 1854,' London, 1854, 12mo.

POTTER, THOMAS BAYLEY (1817-1898), politician, born on 29 Nov. 1817 at Manchester, was the younger son of Sir Thomas Potter, knt., by his wife Esther, daughter of Thomas Bayley of Booth Hall, near Manchester.

SIR THOMAS POTTER (1773-1845) and his brother RICHARD POTTER (1778-1842) were unitarians and leading members of the Manchester school of liberals. They were among the founders of the 'Manchester Guardian,' and afterwards of the 'Times' (of Manchester), later called the 'Examiner and Times.' Thomas, after actively promoting the incorporation of Manchester, was elected its first mayor in 1838. During his second mayoralty, in 1839, he was knighted; he died at Buile Hill, near Manchester, on 20 March 1845 (*Gent. Mag.* 1845, i. 562). A portrait of him is in the office of the lord mayor in Manchester town hall. His brother Richard, known as 'Radical Dick,' was elected M.P. for Wigan in the first reformed parliament in 1832 and again in 1835 and 1837: he died at Penzance on 13 July 1842 (*Gent. Mag.* 1842, ii. 429). The brothers founded the wholesale house in the Manchester trade so long known as 'Potter's,' and it became a rendezvous for political and philanthropic reformers. The business was first carried on in Cannon Street, and was removed to George Street in 1836. It was one of the rooms in the George Street premises that was called 'the Plotting Room.'

Thomas Bayley Potter first attended Mr. John's school in George Street, Manchester. At the age of ten he went with his elder brother, John, to Dr. Carpenter's school at Bristol. Dr. Carpenter used to read aloud the parliamentary debates, and of about sixteen boys who attended during Potter's time eight became liberal members of parliament. From Bristol Potter went to Rugby under Dr. Arnold. While he was there the reform

bill passed, and immediately on leaving school, at the age of sixteen, he took part in his uncle Richard's election at Wigan. In 1833 he joined the London University, the only one open to him as a unitarian.

On returning to Manchester Potter became a partner in the family business, and a vigorous supporter of the family politics. At the age of twenty-three he was chairman of the Manchester branch of the Complete Suffrage Society. In 1845, on the death of his father, his brother John became head of the firm known successively as 'Potter & Norris' and 'Potter & Taylor.' John was mayor of Manchester during three successive years, and was knighted in 1851. At the time of the Crimean war a temporary estrangement occurred between the Potters who supported the war, and the party of Bright and Cobden who opposed the war. Thomas Potter's brother, Sir John, stood for Manchester in 1857 in opposition to Bright, and, with the support of his brother Thomas, was elected at the head of the poll (30 March). In the following year on 25 October Sir John died, and his brother Thomas became head of the firm. The split in the liberal party was soon repaired, and long before 1861 Potter was again co-operating with his old friends. In that year he warmly espoused the cause of the North Americans in the American civil war, and in 1863 founded the Union and Emancipation Society, which he carried on at great cost of money and labour during the continuance of the American war. His friendship with Richard Cobden became very strong, and in 1865, when Cobden died, he was elected to succeed him in the representation of Rochdale, his candidature being warmly recommended by John Bright. In the general election which happened a few months later the seat was not contested, but in the six following general elections he fought hard fights, winning with substantial majorities. In 1886 he stood as a home-ruler. Shortly after the death of his partner, Mr. Francis Taylor, which occurred about 1870, the business was sold, and Potter ended his commercial connection with Manchester. In 1895 failing health compelled him to retire from parliament. During his thirty years in the House of Commons he was a consistent supporter of free trade and of the principles of political freedom. He seldom spoke, but was a diligent member. He introduced a bill in 1876 designed to abolish the law of primogeniture, the second reading of which was lost by only thirty-five votes. Outside the house he gave influential and substantial support to many

public movements; for example, to that for the unity of Italy, and for many years he had a close personal friendship with Garibaldi. In 1879 he visited America with the object of encouraging the adoption of free trade in the United States. While at Boston he was elected the first honorary member of the Merchants' Club.

The most important work of Potter's life was the establishment and successful conduct during many years of the Cobden Club. This society was started in 1866, partly at the suggestion of Professor Thorold Rogers, and was intended to educate the people by means of printed publications, lectures, and otherwise in the principles of free trade as held by Richard Cobden. Potter himself acted as secretary, and for some time as chairman of the club, and in 1890, twenty-four years after its establishment, received from Gladstone, in the presence of several distinguished statesmen, an address setting forth the valuable public work accomplished by the club under his guidance.

At the end of his life Potter spent his vacations in Cobden's old home at Midhurst, where he died on 6 Nov. 1898.

In 1846 Potter married Mary, daughter of Samuel Ashton of Gee Cross, Hyde. They had four sons and one daughter, of whom the third and fourth sons, Arthur and Richard, and the daughter Edith survived their father. Mrs. Potter died at Cannes in 1885, and Potter, in 1887, married Helena, daughter of John Hicks of Bedmin, who survived him.

Potter was popular in the House of Commons with men of all parties. His appearance was that of a stout Yorkshireman, with a florid complexion; and he was jestingly spoken of as 'the greatest man in the house,' his weight amounting to eighteen stone.

[Private information; Hansard's Parl. Debates; personal knowledge.] E. O.

POWELL, SIR GEORGE SMYTH BADEN- (1847-1898), author and politician, born at Oxford on 24 Dec. 1847, was the third son of Baden Powell [q.v.], by his second wife, Henrietta Grace, daughter of Admiral William Henry Smyth [q.v.] Major-general Robert Stephenson Smyth Baden-Powell is his younger brother. He was admitted to St. Paul's School on 17 Sept. 1858, and to Marlborough College in April 1861. Leaving school at midsummer 1868 he spent three years in travel, visiting India, the Australasian colonies, the Cape, Spain, Portugal, Norway, and Germany. He published his observations in Australia and New

Zealand in 1872 under the title 'New Homes for the Old Country' (London, 8vo), a work containing much information on the natural history of the colonies. He matriculated from Balliol College, Oxford, on 18 Oct. 1871, graduating B.A. in 1875 and M.A. in 1878. In 1876 he obtained the chancellor's prize for an English essay on the subject of 'The Political and Social Results of the absorption of small Races by large.' In the same year he entered the Inner Temple as a student. In 1877 he became private secretary to Sir George Ferguson Bowen [q.v. Suppl.], governor of Victoria. At this time he devoted some attention to the study of the economic aspects of colonisation, and in 1879 he published 'Protection and Bad Times with special reference to the Political Economy of English Colonisation' (London, 8vo), in which he vigorously combated the notion that while free trade was good for a manufacturing country like England, it was unsuited for younger communities. In 1880 Baden-Powell proceeded to the West Indies as commissioner to inquire into the effect of the sugar bounties on West India trade. In 1882 he published 'State Aid and State Interference' (London, 8vo), a strong protest against protection, in which, without confining himself to the question of sugar bounties, he made use of his observations in the West Indies. In November 1882 he was appointed joint commissioner with Colonel Sir William Crossman to inquire into the administration, revenue, and expenditure of the West India colonies. The report of the commission, contained in five blue-books, was completed by Easter 1884. For his services Baden-Powell was created C.M.G. In January 1885 he went to South Africa to assist Sir Charles Warren in the pacification of Bechuanaland. He afterwards made a tour of investigation in Basutoland and Zululand.

In December 1885 Baden-Powell was returned to parliament in the conservative interest for the Kirkdale division of Liverpool, a seat which he retained until his death. Immediately after his election he proceeded to Canada to assist to establish communication with Japan through the colony by means of a line of steamers between Vancouver and Yokohama. He spoke, wrote, and worked in favour of this scheme, which was subsidised by government and successfully carried out. The new route reduced the length of the journey to Japan from forty-two to twenty-two days. In 1887 he was appointed special commissioner with Sir George Bowen to arrange the details of

the new Maltese constitution. All the recommendations of the commissioners were adopted, and they received the thanks of government. The following year Baden-Powell was nominated K.C.M.G.

While on the Pacific coast of Canada in 1886 Baden-Powell was attracted to the disputes concerning the Behring Sea fisheries. He endeavoured to call the attention of the British and American governments to the question, visiting Washington on his way to England. In June 1891, when the difficulty became acute, Lord Salisbury appointed Baden-Powell and a representative of the Canadian dominion to proceed to the Behring Sea to investigate the subject. The British claims were founded on their reports, and in December 1892 he was appointed British member of the joint commission in Washington. In the spring of 1893 he was chosen to advise in the preparation and conduct of the British case before the arbitrators in Paris. For these services Baden-Powell received the thanks of government, his position as member of parliament precluding the bestowal of any substantial reward. In 1892 he was made honorary LL.D. of Toronto.

In 1896 Baden-Powell took a party of astronomers to Nova Zembla in his steam yacht, the Ontario, to observe the total eclipse of the sun on 4 Aug. On returning from Nova Zembla, Baden-Powell was joined at Hammerfest by Dr. Nansen, who was returning from his expedition towards the north pole. Baden-Powell conveyed Nansen to Christiania in the Ontario. Powell died at his residence in Euston Square, London, on 20 Nov. 1898, and was buried at Kensal Green cemetery on 24 Nov. In April 1893 he married, at Cheltenham, Frances, only child of Charles Wilson of Glendouan, Cheltenham. She survived him. By her he had a son and daughter.

Besides the works already mentioned Baden-Powell was the author of 'The Saving of Ireland, Industrial, Financial, Political' (London, 1898, 8vo), a work directed against the policy of home rule. He wrote numerous articles in the 'Quarterly,' 'Westminster,' 'Nineteenth Century,' 'Fortnightly,' 'Contemporary,' and 'National' Reviews, and in 'Fraser's Magazine,' dealing with political and economic aspects of colonial administration. He also delivered numerous lectures and public addresses, edited 'The Truth about Home Rule' (Edinburgh and London, 1888, 8vo), a collection of papers on the Irish question, and contributed an article on 'Policy and Wealth in Ashanti' to Major-general Robert Stephenson Smyth

Baden-Powell's 'Downfall of Premphoh,' London, 1896, 8vo.

POWYS, THOMAS LITTLETON, fourth Baron Lilford (1833-1896), ornithologist, was the eldest son of Thomas Atherton Powys, third Baron Lilford, and his wife Mary Elizabeth (daughter of Henry Richard Fox, third Baron Holland, and Elizabeth Vassall, his wife). He was born in Stanhope Street, Mayfair, London, on 18 March 1833. He was educated at Dr. Bickmore's school, Berkswell, Warwickshire, from 1843 to 1848, and at Harrow, which he quitted at midsummer 1850 for residence with a tutor at Llanecanne. He then entered at Christ Church, Oxford, whence he matriculated 12 June 1851, but left the university without taking a degree.

At an early age he had manifested a love for animals, and when at Harrow kept a small menagerie, and thence wrote his first published paper. He kept a larger menagerie at Oxford, and all his spare time, during vacation and subsequently through life, as far as his health would permit, was devoted to travel for the purpose of studying animals, and especially birds in the field. In 1858 he visited Scilly, Wales, and Ireland, and becoming acquainted with Edward Clough Newcome, the best falconer of his day, shortly after took up falconry himself. In 1864, on the ombodiment of the militia, he joined that of his county and served at Dublin and Devonport, giving up his commission at the end of 1865.

From 1866 to 1868, accompanied by the Hon. Hercules Rowley, he made an extended yachting cruise in the Mediterranean. Returning to England in the following year, he married, 14 June 1869, Emma Elizabeth, youngest daughter of Robert William Brandling, esq., of Low Gosforth, Northumberland.

Between 1864 and 1882 he paid frequent visits to Spain and the Mediterranean, rediscovering the rare gull *Larus Audouini*. The death in 1882 of his eldest son, and in 1884 of his wife, greatly distressed him, and his lifelong malady, the gout, subsequently attained such a hold as to render him a permanent invalid, his affliction being relieved by the devoted attention of his second wife,

Clementina (daughter of Ker Baillie Hamilton, C.B.), whom he married on 21 July 1895.

He had been elected a fellow of the Zoological Society in 1862, and of the Linnean Society in March 1862. He was one of the founders of the British Ornithologists' Union in 1858, and its president from March 1867. He was also a liberal supporter and first president of the Northamptonshire Natural History Society, founded in 1878, and a prominent member of the 'Old Hawking Club.'

His aviaries at Lilford were the envy of field ornithologists, and especially noted for the collection of birds of prey.

His zeal for his favourite science never flagged, and he projected and issued his famous work, 'Coloured Figures of the Birds of the British Islands,' which, however, he did not live to complete, his malady causing his death at Lilford on 17 June 1896.

In addition to some two dozen papers on ornithological subjects, contributed to the 'Ibis' (of which he was a generous supporter), the 'Proceedings of the Zoological Society,' and other scientific journals, he was author of: 1. 'Coloured Figures of the Birds of the British Islands,' completed by Osbert Salvin [q.v. Suppl.], with a biography by Professor A. Newton, and a portrait, 7 vols., London, 1885-97, 8vo. 2. 'Notes on the Birds of Northamptonshire and Neighbourhood,' 2 vols. illustrated, London, 1893, 4to.

['Lord Lilford . . . a Memoir by his Sister,' and a preface by Mandell Creighton, bishop of London, London, 1900, 8vo (with portrait); Professor A. Newton's Preface to 'Coloured Figures,' &c.; Ibis, 1890, p. 593; Proc. Linn. Soc., 1890-7, p. 59; Burke's Peerage.] B. B. W.

PRESTWICH, SIR JOSEPH (1812-1896), zoologist, the eldest surviving son of Joseph Prestwich, a wine merchant in London, and of Catharine, daughter of Edward Blakey of Brosley, was born at Pensbury, Clapham, on 12 March 1812. He was descended from an old Lancashire family, which lived, till the troubles of the civil war, at Hulme Hall, on the banks of the Irwell, now part of Manchester. The last owner, Thomas Prestwich, was created a baronet on 25 April 1644 by Charles I for services to the royal cause, and it was believed that Joseph Prestwich was in reality heir to the title. When five years old he was sent to a private school near home; next to one at Forest Hill, and to a third in South Lambeth, whither his parents had removed. In 1823 he was a pupil at a school

in Paris, boarding with a French family, so that in the two years of his stay he learnt the language well. On his return to England he went to a school at Norwood, and was then for two years under Richard Valpy [q. v.] at Reading. In his seventeenth year he joined University College, London, where he was attracted to science and chemistry. At the age of eighteen he entered his father's office, but though most conscientious in his attention to business, he devoted every spare moment to science, working till late in the night; this habit, and living too sparingly so that he might spend more on books and instruments for his studies, probably did harm to his constitution, for though he lived to be old he was far from a healthy man.

Gradually Prestwich's interests concentrated on geology, and he began to study the coalfield of Coalbrookdale in Shropshire, which he described in two papers read before the Geological Society of London. The second of them at once established his reputation as a geologist. While in London he settled down to that close study, first of the Eocene and then of the Pliocene deposits, on which were founded his most important contributions to science.

His parents removed to Devonshire Street, Portland Place, in 1840, and in 1842, at a rather anxious crisis, the father ceded his place in the firm to the son, who then lived at the offices in Mark Lane. To his study of the tertiary he had added that of water supply, and in 1861 published an excellent volume on the water-bearing strata round London. In the same year came the first of a series of most valuable papers on the Eocene strata of England and their continental equivalents, but the series did not close till 1888. He also closely studied the Pliocene deposit of the eastern counties, especially during the decade commencing with 1845, but the three papers which were the result were not published till 1871; though containing less new matter than those on the Eocene, they are models of exhaustive work. In one the iron sands on the North Downs, which at Lenham contain ill-preserved fossils, were classed as lower Orag. This identification was afterwards contested, but further investigation has confirmed Prestwich's view.

Late in the fifties he began to work at the antiquity of man, co-operating first in the exploration of Brixham cave, and then, in the spring of 1869, visiting the Somme valley in company with (Sir) John Evans, to examine into M. de Perthes's evidence for the existence of man when the gravels with remains of the mammoth were formed.

The results were embodied in a paper read to the Royal Society in May 1869, showing that, though M. de Perthes had been occasionally imposed upon, the main facts were indisputable. Then came the news that a human jawbone, supposed to be contemporary, had been found in the gravel at Moulin Quignon, Abbeville. Prestwich went with some English experts in 1863 to examine the specimen, and afterwards attended a conference on the subject at Paris, when they maintained the jaw to be much more recent than the gravel in which it had indubitably been found. The questions thus opened up engaged Prestwich's attention to the last, some of his latest papers being on certain flints found by Mr. B. Harrison and others on the North Downs, sometimes as much as 600 feet above sea level. Prestwich regarded them as bearing the marks of human workmanship, but some good judges maintain the fractures to be natural.

In 1864 he was placed on the Water Commission, and in 1866 was appointed to the Royal Coal Commission, on each of which he took a very active part, making most valuable contributions to their reports. As his health was suffering from such continuous strain, he determined to have a breathing place in the country, so he began to build near Shoreham, Kent, in 1864, Darent Hulme, a quaintly ornamented and very attractive house, in the garden of which he found a lifelong pleasure. But the loss at the end of 1866 of his sister Civil, who had been his devoted companion for the last ten years, overshadowed its completion.

February 1870 was marked by two important events: he became president of the Geological Society, of which he had already been secretary and treasurer, and a few days afterwards married Grace Anne McCall, daughter of James Milne of Findhorn, and niece of Hugh Falconer [q. v.] In 1872 he found himself able to retire from business, and thus to indulge the desire of his life, and devote his whole time to scientific studies. But in June 1874, on the death of John Phillips (1800-1874) [q. v.], he was offered the chair of geology at Oxford, which after some hesitation he accepted. It was late in life to begin to teach, and Prestwich was not naturally a facile speaker or lecturer, but he threw himself vigorously into his new duties and the cause of scientific education in the university. Not the least of his services to it and the city was applying his special knowledge to obtain a better water supply. He received the degree of M.A. on 11 Nov. 1874, and was admitted a

member of Christ Church soon after entering upon his duties. In 1879 he refused the presidency of the British Association, fearing the strain of additional work, and in February 1885 was elected a corresponding member of the French Academy of Sciences. Early in 1888 he vacated the professorship, being succeeded by Alexander Henry Green [q. v. Suppl.], and published the second volume of his 'Geology, Chemical, Physical, and Stratigraphical' (the first having appeared in 1880), receiving later in the year the degree of D.O.L. from the university. He was president of the International Geological Congress which that year met in London, but Darant Hulmo was henceforth his only residence.

His later work dealt more especially with quaternary deposits, such as the so-called Westleton shingle, a gravel of which he believed the equivalents could be found over a large part of England. An important paper on this subject was published in 1889 with another on the flint implements found by Mr. B. Harrison, as already mentioned. 1895 saw the publication of a volume entitled 'The Tradition of the Flood,' of another entitled 'Collected Papers on some Controverted Questions of Geology,' of a reissue, with additions, of the 'Water-bearing Strata of the Country around London,' and of an article in the 'Nineteenth Century' on the 'Greater Antiquity of Man.' Health, however, was now gradually failing; continuous exertion, whether physical or mental, became more difficult, though his interest in geology and in his garden never flagged; but a sudden failure of strength occurred on 1 Nov. 1896, which was the beginning of the end. He lived to receive one more recognition of his services, for on New Year's day 1896 he was gazetted a knight. He died on 23 June 1896 and was buried in Shoreham churchyard. Lady Prestwich, herself well versed in geology and his constant helpmate, survived to write a memoir of her husband, which appeared in June 1899, but in September she also, after long ill-health, passed away at Darant Hulmo.

As a geologist Prestwich's strength lay in stratigraphy. There his work is masterly. In physical questions also he took great interest, but it may be doubted whether he was so uniformly successful in dealing with them, while to petrological, like most geologists of his generation, he gave little attention. As an observer he was remarkable for accuracy, patience, and industry; no pains were spared in collecting materials, and his work on the tertiary and quaternary deposits will on this ground have a perma-

nent value, even though some of his conclusions may fail to command general acceptance. These, however, will not be numerous. His position in regard to geology was a somewhat exceptional one; for, while accepting on the whole the uniformitarian view maintained by Charles Lyell [q. v.], he did not entirely abandon some tenets of the older school, such as the occasional intensification of natural forces on a rather large scale. For instance, he held that a flood had spread over England, and much, if not all, of Europe, in quaternary times, which partly destroyed palæolithic man. While assigning to the latter an earlier appearance than would be conceded by some geologists, he placed the glacial age within twenty or twenty-five thousand years of the present date.

His writings, according to the list printed in the 'Memoir,' are 140 in number, including two papers posthumously published. Of these, six were books; one, however, consisting only of republished papers; several of the remainder were pamphlets, reports, or reviews, the rest contributions to scientific periodicals, especially of the Geological and Royal Societies. Some of the more important have been mentioned above, but those on the agency of water in volcanic eruptions, the thickness and mobility of the earth's crust, and underground temperatures, published in the 'Proceedings of the Royal Society,' and that on the 'Parallel Roads of Lochaber,' published in the 'Philosophical Transactions' (vol. xvii.), must not be forgotten. In the last-named he supposes the terraces to have had their origin on the shores of a freshwater lake formed upon a glacier, the lower portion of it being raised to a higher level by a jamming of the ice. The idea is ingenious, and avoids some difficulties in the two rival theories, usually in favour, viz., seaside terraces produced during a submergence, and terraces on the side of an ordinary lake, the mouth of which is dammed by ice, but is not without grave difficulties of its own.

In personal appearance Prestwich was well above middle height, thin, and rather fragile in aspect, with delicate features, a remarkably fine forehead, and attractive expression, corresponding with that singular kindness of manner and courtesy, even to opponents, which, with his inflexible integrity, made him no less beloved than respected. He was the last representative of that generation of great geologists who were born within a few years of the beginning of the nineteenth century, though with them he was always 'Young Prestwich.'

while he was the Neetor of that which he left behind.

Besides the honours mentioned above, Prestwich was elected a fellow of the Geological Society in 1893, and received the Wollaston medal in 1849, was elected a fellow of the Royal Society in 1833, and was awarded a Royal medal in 1885. He was also a fellow of the Chemical Society, of the Geological Society of France (1838), and was an associate of the Institute of Civil Engineers, as well as being an honorary member of several English and foreign societies, among them the Lincei of Rome.

A painting (presented by Lady Prestwich) is in the collection of the Geological Society, and reproduced photographs are also there and in the 'Life' by his widow.

[Personal knowledge; obituary notices in the Quarterly Journal of the Geological Society, vol. liii. Proc. p. xlix; the Proceedings of the Royal Society, vol. lx. p. xii, and Geological Magazine, 1898, p. 336, referring to a fuller notice, with a portrait, 1893, p. 241. These, however, are superseded by the Life and Letters of Sir Joseph Prestwich, by his widow, 1899.]

T. G. B.

PRICE, BARTHOLOMEW (1818-1898), master of Pembroke College, Oxford, born in 1818 at Coln St. Dennis in Gloucestershire, was the second son of William Price (*d.* 13 April 1860), rector of Farnborough in Berkshire and of Coln St. Dennis. He was educated privately, and matriculated as a scholar from Pembroke College, Oxford, on 16 March 1837. He graduated B.A. in 1840, obtaining a first class in mathematics, and M.A. in 1843. In 1842 he gained the senior university mathematical scholarship, and two years later was elected a fellow of Pembroke, taking holy orders. In 1846 he became tutor and mathematical lecturer, and in 1847-8 and 1863-5 was a public examiner. In 1858 he was proctor.

In 1848 Price published his first mathematical work, 'A Treatise on the Differential Calculus' (London, 8vo), and he then began to prepare his great undertaking, the 'Treatise on Infinitesimal Calculus', which included differential and integral calculus, calculus of variations, applications to algebra and geometry, and analytical mechanics (Oxford, 8vo). It was completed in four volumes, the first appearing in 1862 and the last in 1880. A second edition was commenced in 1857, before the completion of the first, and was completed in 1889. He was elected a fellow of the Royal Society on 3 June 1862 and of the Royal Astronomical Society on 13 June 1856.

In 1853 Price was chosen Sedleian pro-

fessor of natural philosophy at Oxford, a chair which he retained until June 1898. In 1856 he became a member of the hebdomadal council, and in 1868 he was made an honorary fellow of Queen's College and secretary to the delegates of the university press. At that time he was doing a very large part of the mathematical teaching in the university, but his success in his new position was so great that he became gradually absorbed in its duties. He showed great financial ability in directing the affairs of the press, and increased its business and income enormously before resigning the secretaryship in 1884. As time went on the affairs of the university passed more and more into his hand, and he became a member of nearly every board or council of importance connected with it. When the university observatory was founded in 1874 he was put on the board of visitors, and in 1878 he was one of a committee of three appointed to consider its outstanding requirements. He was also one of the six representatives of the Royal Society on the board of visitors to the royal observatory at Greenwich. In 1892 he was elected master of Pembroke College by the appointment of Lord Salisbury, the votes of the fellows being equally divided; Lord Salisbury, as chancellor of the university, was visitor of the college. With the mastership went a canonry of Gloucester. He died in Pembroke College on 29 Dec. 1898 and was buried on 3 Jan. 1899 in Holywell cemetery. He was married at Littleham in Devonshire on 20 Aug. 1857 to Amy Eliza, eldest daughter of William Cole of Highfield, Exmouth; she, with several sons and daughters, survived him.

[Monthly Notices of the Royal Astronomical Soc. 1899, lix. 228-9; Times, 30 Dec. 1898; Oxf. Univ. Mag. 26 Jan. 1899; Royal Society's Yearbook, 1900, pp. 185-9.]

E. I. C.

PRIESTLEY, SIR WILLIAM OVEREND (1829-1900), physician, the eldest son of Joseph Priestley and Mary, daughter of James Overend of Morley, was born at Morley Hall, near Leeds, on 24 June 1829; he was grand-nephew of Joseph Priestley [q.v.], who discovered oxygen. Priestley was educated successively at Leeds, King's College, London, Paris, and the university of Edinburgh. He was admitted a member of the Royal College of Surgeons of England in 1852, and in 1853 he graduated M.D. at Edinburgh, taking as his thesis 'The Development of the Gravid Uterus.' The thesis showed such merit that it was awarded Professor Simpson's gold medal and the higher distinction of the senate gold medal, which is given only for excellence in original work.

The dissections which illustrate it still find an honoured place in the Edinburgh University Museum. Priestley acted as the private assistant of Sir James Young Simpson [q.v.] for some time after his graduation, but in 1856 he came to London and gave lectures at the Grosvenor Place School of Medicine. In 1858 he was appointed lecturer on midwifery at the Middlesex Hospital, and in 1862 he was elected professor of obstetric medicine at King's College, London, and obstetric physician to King's College Hospital, in the place of Dr. Arthur Farre. These posts he resigned in 1872, and he was then appointed consulting obstetric physician to the hospital, becoming an honorary fellow of King's College and a member of the council.

Priestley was admitted a member of the Royal College of Physicians of London in 1859, and was chosen a fellow in 1864, serving as a member of the council 1878-80, Lumleian lecturer in 1887, and censor 1891-2. He became a fellow of the Royal College of Physicians of Edinburgh in 1858, and from 1866 to 1876 he was an examiner in midwifery at the Royal College of Surgeons of England. He was also at different times an examiner at the Royal College of Physicians of London and at the universities of Cambridge, London, and Victoria. He was president of the Obstetrical Society of London 1876-8, and was a vice-president of the Medical Society of Paris. He was a physician-aide-majeur to H.R.H. Princess Louise of Hesse (Alice of England), and to Princess Christian of Schleswig-Holstein. The honorary degree of LL.D. was conferred upon him by the university of Edinburgh in 1894, and in 1893 he was knighted. Early in his career he was attracted to politics in connection with professional subjects, and on 12 May 1890 he was elected without opposition parliamentary representative of the universities of Edinburgh and St. Andrews in

the conservative interest upon the elevation of Sir Charles Pearson to the Scottish bench.

He died in London on 11 April 1900, and is buried at Warnham, near Westbrook Hall, his estate in Sussex. There is an excellent half-length portrait in oils painted by Rudolf Lehmann, his brother-in-law. Priestley married, on 17 April 1856, Eliza, the fourth daughter of Robert Chambers (1802-1871) [q.v.], by whom he had two sons and two daughters.

Sir William Priestley was among the first to convert midwifery into obstetric medicine by using modern scientific methods to elucidate its problems. Much of his success in the theory and practice of his art he owed to his master, Sir James Y. Simpson. His power of teaching, his urbanity, and his skill soon obtained him a practice of the highest order, and enabled him to exert considerable influence upon his own branch of medicine. Unfortunately he entered parliament too late and sat there too short a time to render such services to his profession as he would have wished. He was especially interested in the remodelling of the London University, and desired to convert it from an examining into a teaching body. During the latter years of his life he wished to restore the library of the university of Edinburgh, but his design was frustrated by the refusal of the government to give a grant for the purpose.

Priestley's works were: 1. 'Lecture on the Development of the Gravid Uterus,' London, 1800, 8vo. 2. 'The Pathology of Intra-uterine Death, being the Lumleian Lectures delivered at the Royal College of Physicians of London, March 1887,' London, 1887, 8vo. He also edited, in conjunction with H. R. Storer, the 'Obstetric Writings and Contributions of Sir James Y. Simpson,' Edinburgh, 1855-6, 2 vols. 8vo.

[Lancet, 1900, i. 1147; British Medical Journal, 1900, i. 996; personal knowledge; private information.] D.A.P.

Q

QUAIN, SIR RICHARD, first baronet (1816-1898), physician, born on 30 Oct. 1816 at Mallow-on-the-Blackwater, co. Cork, was the eldest child of John Quain of Carrigoon. John Quain's older brother, Richard Quain of Rathleigh, was father of Jones Quain [q.v.], of Richard Quain [q.v.], and of Judge John Richard Quain. Sir Richard Quain's mother was Mary, daughter of Michael Burke of Mallow. He received his early education at Cloyne diocesan school, and was then apprenticed to Dr. Frazer, a surgeon-apothecary

at Limerick. He entered University College, London, in January 1837, where his cousins Jones and Richard Quain were teaching anatomy. In 1840 he graduated M.B., taking the scholarship and gold medal in physiology with honours in surgery and midwifery. He spent a year as house surgeon at University College Hospital, and for the following five years he was house physician. He graduated M.D. in 1842, receiving the gold medal and a certificate of special proficiency, and in 1843 he was elected a fellow of Uni-

versity College. In 1848 he was elected assistant physician at the Brompton Hospital for Diseases of the Chest, where he became full physician in 1855, and consulting physician in 1876. Later in life he was consulting physician to the Seamen's Hospital at Greenwich and to the Royal Hospital for Consumption at Ventnor. Of the Royal College of Physicians of London he was admitted a member in March 1846, a fellow in 1851, a member of council and censor in 1867, 1868, 1877, and 1882, a vice-president in 1889. In 1872 he delivered the Lumsian lectures on diseases of the muscular walls of the heart, and in 1885 he was Harveian orator, taking as the subject of his address the healing art in its historic and prophetic aspects.

He was appointed crown nominee on the General Medical Council in November 1863, and took his seat in the following year. He was shortly afterwards appointed a treasurer and a member of the pharmacopœia committee. He acted as secretary during the first revision, which resulted in the publication of the second edition of the 'British Pharmacopœia' in 1867. He subsequently (1874) became chairman of the committee, and was thus closely associated with the issues of the 'Pharmacopœia' which appeared in 1874 and 1885, as well as in the publication of the Appendix of 1890 and the new edition of 1898. In 1891, on the death of John Marshall (1818-1891) [q.v.], Quain was elected president of the General Medical Council, and was re-elected in 1896 on the expiration of his term of office.

In 1865 he was a prominent member of the royal commission appointed to inquire into the nature, causes, and methods of prevention of the rinderpest or cattle plague. In May 1866 he was appointed by the crown a member of the senate of the university of London. He was president of the Harveian Society in 1853, and of the Pathological Society, where he had served as secretary from 1852 to 1856, in 1869. He was elected a fellow of the Royal Society in 1871, M.D. honoris causa of the Royal University of Ireland in 1887, fellow of the Royal College of Physicians of Ireland in 1887, LL.D. of Edinburgh in 1889, M.D. of Trinity College, Dublin, in 1890, and physician extraordinary to Queen Victoria in 1890. He was created a baronet of the United Kingdom on New Year's day 1891.

Quain died in Harley Street, London, on 13 March 1898, and is buried in the Hampstead cemetery. A portrait by Sir John Millais, painted in 1896, is in the possession of the Royal College of Physicians, London. He married, in 1854, Isabella Agnes, only

daughter of Captain George Wray of the Bengal army, of Clesby in Yorkshire, by whom he had four daughters.

Quain acquired early a large and fashionable practice in London, a position for which his natural talents pre-eminently fitted him. He attended both Thomas Carlyle and his wife, while he was the personal friend as well as the medical adviser of Sir Edwin Landseer. His work in connection with fatty degeneration of the heart has become classical, and he is known as the editor of a 'Dictionary of Medicine,' the most successful medical publication of his generation (1st edition, 1 vol. 1882; 2nd edition, edited by Dr. Mitchell Bruce, 2 vols. 1894; 3rd edition, edited by H. M. Murray and others, 1 vol. 1902).

[British Medical Journal, 1898, i. 793; Lancet, 1898, i. 816.] D.A.P.

QUARITCH, BERNARD (1810-1899), bookseller, born at Worbia, a village in Prussian Saxony, on 23 April 1819, was of Wendish origin. He was apprenticed to a bookseller in Nordhausen, remained with him from 1834 to 1839, and afterwards passed three years in a publishing house in Berlin. In 1842 he came to London and was employed for a couple of years in a subordinate position in the shop of Henry George Bohn [q.v.] of York Street, Covent Garden. Between 1844 and 1845 he lived in Paris with the bookseller, Théophile Barrois, then came back to London, and in 1846 was once more with Bohn, whom he helped to compile his classified catalogue of 1847. After a false start in Great Russell Street as an agent on his own account, Quaritch entered effectually into bookselling for himself in a very small way in April 1847 at 16 Castle Street, Leicester Square, now part of Charing-cross Road. In that year he was naturalised as a British subject, and in November he produced his first catalogue, a single leaf, entitled 'Quaritch's Cheap Book Circular.' By 1848 he was issuing, with approximate regularity, a monthly 'Catalogue of Foreign and English Books,' for which, between December 1854 and May 1864, the heading 'The Museum' was used, in order to secure favourable postage conditions as a stamped newspaper. He became known as a dealer in European and oriental linguistics about the time of the Crimean war. In 1854 he published Barker's 'Turkish Grammar,' in 1856 Redhouse's 'Turkish Dictionary,' Faris's 'Arabic Grammar' in 1857, Bleek's 'Persian Grammar' in 1858, and Catafago's 'Arabic Dictionary' in 1858. An early notable purchase was that of a copy of the *Mazraie*

bible for 595*l.* at the sale of the Bishop of Cashel's library in February 1859; within a space of forty years no less than six separate copies of this rare and costly book were in his possession. His first large catalogue was published in 1858, a volume with about five thousand articles. He removed in 1860 to 15 Piccadilly, where he remained for the rest of his life, but retained the Castle Street shop as a warehouse. A complete catalogue of his stock, with an index, describing about seven thousand works, was produced in 1860. He purchased extensively at the Libri sales in 1859 and 1861, and at the Van Alstein sale at Ghent in 1863, and issued an enlarged catalogue in 1861.

Nearly one half of the books of the Perkins sale (1873) were acquired by Quaritch, who in the same year purchased the non-scientific portion of the Royal Society's Norfolk Library. These accretions helped to form the basis of his *'Bibliotheca Xylographica, Typographica, et Palæographica: Catalogue of Block Books and of early Productions of the Printing Press in all Countries, and a Supplement of Manuscripts'* (October 1873, 8vo, pp. 107). In this remarkable catalogue, the best of the kind that had yet been produced by a bookseller, the books are arranged under the names of towns and printers, with descriptions of nearly seventeen hundred examples from the earliest presses. It is included in a large volume published in 1874, of which another division was devoted to romances of chivalry, early fiction, and popular books, arranged on a novel system, the romances under the headings of their respective cycles, with original introductions and notes. Another highly interesting section was that of Americana, early books of travel, and editions of the Latin Ptolemy. The execution of these special catalogues is due to Mr. Michael Kerney, who since 1862 had been Quaritch's chief cataloguer and was henceforward his trusted literary advisor. In these and subsequent catalogues all the scholarly descriptions of the chief rarities, the manuscripts, and the oriental literature were by the same hand, whose merit and usefulness Quaritch always freely acknowledged. The purchases at Sir William Titte's sale in 1874 amounted to 9,500*l.*, and with other additions to a rapidly growing stock were described in a large *'Supplemental Catalogue'* (1877). With its predecessor it included 44,824 articles, or about two hundred thousand volumes. A large number of precious books from the first and second Didot sales (1878-9) fell into his hands, and in September 1880 he published an im-

mense catalogue, six and three-eighths inches thick, weighing nine pounds fifteen ounces, and containing 2,395 pages with an extensive index, perhaps the most bulky tome ever produced by a second-hand bookseller (*Notes and Queries*, 6th ser. iii. 341-3).

The achievements of the Didot sales were followed by a series of triumphs as the principal purchaser of rare and important articles at the following London auctions: David Laing's library (1879); the Ramirez Mexican collection (1880); the great Sunderland-Marlborough library (1881-3); the Berckford-Hamilton collections (1882-4); Sir John Thorold's Synton Park library (1881); the Osterley Park Jersey library (1885); the fine stock of a retiring bookseller, F. S. Ellis, in the same year; Mr. Wodhull's collection, and Dr. Shadford Walker's books (1886); Gibson Craig's library (1887), a part of the Seillière collection sold in London (1887); the Hopetoun library as well as that of Frederick Perkins in the same year; R. S. Turner's library in 1888; Lord Crawford's 'turn-outs' in 1887-1889; the partial sale of the Hamilton manuscripts in 1889; Mr. Gaisford's fine English collection in 1890; Lord Ashburnham's library of valuable printed books in 1897-8, and the partial sale of his manuscripts in 1899; the collections of William Morris and the Rev. J. Makellar in 1898. He also took the most prominent position as purchaser at certain French sales during the same period; the rare Americana of A. Pinart in 1883, and of Dr. Court in 1884; the Seillière sales in 1890-3, and the various stages of the sale of the Salvaterra collection in 1892-3.

The various catalogues previously mentioned were issued from time to time in sections as they were ready, and these separate publications with many occasional rough lists of recent purchases extended to nearly five hundred in number. The last complete record of his stock was a *'General Catalogue of Old Books and Manuscripts'* (1887-8, index 1892, 7 vols. 8vo, also in large paper with portrait), increased by special supplements between 1894 and 1897 to about twelve volumes, a monument of bookselling enterprise, and of considerable bibliographical value, alike as a criterion of price and for the extraordinary quantity of choice specimens described therein.

Quaritch's activity gradually diminished during the last few years of his life, but never to any striking degree. In the course of a successful career extending over more than fifty years he developed the most extensive trade in old books in the world.

The classes to which he gave special attention were natural history, fine arts, archaeology, travels, periodicals, and oriental learning, but he was chiefly known as a dealer in incunabula, fine manuscripts, bibles, liturgies, Shakespeareana, early English literature, Americana and cartography, and historic bindings. As a general rule he was attracted rather by the qualities of price and rarity than by that of fine condition. Some of his accumulations were dispersed by public auctions in London and Paris in his later years. The methods of his first English employer, Henry Bohn, always greatly influenced him, and like Bohn, but to a less degree, he bought remainders of expensive books, such as Owen Jones's 'Grammar of Ornament' and Westwood's 'Facsimiles of Anglo-Saxon and Irish Manuscripts.' He published many works, among them being the first four editions of FitzGerald's 'Omar Khayyam,' and was the agent for the publications of the British Museum and the Society of Antiquaries. Either personally or by deputy he attended every important book auction in Europe and America, and the high prices fetched at sales during the last thirty years were largely the result of his spirited biddings. He determined that, unless amateur buyers entrusted their commissions to him, they should be unsuccessful bidders.

From the commencement to the end of a commercial career which only ceased with life, Quaritch's thoughts were centred in his shop; he had no relaxations and took few holidays. He was a man of strong character, shrewd, unyielding, irascible, energetic, industrious. He had read and thoroughly digested a few books, chiefly on history and ethnology, but did not belong to the race of studious booksellers, for he had no wide acquaintance with books, except through the titles of those in current demand, and cared nothing for learning and literature in themselves.

He was fond of airing his views on politics and sociology in catalogue notes. He was not without social qualities, but he never allowed them to interfere with the due allotment of time to affairs. He was one of the chief founders of the dining-club

known as 'The Setts of Odd Volumes,' of which he was the first president (1878), occupying the same office in 1879 and 1892. A somewhat squat and awkward figure, occasionally rough manners, irrepressible egotism, pithy sayings, half humorous, half eardonic, delivered in a grating voice, combined to form an interesting if not a very attractive personality.

He died at Belsize Grove, Hampstead, on 17 Dec. 1899, in his eighty-first year. After his death his business was carried on by Mr. Bernard Quaritch, his son.

His original publications were confined to a couple of pamphlets—one addressed to Gladstone suggesting that the franchise should be extended to all persons willing to bear arms (1866), and a letter to General Starring on allegations of fraud in his dealings with the United States customs house (1880). Some lectures delivered before 'The Setts of Odd Volumes' on learned societies and printing clubs (1883, 1886), and liturgical history (1887), and a 'Catalogue of an Exhibition of Manuscripts and Early Printed Books' (1885), also printed for the 'Setts,' which appeared under his name, were probably due to friendly assistance. The same may be said of the text which accompanied the 'Collection of Facsimiles of Bookbinding' (1889), 'Notes on the History of Historic Bookbinding' (1891), the 'Collection of Facsimiles from Illuminated MSS.' (1890), the 'Catalogue of Medieval Literature' (1890), and 'Palaeography: Notes on the History of Writing' (1894).

Wyman, 1880 (Odd Volumes), extended in article in the Royal Album of Arts and Industries, 1887, 4to; see also *Atlantic Monthly*, June 1900, pp. 843-8; *Times*, 19 Dec. 1899, p. 6; *Athenaeum*, 23 Dec. 1899, p. 866; *Academy*, 23 Dec. 1899, p. 748; *Bookseller*, 12 Jan. 1900, p. 9; *Publishers' Circular*, 23 Dec. 1899, p. 678 (portrait); *Illustrated London News*, 30 Dec. 1899 (portrait).] H. R. T.

QUEENSBERRY, MARQUIS OF. [See DOUGLAS, JOHN SHOLTO, 1844-1900.]

R

RAWLINSON, SIR ROBERT (1810-1898), civil engineer, born at Bristol on 28 Feb. 1810, was son of Thomas Rawlinson, a builder, of Chorley, Lancashire, and his wife, Grace Ellice of Exeter. He was educated at Lancaster, where his father had removed shortly after his birth, and for a time assisted his father in his business as a builder, contractor, and millwright.

In 1831 he entered the employ of Jesse Hartley [q. v.], and remained with him till 1836, being chiefly occupied in dock and harbour work. He then entered the employ of Robert Stephenson [q. v.], and was engaged on the London and Birmingham railway.

In 1840 he returned to Liverpool, becoming assistant-surveyor to the corporation, and from 1843 to 1847 he was employed as chief engineer under the Bridgewater trust. During this period a discussion as to the necessity of increasing the supply of water to Liverpool was going on, and he advocated a scheme for the utilisation of the Bala lake in Wales for this purpose; it is remarkable that the present water supply of the city is drawn from a district in Wales not very far removed from the source which Rawlinson then indicated.

In 1848, on the passing of the Public Health Act, he was one of the inspectors appointed by government under the act, and later became head of the department. It is, however, by his work as head of the sanitary commission which was sent out by the government to the seat of war in the Crimea in 1855 that Rawlinson will be best known. Full accounts of the valuable work which was done by this commission are given by Alexander William Kinglake [q. v.] in his 'Invasion of the Crimea.'

On his return from the Crimea Rawlinson took up his duties as chief engineering inspector under the local government board, and in connection with this office he prepared and published some valuable notes entitled 'Suggestions on Town Sewering and House Draining, for the Instruction of Engineers and Surveyors to Local Boards.' The correctness of the views he then advocated has been proved by their extensive adoption throughout the kingdom and elsewhere.

In 1863 he served as a member of the army sanitary committee; and in April 1868, during the terrible cotton famine in

Lancashire, he was sent down to that county by Lord Palmerston to organise relief works for the thousands of operatives thrown idle by the stoppage of the cotton supply from America owing to the civil war. The works he then started occupied his attention until 1869, and nearly two millions sterling was spent in connection with them.

In 1865 and in 1868 he was chairman of the commissions appointed to inquire into the best means of preventing the pollution of rivers; and in 1870 he was on another commission dealing with town sewage. In 1884 he was president of the congress of the sanitary institute held at Dublin, and published the address he delivered in that capacity.

For his many valuable services in connection with public health and sanitation he was knighted on 24 July 1883, and in January 1888 he was made K.C.B. In that year he retired from the office which he had held for forty years as chief engineering inspector to the local government board.

He was elected a member of the Institution of Civil Engineers in March 1848; he served on the council for many years and became president in May 1894, being at that time eighty-four years of age. His presidential address was published in the same year.

He died at his residence, 11 The Boltons, South Kensington, on 31 May 1898, and was buried in Brompton cemetery on 4 June. He married, in 1831, Ruth, daughter of Thomas Swallow of Lockwood, Yorkshire. There is an oil painting in the possession of the Institution of Civil Engineers.

He wrote several books dealing with technical matters, and also numerous professional reports, mainly on sanitation and allied subjects. He also published (London, 1893) a small volume of verse.

Rawlinson's more important books and tracts were: *Drainage of Towns*, London, 1864. *Designs for Factory Shafts, &c.*, London, 1868. *Lectures on Sanitary Questions*, London, 1876. *Maps and Plans for Drainage, &c.*, London, 1878-80. *Hygiene of Armiss in the Field*, London, 1883. *Public Works in Lancashire, with Appendix on Drainage*, London, 1893.

His chief published reports were on *Sewerage, Water Supply, and Drainage*, viz.: *Wigan Water*, Wigan, 1852; *Birmingham Water*, Birmingham, 1854 and 1871; *Tynemouth Sewerage*, N. Shields, 1857; *Chorley*

District Drainage, Chorley, 1857; West Ham Sewerage, 1862; Windsor Castle Drainage, &c., London, 1863; Liverpool Waterworks, London, 1866; Swansea Water Supply, Swansea, 1868; Failure of Bradfield Reservoir in 1864; Aldershot Sewerage, London, 1870; Croydon Waterworks, Croydon, 1882; Calstock, Devonport, Falmouth, &c. He also wrote vol. xvii. of the Reports of the General Board of Health on Drainage and Water Supply.

[Obituary notices in Proc. Inst. Civil Eng. vol. cxxxiv.; Burke's Peerage &c. 1890; Times, 2 and 6 June 1898; Kinglake's Invasion of the Crimea.] T. H. B.

REEVES, JOHN SIMS (1818-1900), tenor vocalist, son of John Reeves, a bandsman in the royal artillery, was born at Woolwich on 26 Sept. 1818, and baptised John only. (The professional name 'Sims' was adopted many years later at the suggestion of Madame Puzzi, a vocalist, as a euphonious prefix to Reeves.) He received his earliest instruction in music from his father, and afterwards studied the pianoforte under Johann Baptist Cramer [q. v.], and with W. H. Calcott for harmony. At the age of fourteen he became organist of North Cray church, Kent, and gained a knowledge of the oboe, bassoon, violin, and violoncello, 'all of which instruments he played pretty well.' Reeves forsook music for a year and studied for the medical profession at one of the London hospitals, but a gruesome practical joke played upon him by one of his fellow-students turned him from further anatomical pursuits. He took a strong fancy to the stage, and after taking lessons in singing from Tom Cooke and J. V. Hobbs, he made (according to his own account) his first public appearance as a vocalist in 1839 at the Newcastle theatre as the Gipsy Boy in 'Guy Rammerring.' He subsequently played in Edinburgh, Glasgow, Belfast, Norwich, and elsewhere.

He returned to London in 1842, where, as a tenor, he appeared first at the Grecian Theatre, City Road, under the name of 'Mr. Johnson,' and afterwards as one of Macready's company at Drury Lane Theatre, where he sang in Handel's 'Acis and Galatea' (produced with Stanfield's scenery), the 'Two Gentlemen of Verona,' Purcell's 'King Arthur,' and in other minor parts. He then went to Paris, where he studied under Bordogni, and subsequently to Milan, where he enjoyed the invaluable tuition of Alberto Mazzucato. At La Scala he made his *début* as Edgardo in Donizetti's 'Lucia di Lammermoor' with marked success.

Reeves reappeared in London at a grand monster concert given for the benefit of

William Vincent Wallace [q. v.] at Drury Lane Theatre, 16 May 1847, when he was announced as 'Mr. J. S. Reeves,' and at the 'Ancient Concert' of 23 June in the same year as 'Mr. Reeves.' But it was not till the following 6 Dec. that he made his mark, when he appeared as Edgardo at Drury Lane Theatre, then under the management of Jullien, with Hector Berlioz as *chef d'orchestre*. On this and subsequent occasions during the season he not only displayed a voice of exquisite charm, but showed that he possessed histrionic gifts of no mean order. He created the part of Lyonnell in Balfe's 'Maid of Honour.' The Drury Lane playbills of that time (1847) furnish evidence of the gradual change in his name—first 'Mr. S. Reeves,' and then 'Mr. Sims Reeves,' by which designation he became widely known throughout his long and remarkable career.

But it was in the field of oratorio and on the concert platform that Reeves attained the highest pinnacle of his well-merited fame. The Worcester and Norwich musical festivals of 1848 were his first appearances in oratorio. From that time onward he took rank as the premier English tenor, singing at the Handel and provincial musical festivals, the Sacred Harmonic Society's concerts, and elsewhere, with extraordinary marks of public appreciation.

In 1888 he published his 'Life and Recollections,' which was followed in 1889 by a similar anecdotal book entitled 'My Jubilee.' Towards the close of his life he was a professor of singing at the Guildhall School of Music. A public subscription was started to relieve the necessitous circumstances of his old age, and in the year of his death a civil-list pension of 100*l.* was granted to him in consideration of his eminence as a singer. Sims Reeves died at Worthing on 25 Oct. 1900, and his remains were cremated at Woking.

Reeves married, on 3 Nov. 1850, Miss Emma Lucombe, an excellent singer, who died on 10 June 1895.

The voice of Sims Reeves was one of peculiar beauty. There was not a faulty note in its wide range. Rich in the mellowness of its smooth quality, he always had a reserve of power in his voice which, while being remarkable in its volume of tone, never overstepped the border line of the incomparable sweetness and pathos of his wonderful organ. Moreover, his finished phrasing—what may be termed the ebb and flow of his voice—was a feature in his performances that appealed to the highest instincts of his hearers. Dramatic in the

singing of a simple song or a devotional oratorio air, Reeves never sang for mere effect.

F. G. E.

RENOUF, Sir PETER in **PAGE** (1822–1897), egyptologist, oriental scholar, and theologian, son of Joseph Renouf of Guernsey, and his wife Mary, daughter of John le Page, also of Guernsey, was born in Guernsey on 28 Aug. 1822. He was educated at Elizabeth College, Guernsey, and thence passed in 1841 with a scholarship to Pembroke College, Oxford, where, being intended for the church, he soon came into contact with the protagonists of the tractarian movement, especially with Newman, whose views exerted considerable influence over him. He is said to have aided in the compilation of some of the 'Tracts for the Times.' Certainly his tractarianism was of so uncompromising a type that it hurried him rapidly into the Roman church, and he was 'received' as early as Easter 1842 at St. Mary's College, Oscott, where, having abandoned Oxford, he remained for some years engaged in various studies.

The years from 1846 to 1855 were occupied in desultory travel and study. In the latter year Renouf, after delivering, at the newly founded Roman catholic university of Ireland, a course of historical lectures on French literature and the history of philosophy, was appointed by Newman, then the rector, to the chair of ancient history, to which was afterwards added the professorship of eastern languages. He held this professorship till 1864, and it was during his tenure of it that he first turned his attention towards egyptology. His first essays in the science which was eventually to become the chief occupation of his life were published in 'Atlantis,' the literary journal of the university, in which, in 1863, appeared his noteworthy defence of egyptological science against the attacks of Sir George Cornewall Lewis [q. v.], entitled 'Sir G. C. Lewis on the Decipherment and Interpretation of Dead Languages.' This article finally disposed of all objections to Young and Champollion's method of deciphering the hieroglyphs [see YOUNG, THOMAS, 1773–1829]. Though devoting more and more of his time to egyptology, Renouf still took part in the discussion of other subjects, chiefly theological, which interested him. He contributed

articles to the 'Home and Foreign Review,' 'North British Review,' and other periodicals. After 1864, when he severed his connection with the Irish Catholic university, he gradually grew out of sympathy with the Ultramontane position. In 1868 he published an essay on the subject of 'The Condemnation of Pope Honorius.' This was in effect a vigorous attack on the doctrine of papal infallibility, which was now definitely propounded at Rome; he showed that without possible doubt the 'infallible Vicar of Christ' Honorius was a monotholite heretic, who, in the words of the judgment of the council held at Constantinople in 681, 'shall be cast out of the Holy Church of God, and be anathematised with them (Sergius of Constantinople and others), because we have found, from the letter written by him to Sergius, that he followed the mind of the latter in all things, and gave authority to his impious dogmas.' This insistence on the historical condemnation of a pope as a heretic was by no means to the taste of the Ultramontane champions of infallibility on the continent and in Ireland, and Renouf's essay was placed on the 'Index.' His thesis was taken up vigorously by a Jansenist writer, the Rev. J. A. van Beek, who translated Renouf's essay into Dutch, under the title 'Zal de Paus op het aannemende Concilië onfeilbaar verklaard worden?—Do Veroordceling van Paus Honorius,' and supported it with a brochure of his own, 'Beschouwingen over de Pauselijke Onfeilbaarheid.' Renouf did not retreat before the clamour of Ultramontane resentment, which was well expressed in a pamphlet written by Paolo Botalla, an Italian priest, but he defended his position in a second publication, 'The Case of Pope Honorius reconsidered, with reference to recent Apologies' (1869). With the official adoption of the doctrine of infallibility the controversy ceased. But Renouf did not follow Dr. Döllinger in severing his connection with the Roman church on its adoption of that dogma.

In 1864 Renouf advocated a project which commended itself to many English Roman catholics, though not to the Ultramontanes—the foundation of a college for Roman catholics at Oxford; his views were put forward in a letter addressed to Dr. Newman by a Catholic Layman, and entitled 'University Education for English Catholics' (London, 1864). The proposal came to nothing.

On his retirement from the Irish catholic university Renouf was appointed in 1866 one of her majesty's chief inspectors of schools, a post which he held for nearly

twenty years. Theology was now abandoned, and Renouf devoted an increasing part of his leisure to egyptological study. One of his most notable contributions to egyptology during this period was his 'Elementary Grammar of the Ancient Egyptian Language' (1875, 2nd edit. 1890). With the exception of Dr. Birch's linguistic notes in the second edition of Bunsen's 'Egypt's Place in Universal History' (1867, vol. v.), this was the first ancient Egyptian grammar published in English. In 1879 he delivered the Hibbert lectures, taking for his subject 'The Religion of Ancient Egypt.' The views therein expressed are now to some extent superseded, because Renouf in many ways followed in the footsteps of Professor Max Müller [q. v. Suppl.], and in dealing with Egyptian religion was inclined to lay too much stress upon philological theories and not to pay sufficient attention to the modern developments of anthropological science.

In 1886 Renouf was appointed to succeed Samuel Birch [q. v. Suppl.] as keeper of the Egyptian and Assyrian antiquities in the British Museum. In this position he presided over the publication of the 'Coffin of Amann' (1890), a work prepared by Birch, and of a facsimile of the well-known papyrus of Ani, which has since been fully edited and translated by his successor in the post of keeper, Dr. Wallis Budge. At the end of 1891 he retired, after having been especially permitted to exceed the ordinary civil service age-limit by four years.

In 1887 Renouf succeeded Sir Charles Newton [q. v. Suppl.] as president of the Society of Biblical Archaeology, to whose 'Transactions' and 'Proceedings' he had made many contributions. In 1892, after his retirement from the British Museum, he commenced the publication in the 'Proceedings' of an elaborate translation of and commentary upon the 'Book of the Dead,' a work left unfinished at the time of his death. In 1896 he was knighted. He died on 14 Oct. 1897.

In 1857 Renouf married Ludovika, daughter of Brentano la Roche of Frankfort.

It is by his egyptological work that Sir Peter Renouf is best known. His temperament was strongly controversial, not to say polemical, yet he rendered lasting service to egyptology, especially in the domain of the language of ancient Egypt, our knowledge of which he greatly helped to place in the position of certainty that it has now attained.
